MICROBIOLOGY

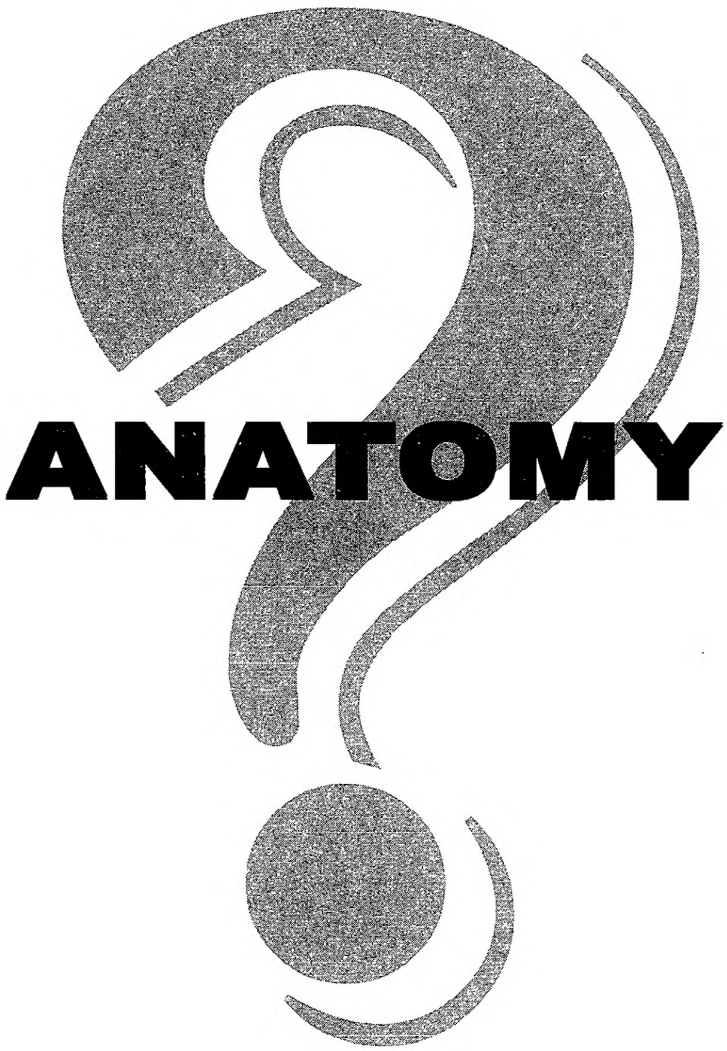
1. GENERAL		
- MORPHOLOGY AND PHYSIOLOGY OF BACTERIA	5.3	5.101
- STERILIZATION AND DISINFECTION	5.5	5.102
- CULTURE MEDIAAND CULTURE METHODS	5.7	5.104
- BACTERIAL GENETICS	5.8	5.104
- MISCELLANEOUS	5.9	5.105
2. IMMUNOLOGY		
- STRUCTURE AND FUNCTION OF IMMUNE SYSTEM	5.9	5.105
- ANTIBODY	5.12	5.107
- ANTIGEN	5.14	5.108
- ANTIGEN-ANTIBODY REACTION	5.15	5.109
- IMMUNITY	5.16	5.110
- HYPERSENSITIVITY	5.16	5.110
- IMMUNODEFICIENCY	5.18	5.111
- IMMUNOLOGY OF TRANSPLANTATION	5.19	5.112
- COMPLEMENT SYSTEM	5.19	5.112
- MISCELLANEOUS	5.20	5.112
3. BACTERIA		
- STAPHYLOCOCCI		
1. STAPH. AUREUS	5.20	5.113
2. COAGULASE NEGATIVE STAPHYLOCOCCI	5.22	5.114
- STREPTOCOCCI	5.23	5.114
- PNEUMOCOCCI	5.25	5.115
- NEISSERIA	5.27	5.116
1. GONOCOCCUS	5.27	5.116
2. MENINGOCOCCUS	5.27	5.117

- CORYNEBACTERIUM 5.28 5.117
- BACILLUS
  1. BACILLUS ANTHRACIS 5.30 5.118
  2. BACILLUS CEREUS 5.31 5.119
- CLOSTRIDIUM 5.31 5.119
  1. CLOSTRIDIUM PERFRINGENS (WELCHII) 5.31 5.119
  2. CLOSTRIDIUM TETANI 5.32 5.120
  3. CLOSTRIDIUM BOTULINUM 5.33 5.120
  4. CLOSTRIDIUM DIFFICILE 5.33 5.120
- NONSPORINGANAEROBES 5.34 5.120
- ENTEROBACTERIACEAE 5.34 5.121
  1. E. COL! 5.34 5.121
  2. PROTEUS 5.36 5.122
  3. KLEBSIELLA 5.36 5.122
  4. SHIGELLA 5.36 5.122
  5. SALMONELLA 5.36 5.122
- VIBRIO 5.38 5.123
  1. V. CHOLERAE 5.38 5.123
  2. HALOPHILIC VIBRIOS 5.40 5.124
- PSEUDOMONAS 5.40 5.125
- MELIOIDOSIS 5.41 5.125
- YERSINIA 5.41 5.125
- HAEMOPHILUS 5.41 5.125
- BORDETELLA 5.42 5.125
- BRUCELLA 5.42 5.126
- MYCOBACTERIA
  1. M. TUBERCULOSIS 5.43 5.126
  2. ATYPICAL MYCOBACTERIA 5.44 5.127
  3. M. LEPRAE 5.45 5.128
- SPIROCHETES 5.46 5.128
  1. TREPONEMA 5.46 5.128
  2. BORRELIA 5.48 5.129
  3. LEPTOSPIRA 5.49 5.130
- MYCOPLASMA 5.50 5.130
- ACTINOMYCETES 5.50 5.131
- LISTERIA MONOCYTOGENES 5.51 5.131
- CAMPYLOBACTER 5.51 5.131
- HELICOBACTER 5.52 5.131
- LEGIONELLA 5.53 5.132
- RICKETTSIACEAE 5.53 5.132
- CHLAMYDIAE 5.55 5.133
- MISCELLANEOUS 5.56 5.134

4. VIROLOGY
- GENERAL PROPERTIES OF VIRUSES 5.57 5.135
- BACTERIOPHAGE 5.59 5.136
- POXVIRUSES 5.59 5.136
- HERPESVIRUSES 5.60 5.136
  1. HERPES SIMPLEX VIRUS 5.60 5.137
  2. VARICELLAZOSTERVIRUS 5.60 5.137
  3. EPSTEIN-BARR VIRUS 5.61 5.137
  4. CYTOMEGALOVIRUS 5.61 5.137
- ADENOVIRUSES 5.62 5.138
- PICORNA VIRUSES 5.62 5.138



- POLIOVIRUS 5.62 5.138
- MYXO VIRUSES 5.63 5.138
  A. ORTHOMYXOVIRUS (INFLUENZA) 5.63 5.139
  B. PARAMYXOVIRUSES 5.63 5.139
  1. MEASLES 5.64 5.139
  2. MUMPS 5.64 5.139
  3. RSV 5.64 5.139
- RUBELLA 5.64 5.139
- ARBOVIRUSES 5.64 5.139
- RHABDOVIRUS (RABIES) 5.65 5.140
- HEPATITIS VIRUSES 5.66 5.141
  1. HEPATITIS A VIRUS 5.67 5.141
  2. HEPATITIS B VIRUS 5.67 5.142
  3. HEPATITIS C VIRUS 5.68 5.142
  4. HEPATITIS E VIRUS 5.69 5.142
  5. HEPATITIS D VIRUS 5.69 5.142
  6. HEPATITIS G VIRUS 5.69 5.143
- HUMAN IMMUNODEFICIENCY VIRUS 5.69 5.143
- ONCOGENIC VIRUSES 5.72 5.145
- HUMAN PAPILLOMAVIRUS 5.73 5.145
- ROTAVIRUS 5.73 5.145
- SLOW VIRAL DISEASES 5.73 5.145
- PARVOVIRUS 5.74 5.146
- MISCELLANEOUS 5.74 5.146

5. PARASITOLOGY
- GENERAL 5.75 5.147
- PROTOZOA 5.76 5.147
  1. ENTAMOEBA 5.76 5.147
  2. GIARDIA LAMBLIA 5.77 5.148
  3. TRYPANOSOMA 5.78 5.148
  4. LEISHMANIA 5.78 5.148
  5. PLASMODIUM 5.79 5.149
  6. TOXOPLASMA 5.80 5.150
  7. BALANTIDIUM COLI 5.81 5.150
  8. CRYPTOSPORIDIUM 5.81 5.151

ANATOMY

GENERAL

1. Which of the following is a traction epiphysis ?
a) Tibial condyles *(NEET/DNB Pattern)*
b) Trochanter of femur
c) Coracoid process of scapula
d) Head of femur

2. Which is the most prominent spinous process ?
a) T1 b) *Cl* *(NEET/DNB Pattern)*
c) C6 d) L5

3. Which of the following bones has no medullary cavity- *(NEET/DNB Pattern)*
a) Ulna b) Clavicle
c) Fibula d) Humerus

4. Coracoid process is a_____ kind of epiphysis -
a) Atavistic *(NEET/DNB Pattern)*
b) Pressure
c) Traction
d) Aberrant

5. General visceral fibres do not supply-
a) Smooth muscles *(NEET/DNB Pattern)*
b) Skeletal muscles
c) Cardiac muscles
d) Glands

SUPEX

6. The lesion of Klumpke's paralysis is in - *(AP 88)*
a) Cervical plexus b) Lower brachial
c) Upper brachial d) Sacral plexus

7. Dorsum of the middle finger is supplied by -
a) Radial nerve b) Median nerve *(Kerala 90)*
c) Ulnar nerve d) A and b

8. Sensory supply of the tip of the ring finger is -
a) Radial nerve b) Median nerve *(Kerala 90)*
c) Ulnar nerve d) Posterior interosseous nerve

9. Brachialis is supplied by - *(NIMS 96)*
a) Radial and Ulnar nerve
b) Median and musculocutaneous neve
c) Radial and musculocutaneous nerve
d) Radial and Median nerve

10. Extension of the Metacarpophalangeal joint is lost in inj ury to - *(AIIMS 2K)*
a) Radial nerve b) Ulnar nerve
c) Median nerve d) Posterior interosseous nerve

11. If the greater tuberosity of the humerus is lost, which of the following movements will be affected?
a) Adduction and flexion *(AIIMS 2K)*
b) Abduction and lateral rotation
c) Medial rotation and adduction
d) Flexion and medial rotation

12. True flexors of the elbow joint are - *(TGI 85, 88)*
a) Biceps b) Brachialis
c) Brachioradialis d) Teres minor

13. Ossification in foetus starts in - *(DNB 90)*
a) 1st week of intrauterine life
b) 2nd week of intrauterine life
c) 5th week of intrauterine life
d) 5th month of intrauterine life

14. Abduction of the shoulder joint above 90° is -
a) Biceps b) Trapezius *(JIPMER 87)*
c) Serratus anterior d) Supraspinatus

15. The following is true of brachial plexus -
a) Cervical rib involves lateral cord *(Kerala 89)*
b) Musculocutaneous nerve arises from medial cord
c) Radial nerve arises from posterior cord
d) Post fixed plexus is formed by C4,5,***6,***7,8 T1

16. Axillary nerve Inj ury at its origin leads to paralysis of- *(PGI93,01)*
a) Deltoid
b) Latissmus dorsi and deltoid
c) Deltoid and Teres Minor
d) Deltoid and Teres Major

17. Winging of Scapula is due to paralysis of - *(A 193)*
a) Latissimus dorsi b)Pectoralis major
c) Pectoralis minor d) Serratus anterior

18. Relation of musculocutaneous nerve with axillary artery in axilla is - *(AMU 95)*
a) Lateral b) Medial
c) Anterior d) Posterior

19. Following an incised wound in the front of wrist, the subject is unable to oppose the tips of the little finger and the thumb. The nerve (s) involved is/are - *(UPSC 2K, AIIMS 83)*
a) Ulnar nerve alone
b) Median nerve alone
c) Median and ulnar nerve
d) Radial and ulnar nerves

20. Lymphnode which is first to be involved in carcinoma breast - *(AI88)*
a) Pectoralgroup b) Internal mammary
c) Apical d) Central
e) Supraclavicular

21. Cancer breast of upper outer quadrant mostly spreads to - *(MAHE 2001)*
a) Anterioraxillary b) Posterior axillary
c) Pectoral d) Internal mammary

22. Nerve damage affecting movements of thumb -
a) Median nerve b) Ulnar nerve *(TN 97)*
c) Radial nerve d) Posterior interosseous nerve

23. In an ulnar nerve lesion proximal to the elbow
a) There would be a sensory deficit involving the skin on the dorsal aspect of the medial one and a half digits *(AIIMS 78, PGI84)*
b) There would be a sensory deficit involving the skin on the ventral aspect of medial one and a half digits
c) Thumb adduction would be lost
d) Wrist adduction would be lost

l)b 2)b 3)b 4) a 5)b 6)b 7)a,b,c 8)b,c 9)c 10)a,d ll)b 12)a,b,c 13)c 14)b,c
15)c 16)c 17)d 18) a 19)b 20)a 21)c 22)a,b,c,d 23)b,c

24. Clavicular part of deltoid is associated with - *(AUMS80,*
a) Flexion b) Medical rotation *AMU87)*
c) Abduction d) Adduction

25. Each of the following has an attachment to scapula except - *(PGI80, Rohtak 8 7)*
a) Pectoralis major b) Pectoralis minor
c) Biceps brachii d) Triceps

26. The following structures are attached to the greater tuberosity of the humerus except -
a) Supraspinatus muscle *(JIPMER 80,*
b) The coracohumeral ligament *DNB 91)*
c) Teres minor muscle
d) Infraspinatus muscle
e) Subscapularis muscle

27. Boxer's muscle is- *(AIIMS 80, AMC 86)*
a) Trapezius b) Seratus anterior
c) Psoas major d) Latissimus dorsi

28. All the wrist - *(PGI 84)*
a) The ulnar nerve is medial to the ulnar artery
b) The ulnar artery is lateral to the tendon of the flexor carpi ulnaris muscle
c) The radial artery is laterial to the tendon of the flexor carpi radialis muscle
d) The median nerve is in the interval between the tendons of the palmaris longus and flexor carpi radialis muscles
e) None

29. Which of the following nerves are branches of the posterior cord - *(PGI 84)*
a) Radial nerve b) Axillary nerve
c) Musculocutaneous nerve d) Subclavius nerve
e) Lateral pectoral nerve

30. The glenoid cavity of the scapula is rotated upward by which of the following muscles - *(PGI 84)*
a) Lavator scapulae b) Serratus anterior
c) Rhomboid minor d) Trapezius

31. The muscle of the rotator cuff include - *(PGI 85)*
a) Teres minor b) Subscapularis
c) Supraspinatus d) Infraspinatus

32. Adductors of the hand at the wrist joint include-fPG/ *86)*
a) Brachioradialisb) Flexor carpi ulnaris
c) Extensor digitorum d) Extensor carpi ulnaris

33. The first bone to ossify in membrane is -*(AIIMS 86,*
a) Scaphoid b) Scapula *UPSC 86)*
c) Clavicle d) Fibula
e) Femur

34. A patient is found to have pus in the midpalmar space. The space is - *(PGI 86)*
a) The space around the hypothenar muscles
b) The synovial sheath for the flexor pollicis longus tendon
c) The ulnar bursa
d) The space around the muscles of the thenar eminence
e) A space lying medial to a fibrous septum attaching the palmar aponeurosis to the third metacarpal bone

35. The medial collateral ligament of the elbow joint is closely related to the following structure -
a) Brachial artery b) Radial nerve *(AMU86)*
c) Ulnar artery d) Basilic vein
e) Ulnar nerve

36. Axillary nerve arises from - *(AIIMS 86)*
a) Posterior cord b) Lateral cord
c) Both medial and lateral cords d) Upper trunk
e) None of the above

37. Root value of ulnar nerve -*(JIPMER 86, Kerala 87)*
a) C_7C_8T, b) C_7C_8T,
c) C_8T_1 d) $C_6C_7C_8$
«) $C_5C_6C_7$

3 8. Musculocutaneous nerve supplies -*(PGI 86, UPSC 86)*
a) Brachialis b) Biceps brachi
c) Coracobrachialis d) All of theabove

39. Which tendon is frequently absent in the hand -
a) Palmaris longus *(UPSC 86*
b) Extensor carpi radialis longus *JIPMER 86*
c) Extensor carpi radialis brevis *PGI 87)*
d) Flexor carpi ulnaris
e) Flexor digitorum pro funds

40. Which structure does not pass through the carpal Thnnel- *(PGI 86, AJ 88)*
a) Median nerve b) Radial bursa
c) Ulnar bursa d) Ulnar nerve

41. Following muscles cause retraction of shoulder except-
a) Trapezius b) Serratus anterior *(AMU87)*
c) Rhomboid major d) Rhomboid minor

42. The quadrilateral space is bounded by the following structures, except the - *(PGI 87)*
a) Surgical neck of the humerus
b) Long head of triceps
c) Deltoid
d) Teres major
e) Teres minor

43. Which of the following bones does not form the proximal row of carpal bones - *(AMU87)*
a) Scaphoid b) Lunate
c) Triquetral d) Capitate

44. Carpal tunnel syndrome is due to compression of -
a) Ulnar nerveb) Median nerve *(TN 87)*
c) Radial nerved) Ulnar artery

45. The structures taking origin from the tip of coracoid process are - *(PGI 88)*
a) Short head of biceps b) Coracobrachialis
c) Pectoralis minor d) Long head of biceps

46. In the region of the shoulder - *(AP 88)*
a) The glenohumeral joint permits 180° of the abduction
b) The glenohumeral joint reinforced on all aspects (superiorly, inferiorly, arteriorly, anteriorly, and posteriorly) by muscles of the rotator (musculotendinous) cuff
c) The subacromial (subdeltoid) bursa is inferior to the supraspinatus tendon and muscle
d) The glenohhmeral joint permits flexion, extension, abduction, adduction, and both internal and external rotation

24) a,b 25) a 26) e 27) b 28)a,b,c,d 29) a,b 30)b,d 31)a,b,c,d 32)b,d 33) c 34) e 35) e 36) a
37) b 38) d 39) a 40) d 41) b 42) c 43) d 44) b 45)a,b 46) d

47. Medial cord of the brachial plexus gives rise to all except- *(PGI88)*
a) Nerve to supraspinatus
b) Ulnar nerve
c) Medial cutaneous nerve of arm
d) Medial cutaneous nerve of foream

48. Regarding serratus anterior muscle, which is incorrect - *(AI89)*
a) Multipinnate muscle
b) Lifts arm above the shoulder
c) Supplied by long thoracic nerve
d) Orginates from lower 8 ribs

49. Radial nerve 2 inches distal to the elbow joint gives - *(IN 89)*
a) Muscular branches b) Sensory branches
c) Auricular branches d) All of the above

50. Fracture of the surgical neck of humerus results in-
a) Loss of sensation in dorsal forearm *(AI89)*
b) Flat shoulder
c) Wrist drop
d) Claw hand

51. Root value of axillary nerve is - *(UPSC 89)*
a) C5,6 b) C4,5
c) C5,6,7 d) C6,7

52. Root value of radial nerve is - *(UPSC 89)*
a) C5,6 b) C5,6,7
c) C5,6,7,8,T1 d)C8,Tl

53. Root value of musculocutaneous nerve is -
a) C4,5 b) C5,6,7 *(UPSC89)*
c) C5,6,7,8 d)C8,Tl

54. Wrist drop is seen with injury to..... nerve -
a) Median b) Radial *(UPSC 89)*
c) Ulnar d) Axillary

55. Musician's nerve is..... nerve - *(UPSC 89)*
a) Ulnar b) Radial
c) Median d) Axillary

56. The term eye of the hand applies to.....nerve -
a) Median b) Radial *(UPSC 89)*
c) Ulnar d) Axillary

57. The first and second lumbricals are supplied by the____ nerve - *(UPSC 89, TN91)*
a) Median b) Ulnar
c) Radial d) Posterior interosseous

58. Labourers nerve is - *(UPSC 89)*
a) Median b) Ulnar
c) Radial d) Sciatic

59. Artery present in the anatomical snuff box is -
a) Radial b) Ulnar *(Karnat89, AI01)*
c) Interosseus d)None

60. Deep branch of the ulnar nerve supplies the following mucles except - *(AMU 89)*
a) Adductor pollicis
b) First dorsal interosseous
c) First lumbrical
d) Therd lumbrical

61. Muscles that can flex the foream include all except -
a) Brachialis b)Brachioradialis *(AMU 90)*
c) Pronator teres d) Anconeus

62. Ossification centre of the medial epicondyle appears in- *(ROHTAK90)*
a) 5th year b)7th year
c) 9th year d) 11th year

63. The nerve responsible for the fine movements of the hand is - *(DNB90)*
a) Radial N b) Median
c) Posterior interosseous N d) Ulnar N

64. Muscles that can extend the middle distal phalanx or the index finger include all except - *(AMU 91)*
a) The first dorsal interosseous
b) The first lumbrical
c) The second palmar interosseous
d) Extensor carpi radialis longus

65. The Prime Flexor of metacarpophalangeal join
a) Lumbrical muscle *(AI91)*
b) Flexor digitorum superficlalis
c) Flexor digitorum profunds
d) Dorsal interosseus muscle

66. Ulnar nerve supplies all except - *(AI 91)*
a) 3rd and 4th lumbrical muscle
b) Palmar and dorsal interosseus muscle
c) Adductor Pollicis
d) Flexor Pollicis Brevis

67. Nerve not related to humerus is - *(Kerala 91)*
a) Radial b) Axillary
c) Median d) Musculocutaneous

68. Structure piercing the clavipectoral fascia is -
a) Basilic vein *(Kerala 91)*
b) Cephalic vein
c) Thoracoacromial artery
d) Musculophrenic nerve

69. Which is correct regarding deep palmar arch -
a) Superficial to lumbricals *(AIIMS91)*
b) Lies at level of distal palmar crease
c) Formed by deep branch of ulnar Artery
d) Gives 3 interdigital arteries

70. Muscles of the hypothenar eminence are innervated by the- *{UP92)*
a) Radial nerve b) Median nerve
c) Ulnar nerve d) Median and Radial nerves

71. Which is not a branch of posterior cord of Brachial plexus - *(AI92)*
a) Thoracodorsal b) Radial
c) Ulnar d)Axillery

72. Ulnar nerve supplies all of the following except
a) Flexor digitorum profundus *(JIPMER92)*
b) Dorsal interossei
c) Abductor pollicis brevis
d) Extensor carpi ulnaris

---

47) a 48) d 49) a,b 50) b 51) a 52) c 53) b 54) b 55) a 56) a 57) a 58) a 59) a 60) c
61) d 62) a 63) d 64) d 65) a, d 66)? 67) d 68)b,c 69) c 70) c 71) c 72)c,d

73. The mdial wall of the axilla is formed by the -
a) Serratus anterior *(Rajasthan 92)*
b) Snbscapularis muscle
c) Pectoralis major muscle
d) Teres major muscle

74. The following structures form the boundaries to the superior entrance into the axilla except the -
a) Clavicle *(PGI92)*
b) Coracoid process
c) Upper border of scapula
d) Outer border of first rib

75. The coracobrachialis assists in which movement of the arm - *(AMU 92)*
a) Flexion b) Extension
c) Rotation d)Supination

76. The movement affected following axillary nerve injury is - *(AI93)*
a) Flexion b)Abduction
c) Adduction d) Extension

77. Injury to radial nerve at wrist leads to - *(Delhi 93)*
a) Wrist drop
b) Sensory loss on adjacent sides of III and IV fingers (None)
c) Paralysis of adductor pollicis
d) Loss of supination in extended position

78. Musculo-cutaneous nerve of the arm supplies -
a) Brachio-radialis muscle *(KERALA 94)*
b) Brachialis muscle
c) Triceps muscle
d) Coraco-brachialis

79. When median nerve is paralysed in carpal tunnel syndrome-which of the foilwing occurs -
a) Adductor pollicis paralysis *(JIPMER 95)*
b) Flexor pollicis longus paralysis
c) Flexor pollicis brevis paralysis
d) Loss of sensation of thenar eminence

80. Axial artery of upper limb is derived from -
a) 4th cervical intersegmental *(JIPMER 95)*
b) 5th cervical intersegmental
c) 5th cervical intersegmental
d) 7th cervical intersegmental

81. Injury to ulnar nerve at wrist causes paralysis of
a) Apposition of thumb *(A195)*
b) Abduction at carpometacarpal joint of thumb
c) Adduction at thumb
d) Flexion of metacarpophalangeal joint of middle finger

82. Lower border of scapula corresponds to -
a) D7 b)D9 *(PGI95)*
c) D12 d)D5

83. Which of the following arteries does not take part in scapuler anastomosis - *(TN 95)*
a) Subscapular artery
b) Suprascapular artery
c) Transverse cervical artery
d) Anterior circumflex humeral artery

84. All of following are sequelae of musculocutaneous nerve injury except - *(ALL INDIA 96)*
a) Loss of supination of forearm
b) Loss of flexion of arm
c) Loss of flexion at elbow
d) Sensory loss over lower lateral area of forearm

85. Serratus anterior is supplied by - *(DELHI 96)*
a) Thoracodorsal nerve b) Nerve to subclavius
c) Long thoracic nerve d) Axillary nerve

86. Nerve supply of brachialis is from - *(DELHI 96)*
a) Median nerve b) Musculocutaneous nerve
c) Ulnar nerve d) Posterior interosseus nerve

87. Posterior interosseus nerve of upper limb is a branch of - *(DELHI 96)*
a) Median never b) Ulnar never
c) Radial never d) Thoracodorsai nerve

88. Rupture of supraspinatus manifest as - *(PGI96, 97)*
a) Painful movements
b) Difficulty in initiation of abduction
c) Difficult abduction after 90^0
d) Flat shoulder

89. The nerve supply to pronator teres is - ***(TN* 98)***
a) Median nerve b) Radial nerve
c) Ulnar nerve d) Posterior interosseous nerve

90. Median nerve supplies - *(MAHE 98)*
a) Abductor pollics longus
b) Abductor pollics brevis
c) Adductor pollicis
d) First dorsal interosseous

91. C8 T1 supplies all muscles except - *(ALIMS 98)*
a) Extensor indicis
b) 3rd and 4th lumbricals
c) Abductor digiti minimi
d) Palmar interossei

92. Nail bed of thumb is supplied by - *(Orissa 98)*
a) Radial nerve b) Ulnar nerve
c) Median nerve d) None of the above

93. Tip of coracoid process of scapula gives attachment to- *(Orissa 98)*
a) Long head of biceps muscle
b) Sub-scapularis muscle
c) Short head of biceps muscle
d) Supra -spinatus muscle

94. The structure that is least likely to be compressed in flexion and abduction of shoulder joint - *(AI99)*
a) Supraspinatus muscle b) Long head of biceps
c) Suprascapular nerve d) Sub acromial bursa

95. Matacarpophalangeal joints are flexed in the paralysis of - *(AI99)*
a) Median nerver b) Radial nerve
c) Ulnar nerve d) Axillary nerve

96. Following groups of axillary L.N. are distributed along lateral thoracic artery - *(CUPGEE 99)*
a) Anterior set b) Lateral set
c) Posterior set d) Apical set

---

73) a 74) b 75) a 76) b 77) None 78)b,d 79) c 80) d 81) c 82) a 83) d 84) a,b 85) c 86) b 87) c 88) b 89) a 90) b 91) a 92) c 93) c 94) c 95) b 96) a

97. Deep branch of ulnar nerve does not supply -
a) 2nd lumbrical *(CUPGEE 99)*
b) 4th lumbrical
c) Palmar interossei
d) Dorsal interossri

98. Blood supply of breast is from all except -
a) Internal mammary artery *(AIIMS99)*
b) Intercostal artery
c) Thorocodorsal branch of subscapular artery
d) Thoraco-acromial artery

99. All are sensory except - *(MP 2K)*
a) Saphenous nerve b) Sural nerve
c) Intercostobrachial nerve d) Long thoracic nerve

100. Lower angle of scapula at the level of -
a) T_4 b)T_5 *(DNB2001)*
c)T_6 d)$T_?$

101. Intercostobrachial Nerve is a branch of -
a) 1st intercostal nerve *(JIPMER2002)*
b) 2nd intercostal nerve
c) 3rd intercostal nerve
d) Upper trunk of brachial plexus

102. In deltoid paralysis, which nerve is involved-(PG/*97)*
a) Circumflex N b) Musculocutaneous N
c) Axillary N d) Radial N

103. Ulnar nerve injury at wrist spares which muscle- *(PGI97, 98)*
a) Opponens pollicis b) Palmar interossei
c) Dorsal interossei d) Adductor pollicis

104. Muscles attached to hook of hamate is - *{PGI97)*
a) Flexor carpi ulnaris
b) Flexor retinaculum
c) Flexor hallucis longus
d) Flexor digitorum longus

105. Finger by which all the muscles in the hand can be tested- *(PGI98)*
a) Index b)Ring
c) Thumb d) Middle

106. Arterial supply of latistimus dorsi is- *(PGI 99)*
a) Subscapular A b) Circumflex humeral A
c) Thoracodorsal A d) Lateral thoracic A

107. Nerve damaged due to lunate dislocation (in carpal tunnel)- *(PGI2000)*
a) Median & ulnar b) Median
c) Ulnar d) Radial

108. Adduction of hand at wrist is done by - *(PGI2000)*
a) Flexor carpi radialis
b) Flexor carpi longus
c) Flexor digitorum profundus
d) Extensor carpi ulnaris
e) Flexor digitorum superficialis

109. Muscles supplied by median nerve - *(PGI 01)*
a) Abductor pollicis brevis b) Opponens pollicis
c) Adductor pollicis d) First lumbrical
e) Flexor pollicis brevis

110. Lateral border of cubital fossa is formed by-
a) Pronator teres b) Brachioradialis *(PGI 01)*
c) Supinator d) Branchialis
e) Biceps

111. Small muscles of hand are supplied by - *(PGI 02)*
a) C_6 b)C_7
c) C_8 d)T,
e) T_2

112. Median nerve injury at elbow affects - *(PGI 02)*
a) Adduction of the thumb
b) Flexion at DIP joints of 2nd finger
c) Flexion of PIP of third fmger
d) Flexion at 1st and 2nd DP fingers
e) Flexion on MCP joints except thumbs

113. Low ulnar nerve palsy is characterised by-
a) Claw hand *(PGI 03)*
b) Sensory loss of medial four digits
c) Weakness of grips
d) Inability to extend at M.C.P. joint
e) Inability to abduct the thumb

114. Thenar eminence is supplied by- *(PGI 03)*
a) Median nerve
b) Radlial nerve
c) Ant. Interosseous nerve
d) Post interosseous nerve
e) Ulnar nerve

115. Injury to radial nerve in lower part of spiral groove- *(AI03)*
a) Spares nerve supply to extensor carpi radialis longus
b) Results in paralysis of anconeus muscle
c) Leaves extensions at elbow joint intact
d) Weakness pronation movement

116. Ill head of coracho brachialis is known as -
a) Struthers ligament *(Jipmer04)*
b) Branchioradialis
c) Radial collateral ligament
d) Ulnar ligament

117. Which of the following is not attached to pisiform bone - *(Bihar 03)*
a) Flexor retinaculum
b) Abductor digiti minimi
c) Flexor digitorum superficialis
d) Flexor carpi ulnaris

118. The pronator quadratus has the same innervation as the following muscle - *(AIIMS 03)*
a) Flexor digitorum superficialis
b) Palmaris longus
c) Flexor pollicis longus
d) Flexor digitorum profundus of middle finger

119. Tubercles of Montgomery is seen in -
a) Breast b) Liver *(UPPGMEE04)*
c) Stomach d)Lung

---

97) a 98) c 99)d 100)d 101)b 102)c 103)a 104)b 105)c 106)a 107)b 108)d 109)a,b,d,e
110) b 111) c,d 112) a,b,c,d 113)a,c 114)a,e 115)b 116)a 117)c 118)c 119)a

120. In a vehicular accident, the musculocutaneous nerve was completely severed, but still the person was able to weakly flex the elbow joint. All of the following muscles are responsible for this flexion.
a) Brachioradialis *(AIIMS 04)*
b) Flexor carpi radialis
c) Ulnar head of pronator teres
d) Flexor carpi Ulnaris

121. Nerve passing through the spiral groove of the humerus is - **(***IN04)*
a) Radial Nerve
b) Ulnar Nerve
c) Musculocutaneous Nerve
d) Interosseous Nerve

122. Muscles attached to the greater tubercle of humerus - **(***PGIJune 05)*
a) Supra spinatus b) Teres minor
c) Teres major d) Infraspinatus
e) Pectoralis major

123. Muscles attached to the coracoid process-^G*/June 05)*
a) Coracobranchialisb) Short head of biceps
c) Long head of biceps d) Pectoralis major
e) Pectoralis minor

124. Which of the following does NOT supply the breast with blood- **(***MAHA05)*
a) Lateral thoracic artery
b) Thoracoacromial artery
c) Posterior intercostals arteries
d) Costoclavicular artery

125. Which of the following, among axillary lymph nodes, is a terminal group - *(AIMSNOV05)*
a) Pectoral b) Central
c) Lateral d) Apical

126. The carpal tunnel contains all of the following important structures except - *(AI05)*
a) Median Nerve.
b) Flexor pollicis longus
c) Flexor carpi radialis
d) Flexor digitorum superficialis

127. Compression of a nerve within the carpal tunnel products inability to - *(AIMS May 05)*
a) Abduct the thumb
b) Adduct the thumb
c) Flex the distal phalanx of the thumb
d) Oppose the thumb

128. A 43 year old woman came with a large abscess in the middle of the right posterior triangle of the neck. The physician incised and drained the abscess. Five days later the patient noticed that she could not extend her right hand above her head to brush her hair. Which of the following are the signs and symptoms of additional harm - *(AI 06)*
a) Damage to scalenus medius
b) Injury to suprascapular nerve
c) Cut to spinal part of accessory nerve
d) Spread of infection to shoulder joint

129. Axillary nerve supplies - *(PGI June 06)*
a) Deltoid + Teres major
b) Deltoid + Teres Minor
c) T.Major + T.Minor
d) Coracobrachialis + Short head of biceps

130. Ligament of shoulder joint are all except -
a) Corococlavicular *(Manipal 06)*
b) Glenohumoral
c) Coracohumeral
d) Transverse humeral

131. All of the following drain into azygous vein, except-
a) Left superior intercostals *(PGMCET07)*
b) Accessory homozygous
c) 4 to 11 posterior intercostal on Rt side
d) Esophageal veins

132. In klumpke's paralysis all are involved, except -
a) C_6 b)C_7 *(PGMCET01)*
c)C_8 d) T j

133. Winging of scapula is due to injury to -
a) Long thoracic nerve *(PGMCET 01)*
b) Short thoracic nerve
c) Axillary nerve
d) Suprascapular nerve

134. Axillary sheath is derived from - *(PGMCET01)*
a) Prevertebral fascia
b) Clavipectoral fascia
c) Deep layer of cervical fascia
d) Pretracheal fascia

135. Power grip of hand depends on - *(Corned 07)*
a) Short flexor of fingers b) Lumbricals of hand
c) Long flexors of the fingers d) Palmaris brevis

136. Which of the following nerves accompanies the profunda brachii artery - *(Corned 0 7)*
a) Ulnar b)Musculocutaneous
c) Radial d) Median

137. Erb's point is formed by - *(Corned 07, PGI03)*
a) C_4 and C_5 b) C_5 and C_6
c) C_6 and C_7 d) C_8 and T $_{1}$

138. In Erb-Duchene paralysis, the injury is limited to the- *(Corned 07)*
a) 2^{nd} and 3^{rd} cervical nerves
b) 3^{rd} and 4^{th} cervical nerves
c) 4^{th} and 5^{th} cervical nerves
d) 5^{th} and 6^{th} cervical nerves

139. All are functions of Latissimus Dorsi except -
a) External rotation of shoulder *(MAHE07)*
b) Extension
c) Adduction
d) Medial rotation

140. Nerve supply of Trapezius - *(MAHE 07)*
a) Accessory Nerve b) Hypoglossal Nerve
c) Troclear Nerve d) Trigeminal Nerve

141. The "rotator cuff" muscle includes all except -
a) Supraspinatus b) Infraspinatus *(UP 07)*
c) Teres major d) Subscapularis

120) c 121) a 122) a,b,d 123)a,b,e 124)d 125)d 126)c 127)a 128)c 129)b 130)a 131)a 132)a 133)a
134) a 135) c 136) c 137)b 138) d 139) a 140) a 141) c

142. In Ulnar nerve injury in arm, all of the following are seen except - *(AIMSNov 07)*
a) Hypothenar atrophy
b) Adduction of thumb
c) Loss of sensation of medial 1/3 of the hand
d) Claw hand

143. In obstruction of second part of axillay artery, the anostomosis between the following artery will maintain the blood supply of upper limb -
a) Deep branch of transverse cervical artery & subscapular artery *(AIMSNov 07)*
b) Anterior & posterior circumflex humeral
c) Posterior circumflex humeral & circumflex scapular artery
d) Suprascapular & anterior circumflex humeral artery

144. If median nerve is injured at the wrist then loss of function of all of the following will take place except-
a) Lumbrical muscles to the Index finger.
b) Lumbrical muscles to the middle finger.
c) Muscles of the thenar eminence *(AiimsMay08)*
d) Adductor pollicis

145. Movements taking place during abduction of shoul der joint are all except - *(Aiims May 08)*
a) Medial rotation of scapula
b) Axial rotation of humerus at acromioclavicular joint
c) Elevation of humerus
d) Movements at clavicular end of sternoclavicular joint

146. All are functions of Latissimus Dorsi except -
a) External rotation of shoulder *(Manipal 08)*
b) Extension
c) Adduction
d) Medial rotation

147. Nerve supply of Trapezius - *(Manipal 08)*
a) Spinal accessory nerve b) Hypoglossal nerve
c) Trochlear nerve d) Trigeminal nerve

148. Which of the following muscle is supplied by deep branch of the ulnar nerve - *(DPGEE 08)*
a) Adductor pollicis
b) Opponens pollicis
c) Abductor pollicis brevis
d) Flexor digitorum profundus

149. The following structures pass through teh carpel tunnel except - *(DPGEE 08)*
a) Median nerve
b) Ulnar artery
c) Flexor carpi radialis tendon
d) Flexor pollicis longus tendon

150. Not seen in distal radial nerve injury is -
a) Inability to extend fingers *(DPGEE 08)*
b) Weakness fo extensor carpi radialis brevis
c) Loss of sensations over dorsum of hand
d) Paralysis of Brachiradialis

151. What is the action of anterior fibres of deltoid ?
a) Flexion *(APPG 08)*
b) Lateral rotation
c) Flexion and medial rotation
d) Extension and lateral rotation

152. Fascia around nerve bundle of brachial plexus is derived from - *(AIMS Nov 08)*
a) Prevertebral fascia
b) Pretracheal fascia
c) Investing layer
d) Superficial cervical fascia

153. Contents of anatomical snuffbox are -
a) Radial artery *(PGI Dec 08)*
b) Tendon of abductor pollicis longus
c) Tendon of extensor pollicis brevis
d) Scaphoid bone
e) Superficial cutaneous branch of radial nerve

154. True about pectoralis major muscle -
a) Abductor & Internal rotator of shoulder
b) Blood supply by perforating branch of internal thoracic artery *(PGI Dec 08)*
c) Blood supply by intercostal artery
d) Nerve supply by intercostal artery
e) Inserted into 2nd to 6th costal cartilage

155. Concerning brachial plexus, which of the following facts are true - *(PGI Dec 08)*
a) Formed by spinal nerve C4-C7
b) Most common site of injury is upper trunk
c) Injury may occur during breech delivery
d) Radial nerve is branch of medial cord
e) Lower trunk injury results in hand deformity

156. First extensor compartment of wrist have which of the following structures - *(PGI Dec 08)*
a) Extensor pollicis brevis
b) Extensor carpi radialis longus
c) Extensor carpi radialis brevis
d) Extensor digiti minimi
e) Abductor pollicis longus

157. Muscle supplied by median nerve - *(PGI Dec 08)*
a) Opponens pollicis
b) Abductor pollicis brevis
c) Flexor pollicis brevis
d) First lumbricals
e) Adductor pollicis

158. Artery in anatomical snuffbox is - *(AI09)*
a) Radial b) Brachial
c) Ulnar d)Interosseous

159. Deltoid ligament is attached to all, except -
a) Medial malleolus *(AIMS May 09)*
b) Medial cuneiform
c) Spring ligament
d) Sustentaculum tali

160. Which of the following movements of thumb are not affected in redial nerve inj ury - *(PGI June 09)*
a) Opposition b) Abduction
c) Adduction d) Extension
e) Flexion

142) b 143) a 144)d 145)a 146)a 147)a 148)a 149)b 150)a 151)c 152)a 153)A11 154)b,c,d 155)a,b,c,e 156) a,b 157)a,b,c,d 158) a 159) b 160)a,b,c

161. Which of the following muscles is enclosed within the calvipectoral fascia - *(COMED 09)*
a) Pectoralis major b) Serratus anterior
c) Coracobrachialis d) Subclavius

162. The ossification center of pisiform bone appears at the age of - *(COMED 09)*
a) 10-11 years b) 12-13 years
c) 14-15 years d) 15-16 years

163. Intrinsic muscles of hand are innervated by- *(DELHIPG Feb.09)*
a) Ulnar nerve b) Radial nerve
c) Median nerve d) All of the above

164. Fall on outstretched hand leads to fracture of the following bones - *(DELHI PG Feb.09)*
a) Scaphoid bone, capitate and clavicle
b) Scaphoid, clavicle
c) Head of ulna
d) Radial styloid process

165. First dorsal interosseous muscle of hand is supplied by- *(DELHIPG Feb.09)*
a) Deep branch of ulnar nerve
b) Superficial branch of ulnar nerve
c) Median nerve
d) Radial nerve

166. Which of the following arteries supply pectoralis major muscle - *(PGINov 09)*
a) Pectoral branches of thoracoacromial artery
b) Intercotal artery
c) Lateral thoracic artery
d) Subclavian artery
e) Internal mammary artery

167. Deep branch of ulnar nerve supplies - *(PGINov 09)*
a) Adductor pollicis
b) Flexor digitorum superficialis
c) Ist himbrical
d) 3rd lumbrical
e) Palmaris brevis

168. True about peripheral nerve injury in upper limb -
a) Radial nerve injury cause anaesthesia over anatomical snuffbox *(PGINov 09)*
b) Median nerve injury cause wrist drop
c) Ulnar nerve injury cause claw hand
d) Index finger anesthesia is caused by median nerve injury
e) Thumb anaesthesia is caused by ulnar nerve injury

169. Content (s) of bicipital groove is/are -
a) Synovial membrane of shoulder jt (PGI Nov 09)
b) Ascending branch of anterior circumflex artery
c) Ascending branch of posterior circumflex artery
d) Radial artery
e) Coracobrachialis muscle

170. The following structure does not pass through flexor retinaculum - *(AIIMS Nov 09)*
a) Ulnar N.
b) Median N.
c) Flexor digitorum profundus
d) Flexor digitorum superficialis

171. All of the following muscles retract the scapula except - *(AIIMS May 10)*
a) Trapezius b) Rhomboid major
c) Rhomboid minor d) Levator scapulae

172. All of the following movements occur during abduction of shoulder except - *(AI10)*
a) Elevation of humerus
b) Axial rotation of clavicle
c) Medial rotation of scapula
d) Acromioclavicular joint movement

173. The following structures are attached to the greater tuberosity of the humerus except - *(DPG10)*
a) Supraspinatus muscle
b) The coracohumeral ligament
c) Teres minor muscle
d) Subscapularis muscle

174. Muscle that can extend the middle distal phalanx of the index finger include all except - *(DPG 10)*
a) The first dorsal inter interosseous
b) The first lumbrical
c) The second palmar interosseous
d) Extensor carpi radialis longus

175. Ulnar nerve injury at wrist spares which muscle- *(DPG 10)*
a) Opponens pollicis b) Palmar interossei
c) Dorsal interossei d) Adductor pollicis

176. Erb's palsy occurs due to involvement of_____ of brachial plexus - *(Maharashtra 10)*
a) Upper trunk b) Middle trunk
c) Medisl cord d) Lateral trunk

177. Which are not the flexors of forearm - *(PGIMay 10)*
a) Pronater teres b) Brachialis
c) Brachioradialis d) Anconeus
e) Flexor pollicis longus

178. True about radial nerve - *(PGIMay 10)*
a) Branch of posterior cord
b) Nerve of extensor compartment of forearm
c) Arise from C5-T1
d) Anterior interosseous nerve is branch of it
e) Supply skin of extensor compartment

179. Rotator cuff is/are formed by all except- *(PGI May 10)*
a) Supraspinats b)Infraspinatus
c) Teres minor d) Teres major
e) Subscapularis

180. Carpel tunnel syndrome is caused by all except - *(AIIMS May 11)*
a) Amylodosis b) Hypothyroidism
c) Addisson's disease d) Diabetes mellitus

181. Neurovascular bundle in axilla is surrounded by sheath derived from - *(AIIMS May 11)*
a) Prevertebral fascia b) Pretracheal fascia
c) Clavipectoral fascia d) Axillary sheath

182. All of the following muscles retract the scapula except - *(AIIMS May 11)*
a) Trapezius b) Rhomboid major
c) Rhomboid minor d) Levator scapulae

161) d 162)b 163) a,c 164)a 165)a 166)a,b 167)a,d 168)a,c,d 169)b 170)a 171)d 172)c 173)d 174)d 175) a 176) a 177)d,e 178)a,b,c,e 179)d 180)c 181)a 182)d

183. Boundary of triangle of auscultation is not formed by- *(ARMS May 11)*
a) Serratus anterior b) Scapula
c) Trapezius d) Latissimusdorsi

184. Axillary abscess is safely drained by which approach - *(ARMSMay 11)*
a) Medial b) Posterior
c) Lateral d) Floor

185. Which amongst the following is a branch from the trunk of brachial plexus? *(A111)*
a) Suprascapular nerve b) Long Thoracic Nerve
c) Dorsal Scapular Nerve d) Nerve to subclavius

186. Main muscle of opposition is- *(Punjab 10)*
a) Abductor pollicis brevis b) Flexor pollicis brevis
c) Opponens pollicis d) Adductor pollicis

187. Which tendon is frequently absent in upper limb -
a) Flexor carpi ulnaris *(Punjab 10)*
b) Flexor digitorum profundus
c) Extensor carpi radialis brevis
d) Palmaris longus

188. Carpal tunnel syndrome involves - *(PUNJAB 11)*
a) Median nerve b) Anterior interosseous nerve
c) Ulnar nerve d) Radial nerve

189. Which of the following is a modification of deep fascia? *(PUNJAB 11)*
a) Extensor etinaculum
b) Palmar aponeurosis
c) Fibrous flexor sheath

190. Rider's bones are ossification of - *(PUNJAB 11)*
a) Adductor brevis b) Adductor longus
c) Adductor magnus d) None

191. Anatomical snuff box is formed by all except -
a) Abductor pollicis longus *(Jipmer10)*
b) Extensor pollicis longus
c) Extensor pollicis brevis
d) Extensor carpi radialis

192. All the following structures are attached to coracoid process except - *(Jipmer10)*
a) Brachialis b) Corachobrachialis
c) Short head of biceps d) Long head of biceps

193. Short head of biceps is attached to- *(Jipmer 10)*
a) Coracoid process b) Supraglenoidtubercle
c) Acromion process d) Bicipital groove

194. All are branches of posterior cord of brachial plexus except- *(Jipmer10)*
a) Axillar nerve b) Long thoracic nerve
c) Thoracodorsal nerve d) Radial nerve

195. Superficial branch of ulnar nerve supplies -
a) Palmaris brevis *(Jipmer10)*
b) Abductor pollicis
c) Biceps brevis
d) Flexor carpi radialis

196. Short head of biceps is attached to - *(Jipmer 11)*
a) Coracoid process b) Supraglenoid tubercle
c) Acromion process d) Bicipital groove

197. Carpal tunnel syndrome is due to the compression of- *(Jipmer 11)*
a) Median nerve b) Anterior interosseous nerve
c) Radial nerve d) Ulnar nerve

198. Which of the following is also known as the labourer's nerve ? *(NEET/DNB Pattern)*
a) Ulnar nerve
b) Median nerve
c) Anterior interosseous nerve
d) Radial nerve

199. All of the following are composite muscles except
a) Adductor magnus *(NEET/DNB Pattern)*
b) Pectineus
c) Flexor digitorum profundus
d) Flexor digitorum superflcialis

200. How to test for the long thoracic nerve?
a) Touch the opposite shoulder
b) Shoulder shrug *(NEET/DNB Pattern)*
c) Raise the arm above the head
d) Lift an object from the ground

201. False about 1st metacarpal is - *(NEET/DNB Pattern)*
a) Shortest and stoutest of all metacarpals
b) Does not articulate with any other metacarpal bone
c) Rotated medially through 90 degrees with respect to other metacarpals
d) The base is occupied by a condylar articular surface for trapezium

202. Fascia around nerve bundle of brachial plexus is derived from - *(NEET/DNB Pattern)*
a) Prevertebral fascia
b) Pretracheal fascia
c) Investing layer
d) Superficial cervical fascia

203. Fascial sleeve around bundle of brachial plexus is derived from - *(NEET/DNB Pattern)*
a) Prevertebral fascia
b) Pretracheal fascia
c) Carotid fascia
d) Investing layer of deep fascia

204. Cranial part of accessory nerve supplies -
a) Sternocleidomastoid *(NEET/DNB Pattern)*
b) Trapezius
c) Levator scapulae
d) Levator palatini

205. Deep flexors of forearm are supplied by -
a) Median nerve *(NEET/DNB Pattern)*
b) Ulnar nerve
c) Radial nerve
d) Musculocutaneous nerve

206. Which muscle is inserted into the floor of the intertubercular sulcus of the humerus ?
a) Latissimus dorsi *(NEET/DNB Pattern)*
b) Teres major
c) Pectoralis major
d) Deltoid

183) a 184)d 185)a>d 186)c 187) d 188) a 189) a 190)b 191)d 192) d 193) a 194)b 195) a 196) a
197) a 198)b 199)d 200)c 201)d 202)a 203)a 204) d 205)a 206) a

207. All are true about proximal humans attachment except - *(NEET/DNB Pattern)*
a) Supraspinatus atLT b) Subscapularis at LT
c) Teres minor at GT d) Infraspinatus at GT

208. Boundries of upper tringular space include all except - *(NEET/DNB Pattern)*
a) Teres minor b) Teres major
c) Subscapularis d) Triceps

209. All are contents of cubital fossa except -
a) Median nerve *(NEET/DNB Pattern)*
b) Biceps tendon
c) Brachial artery
d) Ulner nerve

210. Froments sign is seen - *(NEET/DNB Pattern)*
a) Ulnar nerve palsy
b) Median nerve palsy
c) Anterior interosseous nerve palsy
d) Radial nerve palsy

211. Roots involved in Erb's palsy are - *(NEET/DNB*
a) Posterior primary rami of C6- C7 *Pattern)*
b) Anterior primary rani of C5-C6
c) Posterior primary rami of C8-T1
d) Posterior primary rami of C7-C8

212. The interossei are supplied *hy-(NEET/DNB Pattern)*
a) Superficial palmar branch of radial artery
b) Deep palmar branch of ulnar artery
c) Superficial palmar arch
d) Deep palmar arch

213. Which nerve originates from trunk of brachial plexus - *(NEET/DNB Pattern)*
a) Long thoracic nerve b) Dorsal scapular nerve
c) Axillary nerve d) Suprascapularnerve

214. Muscle ith dual Nerve supply- *(NEET/DNB Pattern)*
a) FDS b) Deltoid
c) Brachialis d) FCU

215. Winging of scapula is due to which of these conditions? *(NEET/DNB Pattern)*
a) Long thoracic nerve palsy
b) Thoraco-dorsal nerve palsy
c) Erb's palsy
d) Klumpke's palsy

216. Following a deep cut overlying the hypothenar emminence, it is observed that the patient cannot hold a sheet of paper between the 2nd and 3rd digits. Which of the following nerves is most likely damaged? *(NEET/DNB Pattern)*
a) Deep branch of ulnar nerve
b) Deep branch of radial nerve
c) Superficial branch of ulnar nerve
d) Median nerve

217. Which ligament transfers weight from peripheral to axial skeleton? *(NEET/DNB Pattern)*
a) Coracoclavicular ligament
b) Acromio-clavicular ligament
c) Ligament of Bigelow
d) Stemo-clavicular ligament

218. Froments's sign is seen in which nerve palsy?
a) Ulnar nerve palsy *(NEET/DNB Pattern)*
b) Median nerve palsy
c) Anterior interosseous nerve palsy
d) Radial nerve palsy

219. All of the following are considered to be rotator cuff muscles except - *(NEET/DNB Pattern)*
a) Supraspinatus b) Infraspinatus
c) Teres minor d) Teres major

220. Injury tolong thoraci nerve. It can be tested by asking the patient - *(NEET/DNB Pattern)*
a) Shrug the shoulder
b) Raise the arm above head
c) Touch opposite shoulder
d) Left a heavy object.

221. The term "guyon's canal" is in relation to which of the following? *(NEET/DNB Pattern)*
a) Anterior interosseus nerve
b) Ulnar nerve
c) Median nerve
d) Radial artery

222. Not present in proximal row of carpal bone -
a) Lunate *(NEET/DNBPattern)*
b) Scaphoid
c) Trapezium
d) Pisiform

223. Nerve related to anatomical snuff box -
a) Ulnar *(NEET/DNBPattern)*
b) Median
c) Superficial branch of radial
d) Axillary

224. Labourer's nerve is - *(NEET/DNB Pattern)*
a) Ulnar b) Radial
c) Median d) Superficial br of radial

225. Spinal partof accessory nerve supplies -
a) Platysma *(NEET/DNBPattern)*
b) Sternocleidomastoid
c) Stylohyoid
d) Diagastric

226. Biceps brachi is supplied by - *(NEET/DNB Pattern)*
a) Radial nerve b) Median nerve
c) Musculocutaneous nerve d) Axillary nerve

227. About radial bone true except - *(NEET/DNB Pattern)*
a) Radial groove is present
b) Major contributor to wrist joint
c) Radial artery lies medial to styloid process of radius
d) Medial bone of forearm

228. Contents of midpulmar space are all except -
a) 2nd lumbrical b) FDP of 3rd finger
c) 1 st lumbrical d) FDP of 4th finger

229. Which intrinsic muscle is not supplied by medion nerve- *(NEET/DNB Pattern)*
a) Abductor pollicis brevis
b) Adductor pollicis brevis
c) Opponens pollicis
d) First lumbrical

207) a 208) c 209)d 210)a 211)b 212)d 213)d 214)c 215)a 216)a 217)a 218)a 219)d 220)c
221)b 222) c 223) c 224) c 225) b 226) c 227) b 228) c 229) b

230. Winging of scapula is due to paralysis of - *(NEET/DNB Pattern)*
a) Pectoralis major
b) Serratus anterior
c) Peetoralis minor
d) Latissimus dors

231. Axillary nerve suppies - *(NEET/DNB Pattern)*
a) Supraspinatus b) Teres minor
c) Teres major d) Infraspinatus

232. All arteries involved in anastomosis around scapula except - *(NEET/DNB Pattern)*
a) Circumflex scapular b) Suprascapular
c) Inffascapular d) Tamsverse cervical

233. Radial styloid process gives attachement to -
a) ECU b) Brochioradialis
c) ECR d) Anconeus

234. Erb's palsy involves - *(NEET/DNB Pattern)*
a) C_5C_6 b) **C.T,**
c) T,T_2 d)C_6C_7

235. Posterior wall of axilla is not formed by -
a) Subscapularis *(NEET/DNB Pattern)*
b) Latissimus dorsi
c) Supraspinatus
d) Teres major

236. Klumpke's paralysis affect - *(NEET/DNB Pattern)*
a) C_5C_6 b) c_6c_7
c) C_8T, d) C_4C_5

THORAX

237. SA node is located - *(AI88)*
a) Epicardially b) Intramyocardial
c) Subepicardially d) Endocardially

238. Muscle of expiration - *(MAHE98)*
a) Diaphragm b) Internal intercostal
c) External intercostal d) Rect. Abdominis

239. Trachea begins at the level of - *(KARNAT89)*
a) Lower border of thyroid cartilage
b) Lower border of cricoid
c) Lower border of Hyoid
d) Fourth cervical vertebra

240. The developement of septal defects in the fetal heart occurs at - *(JIPMER 91)*
a) 2-4 weeks b) 5-8 weeks
c) 9-12 weeks d) 12-18 weeks

241. Lung abscess secondary to aspiration is most often seen in - *(PD187)*
a) Anterior upper lobe b) Posterior upper lobe
c) Posterior lower lobe d) Apical lower lobe

242. All generation of bronchus are fully present by -—weeks of intrauterine life - *(AIIMS 80, AMU 89)*
a) 6^{th} b) 10^{th}
c) 16^{th} d)24^{th}

243. Foreign body aspiration most commonly enters -
a) Right main bronchus *(TN 98)*
b) Left man brounchus
c) Can enter both equally
d) None of the above

244. The lenght of an adult trachea is - *(AIIMS 81)*
a) 6 to 8 cm b) 10 to 11 cm *(DNB 83)*
c) 14 to 15 cm d) 16 to 20 cm

245. An adult trachea has a diameter of - *(AIIMS 79)*
a) 0.5-1 cm b) 1.2-1.6 cms *(DNB 83)*
c) 2.5-3 cms d) 3-3.5 cms

246. Carina in an adult is at the level of - *(PGI 81*
a)T_2 b) T_3 *Rohtak 87)*
c) T_4 d) T_{fi}

247. During quiet breathing, the lower border of the lung is found at the level of the - *(AIIMS 78*
a) Sixth rib in the midclavicular line *PGI81)*
b) Tenth rib in the midaxillary line
c) Eighth rib in the midaxillary line
d) Twelfth rib in the scapular line

248. The lungs - *(PGI 79, 81)*
a) Receive parasympathetic innervation from the vagus nerves
b) Receive sympathetic innervation from preganglionic nerve cell bodies located in the intermediolateral cell column of upper thoracic spinal cord segments
c) Are innervated by visceral afferents that utilize both the vagal and sympathetic pathways to enter the central nervous system
d) Are drained by lympathic pathways, both sides of which (left and right) ter minate in the thoracic duct

249. The left coronary artery - *(AIIMS 79, PGI 80)*
a) Has a branch that commonly anastomoses with the right coronary in the coronary sulcus
b) Has a branch that commonly anastomoses with a branch of the right coronary in the intervertricular sulcus
c) Is short in that soon after its origin it bifurcates into the anterior interventricular and circumfles arteries
d) Passes anterior to the pulmonary trunk

250. Anterior interventricular artery is a branch of the----------artery - *(JIPMER 80, Delhi 86)*
a) Right marginal b) Pulmonary trunk
c) Right coronary d) Left coronary

251. At the midaxillary line, parietal pleura extends upto the level of- *(AIIMS 80, 92, 93)*
a) 8^{th} rib b) 9^{th} rib
c) 10^{th} rib d) 11^{th} rib

252. The coronary sulcus is occupied by the----------sinus- *(PGI 80, DNB 89)*
a) Pulmonary b) Coronary
c) Aortic d) Oblique

253. Posterior interventricular artery is a branch of the----------artery - *(PGI 81, Delhi 85)*
a) Circumflex b) Left coronary
c) Right coronary d) None of the above

230) b 231)b 232) c 233) b 234) a 235) c 236) c 237) c 238) b,d 239) b 240) b 241) b,d 242) c 243) a
244) c 245) b 246) c 247) a,c 248)a,b,c 249)a,b,c 250) d 251) c 252) b 253) c

254. The esophagus - *(PGI81, 84)*
a) Passes through the esophageal hiatus at vertebral level T-10
b) Is found between the trachea and the thoracic duct in the superior mediastinum
c) Is typically ventral to the azygos vein in the lower throax
d) Is adjacent to the right atrium as it passes posterior to the heart

255. Which of the following statements about the thoracic wall is/are true - *(PGI 82, 88)*
a) The terminal branches of the typical posterior intercoastal arteries anastamose with branches of the anterial intercostal arteries
b) The neurovascular bundle in the intercostal space passes along the superior border of the rib
c) The internal thoracic artery ends by the dividing into superior epigastric and musculophrenic arteries
d) The sternal angle is at the level of the third Costal Cartilage

256. The sinus node is supplied by - *(PGI 83)*
a) Right coronary artery
b) Right anterior ventricular artery
c) Left anterior descending artery
d) Artrio ventricular nodal artery

257. The terminal branches of the internal mammary artery are - *(PGI 83)*
a) Superior epigastric
b) Right gastroepiploic
c) Musculophrenic artery
d) Superior pancreatico duodenal

258. The thoracic duct crosses from the right to the left at the level of - *(PGI 86, AI88)*
a) T12 vertebra b)T6 Vertebra
c) T4 Vertebra d) T2 Vertebra
e) C7 Vertebra

259. The narrowest part of the alimentary canal is -
a) 60 cm proximal to ileocecal junction *(PGI 87)*
b) Duodenum 1st part
c) Esophagogastric in
d) Cricopharynx

260. Thoracic duct is also called - *(AIIMS 87)*
a) Hensen'sduct b) Bernard's duct
c) Pecquet duct d) Hoffman's duct

261. The esophageal opening in diaphragm is at the level of- *(AI88)*
a) T10 b) T9
c) T8 d)Tll
e) T12

262. Right coronary artery supplies all except - *(PGI 88)*
a) Apex of heart b) Intraventricular septum
c) Inter atrial septum d) S A mode

263. The arterial supply of the bundile of His is -*(AP 88)*
a) Interventricular branch of left coronary
b) Interventricular branch of right coronary
c) Marginal
d) Right aortic sinus

264. Bronchopulmonary segment contains all except -
a) Independent pulmonary artery *(AIIMS 89)*
b) Independent pulmonary vein
c) Tertiary bronchiole
d) Conical segment

265. Which of the following structures do not pierce the diaphragm - *(AI 90)*
a) IVC b) Aorta
c) Esophagus d) Greater splanchnic nerve

266. All are true about trachea except - *(AI 90)*
a) 15 cm long
b) Bifurcates at C7
c) Lined by pseudo stratified columnar epithelum
d) Tracheal cartilage is circular

267. The IVC opnening in the diaphragm is at the level of - *(Kerala 90)*
a) T8 b)T10
c) T12 d)Ll

268. Bronchial veins of the right side open into - *(Kerala 90)*
a) Superior vena cava b) Azygos vein
c) Hemiazygos vein d) None of the above

269. Which is true about apex of the left lung - *(AI 91)*
a) Subclavian artery forms a groove
b) Middle cervical ganglion lies behind it
c) Closely adherent to cervical pleura
d) Ends at second costal cartilage

270. All the direct articulation of true rib except -
a) Costo sternal joint *(AI 91)*
b) Costo chondral joint
c) Costo transverse joint
d) Costo vertebral joint

271. Which is true about arch of aorta - *(AI91)*
a) Starts at 3rd right ICS and ends at left 3rd ICS
b) Left vagus arches over it
c) Lies behind body of sternum
d) It is closely related to parietal pleura

272. Narrowest part of the esophagus is - *(IN 91)*
a) Cricopharynx
b) Esophagogastric junction
c) At the level of arch of aorta
d) Level of tracheal bifurcation

273. Length of Esophagus is- *(Kerala 91)*
a) 10 cm b) 15 cm
c) 25 cm d) 40 cm

274. The base of the heart is related to - *(Jipmer 91)*
a) Azygos vein
b) Tracheal bifurcation
c) Descending aorta
d) Central tendon of diaphragm

275. Which of the following about parietal pleura is correct - *(AI 92)*
a) Supplied by vagus N
b) Sensitive to pain
c) Derived from splanchnopleural layer of lateral plate mesoderm
d) Extends upto T2

254) a,b,c 255) a,c 256) a 257) a,c 258) None 259) d 260) c 261) a 262) a 263) a,b 264) b 265) b 266) b,d 267) a 268) b 269) a 270) a 271) d 272) a 273) c 274) c 275) b

276. Left coronary artery supplies all except - *(AI92)*
a) SA node b) Posterior 1/3 of septum
c) Left ventricle d) Apex of heart

277. The Inferior Surface of the heart is formed by -
a) Right and Left Ventricle *(AI 93)*
b) Right atrium and Ventricle
c) Inter ventricular Septum
d) IVC and Right Ventricle

278. The following form the boundaries of Koch's triangle except - *(Jipmer 93)*
a) Tendon of Todaro
b) Septal leaflet of tricuspid valve
c) Orifice of coronary Sinus
d) Origin of Left Coronary artery

279. Atrioventricular node is supplied by - *(Jipmer 93)*
a) Left Coronary artery
b) Right Coronary artery
c) Left circumflex artery
d) Left anterior descending artery

280. Base of the heart is formed by - *(Jipmer 93)*
a) Right atrium b) Left atrium
c) Both atria d) Left Ventricle

281. Rt middle lobe consists of which broncho pulmonary segment - *(Delhi 93, AI93, PGI2K)*
a) Superior & inferior b) Medial and lateral
c) Anterior and posterior d) Apical and lateral

282. Coronary sinus opens into - *(Kerala 94)*
a) inferior vena cava b) right atrium
c) left atrium d) great cardiac vein

283. If a foreigh body enters in to the nose accidentally it enters - *(Jipmer 95)*
a) Apical segment of rt. Lower lobe
b) Medial segment of rt. Middle lobe
c) Basal segment of It. Lung
d) Posterior segment of rt. Lower lobe

284. Great cardiac vein lies in - *(PGI95)*
a) Anterior IV groove b) Posterior IV groove
c) Anterior AV groove d) Posterior AV groove

285. In a cross section of thorax at T4, which is found - *(AI 95)*
a) azygos vein b) branchiocephalic artery
c) arch of aorta d) left subclavian

286. Structure arching over hilum of right lung is -
a) Azygos vein *(A196)*
b) Thoracic duct
c) Superior vena cava
d) Arch of aorta

287. Lower border of costodiaphragmatic recess is at level of following Rib - *(AI96)*
a) 6^{th} Rib b) 8^{th} Rib
c) 10^{th} Rib d) 12^{th} Rib

288. One of the following ribs articulate directly with sternum except - *(Delhi, 96)*
a) 2^{nd} rib b) 5^{th} rib
c) 4^{th} rib d) 8^{th} rib

289. Sensory nerve supply of trachea is - *(Kerala 96)*
a) Superior laryngeal nerve
b) Recurrent laryngeal nerve
c) Internal laryngeal nerve
d) Both Recurrent laryngeal & Internal laryngeal nerve
e) Glossopharyngeal nerve

290. The most dependant part of the lung in the supine position - *(CUPG.EE 96)*
a) Upper apical b) Lower apical
c) Basal d) Upper anterior

291. Bundle of HIS is - *(Karnat 96)*
a) Highly susceptible to Ishaemia
b) Mainly supplied by right coronary
c) Mainly supplied by left coronary
d) Has a dual blood supply

292. Part of heart lying in front of oeophagus - *(IN97)*
a) Left Atrium b) Left ventricle
c) Right ventricle d) Right Atrium

293. Correct about right and left main bronchi is -
a) Right bronchus is more vertical and broader than the left *(PGI 97)*
b) Right bronchus is more vertical and has a narrow calibre than the left
c) Left bronchus is more vertical and broade than right
d) Left bronchus is more vertical and narrower than ritght

294. True ribs are - *(CUPGE 97)*
a) 7^{th} rib b) 8^{th} rib
c) 10^{th} rib d) 12^{th} rib

295. All the following veins drain into coronary sinus except - *(IN 98, AMC 88)*
a) Great cardiac vein b) Middle cardiac vein
c) Small cardiac vein d) Anterior cardiac vein

296. All open in right atrium except - *(M.P 98)*
a) Sup. vena cava b) Coronary sinus
c) Great cardiac vein d) Inf. vena cava

297. True about thoracic duct - *(MP 98)*
a) It passes through aortic opening of diaphragm
b) It starts at the level of T3 vertebra
c) It opens into superior vena cava
d) It crosses from right to left at T5 vertebra

298. Which one of the following structure is NOT situated between the nect of the first rib and apex of the lung - *(ICS 98)*
a) First posterior intercostal vein
b) superior intercostal artery
c) Thoracic duct
d) Sympathetic trunk

299. All are insert in the first rib except - *(AIIMS 98)*
a) Scalenus anterior
b) Scalenus posterior
c) Scalenus medius
d) Supra pleural membrane

276)b 277)a 278)d 279)b 280)c 281)b 282)b 283)a 284)a,d 285)c 286)a 287)c 288)d 289)b
290) b 291) d 292) a 293) a 294) a 295) d 296) c 297) a,d 298) c 299) b

300. Oesophagus reveives blood sumply from all except -
a) Interior Thyroid artery *(A199)*
b) Inerior phrenic artery
c) Internal mammary artery
d) Bronchial artery

301. The oblique sinus of pericardium lies -
a) Behind the left atrium *(AMC99)*
b) Behind the ascanding aorta
c) Behind the SVC
d) Anterior to pulmonary trunk

302. Which of the following is not a boundary of the Koch's triangle - *(AIIMS2K)*
a) Tendon of Todaro b) Limbus fosa ovalis
c) Coronary sinus d) Tricuspid valve ring

303. Sympathetic innervation of heart is by - *(DNB 2001)*
a) T_rT_3 b) T_2-T_6
c) T_3-T_7 **d) Lj- L_5**

304. Length of trachea - *(TN 2002)*
a) 10-12 cm b) 1 cm -10 cm
c) 15 cm d) 22.5 cm

305. Which one of these muscles is not cut in postero lateral thoracotomy- *{PGI98)*
a) Serratus anterior b) Pectoralis major
c) Latissimus dorsi d) Intercostals

306. Esophagus enters through - *{PGI99)*
a) Central tendon of diaphragm
b) Along aortic opening
c) Muscular part of diaphragm
d) Rt. crus

307. Part of left lower lobe of lung except- (*PGI2000)*
a) Superior b) Anteromedial Basal
c) Post, basal d) Medial basal

308. Which of the following statements is correct regarding the trachea - *{PGI 01)*
a) During deep inspiration, the tracheal bifurcation may descend to T_6 level
b) The left bronchus is wider and shorter
c) The arch of the aorta lies the right bronchus and is anterior to it
d) The sensory supply of trachea is by the vagus
e) In the thorax, the esophagus lies anterior to the trachea

309. Blood supply of lungs are - *{PGI 02)*
a) Pulmonary artery b) Pulmonary vein
c) Bronchial artery d) Intercostal artery
e) Internal thoracic artery

310. True statements about esophageal hiatus - *{PGI 02)*
a) Lies between two crura of diaphragm
b) At the livel of D_{12} vertebra
c) Vagus nerve passes through it
d) Lie in rt. crura of diaphragm
e) Thoracic duct passes through it

311. Branches of R.C.A. (Rt. Coronary artery) -*(PGI 03)*
a) Obtuse marginal b) Acute marginal
c) Posterior interventricular d) Diagonal,
e) Posterior ventricular

312. Structures passing through the aortic hiatus of diaphragm are- *{PGI 03)*
a) Aorta b) Azygos vein
c) Hemiazygos vein d) Thoracic duct
e) Sympathetic trunk

313. Bronchial artery supplies upto - *{Jipmer 03)*
a) Terminal bronchiole b) Respiratory bronchiole
c) Alveolus d) Secondary bronchus

314. The commonest variation in the arteries arising from the arch of aorta is - *{AI03)*
a) Absence of brachiocephalic trunk
b) Left vertebral artery arising from the arch
c) Left common carotid artery arising from brachiocephalic trunk
d) Presence of retroesophageal subclavian artery

315. The lumbar region of the vertebral column permits all of the following movements except -
a) Flexion b) Extension *{AI 03)*
c) Lateral flexion d) Rotation

316. The middle cardiac vein is located at the - *{AI 03)*
a) Anterior interventricular sulcus
b) Posterior interventricular sulcus
c) Posterior AV groove
d) Anterior AV groove

317. In angina pectoris, the pain radiating down the left arm is mediated by increased activity in afferent (sensory) fibres contained in the - *{AIIMS 03)*
a) Carotid branch of the glossopharyngeal nerve
b) Phrenic nerve
c) Vagus nerve and recurrent laryngeal nerve
d) Thoracic splanchnic nerve

318. Autonomic supply to S.A node is - *{Orrisa 04)*
a) Parasympathetic excitatory
b) Sympathetic excitatory
c) Both excitatory
d) Both inhibitory

319. The stability of the vertebral column is due to -
a) Vertebra and vertebral discs *{Bihar 03)*
b) Interspinous ligaments
c) Paraspinal muscle
d) All

320. The esophagus - *{Kerala 04)*
a) Begins at the upper border of cricoid carlotilage
b) Runs a straight course throughout
c) Is narrowest at its termination
d) Is narrowest at its begining

321. Left superior intercostal vein drains into-*(APPGE 04)*
a) Azygous vein b) Hemi azygous vein
c) Innominate vein d) Left branchiocephalic vein

322. The arch of aorta lies in the —mediastinum -
a) Posterior b) Anterior *{TN04)*
c) Middle d) Superior

323. The base of the heart is formed by the - *{TN04)*
a) Right atrium b) Left atrium
c) Left ventricle d) Right ventricle

300)c 301)a 302)b 303)b 304)a 305)b 306)c 307)b 308)d 309)a,b,c 310)c,d 311)b,c,e 312)a,b,d
313) b 314) c 315) d 316)b 317)d 318)b 319)d 320)d 321)d 322)d 323)b

324. Which of the following is correct regarding SA node- *(SGPGI05)*
a) It is supplied by left coronary artery mainly
b) Generates an impulse at the rate of about 70/min and initiates the heart beat
c) Situated in left atrium
d) Part of valves

325. All of the following are true regarding heart except-
a) Comory sinus opens into Right atrium *(SGPGI05)*
b) Vena cardie minimi drains into surface of heart
c) SA node is supplied by Right coronary artery
d) Left auricle projects anteriorly to overlap the infundibulam of the right ventricle

326. Which of the following is correct regarding hilum of right lung - *{AMU05)*
a) Thoracic duct arches over it
b) Azygous vein arches over anterior surface
c) Arch of aorta is related to its anterior surface
d) Pressed by lingual

327. Occlusion of the LAD will lead to infarction of which area- **(***MAHE05)*
a) Posterior part of the interventricular septum
b) Anterior wall of the left ventricle
c) Lateral part of the heart
d) Inferior surface of right ventricle

328. The root of the right lung does not lie behind which one of the following - *(ICS 05)*
a) Right atrium b) Right vagus
c) Superior vena cava d) Phrenic nerve

329. Which of the following do NOT elevate the ribs -
a) Serratus posterior superior *(MAHA 05)*
b) Serratus posterior inferior
c) External intercostals
d) Levatores costarum

330. Superior intercostal artery is a branch of-*{APPGE 05)*
a) Costocervical trunk b) Dorsal scapular artery
c) Thyrocervical trunk d) Internal thoracic artery

331. Anterior intercostal artery is branch of -*(Orrisa 05)*
a) Internal mammary artery
b) Direct branch of aorta
c) Posterior intercostal artery
d) Subclavian artery

332. All of the following structures pass through the superior aperture of thorax except -*{AIIMS NOV 05)*
a) Right recurrent laryngeal nerve
b) Left common carotid artery
c) Left sympathetic trunk
d) Thoracic duct

333. While doing thoracocentesis, it is advisable to introduce needle along - *(AI05)*
a) Upper border of the rib
b) Lower border of the rib
c) In the center of the intercostal space
d) In anterior part of intercostal space

334. All of the following arteries are common sites of occlusion by a thrombus except - *(AIIMSMay 05)*
a) Anterior interventricular
b) Posterior interventricular
c) Circumflex
d) Marginal

335. The following statements are true regarding the SA node except - *(AIIMSMay 05)*
a) Is located at the right border of the ascending aorta
b) It contains specilized nodal cardiac muscle
c) It is supplied by the atrial branches of the right coronary artery
d) It initiates cardiac conduction

336. The coronary sinus - *(Jipmer 05)*
a) Lies in anterior part of the coronary sulcus
b) Ends in right atrium
c) Has venae cordis minimae as its tributaries
d) Develops from right anterior cardinal vein

337. Which of the following structures constitutes part of ventricle of heart - *(HP 2006)*
a) Auricle b) Crista terminalis
c) Fossa ovalis d) Trabeculee carenae

338. Consider the following statements - *(UPSC 07)*
Venacaval opening of the diaphragm situated at the level of T_g transmit -
1. Inferior vena cava
2. Vagus nerve
3. Branches of the right phrenic nerve
4. Thoracic duct

Which of the statements given above are correct ?
a) 1 and 2 b) 2 and 3
c) 1 and 3 d) 1 and 4

339. The normal narrowing in the middle of the oesophagus is caused by - **(***Corned 07)*
a) Azygos vein
b) Hemiazygos vein
c) Right main stem bronchus
d) Left main stem bronchus

340. The last tributary of the azygos vein is - *{Corned 08)*
a) Right superior intercostal vein
b) Hemi-azygos vein
c) Right bronchial vein
d) Accessory azygos vein

341. Structures that pass from thorax to abdomen behind the diaphragm are all except - *{AI 07)*
a) Azygos vein b) Aorta
c) Thoracic duct d) Greater splanchnic nerve

342. Most common site of Morgagni Hernia is - *{AI 07)*
a) Left Anterior b) Right posterior
c) Right Anterior d) Left posterior

343. Difference between typical cervical & thoracic vertebral- *{AI07)*
a) Has a triangular body
b) Has a foramen transversarium
c) Superior articular facet directed backwards & upwards
d) Has a large vertebral body

324) b 325)b 326)b 327)b 328)b 329)b 330)a 331)a 332)a 333)a 334)d 335)a 336)b 337) d
338) c 339) d 340) c 341) d 342) c 343)b

344. All of the following characteristics differentiate a typical cervical vertebrae from a thoracic vertebrae except- *(Aiims May 07)*
a) Has a triangular vertebral canal
b) Has foramen transversarium
c) Superior articular facet is directed backwards & upwards
d) Has a large vertebral body

345. A "Potential Anastomosis" seen in- *(UP 07)*
a) Labial branch of facial artery
b) Intercostal artery
c) Coronary artery
d) Arterial arcades of mesentery

346. Which of the following duct commences in the abdomen as an elongated lymph sac of the cisterna chyli is - *(UP 07, UP 06)*
a) Thoracic duct b) Gartner's duct
c) Bile duct d) Hepatic duct

347. In a case of chest pain with pericarditis and pericardial effussion, pain is referred by -
a) Phrenic nerve *(AIIMSNov 07)*
b) Superficial cardiac plexus
c) Deep cardiac plexus
d) Vagus nerve

348. Pleural tapping in the mid-axillary line, muscle not pierced is - *(AIIMSNov 07)*
a) Internal intercostal b) External intercostal
c) Inner most intercostal d) Transversus thoracis

349. Which of the following is the most cranial structure in the root of left lung? *(AIIMSNov 0 7)*
a) Bronchus b) Pulmonary artery
c) Pulmonary vein d) Bronchial artery

350. If circumflex artery gives the posterior interventricular branch, this circulation is described as - *(AIIMS Nov 07)*
a) Right dominance b) Left dominance
c) Codominance d) Undetermined

351. Direct opening in the right atrium with - *(UP 08)*
a) Anterior cardiac vein b) Oblique vein
c) Middle cardiac vein d) Great cardiac vein

352. In the lungs bronchial arteries supply the bronchopulmonary tree - *(A! 08)*
a) Till tertiary bronchi
b) Till segmental bronchi
c) Till respiratory bronchioles
d) Till alveolar sacs

353. The thoracic duct receives tributaries from all of the following except - *(A iims May 08)*
a) Bilateral ascending lumbar trunk
b) Bilateral descending thoracic trunk
c) Left upper intercostal duct
d) Right bronchomediastinal lymphatic trunk

354. Tracheal bifurcation is at which level of vertebra -
a) T4 b)T2 *(Manipal 08)*
c)Tl d)T7

355. Fibrous pericardium is attached to - *(Manipal 08)*
a) Central tendon b) Right crus
c) Left crus d) Pleura

356. Anterior interventricular artery is a branch of -
a) Rt coronary artery *(DPGEE 08)*
b) Left coronary artery
c) Circumflex artery
d) Left anterior descending artery

357. Which of the following is true about the starting course azygous vein course - *(APPG 08)*
a) Superior venecava
b) Posteriorly to inferior venecava
c) Anterior lumbar vein
d) None

358. True about anatomy of right ventricle -
a) Situated posteriorly *(PGIDec08)*
b) More prominent trabeculation
c) Crista supraventricularis separate tricuspid valve & pulmonary valve
d) Apex trabeculated
e) TV & PV share fibrous continuity

359. True about Latissimus dor si - *(PG1 Dec 08)*
a) Nerve supply from long thoracic nerve
b) Inserted into bicipital groove of humerus
c) Use to fill up back defects
d) Blood supply from lateral thoracic artery
e) Origin from upper four ribs

360. Boundary of triangle of auscultation is not formed by- *(ARMSNov 08)*
a) Serratus anterior b) Scapula
c) Trapezius d) Latissimus dorsi

361. In a Subclavian artery block at the outer border of 1st rib, all of the following arteries help in maintaining the circulation to upper limb except -
a) Sub scapular artery *(AIIMS Nov 08)*
b) Superior thoracic
c) Thyrocervical trunk
d) Suprascapular artery

362. Aortic hiatus contains - *(ARMSMay 09)*
a) Left gastric vein and thoracic duct
b) Thoracic duct and hemiazygos vein
c) Azygos vein and thoracic duct
d) Left vagus and thoracic duct

363. Blood supply of pectoralis major muscles is /are -
a) Thoracoacromial trunk *(PGIJune09)*
b) Lateral thoracic artery
c) Internal mammary artery perforating branches
d) Axillary artery
e) Subclavian artery

364. As viewed from the right atrium, the floor of the fossa ovalis is formed by - *(COMED 09)*
a) Septum primum
b) Septum secundum
c) Endocardial cushions
d) Tricuspid valve orifice

344) d 345) c 346) a 347) a 348) d 349) b 350) b 351) a 352) c 353) d 354) a 355) a 356) b 357) b
358)b,c,d,e 359)a,b,c 360)a 361)b 362)c 363)a,c 364)b

365. The thoracic duct crosses the posterior mediastinum at the level of which vertebra - *(COMED 09)*
a) T5 b)T6
c) T7 d)T8

366. Spinal epidural space contains -*(DELHIPGFeb. 09)*
a) Areolar tissue and internal vertebral venous plex uses
b) Only areolar tissue
c) Only cerebrospinal fluid
d) Vertebral venous plexus and cerebrospinal fluid

367. Spinal epidural space is the largest at the level of the - *(DELHI PG Feb. 09)*
a) 12^{th} thoracic vertebra b) 1^{st} lumbar vertebra
c) 2^{nd} lumber vertebra d) 3^{rd} lumber vertebra

368. All of the following are true about phrenic nerve, except- *(DELHIPG Mar. 09)*
a) It is purely motor nerve
b) It arise briefly from C_4 spinal nerve
c) It is formed at the lateral order of scalenus anterior
d) Accessory phrenic is commonly a branch from the nerve to subclavirus

369. Which of the following statements is/are true about diaphragm - *(PGI Nov 09)*
a) Left side pushed down by heart
b) Left side lower than right side
c) Right side lower than left side
d) Right side pushed up by liver
e) Hernia common on left because of weak origin

370. True about left phrenic nerve - *(AIIMSNov 09)*
a) Lies anterior to anterior scalenous muscle
b) Posterior to brachial plexus
c) Posterior to subclavian artery
d) Posterior to hilum left lung

371. Left sided superior vena cava drains into - *(AJ10)*
a) Right atrium b) Left atrium
c) Coronary sinus d) Pericardial space

372. Occlusion of the left anterior descending artery will lead to infarction of which area - *(DPG10)*
a) Posterior part of the interventricular septum
b) Anterior wall of the left ventricle
c) Lateral part of the heart
d) Inferior surface of right ventricle

373. Which of the following is not a tributary of azygos vein? *(Maharashtra 10)*
a) Right posterior intercostal
b) Right superior
c) Left superior intercostal
d) Accessory hemiazygos

374. True statement about Rt coronary artery (RCA) -
a) Diameter less than LCA *(PGI Nov 10)*
b) RCA arises from anterior aortic sinus
c) RCA supplies major part of right atrium and right ventricle
d) RCA gives rise to circumflex coronary branch

375. Constrictions in Esophagus are present at distance of (from incisor) - *(PGINov. 10)*
a) 12 cm b)25cm
c) 28cm d)36cm
e) 40 cm

376. The surface marking of the arch of aorta is as follows - *(Karn 11)*
a) Behind the manubrium stemi
b) 2nd intercostal space
c) 3rd intercostal space
d) Left 2nd costal cartilage

377. Veins are an example of - *(PUNJAB 11)*
a) Conducting vessels b) Distributing vessels
c) Resistance vessels d) Capacitance vessels

378. Hassal's corpuscles are seen in - *(Jipmer 11)*
a) Thymus b) Thyroid
c) Parathyroid d) Spleen

379. Which of the following accompanies the anterior interventricular artery ? *(NEET/DNB Pattern)*
a) Great cardiac vein b) Middle cardiac vein
c) Small cardiac vein d) Right marginal vein

380. At what level does the trachea bifurcates?
a) Upper border of T4 *(NEET/DNB Pattern)*
b) Lower border of T4
c) 27.5 cm from the incisors
d) Lower border of T5

381. Which of the following represents the surface marking of the aortic valve?*(NEET/DNB Pattern)*
a) Sternal end of left 3rd costal cartilage
b) Sternal end of right 3rd costal cartilage
c) Besides the sternum in left 3rd intercostal space
d) Besides the sternum in right 3rd intercostals space

382. Which of the following is supplied by the abdominal aorta? *(NEET/DNB Pattern)*
a) Accessory lung lobes
b) Bronchopulmonary segment
c) Sequestrated lung tissue
d) Base of lung

383. IVC pierces the diaphgram at what vertebral level-
a) T6 b) T8 *(NEET/DNB Pattern)*
c) T10 d)T12

384. Arch of aorta lies at what vertebral level -
a) T5 b) T4 *(NEET/DNB Pattern)*
c) T6 d)T2

385. All of the following lie between the 1st rib and the apex of the lung, except - *(NEET/DNB Pattern)*
a) Thoracic duct
b) Superior intercostal artery
c) First posterior intercostal vein
d) Sympathetic trunk

386. What is true about sinus venosus- *(NEET/DNB*
a) Forms rough wall of right atrium *Pattern)*
b) Forms smooth wall of right atrium
c) Forms right coronary sinus
d) Forms left leaflet of coronary sinus

365) a 366) a 367) d 368) a 369)b,d,e 370) a 371)c>a 372) b 373) c 374)a,b,c 375) b,e 376) a 377) d
378) a 379) a 380)b 381)a 382)c 383)b 384)b 385)a 386)b

387. Subcapsular sinuses are seen in- *(NEET/DNB Pattern)*
a) Spleen b) Thymus
c) Thyroid d) Lymph node

388. Which of the following is not supplied by the right coronary artery? *(NEET/DNB Pattern)*
a) SA node b) AV node
c) AV bundle d) Right bundle branch

389. Surface marking of the mitral valve is -
a) Behind sternal end of left 4th costal cartilage
b) Behind sternal end of right 4th costal cartilage
c) Left 4th intercostal space in the midclavicular line *(NEET/DNB Pattern)*
d) Left 3rd intercostal space in the midclavicular line

390. Superior vena cava opens into right atrium at the level of - *(NEET/DNB Pattern)*
a) T1 b) T3
c) T4 d) T5

391. Opening of esophagus into diaphragm is at the level of - *(NEET/DNB Pattern)*
a) T6 b) T10
c) T12 d) T8

392. Isometric relaxation is defined as -
a) Relaxation of both atria *(NEET/DNB Pattern)*
b) Relaxation of both atria with all valves open
c) Relaxation of LV with mitral & aortic valve closed
d) Atrophy

393. Distance of the Lower Esophageal Sphincter from the upper incisors is - *(NEET/DNB Pattern)*
a) 15cm b) 22.5cm
c) 27.5cm d) 37.5cm

394. Transverse sinus is present posterior to which structures - *(NEET/DNB Pattern)*
a) Right atrium b) Left atrium
c) Upper pulmonary artery d) Aorta

395. Aortic area for auscultation overlying the chest wall is located at - *(NEET/DNB Pattern)*
a) Cardiac apex
b) 2nd intercostal space on right side
c) 2nd intercostal space on left side
d) Epigastric region

396. Lymphatic drainage of cervix is to all except -
a) Internal iliac *(NEET/DNB Pattern)*
b) External iliac
c) Obturator
d) Sacral

397. Hyaline cartilage of respiratory tree extends upto-
a) Tertiary bronchiole *(NEET/DNB Pattern)*
b) Secondary bronchiole
c) Terminal bronchiole
d) Bronchi

398. Length of adult trachea is - *(NEET/DNB Pattern)*
a) 5-6 cm b) 10-11 cm
c) 15-16cm d) 20-21cm

399. Sympathetic supply to heart -*(NEET/DNB Pattern)*
a) Cj-C_7 **b) T, - T_4**
c) C[-C_4 d)T_5-T_9

400. Esophagus shorts at which level -
a) Upper border of cricoid cartilage
b) Lower border of cricoid cartilage
c) Thyroid cartilage *(NEET/DNB Pattern)*
d) Hyoid cartilage

401. Surface marking of oblique fissure of lung include all except - *(NEET/DNB Pattern)*
a) T_3 b) 5th rib
c) 7th rib d) 6th costal cartilage

402. Blood supply of liver - *(NEET/DNB Pattern)*
a) 80 % hepatic artery, 20 % portal vein
b) 20 % hepatic artery, 80 % portal vein
c) 50 % hepatic artery, 50 % portal vein
d) 100 % hepatic artery

403. Coronary sinus is guarded by- *(NEET/DNB Pattern)*
a) Crista terminalis b) Thebesian valve
c) Mitral valve d) Spiral valve

404. Coronary sinus develops *from-(NEET/DNB Pattern)*
a) Truncus arteriosus b) Conus
c) Sinus venosus d) AV canal

405. Hemiazygous vein crosses left to right at the level of- *(NEET/DNB Pattern)*
a) T8 b) T10
c) T12 d) T6

406. Bifurcation of trachea is at - *(NEET/DNB Pattern)*
a) Upper border of T5 b) Lower border of T4
c) Upper border of T4 d) Lower border of T5

407. Fossa ovalis is a remnant of- *(NEET/DNB Pattern)*
a) Septum primum b) Septum secundum
c) Ductus arteriosus d) ductus venosus

408. SA node blood supply is - *(NEET/DNB Pattern)*
a) Rt. coronary b) Lt. coronary
c) Lt. and descending d) Ant aortic sinus

409. Koch's triangle has blood supply from -
a) Rt. coronary *(NEET/DNB Pattern)*
b) Ltcircumflex
c) Lt. and descending
d) Ant aortic sinus

410. At Saint Louis angle what crusses -
a) Arch of aorta *(NEET/DNB Pattern)*
b) Azygous vein
c) Common carotid artery
d) None

411. Lower border of lung is upto____ level of rib at mid-axillary line - *(NEET/DNB Pattern)*
a) 6 b) 8
c) 10 d) 12

412. Occlusion of left anterior descending artery results in ischemia of - *(NEET/DNB Pattern)*
a) Anterolateria wall b) Left atrium
c) Right ventricle d) Interatrial septum

413. Esophageal opening in diaphragm at -
a) T_g b) T_{10} *(NEET/DNB Pattern)*
c)T_{12} d)T_6

387) d 388) d 389)a 390)d 391)b 392)c 393)d 394)d 395)b 396)c 397)d 398)b 399)b 400)b
401) c 402) b 403) b 404)c 405)a 406)b 407)a 408)a 409)a 410)a 411)b 412)a 413)b

414. Ductus venosus connects -
a) Pulmonary trunk and descending aorta
b) Right atrium and left atrum
c) Portal vein and IVC *(NEET/DNB Pattern)*
d) Pulmonary trunk and ascending aorta

415. Thoracic duct crosses at - *(NEET/DNB Pattern)*
a) T1 b) *Cl*
c) T5 d) T8

416. Middle lobe of lung contains, segments -
a) Superior & inferior *(NEET/DNB Pattern)*
b) Anterior & posterior
c) Medial & lateral
d) Apical & basal

417. Azygos lobe is found - *(NEET/DNB Pattern)*
a) Heart b) Spleen
c) Lung d)Pancreas

418. Blood supply of thoracic part of esophagus -
a) Aorta *(NEET/DNB Pattern)*
b) Inferior thyroid artery
c) Gastric artery
d) Superior thyroid artery

419. Fossa ovalis clases because of fussion of - *(NEET/DNBPattern)*
a) Septum primum + Endocardial cushion
b) Septum secundum + Endocardial cushion
c) Septum primum + Septum secundum
d) None

420. What lies anterior to transverse sinus- *(NEET/*
a) Aorta b) Pulmonary artery *DNB Pattern)*
c) IVC d) SVC

INFEX

421. Patella completely ossify by the age of - (*.PGI84)*
a) 6 years b) 10 years
c) 14 years d) 21 years

422. Fabella is - *(PGI81, AMU87)*
a) Same as fibula
b) An accessory projection from fibula
c) A sesamoid bone
d) None of the above

423. Distal femoral epiphysis is seen at the age of -
a) Just after birth b) 10 weeks *(JIPMER 80,*
c) 20 weeks d) 34 weeks *Delhi 87)*

424. Which of the following muscles are stance phase muscles - *(PGI 80, 87)*
a) Quadriceps b) Hamstring muscles
c) Anterior tibial d) Peroneus longus
e) Soleus-gastrocnemuus

425. Peroneus brevis is inserted to - *(PGI 88)*
a) Base of fifth metatarsal
b) Base of first metatarsal
c) Head of third metatarsal
d) Head of second metatarsal

426. The ischial tuberosity gives attachment to -
a) Obturator intemus *(AIIMS 79, Rohtak 90)*
b) Quadratus femoris
c) Gluteus maximus
d) Adductor magnus

427. The posterior division of obturator nerve innervates - *(AIIMS 79, Kerala 89)*
a) Hip joint b) Knee joint
c) Adductor longus d) Pectineus

428. In the region on the knee - *(PGI 81)*
a) The popliteal fossa is bounded above by tendons of the hamstring muscles and below by the two heads of the gastrocnemius muscle
b) The deepest structure in the popliteal fossa is the popliteal artery
c) The popliteal and femoral vessels are continuous through the adductor hiatus
d) The common peroneal nerve passes superficially through the central protion of popliteal fossa

429. The superficial circumflex iliac artery usually anastomoses with which of the following arteries -
a) Superior gluteal *(AIIMS 81, AMC 83)*
b) Lateral femoral circumflex
c) Deep circumflex iliac
d) All of the above

430. The longitudinal arch of the foot - *(PGI 82)*
a) Is divided into medial and lateral protions anteriorly with the calcaneus forming a common component posteriorly
b) Is highest (most suprior) at the level of the talus
c) Receives medial support primarily from the palntar calcaneonavicular (spring) ligament, which directly support the head of the talus
d) Is arranged so that weight is distributed anteriorly to the heads of the metatarsals and posteriorly to the calcaneus

431. The following muscles dorsiflex the foot at the ankle j oint - *(PGI 82)*
a) Extersor digitorum brevis
b) Tibialis anterior
c) Peroneus longus
d) Extensor hallucis longus

432. Abduction and adduction of the forefoot occurs at- *(PGI 83)*
a) Subtalar joint b) Midtarsal joint
c) Inferior tibiofibular joint d)None

433. The contents of the femoral sheath *is/are-(AHMS 84)*
a) Femoral nerve b) Femoral vein
c) Femoral artery d) b & c

434. In walking, the hip bone of the suspended leg is raised by which of the following muscles acting on the supported side of the body- *(AIMS 84)*
a) Obturator extemus b) Gluteus medius
c) Gluteus maximus d) Gluteus minimus

414)c 415)b 416)c 417)c 418)a 419)c 420)a 421)c 422)c 423)d 424)AU 425)a 426)d 427)b 428) a,b,c 429) d 430)All 431)b,d 432) b 433) d 434) a

435. Due to bony support, the most stable position of the ankle joint is - *(AMU 84)*
a) Inversion b) Plantar flexion
c) Eversion d) Dorsiflexion

436. The longest vein in the human body is- *(A1IMS 85)*
a) IVC b) Cephalic
c) Basilic d) Long saphenous

437. The number perforators of the great saphenous vein in the leg is - *(AIIMS 85)*
a) 2 b)3
c) 4 d) 5

438. The following structures pass through the subsartorial canal, except the - *(AIIMS 85)*
a) Posterior division of the obturator nerve
b) Saphenous nerve
c) Femoral artery
d) Nerve to vastus intermedius
e) Femoral vein

439. Knee jerk reflex tests -*(NIMHANS 86, 87,*
a) Lj L_2L_3 b) L_2 L_3L_4 *Kerala 87)*
c)$L_3L_4L_5$ d)L_4L_5L,
e)L_5S,S_2

440. Sartorius muscle takes origin from - *(AP 86,*
a) Pectinate line *Delhi 86)*
b) Ant. Superior iliac spine
c) Body of the ileum
d) Ischial tuberosity

441. Ossification of the lower end of femur is seen at - *(PGI86, KERALA 87, UPSC 86, JIPMER 86)*
a) 36^{th} week b) 3 8^{th} week
c) 39^{th} week d) 40^{th} week
e) 32^{nd} week

442. The keystone of the medial longitudinal arch of the foot is- *(JIPMER 86)*
a) Calcaneum b) Cuboid
c) Talus d) Navicular

443. Femoral nerve does not supply - *(AIIMS 86, 91)*
a) Sartorius b) Rectus femoris
c) Tensor fasciae latae d) Articularis genu

444. Where does superficial femorla artery becomes the popliteal artery - *(TN 8 7)*
a) At apex of femoral triangle
b) At the hiatus in adductor magnus
c) Within the adductor canal
d) None of the above

445. Which is true of spring ligament - *(TN87)*
a) Seen in the spine
b) Synonymus with plantar calacaneonavicular
c) Ligament
d) Seen in the knee joint
e) Seen in hip joint

446. The action of popliteal muscle is to - *(PGI 87)*
a) Rotate the femur laterally on the tibia
b) Rotate the femur medially on the tibia
c) Rotate the tibia laterally on the femur

447. Floor of the femoral triangle is formed by the following muscles, except the - *(AMU 88)*
a) Pectineus b) Adductor longus
c) Iliacus d) Adductor brevis

448. Pain from the hip joint is referred to the - *(PGI 88)*
a) Back b) Knee joint
c) Calf d) All of the above

449. Foot drop result as a result of inj ury to - *(AI88)*
a) Deep peroneal nerve
b) Superficial peroneal nerve
c) Tibal nerve
d) Deltoid ligament

450. Lateral rotators of the hip are A/E - *(AI 88)*
a) Piriforms b) Quadratus famoris
c) Obturator intemus d) Obturator extemus
e) Psoas major

451. The strongest ligament in the body is - *(PGI 88)*
a) Inguinal ligament b) Lacunar ligament
c) Ligamentum flavum d) Iliofemoral ligament

452. The flexor of the hip is- *(PGI 88)*
a) Psoas b) Vastus medialis
c) Quadratus femoris d) Gluteus maximus

453. Which artery is found in the adductor canal -
a) Profunda femoris b) Femoral *(AMC88)*
c) Obturator d) Popliteal

454. Fascia cribrosa is related to- *(Rohtak88)*
a) Inguinal ring b) Femoral canal
c) Neck d) Thigh

455. Popliteus muscle forms the..... of popliteal fossa-
a) Roof b) Floor
c) Upper boundary d) Lower boundary

456. The peroneal artery is a branch of which artery -
a) Anterior tibial artery *(CMC 89)*
b) Popliteal artery
c) Posterior tibial artery
d) Arcuate artery
e) Lateral plantar artery

457. Femoral canal, which is correct - *(AI89)*
a) Smaller in female
b) Contains femoral vein
c) Inferior epigastric artery lies medially
d) Medial most compartment of femoral sheath

458. Extension of the hip is restricted by - *(AI89)*
a) Iliofemoral ligament b) Psoas
c) Gravity d) Abductor muscles

459. Medial longitudinal arch of foot is not formed by -
a) Cuboid b) Calcaneous *(AI 89)*
c) Talus d) Navicular

460. Most commonly used donar nerve in nerve grafting is- *(UPSC89)*
a) Medial politeal b) Posterior interosseus
c) Great auricular d) Sural

461. Housemaids knee is an inflammation of the..... Bursae - *(UPSC89)*
a) Suprapatellar b) Semi membranosus
c) Prepatellar bursa d) Lateral patellare

435) d 436) d 437) c 438) d 439) b 440) b 441) a 442) c 443) c 444) b 445) b 446) a 447) d 448) b
449) a 450) e 451)d 452) a 453) b 454) b 455) b 456) c 457) d 458) a 459) a 460) d 461) c

462. Medial meniscus is attached at - *(NIMHANS89)*
a) One point b) Two point
c) Three points d) None

463. The muscles that innervate the sole of foot include-
a) Tibialis anterior *(AMU 89)*
b) Extensor hallucis longus
c) Tibialis posterior
d) Flexor digitorum longus

464. Extensor of the knee is by - *(AIIMS 91)*
a) Biceps femoris b) Quadriceps
c) Sartorius d) Semi membranosus

465. Short saphenous vein is the continuation of -
a) Medial marginal vein *(AIIMS 91)*
b) Lateral marginal vein
c) Dorsal venous arch
d) Tibi al vein

466. Which of the following muscles does not arise from the calcaneum - *(AP 91)*
a) Flexor digitorum brevis
b) Extensor digitorum brevis
c) Quadratus plantae
d) Flexor hallucis brevis
e) Abductor hallucis

467. The major blood supply to the posterior femoral muscles is provided by - *(AP 91)*
a) The perforating branches of the deep femoral artery
b) The obturator artery
c) The superior gluteal artery
d) Medial and lateral femoral circumflex vessels

468. Which of the folllowing muscles does not insert into the plantar aspect of the foot - *(UP 92)*
a) Flexor digitorum longus b) Peroneus tertius
c) Peroneus longus d) Tibialis posterior
e) Flexor hallucis longus

469. Oblique popliteal ligament is the continuation of- *(Al 92)*
a) Semi tendinosus b) Semi membranosus
c) Biceps femoris d) Adductor magnus

470. Ligament of Bigelow is present in - *(ARMS 92)*
a) Shoulder joint b) Ankle joint
c) Knee joint d) Hip joint

471. Sacral canal's volume is - *(Delhi 92)*
a) 5-10cc b)15-25cc
c) 10-15cc d) 25-35cc

472. In the adult, the chief arterial supply to the head of the femur is from the - *(TN 92)*
a) Superficial circumflex iliac artery
b) Obturator artery
c) Branches from the medial and lateral circumflex femoral arteries
d) Deep external pudendal artery
e) Inferior gluteal artery

473. Great saphenous vein can be exposed anterior to the medial malleolus at - *(AMU 92)*
a) 1 cm b) 1.25 cm
c) 2.5 cm d) 4 cm

474. The nerve involved in Tarsal Thnnel syndrome is -
a) Lateral plantar b) Medial Plantar *(AI93)*
c) Posterior tibial d) Anterior tibial

475. Saphenous opening is situated - *(JIPMER 93)*
a) Just below pubic tubercle
b) Below and lateral to pubic tubercle
c) Above and medial to pubic tubercle
d) Just above pubic tubercle

476. Ossification centres in calcaneus and talus appear in- *(JIPMER 95)*
a) 4^{th} and 8^{th} month b) 3^{rd} and 6^{th} month
c) 5^{th} and 9^{th} month d) 11^{th} and 12^{th} month

477. Drainage of glans penis is to - *(Al 95)*
a) Deep inguinal nodes
b) Superficial inguinal nodes
c) Paraaortic
d) Iliac lymph nodes

478. Fabellaoccurs in- *(TN95)*
a) Gastrocnemious medial head
b) Gastrocnemious lateral head
c) Tendo calcaneous
d) Soleus muscle

479. Action of quadratus femoris is- *(Assam 95)*
a) Extension b) Flexion
c) Lateral rotation d) Medial rotation

480. While flexing knee, femoral condyles are prevented from rolling b ackwards by - *(ARMS 95)*
a) Ligamentum patellae
b) Semilunar cartilages
c) Medial & lateral collateral ligaments
d) Cruciate Ligaments

481. Femoral vein lies----- -------to femoral artery -
a) Anterior b) Posterior *(CUPGEE 95)*
c) Lateral d) Medial

482. Anastomosis around the knee-which is true -
a) Deseeding genicular branch of femoral artery
b) Anterior tibial artery *(CUPGEE 96)*
c) Saphenous branch of femoral artery
d) All

483. Muscles inserted into the iliotibial tract-*(CUPGEE*
a) Tensor fascial lata b) Gluteus maximus *96)*
c) Vastus lateralis d)All

484. Knee jerk is primarily served by - *(AI97)*
a) LI b)L2
c) L3 d)L4

485. Not seen in adductor canal - *(Kerala 97)*
a) Femoral artery b) Femoral nerve
c) Saphenous nerve d) Femoral vein

486. Spontaneous pelvic diasthesis is seen in - (*PGI97)*
a) Extended lithotomy b) Squating
c) Trendelenberg d) Supine

487. Structure passing deep to Flexor retinaculam, behind medial malleolus is - *(ARMS 97)*
a) Tibialis anterior
b) Tibialis posterior
c) Posterior tibial artery
d) Tendon of Extensor hallucis longus

462) c 463) a,c,d 464) b 465) b 466) d 467) a 468) b 469) b 470) d 471) d 472) c 473) c 474) c 475) b
476) b 477) a 478) b 479) c 480) d 481) d 482) a,b 483) d 484) b 485) b 486) a 487) b,c

488. IV infusion is avoided in - *(CUPGE 97)*
a) long saphenous vein b) Cephalic vein
c) Ext. Jugular vein d) Int Jugular vein

489. Weight of the body is supported in sitting posture by- *(CUPGE 97)*
a) Ischial tuberosity b) Ramus of Ischium
c) Body of Ischium d) Pubis

490. False about venous drainage at the lower limb -
a) Blood flows from superficial to deep system
b) Blood flows from deep to superficial *(Kerala 97)*
c) Veins are provided with valves
d) Valvular incompetence will lead to varicose veins

491. Adductor hallucis nerve supply is - *(Jipmer 98)*
a) Medial plantar nerve
b) Deep branch of medial plantar nerve
c) Deep branch of lateral plantar nerve
d) Lateral plantar nerve

492. Anterior cruciate ligament is attached *to-(JIMPER 98)*
a) Medial part of anterior Intercondylar area of tibia
b) Lateral part of medial condyle of femur
c) Lateral part of lateral condyle of femur
d) Medial part of lateral condyle of femur

493. Lateral Circumflex femoral is a branch of -
a) External Iliac b) Internal iliac *(AI98)*
c) Femoral artery d) Profunda femoris artery

494. In children, the head of femur is supplied by all of the following arteries except - *(ICS 98)*
a) Nutrient artery
b) Medial circumflex artery
c) Artery of the ligamentum teres
d) Obturator artery

495. The anterior cruciate ligament of knee joint- *(Orissa 98)*
a) Prevents backward displacement of tibial condyles
b) Prevents forward displacement of tibial condyles
c) Is attchedt above to the medial femoral condyle
d) Prevents side to side displacement of the tibial condyles

496. Abnormal obturator artery is a branch of -
a) Internal iliac artery *(Orissa 99)*
b) External iliac artery
c) Obturator artery
d) Inferior epigastric artery

497. Muscles originating from ischial tuberosity are all except - *(MP 2K)*
a) Short head of tricepsb) Adductor magnus
c) Semimembranosus d) Semitendinosus

498. True about lateral meniscus - *(MP 2K)*
a) It is nearly semicircular
b) It is more liable to injury
c) It's postrior surface is indented by popliteus muscle
d) Fibular collateral ligament is attached to it

499. Major function of gluteus medius & minimus at hip joint is - *(AMC 2K)*
a) Flexion b) Extension
c) Abduction d) Adduction

500. Trendelenburg's sign is positive with weakness/ paralysis - *(TM 2001)*
a) Gluteus maximus
b) Gluteus medius & minimus
c) Adductor longus
d) Hamstrings

501. Largest branch of Lumbar plexus - *(TN2001)*
a) Sciatic Nerve b) Femoral nerve
c) Obturator nerve d) Pudendal nerve

502. Following ligament forms the medial boundary of femoral canal - *(HPU 2001)*
a) Pectineal b) Lacunar
c) Pubic d) Inguinal

503. Which muscle extends the knee with the hip flexion-
a) Biceps femoris b) Vastus medialis
c) Rectus femoris d) Vastus lateralis

504. A 10 year old boy taken for venesection of Great saphenous vein developed sudden pain & parasthesia on the medial aspect of great toe after givin incision over the vein & ligating it. Which of the following nerve is most likely involved in this - *(AI02)*
a) Sural nerve b) Deep peroneal nerve
c) Medial planter nerve d) Saphenous nerve

505. The Lymphatic drainage from heel and lateral lateral part of foot is to - *(JIPMER 2002)*
a) Superficial inguinal LN b)Deep inguinal LN
c) External iliac LN d) Popliteal LN

506. The following is an expansion of semimembranous tendon- *(JIPMER 2002)*
a) Oblique popliteal ligament
b) Tibial collateral ligament
c) Fibular collateral ligament
d) Arcuate popliteal ligament

507. Biceps femoris, true is - *(TN 2002)*
a) Muscle of adductor compartment of thigh
b) Attached to head of fibula
c) Supplied by femoral nerve
d) Related to medial ligament of knee

508. Inversion and eversion occurs at which joint-(PG7*97)*
a) Subtalar and midtarsal b) Calcaneo navicular
c) Midtarsal d) Calcaneocuboid only

509. Pain felt between great toe and II toe is due to involvment of which nerve root - *(PGI98)*
a) L_5 b) S_2
c) S_1 d) S_3

510. Planter flaxion is brought about by which of these muscles - *(PGI 02)*
a) Plantaris b) FHL
c) Tibilis anterior d) Peronius brevis
e) Soleus

511. Lymphatic drainage of clitoris is to - *(PGI02)*
a) Gland of Cloquet
b) Superficial inguinal lymph nodes
c) Deep inguinal lymph nodes
d) Obuturator nodes
e) Para-aortic nodes

488) a 489) a 490) b 491) c 492) a$_5$d 493) d 494) a 495) b 496) d 497) a 498) c 499) c 500) b 501) b
502) b 503) c 504) d 505) d 506) a 507) b 508) a 509) a 510)a,b,e 511)a,c

512. At the time of birth which of the following ossification centres are seen - *(PGI02)*
a) Lower end of femur b) Upper end of humerus
c) Calcaneum d) Upper end of tibia
e) Head of humerus

513. Blood supply of great toe are - *{PGI 02)*
a) Dorsalis pedis artery b) Lateral plantar artery
c) Matacarpal artery d) posterior tibial artery
e) Medial plantar artery

514. Which one of the following structure passes out of the pelvis through the greater sciatic notch and re-enters through the lesser sciatic notch -
a) Ureter *(UPSC02)*
b) Obturator nerve
c) Internal pudenal artery
d) Middle rectal artery

515. Popliteal muscle is supplied by which nerve -
a) Femoral b) Sciatic *{St. Johns 02)*
c) Tibial d)Peronaeal

516. A commonest cause for neuralgic pain in foot is -
a) Compression of communication between medial and lateral plantar nerves *(AI03)*
b) Exaggression of longitudinal arches
c) Injury to deltoid ligament
d) Shortening of planter aponeurosis

517. All of the following ligament contribute to be stability of ankle (talocrural) joint *except-{AIIMS 03)*
a) Calcaneonavicular (spring)
b) Deltoid
c) Lateral
d) Posterior tibiofibular

518. Preganglionic parasympathetic nerve fiber which supply pelvic viscera is/are- *{PGI03)*
a) Ventral rami of $S_{2,3\,4}$
b) Hypogastric plexus
c) Pudendal nerve
d) Splanchnic nerve
e) Inferior mesenteric plexus

519. Arterial branches which supply the head and neck of the femur is/are- *{PGI 03)*
a) Medial circumflex artery
b) Lateral circumflex artery
c) Profunda femoris artery
d) Obturator artery
e) Ext. femoral artery

520. True about gluteus maximus except- *{Manipal04)*
a) Supplied by superior gluteal nerve
b) Arises from coccyx, ischium
c) Insertion into iliotibial tract
d) Strong extensor

521. Upper part of the deltoid ligament is attached to the medial malleolus and lower part is attached.
a) Talus b) Cuboid *{Kerala 04)*
c) Navicular d) Calcaneum

522. Which of the following invertors is inserted on almost all the tarsal bones except talus -*{Kerala 04)*
a) Tabialis anterior
b) Tibialis posterior
c) Flexor hallucis longus
d) Flexor digitorun longus

523. Deltoid ligament is composed of all of following parts except- *{SGPGI04)*
a) Tibiocalcacaneal b)Tibiotalar
c) Tibiofibular d) Tibionavicular

524. By pinching sartorius muscle which reflex is elicited- *{Jipmer 03)*
a) Tendon reflex b) Cremastric reflex
c) Bulbocavernous reflex d) Anal reflex

525. When foot is off the ground the action of gluteus medius to is - *{SGPGI04)*
a) Flexion b) Abduction
c) Extension d) Make the opposite hip horizontal

526. Lateral popliteal nerve injury can cause-*{SGPGI 05)*
a) Loss of sensation in sole
b) Paralysis of sole muscle
c) Telepus equinovarus
d) Telipus calcanco valgus

527. Which of the following about medial meniscus is true-
a) More liable to injury than lateral meniscus
b) Attached to fibular collateral ligament *{AMU 05)*
c) It is circular in shape
d) Wider in front

528. The forward displacement of the tibia and the femur is prevented by - *{COMEDK 05)*
a) Anterior cruciate ligament
b) Posterior cruciate ligament
c) Medial collateral ligament
d) Lateral collateral ligament

529. Spring ligament is also called - *(Jipmer 05)*
a) Calcaneonavicular ligament
b) Calcaneocubiod ligament
c) Transverse tibiofibular ligament
d) Talocaleaneal ligament

530. Major arterial supply to anterior cruciate ligament is from - *(Jipmer 05)*
a) Medial genicular artery
b) Lateral genicular artery
c) Middle genicular artery
d) None of the above

531. Lateral meniscus is less prone to injury than medial meniscus because of the following *except* **-**
a) Lateral meniscus is less mobile than medial meniscus *{Jipmer 05)*
b) Lateral meniscus is opened outwards by the popliteus
c) Lateral meniscus is more adapted to sustain injury
d) Lateral meniscus undergoes less excursion during rotatory movement

512)a,b 513)a,e 514)c 515)c 516)a 517)a 518)a,d 519)a,d 520)a 521)a,c,d 522)b 523)c 524)b 525)b 526) c 527) a 528) a 529) a 530) c 531)b

532. True about the anatomy of great saphenous vein -
a) Starts as a continuation of medial marginal vein *(PGI June 05)*
b) Ends of femoral vein 2.5 cm below the inguinal ligament.
c) There are 2-5 valves below the knee
d) Ascends 2.5 - 3 cm behind tibial malleolus
e) In the thigh, it is in relation with medial cutaneous nerve of thigh

533. Which one of the following arteries pierces the oblique popliteal ligament of the knee joint -
a) Medial superior genicular artery *(J&K05)*
b) Lateral superior genicular artery
c) Middle genicular artery
d) Posterior tibial recurrent artery

534. The cremaster muscle is innervated by which of the following nerves - (*MAHA 05)*
a) Genital branch of the genitofemoral nerve
b) Ilioinguinal
c) T_{12}
d) Femoral

535. All of the following statements concerning the sartorius muscle are correct except - (*MAHA 05)*
a) It is known as the "tailor's muscle"
b) It is the longest muscle in the body
c) It acts across two joints
d) It extends the hip

536. Which of the following nerve is NOT a branch of lumbar plexus - (*APPGE 05)*
a) Obturator nerve
b) Femoral nerve
c) Sciatic nerve
d) Lateral cutaneous nerve of thigh

537. The femoral ring is bounded by the following structures except - *(AI05)*
a) Femoral vein b) Inguinal ligament
c) Femoral artery d) Lacunar ligament

538. The direction of the flow of venous blood in conditions of valve incompetence affecting perforating veins of lower limb is - *(AIIMSMay 05)*
a) Along gravity b) Superficial to deep
c) Along osmotic gradient d) Deep to superficial

539. Eversion of foot is produced by - *(COMED-06)*
a) Tibialis anterior b) Tibialis posterior
c) Peroneus tertius d) Peroneus longus

540. Invertor of foot is - (*PGMCET07)*
a) Tibialis posterior b) Peroneus tertius
c) Peroneus brevis d) Gastrocnemius

541. About Posterior cruciate ligament - true statement is - *QU07)*
a) Attached to the lateral femoral condyle
b) Intrasynovial
c) Prevents posterior dislocation of tibia
d) Relaxed in full flexion

542. All the structures are inside femoral sheath except-
a) Femoral nerve b) Femoral artery *(MAHE07)*
c) Femoral vein d) Lymphatics

543. All the contents of femoral sheath except - *(UP 07)*
a) Femoral artery b) Femoral nerve
c) Femoral vein d) Genito femoral nerve

544. Adductor canal lies beneath the - *(UP 07)*
a) Adductor longus b) Adductor magnus
c) Sartorius d) Vastus medialis

545. Femoral ring is bounded by all except - *(UP 07, DNB 90)*
a) Inguinal ligament
b) Superior ramus of pubis
c) Femoral artery
d) Femoral vein

546. Posterior dislocation of the femur on the tibia is prevented by - *(UP 0 7)*
a) Anterior cruciate ligament
b) Posterior cruciate ligament
c) Medial collateral ligament
d) Lateral collateral ligament

547. In forceful inversion of foot, fracture of the tuberosity of 5th metatarsal is due to pull exerted by which tendon - *(AIIMS Nov 07)*
a) Peroneus longus b) Peroneus brevius
c) Peroneus tertius d) Extensor digitorum

548. Apatient was on DVT prophylaxis. All of the following has perforators which connect superficial veins to the deep veins, except - *(AIIMSNov 07)*
a) Ankle b) Below the inguinal ligament
c) Mid calf d) Lower thigh

549. Inversion / Eversion movements occurs at - *(UP 08)*
a) Ankle j oints b) Subtalar j oints
c) Tibiotalar joints d) Transverse tarsal joints

550. Anterior cruciate ligaments prevents - *(UP 08)*
a) Anterior dislocation of femur
b) Posterior dislocation of femur
c) Anterior dislocation of tibia
d) Posterior dislocation of tibia

551. A young patients presented with loss of sensation in sloe of foot with paralysis of medial side of plantar muscles of the foot, Most likely nerve involvement is- *(UP08)*
a) Common peroneal nerve
b) Deep peroneal nerve
c) Superficial peroneal nerve
d) Tibial nerve

552. All of the following muscles are composite muscle Except- *(AI08)*
a) Pectineus b) Rectus femoris
c) Adductor magnus d) Biceps femoris

553. The skin overlying the region where a venous?f cut-down n is made to access the Great saphenous vein in supplied by - *(AI08)*
a) Femoral nerve b) Sural nerve
c) Tibial nerve d) Superficial peroneal nerve

554. Blood supply of femoral head is - *(PGI June 08)*
a) Femoral artery
b) Obturator artery
c) Internal pudendal artery
d) Medial & Lateral circumflex artery

532)a 533)c 534)a 535)d 536)c 537)c 538)d 539)c,d 540)a 541)c 542)a 543)b 544)c 545)c 546) a 547) b 548) b 549) b 550) c 551)d 552) b 553) a 554) b,d

555. All the structures are inside femoral sheath except - *(Manipal 08)*
a) Femoral nerve b) Femoral artery
c) Femoral vein d) Lymphatics

556. The following tendons pass under extensor retinaculum except - *(Manipal 08)*
a) EXTENSOR digitorum brevis
b) Extensor hallucis
c) Tibialis anterior
d) Superficial peroneal nerve

557. Which of the following structure is attached to the head of the fibula - *(DPGEE08)*
a) Lateral mensiscus
b) Popliteus tendon
c) Lateral collateral ligament
d) Posterior cruciate ligament

558. Which of the following is not supplied by posterior division of obturator nerve? *(APPG08)*
a) Obturator extemus b) Obturator intemus
c) Adductor magnus d) Both a and c

559. Trendelenburg test is positive due to injury to which of the following nerve - *(AIIMS Nov 08)*
a) Obturator b) Sciatic
c) Superior Gluteal d) Inferior Gluteal

560. Which passive movement causes pain in deep posterior compartment syndrome? *(A1IMSNov 08)*
a) Foot abduction b) Dorsiflexion of foot
c) Plantar flexion of foot d) Foot adduction

561. Ilio femoral ligament arise from - *(PGIDec 08)*
a) Ischial tuberosity b) Anterior superior iliac spine
c) Iliopubic rami d) Anterior inferior iliac spine
e) Iliac crest

562. A man is stucked with lathi on lateral aspect of head of fibula. Which of the following can occur as a result * of nerve injury - *(PGI Dec 08)*
a) Loss of sensation of lateral foot
b) Loss of sensation of adjacent sides of 1 st & 2nd toe
c) Inversion inability
d) Dorsiflexion not possible
e) Plantar flexion not possible

563. Superior Gluteal Nerve supplies all of the following muscles, Except - *(AI09)*
a) Gluteus Minimus b) Gluteus Maximus
c) Tensor fascia lata d) Gluteus Medius

564. All of the following are composite muscles, except -
a) Flexor carpi Ulnaris *(AI 09)*
b) Flexor digitorum profundus
c) Pectineus
d) Biceps Femoris

565. Muscles(s) causing dorsiflexion of foot is/are -
a) Extensor digitorum longus *(PGI June 09)*
b) Extensor hallucis longus
c) Flexor digitorum longus
d) flexor hallucis longus
e) Tibialis anterior

566. A Man is stucked with lathi on lateral aspect of head of fibula. Which of the following feature(s) can occur as a result of nerve injury - *(PGI June 09)*
a) Loss of sensation along lateral border of foot.
b) Loss of sensation of adjacent sides of 1st & 2nd toe.
c) Inversion inability.
d) Dorsiflexion not possible.
e) Plantur flexion not possible.

567. Anterior wall of inguinal canal is formed by muscles - *(DELHI PG Feb. 09)*
a) External and internal oblique
b) External, internal and transverse abdominis
c) External oblique and rectus abdominis
d) Internal oblique and transverse abdominins

568. All statements concerning the conjoint tendon are true, except: *(DELHI PG Mar. 09)*
a) It forms part of posterior wall of inguinal canal
b) It is the fused part of aponeurosis of transverses abdomens and internal oblique muscle
c) It is continuous with inguinal ligament
d) It may be pushed forward by direct inguinal hernia

569. In injury to head of fibula, all are involved except -
a) Common peroneal N. *(AIIMS Nov 09)*
b) Superficial peroneal N.
c) Anterior Tibial N.
d) Tibial N.

570. Deep peroneal nerve supplies - *(ARMSNov 09)*
a) 1st web space of foot
b) 5th web space of foot
c) Antero lateral dorsum of foot
d) Lateral part of leg

571. All of the following maintain the stability of ankle joint except - *(ARMS Nov 09)*
a) Cruciate ligament
b) Shape of the bones
c) Tendons of muscle which cross the joint
d) Collateral ligament

572. What is medial most in femoral triangle -
a) Vein b) Artery *(ARMS Nov 09)*
c) Nerve d) Lymphatics

573. A healthy young athlete is sitting at the edge of the table with knee at 90 degree flexion. He fully extends it. What will happen - *(ARMS May 10)*
a) Movement of tibial tuberosity towards centre of the patella
b) Movement of tibial tuberosity towards lateral border of patella
c) Movement of tibial tuberosity towards medial border of patella
d) No change in position

574. Gluteus medius is supplied by - *(AI 10)*
a) Superior gluteal nerve
b) Inferior gluteal nerve
c) Nerve to obturator intemus
d) Nerve to quadratus femoris

555)a 556)d 557)c 558)b 559)c 560)b 561)d 562)a,b,d 563)b 564)c 565)a,b,e 566)a,b,d 567)a
568) c 569)d 570)a 571)a 572)d 573)b 574) a

575. Which of the following tendons passes below the sustenticulum tali - *(AI10)*
a) Tibialis anterior
b) Tibialis posterior
c) Flexor digtorum longus
d) Flexor hallucis longus

576. Which of the following tendons has attachments on sustenticulum Tali - *(AI 10)*
a) Tibialis anterior b) Tibialis posterior
c) Flexor digitorum longus d)Flexer hallucis longus

577. Foot drop results as a result of injury to -*(DPG10)*
a) Deep peroneal nerve
b) Superficial peroneal nerve
c) Tibial nerve
d) Deltoid ligament

578. Which one of the following arteries pierces the oblique popliteal ligament of the knee joint?
a) Medial superior genicular artery *(DPG 10)*
b) Lateral superior genicular artery
c) Middle genicular artery
d) Posterior tibial recurrent artery

579. Which of the following forms the tendinous sling in the superficial arch of foot? *(Maharashtra 10)*
a) Peroneus longus and pemeus brevis
b) Peroneus brevis
c) Peroneus longus and tibialis posterior
d) Peronuis brevis and tibialis posterior

580. Urogenital diaphragm is made of the following except-
a) Deep transverse perinei *(Maharashtra 10)*
b) Perineal membrane
c) Codes' fasicia
d) Sphincter urerthrae

581. Feature seen in common peroneal nerve injury-
a) Inversion inability *(PGlMay 10)*
b) Loss of sensation of sole
c) Foot drop
d) Loss of extension of great toe
e) Seen in Fibular neck #

582. All of the following are supplied by superior gluteal nerve except - *(AIIMS Nov 10)*
a) Gluteus maximus b) Gluteus minimus
c) Gluteus medius d) Tensor fascia lata

583. Arterial supply to the head and neck of femur is -
a) Lateral circumflex femoral artery *(Punjab 10)*
b) Medial circumflex femoral artery
c) Profunda femoris artery
d) External femoral artery

584. Which of the following movements will not be affected by involvement of the L5 Nerve root - *(AI 11)*
a) Thigh adduction b) Knee Flexion
c) Knee Extension d) Toe Extension

585. All of the following statements about injury to common peroneal nerve are true, except - *(AI 11)*
a) Commonly results from injury to the neck of fibula
b) Loss of sensations over sole of foot
c) Loss of toe dorsiflexion
d) Foot drop

586. Contents of adductor canal includes all except -
a) Femoral vein *(Jipmer 10)*
b) Femoral artery
c) Saphenous nerve
d) Nerve to vastus lateralis

587. Afferent component of cremasteric reflex includes - *(Jipmer 10)*
a) Ilioinguinal nerve b) Genito femoral nerve
c) Pudendal nerve d) Iliohypogastric

588. Superficial inguinal ring is a defect in -
a) External oblique abdominis *(Jipmer 10)*
b) Internal oblique abdominis
c) Internal oblique aponeurosis
d) External oblique aponeurosis

589. Nerve supply to tensor fascia lata - *(Jipmer 10)*
a) Femoral nerve b) Inferior gluteal nerve
c) Sciatic nerve d) Superior gluteal nerve

590. What is the root value of the posterior cutaneous nerve of the thigh ? *(NEET/DNB Pattern)*
a) SI, S2 b)Sl,S2, S3
c) S2, S3 d) S2, S3, S4

591. During heel touch phase of walking pressure in calf compartment is - *(NEET/DNB Pattern)*
a) More than resting pressure
b) Less than resting pressure
c) No change in pressure
d) First rises and then falls

592. Gluteus maximus is supplied by -
a) Superior gluteal nerve *(NEET/DNB Pattern)*
b) Inferior gluteal nerve
c) Nerve to quadratus femoris
d) Sciatic nerve

593. Extensor hallucis longus is supplied by -
a) Superficial peroneal nerve
b) Deep peroneal nerve *(NEET/DNB Pattern)*
c) Tibial nerve
d) Sciatic nerve

594. Anterior compartment of leg contains all except-
a) Peroneus brevis *(NEET/DNB Pattern)*
b) Tibialis anterior
c) External hallucis longus
d) External digitalis longus

595. The nutrient artery to the femur is ?
a) Profunda femoris artery *(NEET/DNB Pattern)*
b) Femoral artery
c) Popliteal artery
d) Middle circumflex femoral artery

596. Nutrient artery arises to fibula from -
a) Peroneal artery *(NEET/DNB Pattern)*
b) Anterior tibial artery
c) Posterior tibial artery
d) Poplitesl artery

597. Nutrient artery to femur arises from -
a) Femoral artery *(NEET/DNB Pattern)*
b) Profunda femoris artery
c) Popliteal artery
d) None of the above

575) d 576) b 577)a 578)c 579)c 580)c 581)c,d,e 582)a583)b 584)a 585)b 586)d 587)b 588)d
589) d 590) b 591) a 592) b 593) b 594) a 595) a 596) a 597) b

598. 7yr old girl, injury to nerve which passes superior to piriformis & winds around greater sciatic notch. Most likely muscle affected- *(NEET/DNB Pattern)*
a) Gluteus medius b) Gluteus maximus
c) Obturator intemus d) Piriformis

599. Course of the great saphenous vein lies in what rekation to the malleoli? *(NEET/DNB Pattern)*
a) Anterior to the medial malleolus
b) Posterior to the medial malleolus
c) Anterior to the lateral malleolus
d) Posterior to the lateral malleolus

600. Structures passing through the greater sciatic foramen are all of the following except -
a) Pyriformis *(NEET/DNB Pattern)*
b) Superior gluteal nerve
c) Inferior gluteal nerve
d) Obturator nerve

601. All are contents of femoral sheath except-
a) Femoral artery *(NEET/DNB Pattern)*
b) Femoral nerve
c) Femoral vein
d) Genitofemoral nerve

602. Conjoint tendon is formed by - *(NEET/DNB*
a) External oblique, internal oblique *Pattern)*
b) External oblique, transversus abdominis
c) Internal oblique, transversus abdominis
d) all three

603. Nutrient artery arises to fibula from -
a) Peroneal artery *(NEET/DNB Pattern)*
b) Anterior tibial artery
c) Posterior tibial artery
d) Poplitesl artery

604. Root value of sciatic nerve - *(NEET/DNB Pattern)*
a) $S_j S_j S_j$ b)L_4L_5S, S_2S_3
c) L, L_2L_3 d)$L_2L_3L_4$

605. Site of injection in gluteus - *(NEET/DNB Pattern)*
a) Inferomedial b) Superomedial
c) Superolateral d) Superomedial

606. Major flexor of hip joint - *(NEET/DNB Pattern)*
a) Psoas major b) Gluteus maximus
c) TFL d) Hamstring

607. Trendelenburg sign is due to paralysis of -
a) Gluteus maximus *(NEET/DNB Pattern)*
b) Gluteus medius
c) Pyriformis
d) Obturatior ext.

608. Inguinal ligament forms the boundries of -
a) Femoral triangle *(NEET/DNB Pattern)*
b) Hesselbach's triangle
c) Both
d) None

609. Length of inguinal canal - *(NEET/DNB Pattern)*
a) 2.5 cm b) 4 cm
c) 10 cm d) 15 cm

610. Deltoid ligament is attached to all except -
a) Medial malleolus *(NEET/DNB Pattern)*
b) Talus
c) Calcaneum
d) Lateral malleolus

611. First web space of toes is supplied by -
a) Femoral nerve *(NEET/DNB Pattern)*
b) Deep peroneal nerve
c) Superficial paroneal nerve
d) Sphenous nerve

612. Flexor of hip joints are all except- *(NEET/DNB*
a) Psaoas major b) Sartorius *Pattern)*
c) Gluteus maximus d) Rectus femoris

613. Flexion of knee joint is caused by- *(NEET/DNB*
a) Rectus femoris b) Vastus medialis *Pattern)*
c) Homstrings d) Vastus lateralis

614. Adductor canal conteins all except- *(NEET/DNB*
a) Femoral artery b) Femoral vein *Pattern)*
c) Femoral nerve d) Sphenous nerve

615. Tibial nerve supplies all except -*(NEET/DNB Pattern)*
a) Gastrocnemius b) Plantaris
c) Peroneus longus d) Tibialis posterior

616. What lies at midinguinal point -
a) Deep inguinal ring *(NEET/DNB Pattern)*
b) Superficial inguinal ring
c) Femoral artery
d) Sphenous vein

ABDOMEN

617. Which of the following stimulus does not induce visceral pain - *(All India 93)*
a) Distension b) Pressure
c) Cauterisation d) Cutting

618. Length of spermatozoa - *(CUPGEE 02)*
a) 50m b) 100 m
c) 120 m d)500m

619. The first event to occur in the MICTURITION REFLEXES - *(AIIMS 98)*
a) Relaxation of sphincter
b) Detrusor contraction
c) Relaxation of perineal muscles
d) Activity of EMG stops at external sphincter

620. Hydatides of Morgagni are - *(Jipmer 19, Bihar 89)*
a) Hydatid cysts in the brain
b) Hydatid cyst in the thorax
c) Subcutaneous hydatid cysts
d) None of the above

621. Capacity of stomach of newborn - *(Calcutta 2K)*
a) 20ml b)30ml
c) 50ml d) 100 ml

622. Corresponding to the Vas in males, which structure penetrates the inguinal ring in females - *(PGI88)*
a) Round ligament b) Inguinal ligament
c) Broad ligament d) Cardinal ligament

598) a 599) a 600)d 601)b 602)c 603)a 604)b 605)c 606)a 607)b 608)c 609)b 610)d 611)b
612)c 613)c 614)c 615)c 616)c 617)c,d 618)a 619)c 620)d 621)b 622)a

623. All are supports of uterus except - *(AIIMS 92)*
a) Uterosacral ligament
b) Round ligament of Uterus
c) Mackenrodts ligament
d) Transverse cervical ligament

624. The sensory nerves from the cervix pass through the- *(DNB89)*
a) Lumbar4,5 b) Sacral 2,3,4
c) Pudendal nerve d) Ilioinguinal nerve

625. The branches of internal iliac artery include all of the following except - *(KARN 94)*
a) Uterine artery b) Middle rectal artery
c) Obturator artery d) Inferior epigastric artery

626. All of the following are branches of internal iliac except- *(AP 97)*
a) Ovarian artery b) Superior vesical artery
c) Uterine artery d) Internal pudendal artery

627. The principal factor causing the rupture of the graafian follicle is - *(Kerala 2K)*
a) Increase in intrafollicular pressure
b) Necrobiosis of the overlying tissues
c) All of the above
d) None of the above

628. The superior rectal artery arises from the-
a) Superior mesentric artery *(AIIMS 85)*
b) Inferior mesentric artery
c) Internal illiac artery
d) Internal pudendal artery

629. Middle rectal artery is branch of... artery-*(PGI88)*
a) Internal iliac b) Internal pudendal
c) External iliac d) Femoral

630. The blood supply of the jejunum is through the -
a) Inferior mesenteric artery *(PGI 88)*
b) Superior mesenteric artery
c) Pancreatico duodenol artery
d) Lleocolic artery

631. Appendicular artery is a branch of - *(PGI 85)*
a) Ileo colic artery b) Right colic artery
c) Middle colic artery d) Posterior cecal artery

632. Recurrent appendicular artery is a branch of- *(PGI 85)*
a) Ileocolic artery b) Right colic artery
c) Middle colic artery d) Posterior cecal artery

633. The length of the CBD is- *(PGI 85)*
a) 5cm b) 7.5 cm
c) 8.0 cm d)9cm

634. Caudate lobe of liver is situated - *(PGI 90)*
a) Gall bladder and groove for ligamentum teres
b) IVC and ligamentum Venosum
c) Posterior part of left lobe
d) Anterior superior surface of liver

635. Transpyloric plane passes through - *(Kerala 91)*
a) T_{12}-$_{Ll}$ b)L_s-S,
c) $T_{,0}$ d)L_rL_2

636. Fascia of Denonvilliers- *(Karn 94)*
a) Membranous layer of fascia of the thigh
b) Perirenal fascia
c) Fascia between the rectal ampulla and the prostate and the seminal vesicles
d) Posterior layer of perirenal fascia

637. Irritation of the diaphragam radiates to which of the following segments - *(AP 97)*
a) C34 b)Cl-2
c) C6-7 d) C8-9

638. Nerve of later jet of vagus is seen in- *{PGI 97)*
a) Thorax b) Neck
c) Stomach d) Heart

639. Pancreatico splenic lymph nodes receive lymphatics from the part of the stomach which is supplied by -
a) Left gastric artery *(ICS 2K)*
b) Short gastric arteries and left gastroepiploic artery
c) Right gastro epiploic artery
d) Right gastric artery

640. Most common type of diaphragmatic hernia -
a) Bochdalek's hernia *(JIPMER85)*
b) Morgagni's hernia
c) Hernia throught the dome
d) Hiatus hernia

641. In portal hypertension the sites of portosystemic anastomosis includes - *(ARMS87)*
a) Lower end of esophagus
b) Around umbilicus
c) Lower third of rectum and anal canal
d) Extraperitoneal surface of abdomina organs
e) All of the above

642. Normal portal venour pressure is- *(JIPMER 87)*
a) 5-8mmHg b)6-12mmHg
c) 12-15 mm Hg d)45mmHg

643. One of the following does not normally shrink in the umbilical cord - *(PGI 79, 80, UPSC87)*
a) Allantois b) Vitello intestinal duct
c) Umbilical vein d) Umbilical artery

644. Over 75% of the strength of the intact abdominal wall is in the- *(UPSC95)*
a) Skin b) Subcutaneous tissue
c) Aponeurosis d)Pentonium

645. Bowel does not get strangulated in which of the following- *(ARMS 2K)*
a) Recto uterine pouch
b) Omental bursa
c) ileo-colic recess
d) Para duodenal and peritoneal recess

646. Renal collar is foremd by splitting into two limbs and encircling the aorta by - *(Al 99)*
a) Horse shoe Kidney b) Renal artery
c) Left renal vein d) None of the above

647. The least dilatable part of the Urethra-
a) Prostatic b) Membranous (*CUPGEE 95)*
c) Spongy d) All are equally dilatable

623) None 624) b 625) d 626) a 627) b 628) b 629) a 630) b 631) a 632) None 633) c 634) b 635) d 636) c 637) a 638)c 639)b 640) d 641)e 642)b 643)a 644)c 645)a 646)c 647) b

648. In hydrocele aspiration, the needle passes through all of following layers except - *(DELHIPG 96)*
a) Dartos
b) Tunica albuginea
c) Tunica vaginalis
d) External spermatic fascia

649. During abdominal surgery under local anaesthesia, patient suddenly felt sharp pain. Injury to structure likely involved - **(***AIIMS 2k)*
a) Liver parenchyma b) Large gut
c) Small gut d) Parietal peritonium

650. The lesser peritoneal sac (omental bursa) is bounded- *(PGI78, AIIMS 75)*
a) Anteriorly by the stomach
b) Posteriorly by the ileum
c) Posteriorly by the pancreas
d) Posteriorly by the lesser omentum

651. Asa rule, all prostatic arteries are branches of the-
a) Inferior vesical b) Defemtial *(PGI 78,AIIMS91)*
c) Superior vesical d) Internal pudendal

652. The lumbosacral (lumbar and sacral) plexus -
a) Is formed within both the abdomen and the pelvis *(PGI 78, 81)*
b) Is formed partially within the substance of the major muscle
c) Is found partially on the deep aspect of the piriformis muscle
d) Has branches that innervate the muscles of the lower abdominal wall
e) None

653. The posteroinferior (visceral) surface of the liver is related to the - *(JIPMER 78, PGI 80)*
a) Right kidney b) Hepatic flexure of the colon
c) Duodenum d) Esophagus

654. Buck's fascia is related to - *(JIPMER 78, AMU86)*
a) Ischiorectal fascia b) Thigh
c) Neck d) Penis

655. Structure found in the superficial perineal space (pouch) of the male include the - *(PGI 78, 82)*
a) Bulb of the penis
b) Bulbospongiosus muscle
c) Ischiocavemosus muscles
d) Superficial transverse perineus muscle
e) None

656. The post, wall of inguinal canal are formed by many structures that include - *(JIPMER 79, PGI 87)*
a) Conjoint tendon b) Transversus abdominis
c) Fascia transversalis d) Lacunar ligament

657. Which of the following statements concerning the nerve supply to the urinary bladder is/are correct -
a) The sympathetic postganglionic fibre orginate in the first and second lumber ganglia
b) The parasympathetic preganglionic fibres synaple with postaganglionic neurons in the inferior hypogastric, plexuses *(PGI80, AIIMS 83)*
c) The afferent sensory fibres arising in the bladder reach the spinal. Cord via the pelvic splanchnic nerves and also travel with the sympathetic nerves
d) The parasympathetic preganglionic fibres arise from S2-S4
e) All of the above

658. The common bile duct - *(PGI 80)*
a) Passes anterior to the first part of the duodenum
b) Is situated anterior to the portal vein
c) Opens into the third part of the duodenum
d) Is separated from the inferior vena cava by the epiploic foramen

659. The right suprarenal gland is related to the -
a) Third part of the duodenum *(JIPMER 80*
b) Inferior vena cava *PGI 81)*
c) Transverse colon
d) Right lobe of the liver

660. Which of the following statements concerning the anterior abdominal wall is/are correct? *(PGI 80)*
a) The fibers of external and internal abdominal oblique muscles are oriented perpendicular to one another
b) A function of the rectus abdominis muscle is extension of the vertebral column
c) The Muscles are innervated partially by lower intercostal nerves
d) Contraction of its muscles reduces intrabdominal pressure

661. The celiac nodes receive lymphatic drainage from the - *(JIPMER 80, AMC 84)*
a) Liver b) Pancreas
c) Spleen d) Duodenum
e) All of the above

662. Which of the following statements relative to the gallbladder is/are true - *(PGI80)*
a) Its fundus is normally situated on the transpyloric line at the tip of the ninth costal cartilage
b) It occupies a groove that separates the right and quadrate lobes of the liver
c) It is related posteriorly to the first part of the duodenum
d) Its arterial supply is typically derived from the left hepatic artery

663. Parasympathetic outflow from sacral plexus is - *(JIPMER 81, AP 91)*
a) Nerve Erigentes b) Nerve of Kuntz
c) Arnold's nerve d) Jacobson's nerve

664. The urinary bladder in the male is - *(PGI81, 82)*
a) Posterior to the pubic symphysis
b) Anterior to the ampulla of the vas deferens
c) Superior to the prostate gland
d) Superior to the seminal vesicles

665. Which of the following statements is (are) correct
a) The lesser omentum forms the anterior boundary into the lesser sac *(PGI82)*
b) The thorcic duct leaves the abdomial cavity by passing through the aortic opening
c) The bile duct (Common bile duct) descends behind the first part of the duodenum
d) The quadrate lobe of the liver drains into the left hepatic duct

648) b 649) d 650) a,c 651)a,d 652) a,d 653)All 654) d 655)a,b,c,d 656) a,c 657) e 658) b,d 659) b,d 660) a,c 661) e 662)a,b,c 663) a 664)a,b,c 665)a,b,c

666. Superficial fatty fascia between umbilicus & pubis is fascia - *(PGI82)*
a) Camper b) Scarpa
c) Colies d)CUi

667. In the female pelvis - *(PGI 82)*
a) The ovary is related to the anterior leaflet (layer) of the broad ligament
b) The suspensory ligament of the ovary transmits the ovarian vessels
c) The ureter passes superior to the uterine artery at the level of the uterine cervix
d) The Posterior fornix of the vagina is related to the recto uterine pouch (of Douglas)

668. The rectus sheath contains al of the following except-
a) Pyramidalis muscle *(AIIMS 82, AI88)*
b) Genitofemoral nerve
c) Inferior epigastric
d) Superior epigastric vessels

669. Which of the following statement about the formation of the inguinal canal is/are true -
a) The superficial inguinal ring is an opening in the aponeurosis of the external adbominal oblique muscle *(PGI 82, 83)*
b) The anterior wall of the inguinal canal is formed by the aponeurosis of the external oblique and reinforced laterally by fibers of the internal oblique muscle
c) The posterior wall is formed partially by the trasnversalis fascia
d) The deep inguinal ring is an outpouching of the transversalis fascia and is situated lateral to the inferior epigastric vessels

670. The normal constrictions of the ureter are found - *(AIIMS 83, PGI 87, 79)*
a) Where the ureter begins at the junction of the renal pelvis and the ureter
b) Where the ureter passes through the bladder wall
c) Where the ureter crosses the common iliac artery or the pelvic brim
d) Where the ureter passes through the cardinal ligament

671. The chief blood supply of the greater omentum is.....artery - *(PGI 83)*
a) Gastroduodenal
b) Right gastroepiploic
c) Left gastro epiploic
d) Superior pancreatice duodenal

672. The boundries of the morrisons pouch are -
a) Inferior surface of liver *(PGI 84)*
b) Anterior abdominal wall
c) Falciform ligament
d) Peritoneum over Rt. Kidney
e) Coronary ligament

673. The following about prostate is true except -
a) Surrounds the neck of bladder *(ARMS 84)*
b) Has an anterior lobe which hypertrophies in old age
c) Has median lobe between urethra and ejaculatory ducts
d) Has a posterior lobe which is prone to carcinomatous change

674. It is true that the gall bladder - *(ARMS 84)*
a) is supplied by cystic artery which has an accompanying vein on its left side
b) is drained by veins into the liver
c) has a fundus which project beyond the liver
d) has an infundibulum which projects downwards joining a pouch

675. The superior mesentric artery arises opposite the.... Vertebra - *(ARMS 85)*
a) T_{12} b)L,
c) L_2 d)L_3

676. The Coeliac axis arises from the aorta opposite the... Vertebra - *(ARMS 85)*
a)T_{12}&L_1 b)L_1
c)L_2 d)L_3

677. Deep inguinal ring is a defect in the - *(UPSC 85,*
a) Ext oblique *PGI 8 7, Jipmer 8 7, AI 88, Kerala 90*
b) Int. oblique *ARMS May 05*
c) Transversus abdominis
d) Transversus fascia
e) Peritoneum

678. Commonest type of inversion of testes is -
a) Superior b) Anterior *(ARMS85)*
c) Lateral d)Loop

679. The following statement is (are) correct concerning the vagina except - *(ARMS 85)*
a) The area of the vaginal lumen around the cervix is divided into four fomices
b) The upper part of the vagina is supported by the levator ani muscles and the transverse cervical ligaments
c) The perineal body lies posterior to and supports the lower part of the vagina
d) The upper part of the vagina is not covered with peritoneum

680. Carcinoma prostate commonly occurs in the..... lobe.- *(PGI 85)*
a) Anterior b) Posterior
c) Lateral d) Middle

681. The right adrenal vein drains into the - *(ARMS 85)*
a) right renal vein b)IVC
c) Lumbar veins d) Left renal vein

682. The broad ligament of uterus has running in it -
a) Uterine vessels b) Uterine tube *(AMC 85)*
c) Ovarian ligament d) All of the above

683. Which of the following statements concerning the ovary is (are) correct - *(ARMS 86)*
a) The lymph drainage is into the para-aortic (lumbar) lumph nodes at the level of the first lumbar vertebra
b) The ligament of the ovary extends from the ovary to the upper end of the lateral wall of the uterus
c) The ovarian fossa is bounded above by the external iliac vessels
d) The obturator nerve usually lies lateral to the ovary

666)a 667)b,d 668)b 669)a,b,c,d 670)a,b,c 671)b,c 672)a,d,e 673)b 674)b,c 675)b 676)a 677)d 678)b
679) d 680) b 681)b 682) d 683)a,b,d

684. The shortest part of the colon is- *(AP 86, Dehli 86)*
a) Ascending colon b) Transverse colon
c) Descending colon d) Sigmoid colon

685. Para sympatheticsupply to rectum and anal canal - *(PGI86, UPSC 86)*
a) L_4L_5S, b)L_5S,S_2
c)S,S_2S_3 d)$S_2S_3S_4$

686. Lymphatic of the Anal canal is to - *(AIIMS 86,*
a) Inguinal *UPSC87, Kerala 87)*
b) Lymph nodes
c) Ext. iliac nodes
d) Para aortic
e) None of the above

687. Which of the following about meckels diverticulum is false- *(PGI 86, AI88)*
a) Present in 2 % of population
b) Occurs at 2 feet from the ileocaceal junction
c) Posesses all 3 coats of intesinal wall
d) Arises from the mesentric border of ileum

688. The structures in the free border of the lesser omentum anterior to posterior are - *(PGI 86,*
a) CBD, Hepatic artery, Portal vein *UPSC 87*
b) Portal vein, hepatic artery CBD *AI 88)*
c) Hepatic artery portal vein CBD
d) Portal vein CBD hepatic artery

689. Lymphatic drainage of the umbilicus is to -
a) Axillary nodes *(PGI 87, UPSC 87,*
b) Inguinal nodes *NIMHANS 86, Kerala 90)*
c) Aandb
d) Porta hepatis
e) Celiac axis nodes

690. Uterine artery is a branch of - *(PGI 87, UPSC 86*
a) Directly arises from the aorta *JIPMER86,*
b) Int. iliac artery *Kerala 88)*
c) Ext. iliac artery
d) Femoral artery

691. The left testicular veins drains into the -*(AIIMS 8 7,*
a) Left renal vein b) IVC *Delhi 87, A 88)*
c) Rt. Renal vein d) Int. iliac vein
e) Ext. iliac vein

692. Which of the following statement concerning the function of the muscle of the anterior abdomina wall are true - *(PGI 8 7)*
a) They laterally flex and rotate the vertebral column
b) They assist the diaphragm during inspiration by relaxing
c) They support and protect the abdominal viscera
d) They assist in increasing the intraabdominal pressure during micturition and defecation

693. Length of the inguinal canal is - *(PGI 87)*
a) 2 cm b) 3.75 cm
c) 4.5 cm d) 5 cm
e) 6 cm

694. The kidney has .. ….segment - *(PGI 87)*
a) 11 b)9
c) 7 d) 5

695. The smallest branch of the celiac axis is - *(PGI 8 7)*
a) Splenic b) Common hepatic
c) Left gastric d) Gastro-epiploic

696. Hasselbachs triangle is - *(PGI 87)*
a) inguinal triangle b) Sacral triangle
c) Anal triangle d) Carotid triangle

697. The boundaries of the Hasselbachs triangle are all except - *(PGI 8 7, NIMHANS 86, Kerala 90)*
a) Lateral border of Rectus abdominis
b) Inguinal ligament
c) Inferior epigastric artery
d) Medial border of pyramidal is

698. The neurovascular bundle in the anterior adbominal wall is situated between - *(PGI 8 7)*
a) The subcutaneous tissue and ext. oblique muscle
b) External oblique and internal oblique
c) Internal oblique and transversus abdominis
d) Transversus abdominis and peritoneum

699. The contents of the inguinal canal passing through the Int.ring are all except - *(AI 88, PGI 8 7)*
a) Ilio inguinal nerve
b) Vas deferens
c) Pampinifrom plexus of veins
d) Inferior epigastric artery

700. Fascia extension of lacunar ligament along iliopectineal line is - *(PGI 88)*
a) Poupart ligamentb) Thompson's ligament
c) Cooper's ligament d) Lacunar ligament

701. Pouch of douglas is situated between - *(AI 88)*
a) Bladder and the uterus
b) Bladder and pubic symphysis
c) Bladder and rectum
d) Uterus and rectum

702. All of the following muscles are posterior to right and left kidneys except - *(AIIMS 88)*
a) Psoas major b) Latissimus dorsi
c) Quadratus Lumborum d) Transverse abdominis

703. The pancreatic bed does not include - *(AMU 88)*
a) left kidney b) Splenic artery
c) Left renal vein d) Left crus of diaphragm

704. Splenic artery usually arises from... - *(PGI 88)*
a) Aorta b) Superior mesentric artery
c) Celiac artery d) Hepatic artery

705. Structures realted to the lesser omentum are -
a) vagus b) hepatic artery *(PGI 88)*
c) hepatic vein d) portal vein

706. Posterior relationships of both kidneys include the-
a) Diaphragm *(TN 89)*
b) Psoas major muscle
c) Quadratus lumborum muscle
d) Ninth rib

707. Fascia of Gerota is - *(TN 89)*
a) True capsule b) Renal fascia
c) Fatty capsule d) Thoracolumbar fascia

684) a 685) d 686) a 687) d 688) a 689) c 690) b 691) a 692)a,c,d 693) b 694) d 695) c 696) a 697) d
698) c 699) a,d 700) c 701) d 702) b 703) b 704) c 705) b,d 706)a,b,c 707) b

708. The rectus sheath contain the following important structures except - *(DNB 89)*
a) Terminal branches of lower intercostal nerves
b) Inferior epigastric artery
c) Lymph vessels
d) Ilio Inguinal nerve

709. The superior mesenteric artery - *(AP 89)*
a) Typically arises form the aorta just inferior to the origin of the gonadal (testicular or ovarian) arteries
b) Supplies the entire duodenum
c) Passes between the pancreas and the second part of the duodenum
d) Supplies the jejunum, appendix and ascending and transverse portions of the colon

710. Left gastroepiploic artery is a branch of - *(AI89)*
a) Celiac axis b) Hepatic artery
c) Splenic artery d) Left gastric artery

711. Regarding trigone of the bladder, which is incorrect-
a) Bordered by interureric crest *(AI89)*
b) Mesoderm in origin
c) Mucus membrane has folds
d) Overlies the median lobe of prostate

712. Which is a flexor of the lumbar vertebral culumn - *(AI 89)*
a) Psoas b) Rectus abdominis
c) Internal oblique d) External oblique

713. The policeman of the abdomen is - *(UPSC 89)*
a) Peritoneum b) Greater omentum
c) Appendice epiloicae d) Teania coli

714. Xiphisternal j unction is usually at the level of disc between the following thoracic vertebrae -
a) 9 and 10 b) 8 and 7 *(DNB 90)*
c) land 12 d)None

715. The attachment of the mesentry of the small gut is -
a) Lt. Transverse process of L2 to Rt. Sacro iliac joint.
b) Rt. Transverse process of L2 to Rt. Sacro iliac joint.
c) Lt. Transverse process of T1 to Rt. Sacro iliac joint *(PG190, AIIMS 86)*
d) Rt. Transverse process of T1 to Lt. Sacro iliac joint
e) None of the above

716. Which of the following statements are true concerning the rectus abdominis muscle -*(PGI91)*
a) It arises by three heads from the front of the symphysis pubis, the pubic crest and the pubic tubercle
b) It is inserted into the eighth, ninth and tenth costal cartilages
c) The tendinous intersection are attached to the posterior wall of the rectus sheath
d) It is innervated by the lower six intercostal nerves

717. Embryonic ventral mesogastrium gives rise to -
a) Greater omentum *(AIIMS 91)*
b) Lesser omentum
c) Pelvic mesocolon
d) Gastro splenic ligament

718. Urethra of female - *(DNB 91)*
a) has only connective tissue in its upper third
b) has only smooth muscle in its wall
c) Is shorter than in the male
d) Is longer than in the male

719. Perineal body is formed by all except - *(AI 91)*
a) Levator ani muscle
b) External anal sphincter muscle
c) Bulbocavernous muscle
d) Obturator intemus muscle

720. Which is true about superficial inguinal ring -
a) It is a defect in transversalis fascia *(AI 91)*
b) It is round in shape
c) It transmit llio Inguinal nerve.
d) Situated one inch above the mid-inguinal point

721. Duodenum is developed from - *(TN91)*
a) Foregut b) Midgut
c) Forgeut and midgut d) Hindgut

722. Which is true regarding urethra - *(JIPMER 91)*
a) Originates from Urogentital sinus
b) Lined by transitional epithelium
c) Membranous part is narrowest
d) Ejaculatary ducts joins urethra near the origin

723. Which is true regarding ureter - *(JIPMER 91)*
a) Anterior to genitofemoral nerve
b) Anterior to gonadal vessels
c) Anterior to Internal iliac artery
d) Anterior to attachment of mesentry

724. The following is true of ureter- *(AIIMS 91)*
a) Crossed anteriorly by gonadal artery
b) Length of 50 cm
c) Nerve supply from T8-T10
d) Crossed posteriorly by renal artery

725. The following is true regarding spleen -
a) Notch is on inferior border *(AIIMS 91)*
b) Long axis parallel to 12^{th} Rib
c) Developed from ventral mesogastrium
d) Nerve supply from celiac plexus

726. The inferior mesentric artery supplies all of the following organs except the - *(DNB 91)*
a) Ascending colon b) Descending colon
c) Transverse colon d) Sigmoid colon

727. Below the level of the anterior superior iliac spine, which structure forms the posterior wall of the rectus sheath - *(TN 92)*
a) Trans versus abdominis b) External oblique
c) Internal oblique d) Conjoint tendon
e) Transversalis fascia

728. The hilus of the right kidney contains the following important structures - *(PGI 92)*
a) Branches of the renal artery
b) Renal pelvis
c) Sympathetic nerve fibers
d) Tributaries of the renal vein

708)c,d 709)d 710)c 711)c 712)b 713)b 714)d 715)a 716)d 717)b 718)c 719)d 720)c 721)c
722) a,b 723) a,c 724) a 725) d 726) a 727) None 728)a,b,c,d

729. All the following statements concerning the conjoint tendon are true except - *(DNB 92)*
a) It forms part of the posterior wall of the inguinal canal
b) It is formed by the fusion of the aponeuroses of the transversus abdominis and internal oblique muscles
c) It reinforces the superficial inguinal ring
d) It is continuous with the inguinal ligament
e) It may bulge forward in a direct inguinal hernia

730. The following is false regarding rectus sheath -
a) Contains pyramidalis *(AIIMS 92)*
b) Deficient anterosuperiorly
c) Posterior wall formed by Transversalis fascia
d) Inferior epigastric artery pierces postero-inferiorly

731. The following is not a content of broad ligament -
a) Round ligament b) Ovarian ligament *(AI92)*
c) Fallopian tubes d) Ovary

732. Which is not a tributary of left Renal vein -
a) Inferior phrenic b) Left gonadal *(AI92)*
c) First lumbar d) Left supra renal

733. Internal pudendal artery in a female is a branch of -
a) Internal iliac artery (Anterior) *(Delhi 92,*
b) Uterine artery *AIIMS 89)*
c) Exemal iliac artery
d) Common iliac artery

734. The following statements concerning the abdominal part of the sympathetic trunk are not true except that- *(PGI92)*
a) It enters the abdomen behind the lateral arcualte ligament
b) The trunk possesses six segmentally arranged ganglia
c) All the ganglia receive white rami communicantes
d) Gray rami communicantes are given off to the lumbar spinal nerves
e) The splanchnic nerves from the throax join the trunks below the diapharagm

735. Motor nerve supply to Detrusors of the bladder is -
a) $L_2\ L_3\ L_4$ b) $S_2\ S_2$ *(JIPMER 92)*
c) $S_2S_3S_4$ d) S_4S_5

736. Untrue about BUrd part of duodenum is -
a) 10 cm in length *(Delhi 93, 89)*
b) Derived from foregut
c) Superior mesenteric artery passes anterior to it
d) Lying posterior are inferior vena cava and aorta

737. Uterine artery is a branch of—Artery- *(PGI93)*
a) External iliac
b) Anterior branch of internal iliac
c) Posterior branch of internal iliac
d) Internal pudendal

738. Following are constituents of spermatic Cord except-
a) Vas deferens *(AI93)*
b) Testicular artery
c) Pampiniform plexus
d) Genital branch of genito femoral N.

739. The contents of the Sacral Canal are all excepts -
a) Filum terminale *(AI 93)*
b) Dura
c) L_4-L_5 Nerve roots
d) Vertebral venous plexus

740. Length of female urethra is - *(JIPMER 93)*
a) 2 cm b)3cm
c) 4cm d)6cm

741. Lymphatics from the ovary drain into -
a) Para aortic nodes *(JIPMER 93, AI 91)*
b) Deep inguinal nodes
c) Superficial inguinal nodes
d) External iliac nodes

742. Which is correct regarding Tail of pancreas -
a) Related to the upper part of spleen *(JIPMER 93)*
b) Carcinoma is common
c) Lies in the gastrosplenic ligaments
d) Maximum number of Islets of langerhans.

743. Main Lymphatic drainage of the testis - *(AI 93)*
a) Pre and para aortic lymph nodes
b) Obturator nodes
c) Supraclavicular nodes
d) Inguinal Nodes

744. Parasympathetic fibers that pass through the vagus nerve supply the - *(AI 93)*
a) Stomach b) Spleen
c) Ileum d) Sigmoid colon

745. Superficial inguinal ring is an opening in -
a) External oblique muscle of abdomen *(Kerala 94)*
b) Internal oblique muscle of abdomen
c) Aponeurosis of external oblique muscle of abdomen
d) Fascia transversalis

746. Right testicular vein drains into - *(Kerala 94)*
a) inferior vena cava b) renal vein
c) portal vein d) splenic vein

747. Bile duct opens into the - *(KARN 94)*
a) Second part of duodenum
b) Third part of duodenum
c) Pyloric end of stomach
d) ileo-caecal junction

748. The functional unit of kideny is called - *(Karn. 94)*
a) Bowman's Capsule b) Malphigian corpuscles
c) Pyramid d) Nephron

749. Which of the following structure is not present in transpyloric plane - *(JIPMER 95)*
a) First lumbar vertebra
b) Tip of ninth costal cartilage
c) Fundus of gall bladder
d) Right supra renal gland

750. All are true about superficial penile fascia except
a) it contains dartos *(JIPMER 95)*
b) it contains loose connective tissue
c) it contains superficial dorsal vein
d) Innervated by ilioinguinal nerve

729) d 730) b 731)d 732)c 733)a 734)d 735)c 736)b 737)b 738)None 739)c 740)c 741) a
742) d 743) a 744) a,c 745) c 746) a 747) a 748) d 749) d 750) d

751. All are true about lymphatic drainage of uterine cornua and fudus except - *(Kerala 95)*
a) To horizontal group of superficial inguinal nodes
b) To para aortic nodes
c) Pre aortic nodes
d) Pelvic nodes

752. Inguinal canal is not bounded posteriorly by-*(AI95)*
a) Transversalis fascia b) Internal oblique
c) Conjoint tendon d) Lacunar ligamnent

753. Anal continence is not contributed by - *(AI95)*
a) anorectal junction b) valves of houston
c) internal analsphincter d) inferior rectal nerve

754. Cremasteric reflex is governed by - *(AMU95)*
a) SI b)Ll
c)L4 d)S3

755. Following are true about portal vein except-
a) Formed behind neck of pancreas *(AIIMS95)*
b) Common bile duct is to right & anterior
c) Gasrtoduodenal artery is to left & anterior
d) Ascends behind 2nd part of duodenum

756. Which structure lies in the intersigmoid recess -
a) Left Ureter *(PGI95)*
b) Left Ureter and left comm.iliac artery
c) Left Ureter and left common iliac vein
d) Left Ureter, left comm.iliac artery and left comm. Iliac vein

757. Regarding the left renal vein which is FALSE -
a) Receives left renal & left suprarenal veins
b) Inferior mesenteric veins drains here
c) It drains into the IVC *(CUPGEE 95)*
d) Crosses in front of the aorta

758. Suprarenal gland gets blood supply from all of following arteries except - *(Delhi 96)*
a) Aorta
b) Renal artery
c) Inferior phrenic artery
d) Superior mesenteric artery

759. Splenic artery supplies all following except -
a) Liver b) spleen *(Delhi 96)*
c) pancreas d) stomach

760. All of the following statements of Adrenal gland are true except - *(AI 9 7)*
a) Both are supplied by three arteries
b) Both adrenal glands drain directly into inferior vena cava
c) Right gland is Pyramidal is shape
d) Average weight is about 5gms.

761. Conjoint tendon is formed by- *(Kerala 97)*
a) Tendons external and internal oblique
b) Lower fibres of internal oblique & transversus abdominis
c) Internal oblique only
d) Pyramidalis

762. Which organ has no endarterial supply - *(AI 98)*
a) Liver b) Spleen
c) Kidney d) Lung

763. Gians penis drains into - *(MP 98)*
a) Ext. iliac lymph nodes
b) Deep inguinal lymph nodes
c) Paraaortic lymph nodes
d) Superior inguinal lymph nodes

764. Falciform ligament contains - *(AI 98)*
a) Ligamentum teres
b) Ligamentum venosum
c) Bile duct and portal vein
d) Superior epigastric artery

765. Deep circumflex iliac artery is a branch of -
a) Internal iliac Artery *(JIPMER 98)*
b) External iliac artery
c) Femoral artery
d) Inferior epigastric artery

766. TVue about appendix epeploacae- *(MP 98)*
a) Helps in active peristalysis
b) Presents in alimentary canal along with mesentry
c) Present in small intestine
d) Present in rectum

767. All are opening in prostatic urethra except-(2l4P *98)*
a) Prostatic utricle b) Ejaculatory duct
c) Bulburethral glands d) Prostatic ducts

768. Deep inguinal ring contain - *(MP 98)*
a) Suspensory ligament of ovary
b) Mesosalpinx
c) Mesoovarium
d) Round ligament of uterus

769. Lymphatic drainage of cervix is - *(MP 98)*
a) Inguinal lymph nodes
b) Ext..iliac lymph nodes
c) Paraaortic lymph nodes
d) Obturator lymph nodes

770. Primary lymph nodes draining the lymphatics form the fundus of the stomach would include the -
a) Pancreatico-splenic nodes *(ICS 98)*
b) Right gastric nodes
c) Left gastric nodes
d) Hepatic nodes

771. Consider the following statement accessory spleens may occur at - *(ICS 98)*
1) The tail of the pancreas
2) Hilum of spleen and its mesentery
3) Omentum and mesentery of small bowel
4) Ovary and testes
a) 1,2 and 3 are correct b) 1 and 3 are correct
c) 2 and 4 are correct d) All four are correct

772. COWPER'S GLANDS open into - *(AIIMS 98)*
a) Prostatic urethra b) Membranous urethra
c) Penile urethra d) Bulbar urethra

773. Afferents of cremasteic reflex are present in -
a) Ilioinguinal nerve *(AIIMS 98)*
b) Genitofemoral nerve
c) Iliohypogastric nerve
d) Pudendal nerve

751)d 752) d 753)b 754)b 755)d 756)a 757)b 758)d 759)a 760)b 761)b 762)d 763)b 764)a
765)b 766)b 767)c 768)d 769)b,d 770)a 771)a 772)c 773)b

774. The blood supply to the uterus is by which artery -
a) Uterine b) Ovarian *(AMC 99)*
c) Vaginal d) All

775. Which of the following is not a content of the pudendal canal - *(Kaernat 99)*
a) Pudendal nerve
b) Internal pudendal artery
c) Internal pudendal vein
d) Nerve to obturator intemus

776. True about inferiormesentric artery - *(UP2K)*
a) Continues as inferior rectal artery
b) Takes part in formation of marginal artery
c) Arises from coeliac trunk
d) Supplies mid gut

777. If a missile enters the body just above the pubic ramus through the anterior adominal wall it will most likely pierce which of the following structures- *(AIIMS2K)*
a) Abdominal aorta b) Left renal vein
c) Urinary bladder d) Spinal cord

778. What is thenerve supply to the skin around the umbilicus- *(Kerala 2k)*
a) 10^{th} thoracic ventral ramus
b) 11^{th} thoracic ventral ramus
c) Subcostal nerve
d) Iliohypogastric nerve
e) Ilioinguinal nerve

779. Blood supply of the sigmoid colon is from -
a) Marginal artery of drummond *(PG12K)*
b) Sigmoidal artery
c) Superior hemorrhoidal artery
d) Middle colic artery
e) Left colic artery

780. lesser sac of the stomach is bounded by - *(PG12K)*
a) Posterior wall of stomach
b) Visceral surface of spleen
c) Under surface of liver
d) Greater omentum
e) Right crus of diaphragm

781. Iliac crest at the level of (highest point of -
a) L_3 b)L_4 *(DNB2001)*
c) L_5 d)S_1

782. After herniotomy loss of sensation of the scrotum, root of penis is due to injury of - *(AIMS2001)*
a) Ilioinguinal nerve b) Iliohypogastric nerve
c) Genitofemoral nerve d) Obturator nerve

783. All of the following are the posterior relations of the kidney except - *(J&K 2001)*
a) Psoas major b) Quadratus lumborum
c) Sympathetic chain d) Ilioinguinal nerve

784. The following provide maximum support to uterus -
a) Broad ligament *(PG12001)*
b) Mackenordt's ligament
c) Round ligament
d) Vascicouterin fold

785. All are related to post, surface of bladder except -
a) Ureter *(JIPMER2001)*
b) Rectum through rectovesical pouch
c) Seminal vesicles
d) Vas deferens

786. Ventral mesogastrium derivatives include A/E -
a) Falciform ligament *(JIPMER2001)*
b) Coronary ligament
c) Lesser omentum
d) Gastrosplenic ligament

787. Branch of posterior division of internal iliac artery is- *(JIPMER2001)*
a) Superior gluteal artery
b) Inferior gluteal artyery
c) Superior vesical artery
d) Middle rectal artery

788. The bed of the stomach is not formed by-*(Kerala 01)*
a) Left kidney b) Left supra renal gland
c) Splenic vein d) Tail of pancreas

789. Ligation of the coeliac artery mostly affects -
a) Stomach b) Pancreas *(Kerala 2001)*
c) Jejnum d) Spleen

790. The venous drainge of liver into IVC is through -
a) Portal vein b) Hepatic veins *(AI2001)*
c) Azygous vein d) Superior mesentrci vein

791. A patient of external piles has pain, which of the following nerve carry this pain sensation -
a) Hypogastric nerves *(AI2002)*
b) Parasympathetic plexus
c) Sympathetic nerves
d) Pudendal nerve

792. The architecture of the liver is divided into lobes by-
a) Bile duct b) Hepatic artery *(PG102)*
c) Hepatic vein d) Portal vein
e) Lymphatics

793. Lesser omentum has following contents except-
a) Hepatic veinb) Hepatic artery (*PGI97*)
c) Portal vein d) Bile duct

794. Inferior mesenteric vein drains into vein- (*PGI97)*
a) Splenic b) Hepatic
c) Portal d) Inf. vena cava

795. True about foremen of bochdelak is - *(PGI97)*
a) Posterolateral gap in diaphragm
b) Anterolateral gap in diaphrgam
c) Pleuro-pericardial gap
d) Gap in the muscle fibres

796. Relation of caudate lobe of liver is - *(PGI 98)*
a) Posterior to portal vein
b) Anterior to rt. inferior phrenic artery
c) Posterior to ligamentum teres
d) Posterior to ligamentum venosum

797. All the statements are true about ileum except -
a) LN in mesentery *(PGI 98)*
b) 3-6 arcades in continuation
c) Smaller diameter than jejunum
d) Large circular mucosal folds

774)a,b 775)d 776)b 777)c 778)a 779)a,b 780)a,c,d 781)b 782)a 783)a 784)b 785)a 786)d 787)a
788) c,d 789) a,d 790) b 791) d 792)a,b,d 793) a 794) a 795) a 796) b 797) d

798. Rectus adominis is inserted into - *{PGI98)*
a) Xiphoid process b) Median raphae
c) Linea alba d) l-4 ribs

799. Pelvic splanchnic nerve is formed by- **(***PGI98)*
a) Posterior rami of L_5 - Sj
b) Posterior rami of S_2 S_3 S_4
c) Anterior rami ofL_5 S, S_2
d) Anterior rami of S_2 S_3 S_4

800. The commonest site of surgical uretero-vaginal fistula is - *{PGI99)*
a) Below infudibulopelvic ligament
b) Below uterine artery in the mackenrodts ligament
c) Vaginal angle
d) Above uterine artery

801. Note true about the anal canal is - *{PGI99)*
a) Completely lined by stratified squamous epithelium
b) Supplied by pudendal nerve
c) Drained by veins forming portosystemic anastomosis
d) Part below pectinate line is spupplied by inf.rectal artery

802. Which is the direct branch of coeliac trunk-
a) Rt. gastric b) Lt. gastric *{PGI 99)*
c) Gastroduodenal d) Rt gastroepiploic artery

803. Vein draining to IVC is- *{PGI 99)*
a) Left testicular vein b) Rt suprarenal vein
c) Lt. ovarian vein d) Lt. suprarenal vein

804. True about boundaries of lesser Sac - *{PGI2000)*
a) Posteriorly stomach b) Crus of diaphagm
c) Spleen d) Greater omentum

805. Cystic artery arises from - *{PGI 01)*
a) Right hepatic artery b) Left hepatic artery
c) Common hepatic artery d) Gastroduodenal artery

806. Superficial perineal muscles include - *{PGI 02)*
a) Superficial transverse perinei
b) Bulbospongiosus
c) Ischiocavemosus
d) Iliococcygeus
e) Pubococcygeus

807. The branch of anterior division of internal iliacartery includes - *{PGI 02)*
a) Posterior gluteal. b) Uterine
c) Obturator d) Internal pudendal
e) Iliolumbar

808. Cremasteric muscle is supplied by - *{PGI 02)*
a) Genital branch of genitofemoral nerve
b) Femoral branch of genitofemoral nerve
c) Lateral femoral nerve
d) Ilio-inguinal nerve

809. Blood supply of Lt ureter are- *{PGI 03)*
a) Uterine artery b) Inferior vesical artery
c) Testicular artery d) Common iliac artery
e) External femoral artery

810. True about inferior vena cava- *{PGI 03)*
a) Passes through diaphragm at level of D_{10} vertebra
b) Rt. suprarenal artery directly drains to it.
c) It lies anterior to the renal vein.
d) It forms the posterior wall of the epiploic foramen.
e) It is related to psoas muscle

811. IVue about inguinal canal - *{PGI 03)*
a) It is an Intermuscular canal
b) Superficial inguinal ring is situated superior and leteral to public tubercles
c) Deep inguinal ring is superio-medial to attachment of recutus abdominis
d) In male vas deferens passes through it.
e) Artery and nerve supply pass through it

812. Lt ureter is related to - *{PGI 03)*
a) Quadrtus Lumborum b) Lt gonadal vessels
c) Superior mesenteric vein d) Sigmoid mesocolon
e) Internal iliac artery

813. Blood supply of stomach is/are- *{PGI 03)*
a) Left gastric artery b) Short gastric artery
c) Splenic artery proper d) Renal artery
e) Lt gastroepiploic artery

814. The cysterna chili are situated in the -
a) Pelvis b) Thorax *{Karnataka 02)*
c) Neck d) Abdomen

815. Length of male adult urethra is - *{TN 03)*
a) 20cms b)10cms
c) 4 cms d) 15 cms

816. Length of Female adult cervical canal is - *{TN 03)*
a) 2 cms b) 2.5 cms
c) 6 cms d) 10 cms

817. Ureter crosses all of the following EXCEPT -
a) Uterine artery *{IN03)*
b) Bifurcation of common iliac
c) Sigmoid mesocolon
d) Inferior mesentric artery

818. The Blood vessel related to the paraduodenal fossa is - *{AI03)*
a) Gonadal veins b) Superior mesenteric artery
c) Portal vein d) Inferior mesenteric vein

819. A posteriorly perforating ulcer in the pyloric antrum of the stomach is most likely to produce initial localized peritonitis or abscess formation in the following - *{AI03)*
a) Omental bursa (lesser sac)
b) Greater sac
c) Right subphrenic space
d) Hepato renal space (pouch of Morison)

820. While exposing the kidney from behind, all of the following nerves are liable to injury except -
a) Lateral cutaneous nerve of thigh *{All India 04)*
b) Ilioinguinal nerve
c) Subcostal nerve
d) Iliohypogastric nerve

821. Infection/inflammation of all of the following, causes enlarged superficial inguinal lymph nodes except -
a) Isthmus of uterine tube
b) Inferior part of anal canal
c) Big toe
d) Penile urethra

798) a 799) d 800) b 801) a 802) b 803) b 804) d 805) a 806)a,b,c 807)b,c,d 808) a 809)a,b,c,d 810)d,e
811)a,b,d,e 812)b,d,e 813)a,b,e 814)d 815)a 816)b 817)d 818)d 819)a 820)a 821)d

822. The intricately and prodigiously looped system of veins and arteries that lie on the surface of the epididymis is known as - *{AllIndia 04)*
a) Choroid plexus b) Tuberal plexus
c) Pampiniform plexus d)Rectiniform plexus

823. Which of the following is true about location of Omental Bursa - **(***Jipmer 04)*
a) Left sub hepatic b) Left sub phrenic
c) Right sub hepatic d) Right sub phrenic

824. Ejaculatory duct opens into - *{APPGE 04)*
a) Membranous urethra b) Prostatic urethra
c) Penile urethra d) Seminal vesicles

825. A common structure in Hesselbach's triangle and femoral triangle is - **(***UPPGMEE04)*
a) Conjoint tendon b) Inguinal ligament
c) Inferior epigastric artery d) Rectus femoris

826. The efferent limb of the cremaster reflex is provided the - **(***UPPGMEE 04)*
a) Femoral branch of the genitofemoral
b) Genital branch of the genitofemoral nerve
c) Ilioinguinal nerve
d) Pudendal nerve

827. Fructose, a source of energy for spermatozoa, is found primarily in secretions from *the-(UPPGME 04)*
a) Bulbourethral glands b) Epididymus
c) Prostrate d) Seminal vesicle

828. The relation of sympathetic trunk to inferior venacava is - *{Jipmer 03)*
a) Right b)Left
c) Anterior d) Posterior

829. Cave of Ritzeius is found in - **(***UPPGMEE 04)*
a) Infront of the bladder b) Behind the bladder
c) Behind the rectum d) Behind the cervix

830. The lymphatics of vulva - *{SGPGI04)*
a) Do not freely communicate with each other
b) Do not cross the labiocrural fold
c) Transverse the labia from medial to lateral side
d) Drain directly in to the deep femoral glands

831. The inferior hypogastric plexus is located -
a) Anterior to the aorta *{SGPGI 04)*
b) Behind the kidney
c) Between layers of anterior abdominal wall
d) On the side of rectum

832. Ligamentum teres of the liver is remnant of- *{SGPGI 05)*
a) Umbilical arteries b) Left umbilical vein
c) Ductus-venosus d) Ductus arteriosus

833. Venous blood of liver is drained by - *{SGPGI 05)*
a) Portal vein b) Hepatic artery
c) Sinusoids d) Hepatic veins

834. Which of the following is true about splenic artery -
a) Smaller than left gastric artery *{SGPGI 05)*
b) Gives short gastric arteries along the fundus
c) Curves around the fundus
d) Arises from abdominal aorta

835. The free edge of the falciform ligament encloses -
a) Ligamentum venosum *{SGPGI05)*
b) Portal vein and common bile duct
c) Ligamentum teres
d) Superior epigastric vein

836. All of the following form visceral relations of spleen except- *{AMU05)*
a) Stomach b) Splenic flexure of colon
c) Kidney d) Adrenals

837. The main antagonistic muscle of rectus abdominis muscle is - *{COMEDK05)*
a) Psoas major b) Latissimus dorsi
c) Quadratus lumborum d) Erector spinae

838. To create a porto-caval shunt in a patient with portal hypertension, which of the following venous anastomosis should be performed - *{Jipmer 05)*
a) Superior mesenteric vein to inferior mesenteric vein
b) Right gastric vein to left gastric vein
c) Right gastric vein to right gastric vein
d) Left splenic vein to left renal vein

839. Which of the following arteries is a direct branch of the gastroduodenal artery - *{Jipmer 05)*
a) Right gastric artery
b) Left gastric artery
c) Inferior pancreaticoduodenal artery
d) Right gastroepiploic artery

840. True about the anatomy of inguinal hernia which is/ are true - *{PGI June 05)*
a) Sup. Inguinal ring is an opening in external oblique aponeurosis
b) Indirect hernia lies just medial to inferior epigastric artery
c) Posterior wall is formed by transversalis fascia and conjoined tendon
d) Cremasteric artery is a branch of external iliac artery
e) Indirect hernia lies anteromedial to spermatic cord

841. TVue about ureter - *{PGI June 05)*
a) Starts at the hilum
b) Changes its direction at the ischial spine
c) Penetrates the bladder wall without any valve
d) Enters the bladder at the lateral angle of the trigone
e) Enters pelvis in front of bifurcation of common iliac artery

842. The diaphragm is formed of the following except -
a) Septum transversum *{ICS 05)*
b) Paraxial mesoderm
c) Pleuroperitoneal membranes
d) Dorsal mesentery of oesophagus

843. Ureteric constriction is seen at all the following positions, except - *{MAHA 05)*
a) Ureteropelvic junction
b) Ureterovesical junction
c) Crossing of iliac artery
d) Ischial spine

822) c 823) a 824)b 825)b 826)b 827)d 828)b 829)a 830)c 831)d 832)b 833)d 834)b 835)c
836) d 837) d 838) d 839) d 840)a,c,e 841) All 842)d 843) d

844. All of the following statements concerning the ductus deferens are correct except - *(MAHA 05)*
a) It begins in the head of the epididymis
b) It ascends in the spermatic cord
c) It joints the duct of the seminal vesicle to form the ejaculatory duct
d) It descends medial to the ureter and seminal vesicles

845. The artery of the ductus deferens arises from which of the following structures - *{MAHA 05)*
a) Aorta b) Inferior epigastric
c) Inferior vesical d) Pudendal

846. All of the following statements about the splenic artery are true except that it - *(AIIMSNO V05)*
a) Has a tortuous course
b) Is a branch of the coeliac trunk
c) Has branches that anastomose freely within the spleen
d) Supplies the greater curvature of stomach

847. The narrowest part of the ureter is at the -
a) Uretero - pelvic junction *(AIIMS NO V 05)*
b) Hiac vessel crossing
c) Pelvic ureter
d) Uretero - vesical junction

848. Benign Prostatic hypertrophy results in obstruction of the urinary tract. The specific condition is associated with enlargement of the - *(AI05)*
a) Entire prostate gland b) Lateral lobes
c) Median lobe d) Posterior lobes

849. The Prostatic urethra is characterized by all of the following features, except that it - *(AI 05)*
a) Is the widest and most dilatable part
b) Presents a concavity posteriorly
c) Lies closer to anterior surface of prostate
d) Receives Prostatic ductules along its posterior wall

850. All of the following statements regarding was deference are true except - *(AI 05)*
a) The terminal part is dilated to form ampulla.
b) It crosses ureter in the region of ischial spine
c) It passes lateral to inferior epigastric artery at deep inguinal ring
d) It is separated from the base of bladder by the peritoneum

851. The following group of lymph nodes receives lymphatics from the uterus except - *(AI 05)*
a) External iliac b) Internal iliac
c) Superficial inguinal d) Deep inguinal

852. In an adult male, on per rectal examination, the following structures can be felt anteriorly except -
a) Internal iliac lymph nodes *(AI 05)*
b) Bulb of the penis
c) Prostate
d) Seminal vesicle when enlarged

853. The gastroduodenal artery is derived from -*(AIIMS*
a) Celiac artery b) Hepatic artery *May 05)*
c) Splenic artery d) Cystic artery

854. The neck of pancreas is related on its posterior surface to- *(AIIMS May 05)*
a) Gastroduodenal artery
b) Superior mesenteric vein
c) Inferior vena cava
d) Bile duct

855. Lymphatic drainage of the cervix occurs by all of the following lymph nodes, except - *(AI 06)*
a) Parameterial lymph nodes
b) Deep inguinal lymph nodes
c) Obturator lymph nodes
d) Ext. iliac lymph nodes

856. All of the following are the components of the white pulp of spleen, except - *(AI 06)*
a) Periarteriolar lymphoid sheath
b) B cells
c) Antigen presenting cells
d) Vascular sinus

857. True statements about Appendix-(PG/ *June 06yil93)*
a) Does not have mesentery
b) Has taenia coli
c) Develops from midgut
d) Supplied by appendicular branch of ileocolic artery
e) Supplied by interior mesenteric artery

858. True statements about lower *VJP* Ant abdominal wall-
a) Linea Alba is poorly formed *(PGIJune06)*
b) Two layers of rectus sheath present
c) External oblique poorly formed
d) Ext. obliqe muscle well formed & strong
e) Rectus abdominis is divided

859. Superficial perineal muscles include -*(PGI June 06)*
a) Iliococcygeus b) Ischiococcygeus
c) Bulbospongiosus d) Levator ani
e) Pubococcygeus

860. Atherosclerotic occlusion of which artery would result in insufficient perfusion of urinary bladder -
a) External iliac b) Internal pudendal *(HP 06)*
c) Internal iliac d) Lateral sacral

861. Most medially located renal structure is - *(HP 06)*
a) Major calyx b) Minor calyx
c) Renal cortex d) Renal pelvis

862. Pyramidalis is supplied by - *(Manipal 06, PGI84)*
a) Subcostal nerve b) Ilioinguinal nerve
c) Iliohypogastric nerve d) Genitofemoral nerve

863. Right kidneys anterior relation : all are devoid of peritoneum, except - *{PGMCET 01)*
a) Duodenum b) Supra renal gland
c) Colon d) Liver

864. Which one of the following ligaments contains splenic artery - *(UPSC 0 7)*
a) Gastrosplenic ligament
b) Splenocolic ligament
c) Splenorenal ligament
d) Splenophrenic ligament

844) a 845) c 846)c 847)d 848)c 849)b 850)d 851)d 852)a 853)b 854)b 855)b 856)d 857)c,d 858) a,c 859) c 860) c 861) d 862) a 863) d 864) c

865. The segmental division of liver into eight segments is based on - *(UPSC 07)*
a) Hepatic veins alone
b) Portal vein alone
c) Hepatic veins and common hepatic artery
d) Hepatic veins and portal vein

866. Stomach derives its blood supply from all these arteries directly or indirectly except - (*Corned 0 7)*
a) Splenic artery b) Hepatic artery
c) Superior mesenteric artery d) Celiac axis

867. Structure that does not cross the midline is-(^7 *07)*
a) Left gonadal vein
b) Left renal vein
c) Left branchiocephalic vein
d) Hemiazygos vein

868. Porto systemic shunt is not seen in - *(AI07)*
a) Liver b) Spleen
c) Anorectum d) Gastro Esophageal

869. Injury to the male urethra below the perineal membrane causes urine to accumulate in - *(AI 07)*
a) Superficial perineal pouch
b) Deep perineal pouch
c) Space of retzius
d) Pouch of douglas

870. All are true the trigone of the urinary bladder except-
a) Mucosa is loosely associated to the underlying musculature *(AI 07)*
b) Mucosa is smooth
c) It is lined by transitional epithelium
d) It is derived from the absorbed part of the mesonephric duct

871. Supports of the uterus are all except - *(AI 07)*
a) Uterosacral ligament b) Broad Ligament
c) Mackenrodts' ligament d) Levator ani

872. Renal angle lies between - *(Aiims May 07)*
a) 12^{th} rib & lateral border of sacrospinalis
b) 11^{th} rib & lateral border of sacrospinalis
c) 12^{th} rib & lateral border of quadratus lumborum
d) 11^{111} rib & lateral border of quadratus lumborum

873. Pudendal nerve supplying motor part to external sphincter is derived from - *(Aiims May 07)*
a) L_5-S, roots b)Sj-S_2 roots
c) L_2-L_3 roots d) S_2-S_3 roots

874. Ureteric constriction in the following sites except-
a) At the pelviureteric junction *(UP 07)*
b) Crosses the internal iliac artery
c) At bladder wall
d) At mesentery

875. Tail of pancreas related with - *(UP 07)*
a) Splenicorenal ligament
b) Gastrosplenic ligament
c) Phrenico colic ligament
d) Falciform ligament

876. Watershed area between SMA and IMA which commonly result in ischemia is - *(AIIMSNov 07)*
a) Hepatic flexure b) Splenic flexure
c) Rectosigmoid Jn. d) Ileocolic Jn.

877. True about left renal vein - *(AIIMS Nov 0 7)*
a) Posterior and inferior to sup. mesenteric artery
b) Posterior and superior to superior mesenteric artery
c) Anterior and inferior to sup. mesenteric artery
d) Annterior and superior to sup. mesenteric artery.

878. In fracture of penis involving rupture of tunica albuginea with intact Buch's fascia following would be noted clinically - *(AIIMS Nov 0 7)*
a) Hematoma involving only the shaft of penis
b) Hematoma involving scrotum & perineal region
c) Penis, scrotum and abdominal wall
d) Penis scrotum & thighs

879. Shortest part of the colon is - *(UP 08)*
a) Ascending colon b) Transverse colon
c) Descending colon d) Sigmoid colon

880. Ureteric constriction in the following sites EXCEPT-
a) Ischial spine *(UP 08)*
b) Pelvi-ureteric junction
c) Uretero-vesical junction
d) Crosses the internal iliac artery

881. All are true about Thoraco-lumbar fascia - EXCEPT-
a) Attachment to the spinous process of lumber vertebra *(UP 08)*
b) Origin to the transversus and internal oblique muscles
c) Lumber part situated in the interval between the iliac crest and the 12th rib
d) Attachment to the transverse process of lumber vertebra

882. Venous spread in carcinoma rectum reaches to the following structure - *(UP 08)*
a) Spleen b) Kidney
c) Liver d) Duodenum

883. Referred pain in external haemorrhoides is due to -
a) Common pudendal nerve *(UP 08)*
b) Inferior rectal nerve
c) Splanchnic nerve
d) Sympathetic nerve

884. Which of the following is the correct order of pathway for a sperm - *(AI 08)*
a) Straight tubules —> Rete testis —> Efferent tubules
b) Rete tubules —> Efferent tubules —> Straight tubules
c) Efferent —> tubule Rete testis —> Straight tubules
d) Straight tubule —> Efferent tubules —> Rete tubules

885. Which of the following veins is found in relation to the paraduodenal fossa - *(AI 08)*
a) Inferior mesentric vein b) Middle colic vein
c) Left colic vein d) Splenic vein

886. The artery to the ductus dererens is a branch of -
a) Inferior epigastric artery *(AI 08)*
b) Superior epigastric artery
c) Superior vesical artery
d) Cremasteric artery

865) d 866) c 867) a 868) b 869) a 870) a 871)b 872) a 873) d 874) d 875) a 876) b 877) a 878) a
879)a 880)a 881)a 882)c 883)b 884)a 885)a 886) c

887. TVue about valves in portal venous system -
a) Present at the junction of superior mesentric artery with the splenic artery *(Aiims May 08)*
b) Within the portal vein only
c) The whole system is valveless
d) In the intrahepatic portion of portal vein.

888. All are the contents of deep perineal pouch except -
a) Bulbourethral glands *(Aiims May 08)*
b) Internal urethral sphincter
c) Dorsal nerve of penis
d) Bulb of penis

889. About ureter true is - *(PGI June 08)*
a) 5 cm long b) 25 cm long
c) 35 cm long d) Totally retroperitoneal
e) It enters true pelvis after crossing iliac vessel

890. Middle lobe of prostrate is present in between -
a) Prostratic urethra & Ejaculation duct
b) Prostratic urethra & rectum *(PGI June 08)*
c) Ejaculation duet & pubis
d) Pubis and rectum

891. Deep perineal pouch contains - *(PGI June 08)*
a) Bulb of penis b) Crura of penis
c) Bulbospongiosus d) Membranous urethra

892. The lymphatic drainage of testes is - *(DPGEE 08)*
a) Inguinal L.N. b) Mesenteric L.N.
c) Para-aortic L.N. d) Obturator L.N.

893. In rectus sheath which branch of aorta make anastomosis with superior epigastric artery - *(PGI Dec08)*
a) Subclavian artery b) External iliac artery
c) Internal iliac artery d) External carotid A
e) Axillary artery

894. Which of following is not a permanent mucosal fold? *(AIIMS Nov08)*
a) Spiral valve of Heister b) Gastric rugae
c) Plica semilunaris d) Transverse rectal fold

895. Spleen projects into the following space of peritoneal cavity ? *(AIIMS Nov08)*
a) Paracolic gutter b) Inftacolic compartment
c) Left subhepatic space d) Greater Sac

896. Which of the following is the teriminal group of lymph node for colon? *(AIIMS Nov08)*
a) Paracolic b)Epicolic
c) Preaortic d) Ileocolic

897. All of the following are branches of splenic artery, Except- *(AI09)*
a) Short gastric artery
b) Hilar branches
c) Right gastroepiploic artery
d) Arteria pancreatica magna

898. Contents of deep perenial pouch include all of the following, Except - *(AI09)*
a) Dorsal nerve of penis b) Bulbourethral gland
c) Root of penis d) Sphincter urethrae

899. Urogenital diaphragm is made up of the following, Except- *(AI09)*
a) Deep transverse Perineus b) Perinial membrane
c) Colle's fascia d) Sphincter urethrae

900. Lymphatics from the spongy urethra drain into the following lymph nodes - *(AI09)*
a) Superior inguinal nodes
b) Internal inguinal nodes
c) Deep inguinal nodes
d) Sacral nodes

901. Within which part of a gastric gland, are chief cells located - *(AI09)*
a) Gastric pitb)Neck
c) Isthumus d) Fundus

902. Chief cells of stomach are most abundant in -
a) Fundus b) Body *(AI09)*
c) Antrum d) Pylorus

903. All of the following statements about Paneth c ells are true, Except - *(AI09)*
a) Rich in Rough Endoplasmic Retuculum
b) Rich in Zinc
c) Contain Lysozyme
d) Foamy appearance

904. Right gastroepiploic artery is a branch of -
a) Right Hepatic artery *(AIIMS May 09)*
b) Gastroduodenal artery
c) Hepatic artery
d) Superior mesenteric atery

905. Which is not supplied by pelvic splanchnic nerves? *(AIIMS May 09)*
a) Rectum b) Urinary bladder
c) Appendix d) Uterus

906. Sphincter of Oddi consists of - *(AIIMSMay 09)*
a) 2 sphincters b) 3 sphincters
c) 4 sphincters d) 5 sphincters

907. Vaginal sphincter is formed by all except -
a) Internal urethral sphincter *(AIIMS May 09)*
b) External urethral sphincter
c) Pubovaginalis
d) Bulbospongiosus

908. True about female pelvis - *(PGI June 09)*
a) C-shaped pelvic cavity
b) Pelvic inlet is wider posteriorly
c) P.inlet is heart shaped
d) Subpublic angle is 70°
e) Ischiopublic index is 80 ± 5

909. The sensory supply of the fallopian tube and ovary is from- *(COMED09)*
a) D6toD8 b)D8toD10
c)D10toD12 d) L2 to L4

910. The dartos muscle is innervated by - *(COMED 09)*
a) Ilionguinal nerve b) Iliohypogastric nerve
c) Sympathetic nerves d) Pudendal nerve

911. Structure contained within rectus sheath are all except - *(DELHI PG Feb. 09)*
a) Internal thoracic artery
b) Superior epigastric artery
c) Inferior epigastric artery
d) Rectus abdominis

887) c 888) d 889)b,d,e 890) a 891) d 892) c 893) b 894) b 895) d 896) c 897) c 898) c 899) c 900) c
901)d 902)a>b 903)d 904)b 905)c 906)b 907)a 908)None 909)c 910)c 911)a

912. The shortest part of colon is - *(DELHIPG Mar 09)*
a) Transverse colon b) Ascending colon
c) Descending colon d) Sigmoid colon

913. The right adrenal vein drains into:
a) Right renal vein *(DELHI PG Mar 09)*
b) Inferior vena cava
c) Second right lumbar vein
d) Third right lumbar vein

914. To which lymph nodes, the lymph from the umbilicus drain- *(UPSC-II09)*
a) Axillary and inguinal
b) External and internal iliac
c) Pre-and para-aortic
d) Inter-aortocaval

915. Valvulae conniventes are seen in - *(PGINov 09)*
a) Jejunum b) Ileum
c) Stomach d) Colon
e) Appendix

916. True about ureter's entry into bladder-(PG*/Nov 09)*
a) At medial angle of trigone
b) At lateral angle of trigone
c) Make an angle
d) Is straight
e) Valveless

917. The following structures are felt on per rectal examination except - *(AIIMS Nov 09)*
a) Bulb of penis b) Ureter
c) Anorectal ring d) Urogenital diaphragm

918. True about prostatic urethra are all except -
a) Trapezoid in cross-section *(AIIMS Nov 09)*
b) Presence of verumontanum
c) Opening of prostatic ducts
d) Contains urethral crest

919. Vaginal sphincter is formed by all except -
a) Internal urethral sphincter *(AIIMS Nov 09)*
b) External urethral sphincter
c) Pubovaginalis
d) Bulbospongiosus

920. True about prostatic urethra are all except -
a) Trapezoid in cross-section *(AIIMS May 10)*
b) Presence of verumontanum
c) Opening of prostatic ducts
d) Contains urethral crest

921. Coeliac plexus is located - *(AIIMS May 10)*
a) Anterolateral & around the aorta
b) Posterolateral & around the aorta
c) Anteromedial to lumbar sympathetic chain
d) Posterolateral to lumbar sympathetic chain

922. Appendices epiploicae present in - *(AIIMSMay 10)*
a) Appendix b) Caecum
c) Rectum d) Sigmoid colon

923. Which is not supplied by pelvic splanchnic nerves? *(AIIMS May 10)*
a) Rectum b) Urinary bladder
c) Appendix d) Uterus

924. Urogenital diaphragm is made up of the following, Except- *(AI10)*
a) Deep transverse perineus b) Perinial membrane
c) Code's fascia d) Sphincter urethrae

925. Hypogastric sheath is a condensation of - *(AI 10)*
a) Scarpa's fascia
b) Colie's fascia
c) Pelvic fascia
d) Inferior layer of Urigenital diaphragm

926. Lymphatics from the spongy urethra drain into the following lymph nodes - *(AI 10)*
a) Superior inguinal nodes
b) Internal inguinal nodes
c) Deep inguinal nodes
d) Sacral nodes

927. Which of the positions best describes the location of celiac plexus - *(AI 10)*
a) Anterolateral to Aorta
b) Posterolateral to Aorta
c) Anterolateral to sympathetic chain
d) Anteromedial to sympathetic chain

928. In post-ductal coarctation of aorta collaterals may be formed by all of the following, except - *(AI 10)*
a) Vertebral artery
b) Suprascapular artery
c) Subscapular artery
d) Posterior intercostal artery

929. In portal hypertension the sites of portosystemic anastomosis includes - *(DPG10)*
a) Lower end of esophagus
b) Around umbilicus
c) Lower third of rectum and anal canal
d) All of the above

930. The rectus sheath contains all of the following except-
a) Pyramidalis muscle *(DPG 10)*
b) Genitofemoral nerve
c) Inferior epigastric vessels
d) Superior epigastric vessels

931. Pouch of Douglas is situated between - *(DPG 10)*
a) Bladder and the uterus
b) Bladder and pubic symphysis
c) Bladder and the rectum
d) Uterus and rectum

932. Lymphatics of suprarenal gland drain into_____ lymph nodes- *(Maharashtra 10)*
a) Internal iliac b) Para-aortic
c) Superficial inguinal d) Coeliac

933. Which structure(s) passes behind the inguinal ligament - *(PGIMay 10)*
a) Femoral branch of genitofemoral nerve
b) Superficial epigastric artery
c) Psoas major
d) Femoral vein
e) Saphenous vein

912)b 913)b 914)a 915)a,b 916)b,c,e 917)b 918)a 919)a 920)a 921)c 922)d 923)c 924)c 925)c 926) c 927) a 928) None 929) d 930) b 931)d 932) b 933) c,d

934. Flexor of lumbar spine is/are- *(PGIMaylO)*
a) Erector spinae
b) External oblique muscle
c) Internal oblique muscle
d) Rectus abdominis
e) Psoas major

935. Teres major of liver is a remnant of -*(PGIMay 10)*
a) Ductus venosus b) Umblical artery
c) Ductus arteriosus d) Peritoneum
e) Left umbilical vein

936. True statement about anatomy of anal canal -
a) Puborectalis is essential to maintain continence
b) Internal sphincter is skeletal muscle *(PGINov 10)*
c) Internal sphincter remains in the state of tonic contraction
d) External sphincter is supplied by gluteal nerve
e) No lymphatic drainage

937. Ureter dervies its blood supply from -*(PGINov 10)*
a) Renal artery
b) Gonadal vessel
c) Common iliac artery
d) Inferior vesical artery
e) Superior mesenteric artery

938. True about Right phrenic nerve - *(PGINov. 10)*
a) Motor branch
b) Sensory branch
c) Arise from C_4
d) Shorter course than left phrenic nerve

939. All of the following are derivatives of the septum transversum except - *(AIIMS Nov 10)*
a) Falciform ligament
b) Coronary ligament
c) Mesentery of the lesser sac
d) Ligamentum teres

940. All of the following organs develop in the mesentery of stomach except - *(AIIMS Nov 10)*
a) Liver b) Spleen
c) Kidney d) Pancreas

941. All are sphincters of lower genito urinary tract of female except? *(AIIMS Nov 10)*
a) Pubovaginalis
b) External urethral sphincter
c) Internal urethral sphincter
d) Bulbospongiosus

942. Upper limb weight is transmitted to axial skeleton by all except - *(AIIMS May 11)*
a) Coracoacromial ligament
b) Claviculoclavicular [interclavicular] ligament
c) Costoclavicular ligament
d) Acromioclavicular ligament

943. Sphincter of Oddi consists of - *(AIIMSMay 11)*
a) 2 sphincters b) 3 sphincters
c) 4 sphincters d) 5 sphincters

944. Root of mesentery is crossed by - *(AIIMS May 11)*
a) Horizontal part of duodenum
b) Left gonadal vessels
c) Left ureter
d) Superior mesenteric artery

945. Spleen projects into the following space of peritoneal cavity? *(AIIMS May 11)*
a) Paracolic gutter b) Infracolic compartment
c) Left subhepatic space d) Greater Sac

946. All of the following form posterior relations of head of pancreas, Except - *(AI11)*
a) Common Bile Duct b) First part of duodenum
c) Aorta d) Inferior Vena cava

947. Urethral Crest is situated in - *(AI 11)*
a) Prostatic Urethra b) Membranous Urethra
c) Penile Urethra d) Bulbar Urethra

948. Which of the following is not a component of the hypogastrics heath - *(AI 11)*
a) Broad ligament
b) Uterosacral ligament
c) Transverse cervical ligament
d) Lateral ligament of the bladder

949. In portal hypertension lower end of the oesophagus may show dilatation of veins. Which of the following veins drains into the portal vein from the lower end of the oesophagus ? *(Karn 11)*
a) Right gastric b) Left gastric
c) Hemiazygos d) Inferior phrenic

950. Arterial supply of the duodenum is by - *(Karn 11)*
a) Superior mesenteric artery
b) Celiac artery
c) Inferior mesenteric artery
d) Both superior mesenteijc & celiac arteries

951. Shortest part of colon- *(Punjab 10)*
a) Ascending colon b) Transverse colon
c) Descending colon d) Sigmoid colon

952. Length of female urethra - *(Punjab 10)*
a) 2cm b)4cm
c) 6cm 8) 8cm

953. Which of the following structure is not present in transpyloric plane? *(PUNJAB11)*
a) First lumbar vertebra b) Fundus of gall bladder
c) Hilum of right kidney d) Inferior mesenteric vein

954. Subdiaphragmatic right posterior intra peritoneal space is - *(Jipmer10)*
a) Lesser sac
b) Morrison's pouch
c) Hepatorenal pouch
d) Superior part of supracolic compartment

955. Posterior gastric artery is a branch of -
a) Left gastric artery *(Jipmer11)*
b) Right gastric artery
c) Splenic artery
d) Hepatic artery

956. Which of the following is false about portal vein?
a) Formed behind the neck of pancreas
b) Bile duct lies anterior & right to it *(Jipmer 11)*
c) Gastro duodenal artery lies to the left & anterior to it
d) Ascends behind the 2nd part of duodenum

934)d,e 935)e 936)a,c 937)a,b,c,d 938)A11 939)d 940)c 941)c 942)a 943)b 944)a 945)d 946)b 947)a
948) a 949) b 950) d 951) a 952) b 953) d 954) b 955) c 956) d

957. Duct of Bellini is seen in - *(Jipmer 11)*
a) Prostrate b) Kidney
c) Salivary gland d) Lungs

958. Scarpa's fascia is attached to - *(Jipmer 10)*
a) Inguinal ligament b) Fascia lata of thigh
c) Conjoint tendon d) Pubic crest

959. Brunner's glands are seen in which of the following?
a) Stomach *(NEET/DNB Pattern)*
b) Small intestine
c) Large intestine
d) Duodenum

960. From which of the following is the duodenum derived? *(NEET/DNBPattern)*
a) Foregut
b) Midgut
c) Foregut and midgut
d) Midgut and hindgut

961. Where is the Cave of Retzius present ?
a) Between urinary bladder and rectum
b) Between urinary bladder and cervix
c) In front of the bladder *(NEET/DNB Pattern)*
d) Between the cervix and the rectum

962. Waldeyer's fascia lies - *(NEET/DNB Pattern)*
a) In front of the bladder
b) Behind the rectum
c) Between bladder and uterus
d) Between uterus and rectum

963. Spiral artery is a branch of - *(NEET/DNB Pattern)*
a) Uterine artery b) Arcuate artery
c) Vesical artery d) Ovarian artery

964. Superior pancreaticoduodenal artery is a branch of - *(NEET/DNBPattern)*
a) Hepatic artery
b) Splenic artery
c) Gastroduodenal artery
d) Inferior mesenteric artery

965. Bulbourethral glands open into which part of the urethra? *(NEET/DNB Pattern)*
a) Membranous b) Spongy
c) Prostatic d) Intramural

966. Portal vein is formed - *(NEET/DNB Pattern)*
a) Behind the spleen
b) Behind the tail of pancreas
c) Behind the neck of pancreas
d) Behind the second part of duodenum

967. Resting pressure in the anal canal is because of -
a) External sphincter *(NEET/DNB Pattern)*
b) Internal sphincter
c) Anorectal ring
d) Conjoint longitudinal coat

968. All of the following are supports of uterus except-
a) Pelvic diaphragm *(NEET/DNB Pattern)*
b) Utero sacral ligament
c) Tubo ovarian ligament
d) Round ligament

969. Weakest support of uterus *is-(NEET/DNB Pattern)*
a) Uterosacral ligament b) Round ligament
c) Broad ligament d) Levator ani

970. Corpora amylacea is seen *in-(NEET/DNB Pattern)*
a) Prostate b) Seminal vesicle
c) Thymus d) Testis

971. Dermatomal supply of the perianal skin is -
a) SI b) L2 *(NEET/DNB Pattern)*
c) L3 d) S4

972. Anterior relations of the right kidney are all except-
a) Liver *(NEET/DNB Pattern)*
b) 4th part of duodenum
c) Hepatic flexure
d) Adrenal gland

973. **Anterior end of the spleen is held up by -**
a) Leinorenal ligament *(NEET/DNB Pattern)*
b) Phrenicocolic ligament
c) Gastrosplenic ligament
d) Gastrocolic ligament

974. **Obturator artery is a branch of -**
a) Internal iliac artery *(NEET/DNB Pattern)*
b) External iliac artery
c) Common iliac artery
d) Vesical artery

975. **Pancreas divisum indicates which of the following -**
a) Duplication of the pancreas *(NEET/DNB Pattern)*
b) Failure of fusion of dorsal & ventral pancreatic buds
c) Formation of more than two pancreatic buds
d) Formation of only one pancreatic bud

976. Obstruction of inferior vena cava presents as -
a) Paraumbilical dilatation *(NEET/DNB Pattern)*
b) Thoracoepigastric dilatation
c) Esophageal varices
d) Hemorrhoids

977. Accessory obturator artery is a branch of -
a) Femoral artey *(NEET/DNB Pattern)*
b) Obturator artey
c) Profunda femoris
d) Inferior epigastric artery

978. Right ovarian artery is a branch of -
a) Abdominal aorta *(NEET/DNB Pattern)*
b) Right internal iliac
c) Common iliac
d) External iliac

979. Blastocyst makes contact with endrometrium on -
a) < 3 days *(NEET/DNB Pattern)*
b) 5 - 7 days
c) 8 - 11 days
d) 15 -16 days

980. Minor duodenal papilla is opening of -
a) Hepatic duct *(NEET/DNB Pattern)*
b) Hepatopancreatic ampulla
c) Accessory pancreatic duct
d) Bile duct

957) b 958)b 959) d 960)c 961)c 962)b 963)b 964)c 965)b 966)c 967)b 968)c 969)c 970) a
971) d 972)b 973) b 974)a 975)b 976)b 977) d 978)a 979)b 980) c

981. Sperm maturation takes place in -
a) Vas deferens *(NEET/DNB Pattern)*
b) Seminiferous tubules
c) Epididymis
d) Female genital tract

982. Structure immediately posterior to pancreatic head-
a) Right renal vein *(NEET/DNB Pattern)*
b) Splenic artery
c) inferior mesenteric vein
d) Coeliac trunk

983. If two buds of pancreas do not fuse, the anomaly is-
a) Ectopic pancreas *(NEET/DNB Pattern)*
b) Pancreatic divisum
c) Annular pancreas
d) Accessory pancreas

984. Sperm chromosome faster is-*(NEET/DNB Pattern)*
a) X chromosome b) Y chromosome
c) Both same d) None

985. Cystic artery is usuallly a branch of which of the following? *(NEET/DNB Pattern)*
a) Right gastric artery
b) Right hepatic artery
c) Splenic artery
d) Celiac artery

986. Most common congenital anomaly of the pancreas is- *(NEET/DNB Pattern)*
a) Pancreas divisum
b) Pancreatic cysts
c) Ectopic pancreas
d) Inversion of pancreatic ducts

987. Which of these is present midway between the ASIS and the pubic symphysis -
a) Deep inguinal ring *(NEET/DNB Pattern)*
b) Superficial ring
c) Femoral artery
d) Intra epigastric artery

988. Which of these is false about celiac trunk -
a) It is the vertical branch of aorta.
b) It has plexus around it
c) It has three terminal branches.
d) It lies to the right of the caudate process

989. False about portal vein - *(NEET/DNB Pattern)*
a) first 5 cm doesn't give any branches
b) It arises behind pancreatic head
c) It has constant length
d) It is a part of the hepatic portal system.

990. Which of these best describes the renal angle -
a) Angle between the lattissimus dorsi and the 12th rib *(NEET/DNB Pattern)*
b) Angle between the erector spinae and the iliac crest
c) Angle between the 12th rib and the erector spinae
d) Angle between the 12th rib and the rectus abdominis

991. Relation of renal vein with aorta is -
a) anterior , above SMA *(NEET/DNB Pattern)*
b) anterior, below SMA
c) anterior, below IMA
d) posterior, below SMA

992. What best defines vasa vasorum -
a) Small blood vessels supplying walls of large blood vessels *(NEET/DNB Pattern)*
b) Small blood vessels supplying nerves
c) Vessels accompanying artery
d) Vessels accompanying nerves

993. Spiral valve is seen in which- *(NEET/DNB Pattern)*
a) Neck of gall bladder b) Cystic duct
c) Colon d) Pylorus

994. Which of these is a branch of inferior mesenteric artery - *(NEET/DNB Pattern)*
a) Left colic artery b) Right colic artery
c) ileocolic artery d) Middle colic artery

995. In patients with penile injury, Colie's fascia prevents extravasation of urine in - *(NEET/DNB Pattern)*
a) Ischiorectal fossa b) Perineum
c) Abdomen d) None

996. Portal vein is formed by the union of-*(NEET/DNB*
a) Splenic and inferior mesentric veins *Pattern)*
b) Splenic and superior mesentric veins
c) Right and left hepatic veins
d) Hepatic and splenic veins

997. Sinusoids are seen in all of the following except -
a) Liver b) Kidney *(NEET/DNB Pattern)*
c) Lymph nodes d) Spleen

998. Portal systems found in - *(NEET/DNB Pattern)*
a) Liver b) Kidney
c) Lung d) Brain

999. Somatic innervation to the pelvic organs is -
a) Greater splanchnic nerve *(NEET/DNB Pattern)*
b) Lesser splanchnic nerve
c) Pudendal nerve
d) Ilioinguinal nerve

1000. Tone of the anal sphincter is maintained by?
a) Nervi erigentes *(NEET/DNB Pattern)*
b) Inferior hypogastric plexus
c) Inferior rectal nerve
d) Pelvic splanchnic nerves

1001. Following are parts of the fallopian tube from uterus to the ovary except - *(NEET/DNB Pattern)*
a) Ampulla b)Isthmus
c) Infundibulum d)Fundus

1002. Nerve supply to the perineum is -
a) Pudendal nerve *(NEET/DNBPattern)*
b) Inferior rectal nerve
c) Pelvic splanchnic nerves
d) Bypogastric plexus

1003. Blood-testis barrier is formed *by-(NEET/DNBPattern)*
a) Sertoli cells b)Leydig cells
c) Epididymis d)Vas deferens

1004. Branch of internal iliac *artery-(NEET/DNB Pattern)*
a) Ovarian artery b) Testicular artery
c) Superior vesicle d) None

981)d 982) a 983)b 984)b 985)b 986)a 987)c 988)d 989)b 990)c 991)b 992)a 993)b 994)a
995) a 996)b 997)b 998)a 999)c 1000)c 1001)d 1002)a 1003) a 1004)c

1005. Which of the following is related to third part of duodenum- *(NEET/DNB Pattern)*
a) Portal vein b) Head of pancreas
c) Hepatic artery d) Superior mesenteric vein

1006. Not seen in colon - *(NEET/DNB Pattern)*
a) Taeniae b) Pyer's patches
c) Sacculations d) Appendices

1007. Renal papilla opens into - *(NEET/DNB Pattern)*
a) Cortex b) Pyramid
c) Minor calyx d) Major calyx

1008. Space of disse is seen in- *(NEET/DNB Pattern)*
a) Spleen b) Liver
c) Lung d) Heart

1009. Appendicular artery is a branch of- *(NEET/DNB*
a) Iliocolic b) Rt colic *Pattern)*
c) Inferior mesenteric d) Marginal artery

1010. Neurovascular plane in anterior abdominal wall is - *(NEET/DNB Pattern)*
a) Between ext oblique and internal oblique
b) Between int. oblique and transverses abdominis
c) Below transversus abdominis
d) Above ext. oblique

1011. Which nerve supplies celiac plexus -
a) Phrenic N, *(NEET/DNB Pattern)*
b) Greater splanchnic N.
c) Iliohypogastric N.
d) Inguinal N.

1012. Right hepatic duct drains all segments except -
a) 5 b) 6 *(NEET/DNB Pattern)*
c) 7 d) 3

1013. Lymph from glans penis drains into -
a) Superficial inguinal nodes *(NEET/DNB Pattern)*
b) Deep inguinal lymph nodes
c) Obturator nodes
d) Internal iliac nodes

1014. In bladder injury, pain is referred to all except -
a) Upper port of thigh *(NEET/DNB Pattern)*
b) Lower abdominal wall
c) Flank
d) Penis

1015. Testicular lymphatics drain into -
a) Deep inguinal lymphnodes
b) Internal iliac lymph nodes
c) Para aortic lymph nods *(NEET/DNB Pattern)*
d) Superficial inguinal lymphnodes

1016. Nerve root of pudendal nerve is -
a) S,S_2S_3 b) $S_2S_3S_4$ *(NEET/DNB Pattern)*
c) S_3-S_4 d) S_2-S_3

1017. Urogential diaphragm is formed by all except -
a) Colles fascia *(NEET/DNB Pattern)*
b) Deep transverse perinei
c) Perineal membrane
d) Sphincter urethrae

1018. Sphincter urethrae is persent *\n-(NEET/DNB Pattern)*
a) Prostatic urethrae b) Spongy urethrae
c) Membranous urethrae d) Penile urethrae

1019. Spleen extends from - *(NEET/DNB Pattern)*
a) 5th to 9th rib b) 9th to 11th rib
c) 2nd to 5th rib d) 11th to 12th rib

1020. Lateral fornix is related to all except -
a) Ureter *(NEET/DNB Pattern)*
b) Uterine artery
c) Inferior vesical artery
d) Transverse cervical ligament

1021. Nerve supply of kidney is from -*(NEET/DNB Pattern)*
a) Lumbar plexus b) Coeliac plexus
c) Inferior mesentric nerve d)None

1022. Portocaval (portosystemic) anastomosis is seen at all except - *(NEET/DNB Pattern)*
a) Esophagus b) Liver
c) Rectum d) Duodenum

1023. Contents of broad ligaments are all except -
a) Round ligament *(NEET/DNB Pattern)*
b) Fallopion tube
c) Lymph nodes
d) Ovaries

1024. All are branches of inferior mesentric artery except - *(NEET/DNB Pattern)*
a) Left colic b) Sigmoidal artry
c) 3rd Middle rectal d) Superior rectal

1025. All are parts of vulva except - *(NEET/DNB Pattern)*
a) Labia minora b) Labia majora
c) Perineal body d) Clitoris

1026. Blood supply of upper part of vagia -
a) Middle rectal artery *(NEET/DNB Pattern)*
b) Internal pudendal artery
c) Cervicovaginal branch of uterine artery
d) Superior rectal artery

1027. Lymplatic drainage of testis -*(NEET/DNB Pattern)*
a) Inguinal lymph nodes
b) Obturator lymph nodes
c) Paraaortic lymph nodes
d) Iliac lymph nodes

1028. Lymphatic drainage of stomach include all except - *(NEET/DNB Pattern)*
a) Right gastroepiploic nodes
b) Pyloric nodes
c) Pre aortic nodes
d) Coeliae nodes

1029. Orter of the following structures of following tube from lateral to medial -
a) Ampulla-Inftmdibulum-Isthmus-Interstitial
b) Infundibulum-Ampulla-Isthmus-Interstitial
c) Isthmus-Infundibulum-Ampulla-Interstitial
d) Ampulla-Isthmus-Infundibulum-Interstitial

1030. Lymphatic drainage of ovary -
a) Deep inguinal b) Superficial inguinal
c) Obturator d) Paraaortic

1031. Bartholin glnad are related to vagina -
a) Lateral wall *(NEET/DNB Pattern)*
b) Posterior wall
c) Anterior wall
d) None

1005)d 1006)b 1007)c 1008)b 1009)a 1010)b 1011)b 1012)d 1013)b 1014) c 1015)c 1016)b 1017)a 1018)d
1019) b 1020)c 1021) b 1022)d 1023)d 1024)c 1025)c 1026)c 1027)c 1028)c 1029)b 1030)d 1031)a

1032. What lies between cystic duct and common hepatic duct- *(NEET/DNB Pattern)*
a) Lymph node b) Portal pein
c) Hepatic artery d) Cystic artery

1033. Superficial perineal space contains all except -
a) Root of penis *(NEET/DNB Pattern)*
b) Urethral artery
c) Great vesti bular glands (Bartholin glands)
d) Membranous urethra

HEAD & NECK

1034. The optic foramen is located between - *(AIIMS 89)*
a) Greater wing and lesser wing of sphenoid
b) Greater wing and body of sphenoid
c) Lesser wing and body of sphenoid
d) Lesser wing of sphenoid and ethmoid

1035. All of the following statements regarding the oculomotor nerve are true except - *(CUPGE 9 7)*
a) It accommodates the eye
b) It raises the upper evelid
c) It innervates lateral rectus
d) It constricts the pupil

1036. CilioretinalAisabranchof- *(IN 2002)*
a) Anterior ciliary Artery
b) Long posterior ciliary Artery
c) Cerebral retinal Artery
d) Choroidal Artery

1037. The lactimal duct open at the - *(PGI85)*
a) superior turbinate b) Middle meatus
c) Inferior meatus d) None of the above

1038. The weakest wall of the human orbit is-*(Orissa 98)*
a) Roof b) Medial wall
c) Floor d) Lateral wall

1039. Sensory nerve supply of middle ear cavity is provided by- *(AI95)*
a) Facial b) Glossopharyngeal
c) Vagus d) Trigeminal

1040. Narrowest part of middle ear- *(PGI 98)*
a) Epitympanum b) Hypotympanum
c) Anterior tympanum d) Mesotympanum

1041. Inner ear is present in which bone - *(PGI 98)*
a) Occipital
b) Petrous part of temporal bone
c) Squamous part of temporal
d) Parietal bone

1042. Recurrent laryngeal nerve is closely related to -
a) Superior laryngeal artery *(PGI 89)*
b) Inferior thyroid artery
c) Middle thyroid vein
d) Superior thyroid artery

1043. Which of the following cartilage has signet ring shape- *(TN93)*
a) Thyroid b) Cricoid
c) Cuneiform d) Arytenoid

1044. The cervical oesphagus receive its blood supply from the - *(PGI 80, Delhi 84)*
a) Superior thyroid artery b) Inferior thyroid artery
c) Facial artery d) Lingual artery
e) Bronchial artery

1045. Throat pain radiating to the ear following tonsillectomy is due to- *(AIIMS 92)*
a) Persistent infection b) Injury to IX nerve
c) Injury to X nerve d) Injury to eustachian tube

1046. Pain in post 1/3 tongue after tonsillectomy is due to injury to- *(MAHE 98)*
a) VII nerve b) IX nerve
c) V nerve d) XII nerve

1047. Skin at angle of Jaw is supplied by - *(AI 92, AI 93)*
a) Mandibular Nerve
b) maxillary Nerve
c) Greater Auricular N
d) Transverse cutaneous N of neck

1048. The most important muscles of expiration are-
a) Diaphragm *(AIIMS 79, JIPMER 81)*
b) External intercostal
c) Internal intercostal
d) Abdominal wall muscles

1049. All are seen in 3rd nerve palsy except-*(Kerala 94)*
a) Mydriasis b) Ptosis
c) Outward deviation of eye d) Miosis

1050. The oculomotor nerve supplies - *(JIPMER 85)*
a) Inf. oblique b) Levator palpabre
c) Medial rectus d) All

1051. Subarachanoid space ends at- *(Kerala 94)*
a) S4 b) S2
c) L2 d)L3

1052. Mandibular nerve lesion at origin involves all except - *(AIIMS 9 7)*
a) Buccinator b) Masseter
c) Tensor palati d) Tensor tympani

1053. The factor/responsible for viscocity of synovial fluid is/are - *(AIIMS 80, UPSC 85)*
a) Chondritin sulfate b) Hyaluronic acid
c) Heparin sulfate d) All of the above

1054. Carotid sheath contains all except - *(PGI88)*
a) Cartoid artery b) Internaljugular vein
c) Vagus nerve d) Phrenic nerve

1055. Secretomotor fibres to the parotid is via - *(PGI88)*
a) Auriculo - temporal nerve b) Facial nerve
c) Trigeminal nerve d) Maxillary nerve

1056. Lesser superficial petrosal nerve supplies..... gland-
a) Parotid *(IN 91)*
b) Submandibular salivary
c) Sublingual salivary
d) Lacrimal

1057. The relation of facial nerve branches to parotid gland is - *(All India 93)*
a) Deep b) Superficial
c) In the Substance of parotid d) None

1032) a 1033) d 1034)c 1035)c 1036)d 1037)c 1038)b 1039)b 1040)d 1041)b 1042)b 1043)b 1044)b 1045)b
1046)b 1047)c 1048)d 1049)d 1050) d 105l)b 1052)a 1053)b 1054)d 1055)a 1056)a 1057)c

1058. The pterion corresponds to the following except -
a) Anterior pole of insula *(Karnat 96)*
b) Middle meningeal artery
c) Transverse sinus
d) Lateral cerebral sulcus

1059. Cusp of carabelli is seen - *(TN99)*
a) I molar upper b) II molar upper
c) III molar upper d) III molar lower

1060. Treatment of choice for subgaleal hematoma -
a) Incision and evaucation *(AI88)*
b) Needle aspiration
c) Antibiotics and then drain
d) Conservative

1061. Horner's syndrome is produced due to pressure on-
a) Stellate ganglion *(AI 95)*
b) Spinal cord
c) Parasympathatic ganglion
d) Celiac ganglion

1062. Inferior thyroid artery ligation in sub-total thyroidectomy is done - **(***PGI88)*
a) As close tothe thyroid b) As far as possible
c) At its origin d) Anywhere

1063. Which of the following are features of Horner's syndrome- *(PGI 85)*
a) Ptosis b) Miosis
c) Mydriasis d) Anhydrosis

1064. Dangerous area of face is - *(PGI 96)*
a) Above the line joining tragus to the nasal fold
b) Area drained by angular facial vein
c) Spheno ethmoidal recess
d) All of the above

1065. Chassaignae's tubercle is - *(PGI 79, AIIMS 84)*
a) Below the level of crioid cartilage
b) Above the level of cricoid cartilage
c) At the same levels as cricoid cartilage
d) Present at C_7 level

1066. Increased thickness of skull bones is seen in -
a) Thalassemia *(PGI 80, AIIMS 85,*
b) Renal osteodystrophy *DELHI 92)*
c) Osteomalacia
d) Sarcoidosis

1067. Which of the following anatomic land-mark would be usefull in defining the borders of the posterior triangle of the neck - *(JIPMER 80*
a) The superior border of the clavicle *PGI 81)*
b) The anterior border of the trapezius muscle
c) The Posterior border of the sternocleidomastoid muscle
d) The posterior border of the anterior scalene muscle

1068. Veins communicating the cavernous sinus to pterygoid plexus pass through fossa of - *(PGI 80,*
a) Scarpa b)Vesalius *AMU87)*
c) Ovale d)Langer

1069. Following foramina are found in greater wing of sphenoid, except - *(AIIMS 81 Rohtak 88)*
a) Rotundum b) Ovale
c) Spinosum d) Optic canal

1070. The internal thoracic veins are tributaries of the - *(PGI 81, DELHI 83)*
a) Azygos b) Subclavian
c) Internal jugular d) Brachiocephalic

1071. Isthmus of the thyroid gland is across tracheal rings-
a) 2nd to fourth b) 3 rd to fifth *(AMC81)*
c) 5th and 6th d) 4th only

1072. Internal laryngeal nerve supplies - *(JIPMER 81,*
a) Cricothyroid muscle *DNB 90)*
b) Vocalis
c) Mucos membrane below vocal fold
d) None of the above

1073. Which of the following could result from a destructive lesion of the left oculomotor nerve -
a) Loss of left pupillary constriction *(PGI 81, 82)* when light is shone in the left eye
b) Loss of left pupillary constriction when light is shone in the eye
c) Pupillary dilation (mydriasis) in the left eye
d) Paralysis of the ciliary muscle in the left eye
e) None

1074. The Ansa cervicalis Innervates which muscle -
a) Mylohyoid b) Cricothyroid *(AIIMS 82)*
c) Stylohoid d) Sternohyoid

1075. Which of the following statements regarding the pharynx is/are correct - *(PGI 82)*
a) The opening of the auditory tube is located in the lateral wall of the nasopharynx
b) The soft palate is at the level of separation of the nasopharynx and the oropharynx
c) The pharynx is continuous with the esophagus at the level of the sixth cervical vertebra
d) The afferent limb of the gag reflex is cranial nerve X; the efferent limb is cranial nerve IX

1076. The number of ossification centres for the hyoid bone is - *(AMU 82)*
a) 3 b) 4
c) 5 d) 6

1077. In the mediastinum - *(PGI 82, 85)*
a) The left brachiocephalic vein passes anterior to the brachiocephalic arter
b) The ligamentum arteriosum inter-connects the aortic arch and the left pulmonary vein
c) The left recurrent laryngeal nerve passes under the arch of the arota
d) The thoracic duct is found between the esophagus and the trachea

1078. The occulomotor nerve supplies the muscle of the eye except - *(PGI83)*
a) Lateral rectus b) Superior oblique
c) Superior rectus d) Inferior rectus

1079. The posterior 1/3 of the tongue is supplied by.....nerve - *(AIIMS 84)*
a) Hypoglossal b) Chorda tympani
c) Lingual d)Glossopharyn

1058) c 1059) a 1060) d 1061) a 1062) b 1063) a, b,d 1064) b 1065) c 1066) a 1067)a,b,c 1068) b,c 1069) d
1070) d 1071) a 1072) d 1073)a,b,c,d 1074) d 1075) a,b,c 1076) d 1077) a, c 1078) a,b 1079) d

1080. Stapedius muscle is supplied by.....nerve -
a) Facial b) Vagus *(PGI84)*
c) Glossopharyngeal d) Trochlear

1081. Which laryngeal cartilage is above glottis-*(PGI 84)*
a) Artenoid b) Epiglottis
c) Cricoid d) Thyroid

1082. Premature closure of foramen ovale results is -
a) Underdeveloped right atrium *(DELHI 84)*
b) Right ventricular hypertrophy
c) Left ventricular hypertrophy
d) Pulmonary stenosis
e) No serious effect

1083. What is not true for facial artery - *(PGI 85)*
a) Main source of oxygenated blood to palatine tonsil
b) Is a branch of internal carotid artery
c) Supplies branches to both upper and lower lips
d) Conveys postganglionic sympathetic nerve fibres to the submandibular gland

1084. Internal carotid artery at the bifurcation from the common carotid is - *(PGI 85, AMC 86)*
a) Lateral to the external carotid
b) Medial to external carotid
c) Post to external carotid
d) Anterior to external carotid

1085. Superior oblique muscle is supplied by -
a) Occulomotor nerve *(UPSC 85, AP 86,*
b) Trochlear nerve *KERALA88)*
c) Abducent nerve
d) Trigeminal nerve

1086. No. of branches of the internal carotid artery in the neck is - *(PGI 85 UPSC 85)*
a) 1 b) 2
c) 3 d)4 e)None

1087. Inferior oblique is supplied by the.....cranial nerve - *(PGI85)*
a) 3rd b) 4th
c) 5th d) 6th

1088. Damage to the internal laryngeal nerve results in -
a) Hoarseness *(PGI85)*
b) Loss of timbre of voice
c) Anaesthesia of the larynx
d) Breathing difficulty

1089. Damage to the external laryngeal nerve result in -
a) Hoarseness *(PGI 85)*
b) Loss of timbre of voice
c) Anaesthesia of the larynx
d) Breathing difficulty

1090. Foramentransversarium transmit- *(AIIMS85)*
a) Inferior jugular vein
b) Inferior petrosal sinus
c) Sigmoid sinus
d) Vertebral artery

1091. The left subclavian artery is a branch of -
a) Brachiocephalic trunk *(ROHTAK 85)*
b) Ascending aorta
c) Arch of aorta
d) Left common carotid

1092. Lymph from the tonsils drain into the - *(JIPMER*
a) Jugulo omohyoid node *86, KERALA 87*
b) Jugulo digastric node *AP 86, PGI 97, AI06)*
c) Submental node
d) Upper deep cervical node

1093. Middle meningeal artery is a branch of -
a) Middle cerebral artery *(UPSC 86, PGI 86,*
b) Maxillary artery *DELHI 86)*
c) Superficial temporal artery
d) Vertebral artery

1094. The cranial nerve with the longest intracranial course - *(UPSC 86, PGI86,KERALA 87)*
a) Optic b) Abducent
c) Trigeminal d) Oculomotor
e) Trochlear

1095. The largest ganglion in the neck is - *(JIPMER 86)*
a) Superior ganglion
b) Middle ganglion
c) Stellate ganglion
d) Second thoracic ganglion

1096. Stensens duct opens at the - *(AP86, UPSC 88,*
a) Upper 3rd molar teeth *KERALA 88)*
b) Upper 1st molar teeth
c) Upper 2nd molar teeth
d) Upper 1st premolar teeth

1097. Cricothyroid is supplied by - *(NIMHANS 86,*
a) Recurrent laryngeal nerve *Karnataka 89)*
b) Internal laryngeal nerve
c) External laryngeal nerve
d) Hypoglossal nerve

1098. The cavernous sinus communicates directly with all, except- *(AIIMS86)*
a) Inferior petrosal sinus
b) Pterygoid venous plexus
c) Veins in orbit
d) Sigmoid sinus and straight sinus

1099. Main arterial supply of the tonsil is from - *(IN87,*
a) Facial artery *PGI 87, KERALA 87,90)*
b) Ascending pharyngeal artery
c) Palatine artery
d) Maxillary artery

1100. Main nerve supply of the palatine tonsils is -
a) Lesser palatine nerve *(IN87)*
b) Greater palatine nerve
c) Glossopharyngeal nerve
d) Facial nerve

1101. Arcuate eminence of the petrous temporal bone is caused by- *(AIMS 87)*
a) Superior semicircular canal
b) Posterior semicircular canal
c) Lateral semicircular canal
d) Cochlea

1102. Root value of phrenic nerve - *(Kerala 88,*
a) $C_2C_3C_4$ b)C,C_2C_3 *JIPMER 86)*
c) $C_3C_4C_5$ d)$C_4C_5C_6$

<0 cAc7

1080) a 1081) b 1082)b 1083)b 1084) a,c 1085) b 1086)e 1087)a 1088)c 1089)b 1090)d 1091)c 1092)b 1093)b
1094) e 1095) a 1096) c 1097) c 1098) d 1099) a 1100)c 1101) a 1102)c

1103. Middle thyroid vein drains into.....vein - *(PGI88)*
a) External jugular b) Anterior jugular
c) Internal jugular d) Branchiocephalic

1104. Ophthlmic artery is the branch of.....part of internal carotid artery - *(PGI88, PGI93)*
a) Intracavemous b) Intrapetrous
c) Intracerebral d) Extra cranila

1105. Structures passing through the foramen ovale -
a) Emissary vein *(PGI88)*
b) Mandibular nerve
c) Trigeminal nerve
d) All

1106. Which of the following regarding mandibular nerve is correct - *(AI89)*
a) Branch of facial nerve
b) Purely motor
c) Passes through foramen ovale
d) Related to sphenopalatine ganglion

1107. The actions of superior oblique muscle is-*(PGI89)*
a) Abduction b) Intorsion
c) Extorsion d) Depression

1108. Where is cilliry ganglion located in the orbit -
a) Between optic nerve and lateral rectus *(PGI 89)*
b) Apex of orbit
c) Apex of orbit and superior rectus
d) Apex of orbit between optic nerve and lateral rectus

1109. The facial nerve - *(KARNAT89)*
a) Arises from the medulla oblongata
b) Trans verses through parotid gland
c) Supplies muscles of mastication
d) Carrier no taste fibres

1110. Structures passing through the foramen magnum are- *(PGI 89)*
a) Spinal cord b) Vertebral artery
c) Internal jugular vein d) XI cranial nerve

1111. The oesophgus commences at the following level -
a) Lower end of cricoid *(AP 89)*
b) C_5 vertebra
c) 10cm from incisor teeth
d) C_7

1112. Regarding palatine tonsil, which of the following is an incorrect statement - *(PGI 89)*
a) Lies on the superior constrictor
b) Lymph form it drains into the deep the cervical nodes
c) Has sensory innervation from vagus
d) Is a derivative of the second pharynageal pouch

1113. Posterior boundary of carotid triangle is -*(DNB 89)*
a) Sup. Belly of amohyoid b) Post Belly of digastric
c) Sternohyoid d) Sternocleidomastoid

1114. The only pharyngeal muscle innervated by the glosspharyngeal nerve is the - *(NIMHANS 89, Kerala 94)*
a) Stylo pharyngeus
b) Palato pharyngeus
c) Superior constricter
d) Middle constricter

1115. Incissor foramen in the mouth is foramen of -
a) Scarpa b) Luschka *(DNB 89)*
c) Vesali d) Stylomatsoid

1116. The retina is an out growth of the - *(DNB 89)*
a) Mesencephalon b) Diencephalon
c) Telencephalon d) Pons

1117. Retraction of the protruded mandible is done by- *(JIPMER90)*
a) Medial pterygoid b) Lateral pterygoid
c) Masseter d) Temporalis

1118. Excessive hemorrnage in tonsillectomy result from injury to - *(AI90)*
a) Asceding palatine artery
b) Venous commitants of facial artery
c) Palatine vein
d) Internal carotid artery

1119. Which structure passes through infra orbital fissure - *(IN90)*
a) Superior ophthalmic vein b) Ophthalmic artery
c) Trochlear nerve d) Zygomatic nerve

1120. Which vertebra has the most prominent spine -
a) a b)C7
c) T10 d)L2

1121. Artery palpable at the anterior border of masseter is.....artery - *(TN 90)*
a) Superficial temporal b) Facial
c) Lingual d) Maxillary

1122. Which is true regarding parotid gland- *(AI90)*
a) Stensons and whartons duct join and open at the upper second molar teeth
b) Stensons duct opens opposite upper second molar
c) Parotid duct pierces the masseter
d) Developed from mesoderm

1123. Which is true of tonsils - *(AI 90)*
a) Lies on inferior constrictor
b) Developed from 4th branchial cleft
c) Drained by jugulo digastric lymphonodes
d) Crypts lined by stratified columnar epithelium

1124. Parasympathetic division innervates- *(AP90)*
a) Dilator pupillae b)Errectorpilorum
c) Muller's muscle d) Detrusor muscle

1125. Which is true about pharyngotympanic tube -
a) It opens into Oropharynx *(AI91)*
b) Supplied by Gossopharyngeal N.
c) Lined by stratified squamous epithelium
d) It is cartilagenous throughout its length

1126. Which is true about opening of jaw- *(AI91)*
a) Lateral pterygoid muscle contracts
b) Movement in vertical axis
c) Articular disc moves backwards
d) Head of the mandible moves forwards

1127. Nerve supply of the mucosa of larynx is -
a) External laryngal and recurrent larynageal
b) Internal laryngeal *(Kerala 91)*
c) External laryngeal
d) Superior laryngeal

1103)c 1104) c 1105) a,b 1106)c 1107)a,b,d 1108)d 1109)b 1110) b, d llll) a 1112)c 1113)d 1114)a
1115) a 1116) b 1117)c,d 1118)b,c 1119)d 1120)b 1121)b 1122)b 1123)c 1124)d 1125)b 1126)a 1127)b

1128. Posterior chamber of the eye refer to the space- *(JIPMER 91)*
a) Posterior to lens b) Posterior to cornea
c) Posterior to iris d) None

1129. Sphenopalatine ganglion does not supply - *(JIPMER 91)*
a) Nasal mucosa b) Sublingual gland
c) Ciliary ganglion d) Palate

1130. Taste sensation from the anterior 2/3 of tongue is carried by - *(AIIMS 91)*
a) Hypoglossal Nerve b) Chorda tympani
c) Glossopharyngeal N. d) All of the above

1131. The tip of the nose is supplied by - *(AIIMS 91)*
a) Maxillary N. b) Mandibular N.
c) Ophthalmic N. d) Facial N.

1132. Circulus iridis major is situated in - *(AIIMS 91)*
a) Pupillary border of iris b) Greater collarette
c) Ciliary body d) Root of iris

1133. General sensation to the posterior one-third of the tongue is mediated by the - *(AP 91)*
a) Hypoglossal nerve b) Vagus nerve
c) Glossorpharyngeal nerve d) Lingual nerve

1134. The following are contents of the interpeduncular fossa except - *(AP 90)*
a) Trochlear nerve b) Oculomotor nerve
c) Mamillary bodies d) Tuber cinereum

1135. Toynbee's muscle is - *(AP 91)*
a) Stapedius b) Tensor tympani
c) Scalenus minimus d) Levator ani

1136. Skull consists of..... bones - *(IN 91)*
a) 20 b) 22
c) 24 d)28

1137. Which is not a content of tympanic cavity -
a) Maleus b) Chorda tympani *(AI92)*
c) Stapedius d) Post.auricular N

1138. Which is not supplied by Hypoglossal Nerve -
a) Geniohyoid b) Thyrohyoid *(AI 92)*
c) Styloglosssus d) Stylopharyngeus

1139. Seventh, Ninth and Tenth cranial nerves end in -
a) Nucleus Tractus Solitarius *(JIPMER 92)*
b) Nucleus Ambiguous
c) Dorsal Nucleus of vegus
d) Long tract of V nerve

1140. Cough Receptors are not seen in - *(AIIMS 92)*
a) Soft palate b)Ear
c) Bronchi d) Trachea

1141. Inferior and lateral movement is produced by which extra ocular muscle - *(AIIMS 92)*
a) Inferior Rectus b) Superior Rectus
c) Superior oblique d) Inferior oblique

1142. The smallest cranial nerve is the - *(NIMHANS 92)*
a) Olfactory b) Oculomotor
c) Trochlear d) Accessry

1143. Lamina cribrosa is a modification of- *(DELHI 92)*
a) Sclera b) Choroid
c) Optic nerve sheath d) Retina

1144. Choroid fissure of the eye permits the entry of -
a) Choroid plexus *(DNB 92)*
b) Ciliary arteries
c) Central artery of the retina
d) Hyaloid artery

1145. Which of the following statements regarding middle constrictor muscle is wrong - *(IN92)*
a) Lies on the superior constricter
b) Lymph from it drains into deep cervical lymph nodes
c) Has sensory innervation form vagus
d) Is a derivative of the second pharyngeal arch

1146. Anterior Spinal artery is a branch of- *(PGI93)*
a) Internal Carotid artery b) Basilar artery
c) Vertebral artery d) Labyrinthine artery

1147. The vein of galen drains into - *(AI 93)*
a) F/C b) Straight Sinus
c) Superior sagittal sinus d) SVC

1148. The nerve supplying submandibular gland is -
a) V b)IX
c) VE d) XII

1149. Prevertebral fascia is posterior to all except -
a) Carotid b)Esophagus
c) Scalenous anterior d) None *(JIPMER 93)*

1150. Root of tooth contain all the following except -
a) Cementum b) Enamel *(PGI94, 93)*
c) Detine d) Pulp chamber

1151. Adult larynx extends from cervical spine - *(AI93,*
a) C_3 to C_6 b) C_7 **Tj** *AIIMS 79, 82)*
c) C_3C_4 d)C_2C_2

1152. True about 4th ventricle is - *(DELHI 93)*
a) Rhomboid fossa forms floor
b) Choroid plexus lies at its floor
c) Connectio between two cerebral hemishperes
d) Lies inferior to inferior cerebellar peduncle

1153. Structure passing through foramen spinosum is -
a) Accessory meningeal artery *(Kerala 94)*
b) Middle meningeal artery
c) Mandibular nerve
d) Maxillary nerve

1154. Para sympathetic supply to parotid gand is from -
a) Spheno palatine ganglion *(Kerala 94)*
b) Ciliary ganglion submandibula ganglion
c) Otic ganglion
d) None

1155. Which among the following does not pass through superior orbital fissure - *(AIIMS 94)*
a) Oculomotor nerve
b) Optic
c) Ophthalmic division of trigeminal
d) Trochlear

1128) c 1129) b,c 1130) b 1131)c 1132)d 1133)c 1134) a 1135)b 1136)d 1137)d 1138)d 1139)a 1140)a
1141) c 1142) a 1143) a 1144)d 1145)d 1146)c 1147)b 1148)c 1149)c 1150)b 1151)a 1152)a 1153)b 1154)c
1155)b

1156. All the muscles of the face are supplied by facial nerve except - *(JIPMER 95)*
a) Levator anguli oris
b) Corrugator supercilli
c) Levator palperae superioris
d) Risorius

1157. Tip of tongue drains into - *(JIPMER 95)*
a) Occipital lymph node
b) Submental lymph node
c) Deep cervical lymph nodes
d) Tonsillar lymph nodes

1158. Cranio facial angle is - *(JIPMER 95)*
a) 110° b) 120°
c) 130° d) 140°

1159. Which of thefollowing structures is inferior to spheno petrosal Synchondrosis - *(JIPMER 95)*
a) Abducens nerve
b) Osseous part of auditory tube
c) Cartilaginous part of auditory tube
d) Petro squamous sinus

1160. All are true about vocal ligament except -
a) It is medial to vocalis *(JIPMER 95)*
b) It is discontinous with crico thyroid membrane
c) It is lined by stratitied squamous
d) It is fibro elastic tissue

1161. Parathyroid glands are supplid by which artery - *(Kerala95)*
a) Common carotid b) Superior throid
c) Middle thyroid d) Inferior thyroid

1162. All of the following structures are in lateral wall of cavernous sinus except - *(Kerala95)*
a) Occulomotor b) Trochlear
c) Trigeminal d) Ophthamlmic

1163. All of the following structures are related to cavenous sinus except - *(Assam95)*
a) Optic nerve
b) 4th nerve
c) 6th nerve
d) Mandibular division of trigeminal nerve

1164. Trigeminal nerve does not supply - *(AMU95)*
a) Masseter
b) Buccinator
c) Anterior belly of digastric
d) Any of the above

1165. Which nerve passes through Meckel's cave -
a) Abducens b) Facial *(AMU95)*
c) Trigeminal d) Trochlear

1166. Alderman's nerve is a branch of - *(PGI95)*
a) Superior cervical ganglion
b) Inferior cervical ganglion
c) Auricular branch of vagus nerve
d) None

1167. Cranial accessory nerve supplies- *(AI96)*
a) Stemomastoid b) Trapezius
c) Splenius capitis d) Soft palate

1168. Palsy cf **right genioglossus causes -** *(UP 96)*
a) Deviation of tongue to right
b) Deviation of tongue to left
c) Deviation of soft palate to right
d) Deviation of soft palate to left

1169. Which is not a feature of occulamotor nerve palsy-
a) Miosis *(UP 96)*
b) Difficulty in accomodation
c) Superior gaze palsys
d) Diplopia

1170. Waldeyers lymphatic chain is formed by all except -
a) Palatine tonsils *(Kerala 96)*
b) Pharyngeal tonsils
c) Tubal tonsils
d) Post auricular nodes

1171. Which one of the following is a branch of the Facial nerve- *(Karnat 96)*
a) Deep petrosal nerve
b) Lesser superficial petrosal nerve
c) External petrosal nerve
d) Greater superficial petrosal nerve

1172. Depressor's of Mandible- *(AP 96)*
a) Median pterygoid b) Masseter
c) Lateral pterygoid d) Temporalis

1173. Nerve of pterygoid canal is - *(PGI 96)*
a) Sympathetic + Lesser pertrosal nerve
b) Sympathetic + greater superficial petrosal nerve
c) Chorda Tympani
d) Jacobson's nerve

1174. Tympanic plexus is formed by - *(PGI 96)*
a) Tympanic branch of glossopharyngeal nerve
b) Vagus nerve
c) Facial nerve
d) Mandibular nerve

1175. Which is a direct content of cavernous sinus -
a) Ophthalmic division of trigeminal nerve
b) Trochlear nerve *(Kerala 97)*
c) Abducent nerve
d) Occulomotor nerve

1176. Superior malleolar ligament connects -
a) Malleus to incus *(JIPMER 98)*
b) Head of malleus to roof of epitympanum
c) Incus to fossa uncudis
d) Malleus to fossa uncudis

1177. Tympanic plexus present in - *(JIPMER 98)*
a) Tunica adventitia of internal jugular vein
b) Medial projection of middle ear cavity
c) Part of tympanic membrane
d) Petrous part of temporal bone

1178. The secetomotor fibre to the parotid gland passes through - *(TN 98)*
a) Otic ganglion
b) Sphenopalatine ganglion
c) Geniculate ganglion
d) Lesser ganglion

1156) c 1157) b 1158) c 1159)c 1160)b 1161)b,d 1162)c 1163)a 1164)b 1165)c 1166)c 1167)d 1168)a
1169) a 1170)d 1171)d 1172)c 1173)b 1174)a 1175)c 1176)b 1177)b,d 1178)a

1179. Safety muscle of the tongue is - *(IN98)*
a) Hyoglossus b)Genioglossus
c) Palatoglossus d) Styloglossus

1180. Superior cerebral veins drain into - *(AI98)*
a) Great cerbral vein b) Vein of galen
c) Superior sagittal sinus d) Inferior sagittal sinus

1181. Facial N. supply all except - *(MP 98)*
a) Lacrimal gland b) Nasal gland
c) Submandibular gland d) Parotid gland

1182. Subcutaneous muscle extending from the clavicle to the mandible - *(KERALA 98)*
a) Platysma b) Stemocledomastoid
c) Omohyoid d) Sternohyoid

1183. 'Chassaignac's tubercle' is - *(PGI98)*
a) Erb's point
b) Carotid tubercle on C6 vertebra
c) Found on first rib
d) Medial condyle of humerus

1184. Muscles of tongue are supplied by- *(AP 98)*
a) Lingual nerve
b) Glosso pharyngeal nerve
c) Chorda tymapni
d) Hypoglossal

1185. Cranial part Accessory nerve supplies all palatal muscles except - *(Orrissa 98)*
a) Palato glossus b) Palato pharyngeus
c) Tensor veli palati d) Levator palati

1186. Branches of subclavian artery are all except -
a) Vertebral artery *(AI 99)*
b) Thyrocervical trunk
c) Internal thoracic artery
d) Subscapular artery

1187. Nasolacrimal duct is directed- *(AI 99)*
a) Downward, medially, backwards
b) Downward, laterally, backwards
c) Downward, laterally, forward
d) Downward, medially, forward

1188. Transverse ligament of atlas is part of -
a) Cruciate ligament *(CUPGEE99)*
b) Ligament flora
c) Anterior longitudinal ligament
d) Posterior longitudinal ligament

1189. Which nerve is in close relation with root of the lower third molar - *(Karnat 99)*
a) Inferior alveolar nerve b) Chorda tymapani nerve
c) Lingual nerve d) Myolohyoid nerve

1190. Middle cranial fossa is supplied by - *(MP 2K)*
a) Maxillary nerve
b) Mandibular nerve
c) Anterior ethmoidal nerve
d) Posterior ethmoidal nerve

1191. A person has inability to look downward and laterally. The nerve injured is - *(MAHE2001)*
a) Occulomotor b) Trochlear
c) Abducent d) Trigeminal

1192. Skin over the angle of mandible and parotid area is supplied by - *(JIPMER 2001)*
a) Greater auricular nerve
b) Posterior auricular nerve
c) Auriculotemporal nerve
d) Facial nerve

1193. Psuedounipolar neurons are seen in - *(J&K2001)*
a) Olfactory
b) Celiac ganglion
c) Spinal dorsal root ganglion
d) Cochlea

1194. Which of the cranial nerve decussate within the rain- *(NINHANS 01)*
a) Trochlear b) Optic
c) Oculomotor d) Trigeminal *f*

1195. Sensory nerve supply of pinna is - *(HPJ/^2001)*
a) Mandibular nerve b) Maxillary nerve
c) Facial nerve d) Abducent nerve

1196. Posterior fontanelles are ossified at the age of -
a) 6 months b) 2 yrs *(HPU 2001)*
c) 3 yrs d) 4 yrs

1197. Trigeminal nerve has how many nuclei in CNS -
a) Three b) Four *(JIPMER 02)*
c) Five d)Six

1198. Portal circulation is seen in which of the following endocrine gland - *(JIPMER2002)*
a) Pineal gland b) Hypophysis cerebri
c) Pancreas d) Ovary

1199. Lacrimal gland is supplied which of the following ganglia - *(JIPMER2002)*
a) Otic ganglia b) Ciliary ganglion
c) Spenopalatine ganglion d) Submandibualr

1200. The following ligaments are present in temporomandibular joint, except- *(TN 2002)*
a) Lateral temporomandibular ligament
b) Sphenomandibular ligament
c) Stylomandibular ligament
d) Alar ligament

1201. The roof of the olfactory region is formed by - *(TN 02)*
a) Nasal bone b) Cribriform plate of ethmoid
c) Sphenoid d) Temporal bone

1202. Ipsilateral deviation of tongue is due to unaltered action of- *{PGI97)*
a) Genioglossus b) Medial pterygoid
c) Hyoglossus d) Lateral pterygoid

1203. Dorello's canal transmits in tip of temporal bone to en route to cavernous sinus - *{PGI99)*
a) Middle meningeal artery
b) Mandibular nerve
c) Superior alveolar branch of maxillary
d) Abducent nerve

1204. First branch of focial nerve is- *(PGI99)*
a) Chorda tympani
b) Nerve to stapedius
c) Lesser superficial petrosal N
d) Greater superficial petrosal N

1179) b 1180) c 1181) d 1182)a 1183)b 1184)d 1185)c 1186)d 1187)b 1188)a 1189)c 1190)a,b 1191)b
1192) a 1193) c 1194)a 1195) a, c 1196) a1197)b 1198)b 1199)c 1200)d 1201)b 1202)a 1203)d 1204)d

1205. Branchial Sinus passes between- *{PGI 2000)*
a) Two carotids b) IJV & Carotid
c) Superficial to ECA d) Post, mediastinum

1206. Following are the T.M. Joint ligaments except-
a) Stylomandibular (*PGI 2000)*
b) Temporomandibular
c) Tympanomandibular
d) Sphenomandibular

1207. Superior rectus is suppled by which cranial nerve -
a) Superior division of 3rd nerve *{PGI 2000)*
b) Inferior div. or 3rd nerve
c) Abducent nerve
d) Trochlear nerve

1208. Anotomic site of origin of stridor is - *{PGI 2000)*
a) Larynx b) Bronchus
c) Bronchiole d) Trachea

1209. Structures passing through superior orbital fissure - *{PGI01)*
a) Oculomotor nerve b) Trochlear nerve
c) Lacrimal nerve d) Nasociliary nerve
e) Abducent nerve

1210. Which of the following statements is true regarding the pituitary gland - *{PGI 01)*
a) It is separated from the optic chiasma by the sells turcica
b) It is situated deep in the sella
c) The spenoidal air cells lie inferior to it
d) It develops from the base of the 3rd ventricle from the pars anterior
e) It is supplied by a branch of the internal carotid artery

1211. The recurrent laryngeal nerve supplies - *(PGI 01)*
a) Vocalis muscle b) Posterior cricoarytenoid
c) Cricothyroid d) Stylopharyngeus
e) Omohyoid

1212. Which of the following are draining channels of cavernous sinus- *(PGI 02)*
a) Inferior petrosal sinus
b) Inferior opthalmic vein
c) Sphenoparietal sinus
d) Middle cerebral vein
e) Superior ophthalmic vein

1213. Recurrent laryngeal nerve has following course in neck - *(PGI 02)*
a) It passes anterior to inferior thyroid A
b) It passes through stemomastoid
c) It passes between branches of inferior thyroid vessels
d) It passes posterior to inferior thyroid vessels
e) It is superficial to inferior constrictor muscle

1214. Structure that passes through the internal auditory canal - *{PGI 03)*
a) Anterior inferior cerebellar artery
b) Posterior inferior cerebellar artery
c) Nerve of Wrisberg
d) Superior vestibular nerve
e) Cochlear nerve

1215. Nasal Septum is formed by- *{PGI03)*
a) Leteral certilage
b) Crest of maxilla
c) Septal cartilage
d) Perpendicular plate of ethmoid
e) Nasal bone

1216. Inferior thyroid artery is a branch of - *(PGI 03*
a) Thyrocervical trunk *AMC 86, Delhi 86)*
b) Common Carotid artery
c) Subclavian artery
d) Axillary artery
e) Costocervical trunk

1217. True about tonsils are- *{PGI 03)*
a) Develops from 4th pharyngeal arch
b) Lymph nodes drains to jugulodiagastic node
c) It is endodermal derivative
d) Rest on superior constrictor of the pharynx
e) Long axis of tonsil is forwards and medially

1218. The mastoid antrum is related to the following nuclei in the thalamus - *{UPSC 02)*
a) Facial nerve in the facial canal
b) Posterior semi-circular canal
c) Cochlea
d) Cerebrum (temporal lobe)

1219. How many lymph nodes are there in cervical group-
a) 100 b) 200 *{Kerala 03)*
c) 300 d)400

1220. Thyroglossal cyst moves with deglutition because -
a) It is attached to foramen caecum *{TN 03)*
b) Attached to trachea
c) Attached to larynx
d) Attached to hyoid bone

1221. All of the following are grouped together as "muscles of mastication" except - *{AI03)*
a) Buccinator b) Masseter
c) Temporalis d) Pterygoids

1222. Function of stria vascularis - *{Orrisa 04)*
a) Maintain ionic cone, of endolymph
b) Secretion of perilymph
c) Absorption of perilymph
d) Variation of basilar membrane

1223. Muscle not arising from oblique line of thyroid - *{Manipal 04)*
a) Thyrohyoid b) Cricothyroid
c) Cricoarytenoid d)None

1224. Internal carotid nerve is a branch of - *{Manipal 04)*
a) Celiac ganglion
b) Internal sympathetic chain
c) Vagus nerve
d) None

1225. Sphenopalatine ganglion is formed by -*{Jipmer 04)*
a) Deep petosal nerve
b) Superficial petrosal-greater
c) Superficial petrosal - lesser
d) Nerve of plerygoid canal

1205) a 1206)c 1207)a 1208)a,b,d 1209)A11 1210)b,c,e 1211)a,b 1212)a,e 1213)a,c,d 1214)c,d,e 1215)b,c,d,e 1216)a 1217) b,c,d 1218)c 1219)a 1220)d 1221)a 1222)None 1223)b,c 1224)b 1225)b

1226. Glossopharyngeal nerve gives - *{Jipmer 04)*
a) Tympanic nerve b) Pharyngeal plexus
c) Tonsillar branches d) All of the above

1227. Which of the following is not supplied by ansacervicalis- **(***Jipmer 04, J&K2k)*
a) Sternothyroid b) Thyrohyoid
c) Sternohyoid d) Omohyoid

1228. Which is not found on the lateral wall of the nose - **(***Bihar 03)*
a) Infundibulum b) Superior concha
c) Lamina pappeoyces d) Bulla ethmoidalis

1229. Vertebra prominence is - **(***Bihar 03)*
a) a b)C7
c) T9 d)Tll

1230. The following are supplied by XII cranial nerve except - *{Bihar03)*
a) Palatoglossus b) Genioglossus
c) Hypoglosus d) None

1231. All are supplied by cervical plexus except -(*Kerala 04)*
a) Mylohyoid b) Geniohyoid
c) Scalenus medius d) Capitis longus

1232. A patient presented with normal eyesight and absence of direct and consensual light reflexes. Which of the following cranial nerves is suspected to be lesioned - *{AIIMS04)*
a) Occulomotor b) Trouchlear
c) Optic d) Abducent

1233. All are elevators of larynx except - *{APPGE 04)*
a) Thyrohyoid b)Diagastric
c) Stylohyoid d) Sternohyoid

1234. All are supplied by chorda tympani except -
a) Anterior 2/3rd of tongue *{APPGE04)*
b) Posterior l/3rd of tongue
c) Muscles of facial expression
d) Secretomotor fibres to submandibular gland

1235. Posterior belly of digastric is supplied by -
a) Facial nerve *{Karnataka 04, Assam 95)*
b) Mandibular nerve
c) Spinal accessory nerve
d) Ansa cervicalis

1236. Supraorbital and Supratrochlear arteries are branches of which of the following - *{SGPGI04)*
a) Ophthalmic artery b) Maxillary artery
c) ECA d) ICA

1237. Ascending pharyngeal artery is a branch of -
a) Arch of aorta (*77V 04)*
b) Inferior thyroid artery
c) Superior thyroid artery
d) Ext. carotid artery

1238. Chassaignac's tubercule lies at level of -*{Bihar 03)*
a) Erb's point b) Stellate ganglion
c) Atlas d) Odontoid process

1239. Foramen of monoro connects - *{SGPGI 05)*
a) Lateral ventricle to the third ventricle
b) Both lateral ventricles
c) 3rd to the 4th ventricle
d) Lateral to the 4th ventricle

1240. Tensor tympani is supplied by - *(SGPGI 05, PGI97)*
a) Maxillary branch of 5th nerve
b) Mandibular branch of 5th nerve
c) Facial nerve
d) Lingual nerve

1241. Most important muscle which opens mouth is- *{SGPGI 05, MP2K)*
a) Lateral pterygoid b) Medical pterygoid
c) Masseter d) Temporalis

1242. All of the following arise from apex of orbit except - *{SGPGI 05)*
a) Superior oblique b) Inferior rectus
c) Superior rectus d) Medical rectus

1243. Which one of the following is correct regarding superior thyroid artery - *{SGPGI 05)*
a) Arises from facial artery
b) Arises from external carotid artery
c) No relation to external laryngeal nerve
d) Posterior branch supplies isthymus

1244. Following muscles are supplied by facial nerve except- *(SGPGI 05)*
a) Stapedius
b) Masseter
c) Anterior belly of diagastric
d) Occipitofrontalis

1245. Which of the following passes between base of the skull & superior constricter muscle - *(SGPGI 05*
a) Eustachion tube, levator palatine muscle, ascending palatine artery *AIIMS84)*
b) Maxillery nerve & levator palatine muscle
c) Eustachion tube & stylopharyngeous muscle
d) Ascending palatine artery & Glassopharyngeal nerve

1246. Abducens supplies - *{SGPGI05)*
a) Medical rectus b) Lateral rectus
c) Inferior oblique d) Superior oblique

1247. Which of these is not a tributary of cavernous sinus-
a) Sphenoparietal sinus *{MAHE05)*
b) Superior petrosal sinus
c) Superficial middle cerebral vein
d) Inferior ophthalmic vein

1248. The following muscle is an opener of the glottis -
a) Lateral cricoarytenoid *{Jipmer 05)*
b) Posterior cricoarytenoid
c) Transverse arytenoid
d) Inter arytenoids

1249. A patient complains of persistent numbness of the chain, lower lip, and lower teeth. She further indicates that she has difficulty chewing. Radiographic studies of the head demonstrate a small discrete mass in the infratemporal fossa. Which nerve has been compromised by the mass -
a) Buccal nerve *{Jipmer 05)*
b) Lingual nerve
c) Auriculotemporal nerve
d) Inferior alveolar nerve

1226) d 1227) b 1228) c 1229) b 1230) a 1231) a 1232) a 1233) d 1234) b,c 1235) a 1236) a 1237) d 1238) a 1239) a 1240)b 1241) a 1242)a 1243)b 1244)b 1245)a 1246)b 1247)b 1248)b 1249)d

1250. Structure's which pass through the superior orbital fissure is all except - *(Jipmer 05)*
a) Lacrimal nerve b) Superior ophthalmic vein
c) Central retinal artery d) Optic nerve

1251. Cranial nerve related to apex of the petrous temporal bone - *(PGI June 05)*
a) vm b)Vn
c) VI d)V
e) IX

1252. Which of the following structures passes through sinus of morgagni - *(PGI June 05)*
a) Ascending palatine artery
b) Levator palatine muscle
c) Auditory tube
d) Pterygoid nerve
e) Sphenopalatine nerve

1253. Structures passing through superior orbital Assure - *(PGI June 05, JIPMER 05)*
a) Cranial nerve VI b) Cranial nerve I
c) Cranial nerve II d) Ophthalmic nerve
e) Lacrimal nerve

1254. Arterial supply of facial nerve - *(PGI June 05)*
a) Ascending palatine artery
b) Ascending pharyngeal artery
c) Lingular artery
d) Facial artery

1255. Regarding the flow of Cerebrospinal fluid, which one of the following sequences is correct - *(ICS 05)*
a) Lateral ventricle - third ventricle - aqueduct of Sylvius - fourth ventricle
b) Fourth ventricle - third ventricle - aqueduct of Sylvius - lateral ventricle
c) Lateral ventricle - aqueduct of Sylvius - lateral ventricle - fourth ventricle
d) Lateral ventricle - third ventricle - fourth ventricle - aqueduct of Sylvius.

1256. The perilymph, present in the scala vestibule and scala tympani, drains into the CSF through the -
a) Aqueduct of cochlea *(J &K 05)*
b) Aqueduct of vestibule
c) Ductus reunions
d) Cochlear duct

1257. Superficial incision on posterior triangle of neck leads to - *(MAHA 05, ARMS 98)*
a) Difficulty in shrugging of shoulder
b) Difficulty in start of abduction
c) Difficulty in rotation of face towards the same side
d) Difficulty in flexion

1258. Which of the following transmits a nerve branch to the meninges- *(MAHA 05)*
a) Foramen spinosum b) Mastoid foramen
c) Jugular foramen d) Foramen magnum

1259. The vertebral artery traverses all of the following except- *(ARMS NOV 05)*
a) Foramen magnum
b) Subarachnoid space
c) Intervertebral foramen
d) Foramen transversarium

1260. All of the following statements about the vagus nerve are true except that it - *(ARMS NO V 05)*
a) Supplies heart & lung
b) Carries postganglionic parasympathetic fibers.
c) Innervates right two third of transverse colon
d) Stimulates peristalsis & relaxes sphincters

1261. All of the following are branches of the external carotid artery except - *(AI05)*
a) Superior thyroid artery
b) Anterior Ethmoidal artery
c) Occipital artery
d) Posterior auricular artery

1262. Paralysis of 3rd, 4th, 6th nerves with involvement of ophthalmic division of 5th nerve, localizes the lesion to-
a) Cavernous sinus b) Apex of orbit *(AI 05)*
c) Brainstem d) Base of skull

1263. The superior oblique muscle is supplied by -*(AI 05)*
a) 3rd cranial nerve. b) 4th cranial nerve.
c) 5th cranial nerve. d) 6th cranial nerve.

1264. The following statements concerning chorda tympani nerve are true except that it - *(AI 05)*
a) Carries secretomotor fibers to submandibular gland
b) Joins lingual nerve in infratemporal fossa
c) Is a brach of facial nerve
d) Contains postganglionic parasympathetic fibers

1265. Sensory fibres from the taste buds in the hard and soft palate travel along - *(ARMSMay 05)*
a) Trigeminal nerve b) Facial nerve
c) Glossopharynegeal nerve d) Vagus nerve

1266. The palatine tonsil receives its arterial supply from all of the following *except* **-** *(ARMSMay 05)*
a) Facial b) Ascending palatine
c) Sphenopalatine d) Dorsal lingual

1267. Which of the following is not a sign of stellate ganglion block - *(AI 06)*
a) Meiosis b) Exophthalmos
c) Nasal congestion d) Conjunctival redness

1268. True statements about parotid gland - *(PGI June 06)*
a) Duct opens oppsite to upper 2nd molar tooth
b) Duct pierces Masseter
c) Develops from ectoderm
d) Secretomotor fibres come from facial nerve

1269. Ill cranial nerve supplies - *(PGI June 06)*
a) Superior oblique b) Inferior oblique
c) Medial rectus d) Superior rectus
e) Lateral rectus

1270. Isthmus of thyroid gland lies against following tracheal rings - *(PGI June 06, PGI 99)*
a) 2-4 b)2-3
c) 2-5 d) 1 - 3
e) 3-5

1271. The following are branches of internal carotid artery except - *(COMED-06, SGPGI05)*
a) Anterior cerebral artery
b) Posterior cerebral artery
c) Ophthalmic artery
d) Middle cerebral artery

1250)c,d 1251)c,d 1252) a,b,c 1253)a,e 1254)b 1255)a 1256)a 1257)a 1258)a 1259)c 1260)b 1261)b 1262) a 1263) b 1264)d 1265)b 1266)c 1267)b 1268)a,c 1269)b,c,d 1270)b 1271)b

1272. All of the following muscles are supplied pharyngeal plexus except - *(APPG 2006)*
a) Palatoglossus b)Salpingopharyngeus
c) Stylopharyngeus d) Cricopharyngeus

1273. Structure passing through anterior part of jugular foramen- **(***PGMCETOH)*
a) Inf petrosal sinusb) Internal jugular vein
c) Internal jugular vein d) X, XI nerve

1274. Superior orbital fissure synd. *inc\udes-(PGMCET07)*
a) 3,4,5,6 cranial nr b) 3,2,4,5 cranial nr
c) 2,6,3 cranial nr d) 2,5, 6 cranial nerves

1275. Angle of mandible is supplied by - *(PGMCETO 7, AI01)*
a) Greater Auricular nerve
b) Lesser occipital nerve
c) Auriculotemporal nerve
d) Trigeminal nerve

1276. The parasympathetic secretomotor nerve supply to the nose is via - *{Corned 07)*
a) Anterior ethmoid nerve
b) Greater palatine nerve
c) Vidian nerve
d) Inferior orbital nerve

1277. Which muscle is an abductor of the vocal cords -
a) Transverse arytenoid *(Corned 08, 07, UP 04, 07, PGI99)*
b) Oblique arytenoid
c) Lateral thyroarytenoid
d) Posterior Cricoarytenoid

1278. Which of the following laryngeal muscles is supplied by the external laryngeal nerve -
a) Posterior cricoarytenoid *(Corned 08, PGI2K)*
b) Lateral cricoarytenoid
c) Cricothyroid
d) Thyroarytenoid

1279. The preganglionic parasympathetic fibres to the parotid gland travel in - *{Corned 08, 07)*
a) Lesser petrosal nerve b) Greater petrosal nerve
c) Deep petrosal nerve d) Internal carotid nerve

1280. Which of the following is not a branch of Cavernous segment of Internal Carotid artery -
a) Cavernous Branch *{AI07)*
b) Inferior Hypophyseal Branch
c) Meningeal branch
d) Ophthalmic branch

1281. Which of this part of vertebral canal will show secondary curves with concavity backwards -
a) Cervical b) Thoracic *{AI07)*
c) Sacral d) Coccyx

1282. Exposure of left subclavian artery by supraclavicular approach does not require cutting of - *(A i ims May 0 7)*
a) Sternocleidomastoidb) Scalenus anterior
c) Scalenus medius d) Omohyoid

1283. Facial N. stimulation during testing of nerve indicated by contraction of muscle -*(Aiims May 07)*
a) Temporalis b) Masseter
c) Stemoleidomastoid d) Orbicularis oris

1284. Common carotid artery divides at the level of -
a) Hyoid bone *(Aiims May 07, PGI 88)*
b) Cricoid cartilage
c) Superior border of thyroid cartilage
d) Inferior border of thyroid cartilage

1285. All are in Norma Basilaris except - *(MAHE 07)*
a) Mental Foramen b) Foramen Magnum
c) Foramen Ovale d) Foramen Lacerum

1286. All are features of unilateral 3rd Cranial nerve nuclear injury except - (not sure of options)
a) B/L Ptosis *(MAHE 07)*
b) Ipsilateral Pupillary diation
c) Ipsilateral Outward deviation
d) Unilateral Ptosis

1287. Central artery of Retina is branch of- *(UP 07)*
a) External carotid artery
b) Internal carotid artery
c) Ophthalmic artery
d) Basilar artery

1288. The lymphatic drainage to central part of the lip is -
a) Sub mandibular node *(UP 07)*
b) Sub mental nodes
c) Deep cervical nodes
d) Jugulodiagastric nodes

1289. The maxillary nerve arises from the trigeminal ganglion in the middle cranial fossa. It passes forward in the lateral wall of the cavernous sinus and leaves the skull through which of the following foramen to enter the pterygopalatine fossa -*(UP 07)*
a) Foramen ovale b) Foramen spinosum
c) Foramen rotundum d) Foramen lacerum

1290. All the following structure lies out side the cavernous sinus except - *(UP 07, UP 06)*
a) Sphenoidal air sinus b) Internal carotid artery
c) Foramen lacerum d) Maxillary nerve

1291. Which muscles are supplied by Facial nerve ?
a) Platysma b) Superior belly of omohyoid
c) Stylohyoid d) Buccinator *(PGI June 07)*
e) Masseter

1292. Which nerves supply scalp - *(PGI June 07)*
a) Inffatrochlear b) Zygomaticotemporal
c) Greater occipital d) Auriculotemporal

1293. Medical wall of orbit formed by - *(PGI June 07)*
a) Body of sphenoid
b) Lesser wing of sphenoid
c) Greater wing of sphenoid
d) Frontal process of maxilla

1294. Sensory supply of from external auditory meatus-
a) Pterygomandibular ganglion *(PGI June 07)*
b) Geniculate ganglion
c) Facial nerve nucleus
d) Auriculotemporal nerve

1295. Adductors of vocal cord - *(PGIJune 07, PGI 02)*
a) Posterior cricoarytenoids b) Cricothyroid
c) Transverse arytenoids d)Voccalis
e) Lateral cricoarytenoids

1272) c 1273) a 1274)a 1275)a 1276)c 1277)d 1278)c 1279)a 1280)d 1281)a 1282)c 1283)d 1284)c 1285)a
1286) a 1287) c 1288)b 1289)c 1290)d 1291)a,c,d 1292)b,c,d 1293)a,d 1294)d 1295)b,c,e

1296. Intrinsic muscles of the tongue are derived from -
a) **2 nd** branchial cleft *(AIIMS Nov 07)*
b) Pharyngeal arch mesenchyme
c) Occipital somites
d) Cervical somites

1297. A young motorcyclists falls on the grounds leeds to Creek's in lands. Which of the following nerve severence leads to cause of death - *(UP 08)*
a) Hypoglossal nerve b) Vagus nerve
c) Maxillary nerve d) Accessory nerve

1298. Submental lymph node drainage by all except -
a) Anterior palate b) Tip of tongue *(UP 08)*
c) Floor of mouth d) Lower lip

1299. Which of the following nerve involved in-opening inlet of larynx - *(UP 08)*
a) Recurrent laryngeal nerve
b) External laryngeal nerve
c) Internal laryngeal nerve
d) Superficial laryngeal nerve

1300. Ligament of Berry in thyroid fixes- *(UP 08)*
a) Hyoid bone b) Cricoid cartilage
c) Trachea d) Thyroid

1301. All of the following are Digastric muscles, Except -
a) Muscle fibers in the ligament of Treitz *(AI08)*
b) Omohyoid
c) Occipitofrontalis
d) Sternocleidomastoid

1302. IVibutary of the cavernous sinus includes all of the following,Except- *(AI08)*
a) Superior petrosal sinus
b) Inferior petrosal sinus
c) Superficial middle cerebral vein
d) Deep middle cerebral vein

1303. All of the following statements about Diploic veins are true Except - *(AI08)*
a) Develop around 8th wks of gestation
b) These have no valves (valveless)
c) Present in cranial bones
d) Have a thin wall lined by a single layer of endothelium

1304. Which of the following bones do not contribute to the nasal septum ? *(AI08)*
a) Sphenoid b) Lacrimal
c) Palatine d) Ethmoid

1305. U/L injury to hypoglossal nerve leads to all except -
a) Hemiatrophy of involved side *(AiimsMay08)*
b) Deviation of tongue towards the same side
c) Loss of taste sensation in one half of the tongue
d) Fasciculation of the tongue

1306. Which is not a branch of cavernous part of internal carotid artery - *(A iims May 08)*
a) Cavernous branch b) Inferior hypophyseal
c) Meningeal artery d) Ophthalmic artery

1307. Larynx has- *(PGIJune08)*
a) 6 Cartilages
b) 9 Cartilages
c) 2 Paired, 2 unpaired
d) All intrinsic muscles of larynx except cricothyroid is supplied by recurrent laryngeal nerve

1308. Cavernous sinus communicates with -(.*PGI June 08)*
a) Superior petrosal sinus
b) Inferior petrosal sinus
c) Superior ophthalmic vein
d) Middle meningeal vein
e) Sphenopalatine sinus

1309. All are seen in norma basalis except - *(Manipal 08)*
a) Mental foramen b) Foramen magnum
c) Foramen ovale d) Foramen lacerum

1310. The branches of first part of subclavian artery are all except - *(DPGEE 08)*
a) Vertebral artery b) Thyrocervical trunk
c) Internal thoracic artery d) Costocervical trunk

1311. One of the following opens in the middle meatus of the nose - *(DPGEE 08)*
a) Naso-lacrimal duct b) Eustachian tube
c) Sphenoidal air sinus d) Maxilary air sinus

1312. The type of joint present between ear ossicles is -
a) Primary cartilaginous *(DPGEE08)*
b) Secondary cartilaginous
c) Synovial
d) Fibrous

1313. Nasal septum is formed by - *(PGIDec 08)*
a) Perpendicular plate of ethmoid
b) Vomer
c) Nasal bone
d) Lateral cartilage
e) Palatine bone

1314. Structures passing through superior orbital fissure - *(PGIDec 08)*
a) Trochlear nerve b) Nasociliary nerve
c) Lacrimal nerve d) Trigeminal nerve
e) Inferior ophthalmic vein

1315. About lateral pterygoid muscle which of the following statement is true - *(PGI Dec 08)*
a) Protrude mandible
b) Arise from infra temporal fossa & Lateral pterygoid plate
c) Supplied by facial nerve
d) Inserted into fovea of mandible

1316. Sternocleidomastoid is supplied by all of the following arteries except - *(AIIMS Nov 08)*
a) Occipital b) Posterior auricular
c) Thyrocervical trunk d) Superior thyroid

1317. All of the following structures pierce the buccinator muscle except - *(AIIMS Nov 08)*
a) Parotid duct
b) Molar glands of the cheek
c) Buccal branch of facial nerve
d) Buccal branch of the mandibular nerve

1296) c 1297) b 1298)c 1299)a 1300)b 1301)d 1302)d 1303)a 1304)b 1305)c 1306)d 1307)b,d 1308)a,b
1309) a 1310) d 1311)d 1312)c 1313)a,b,c,e 1314) All 1315)a,b,c,e 1316)b 1317)d

1318. Middle superior alveolar nerve is a branch *of-(AI 09)*
a) Mandibular nerve b) Maxillary nerve
c) Lingual nerve d) Facial nerve

1319. The parasympathetic secretomotor fibres to parotid traverse through the following, Except - *(AI09)*
a) Otic ganglion b) Tympanic plexus
c) Greater petrosal nerve d) Aurico temporal nerve

1320. Which of the following is not true about the Trochlear nerve - *(AI09)*
a) Has the longest intracranial course
b) Supplies the ipsilateral superior oblique muscle
c) Only cranial nerve that arises from the dorsal aspect of the brainstem
d) Enters orbit through the superior orbital fissure outside the annulus of Zinn

1321. Area that lies immediately lateral to the anterior perforating substance is - *(AI 09)*
a) Orbital gyrus b) Uncus
c) Optic chiasma d) Limen insulae

1322. Which of the following cranial structures are insensitive to pain - *(AI 09)*
a) Dural sheath surrounding vascular sinuses
b) Choroid plexus
c) Falx cerebri
d) Middle meningeal artery

1323. All of the following statements about Sternberg canal are true, Except - *(AI 09)*
a) Located anterior and medial to Foramen Rotundum
b) Located posterior and lateral to Foramen Rotundum
c) Represents persistant craniopharyngeal canal
d) Cause of intrasphenoidol meningocele

1324. Structures lying deep to posterior belly of digastric are all, except - *(AIIMS May 09)*
a) Retromandibular vein b) Hypoglossal nerve
c) Hyoglossus muscle d) Occipital artery

1325. Enophthalmosisduetopalsyof- *(AIIMSMay 09)*
a) Levator palpebrae superioris
b) Superior tarsal muscle
c) Orbitalis muscle
d) Inferior tarsal muscle

1326. All are of adult size at birth except -*(AIIMSMay 09)*
a) Mastoid antrum b) Ear Ossicles
c) Tympanic cavity d) Maxillary antrum

1327. Nerve supply of muscles of soft palate is/are
a) Glossopharynegal Nerve *(PGI June 09)*
b) Vagus Nerve
c) Trigeminal Nerve
d) Greater palantine nerve
e) Hupoglossal nerve

1328. Which of the following is/are branch of facila nerve-
a) Chorda tympani *(PGI June 09)*
b) Lesser petrosal nerve
c) Greater petrosal nerve
d) Zygomatic nerve
e) Nerve to stepedius

1329. Muscles(s) supplied by facial nerve is/are -*(PGI June 09)*
a) Stepedius b) Anterior diagastric
c) Risorius d) Stylohoid
e) Platysma

1330. The Supratentorial dura is innervated by branches of the trigeminal nerve whereas the infratentorial dura is supplied by branches *ofthe-(DELHIPGFeb. 09)*
a) Upper cervical spinal nerves and the vagus nerve
b) Accessory and upper cervical nerve
c) Only upper cervical nerves
d) Only vagus nerve

1331. The following is true about nasolacrimal duct- *(DELHIPGFeb. 09)*
a) Directed downward, forward, and medially
b) Directed downward, backward and laterally
c) Drains in posterior part of inferior meatus
d) 18 cm in length

1332. Osteomeatal complex refers to -*(DELHI PG Feb. 09)*
a) Maxillary ostium, ethmoid infundibulum, hiatus semilunaris and frontal recess
b) Frontal recess, inferior meatus, sphenoid sinus
c) Hiatus semilunaris maxillary ostium, sphenoeth moid recess
d) None of the given options

1333. Following is true about safety muscle of tongue - *(DELHIPG Feb. 09)*
a) Innervated by cranial part of accessory nerve
b) Hypoglossal nerve
c) Attached to hard palate
d) None of the given options

1334. Lesion of facial nerve above geniculate ganglion is associated with - *(DELHIPG Feb. 09)*
a) Increased lacrimation b) Increased salivation
c) Decreased lacrimation d) Hypoacusis

1335. Inferior oblique muscle of eye is supplied by- *(DELHIPG Mar. 09)*
a) Oculomotor nerve b) Abducent nerve
c) Trochlear nerve d) Facial nerve

1336. Abductor of vocal cord is - *(DELHI PG Mar 09)*
a) Lateral cricoarytenoid
b) Posterior cricoarytenoid
c) Thyroepiglottis
d) Cricothyroid

1337. All of the following have no lymphatics, except:
a) Brain b) Internal ear *(DELHI PG Mar*
c) Cornea d) Liver *09)*

1338. All of the following are seen in the Horner's syndrome, except: *(DELHI PG Mar 09)*
a) Drooping of upper eyelid
b) Enophthalmos
c) Dilated pupil
d) Loss of sweating of same side of face

1339. All the following are contents of sub-occipital triangle, except: *(DELHIPG Mar 09)*
a) Vertebral artery
b) Dorsal ramus of Cl nerve
c) Suboccipital plexus of vein
d) Occipital artery

1318) b 1319)c 1320)b 1321) d 1322)b 1323)b 1324)a 1325)c 1326)d 1327)a,b,c 1328)a,c,d,e 1329)a,c,d,e
1330) a 1331) b 1332)a 1333)b 1334)c 1335)a 1336)a 1337)d 1338)c 1339)d

1340. Facial nerve supplies - *(PGINov 09)*
a) Risoriusb) Anterior belly of digastric
c) Lateral pterygoiod d) Zygomaticus
e) Auricular muscles

1341. About otic ganglion true statement (s) is/are -
a) Lesser petrosal nerve forms parasympathetic root
-■4>) Secretomotor to parotid gland *(PGI Nov 09)*
c) Topographically connected to maxillary division of trigeminal nerve
d) Nerve to medial pterygoid connected to the ganglion
e) Sympathetic root is derived from plexus around internal carotid artery

1342. TVue about vertebral artery - *(PGINov 09)*
a) Enter skull through condylar canal
b) Branch of internal carotid artery
c) Branch of subclavian artery
d) Accompany sympathetic ganglion
e) Passes through foramen transversarium of cervical vertebrae

1343. Nerve supply of muscle of palate *\s/are-(PGI Nov 09)*
a) Glossopharyngeal nerve
b) Vagus nerve
c) Trigeminal nerve
d) Greater palatine nerve
e) Hypoglossal nerve

1344. All are true except - *(AIIMSNov09)*
a) Superior thyroid artery is a branch of ext. carotid art
b) Posterior branch of superior thyroid artery supplies parathyroid gland
c) Inferior thyroid artery is branch of thyrocervical trunk
d) Thyroidea ima artery is invariably a branch of arch of aorta

1345. In post ductal coarctaion of the aorta, blood flow to the lower limb is maintained through which of the following arteries - *(AIIMS Nov 09)*
a) Vertebral artery b) Suprascapular artery
c) Intercostal arteries d) Internal thoracic artery

1346. Extrinsic membranes of larynx are all except -
a) Cricothyroidb) Thyrohyoid *(AIIMSMay10)*
c) Hyoepiglotticd) Cricotracheal

1347. Cranial nerve not carrying parasympathetic fibres-
a) Fourth b) Seventh *(AIIMS May 10)*
c) Third d) Ninth

1348. Middle superior alveolar nerve is a branch of- *(AIIMS May 10)*
a) Mandibular division of trigeminal nerve
b) Palatine division of maxillary nerve
c) Anterior nasal division of maxillary nerve
d) Inferior alveolar nerve

1349. Anterior ethmoidal nerve suplies all except -
a) Maxillary sinus *(AIIMS May 10)*
b) Interior of nasal cavity
c) Dural sheath of anterior cranial fossa
d) Ethmoidal air cells

1350. The function of 8th cranial N. is related to-
a) Smell b) Taste *(AIIMS May 10)*
c) Touch d) Balance

1351. Which of the following passes through the foramen magnum- *(A 110)*
a) Vertebral artery b) Sympathetic chain
c) XIth cranial nerve d) Internal carotid artery

1352. Pain in post 1/3 tongue after tonsillectomy Is due to injury to- *(DPG10)*
a) VII nerve b) IX nerve
c) V nerve d) XII nerve

1353. Damage to the external laryngeal nerve results in-
a) Hoarseness *(DPG10)*
b) Loss of timbre of voice
c) Anaesthesia of the larynx
d) Breathing difficulty

1354. Alderman's nerve is a branch of - *(DPG 10)*
a) Superior cervical ganglion
b) Inferior cervical ganglion
c) Auricular branch of vagus nerve
d) None of these

1355. Which of the following arteries supplies blood to trigeminal ganglion? *(Maharashtra 10)*
a) Basilar artery
b) Anterior cerebral artery
c) Posterior communicating artery
d) Cavernous part of internal artery

1356. The abductor of **vocal cord is -** *(Maharashtra 10)*
a) Posterior cricoarytenoid
b) Lateral cricoarytenoid
c) Thyroarytenoid
d) Cricoarytenoid

1357. Anterior triangle of neck are - *(PGIMay 10)*
a) Submental triangle b) Carotid triangle
c) Supraclavicular triangle d) Digastric triangle
e) Muscular triangle

1358. Blood supply of facial nerve is/are - *(PGINov 10)*
a) Ascending pharyngeal artery
b) Greater palatine artery
c) Middle meningeal artery
d) Labyrinthine br. of ethmoidal artery
e) Stylomastoid branch of occipital artery

1359. False statement about trigeminal nerve -
a) Carries sensation from face and scalp
b) Has motor branch *(PGINov 10)*
c) Arise from C8 nerve root
d) Composed of spinal nucleus

1360. Tensor tympani is supplied by - *(AIIMSNov 10)*
a) Trigeminal N. b) Facial N.
c) Glossopharyngeal N. d) Vagus N.

1361. All of the following are true about Scalenus anterior muscle - *(AIIMS Nov 10)*
a) It is attached to the tubercle of second Rib
b) It is anterior to the transverse cervical artery.
c) It is pierced by the phrenic nerve.
d) It separates the subclavian vein from the subclavian artry

1340) a,d,e 1341)a,b,d 1342)c,e 1343)a,b,c,d 1344)d 1345)a 1346)a 1347)a 1348)None 1349)a 1350)d 1351) a 1352) b 1353)b 1354)c 1355)d 1356)a 1357)a,b,c,e 1358)a,c,e 1359)c 1360)a 1361)d

1362. Lacrimation is lost in lesion of ? *(ARMS Nov 10)*
a) Nasociliary nerve
b) Greater petrosal nerve
c) Ant. ethmoidal nerve
d) Supraorbital

1364. In a subclavian artery block at outer border of 1st rib, all of the following arteries help in maintining the circulation to upper limb except - *(AIIMSMay 11)*
a) Subscapular artery
b) Superior thoracic artery
c) Thyrocervical trunk
d) Suprascapular artery

1177. Vertical crest in fundus of the internal auditary canal is k/a - *(AIIMS May 11)*
a) Bill's bar b) Ponticulus
c) Cog d) Falciform crest

1365. Trochlear nerve all true except - *(AIIMSMay 11)*
a) Longest intracranial course
b) Arises from dorsum of brainstem.
c) Supply ipsilateral superior oblique muscle
d) Enters orbit through sup. orbital fissure outside annulus of Zinn

1366. Sternocleidomastoid is supplied by all of the following arteries except - *(AIIMSMay 11)*
a) Occipital b) Posterior auricular
c) Thyrocervical trunk d) Superior thyroid

1367. The bifurcation of common carotid occurs at-^47*11)*
a) Upper border of cricoid cartilage
b) Upper border of thyroid cartilage
c) Level of Hyoid bone
d) Upper border of cricothyroid membrane

1368. Which of the following is not supplied by the anterior division of mandibular nerve (V3) - *(A111)*
a) Temporalis b) Masseter
c) Lateral pterygoid d) Medial pterygoid

1369. Which of the following passes through the foramen magnum- *(AI11)*
a) Vertebral Artery b) Sympathetic chain
c) Xlth cranial nerve d) Internal carotid artery

1370. All are elevators of mandible except - *(Punjab 10)*
a) Temporalis b) Medial pterygoid
c) Masseter d) Digastric

1371. Anterior 2/3 of tongue develops from- *(Punjab 10)*
a) 1st branchial arch b) 2nd branchial arch
c) 3rd branchial arch d) 4th branchial arch

1372. Nerve supply of Pinna is A/E- *(Punjab 10)*
a) Great auricular nerve
b) Auriculotemporal nerve
c) Lesser occipital nerver
d) Greater superficial petrosal nerve

1373. Spinal cord ends at which level in infants -
a) Lj b) L_2 *(Punjab 10)*
c) L, d) L_4

1374. All muscles of tongue are supplied by hypoglossal nerve except- *(Punjab 10)*
a) Geniologlossus muscle b) Hypoglossus muscle
c) Styloglossus muscle d) Palatoglossus muscle

1375. Structures which passes through the internal auditory meatus are all except - *(Punjab 10)*
a) Nerve of wrisberg
b) Anterior inferior cerebellar artery
c) Superior vestibular nerve
d) Cochlear nerve

1376. Laryngeal prominence is formed by - *(PUNJAB 11)*
a) Cricoid cartilage
b) Hyoid bone
c) Anterior margin of thyroid
d) Angle of the thyroid cartilage

1377. Not a branch of facial nerve- *(Jipmer 10)*
a) Branch to styldhyoid muscle
b) Chorda tympani nerve
c) Lingual nerve
d) Greater petrosal nerve

1378. True statement regarding central retinal artery -
a) End artery *(Jipmer 10)*
b) Branch of ciliary artery
c) Supplies optic nerve
d) Corresponds with the same course as that of the central retinal vein

1379. One of the following bone is absent in newborn -
a) Incus b) Stapes *(Jipmer 10)*
c) Temporal bone d) Malleus

1380. Structure not enclosed by carotid sheath -
a) Internal carotid artery *(Jipmer 10)*
b) Vagus
c) Cervical sympathetic chain
d) Internal jugular vein

1381. Not a branch of opthalmic artery - *(Jipmer 10)*
a) Dorsal nasal artery
b) Superficial temporal artery
c) Superior orbital artery
d) Supratrochlear artery

1382. Sinus overlying falx cerebelli is - *(Jipmer 10)*
a) Straight sinus b) Sigmoid sinus
c) Occipital sinus d) Inferior petrosal sinus

1383. Ansa cervicalis supplies - *(Jipmer 10)*
a) Sternohyoid b) Mylohyoid
c) Cricothyroid d) Stylohyoid

1384. Oculomotor nerve supplies all except - *(Jipmer 11)*
a) Medial rectus b) Inferior rectus
c) Superior rectus d) Lateral rectus

1385. In adults spinal cord ends at - *(Jipmer 11)*
a) Lower border of LI b) Between L2-L3
c) Upper end of L3 d) Lower end of L3

1386. The muscle stylopharyngeus is supplied by which nerve? *(NEET/DNB Pattern)*
a) Vagus b) Spinal accessory
c) Glossopharyngeal d) Facial

1387. Preganglionic fibres to the submandibular ganglion arise from? *(NEET/DNB Pattern)*
a) Superior salivatory nucleus
b) Inferior salivatory nucleus
c) Nucleus of tractus solitaries
d) Nucleus ambiguous

1362)b 1363) b 1364)a 1365)c 1366)b 1367)b 1368)d 1369)a 1370)d 1371)a 1372)d 1373)c 1374)d 1375)b
1376)d 1377)d 1378)b 1379)c 1380)c 1381)b 1382)c 1383)a 1384)d 1385)a 1386)c 1387)a

1388. Sensory supply to tonsil is by which nerve ?
a) Greater palatine nerve *(NEET/DNB Pattern)*
b) Lesser palatine nerve
c) Vagus
d) Glossopharyngeal nerve

1389. What is the blood supply of the cervical esophagus ?
a) Inferior thyroid artery *(NEET/DNB Pattern)*
b) Superior thyroid artery
c) Bronchial artery
d) External carotid artery

1390. What overlies the lateral wall of the mastoid antrum?
a) Tegmen tympani *(NEET/DNB Pattern)*
b) Mastoid process
c) Tympanic plate
d) Suprameatal triangle

1391. Which of the following is supplied by the third cranial nerve ? *(NEET/DNB Pattern)*
a) Superior oblique b) Inferior oblique
c) Lateral rectus d) Dilator papillae

1392. What do the semicircular canals detect ?
a) Linear acceleration *(NEET/DNB Pattern)*
b) Angular acceleration
c) Speed
d) Balance

1393. Inferior thyroid vein drains into -
a) Internal jugular vein *(NEET/DNB Pattern)*
b) Superior vena cava
c) Brachiocephalic vein
d) External jugular vein

1394. Primary action of superior oblique is -
a) Intorsion *(NEET/DNB Pattern)*
b) Depression
c) Adduction
d) Abduction

1395. What is true about chorda tympani?
a) Postganglionic sympathetic *(NEET/DNB Pattern)*
b) Postganglionic parasympathetic
c) Preganglionic parasympathetic
d) Postgalglionic parasympathetic

1396. Blood supply of the Eustachian tube is by all except-
a) Ascending pharyngeal artery
b) Middle meningeal artery *(NEET/DNB Pattern)*
c) Artery of pterygoid canal
d) Facial artery

1397. Bed of tonsil is formed by - *(NEET/DNB Pattern)*
a) Superior constrictor b) Middle constrictor
c) Inferior constrictor d) Platysma

1398. True regarding surface anatomy of internal jugular vein - *(NEET/DNB Pattern)*
a) Line passing from ear lobule to mid pt of clavicle
b) Line passing from ear lobule to medial end of clavicle
c) Line joining ear lobule to lateral end of clavicle
d) Line joining mastoid process to mid pt of clavicle

1399. Keisselbach's plexus is present at -
a) Medial wall of nasopharynx *(NEET/DNB Pattern)*
b) Lateral wall of nasal cavity
c) Anteroinferior part of nasal septum
d) Posterior part of the nasal cavity

1400. Cricoid cartilage lies at which vertebral level -
a) C3 b) C6 *(NEET/DNB Pattern)*
c) T1 d) T4

1401. Rouviere's nodes are situated in -*(NEET/DNB Pattern)*
a) Nasopharynx b) Oral cavity
c) Retropharynx d) Clavicular nodes

1402. Passavants ridge is formed *by*-*(NEET/DNB Pattern)*
a) Palatoglossus b) Superior constrictor
c) Salpingopharyngeus d) Palatopharyngeus

1403. Crystalline lens develops *from*-*(NEET/DNB Pattern)*
a) Mesoderm b) Endoderm
c) Surface ectoderm d) Neuroectoderm

1404. Muscle entering middle ear from pyramid apex is - *(NEET/DNB Pattern)*
a) Stapedius b) Tensor tympani
c) Tensor palatine d) Auricularis

1405. Eustachian tube passes between -
a) Superior and middle constrictors
b) Above superior constrictor *(NEET/DNB Pattern)*
c) Middle and inferior constrictor
d) Below inferior constrictor

1406. Largest turbinate is - *(NEET/DNB Pattern)*
a) Superior b) Inferior
c) Middle d) All are of the same size

1407. Nasolacrimal duct opens into the -
a) Supreme meatus *(NEET/DNB Pattern)*
b) Superior meatus
c) Middle meatus
d) Inferior meatus

1408. Which of the following is a direct content of the cavernous sinus? *(NEET/DNB Pattern)*
a) Ophthalmic division of trigeminal nerve
b) Trochlear nerve
c) Abducent nerve
d) Occulomotor nerve

1409. Which is not a characteristic of a typical cervical vertebra? *(NEET/DNBPattern)*
a) Has a triangular vertebral canal
b) Has foramen transversarium
c) Superior articular facet is directed backwards and upwards
d) Has a large vertebral body

1410. Waldeyer's ring consists of all of the following except ? *(NEET/DNBPattern)*
a) Palatine tonsils b) Pharyngeal tonsils
c) Tubal tonsils d) Post auricular nodes

1411. Gilette's space indicates which of the following ?
a) Prevertebral space *(NEET/DNBPattern)*
b) Paravertebral space
c) Retropharyngeal space
d) Perotinsillar space

1388) d 1389) a 1390)d 1391)b 1392)b 1393)c 1394)a 1395)c 1396)d 1397)a 1398)b 1399)c 1400)b 1401)c
1402) d 1403) c 1404) a 1405)b 1406)b 1407)d 1408)c 1409)d 1410)d 141 l)c

1412. Mandibular nerve exits the cranial cavity by passing through - *(NEET/DNB Pattern)*
a) Formanen rotundum b) Foramen lacerum
c) Stylomastoid foramen d) Foramen ovale

1413. Which of the following is related to floor of middle ear - *(NEET/DNB Pattern)*
a) Round window b) Internal carotid artery
c) Internal jugular vein d) Tegmen tympani

1414. Nasolacrimal duct opens *into-(NEET/DNB Pattern)*
a) Superior b) Inferior meatus
c) Middle d) Sphenoethmoid recess

1415. Suture present between parietal & occipital bones is - *(NEET/DNB Pattern)*
a) Lambdoid suture b) Saggital suture
c) Coronal suture d) Metopian suture

1416. Surface anatomy for internal jugular vein- *(NEET/DNB Pattern)*
a) Ear lobule to medial third of clavicle
b) Ear lobule to middle third of clavicle
c) Ear lobule to lateral third of clavicle
d) Mastoid to third of clavicle

1417. Abductor of vocal cords is - *(NEET/DNB Pattern)*
a) Thyroarytenoid
b) Lateral cricoarytenoid
c) Posterior cricoarytenoid
d) Cricothyroid

1418. Otic ganglia is related to - *(NEET/DNB Pattern)*
a) 9th nerve b) 10th nerve
c) 8th nerve d) 7th nerve

1419. Posterior one-third of the tongue develops from-
a) Lingual swellings *(NEET/DNB Pattern)*
b) Tuberculum impar
c) Hypobranchial eminence
d) Tongue bud

1420. TYapezoid body is seen in - *(NEET/DNB Pattern)*
a) Lateral lemniscus pathway
b) Medial lemniscus pathway
c) Visual pathway
d) None

1421. Which of the suprahyoid muscle is supplied by both facial nerve and mandibular nerve- *(NEET/DNB*
a) Stylohyoid b) Mylohyoid*Pattern)*
c) Digastric d)Hyuglussus

1422. What is present in the retropharyngeal space -
a) Platysma *(NEET/DNB Pattern)*
b) Loose areolar tissue & lymph nodes
c) Vertebrae
d) Hypoglossal nerve

1423. Anterior l/3rd of the tongue develops from which arch - *(NEET/DNB Pattern)*
a) 1st b)2nd
c) 3rd d)4th

1424. Killian dehiscence is in - *(NEET/DNB Pattern)*
a) Superior constrictor
b) Inferior constrictor
c) Middle constrictor
d) None

1425. Sensory apply of larynx, below the vocal cord -
a) Superior laryngeal nerve *(NEET/DNB Pattern)*
b) Inferior laryngeal nerve
c) Recurrent laryngeal nerve
d) Internal laryngeal nerve

1426. All of the following are true about ear ossicles except - *(NEET/DNB Pattern)*
a) Give the eardrum mechanical advantage via lever action
b) Transmit vibrations from tympanic membrane to inner ear
c) The muscles are highly developed like in bats for echolocation.
d) Are controlled by muscles as part of the accoustic reflex.

1427. Spenoid sinus drains into which of the following -
a) Spheno-ethmoidal recess *(NEET/DNB Pattern)*
b) Middle meatus
c) Superior meatus
d) Hiatus semilunaris

1428. Ethmoid articulates with which of the following -
a) Middle turbinate *(NEET/DNB Pattern)*
b) Inferior turbinate
c) Superiorturbinate
d) All of the above

1429. Cranial Nerve VIII exits through which of the following? *(NEET/DNB Pattern)*
a) Foramen ovale
b) Foramen rotundum
c) Internal accoustic meatus
d) Stylomastoid foramen

1430. Ethmoidal sinus opens into which of the following-
a) Hiatus semilunaris *(NEET/DNB Pattern)*
b) Middle meatus
c) Superior meatus
d) All of the above

1431. Yoke muscle pair - *(NEET/DNB Pattern)*
a) Rt IR + Rt SR b) Rt LR + Rt MR
c) Rt LR + Lt MR d) Lt LR + Lt MR

1432. Choroidal artery is a branch of which of the following? *(NEET/DNB Pattern)*
a) Retinal artery
b) External carotid artery
c) Internal carotid artery
d) Middle meningeal artery

1433. Chamberlains line is - *(NEET/DNB Pattern)*
a) Palate to occiput
b) Palate to temporal
c) Palate to foramen magnum
d) Palate to parietal

1434. Ear ossicles articulate with each other through which type of joints? *(NEET/DNB Pattern)*
a) Synostosis b) Synovial
c) Synchondrosis d) Syndesmosis

1412) d 1413)c 1414) b 1415)a 1416)a 1417)c 1418)a 1419)c 1420)a 1421)c 1422)b 1423)a 1424)b 1425)c
1426)c 1427)a 1428)b 1429)c 1430)d 143l)c 1432)c 1433)c 1434)b

1435. All of the following are true about the larynx except -
a) All intrinsic muscles are supplied by the reccurrent laryngeal nerve *(NEET/DNB Pattern)*
b) Cricothyroid is supplied by the external laryngeal nerve
c) Posterior cricoarytenoids abduct the vocal cords
d) Lymphatic drainage of the larynx is to the deep cervical nodes.

1436. All of the following are true about the middle ear cavity except - *(NEET/DNB Pattern)*
a) Roof is formed by tegmen tympani
b) Anterior wall has opening of two canals
c) Medial wall is formed by tympanic membrane
d) Floor has bulb of internal jugular vein

1437. Inferior thyroid artery arises from which of these vessels? *(NEET/DNB Pattern)*
a) Thyrocervical trunk
b) Brachiocephalic trunk
c) Internal carotid artery
d) External carotid artery

1438. Nerve to pterygoid canal is formed from -
a) Deep petrosal nerve + greater petrosal nerve
b) Facial nerve *(NEET/DNB Pattern)*
c) Lesser superficial petrosal nerve
d) Lesser petrosal nerve

1439. Deep petrosal nerve is formed from -
a) Symathetic plexus around carotid
b) Facial nerve *(NEET/DNBPattern)*
c) Glossopharyngeal
d) Internal carotid plexus

1440. Nervus spinosus is a branch of which of the following? *(NEET/DNBPattern)*
a) Maxillary nerve
b) Mandibular nerve
c) Facial nerve
d) Nerve of pterygoid canal

1441. Tympanic branch of the middle ear is derived from-
a) Facial nerve *(NEET/DNBPattern)*
b) Glossopharyngeal nerve
c) Nerve to stapedius
d) Chorda tympani

1442. AU extra-ocular muscles are supplied by the occulomotor nerve except - *(NEET/DNB Pattern)*
a) Superior rectus b) Inferior oblique
c) Lateral rectus d) Medial rectus

1443. Which of the foUowing is not a branch of first part of maxillary artery - *(NEET/DNB Pattern)*
a) Greater palatine artery
b) Middle eningeal artery
c) Deep auricular artery
d) Inferior alveolar artery

1444. Which of the foUowing doesn't elevate the larynx?
a) Sternohyoid *(NEET/DNB Pattern)*
b) Thyrohyoid
c) Mylohyoid
d) None

1445. Which part of ICA does not give any branch -
a) Cervical b) Petrous *(NEET/DNB Pattern)*
c) Cavernous d) Cerebral

1446. Location of pyriformins fossa-*(NEET/DNBPattern)*
a) Nasopharynx b) Oropharynx
c) Laryngeal part of pharynx d) None

1447. Pterygopalatine gangUon suppUes -
a) Paroted gland *(NEET/DNB Pattern)*
b) Submandibular gland
c) Lacrimal gland
d) Sublangual

1448. PregangUonic supply to submandibular gland -
a) Otic ganglion *(NEET/DNB Pattern)*
b) Geniculate ganglion
c) Superior salivary nucleus
d) Inferior salivary nucleus

1449. Main action of superior *rectm-(NEET/DNB* Pattern)
a) Extorsion b) Intorsion
c) Elevation d) Depression

1450. Superior cervical ganglia gives gray rami communicats to - *(NEET/DNB Pattern)*
a) C_rC_4 b) C_5-C_6
c) C_7-C_8 d) None

1451. Inferior thyroid artery is related to -
a) Superior laryngeal nerve *(NEET/DNB Pattern)*
b) Recurrent laryngeal
c) Glossopharyngeal nerve
d) XII nerve

1452. Ophthalmic artery is a branch of which part of ICA- *(NEET/DNBPattern)*
a) Cervical b) Petrous
c) Cavernous d) Cerebral

1453. Common carotid artery bifurcation is at -
a) Thyroid cartilage *(NEET/DNBPattern)*
b) Cricord cartilage
c) *a*
d) T2

1454. STYLOHYOID muscel is supplied by -
a) Facial *(NEET/DNBPattern)*
b) Glossopharyngeal
c) Ansa cervical
d) Vagus

1455. DEEP PETROSAL nerve arises from -
a) Facial nerve *(NEET/DNBPattern)*
b) Glossopharyngeal nerve
c) Plexus around internal carotid artery
d) Mandibular nerve

1456. Abductor of vocal cord is - *(NEET/DNB Pattern)*
a) Cricothyroid
b) Post cricoarytenoid
c) Thyro arytenoid
d) Lat cricoarytenoid

1457. Opening of jaw is done by - *(NEET/DNB Pattern)*
a) Temporalis b) Lat pterygoid
c) Med pterygoid d) Masseter

1435)a 1436)c 1437)a 1438)a 1439)a 1440)b 1441)b 1442)c 1443)a 1444)a 1445)a 1446)c 1447)c 1448)c 1449)c 1450) a 1451)b 1452)d 1453)a 1454)a 1455)c 1456)b 1457)b

1458. Otic ganglion supplies - *(NEET/DNB Pattern)*
a) Submandibular gland b) Lingual gland
c) Parotid gland d) All three

1459. Occipital myotome gives - *(NEET/DNB Pattern)*
a) Muscle of mastication b) Tongue muscles
c) Facial muscles d) Laryngeal muscles

1460. Continuation of inner layer of choroid is -
a) Nonpigmented layer of retina
b) Sclera
c) Pigmented layer of retina
d) None

1461. Thyocervical trunk is a branch of -
a) 1st b) 2nd *(NEET/DNB Pattern)*
c) 3rd d) None

1462. Passavant ridge is formed by- *(NEET/DNB Pattern)*
a) Tensor veli palati and superior constrictor
b) Palatopharyngeous and superior constrictor
c) Palatopharyngeous and inferior constrictor
d) Palatoglossus and superior constrictor

1463. Pyramid of ear gives attachment to -
a) Tensor tympani *(NEET/DNB Pattern)*
b) Stapedius
c) Tensor palati
d) Levator palati

1464. Sclera is thinnest at - *(NEET/DNB Pattern)*
a) Limbus
b) Equator
c) Anterior to attachment of superior rectus
d) Posterior to attachment of superior rectus

1465. Abductor of larynx is - *(NEET/DNB Pattern)*
a) Cricothyroid b) Post cricoarytenoid
c) Thyro arytenoid d) Lat cricoarytenoid

1466. Which laryngeal cartilage is elastic -
a) Epiglottis *(NEET/DNB Pattern)*
b) Comiculate
c) Cuneiform
d) Thyroid

1467. Afferent component in corneal reflex is mediated by- *(NEET/DNB Pattern)*
a) Optic nerve b) Ophthalmic nerve
c) Facial nerve d) Occulomotor nerve

1468. Bony nasal septum is formed by all except -
a) Vomer *(NEET/DNB Pattern)*
b) Sphenoid
c) Ethmoid
d) Nasal spine of nasal bone

1469. Blood supply to Eustachian tube is -
a) Acending pharyngeal *(NEET/DNB Pattern)*
b) Middle meningeal
c) Artery of pterygod canal
d) All

1470. Maxillary artery is - *(NEET/DNB Pattern)*
a) Branch of facial artery
b) Branch of internal carotid artery
c) Branch of common carotid
d) Terminal branch of external carotid

1471. All of the following are division of the Vth cranial nerve except - *(NEET/DNB Pattern)*
a) Ophthalmic b) Optic
c) Mandibular d) Maxillary

1472. Olfactory region in nose is - *(NEET/DNB Pattern)*
a) Below inferior trubinate
b) Above superior turbinate
c) Between middle & inferior trubiate
d) None

1473. Early sign of glaucoma includes following except -
a) Nerve fibre atrophy *(NEET/DNB Pattern)*
b) Splinter hemorrhage
c) Vertical cup
d) Horizontal cup

1474. Lens derives its nutrition *from-(NEET/DNB Pattern)*
a) Tears b) Small capillaries
c) Aqueous d)None

1475. All are true about adenoids except -
a) Physiological growth upto 6 years
b) Crypta magna present *(NEET/DNB Pattern)*
c) Present in nasopharynx
d) Supplied by facial artery

1476. Inferior parathyroid develops from which arch -
a) 1st b) 2nd *(NEET/DNB Pattern)*
c) 3rd d) 4th

1477. Which nerve is responsible for referred pain in ear -
a) Trochleal *(NEET/DNB Pattern)*
b) Olfactory
c) Glossopharyngeal
d) Abducent

1478. Sympathetic root of otic ganglion -
a) Plexus around ICA
b) Plexus around facial artery
c) Plexus around ophthalmic artery
d) Plexus around middle meningeal artery

1479. Soft palate is supplied by - *(NEET/DNB Pattern)*
a) Cranial accessory b) Trigeminal
c) Abducent d) None

1480. Muscles of mastications are derived *from-(NEET/*
a) 1st arch b) 2nd arch *DNBPattern)*
c) 3rd arch d) 4tharch

1481. Subarachnoid space ends at -*(NEET/DNB Pattern)*
a) D12 b) L2
c) L5 d) S2

1482. Parotid duct opens - *(NEET/DNB Pattern)*
a) Opposite 1st molar
b) Opposite 2nd molar
c) Into the papilla
d) Opposite incisor

1483. Plica triangularis is present in -
a) Antero-inferior part of tonsil
b) Dorsum of tongue *(NEET/DNB Pattern)*
c) Inlet of larynx
d) None

1484. Upper border of thyroid cartilage is at -
a) C2 b) C4 *(NEET/DNB Pattern)*
c) 06 d) T1

1458) c 1459) b 1460)c 1461)a 1462)b 1463)b 1464)d 1465)b 1466)a 1467)b 1468)d 1469)d 1470)d 1471)b
1472)b 1473) d 1474)c 1475)b 1476)c 1477)c 1478)c 1479)a 1480)a 1481)d 1482)b 1483)a 1484)b

1485. A patient is unable to move eye outward beyond midline. The lesion is in - *(NEET/DNB Pattern)*
a) Trochlear nerve b) Obturator nerve
c) Abducent nerve d) None

1486. All are paire venous sinuses except -
a) Superior petorsal *(NEET/DNB Pattern)*
b) Inferior petorsal
c) Superior sagittal
d) Transverse

1487. Risorius is a muscle of - *(NEET/DNB Pattern)*
a) Mastication b) Deglutition
c) Facial expression d) Eye movement

1488. Middle meningeal artery is branch of -
a) 1st part of maxillary artery *(NEET/DNB Pattern)*
b) 2nd part of maxillary artery
c) 3rd part of maxillary artery
d) External carotid artery

1489. Whic of the following is transmitted through foramen spinosum - *(NEET/DNB Pattern)*
a) Middle meningeal artery
b) Internal carotid artery
c) Facial nerve
d) Mandibular nerve

1490. Thyrocervical trunk is branch of -
a) 1st b) 2nd *(NEET/DNB Pattern)*
c) 3rd d) None

1491. Which artery is palpated at the anterior border of masseter - *(NEET/DNB Pattern)*
a) Superficial temporal b) Occipital
c) Facial d) External carotid

1492. Which artery does not contribute to little's area -
a) Septal branch of facial artery *(PGI97)*
b) Anterior ethmoidal artery
c) Sphenopalantine A
d) Posterior ethmoidal A

1493. Which of the following is not a mixed ner*e-(NEET/*
a) Vagusb) Glossopheryngeal *DNB Pattern)*
c) Facial d) Trochlear

1494. Taste sensations from anterior 2/3rd of tongue are carried by - *(NEET/DNB Pattern)*
a) Glossopharyngeal b) Chordatympani
c) Trigeminal d) Greater auricular

BRAIN

1495. Pyramidal fibres are - *(AI98)*
a) Projection fibres
b) Association fibres
c) Commissural fibres
d) Association & commissural fibres

1496. In the postnatal period the greatest growth in the grey matter of the C.N.S. **is of -** *(Karnataka 2001)*
a) Neuron cell number b) Length of axon
c) Dendritic tree d) Size of perikaryon

1497. Which of the following sepctrum of colour is highest visualized due to central cones - *(AI2002)*
a) Red Blue b) Blue Red
c) Blue Green d) Red Green

1498. Vestibulocerebellar tract terminates in the ....of cerebellum - *(JIPMER 78, AMU 86)*
a) Flocculus b) Lingula
c) Nodulus d) Uvula
e) All of the above

1499. In Grey mater of cerebellum are the following nuclei- *(PGI79,81)*
a) Nucleus globosus b) Nucleus emboliformis
c) Nucleus dentatus d) Nucleus fastigi
e) Nucleus caudatus

1500. By three cerebellar peduncles, the cerebellum is attached to- *(DNB 80)*
a) Spinal cord b) Medulla
c) Cerebrum d) Midbrain
e) Pons

1501. CSF is partly absorbed by lymphatics around .... cranial nerves - *(PGI80, ROHTAK 89)*
a) i, n, vn, vrn b) i, ii, vi, vn
c) i,m,vn,vm d)i,n,vi,vm

1502. Tremor associated with cerebellar lesions -
a) Called resting tremor *(PGI 81, 82)*
b) Seen predominantly in extremities
c) Occurs ipsilateral to lesion
d) Has coarse, irregular quality
e) Occurs at rest and during sleep

1503. A lesion involving an entire cerebral peduncle would result in the degeneration of fibres originating from cell bodies in which of the following areas -
a) Globus pallidus *(AUMS82)*
b) Cerebellar nuclei
c) Cerebral cortex
d) Dorsal horn of gray matter

1504. Which nerves does not arise form the medulla -
a) Facial b) Glossopharyngeal *(AIIMS 82)*
c) Vagus d) Hypoglossal

1505. All are nuclei of the basal gangila except -
a) Caudate nucleus *(AIIMS 84)*
b) Amygdaloid nucleus
c) Lentiform nucleus
d) Dentate nuclei

1506. The spinal nerves pairs are - *(NIMHANS 86,*
a) 28 b) 30 *87, Kerala87)*
c) 31 d)33
e) 35

1507. In an adult, the spinal cord ends at the level of -
a) Lower border of LI b)L2 *(NIMHANS87,*
c) 13 d)L4 *AI06)*
e) L12

1508. In the new born, the spinal cord ends at - *(PGI88)*
a) L3 b) S4
c) L5 d)Ll

1509. Following are the branches of basilar artery -
a) Pontine *(PGI 88)*
b) Posterior inferior cerebellar artery
c) Posterior cerebellar
d) Labyrinthine

1485)c 1486)c 1487)c 1488)a 1489)a 1490)a 1491)c 1492)d 1493)d 1494)b 1495) a 1496)c 1497)d
1498) a,c,d 1499)a,b,c,d 1500)b,d,e 1501)a 1502)b,c,d 1503)a,b,c 1504)a 1505)d 1506)c 1507)a 1508)a
1509) a,d

1510. Frontal eye motor area is - *(DNB 89)*
a) 9 b)2
c) 6 d) 8

1511. Fibres passing through posterior column is/are -
a) Post spinocerebellar tract - *(PGI89)*
b) Anterior spinocerebellar tract
c) Lateral spinothalamic tract
d) Fasciculus gracilis

1512. Pupillary reflex pathway includes all except - *(Kerala 89)*
a) Retina b) Edinger westpal nucleus
c) Pretectal areas d) Lateral geiculate body

1513. Dentate nucleus is a part of - *(Delhi 89, 93)*
a) Midbrain b) Pons
c) Medulla d) Cerebellum

1514. The central canal of the spinal cord is central in region of - *(AP 89)*
a) Cervical b) Thoratic
c) Lumbar d) Sacral

1515. The cisterna of the lateral sulcus contains -
a) Deep middle cerebral vein *(AP 90)*
b) Middle meningeal artery
c) Internal carotid artery
d) Superficial middle cerebral vein

1516. Which of the following is not a part of Epithalamus-
a) Pineal body *(AP91)*
b) Posterior commissure
c) Trigonum Habenulae
d) Geniculate bodies

1517. All the following arteries supply medulla oblongeta except - *(AIIMS 91)*
a) Posterior inferior Cerebellar artery
b) Spinal artery
c) Anterior inferior Cerebellar artery
d) Vertebral artery

1518. Nucleus in brain common to IX, X & XI cranial nerves - *(DELHI 92, AIIMS 80)*
a) Nucleus solitarius b) Nucleus ambigous
c) Dentate nucleus d) Red nucleus

1519. Which nucleus is not found in the floor of the fourth ventricle - *(JIPMER92)*
a) Abducens N b) Dorsal vagal nuclei
c) Facial N d) Hypoglossal N

1520. Purkinje cells from the cerebellum end in -
a) Extrapyamidal system *(JIPMER92)*
b) Cranial nerve nuclei
c) Cerebellar nuclei
d) Cerebral cortex

1521. Fibres of Acoustic radiation arise in the -
a) Lateral geniculate body *(AIIMS92)*
b) Medial geniculate body
c) Thalamus
d) Temporal lobe

1522. Broca's area is - *(Delhi92)*
a) 44&45 b) 40 & 42
c) 43 & 44 d) None

1523. Cerebral aqueduct (Duct of Sylvius) - which is true- *(Delhi 92)*
a) 3 cms in length
b) Connects III. ventricle to IV ventricle
c) Connects two lateral ventricles
d) None of the above

1524. Fibres pssing through crus-cerebri are - *(Delhi 92)*
a) Corticonclear and Corticospinal fibres
b) Medial leminiscus
c) Spinothalamic
d) All

1525. The inferior cerebellar peduncle has all the following tracts except - *(PGI 93)*
a) Vestibulocerebellar b) Olivo cerebellar
c) Spinocerebellar d)Pontocerebellar

1526. Pretectal nucleus is responsible - *(TN 95)*
a) Accomodation reflex b) Light reflex
c) Conjugation reflex d)None

1527. About blood brain barrier, folowing is true -
a) Present only at choroid plexus *(JIPMER 98)*
b) Restricts the entry of lipid soluble molecules
c) Destroyed by inflammation, irradation & tumor
d) None

1528. Interpeduncular fossa contains all except -
a) Mammillary bodies *(CUPGEE 99)*
b) Posterior perforated substance
c) Occulomotor nerve
d) Opthalmic nerve

1529. Basal ganglion contains all except - ***(A1**99)*
a) Globus pallidus b)Putamen
c) Thalamus d) Lantiform nucleus

1530. Unpaired structure in the brain - *(AI99)*
a) Basilar artery
b) Vertebral artery
c) Middle cerebral artery
d) Anterior cerebral artery

1531. Complete sulcus is - *(TN 99)*
a) Calcarine sulcus b) Central sulcus
c) Temporal sulcus d) Frontal sulcus

1532. Efferents from cochlear nuclear arise for -
a) Superior olivary nucleus *(MP2K)*
b) Inferior colliculus
c) Medial geniculate body
d) Lateral leminiscus

1533. Auditory transmission is via - *(DNB 2001)*
a) Lateral lemniscus b) Medial lemniscus
c) Lateral geniculate body d) Frontal cortex

1534. Oligodendrocytes are important in - *(Kerala 2001)*
a) Blood brain barrier b) Myelin formation
c) Phagocytosis d)Chemotaxis

1535. Middle cerebellar peduncle transmits fibres of -
a) Ponto cerebellar pathway *(PGI97, TN99)*
b) Tectospinal pathway
c) Spinocerebellar pathway
d) Oliva cerebellar pathway

1510) a,c,d 151 l)d 1512)d 1513)d 1514)c 1515)b 1516)d 1517)c 1518)b 1519)c 1520)c 1521)b 1522)a 1523) b 1524) a 1525)d 1526)b 1527)c 1528)d 1529)c 1530)a 1531)a 1532)a 1533)a 1534)b 1535)a

1536. Artery/ arteries supplying occipital cortex is -
a) PCA b) MCA *(PGI 97)*
c) MCA+PCA d)ACA

1537. Fibres which pass through genu of internal capsule are- (*PGI97)*
a) Cortico nuclear fibres b) Rubral fibers
c) Fibres of upper limb d) Fibres of lower limb

1538. Optic tract is related to - *(PGI98)*
a) Olivary mucleus b) Lat. geniculate body
c) Medial geniculate body d) Trapezoid body

1539. Lesion of medial temporal lobe is associated with -
a) Auditory amnesia b) Agnosia *(PGI 98)*
c) Visual amnesia d) Alesia

1540. Unilateral trigeminal N. injury is tested by-
a) Elevation and lowering of jaw *(PGI 98)*
b) Inability to tense the jaw
c) Blinking of eye
d) Comeal reflex

1541. Auditory pathway passes through - *(PGI98)*
a) Medial geniculate body
b) Lateral geniculate body
c) Reticular formation
d) Cerebellar fornix

1542. Great vein of Galen is formed by- *(PGI 98, 97)*
a) Superior saggital sinus with straight sinus
b) Inf. sagital sinus with straight sinus
c) Internal cerebral veins
d) Basilar vein

1543. Which of the following tracts is seen in the posterior column of spinal cord - *(PGI 01)*
a) Leteral spinothalamic tract
b) Fasciculus gracilis
c) Fasciculus cuneatus
d) Rubrospinal tract
e) Posterior spinocerebellar

1544. Branch of basilar artery include - *(PGI 02)*
a) Posterior inferior cerebellar
b) Posterior cerebral
c) Middle cerebral
d) Post, communicating
e) Ant. cerebral

1545. Which of the following is/are the ventral posterior neucleus of thalamus - *(PGI03)*
a) Medial lemniscus b) Leteral lemniscus
c) Corticospinal d) Spinothalamic
e) Trigeminal lemniscus

1546. The mamillothalamic tract terminates in which one of the following nuclei in the thalamus -
a) Anterior b) Ventral lateral *(UPSC 02)*
c) Mediodorsal d)Pulvinar

1547. The following tracts enter the cerebellum through Inferior Cerebellar Peduncle except - (*UPSC 02)*
a) Posterior spino-cerebellar tract
b) Striae medullares
c) Anterior external arculate fibres
d) Anterior spino-cerebellar tract

1548. Which of the following is not a branch of the basilar artery- *(Bihar03)*
a) Labrynthine artery
b) Anterior inter connecting cerebral artery
c) Pontine artery
d) Posterior communicating artery

1549. Which of the following thalamic nuclei does not project to neocortex - *(AIMS03)*
a) Intralaminar nuclei
b) Reticular nuclei
c) Pulvinarnucei
d) Anterior thalamic nuclei

1550. Which of the following nuclei belongs to the general visceral efferent column - *(AIIMS 04)*
a) Facial nerve nucleus
b) Trigeminal motor nucleus
c) Dorsal nucleus of vagus
d) Nucleus ambiguous

1551. Blood brain barrier is formed by - *(APPGE 04,*
a) Microglia b) Oligodendrocytes *AIIMS 86)*
c) Astrocytes d) Type II Pneumotocytes

1552. Tectal breaking is seen in - *(AIIMS 03)*
a) Dandy - Walker malformation
b) Arnold - Chiari malformation
c) Aqueductal stenosis
d) Third ventricular tumour

1553. Central sulcus is an example of - *(Jipmer 03)*
a) Limiting sulcus b) Axial sulcus
c) Operculated sulcus d) Complete sulcus

1554. All are true statement about spinal cord except -
a) Coccygeal ligament is investing layer of dura over filum terminale *(SGPGI05)*
b) Dural sac ends at S2 vertebra
c) Cords ends at lower border of L1
d) Filum terminate extends upto coccyx

1555. Myelin sheath in the central nervous system is formed by- *(SGPGI 05, KARN04, AI90)*
a) Schwann cell
b) Microglia
c) Oligodendrocytes
d) Protoplasmic astrocytes

1556. Cerebello-pontine angle contains all *except* **-**
a) VHN bjVIUN *(SGPGI 05)*
c) Medullo-olivary tract d)XIIN

1557. Which area is out of the blood brain barrier -
a) Thalamus b) Cerebral cortex *(MAHE05,*
c) 4th ventricle d) Area postrema *MP98)*

1558. Support of the muscles against gravity is a function of which one of the following - *(ICS 05)*
a) Reticular nuclei
b) Hypothalamus
c) Supplementary motor area
d) Amygidala

1559. Through which part of internal capsule does auditory pathway pass - *(ICS 05)*
a) Anterior limb b) Posterior limb
c) Retrolentiform part d) Sublentiform part

1536) c 1537) a 1538)b 1539)a 1540) a,d 1541) a 1542) c 1543) b,c 1544) b 1545)a,d,e 1546)a 1547)d 1548)b,d
1549)b 1550) c 1551)c 1552)b 1553)a 1554)a 1555)c 1556)d 1557)d 1558)a 1559)d

1560. Which of the following does NOT give rise to arteries supplying the spinal cord - (*MAHA 05)*
a) Ascending cervical artery
b) Deep cervical artery
c) Intercostal arteries
d) Thoracoacromial artery

1561. The structure which is NOT a component of basal ganglia - **(***APPGE 05)*
a) Caudate of basal ganglia b) Putamen
c) Globus pallidus d) Thalamus

1562. Sensation not represented in sensory cortex is -
a) Pain b) Temperature (*Orrisa 05)*
c) Touch d) Olfaction

1563. Nucleus ambigus includes all, except -
a) IX b)X (*PGMCETGTT)*
c) XI d)XH

1564. Superior colliculus is concerned with -(*Corned 08)*
a) Olfaction b) Hearing
c) Vision d) Pain sensation

1565. Posterior communicating artery a branch *oi-(AI07)*
a) Internal carotid b) External carotid
c) Middle cerebral d) Posterior superior cerebellar

1566. The structures that passes between middle cerebellar peduncle and pons is - *(MAHE 07)*
a) Trigeminal nerve b) Vagus nerve
c) Olfactory nerve d) Optic nerve

1567. The constituents of Inferior cerebellar peduncle includes all except - *(UP 0 7)*
a) Anterior spino cerebellar b) Cuneo cerebellar
c) Olivocerebellar d)Parolivocerebellar

1568. Hypoglossal nucleus lies on - *(UP 07)*
a) Mid brain b) Pons
c) Medulla d) Lower pons

1569. Thrombosis of the following cerebral vessels leading to the Hemiplegia by - *(UP 08)*
a) Anterior cerebral b) Middle cerebral
c) Posterior cerebral d) Lateral cerebral

1570. Which of the following is NOT a branch of intracranial part of Internal carotid artery -*(UP 08)*
a) Anterior communicating
b) Anterior cerebral
c) Middle cerebral
d) Posterior communicating

1571. Pupillary light reflex related with all EXCEPT -
a) Retina *(UP 08)*
b) Pretectal nucleus
c) Edinger - westphal nucleus
d) Superficial longitudinal association tract

1572. All of the following cranial nerves contain somatic efferents, Except - *(AI08)*
a) VII nerve (Facial nerve)
b) III nerve (Occulomotor nerve)
c) IV nerve (Trochlear nerve)
d) VI nerve (Abducent nerve)

1573. Facial colliculus is seen in - ***(AI** 08)*
a) Midbrain b) Pons
c) Medulla d) Interpeduncular foosa

1574. Which is the Nucleus of masseteric reflex *?(AI 08)*
a) Superior sensory nucleus of trigeminal nerve
b) Spinal nucleus of trigeminal nerve
c) Mesencephalic nucleus of trigeminal nerve
d) Dorsal nucleus of vagus nerve

1575. TVue about spinal cord-
a) In adults spinal cord ends at lower border of LI vertebra
b) In newborn may extend up to L3
c) Cauda equina extends from lumbar vertebra to coccyx
d) In embryonic period cord extends up to coccyx
e) It has same diameter all throughout the length

1576. Genu of internal capsule carries - *(PGIJune 08)*
a) Optic radiation b) Corticospinal tract
c) Corticorubral tract d) Corticonuclear tract

1577. The structure that passes between middle cerebellar peduncle and pons is - *(Manipal 08)*
a) Trigeminal nerve b) Vagus nerve
c) Olfactory nerve d) Optic nerve

1578. Which of the following is not the branch of maxillary branch of internal carotid artery ? *(APPG 08)*
a) Inferior alveolar b) Middle meningeal
c) Anterior tympanic d) Posterior tympanic

1579. Visual area of cortex is supplied by -
a) Anterior cerebral artery *(PGIDec 08)*
b) Middle cerebral artery
c) Posterior cerebral artery
d) Posterior inferior cerebellor artery
e) Posterior choroidal artery

1580. Structures not passing through inferior cerebellar peduncle - *(PGI Dec 08)*
a) Pontocerebellar
b) Cuneocerebellar
c) Anterior spinocerebellar
d) Posterior spinocerebellar

1581. Which of the following brainstem nuclei is not derived from the alar plate - *(AIIMSNov 08)*
a) Inferior olivary b) Substantia nigra
c) Dentate d) Hypoglossal

1582. Medulla oblongata is supplied by the following arteries, Except - *(AI 09)*
a) Anterior spinal artery
b) Bulbar artery
c) Basilar artery
d) Posterior inferior cerebellar artery

1583. Vm cranial nerve affects - *(AIIMS May 09)*
a) Taste b) Equilibrium
c) Touch d) Smell

1584. Structure(s) not passing through inferior carebeller peduncle - *(PGI June 09)*
a) Pontocerebeller b)Cuneocerebelle
c) Anterior spinocerebeller d) Olivocerebeller
e) Vestibulocerebeller

1560)d 1561) d 1562) a,b 1563) d 1564)c 1565)a 1566)a 1567)a 1568)c 1569)b 1570)a 1571)d 1572)a 1573)b
1574)c 1575)a,b,c 1576)d 1577)a 1578)d 1579)c 1580)a,c 1581)d 1582)b 1583)b 1584)a,c

1585. The rhombencephalon includes all except -
a) Midbrain b)Pons *(COMED09)*
c) Medulla oblongata d) Cerebellum

1586. Some areas in or near the brainstem, situated outside the blood brain b arrier, are - *(DELHIPG Feb. 09)*
a) Anterior pituitary, area postrema and subfornical organ
b) Area postrema, organum vasculosum of lamina terminalis, posterior pituitary and subfornical or gan
c) Median eminence of hypothalamus, anterior pituitary, organum vasculosum of lamina terminals and area postrema
d) Pituitary gland, median eminence of hypothalamus and subfornical organ

1587. Trigeminal nuclei - *(DELHIPG Feb. 09)*
a) Main sensory nucleus is located in pons
b) Mesencephalic nucleus is made up of unipolar neurons
c) Motor nucleus is located in pons
d) All of the given options

1588. The trapezoid body is concerned with - *(DELHIPG*
a) Pain and temperature b) Hearing *Mar. 09)*
c) Touch and pressure d) Proprioception

1589. All of the following arteries supply medulla oblongata, except - *(DELHIPG Mar 09)*
a) Posterior inferior cerebellar artery
b) Spinal artery
c) Anterior inferior cerebellar artery
d) Vewrtebral artery

1590. Which of the following cranial nerve does not content parasympathetic motor (GVE) fibers ?
a) m b) VI *(DELHI PG Mar 09)*
c) IX d)X

1591. True about corpus callosum - *(PGINov 09)*
a) Unite far area of two sides of brain
b) Connect two frontal lobe
c) Unite two hemisphere
d) Superiorly related to - Indusium griseum
e) Unite adjacent & widespread gyri in the same lobe

1592. Pain insensitive structure in brain is -
a) Falx cerebri *(AIIMS May 10)*
b) Dural sheath surrounding vascular sinuses
c) Middle meningeal artery
d) Choroid plexus

1593. Cerebellar glomeruli are seen in_____layer of cerebellar cortex - *(Maharashtra 10)*
a) Molecular b)Purkinje
c) Granular d) None of the above

1594. Deep venous system of brain consists of -*(PGI May 10)*
a) Internal cerebral vein b) Great cerebral vein
c) Basal veins d) Cavernous sinus

1595. All of the following form the floor of third ventricle, Except- *(AI11)*
a) Infundibulum b) Occulomotor nerve
c) Mammillary body d) Optic chiasma

1596. Floor of fourth ventricle contains all except -
a) Abducent nucleus *(Jipmer 11)*
b) Facial nucleus
c) Dorsal vagal nucleus
d) Hypoglossal nucleus

1597. Posterior communicating artery is branch of -
a) Internal carotid artery *(NEET/DNB Pattern)*
b) External carotid artery
c) Middle cerebral artery
d) Posterior cerebral artery

1598. Nucleas ambiguous doesn't include -
a) 7^{th} nerve nucleus *(NEET/DNB Pattern)*
b) 9^{th} nerve nucleus
c) 10^{th} nerve nucleus
d) 11^{th} nerve nucleus

1599. Vertebral artery passes through foramen of transverse processes of - *(NEET/DNB Pattern)*
a) All cervical vertebrae
b) 2^{nd} to 5^{th} cervical vertebrae
c) All except 1^{st} cervical vertebra
d) All except 7^{th} cervical vertebra

1600. Nucleus ambiguous is related to all cranial nerve except- *(NEET/DNB Pattern)*
a) Vm b)IX
c) X d)XI

1601. Nucleus fasciculatus is seen in -*(NEET/DNB Pattern)*
a) Frontal lobe b) Medulla
c) Temporallobe d) Midbrain

1602. Which artery is formed by joining of 2 vertebral arteries - *(NEET/DNB Pattern)*
a) Basal artery
b) Middle cerebralartery
c) Posterior cerebral artery
d) Basilar artery

1603. Pyramidal cells are seen in?
a) Cerebellum *(NEET/DNB Pattern)*
b) Cerebrum
c) Medulla oblongata
d) Anterior horn cells of spinal cord

1604. Posterior cerebral artery is a branch of which of these? *(NEET/DNBPattern)*
a) Verterbral artery
b) Basilar artery
c) Posterior cerebral artery
d) Posterior choroidal artery

1605. Nucleus of occulomotor nerve is in -
a) Midbrain *(NEET/DNBPattern)*
b) Pons
c) Medulla
d) Thalamus

1606. POSTERIOR COMMUNICATING artery is a branch of- *(NEET/DNBPattern)*
a) Vertebral artery
b) Internal carotid artery
c) External carotid artery
d) Basillary artery

1585) a 1586) b 1587)d 1588)b 1589)c 1590)b 1591) All 1592)d 1593)c 1594)a,b,c 1595)b 1596)b 1597)a
1598) a 1599)d 1600)a 1601)b 1602)d 1603)b 1604)b 1605)a 1606)b

1607. Diencephalon represents - *(NEET/DNB Pattern)*
a) Lateral ventricle b) 3rd ventricle
c) 4th ventricle d) Aquedct

1608. All tracts passed through superior cerebellur peduncles except - *(NEET/DNB Pattern)*
a) Tectocerebellar b) Rubrocerebellar
c) Olivocerebellar d) Cerebellorubral

1609. Corpus callosum - *(NEET/DNB Pattern)*
a) Projection fibers b) Commissoral fibers
c) Association fibers d) None

1610. Cerebellar cortex contains - *(NEET/DNB Pattern)*
a) Pyramidal cells b) Purkinje cells
c) Stromal cells d) Kupffer cells

1611. Two internal cerebral veins fuse to form -
a) Middle cerebral vein *(NEET/DNB Pattern)*
b) Anterior cerebral vein
c) Great cerebral vein
d) Inferior cerebral vein

EMBRYO

1612. Hofbauer cells are associated with - *(AIMS 78, 83)*
a) Single umbilical artery
b) Maternal diabetes
c) Early pregnancy
d) Erythroblastosis foetalis

1613. Mastoid process antrum begins to develop in the -
a) 6th month b) 9th month *(Jipmer80,*
c) 1st year d) 2nd year *Delhi 87)*

1614. The development of diaphragm is from-
a) Septum Transversum (*AIMS 81)*
b) Pleuropericardial membranes
c) Pleuroperitoneal membranes
d) A and C are true
e) B and C are true

1615. Renal agenesis is because of all except - *(AI97)*
a) Defective development of nephritis tissue
b) Failure of ureteric bud with metanephros
c) Failure of ascent of primitive
d) All of the above

1616. Epoophoron is a remnant of - *(PGI95)*
a) Wolffian duct b) Mullerian duct
c) Gubemaculum d)None

1617. The appendix of the testis develops from -
a) Mesonephric duct *(CUPGEE 96)*
b) Para-Mosonephric duct
c) Both
d) None

1618. Tonsils develop embryologicaUy from- *(PGI88)*
a) First pharyngeal pouch
b) Second pharyngeal pouch
c) Third pharyngeal pouch
d) Fourth pharyngeal pouch

1619. Parathyroid glands develop from .....branchial pouches - *(AMC 88)*
a) 1st & 2nd b) 2nd & 3rd
c) 3rd & 4th d) 5th & 6th

1620. The precartilagenous analogue to bone arises from-
a) Ectoderm b) Entoderm *(AIMS 85)*
c) Mesenchyme d) None of the above

1621. Superior parathyroid glands are derived from - *(PGI 86, Dehli 85)*
a) 1st branchial pouch b) 3rd branchial pouch
c) 4th branchial pouch d) 5 th branchial pouch
e) None of the above

1622. Oogonia are derived from - *(MAHE 98)*
a) Yolk sac b) Germinal epithelium
c) Chorion d) Mesoderm

1623. Foot plate of stapes is developed from- *(Kamat 99)*
a) Meckel's cartilage b) Otic capsule
c) Reicherts cartilage d) Hyoid arch

1624. A persistent left superior venacava usually drains into the - *(JIPMER 81, PGI 85)*
a) Right atrium b) Inferior vena cava
c) Coronary sinus d) Right superior vena cava

1625. Cleft lip is due to non fusion of - *(AIMS 92)*
a) Maxillary process with lateral nasal process
b) Maxillary process with medial nasal process
c) Maxillary process with mandibular p rocess
d) All of the above

1626. Uterus develops from - *(AIMS 75)*
a) Mullerian duct b) Wolfian duct
c) Both d)None

1627. Which of the following is derived from cartilage of the third arch - *(JIPMER 78, AP 89)*
a) Styloid process b) Malleus
c) Incus d) Greater come of hyoid

1628. Umbilical vesicle attains full development in weeks of development foetus - *(PGI 80, DNB 88)*
a) 2 b)4
c) 6 d)7

1629. Patent foramen ovale is due to failure pf fusion of - *(AIMS 80, JIPMER 92)*
a) Ostium primum with Endocardial cushion
b) Ostium primum with Ostium Secundum
c) Ostium primum with Septum primum
d) Ostium primum with mitral valve

1630. Urachal fustula results *from-(JIPMER 81,AMU, 84)*
a) Ectopic urethra
b) Ectopic ureter
c) Ectopic vesicae
d) Persistent vitellointestinal duct
e) Persistent allantois

1631. Length of a mature humans spermatozoon is - *(JIPMER 80, DNB 89)*
a) 50-60 microns b) 10-40 microns
c) 100-200 microns d) 300-500 microns

1632. Which of the following is not derivative of mesoderm - *(AIMS 81, AP 89)*
a) Ureter b) Gall bladder
c) Uterus d) Epididymis

1633. Weeping umbilicus refers to developmental malformation of..... - *(AIMS 84)*
a) Allontois b) Vitello-intestinal duct
c) Falciform ligament d) Umbilical vein

1607)b 1608) c 1609)b 1610)b 1611)c 1612)c 1613)a 1614)d 1615)c 1616)a 1617)b 1618)b 1619)c 1620)c
1621)c 1622) a 1623)b 1624)c 1625)b 1626)a 1627)d 1628)b 1629)b 1630)e 1631)a 1632)b 1633)a,b

1634. Uro-rectal septum separates the cloaca into -
a) Rectum and bladder *(AIIMS 84)*
b) Anus and urethra
c) Allantois and bladder
d) Rectum and urogenital sinus

1635. Umbilical cord has - *(PGI86, 87, Andhra 86, Kerala 88, TN 89, AIIMS 89)*
a) 2 artery and 1 vein
b) 1 artery and 2 vein
c) 2 artery and 2 ven
d) only one artery

1636. The reduction of the physiological herina occurs at- *(PGI86, JIPMER 84, AIIMS84)*
a) 6^{th} week b) 7^{th} week
c) 10^{th} week d) 12^{th} week
e) 20^{th} week

1637. The Testes descends into the scrotum during- *(AIMS 86, 85, UPSC 1985)*
a) 6^{th} month b) 7^{th} month
c) End of 8^{th} month d) 9^{th} month
e) 10^{th} month

1638. Genital swellings in male differentiate into -
a) Gians penis *(AIIMS 85)*
b) Penile urethra
c) Ischiocavemosus of penis
d) Scrotum
e) No adult structure

1639. The first teeth to appear in an infant is-*(PGI86, 87 UPSC 86, Kerala 86)*
a) Upper incissors
b) First molar
c) Canine
d) Lower central incissor
e) Second molar

1640. Structures derived from the neural crest are -
a) Pia *(Kerala 87, PGI 86, AIIMS 86, A.I. 88)*
b) Dental papillae
c) Adrenal medulla
d) Schwann cells
e) All of the above

1641. Cells or parafollicular cells are derived from - *(Kerala 87, Andhra 86)*
a) l^{5t} branchial pouch b) 2^{nd} branchial pouch
c) 5^{th} branchial pouch d) 4^{th} branchial pouch
e) Ultimo branchial body

1642. Shotgun perineum is - *(JIPMER 87)*
a) Acquired condition in males
b) Acquired in females
c) Congenital in males
d) Congenital condition in female
e) None of the above

1643. Malleus and Incus are derived from - *(TN87)*
a) First arch b) Second arch
c) Third arch d) Fourth arch

1644. The most important structure involved in development of inferior vena cava is - *(AIIMS 8 7)*
a) Supracardinal vein b) Umbilical vein
c) Subcardinal vein d) Anterior cardinal vein
e) Posterior cardinal vein

1645. Double barr body is seen in.....syndrome -
a) Turners b) Klinefelters *(AI89)*
c) xxx d) Downs

1646. Ligamentus arteriosus is a remnant of - *(TN89)*
a) Ductus arterious b) Ductus caroticus
c) Ductus venosus d)None

1647. Ossification centres for all carpal bones is found by - *(AP89)*
a) 12^{th} year b) 2^{nd} year
c) 3^{rd} year d) 5^{th} year

1648. Melanoblasts are derived from - *(AP 90)*
a) Basal epidermal cells
b) Neural crest cells
c) Prickle cells of epidermis
d) Somato pleuric mesoderm

1649. Somatic afferent columns arise from which part of the neural crest - *(KERALA91)*
a) Antrum b) Alar lamina
c) Basal plate d)Roof

1650. Which is not derived from ectoderm -*(JIPMER 91)*
a) Sclera of eye b) Sweat gland
c) Skin d) Distal part of Anus

1651. Endoderm forms which of the following -
a) Liver parenchyma *(JIPMER91)*
b) Trigone of bladder
c) Cells lining renal tubules
d) Cells fallopian tube

1652. The collecting tubules of the Kidney is derived from - *(Jipmer 91, AIIMS 91)*
a) Mesonephros b) Metanephros
c) Mullerian duct d) Ureteric bud

1653. The following are derived from first branchial except-
a) Anterior malleolar ligment *(Delhi 91, 93)*
b) Posteror malleolar ligament
c) Sphenomandibular ligament
d) Mandible

1654. Hofbauer cells are seen in - *(AMU 91)*
a) Liver b) Placenta
c) Stomach d) Kidney

1655. Non ascent of the kidney is due to faulty -
a) Ureteric budb) Metanephruccap*(DNB 92)*
c) Blood vessels d) Mesonephric ducts

1656. Which of the following is formed at birth -
a) Otic Capsule b) Pinna *(AIIMS 92)*
c) Secondary areola d) Mastoid process

1657. Which Of the following Umbilical blood vessel, disappears first - *(AIIMS 92, Delhi 90)*
a) Right umbilical vein b) Left umbilical vein
c) Right umbilical artery d) Left umbilical artery

1658. Formation of primary ovary in female foetus takes place by - *(PGI 93, AIIMS 76)*
a) 6^{th} week b) 8^{th} week
c) 10^{th} week d) 12^{th} week

1659. Skeletal element of second branchial arch -
a) Malleus b) Incus *(PGI 93)*
c) Meckel's cartilage d) Stapes

1634) d 1635) a 1636)c 1637)c 1638)d 1639)d 1640)e 1641) c,e 1642) d 1643) a 1644) a,c 1645) c 1646)a 1647)a
1648)b 1649)b 1650)a 1651)a 1652)d 1653)b 1654)b 1655)c 1656)a,bl657)a 1658)b 1659)d

1660. Regarding zonal pellucida what is *wrong-(AlIMS 94)*
a) Acellular b) Contains glycoprotein
c) Surrounds morula d) Surrounds ovum

1661. In embryo the inner cell mass forms the -
a) Embryonic disc *(AIIMS 94)*
b) Extra embryonic mesoderm,
c) Chorion
d) Allantois

1662. All are developed from ectoderm except -
a) Lens b) Brain *(Kerala 94)*
c) Spinal cord d) Retinal vascular endothelium

1663. Thymus develops from - *(Kerala 94)*
a) 4th arch b) 2nd arch
c) 3rd pouch d) 6th pouch

1664. Umblical vein assumes which of the following positions after birth - *(Assam 95)*
a) Ligamentum teres
b) Urachus
c) Medial umblical ligament
d) lateral umblical ligament

1665. Proximal convolutd tubules develops from -
a) Mesonephric duct *(JIPMER '98)*
b) Metanephric tubules
c) Mesonephric tubules
d) Ureteric buds

1666. The structure derived from the right fourth aortic arch- ***(IN 98)***
a) Right common carotid artery
b) Right subclavian artery
c) Aortioc arch
d) None of the above

1667. Corona Radiata of ovum is formed from - *(A198)*
a) Cummulus ovaricus b) Zona pellucida
c) Formative yolk d) Follicular cells

1668. During formation of a vertebra, which one of the following is intersegmental in position - *(ICS 98)*
a) Intervertebral disc b) Artery
c) Spinal nerve d) Myotome

1669. Number of Barr bodies in Super female -
a) one b) two *(MAHE 98)*
c) three d) zero

1670. All are endodermal in origin except - *(MP 2K)*
a) Hepatocyte b) Odontoblast
c) Alveolar lining cells d)None

1671. All are mesodermal in origin except - *(MP 2K)*
a) Iris stroma b) Ciliary body
c) Dilator pupillae d) Viteous

1672. Melanoblast cells appear in basal layer of epidermis during - *(ICS 2K)*
a) 3rd month of intrauterine life
b) 5th month of intrauterine life
c) 7th month of intrauterine life
d) 8th month of intrauterine life

1673. Mediline cleft lip is due to failure of fusion of -
a) Two medial nasal processes *(Kerala 01)*
b) Medial & lateral nasal processes
c) Two lateral nasal processes
d) Any of the above

1674. Notochord develops in - *(NIMHANS 01)*
a) 3rd week b) 3rd month
c) 6 months d) 10th week

1675. Commonest type of cleft lip is - *(PGI2001)*
a) Bilateral b) Midline
c) Combined with cleft palate d) Unilateral,

1676. Exomphalos is a disease involving - *(PGI 2001)*
a) Umbilicus b) Cervix
c) Abdominal wall d) Urinary bladder

1677. C-cells of thyroid are derived from - *(PGI 02)*
a) I branchial arch b) II branchial arch
c) III branchial arch d) IV branchial arch
e) Ultimobranchial body

1678. TVue about gastrulation is - *(AI2002)*
a) Process involving rotation of Gastrointestinal tract
b) Process by which 3 germinal layers form
c) Occurs in 4th week of gestation
d) Involves hypoblastic inner cell mass

1679. Bone does not present at birth - *(CUPGEE02)*
a) Malleus b) Incus
c) Stapes d) Petrous temporal

1680. The membranous part of the atrio ventricular part of interventricular septum is between -
a) RA&LV b) LA & RV *(JIPMER 2002)*
c) RA&RV d)LA&LV

1681. At 30 days intra uterine life - *(NIMHANS2002)*
a) Heart starts beating b) Cerebellum develops
c) Optical vesicle appears d) Pinna appears

1682. The interventricular septum is formed by which of the following - *(PGI 2002)*
a) Truncus septum b) Conus septum
c) Septum spurium d) Endocardial cushion
e) Bulbar septum

1683. Following are derived from II arch except - *(PGI98)*
a) Malleus/Incus b) Stylohyoid ligament
c) Stapes d) Smaller cornu of hyoid

1684. Paraxial mesoderm develops into - *(PGI99)*
a) Somites b) Mesonephric duct
c) Notochord d) All of the above

1685. In a female child at birth oocyte is in a stage of-
a) Anaphase 2nd meoitic *(PGI 2000)*
b) Prophase 1 st meiotic
c) Oogony
d) Maturation

1686. True about development all except - *(PGI2000)*
a) Parathyroid glands develop from 3rd & 4th branchial arch
b) Tongue muscles develop from occipital myotome
c) Superior parathyroid gland develops from 4th branchial arch
d) Inferior parathyriod gland develop from 2nd branchial arch

1660) None 1661)a 1662)d 1663)c 1664)a 1665)b 1666)b 1667)d 1668)b 1669)b 1670)b 1671)c 1672)a
1673) a 1674) a 1675)c 1676)c 1677)e 1678)b 1679)d 1680)a 1681)c 1682)b,d,e 1683)a 1684)a 1685)b
1686) a,c,d

1687. True about morula - *(.PGI01)*
a) 8-cell stage
b) 16-cell stage
c) Solid mass with fluid inside
d) Ach.barrier present
e) Zona pellucida present

1688. Primordial germ cells develop from - *(.PGI02)*
a) Neural crest b) Splanchnic mesoderm
c) Genital ridge d) Yolk sac
e) Somatic mesoderm

1689. Derivaties of neural Creast is/are- *(PGI 03)*
a) Para follicular cells of thyroid
b) Adrenal crest
c) Adrenal medulla
d) Dorsal roort ganglia
e) Autonomic ganglia

1690. In the testis, haploid number of chromosomes are present in - *(UPSC 02)*
a) Spermatogonia - Type A
b) Primary spermatocyte
c) Spermatids
d) Spermatogonia - Type B

1691. Anterior neuropore closes on - *(Orrisa 04)*
a) 16 days b) 24 days
c) 28 days d) 8 days

1692. Sphincter and dilator pupillae develops from -
a) Neuro ectoderm *(Jipmer 04)*
b) Surface ectoderm
c) Mesoderm
d) Endoderm

1693. All are ectodermal in origin except - *(Kerala 04)*
a) Cerebellum b) Anal canal
c) Sebaceous gland d) Bone marrow

1694. Meiosis occurs in human males in - *(AIIMS 04)*
a) Epididymis b) Seminiferous tubules
c) Vas deferens d) Seminal vesicles

1695. The germ cell are - *(UPPGMEE 04)*
a) Genital ridge
b) Ebdoderm of neuro ectoderm
c) Endoderm of Yolk sac
d) Endoderm of allontosis

1696. Following cartilage are derivative of Second arch EXCEPT- *(UPPGMEE 04)*
a) Smaller cornu of hyoid
b) Greater cornu of hyoid
c) Styloid process
d) Stylohyoid ligament

1697. Clitoris develops from - *(Mahara 02)*
a) Genital tubercle b) Genital ridge
c) Wolfian duct d) Mullerian duct

1698. Incomplete closure of ectodermal cleft is know to cause- *(SGPGI04)*
a) Retinal detachment
b) Iridodonesis
c) Retinoblastoma
d) Coloboma of iris and retina

1699. The length of the umbilical cord is-------- cm - *(TN 04)*
a) 50 b) 60
c) 70 d)75

1700. Lack of fusion of maxillary and medial nasal process results in - *(CMC 05)*
a) Upper hare lip b) Lower hare lip
c) Cleft palate d) Cleft lower lip & palate
e) Cleft palate and upper lip

1701. Torus Aorticus is an impression in the cavity of -
a) Right atrium b) Right ventricle *(Karn 05)*
c) Left ventricle d) Left atrium

1702. The germ cells are derived from - *(ICS 05, AP 89, AI93)*
a) Yolk sac endoderm
b) Amnion
c) Germinal epithelium of gonad
d) Allantois

1703. Which one of the following cells of germinal epithelium of testis divides by meiosis - *(ICS 05)*
a) Type A spermatogonium
b) Primary spermatocyte
c) Spermatid
d) Secondary spermatocyte

1704. The results of the fertilization include the following except- *(J&K05)*
a) Acrosome reaction
b) Restoration of diploid number of chromosome
c) Determination of sex
d) Initiation of cleavage

1705. Which one of the following muscles does NOT develop from the second pharyngeal arch -
a) Posterior belly of digastric *(J&K 05)*
b) Tensor palatine
c) Stapedius
d) Stylohyoid

1706. In hydatidiform mole, blood cells does not develop because of defect in - *(MAHA 05)*
a) Primary ectoderm b) Mesoderm
c) Endoderm d) Trophoblast

1707. Defect in any of the following may result In renal agenesis except - *(MAHA 05)*
a) Nephrogenic bud
b) Ureteric bud
c) Blastoma of nephrogenic tissue
d) Failure of descent of nephrogenic tissue of lumbar area

1708. Appendix of epididymis is a remnant *of-(APPGE 05)*
a) Mesonephric duct b) Paramesonephric duct
c) Mullerian duct d)None

1709. 4th Ventricle develops from- *(Orrisa 05)*
a) Telencephalon b) Mesencephalon
c) Diencephalon d) Rhombencephlon

1710. 3rd Ventricle develops from - *(Orrisa 05)*
a) Diencephalon b) Telencephalon
c) Mesencephalon d) Prosencephalon

1687) b,e 1688) d 1689)c,d,e 1690)c 1691)b 1692)a 1693)d 1694)b 1695)c 1696)b 1697)a 1698)d 1699)a
1700) e 1701) a 1702)a 1703)b 1704)a 1705)b 1706)b 1707)d 1708)a 1709)d 1710)a

1711. Axillary sheath is derived from - *(Orrisa 05)*
a) Pre-vertebral layer of deep cervical fascia
b) Post vertebral layer of deep cervical fascia
c) Pre tracheal fascia
d) Carotid sheath

1712. Barr body is found in the following phase of the cell cycle - *(A105)*
a) Interphase b) Metaphase
c) GI phase d) Telophase

1713. Meckel's diverticulum is a remnant of - *(AIIMSMay 05)*
a) Stenson's duct b) Wolffian duct
c) Mullerian duct d) Vitellointestinal duct

1714. Polar bodies are formed during - *(AI06)*
a) Spermatogenesis b) Organogenesis
c) Oegenesis d) Morphogenesis

1715. Nucleus pulposus is a remnant of - *(APPG 2006)*
a) Notochord b) Intervertebral disc
c) Spinal cord d) Spinous process

1716. Vitelline vein forms -
a) Ligamentum venosum b) Ligamentum teres
c) Portal vein d) Coronary sinus

1717. Ductus deference is derived from - *(Manipal 2006)*
a) Mesonephric duct b) Mullerian duct
c) Paramesonephric d) Vitelline duct

1718. Somites are derived from - *(PGMCET 01, TN95)*
a) Paraxial mesoderm
b) Lateral plate mesoderm
c) Intermediate mesoderm
d) Mesoblastic nephroma

1719. Primordial germ cell is derived from - *(AI07)*
a) Ectoderm b) Mesoderm
c) Endoderm d) Mesodermal sinus

1720. Most common site of ectopic pancreatic tissue is -
a) Stomach b) Jejunum ' *(Aiims May 07)*
c) Appendix d) Hilum of spleen

1721. The outer layer of the blastocyst form - *(UP 07)*
a) Primitive streak b) Yolk sac
c) Embryo proper d) Trophoblast

1722. The embryological first pharyngeal arches remains - *(UP 07)*
a) Sphenomandibular ligament
b) Stylonoid ligament
c) Stylomandibular ligament
d) Styloid ligament

1723. Forelimb bud appears on- *(UP 07)*
a) 21 days b) 26 days
c) 28 days d) 30 days

1724. Primitive streak is initiated and maintained by -
a) Nodal gene b) BMP4 *(AIIMS Nov 07)*
c) FGF d) Brachyury gene

1725. Ureter develops from - *(AIIMS Nov 07)*
a) Mesonephric tubules b) Mesonephric duct
c) Urogenital sinus d) Paramesonephric duct

1726. Regarding sexual differentiation of the fetus -
a) Gonadal development begins at 5th week of intrauterine life *(AIIMS Nov 07)*
b) Y chromosome determines the differentiation of ovaries
c) Female external genitalia development is completed by 10 weeks.
d) Male sexual differentiation occurs earlier than females

1727. All are mesodermal in origin except - *(UP 08)*
a) Dilator pupillae b) Chroid
c) Iris d) Ciliary body

1728. All are neural crest derivatives except - *(UP 08)*
a) Cauda - equina b) Adrenal medulla
c) Melanoblast d) Odontoblasts

1729. According to embryologist, embryo is termed till -
a) 8 weeks of fertilization *(PGIJune08)*
b) 10 weeks after fertilization
c) 10 weeks after fertilization
d) 12 weeks after LMP
e) 12 weeks after fertilization

1730. Pre auricular sinus is formed due to - *(Manipal 08)*
a) Improper fusion of auricular tubercles
b) Persistent opening of first bronchial arch
c) Degeneration of auricular tubercles
d) None of the above

1731. In ductus venous the fetal blood from the plecenta reaches to the liver through - *(DPGEE 08)*
a) Portal vein b) Rt umblical vein
c) Inferior vena cava d) Left umblical vein

1732. Which of the following is not present at birth ?
a) Mastoid tip *(APPG 08)*
b) Mastoid antrum
c) Ethmoidal labrynth
d) Endolymphatic sinus

1733. Closure of Neural tube begins at which of the following levels - *(AI09)*
a) Cervical region b) Thoracic region
c) Cephalic end d) Caudal end

1734. Following statements are true regarding first pharynegeal arch - *(PGI June 09)*
a) Maxullary & mandibular prominences are formed
b) Maxilla & Zygomatic bone are formed by intermembranous ossification
c) Tensor palati formed by first arch.
d) Facial nerve is nerve supply of first arch.
e) Glosspharyngeal is nerve supply of first arch

1735. Spiral ganglion and organ of Corti are fully developed in a foetus by - *(COMED 09)*
a) 20 weeks b) 25 weeks
c) 30 weeks d) 3 5 weeks

1736. The umbilical cord has - *(DELHIPG Mar. 09)*
a) Two arteries and one vein
b) One arteries and two vein
c) Two arteries and two veins
d) One artery and one vein

1711) a 1712) a 1713)d 1714)c 1715)a 1716)c 1717)a 1718)a 1719)a 1720)a 1721)d 1722)a 1723)b 1724)a 1725)b 1726) a,d 727)a 1728)a 1729)a 1730)a 1731)d 1732)a 1733)a 1734)a,b,c 1735)a 1736)a

1737. Ventral mesogastrium derivatives includes all, except: *(DELHI PG Mar 09)*
a) Falciform ligament b) Coronary ligament
c) Lesser omentum d) Gastrosplenic ligament

1738. Meissner's and Auerbach's plexus are derived from- *(AIIMS Nov 09)*
a) Neural crest
b) Yolk sac
c) Primordial germ cell
d) Epithelial lining of gut

1739. All of the following are composite muscles, except - *(AI10)*
a) Flexor carpi ulnaris
b) Flexor digitorum profundus
c) Pectineus
d) Biceps femoris

1740. Paramesonephric duct in males remains as - *(Maharashtra 10)*
a) Prostatic utricle
b) Prostatic urethra
c) Colliculus seminalis
d) Ejaculatory duct

1741. Which of the following arteries is derivative of second branchical arch? *(Maharashtra 10)*
a) Maxillary artery
b) Middle meningeal artery
c) Stapedial artery
d) Anterior tympanic artery

1742. Meckl's cartilage develops from *1 (Maharashtra 10)*
a) I branchial arch b) II branchial arch
c) III branchial arch d) IV branchial arch

1743. False statement about fetal development -
a) Fetal legs develop before upper limb *(PGINov 10)*
b) Growth in length is very fast in 3-5th month
c) Thumbs are formed in preaxial border
d) Fetus gains maximum weight in 1 st trimester
e) Upper limb develops before legs

1744. Which of the following attains adult size before birth? *(AIIMS Nov 10)*
a) Ear Ossicles b) Maxilla
c) Mastoid Process d) Parietal bone

1745. Structure derived from neural crest is - *(Punjab 10)*
a) Retina b) Cauda equina
c) Melanocytes d) Adrenal cortex

1746. Diaphragm develops from all of the following structures, except - *(AI 11)*
a) Septum transversum
b) Pleuroperitoneal membrane
c) Cervical myotomes
d) Dorsal mesocardium

1747. Muscular component of dorsal aorta develops from- *(AI 11)*
a) Axial Mesoderm
b) Paraxial Mesoderm
c) Intermediate mesoderm
d) Lateral plate mesoderm

1748. Which of the following vessels do not carry deoxygenated bood in fetal circulation? *(AI 11)*
a) Pulmonary Artery b) Umbilical Artery
c) Umbilical Vein d) Pulmonary Vein

1749. What is the embryological remnant of Median umbilical ligament ? *(Karn 11)*
a) Urachus b) Allantois
c) Amnion d) Yolk sac

1750. Derivatives of urogenital sinus includes all except- *(Jipmer 10)*
a) Bladder b) Membranous urethra
c) Prostatic urethra d) Ejaculatory duct

1751. Derivatives of mesonephric duct are all except- *(Jipmer 10)*
a) Ductus deferens b) Seminal vesicles
c) Epididymis d) Rete testis

1752. Cranial end of Wolffian duct forms - *(Jipmer 10)*
a) Epophoron b) Paroophoron
c) Bartholin's duct d) Gartner's duct

1753. Cardiac septum develops by - *(Jipmer 11)*
a) 5 - 8 weeks b) 9 -12 weeks
c) 12 - 16 weeks d) 16 - 18 weeks

1754. Umbilical cord contains - *(Jipmer11)*
a) 1 vein & 2 arteries b) 2 vein & 1 artery
c) 2 veins & 2 arteries d) 1 vein & 1 artery

1755. Remnant of mesonephric duct are all except -
a) Paraoophoron b) Epoophoron *(Jipmer 11)*
c) Gartner's duct d) Bartholin's duct

1756. Renal agenesis is due to - *(Jipmer 11)*
a) Defect in ascent of metanephron
b) Defective formation of nephritic tissue
c) Defect of the ureteric bud & mesonephros
d) All of the above

1757. Which of the following is true about vertebral development ? *(NEET/DNB Pattern)*
a) The notochord forms the annulus fibrosus
b) The sclerotome forms the nucleus pulposus
c) The sclerotome surrounds the notochord only
d) The sclerotome surrounds the notochord and the neural tube

1758. After first meiotic division, the primary oocyte remains arrested in - *(NEET/DNB Pattern)*
a) Diplotene stage b) Pachytene stage
c) Metaphase d) Telophase

1759. Double aorta occurs due to - *(NEET/DNB Pattern)*
a) Non development of right 4th aortic arch
b) Non development of left 4th aortic arch
c) No division of truncus arteriosus
d) Persistence of distal portion of the right dorsal aorta

1760. Pharyngeal tonsil develop from which pharyngeal pouch- *(NEET/DNB Pattern)*
a) First b) Second
c) Third d) Fourth

1761. During the third week of human embryo development- *(NEET/DNB Pattern)*
a) Neural plate formed by stimulation from notochord
b) Amniotic disc forms
c) Body stalk moves ventrally to form umbilical cord
d) Primitive streak formation

1737) d 1738) a 1739)a 1740)a 1741)c 1742)a 1743)a,d 1744)a 1745)c 1746)d 1747)b>d 1748)c
1749) None 1750)d 1751)d 1752)a 1753)a 1754)a 1755)d 1756)d 1757)d 1758)a 1759)d 1760)b 1761)d

1762. The upper 3/4th of vagina develops from -
a) Mullerian duct *(NEET/DNB Pattern)*
b) Wolfian duct
c) Sino vaginal bulb
d) Endoderm

1763. Rectum develops from - *(NEET/DNB Pattern)*
a) Cloaca b) Hind gut
c) Allantoic remnants d) Urogeital sinus

1764. Skeletal derivative of 2nd pharyngeal arch -
a) Malleus b) Incus *(NEET/DNB Pattern)*
c) Stapes d) Maxilla

1765. Umbilical cord contains - *(NEET/DNB Pattern)*
a) 2 arteries & 1 vein b) 2 arteries & 2 veins
c) 1 artery & 1 vein d) 1 artery and 2 veins

1766. All are derived from neuroectoderm except -
a) Dilator pupillae *(NEET/DNB Pattern)*
b) Lens vesicle
c) Optic nerve
d) Posterior layers of retina

1767. Bladder develops from - *(NEET/DNB Pattern)*
a) Ectoderm b) Mesoderm
c) Endoderm d) Neural crest cells

1768. Development of labia majora is from -
a) Urogenital sinus *(NEET/DNB Pattern)*
b) Mullerian duct
c) Genital ridge
d) Genital swelling

1769. All develop from the hindgut except -
a) Ascending colon *(NEET/DNB Pattern)*
b) Descending colon
c) Sigmoid colon
d) Rectum

1770. Myoblasts of diaphragm develops from which somites - *(NEET/DNB Pattern)*
a) Cervical 1-3 b) Cervical 2-4
c) Cervical 3-5 d) Cervical 5-7

1771. Primordial germ cells are desired from -
a) Yolk sac endoderm *(NEET/DNB Pattern)*
b) Yolk sac medoderm
c) Epiblast
d) Gonadal ridge

1772. All are derived from ectoderm except -
a) Lens *(NEET/DNBPattern)*
b) Eustachian tube
c) Spinal cord
d) Retina

1773. Tongue muscles are derived from -
a) Occipital somites *(NEET/DNBPattern)*
b) Pharyngeal pouch
c) Hypobranchial emminence
d) Neural crest

1774. Development of peritoneal cavity is from -
a) Mesenchyme *(NEET/DNBPattern)*
b) Introembyonic coelom
c) Extoderm
d) Endoderm

1775. Cytotrophoblasts invades - *(NEET/DNB Pattern)*
a) D parietalis b) D basalis
c) D capularis d) None

1776. Embgryological development of the human vertebra is from - *(NEET/DNB Pattern)*
a) Somite b) Endoderm
c) Ectoderm d) None

1777. Endodermal cloaca gives rise to all of the following except- *(NEET/DNB Pattern)*
a) Rectum
b) Lower *Vi* of anal canal
c) Upper *Vi* of anal canal
d) Mucous membrane of bladder

1778. Embryonic period of development is -
a) Upto 16 weeks *(NEET/DNBPattern)*
b) Upto 12 weeks
c) Upto 10 weeks
d) Upto 8 weeks

1779. Which of these is correct about the development of tonsil ? *(NEET/DNBPattern)*
a) Is a derivative of the first pharyngeal arch
b) Develops from the third pharyngeal pouch
c) Develops from the second pharyngeal pouch
d) Is a derivative of the neural crest cells

1780. Which of the following is derived from endoderm-
a) Gall bladder *(NEET/DNBPattern)*
b) Lens
c) Spleen
d) Lymph nodes

1781. Small intestine develops *from-(NEET/DNB* Pattern)
a) Foregut b) Midgut
c) Hindgut d) Endodermal cloaca

1782. Which is derived from wolffian duct -
a) Appendix of testis *(NEET/DNB Pattern)*
b) Uterus
c) Appendix of epididymis
d) Hydatid of margagni

1783. Artery of 2nd pharyngeal arch is -
a) Maxillary artery *(NEET/DNB Pattern)*
>) Stapedial artery
c) Subclavian artery
d) Common carotid artery

1784. Umbilical cord has - *(NEET/DNB Pattern)*
a) 2 veins and 1 artery
b) 1 artery and 1 vein
c) 2 arteries and 1 vein
d) 2 arteries and 2 veins

1785. Single unit smooth muscles are seen *in-(NEET/*
a) Iris b) Ductus deferens *DNB Pattern)*
c) Ureter d) Trachea

1786. Second arch derivative - *(NEET/DNB Pattern)*
a) Malleus b) Incus
c) Stapes d) None

1787. The outer layer of the blastocyst forms - *(NEETZ*
a) Primitive streak b) Yolk sac *DNB Pattern)*
c) Embryo proper d) Trophoblast

1762) a 1763) a 1764)c 1765)a 1766)b 1767)c 1768)d 1769)a 1770)c 1771)a 1772)b 1773)a 1774)b 1775)b
1776) a 1777)b 1778)d 1779)c 1780)a 1781)b 1782)c 1783)b 1784)c 1785)c 1786)c 1787)d

1788. Implantation occurs at - *(NEET/DNB Pattern)*
a) 2-3 days b) 6-7 days
c) 15-20 days d) 20-25 days

1789. Double aotric develops from - *(NEET/DNB Pattern)*
a) Ist arch artery b) 2nd arch artery
c) Right dorsal aorta d) Left dorsal aorta

1790. Mesodermal in origin - *(NEET/DNB Pattern)*
a) Astrocytes b) Oligodendrocytes
c) Ependymal cells d) Microglial cells

1791. Which of the following is derived from ectoderm- *(NEET/DNB Pattern)*
a) Epithelium of iris b) Ciliary muscles
c) Vascular endothelium d) Sclera

1792. Which of the following are derived from mesodrm- *(NEET/DNB Pattern)*
a) Astrocytes b) Oligodendrocytes
c) Microlial cells d) Schwann cells

HISTOLOGY

1793. What best characterises the sinusoids - *(AMU86)*
a) Have smaller diameter than lymph capillaries
b) Are not found in skeletal muscle
c) Have a continuous endothelial lining
d) Have a continuous basement membrance

1794. Select the statement which best characterises lymph capillaries - *(Rohtak 86)*
a) have smaller diameter than blood capillaries
b) Less permeable than blood capillaries
c) Have no endothelial lining
d) Have a discontinuous basement membrane

1795. Which of the following cells Contain organeles needed for the secretion of a proteinaceous product-
a) Pyramidal cells of the pancreatic acini *(PGI82)*
b) Chief cells of the stomach
c) Serous-Secreting cells of the parotid gland
d) Fibroblast
e) None

1796. The ureter is lined by.....ephithelium -*(AIIMS 84)*
a) Stratified squamous b)Cuboidal
c) Cilliated columnar d) Transitional

1797. JG cells (Juxta glomerular apparatus) are -
a) Macula densa *(ROHTAK 87)*
b) Smooth muscular cells of afferent arteriole
c) Smooth muscular cells of efferent arteriole
d) Islets of epithelial cells

1798. Ducts of Bellini are found in- *(PGI 87)*
a) Pancreas b) Submandibular salivary gland
c) Kidney d) Liver

1799. Haversian system is seen in - *(AQP 88)*
a) Cortical bone b) Cancellous bone
c) Teeth d)Nail

1800. Auerbachs plexus is present in the - *(Kerala 88, Karnataka 89)*
a) Colon
b) Esophagus c) Stomach
d) S. intestine e) All of the above

1801. Which of the following are true of the nephron or it parts - *(AP 89)*
a) It is the principal site of action of antiduretic homone (ADH)
b) Sodium is actively transported by its cells
c) It is made up in part of a stratified epithelium
d) It is found in the pars conviouta, pars radiata, and medulla

1802. Good collateral circulation occurs in - *(AI91)*
a) Skin b) Muscle
c) Fascia d)Bone

1803. Sinuses are not seen in - *(Kerala 91)*
a) Kidney b) Spleen
c) Endocrine glane d) Liver

1804. Which is not a feature of Skeletal muscle -*(JIPMER*
a) Spindle shaped fibres b) Syncytium *91)*
c) Striations d) Hypolemmal nucleus

1805. Epithelium of cornea is - *(AP 91)*
a) Pseudostratified
b) Transitional
c) Statified squamous keratinized
d) Statified squamous non keratinized

1806. Epithelial lining of the Tonsil is - *(JIPMER 93)*
a) Cuboidal
b) Squamous epithelium without Keratinisation
c) Squamous epithelium with Keratinisation
d) Columnar

1807. Hassals coupuscles are seen in - *(Kerala 94)*
a) Thymus b) Spleen
c) Lymph node d) Appendix

1808. Which of the following is lined by transitional epithelium - *(JIPMER 95)*
a) Stomach b) Colon
c) Urethro verical junction d) Prostrate

1809. Ansa nephroni is lined by - *(Jipmer 95)*
a) Columnar epithelium
b) Squamous epithelium
c) Cuboidal and columnar epithelium
d) Stratified squamous epithelium
e) Cuboidal and Squamous

1810. Toughest layer in esophagus is- *(AI95)*
a) Mucosa b) Submucosa
c) Muscularis d) Adventitia

1811. Parietal peritonium is lined by - *(PGI 95)*
a) Simple squamous b) Stratified squamous
c) Cuboidal d) Columnar

1812. Brunner's glands are located in the -
a) Duodenum b) Jejunum *(CUPGEE96)*
c) Ileum d)All

1813. The normal process by which the existing epithelial cells of skin are replaced by new epithelial cells is called- *(CUPGEE96)*
a) Apoptosis b) Autolysis
c) Both d) Any of these

1814. Space of Disse is seen in - *(M.P 98)*
a) Spleen b) Kidney
c) Liver d) Small intestine

1788) b 1789)c 1790)d 1791) a 1792)c 1793)b 1794)d 1795)a,b,c 1796)d 1797)b 1798)c 1799)a 1800)e 1801)b,d 1802) a 1803)None 1804)a,d 1805)d 1806)b 1807)a 1808)c 1809)e 1810)c 1811)a 1812)a 1813)a 1814)c

1815. Olfactory epithelium is - *(Kerala 98)*
a) Squamous Keratinised
b) Squamous non keratinised
c) Striated columnar
d) Simple
e) Pseudostratified

1816. All have NO LYMPHATICS, except- *(A1IMS98)*
a) Brain b) Internal ear
c) Dermis d)Eye

1817. Halocrine secretion is seen in ..gland-*(JIPMER 99)*
a) Salivary b) Mammary
c) Sebaceous glands d) Gastric

1818. Largest organelle in eukaryote is - *(Orissa R)*
a) ER b) Nucleus
c) Cytoskeleton d) Golgi body

1819. The commonest cartilage to ossify is - *(TNPSC 2K)*
a) Hyaline b) Elastic
c) Fibrous d) Fibroelastic

1820. Stellate cells of von Kuffer are seen in the sinusoids of which of the following organs - *(Kerala 2K)*
a) Spleen b) Bone marrow
c) Liver d) Adrenal
e) None of the above

1821. Gitter cells are - *(Kerala 01)*
a) Microglia b) Modified macrophages
c) Astrocytes d) Neutrophils

1822. Intercalated disc is present in - **(***PGI2000)*
a) Cardiac muscle b) Smooth muscle
c) Skeletal muscle d)All

1823. Number of cartilages in bronchiole - **(***Orrisa 04)*
a) 1 b)2
c) 3 d)None

1824. Nissle's substance is mainly - **(***Orrisa 04)*
a) Histone b) Ribosomes
c) DNA d) Ribonucleoprotein

1825. Elastic cartilage is found in - **(***SGPGI04)*
a) Auditory tube b) Nasal septum
c) Articular cartilage d) Costal cartitage

1826. The synovial bursa between an aponeurosis and a bone is called - *(J&.K05)*
a) Subtendinous b) Submuscular
c) Subfascial d) Subcutaneous

1827. The following structures do NOT have lymphatics, except - *(J &K 05)*
a) Bone marrow b)Bronchii
c) Cartilage d) Epidermis

1828. The following glands contain the myoepithelial cells, except- *(J&.K05)*
a) Mammary glands b) Salivary glands
c) Sebaceous glands d) Sweat glands

1829. Goblet cells are present in - *(Orissa 05)*
a) Trachea b) Jejunum
c) Epididymis d) Ileum

1830. All of the following physiological processes occur during the growth at the epiphyseal plate except -
a) Proliferation and hypertrophy *(AI 05)*
b) Calcification and ossification
c) Vasculogenesis and erosison
d) Replacement of red bone marrow with yellow marrow

1831. Ceruminous glands present in the ear are -
a) Modified eccrine glands *(AIIMSMay 05)*
b) Midified apocrine glands
c) Mucous gland
d) Modified holocrine glands

1832. Neuro-epithelium type of sensory receptors are present in the following system except -
a) Visual b) Auditory *(AIIMS May 05)*
c) Gustatory d) Olfactory

1833. The ducts of all the following glands consist of stratified cuboidal epithelium except - *(AIIMSMay*
a) Sweat gland b) Sebaceous glands *05)*
c) Salivary glands d) Pancreas

1834. Von Brun's nest is seen in - *(Corned 08)*
a) Normal urothelium
b) Transitional cell carcinoma
c) squamous cell carcinoma
d) adeno carcinoma

1835. Cell which does not migrate from the base of the crypt to ends of villi is - *(Aiims May 07)*
a) Enterocyte b) Endocrine cell
c) Paneth cell d) Goblet cell

1836. The upper half of the oesophagus in lined by -
a) Stratified cuboidal epithelium *(UP 07)*
b) Stratified squamous non keratinised epithelium
c) Stratified squamous non keratinsed epithelium
d) Stratified squamous keratinised epithelium

1837. Almost exclusively urinary bladder is lined by -*(UP07)*
a) Squamous epithelium b) Columnar epithelium
c) Transitional epithelium d) Cuboidal epithelium

1838. A patient presented with acute abdominal pain. On clinical suspicion the pt underwent cholecystectomy. On histopathological examination the finding is normal. The gallbladder epithelium will be -
a) Squamous epithelium *(AIIMS Nov 07)*
b) Simple columnar with brush border
c) Simple columnar
d) Simple columnar with sterocilia

1839. Urothelium lines all except - *(AIIMS Nov 07)*
a) Ureters b) Minor calyx
c) Urinary bladder d) Collecting duct

1840. The epithelial lining of the urethra below the opening of the ej aculatory ducts is- *(Corned 08)*
a) Stratified cuboidal epithelium
b) Stratified columnar epithelium
c) Transitional epithelium
d) Stratified squamous epithelium

1841. Tonsil is lined by - *(UP 08)*
a) Stratified squamous keratinised epithelium
b) Stratified squamous non keratinised epithelium
c) Columnar epithelium
d) Cuboidal epithelium

1815) e 1816) c 1817)c 1818) a 1819)d 1820)c 1821)a 1822)a 1823)d 1824)d 1825)a 1826)c 1827)a,c 1828)c 1829) a 1830)d 1831)b 1832)a,b,d 1833)b 1834)a 1835)c 1836)c 1837)c 1838)b 1839)d 1840)b 1841)b

1842. Ureter's is lined by - *(UP 08)*
a) Cuboidal epithelium b) Columar epithelium
c) Squamous epithelium d) Transitional epithelium

1843. Which is not lined by stratified nonkeratinised squamaous epithelium ? *(APPG 08)*
a) Hypopharynx and laryngopharynx
b) Oesophagus
c) Cornea
d) Tympanic membrane

1844. About osteon which of the following statement (s) is/are correct - *(PGIDec 08)*
a) Present in compact bone
b) Concentric lamallae is present
c) Haversian canal is present
d) Volkman's canal surrounded by concentric lamellae

1845. Cells present in Cerebellar cortex are all except -
a) Purkinje b) Bipolar *(AIIMSNov08)*
c) Granule d) Golgi

1846. Gut Associated lymphoid tissue (GALT) is primarily located in - *(AI09)*
a) Lamina propria b) Submucosa
c) Muscularis d) Serosa

1847. Urothelium lines all except - *(AIIMSMay09)*
a) Ureters b) Minor calyx
c) Urinary bladder d) Membranous Urethra

1848. Ruffled membrane is seen in - *(COMED 09)*
a) White fibrous cartilage b) Osteoblast
c) Osteoclast d) Elastic cartilage

1849. After ovulation the discharged oocytes and surrounding layer of granulosa cells are known as - *(DELHIPGFeb. 09)*
a) Corpus luteum b) Corona radiata
c) Stigma d) Zona peliucida

1850. Urothelium lines all except - *(AIIMSNov 09)*
a) Ureters b) Major calyx
c) Urinary bladder d) Membranous urethra

1851. Paneth cells - true is - *(AIIMS May 10)*
a) Rich in rough endoplasmic reticulum
b) High zine content
c) Foamy cytoplasm
d) Numerous lysozyme granules

1852. Human intestinal glands contain_____-*(Maha 10)*
a) Paneth ceils b) Neuroendocrine cells
b) Stem cells d) All of the above

1853. Portal Acinus in liver is centered on *1 (Maharashtra*
a) Central vein b) Hepatic arteriole *10)*
c) Portal tract d) Bile ductule

1854. Which of the following is a holocrine gland ?
a) Sweat gland *(NEET/DNB Pattern)*
b) Breast
c) Pancreas
d) Sebaceous gland

1855. Transitional epithelium is seen in -
a) Esophagus *(NEET/DNB Pattern)*
b) Vagina
c) Urinary bladder
d) Trachea

1856. Lining epithelium of vagina is - *(NEET/DNB Pattern)*
a) Pseudostratified columnar epithelium
b) Keratinized stratified squamous epithelium
c) Non keratinized stratified squamous epithelium
d) Ciliated columnar epithelium

1857. Lining epithelium of fallopian tube is -
a) Simple columnar *(NEET/DNB Pattern)*
b) Pseudo-stratified columnar
c) Ciliated columnar
d) Simple cuboidal

1858. Lining epithelium of the uterine cavity is -
a) Simple squamous epithelium
b) Simple columnar epithelium *(NEET/DNB Pattern)*
c) Stratified squamous epithelium
d) Ciliated columnar epithelium

1859. Mucous glands are absent in - *(NEET/DNB Pattern)*
a) Cervix b) Esophagus
c) Vagina d) Duodenum

1860. All are derived from ectoderm except -*(NEET/DNB*
a) Hypophysis b) Retina *Pattern)*
c) Spinal cord d) Adrenal cortex

1861. Clara cells are present in - *(NEET/DNB Pattern)*
a) Alveoli b) Bronchus
c) Bronchioles d) Trachea

1862. Trachea is lined by - *(NEET/DNB Pattern)*
a) Stratified squamous epithelium
b) Ciliated columnar epithelium
c) Simple columnar epithelium
d) Pseudostratified columnar epithelium

1863. Transistional epithelium is present in -
a) Renal pelvis *(NEET/DNB Pattern)*
b) Loop of Henle
c) Terminal part of urethra
d) PCT

1864. Which of the following cells will proliferate from top to bottom of villi - *(NEET/DNB Pattern)*
a) Chief cells b) Goblet cells
c) Paneth cells d) Pairetal cells

1865. Multi-unit smooth muscle present at all except -
a) Bloodvessels b) Iris *(NEET/DNB Pattern)*
c) Gut d) Ductus deferens

1866. Which of the following is an example of holocrine gland - *(NEET/DNB Pattern)*
a) Mammary glands b) Sweat glands
c) Sebaceous glands d) Parotid glands

1867. All cartilage is covered by perichondrium except - *(NEET/DNB Pattern)*
a) Hyaline b) Elastic
c) Fibrocartilage d) None of the above

1868. Which of the following is not a hyaline cartilage - *(NEET/DNB Pattern)*
a) Articular cartilage b) Thyroid cartilage
c) Meniscus d) Nasal septum

1869. Glands of Van Ebner are present in- *(NEET/DNB*
a) Cervix b) Penile urethra *Pattern)*
c) Tongue d) Vagina

1842) d 1843)d 1844)a,b,c 1845)b 1846)a 1847)d 1848)c 1849)b 1850)d 1851)a,b,d 1852)d 1853)bl854)d 1855) c 1856) c 1857)c 1858)d 1859)c 1860)d 1861)c 1862)d 1863)a 1864)c 1865)c 1866)c 1867)c 1868)c 1869)c

1870. Brunner's glands are seen *m-(NEET/DNB Pattern)*
a) Duodenum b) Gastric
c) Gall bladder d) Ileum

1871. Stave cells are seen in - *(NEET/DNB Pattern)*
a) Liver b) Spleen
c) Pancreas d) Gall bladder

1872. Corpora amylacea is found in -*(NEET/DNB Pattern)*
a) Pineal b) Prostate
c) Pituitary d) Thyroid

1873. All develop from endoodermal cloaca except -*(NEET/*
a) Rectum b) Anal canal *DNB Pattern)*
c) Sigmoid d) Primitive urogenital sinus

1874. All develop from mesoderm except- *(NEET/DNB*
a) Skeletal muscle b) Testes *Pattern)*
c) Enamel d) Ureter

1875. Holocrine glands are - *(NEET/DNB Pattern)*
a) Sweat b) Sebaceous
c) Mammary d) Pancreas

1876. Stratified sqnamous epithelium is seen in- *(NEETZ*
a) Vagina b) Urinary blooder *DNB Pattern)*
c) Uterus d) Cervix

1877. Which of the following is part of ear is derived from all three germ layers - *(NEET/DNB Pattern)*
a) External auditary canal b) Ear ossicles
c) Tymparic membrane d) Ear muscles

1878. Colon contains - *(NEET/DNB Pattern)*
a) Parietal cells b) Chief cells
c) Brunner's gland d) Goblet cells

1879. False about clavicle - *(NEET/DNB Pattern)*
a) Ossifies membrane
b) Horizontal bone
c) No medullary cavity
d) Most common site of fracture is the junction of medial l/3rd with lateral 2/3rd

JOINTS

1880. The example of syndesmoisis type of joint \s-*(AP91)*
a) Sacroiliac b) Inferior tibiofibular
c) Superior tibiofibular d) Mid tarsal

1881. Which is a hinge joint - *(AI92)*
a) Knee b) Elbow
c) Metacarpo phalangeal d)Atlanto Axial

1882. Action of Lumbricals is - *(JIPMER 92, PGI03)*
a) Extension of MP joint
b) Abduction at MP joint
c) Flexion of MP joint and Extension at I.P. joint
d) Lies inferior to inferior cerebellar peduncle

1883. It can be said that the intervertebral foramen -
a) Are narrow towards the lower part of lumbar region
b) Transmit lumbar and sacral spinal nerves since
c) Admit spinal arteries *(AIIMS 84)*
d) Are located between the laminae and the articular processes

1884. Os trigonum is which type of epiphysis -
a) Aberrant b) Pressure *(AMU 88)*
c) Atavistic d) Traction

1885. Following examples of epiphysees are correctly matched except - *(AIIMS 86)*
a) Pressure epiphysis-Hezad of femur
b) Traction epiphysis-tubercles of humerus
c) Atavistic epiphysis-Coracoid process of scapula
d) Aberrant epiphysis Trachanter of femur

1886. Manubriosternaljoint- *(Kerala 96)*
a) Saddle type b) Ball & Socket
c) Symphysis d) Syndesmosis

1887. Which of the following is an example of saddle joint-
a) Carpo-metacarpal joint of the thumb
b) Elbow joint *(CUPGEE95)*
c) Ankle joint
d) Kinnjoint

1888. Example for ellipsoid joint is - *(KERALA ' 96)*
a) Wrist b)Kenn
c) Ankle d) Shoulder

1889. All of the following are example of traction epiphysis, except- *(AI03)*
a) Mastoid process b) Tubercles of humerus
c) Trochanter of femur d) Condyles of tibia

1890. In interpharyngeal joint, capsule is absent in the -
a) Medial side b) Dorsal side *(Jipmer 03)*
c) Palmar side d) Lateral side

1891. The first costochondral joint is a - *(AI04)*
a) Fibrous joint b) Synovial joint
c) Syndesmosis d) Syncendrosis

1892. Vomar-sphenoidal rostrum junction is - *(Orissa R)*
a) Syndesmoisis b) Synostosis
c) Schindylesis d)Gomphoiss

1893. Joint between epiphysis and diaphysis of a long bone is a type of - *{AIIMS 04)*
a) Plain synovial joint b) Fibrous joint
c) Symphysis d) Synchondrosis

1894. Example of hinge joint are all except - *(SGPGI05)*
a) Elbow joint b) Interphalangeal joint
c) Knee joint d) Shoulder joint

1895. The type of joint between the sacrum and the coccyx is a - *(AI 05)*
a) Symphysis b) Syostosis
c) Synchondrosis d) Syndesmosis

1896. Which of the following is an intra-articular tendon-
a) Sartorius b) Semitendinosus *(AI06)*
c) Anconeus d) Popliteus

1897. 1st carpometacarpal joint is- *(APPG06MP98)*
a) Saddle joint
b) Ball & socket joint
c) Secondary cartilaginous joint
d) Hinge joint

1898. Movements of pronation & supination occurs in all the following j oints except - *{AI 0 7)*
a) Superior radio - ulnar joint
b) Middle radio - ulnar joint
c) Inferior radio - ulnar joint
d) Radio - carpal joint

1870) a 1871)b 1872)b 1873)c 1874)c 1875)b 1876)a 1877)c 1878)d 1879)d 1880)b 1881)b 1882)c 1883)c 1884)c 1885) d 1886)c 1887)a 1888)a 1889)d 1890)b 1891)c 1892)c 1893)d 1894)d 1895)a 1896)d 1897)a 1898)d

1899. Secondary cartilaginous joints are -
a) Situated in midline *(DELHI PG Feb. 09)*
b) Permanent in nature
c) Binding cartilage in fibrocartilage
d) All of the given options

1900. Which of .the following is an example of saddle joint?
a) Carpo-metacarpal joint of the thumb *(DPG10)*
b) Elbow
c) Ankle Joint
d) Knee joint

1901. Carpometacarpa; joint of thumb is_____ type of joint- *(Maharashtra 10)*
a) Ball and socket b) Hinge
c) Plane d) Saddle

1902. Enchondral ossification is/are seen in -*(PGIMay 10)*
a) Long bones b) Flat bones of skull
c) Clavicle d) Mandible
e) Nasal bones

1903. All of the following are pneumatic bones, except -
a) Frontal b) Ethmoid *(AJ11)*
c) Mandible d) Maxilla

1904. Which of the following best describes the type of joint seen in the growth plate - *(AI11)*
a) Fibrous b) Primary cartilaginous
c) Secondary cartilaginous d) Plane joint

1905. TVue about location of metaphysis is - *(PUNJAB 11)*
a) Narrow constricted part b) Shaft
c) Epiphyseal end d) Diaphysis end

1906. What kind of a joint is syndesmosis ?
a) Fibrous b) Plain *(NEET/DNB Pattern)*
c) Pivot d) Cartilaginous

1907. Which of the following is a compound condylar joint ? *(NEET/DNB Pattern)*
a) Knee b) Wrist
c) TM joint d) Elbow

1908. Intracapsular articular disc is present in which joint- *(NEET/DNB Pattern)*
a) Sternoclavicular joint b) Elbow
c) Hip joint d) Knee joint

1909. Type of cartilage seen at temporo-mandibular joint is - *(NEET/DNB Pattern)*
a) Hyaline cartilage b) Fibrocartilage
c) Elastic cartilage d) All of the above

1910. Which of the following is an example of atavistic epiphysis? *(NEET/DNB Pattern)*
a) Greater trochanter
b) Head of femur
c) Upper end of radius
d) Coracoid process of scapula

1911. Which of the following is a synovial joint of the condylar variety - *(NEET/DNB Pattern)*
a) First carpometacarpal joint
b) Metacarpophalangeal joint
c) Interphalangeal joint
d) Radiocarpal joint

1912. Joint with articular disc - *(NEET/DNB Pattern)*
a) Elbow b) Shoulder
c) Sternoclavicular d) Knee

1913. Elastic cartilage is seen in -*(NEET/DNB Pattern)*
a) Articular cartilage b) Costal cartilage
c) Epiglottis d) Intervertebral d.s

1914. Flexion extension in neck accors at -
a) Atlanto-axial joint *(NEET/DNB Pattern)*
b) Atlanto-occipital joint
c) C_6-C_7 joint
d) C_7-T_1 joint

MISCELLANEOUS

1915. Which of the following is not a congenital anomaly?
a) Amastia *(NEET/DNB Pattern)*
b) Polymastia
c) Polythelia
d) Mastitis

1916. Parasympathetic supply is *from-(NEET/DNB Pattern)*
a) C2,C3,C4 b) T2, T3, T4
c) L2, L3, L4 d) S2, S3, S4

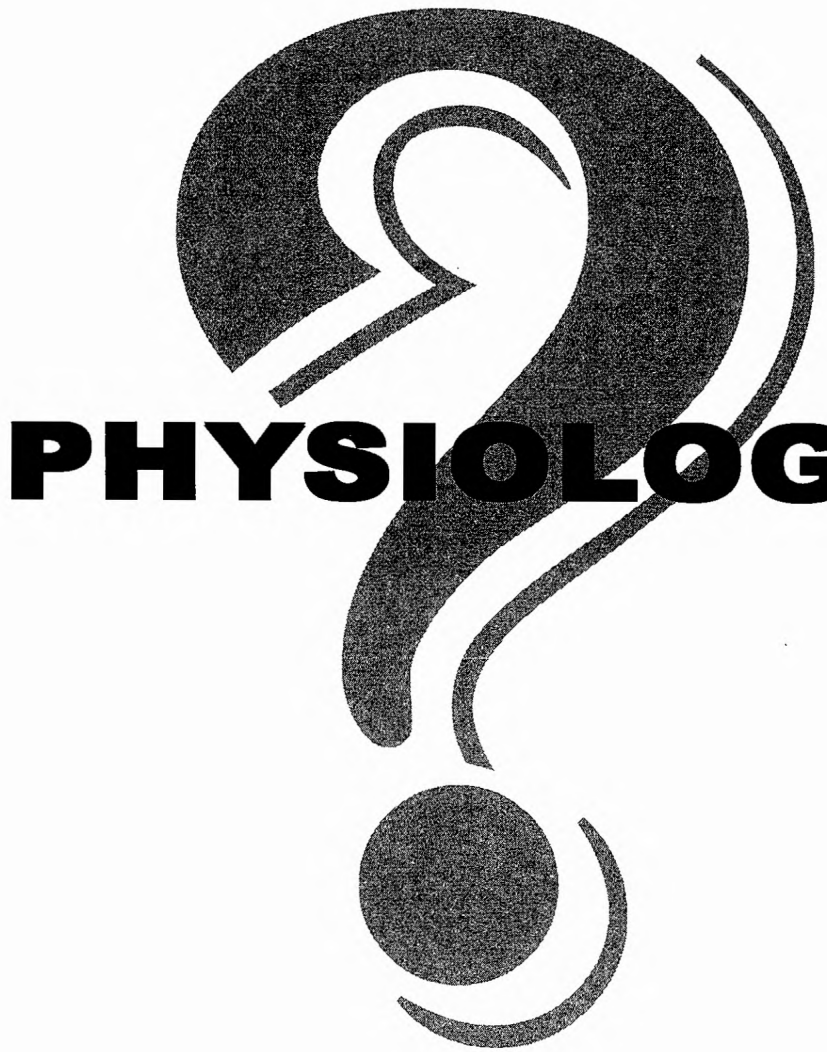
1917. Prolapse of vertebral disc between L5S1 will affect which nerve root - *(NEET/DNB Pattern)*
a) 14 b) L5
c) SI d) S2

1918. Subcapsular sinus is seen in - *(NEET/DNB Pattern)*
a) Lymph node b) Spleen
c) Thymus d) None

1919. Absence of lymph nodes is charachteristic of -
a) Brain *(NEET/DNB Pattern)*
b) Liver
c) Lung
d) Placenta

1920. Which of the following is an operculated sulcus -
a) Calcarine b) Collateral *(NEET/DNB*
c) Lunate d) Central *Pattern)*

1921. Which of the following is a complete sulcus -
a) Lunate *(NEET/DNB Pattern)*
b) Calcarine
c) Colluteral
d) Central



1922. Longest muscle in the body - *(NEET/DNB Pattern)*
a) Biceps b) Triceps
c) Sartorius d) Quadriceps

1923. Corpora arebacea is seen in - *(NEET/DNB Pattern)*
a) Prostrate b) Pineal
c) Seminal vesicle d) Breast

1924. Which of the following is supplied by two nerve -
a) Quadriceps *(NEET/DNB Pattern)*
b) Triceps
c) Digastric
d) FDS

PHYSIOLOGY

PHYSIOLOGY

INTRODUCTION

1. Cardiac muscle is able to function as a syncytium because of the structural presence of - *(ICS 2K)*
a) Branching fibres
b) Intercalated disc
c) Protoplasmic bridges between cells
d) Gap-junctions

2. The largest amounts of prostaglandins are seen in-
a) Seminal fluid b)CSF *(AIIMS86)*
c) Blood d) Urine

3. Calcium binding protien is - *(AIIMS 86,90)*
a) Troponin-C b) Calsecritin
c) Calsequestrin d)All

4. Tropomyosin is a.....of molecular weight..... -
a) Albumin, 24000 *(AIIMS 85)*
b) Globulin, 54000
c) Globulin, 71000
d) Globulin, 51000

5. Osmolarity is - *(JIPMER 98)*
a) Osmolarity per kg of solvent
b) Osmolarity per litre of solvent
c) Moles per kg of solvent
d) Moles per litre of solvent

6. Clathrine mediates - *(AIIMS 2001)*
a) Receptor mediated endocytosis
b) Exocytosis
c) Pericytosis
d) Mesocytosis

7. The motility of cell's is due to protein- *(AIIMS 96)*
a) Motilin b) Tubulin
c) Laminin d)Tactilin

8. Which is true about resting membrane potential of the nerve - *(A191)*
a) Can be measured by applying electorde over the nerve fibre
b) Potassium (Extracellular) mainly contributes
c) Equal to the resting membrane potential of the muscle
d) Reduction of RMP Inhibits a voltage dependent increase in sodium Ion permeability.

9. Nernst equation deals with - *(JIPMER 92)*
a) Oxygen uptake b) Chloride shift
c) Cellular ATP levels d) Plasma bicarbonate level

10. All are true about sodium potassium pump except -
a) Needs ATP *(AIIMS 92)*
b) is inactive at 4°C
c) is elecrogenic
d) Needed for generation of action potential

11. HMG Co - enzyme A is not a co-enzyme in the intermediate metabolism of - *(AIIMS 92)*
a) Thromboxane b) Leucine
c) Pyruvate d) Cholestrol

12. Resting membrane potetial is close to the Isoelectrical potential of - *(AI93)*
a) Na^+ b) Mg++
c)K^+ d)Cl-

13. Chemical gradient across cell membrane is maintained chiefly by - *(JIPMER 93)*
a) Na^+ b) Ca++
c)K^+ d)CP

14. The quantity of water lost as sweat per day is -
a) 100 to 200 cc b)600to800cc *(AMU 91)*
c) 1000 to 1200 cc d) Above 1200 cc

15. Production of c-AMP from ATP requires -
a) ATP ase *(JIPMER 81,Delhi 86, 62)*
b) Adenylate cyclase
c) CAMP synthetase
d) None

16. How many pKa values does orthophosphoric acid possess - *(JIPMER 70, Bihar 91)*
a) One b)Two
c) Three d)Four

17. A substace on I.V. injection was found to be distributed through thirty percent of body water. It Probably- *(PGI79, DNB 88)*
a) Did not pass freely through blood capillaries
b) Was distributed evenly throughtout body water
c) Did not enter cells of body
d) Was exculuded form CSF

18. What provides most of the energy that is used to Maintain a normal resting membrane potential of about 70 millivolts inside the neuronal cell -
a) The potassium pump *(AIIMS 80, PGI 03)*
b) The chloride pump
c) The sodium pump
d) Diffusion of chloride ions

19. The ionic channels in excitable membrane are lined by- *(AIIMS 84)*
a) Cephalins b) Proteins
c) Lipids d) Carbohydrates

20. A solution cantains 1 gram-mole of magnesium sulfate per liter. Assuming full ionization of this compound, calculate the osmotic pressure of the solution (lmosmole/liter concentration is equivalent to 19.3 mm.Hg osmotic pressure) - *(AIIMS 86)*
a) 19.3 mm Hg b)3.86mmHg
c) 19.300 mm Hg d)38.600mmHg
e) 57.900 mm Hg

21. The emeiocytosis or reverse pinocytosis requires which ion - *(AIIMS 84, PGI83, 84)*
a) Na^+ b) K^+
c) Ca++ d) Mg++

22. Sodium channels are specifically blocked by -
a) Nifedipine b) Tetradotoxin *(AIIMS 85)*
c) Tetra Ethyl lead d) Choline

---

l)d 2) a 3) a 4)c 5)b 6) a 7)b 8)c 9)b 10)d ll)a,c 12)d 13)c 14)a
15) b 16)c 17) c 18) a 19)b 20)d 21)c 22)b

23. **If potassium levels are 39 mg % calculate the same in meq/1 -** *(AIIMS 80, DELHI 85)*
a) 1 b)3.9
c) 10 d) 100

24. **D_20 (Deuterium oxide) is used to measure volume of -** *(AIIMS 87, AIIMS 91)*
a) Blood b) Total body water
c) extacellular fluid d) Intracellular fluid

25. **Potassium is maximum in -** *(PGI 82, 84, 90)*
a) Cell b) Plasma
c) interstitium d) Bone

26. **Total body sodium in meq/kg is -** *(PGI 82)*
a) 41 b)58
c) 70.7 d)91.0

27. **On weight basis, the membrane contains protein and lipid in the ratio of -** *(AIIMS 85)*
a) 1:2 b) 1:1
c) 2:1 d)4:1

28. **When solvent is moving in one direction, the solvent tends to drag along some molecules of solute. This is called -** *{PGI 81, AMU 86)*
a) Filtration b) Osmosis
c) Donnan effect d) Solvent drag

29. **Bound K^+ is mainly found in following except-**
a) Brain b)Bone *{AMU 86)*
c) RBC's d) Platelets

30. **The non-ionic diffusion in body is seen in -**
a) Gut b) Kidneys *(AIIMS 93)*
c) Both d)None

31. **For sodium - potasium pump the coupling ratio is -**
a) 1:1 b)2 :3
c) 3 :2 d) 1:4

32. **Plasma K^+ constitute what percentage of total body potassium -** *{AIIMS 86, JIPMER 01)*
a) 0.4% b) 7.6 *%*
c) 10.4% d) 89.6 *%*

33. **In a man weighing 70 kg, water content of body is -** *{JIPMER 80, AMC 84)*
a) 20-30L b) 30-40 L
c) 40-45 L d) 50-60 L

34. **Osmolality of plasma in a normal adult (in m Osm/L) is -** *{Delhi 87, AMC 82, A106)*
a) 250-270 b) 270-290
c) 300-310 d)310-330

35. **Cell shape & motility are provided by -** *{AI95)*
a) Microfilaments b) Microtubules
c) Golgi apparatus d) Nucleus

36. **Oncotic pressure of plasma is due to -** *{TN95)*
a) albumin b) Preabumin
c) Electrolytes d) Fibrinogen

37. **Cells involved in active protein synthesis have-**
a) Increased mitochondria *{AI97)*
b) Increased Rough Endoplasmic reticulum
c) Increased gogli apparatus
d) Increased lysosomes

38. **ECF forms what percentage of body wieght -**
a) 10% b)25% *{AI97)*
c) 33% d) 60 *%*

39. **Calmodulin activates -** *{TN99)*
a) Muscle phosphorylase b) Protein kinase
c) 2,3 DPG d) Glucokinase

40. **Not true regarding Na7K^+ pump is -** *{AIIMS 99)*
a) Pumps Na^+ against a gradient
b) 5 Na^+ exchange for 2K^+
c) Increase in intracellular Na^+
d) Hypocalcemia inhibits the pump

41. **The following is an example of 'Regulated pathway'-**
a) Constitutive exocytosis *(JIPMER 2002)*
b) Receptor mediated endocytosis
c) Constitutive endocytosis
d) Non constitutive exocytosis

42. **Following are true about G protein except-** *(PGI98)*
a) G channels
b) Phosphorylase formation
c) Made up of 4 units
d) Related to ras oncogene

43. **True about facilitated diffusion are A/E -** *(PGI 98)*
a) Occur in direction of concentration gradient
b) Does not require energy
c) Occur in direction opposite to electrical gradient
d) Facilitated by charge of molecule

44. **Regarding transport of Ca^ across a membrane following are true -** *{PGI 03)*
a) Ca^ calmodulin binding
b) It is a passive mechanism
c) Required hydrolysis of A.T.P.
d) It is a symport
e) It is an active process

45. **Receptors on cell membrane that activate ion channel after binding with agonists are -** *{PGI 03)*
a) Nicotonic Cholinergic b) Muscarinic Cholinergic
c) Optoid receptors d)$GABA_A$
e) GAB An

46. **Simulation of post ganglionic sympathetic neurons leads to -** *(PGI 02)*
a) Fast EPSP b) Slow EPSP
c) FastIPSP d) Slow IPSP
e) Very slow EPSP

47. **Action of calmodulin is -** *(PGI 02)*
a) Ca_2^+ dependent
b) Through calmodulin dependent kinases
c) Through CAMP dependent kinases
d) Through CGMP dependent kinases

48. **Which of the following statements is true regarding basal metabolic rate -** *(PGI 01)*
a) Increased in starvation
b) It is not influenced by hormonal changes
c) It is not affected by dietary changes
d) Decreased by 50% in starvation
e) It is not affected by energy expenditure

---

23) c 24) b 25) a 26) b 27) c 28) d 29) d 30) c 31)c 32) a 33) c 34) b 35) b 36) a
37) b 38) b 39) b 40) c 41) d 42) c 43) c 44)c,e 45) a,d 46)a,b,d 47)a,b 48) None

49. **TVue about membrane receptors -** *(PGI2000)*
a) Barrier function b) For specific action
c) Molecular transport d) None

50. **Exocytosis -** *(PGI2000)*
a) Extrusion of cell bound vesicles
b) Intrusion of liquid particles
c) Instrusion of solid particles
d) All of the above

51. **In isometric exercise the following changes occur except-** (*Jipmer03)*
a) Increase in muscle tone
b) Staircase phenomenon
c) Summation of contractions
d) Relaxation heat

52. **The cell junctions allowing exchange of cytoplasmic molecules between the two cells are called - (***AI03)*
a) Gap junctions b) Tight junctions
c) Focal junctions

53. **Most accurate measurement of extracellular fluid volume (ECF) can be done by using - (***AIIMS 03)*
a) Sucrose b) Mannitol
c) Inulin d) Aminopyrine

54. **Smooth muscle are not pain sensitive to -**
a) Cutting b) Distension (*UPpgmee04)*
c) Low chloride d) Torsion

55. **Amongst the muscles, skeletal muscle is the most excitable tissue because -** *{Kerala 04)*
a) There are two "T: tubules per sarcomere and has well developed sarcoplasmic reticulum
b) It is suplied by large myelinated nerve fibres
c) It is nerve regulated
d) None of the above

56. **Energy producing enzymes are located in -**
a) Rough endoplasmic reticulum *{Karnataka 02)*
b) Ribosomes
c) Golgi apparatus
d) Mitochondria

57. **Which one of the following statements is true for excitatory postsynaptic potentials (EPSP) -** *{AI03)*
a) Are self propagating
b) Show all or none response
c) Are proportional to the amount of transmitter released by the presynaptic neuron
d) Are inhibitory at presynaptic terminal

58. **The intrafusal fibres of the striated skeletal muscles are innervated by one of the following type of motor neurons, Choose the correct answer**
a) Alpha b)Beta *{AIIMS 04)*
c) Gamma d) Delta

59. **The force of muscle contraction can be increased by all of the following except -** *{AI 04)*
a) Increasing the frequency of activation of motor units
b) Increasing the number of motor units activated
c) Increasing the amplitude fo action potentials in the motor neurons
d) Recruting larger motor units

60. **Duchenne muscular Dystrophy is a disease of -**
a) Neuromusculer junction *{A104)*
b) Sarcolemal proteins
c) Muscle contractile protein
d) Disuse atrophy due to muscle weakness

61. **In skeletal muscle, actin is bound to Z line by -**
a) Titin b)Desmin *{J&K05)*
c) Actinin d) Tropomyosin

62. **True regarding RMP is all except -** *{SGPGI05)*
a) -70 mV in neurons
b) Is due to K^+ ions
c) Na^1 - K^1 pump 3 Na^+out of cell & $2K^+$ inside
d) Ka^+ - K^+ pump $3K^+$ out of cell & 2 Na^+ inside of cell

63. **Gap junctions are found in -** *{AMU05)*
a) Intestine b) Brain
c) Kidney d) Cardiac muscles

64. **K^+ homeostasis in human is -** *{PGI June 05)*
a) Most of the K+ are intracellular
b) Most of the K+ are extra cellular
c) An essential electrolyte for different organ function
d) Actively secreted in the distal tubule
e) It maintains the Na^+ K^+ ATPase activity

65. **The process by which fusion of part of a cell membrane occurs is/are -** *{PGI June 05)*
a) Cell division b) Endocytosis
c) Exocytosis d) Virus replication

66. **Lysozymes are found in ■** *{PGI June 05)*
a) Eukaryotes b) Prokaryotes
c) Plants d) Bacteriophage
e) Virus

67. **In a neuron, graded electrogenesis occurs at -**
a) Soma - dendritic zone *{J &K 05)*
b) Initial segment
c) Axon
d) Nerve ending

68. **Clathrins used in -** *{MAHA 05)*
a) Receptor mediated endocytosis
b) Exocytosis
c) Cell to cell adhesion
d) Plasma membrane

69. **Time taken for electrical conduct from SA node to AV node in ECG is -** *{Orrisa 05)*
a) PR interval b) ST segment
c) QT interval d) Cannot be determined by ECG

70. **All of the following transport process follow 'saturation kinetics[9] except -** *{AIIMSNO V05)*
a) Facilitated diffusion
b) Na^+ - Ca^{2+} exchanger
c) Simple diffusion
d) Na+ coupled active transport

71. **Which one of the following molecules is used for cell signaling -** *(AI 05)*
a) $C0_2$ b) 0_2
c) NO d) N,

49) b,c 50) a 51)d 52)a 53)c 54)a 55)a 56)d 57)c 58)c 59)c 60)b 61)c 62)d
63) d 64) a,c 65) b 66)a,c,d 67) a 68) a 69) a 70) c 71) c

72. All of the following enzymes are active within a cell except- *(AIIMSMay 05)*
a) Trypsin b) Fumerase
c) Hexokinase d) Alcohol dehydrogenase

73. Synaptic potentials can be recorded by -
a) Patch clamp technique *(AIIMS May 05)*
b) Voltage clamp technique
c) Microelectrode
d) EEG

74. Intracellular receptors are found in- *(PGI June 06)*
a) Insulin b) Glucagon
c) Corticosteriods d) Androgen
e) Thyroxine

75. True statements about ions composition in body -
a) Intracellular & Extracellular ions compositions are same *(PGI June 06)*
b) Phosphorus and Mg'[H]' are major ions intracellularly
c) Na^+, Ch principal ions in E.C.F.
d) Kidney tightly regulates Na^+, K^+, Cl" composition

76. Amplitude of action potential is predominantly determined by-
a) Equilibrium potential of Na+
b) Equilibrium potential of K+
c) Equilibrium potential of CL
d) Equilibrium potential of $HC0_3$

77. Skeletal frame work of a cell is maintained by -
a) Nucleus b) Microtubules *(Manipal 06)*
c) Ribosomes d) Mitochondria

78. Transcytosis occurs in - *(Karnataka -PG MEE 06)*
a) Epithelial cells of intestine
b) Neuroglia
c) Neuron
d) Axonlemma

79. In an adult man weighing 70kgs, the extracellular fluid volume will be about - *(Kam PG MEE 2006)*
a) 42L b)25L
c) 15L d)12 L

80. Hyponatremia has no effect on the RMP (resting membrane potential) because- *(Kam-PGMEE 06)*
a) The cell membrane is impermeable to Na^+
b) ECF Na^+ concentration is high
c) Intracellular K^+ concentration is high
d) Equilibrium potential for Na^+ is +60 mV

81. Glucose is co-transported with Na^+ ions. This is a type of- *{PGMCET 07)*
a) Secondary active transport
b) Primary active transport
c) Facilitated diffusion
d) Simple diffusion

82. NERST's potential of Na^+ is - *{PGMCET01)*
a) +61 b)-60
c) +90 d)-80

83. Protein attached to ^{6}Z' line in cardiac muscle, which is responsible for elasticity is - *{PGMCET 01)*
a) Troponin b) Tropomyosin
c) Titin d) Actin

84. Cell junction is smooth muscle is - *{PGMCET 01)*
a) Zonula adherens b) Macula adherens
c) Tight junction d) Gap junction

85. In the mucosal cells, triglycerides are formed primarily in the - *{Corned 08)*
a) Rough endoplasmic reticulum
b) Smooth endoplasmic reticulum
c) Golgi apparatus
d) Ribosomes

86. Agranular endoplasmic reticulum is involved in the synthesis of - *{AI07)*
a) Protein b) Lipid
c) Carbohydrate d) Vitamin D

87. For PCR which of the following is not required -
a) Taq polymerase *(AiimsMay07)*
b) d-NTP
c) Primer
d) Radiolabelled DNA probe

88. Waston and Crick are associated with - *(MAHE 07)*
a) Discovery of helical structure of DNA
b) Association of Helicobacter Pylori with Chronic Gastritis
c) Discovery of HIV virus
d) None of the above

89. Following tetanising stimulus given to a muscle there is an increased contraction. This is due to -
a) Recruitment phenomenon *(MAHE 07)*
b) Increased Ca^ influx into muscle fibers
c) Contraction of different muscle fibers at different places
d) All of the above

90. Bradykinin causes - *(UP 07)*
a) Stimulation of the visceral smooth muscle
b) Stimulation of the vascular smooth muscle
c) Inhibition of the visceral smooth muscle
d) Inhibition of the vascular smooth muscle

91. Function of Basement membrane is - *(UP 08)*
a) Excitation b) Contraction
c) Filteration d) Transport of anions

92. Equilibrium potential for an ion is calculated using-
a) Gibbs Donnan equation *(Aiims May 08)*
b) Goldman equation
c) Nemst equation
d) Henderson Hesselbach equation

93. Regarding transport of substances through the cell membrane, all are true except - *(Aiims May 08)*
a) Glucose is transported via facilitated diffusion
b) Active transport is an energy driven process
c) Facilitated diffusion requires energy
d) Facilitated diffusion requires carrier protein

94. Fick's law, flux of Geomembrane increased in -
a) Concentration across *(PGI June 08)*
b) Temperature
c) Increased size of molecule
d) Weight
e) Area

72) a 73) c 74)c,d,e 75)b,c,d 76) c 77) b 78) a 79) a 80) d 81) a 82) a 83) c 84) d 85) c 86) b 87) d 88) a 89) b 90) a 91) c 92) c 93) c 94)a,e

95. All of the following are used to measure ECG volume, except - *(DPGEE 08)*
a) Sucrose b) Sodium chloride
c) Inulin d) Heavy water

96. When extracellular potassium is increased from 4 meq to 10 meq what will happen - *(APPG 08)*
a) Resting membrane potential becomes more negative
b) Increase in conductance of sodium
c) Increase in conduction of potassium
d) Na+ K+ ATpase will be stopped

97. Na dependent glucose transport is/are inhibited by-
a) Oubain b)Na azide *(PGIDec08)*
c) Phlorhizine d) Phloretin

98. Increase in cytosolic calcium from intracellular storage, during smooth muscle contraction is/are due to - *(PGI Dec 08)*
a) CAMP b) CGMP
c) CCMP d) IP3-DAG
e) Ca^{2+} channel

99. What is/are effect on membrane when extracellular concentration of K^+ is decreased- *(PGI Dec 08)*
a) *i* magnitude of RMP
b) T negativity of the membrane
c) T magnitude of RMP
d) *i* negativity of membrane

100. Weber Fechner Law is - *(AIIMS Nov 08)*
a) Magnitude of stimulus strength perceived is approximately proportionate to the log of the intensity of stimulus strength
b) Magnitude of stimulus strength perceived is directly proportional to the intensity of stimulus strength
c) Threshold of receptor is directly proportional to stimulus strength
d) Threshold of receptor is inversely proportional to stimulus strength

101. Nitrogen narcosis is caused due *to-(AIIMSNov 08)*
a) Nitrogen inhibits dismutase enzyme
b) Increase production of nitrous oxide
c) Increased solubility of nitrogen in nerve cell membrane
d) Decrease in oxygen free radicals

102. All are second messengers except - *(AIIMS Nov 08)*
a) Guanylyl cyclase b) cAMP
c) IP3 d)DAG

103. Action potential is initiated at the Axon Hillock - Initial segment of the neuron because - ***(AI09)***
a) Threshold for excitation is lowest
b) Neurotransmitter is released at this site
c) It is an unmyelinated segment
d) Has lowest concentration of voltage gated sodium channels

104. All of the following are involved in the transmission of regulatory signals through the ECF, Except -
a) Synaptic signals through neurotransmitters
b) Endocrine signals through hormones *(AI 09)*
c) Direct contact through gap junctions
d) G protein coupled receptors

105. Muscle spindle detects - *(ARMSMay 09)*
a) Tension b) Length
c) Proprioception d) Stretch

106. Somatomedin mediates - *(ARMSMay 09)*
a) Deposition of chondroitin sulfate
b) Lipolysis
c) Gluconeogenesis
d) Decreased rate of glucose uptake by cells

107. cGMP is second messenger for which hormone (s) -
a) Somatostatin *(PGI June 09)*
b) Atrial natruretic factor
c) Angiotensin II
d) antidiuretic hormone (ADH)
e) Nitric Oxide (NO)

108. What is/are effect on membrane when extracelluler concentration of K^+ of decreased - *(PGI June 09)*
a) *i* magnitude of RMP
b) T negativity of the membrane
c) f magnitude of RMP
d) *i* negativity of membrane

109. About osteon which of the following statement(s) is/ are correct - *(PGI June 09)*
a) Present in compact bone
b) Concentric Lamallae is present
c) Haversian canal is present
d) Volkman's canal surrounded by concentric lamellae

110. True about Galvanic skin Response -*(PGI June 09)*
a) Indicator of thermal sweating
b) T by sweating because of sweat has electrolytes
c) Fall when sympathetic activity is high
d) Fall is associated with yogic practice

111. Osmotic pressure of 1 mol of ideal solute relative to pure water is - *(PGI June 09)*
a) 6.5 atm. b) 22.4 atm.
c) 4 atm. d) 2 atm.
e) latm.

112. The following is an example of a primarily inhibitory amino acid - *(Corned 09)*
a) Glutamate b) Aspartate
c) Glycine d) Somatostatin

113. Resting membrane potential of a neuron is -
a)-9 mV b)-50mV *(Corned09)*
c) -70mV d)-100 mV

114. Sarcomere is the area between - *(Corned 09)*
a) Two consecutive I bands
b) Two adjacent Z lines
c) A band and I band
d) Two H zones

115. Plasma ceruloplasmin is a - *(Corned 09)*
a) Alpha 1 globulin b) Alpha 2 globulin
c) Beta 1 globulin d) Beta 2 globulin

95)b 96)c 97)c 98)d,e 99)b,c 100)a 101)c 102)a 103)a 104)c . 105)b 106)a 107)b,e 108)b,c 109) a,b,c 110) a,b,c lll) b 112)c 113)c 114)b 115)b

116. Heme to bilirubin conversion is carried out by -
a) Haeme oxygenase *(Corned 09)*
b) Haeme reductaste
c) Haeme isomerase
d) Haeme hydrolase

117. Drug transport process that requires energy -
a) Active transport *(DELHIPG Mar 09)*
b) Passive diffusion
c) Conventive current
d) Pinocytosis

118. Major neurotransmitter released at end organ effectors of the sympathetic division of the autonomic nervous system - *(DELHI PG Mar. 09)*
a) Adrenaline b) Noradrenalin
c) Dopamine d) Acetylcholine

119. Which of the following transport processes is passive - *(DELHI PG Mar 09)*
a) Co-transport of Na^+ ion and a molecule into cell
b) Echange of K^+ ion outside the cell for Na^+ ion inside the cell
c) Flow of H_20 through cell membrane by osmosis
d) Uptake of molecules into cell by endocytosis

120. Ca^{2+} Channel blockers would have a significant effect on muscle function in - *(DELHIPG Mar 09)*
a) Skeletal muscle b) Smooth muscle
c) Both the above d) Neither

121. Which of the following is not true for cardiac and skeletal muscle fibers ? *(DELHIPG Mar 09)*
a) Both cardiac and skeletal muscles exhibit graded contraction
b) Excitation-contraction coupling in both depends upon increased intracellular Calcium
c) Excitation-contraction coupling is not dependent on extracellular Ca^{2+} in skeletal muscle
d) Cardiac action potential has a plateau and a longer refractory period

122. Synaptic transmission in the autonomic ganglion is usually : *(DELHIPG Mar 09)*
a) Adrenergic b) Peptidergic
c) Cholinergic d) Mediated by substance P

123. In peripheral tissues which of the following contains substance P - *(AIIMS Nov 09)*
a) Plasma cell b) Mast cell
c) Nerve terminal d) Vascular endothelium

124. Basal metabolic rate depends most closely on -
a) Lean body mass b) Body mass index *(AI10)*
c) Obesity d) Body surface area

125. Decreased basal metabolic rate is seen in - *(AI 10)*
a) Obesity b) Hyperthyroidism
c) Feeding d) Exercise

126. A twitch of motor unit is called - *(DPG10)*
a) Myoclonic jerk b) Tremor
c) Fasciculation d) Chorea

127. Which of the following is the most abundant diet of animal origin? *(Maharashtra 10)*
a) Phospholipids b) Cholesterol esters
c) Cholesterol d) Triglycerides

128. True about Nissl granule - *(PGIMay 10)*
a) Involves in RNA synthesis
b) Present in axon
c) Present in dendrite
d) Involves in protein synthesis
e) Structurally they are endoplasmic reticulum

129. All of the following statements about phagocytosis are true, except - *(AI 11)*
a) Amoeba and other unicellular protozoa make their living out of this
b) Used to ingest particles <0.5 microns in size
c) Used to ingest particles >0.5 microns in size
d) Digestion occurs within phagolysosomes

130. Acetylcholine acting on nicotinic receptors produces- *(Korn 11)*
a) Contraction of skeletal muscle
b) Secretion of saliva
c) Bradycardia
d) Pupillary constriction

131. Most commonly occurring amino acid in the collagen structure is- *(Karn 11)*
a) Serine b) Glycine
c) Hydroxyproline d) Proline

132. Most diffusible ion in excitable tissue is -
a) Na+ b)K+ *(Punjab 11)*
c) Ca++ d)Cl-

133. Nernst potential of Na^+ is - *(PUNJAB 11)*
a)+94 b)+61
c) -64 d)-94

134. Which is electrical synapse? *(PUNJAB11)*
a) Motor end plate b) Gap junctions
c) Tight junctions d) Pores of kahn

135. Second messenger for nitric oxide - *(Jipmer 10)*
a) cAMP b)cGMp
c) IP3-DAG d) Calcium

136. Magnitude of action potential is determined by -
a) Na+ b)Mg2+ *(Jipmer 10)*
c)K+ d)Ca2+

137. Total body water differences between male & female is not seen at the age of - *(Jipmer 11)*
a) Above 60 years b) 40 - 60 years
c) 10 - 18 years d) 18 - 25 years

138. Efferent neuron for skeletal muscle *is-*(Jipmer 11)
a) Alpha motor neuron b) Gamma motor neuron
c) la fibre d)Ib fibre

139. Receptor for stretch reflex is - *(Jipmer11)*
a) Muscle spindle b) Golgi tendon organ
c) Proprioceptors d) Golgi bottle neuron

140. The parameter that remains unchanged with advancement of age - *(Jipmer 11)*
a) Hematocrit b) Creatinine clearance
c) FEV d) Heart rate response to stress

141. Skeletal muscle contraction ends when -
a) Ions move out of cytoplasm *(NEET/DNB Pattern)*
b) Ach is absorbed frm the nmj
c) Closure and indrawing of receptors
d) Decreased calcium outside reticulum

116) a 117)a 118)b 119)c 120)b 121)a 122)a 123)c 124)a>d 125) a 126) c 127)d 128)c,d,e
129)b 130) a 131)b 132)b 133)b 134)b 135)b 136)a 137)d 138)a 139)a 140)a 141)d

142. Mitochondria have - (*NEET/DNB Pattern*)
a) Plasmid DNA
b) Circular DNA
c) Single stranded DNA
d) Double stranded circular DNA

143. Presynaptic facilitation is caused by- *(NEET/DNB*
a) Prolonged opening of calcium channels *Pattern)*
b) Prolonged opening of chloride channels
c) Prolonged opening of sodium channels
d) Prolonged closure of potassium channels

144. Most distinguishing feature between skeletal muscle and smooth muscle - *(NEET/DNB Pattern)*
a) Troponin b) Tropomyosin
c) Myosin d) Actin

145. Which is not an action of bradykinin -
a) Vasoconstriction *(NEET/DNB Pattern)*
b) Increased vascular permeability
c) Chemo attractant
d) Pain on injection

146. Which vitamin required for hydroxylation of proline-
a) A b)D *(NEET/DNB Pattern)*
c) C d)K

147. Volume of ICF in body - *(NEET/DNB Pattern)*
a) 0.2*body wt b) 0.4*body wt
c) 0.6*body wt d) 0.8*body wt

148. Pantothenic acid is needed for donating the following moiety - *(NEET/DNB Pattern)*
a) Acetyl co A b) Carboxyl
c) Hydroxyl d) H^+

149. Most potent anti oxidant - *(NEET/DNB Pattern)*
a) VitA b)VitK
c) VitE d)VitC

150. Nernst potential for K+ is - *(NEET/DNB Pattern)*
a)-f90 b) -90
c) +70 d)-70

151. Vit k helps in gamma carboxylation of following AA..
a) Glutamate b) Aspartate *(NEET/DNB Pattern)*
c) Glycine d) Alanine

152. RMP of nerve cell is equal to which ion's equilibrium potential..? *(NEET/DNB Pattern)*
a) K^+ b) Cl"
c) Na^+ d) Ca^+

153. Most osmotically active intracellular cation -
a) K^+ b) Na^+ *(NEET/DNB Pattern)*
c) Mg^{+2} d) Protein

154. Inward flow of Na^+ in heart leads to- *(NEET/DNB*
a) Plateu phase b) Action potential *Pattern)*
c) Repolarization d) No change

155. ICF is - *(NEET/DNBPattern)*
a) 14 L b) 20 % of body weight
c) 28 L d) 33% of body weight

156. ECF is measured by - *(NEET/DNBPattern)*
a) Inulin b) D_20
c) Evan's blue d)$3H_2Q$

157. Golgi tendon apparatus conveys message to cns, depends upon - *(NEET/DNB Pattern)*
a) Tension in muscleb) Length of muscle
c) Rapaidity of contraction d) Blood supply

158. In severe exercise, decrease in pH is due to -
a) Respiratory acidosis *(NEET/DNB Pattern)*
b) Lactic acidosis
c) H^+ retension
d) $HC0_3$'excretion

159. Water travelling from extracellular to intracellular is by - *(NEET/DNB Pattern)*
a) Co-transport b) Diffusion
c) Filtration d) Active transport

160. The cell junctions allowing exchange of cytoplasmic molecules between the two cells are called - *(AT 03, NEET/DNB Pattern)*
a) Gap junctions
b) Tight junctions
c) Focal junctions

161. Sarcomere extends between - *(NEET/DNB Pattern)*
a) A band & I band b) Two Z lines
c) Two I bands d) None

162. Actin's active site is covered *by-(NEET/DNB Pattern)*
a) Myosin b) Tropomyosin
c) Troponin d)Desmin

163. ECF is how much part of total body weigh- *(NEETZ*
a) One third b)Half *DNBPattern)*
c) Two third d)None

164. Number of golgi tendon organs per 100 muscle fibres - *(NEET/DNB Pattern)*
a) 1-20 b) 200400
c) 50-60 d) 80-100

165. Which of the following is used in exocytosis -
a) Ca b)Mg *(NEET/DNB Pattern)*
c) Na d)K

166. Contraction of muscle can be caused by -
a) Release of noradrenaline *(NEET/DNB Pattern)*
b) Release of acetylcholine
c) Release of serotonin
d) Release of histamine

167. Inner hair cells depolarises due to- *(NEET/DNB*
a) k +influx b)na influx *Pattern)*
c) k efflux d) Voltage gated ca channels

168. Which cell junction allows exchange of cytoplas mic molecules - *(NEET/DNB Pattern)*
a) Gap b) Tight
c) Anchoring d)None

169. Myosin filament has a fixed length of- *(NEET/DNB*
a) 0.16 nm b) 1.6 microm *Pattern)*
c) 16nm d) 1.6 mm

170. Energy currency of the cell is -*(NEET/DNB Pattern)*
a) Nucleotide diphosphate
b) Nucleotide triphosphate
c) Deoxynucleotide diphosphate
d) Nuceotide monophosphate

142) d 143) a 144)a 145)a 146)c 147)b 148)a 149)c 150)d 151)a 152)b 153)a 154)b 155)c 156) a 157) a 158)b 159)None 160)a 161)b 162)b 163)a 164)a 165)a 166)b 167)a 168)a 169)b 170) b

171. Which of the following is used in exocytosis-
a) Ca b) Mg *(NEET/DNB Pattern)*
c) Na d)K

172. Na/K pump which enzyme is used -
a) ATPase b)GTPase *(NEET/DNB Pattern)*
c) Acetyl Co A c)NADPH

173. Thin filament consists of all except-
a) Actin b) Troponin *(NEET/DNB Pattern)*
c) Myosin d) Tropomyosin

174. Which ion causes repolarization- *(NEET/DNB*
a) Magnesium b) Calcium *Pattern)*
c) Potassium d) Sodium

175. Nerve depolarization is due to- *(NEET/DNB*
a) Opening of sodium channels *Pattern)*
b) Opening of chloride channels
c) Opening of potassium channels
d) Opening of calcium channels

176. Osmolarity is defined as - *(NEET/DNB Pattern)*
a) Number of osmole per litre
b) Number of osmole per kg
c) Weight of solute per litre
d) Weight of solvent per litre

177. Number of golgi tendon organs per 100 muscle fibres- *(NEET/DNBPattern)*
a) 1-20 b) 200-400
c) 50-60 d) 80-100

178. Thin filament consists of all except- *(NEET/DNB*
a) Actin b) Troponin *Pattern)*
c) Myosin d) Tropomyosin

179. Insensible water loss per day is -*(NEET/DNB Pattern)*
a) 100 ml b) 300 ml
c) 700ml d) 1000ml

180. Strengthening muscle exercise-(AEis*T/DNB Pattern)*
a) Isotonic b) Isometric
c) Aerobic d) None

181. Plasma membrane is mainly composed of - *(NEET/*
a) Cholesterol b) Carbohydrate*DNB Pattern)*
c) Phospholipid d) Protein

182. Most permeable to pure phospholipid bilayer -
a) Oxygen b)Na *(NEET/DNB Pattern)*
c) Q d) Water

183. True regarding Na^+ ion - *(NEET/DNB Pattern)*
a) Responsible for Donnan effect
b) Responsible for Resting membrane potential
c) Responsible for Depolarization
d) Does not help other ions in transport

184. Glucose is co-transported with Na^+ ions. This is a type of - *(NEET/DNBPattern)*
a) Secondary active transport
b) Primary active transport
c) Facilitated diffusion
d) Simple diffusion

185. Action potential is - *(NEET/DNB Pattern)*
a) Decremental phenomenon
b) Doesn't obey all or none phenomenon
c) K^+ goes from ECF to ICF
d) Threshold stimulus is required

186. Type I muscle fibers are - *(NEET/DNB Pattern)*
a) Red b)Anerobic
c) Large d) Glycolytic

187. Catabolism of H_20_2 is carried out by -
a) Peroxisomes *(NEET/DNB Pattern)*
b) Mitochondria
c) Endoplasmic reticulum
d) Lysosomes

188. Most susceptible tissue to hypoxia -
a) Muscle *(NEET/DNB Pattern)*
b) Neurons
c) Hepatocytes
d) Myocytes

189. Energy is required in - *(NEET/DNB Pattern)*
a) Diffusion b) Osmosis
c) Active transport d) None

190. Major cation in ECF - *(NEET/DNB Pattern)*
a) Na b)K
c) $P0_4^{\ 2}$ d) Mg

191. Renshaw cell inhibition is - *(NEET/DNB Pattern)*
a) Feedback facilitation
b) Feed forward inhibhition
c) Feed forward facilitation
d) Feedback inhibhition

192. On weight basis, the membrane contains protein and lipid in the ratio of- *(NEET/DNB Pattern)*
a) 1:2 b) 1:1
c) 2:1 d)4:1

193. Na-K ATPase - *(NEET/DNB Pattern)*
a) 3 Na out/ 2K in b) 3Na in*J* 2K out
c) 2Na out/ 3K in d) 2Na in/3K out

194. Resting membrane potential is generated mainly by - *(NEET/DNB Pattern)*
a) Na^+ b) K^+
c) Cl- d) CA^{2+}

195. cAMP action mediates all except -
a) Glucagon *(NEET/DNB Pattern)*
b) Follicle stimulating hormone
c) Leutinizing hormone
d) estrogen

196. Blood flow to skeletal muscles (ml/min) -
a) 100 *(NEET/DNB Pattern)*
b) 200
c) 400
d) 800

197. A marker of Golgi apparatus is -
a) Galactosyl transferase *(NEET/DNB Pattern)*
b) Acetyl CoA synthetase
c) Pyruvate kinase
d) Malonyl CoA

171)a 172) a 173) c 174)c 175) a 176) a 177) a 178) c 179)b 180) a 181)d 182) a 183) c 184) a
185) d 186) a 187) a 188)b 189)c 190) a 191)d 192) b 193) a 194)b 195) d 196)d 197) a

198. Resting membrane potential of neuron is -
a) +70mv b)-70mv *(NEET/DNB Pattern)*
c) +90 mv d)-90mv

199. Which of the following increases particle diffusion across the cell membrane? *(NEET/DNB Pattern)*
a) Increasing size of particle
b) Decreasing lipid solubility of substance
c) Increasing lipid solubility of substance
d) Decreasing size of opening in cell membrane

200. When sodium enters cells -*(NEET/DNB Pattern)*
a) There is spike in action potential
b) There is plateu in action potential
c) There is repolarization
d) There is hyperpolarization

201. Cell volume & shape is maintained by -
a) Goldman effect *(NEET/DNB Pattern)*
b) Gibbs - Donnan effect
c) Singer's effect
d) None

202. Tetanic contraction is due to accumulation of -
a) Na^+ b) Ca^{2+} *(NEET/DNB Pattern)*
c) K^+ d) Cl*

NERVOUS SYSTEM

203. Motor area in cerebrum is mainly associated with-
a) Performing all voluntary movements *(Delhi 93)*
b) Performing an involuntary movements
c) Executing fine movements
d) Controlling all motor activity

204. The following is a neurotransmitter -*(JIPMER 91)*
a) Serine b) Glutathoine
c) Glutamine d) Aspartate

205. Aqueous homour has composition very similar to CSF - *(JIPMER 81, AMC 85)*
a) Without the cells b) Without the Cl
c) Without the $HC0_3$ d) With high content of Cl'

206. CSF to plasma glucose ratio is normally - *(AI99)*
a) 2.0 to 2.4 b) 1.2 to 1.4
c) 0.6 to 0.8 d) 0.2 to 0.34

207. In Alzheimer's disease charactersitic lesion seen in- *(A197)*
a) Amygdaloid complex b) Nucleus of Meynert
c) Basal ganglia d) Peri ventricle

208. The Inability of the boys natural defence system to detect an abnoxious odour following long term exposure to the smell is called - *(Jipmer 81, PGI81)*
a) Olfactory fatigue b) Rhinoreaction
c) Rhinostenosis d) Rhinorrhoea

209. For the convergence of rays on to the retina, most important structure is - *(All India 97)*
a) Anterior surface of cornea
b) Lens curvative
c) Size of eye ball
d) Acquous humour

210. Refractive index of cornea is about - *(Delhi 80,89)*
a) 1.30 b) 1.33
c) 1.37 d) 1.42
e) 1.50

211. Colour vision is by- *(Kerala 94)*
a) Rods b) Cones
c) Occipital cortex d) Bipolar cells

212. Blind spot of mariotte is - **(***AP86)*
a) Fovea centralis b) Macula lutea
c) Optic disc d) None of the above

213. Near point of a 5 year old child is - *(KERALA 98)*
a) 5 cms b) 10 cms
c) 15 cms d) 25 cms

214. The most important constituent of endolymph is -
a) Sodium b) Potassium *(PGI 89)*
c) Chloride d) Protein

215. Primary visual field is situated around the.... sulcus-
a) Central b) Calcarine
c) Superior temporal d) Inferior ccipital

216. Kluver-Bucy syndrome is characterized by all except-
a) Korsakoff amnesia *(AIIMS 81, JIPMER 81)*
b) Apathy and placidity
c) Decreased sexual activity
d) Sham rage

217. EEG in parodoxical sleep is - *(AIIMS97)*
a) Low amplitude mixed frequency
b) High amplitude low frequency
c) Q - waves
d) Delta & Theta waves

218. Thalamus relay all sensory sensations except-
a) Touch b) Temperature *(JIPMER 98)*
c) Olfaction d) Auditory

219. Which one of the following regions of the body has the largest representation in cortical area -*(UPSC 97)*
a) Trunk muscle b) Muscles of forearm
c) Muscles of mastication d) Muscles of thumb

220. In normal CSF glucose is - *(SCTIMS 98)*
a) 2/3 blood level b) 1/3 blood level
c) Equal to blood level d) None of the above

221. Lowest representation in sensory cortex is for-
a) Thumb b) Genitalia
c) Tongue d)Face

222. While doing a neurosurgery, the paracentral lobule was accidentally damaged. It will lead to which of the following - *(AIIMS 2K)*
a) Hemiplegia
b) Monoplegia
c) Involvement of the perineum and lower limbs
d) Quadriplegia

223. Function of the thalamus is - *(AIIMS 92)*
a) Relay centre b) Arousal
c) Pain perception d) Pain localisation

198)b 199)c 200)a 201)b 202)b 203)a 204)d 205)a 206)c 207)b 208)None 209)a 210)c 211)b
212)c 213)a 214)b 215)b 216)c 217)a 218)c 219)c 220)a 221)c 222)c 223)a

224. Weber-Fechnar law is - *(All India 97)*
a) Mangitude of sensation is proportional to number of receptor stimulated
b) Mangitude of sensation is proportional to amplitude of action potential or receptor
c) Mangitude of sensation is proportional to logarithm of intesity of stimulus
d) Intensity of frequency of stimulus

225. "Spatial distortion" is common is disorders of -
a) Dominant parietal lobe *(PGI81, AIIMS 84)*
b) Non-dominant parietal lobe
c) Dominant temporal lobe
d) Non-dominant temporal lobe

226. Deja Vu is seen in - *(Kerala 94)*
a) Normal persons b) Temporal lobe epilepsy
c) Psychosis d) All of the above

227. Shivering is abolished during general anaesthesia by- *(AI91)*
a) Cerebrum b) Thalamus
c) Hypothaimus d) Vasomotor centre

228. The receptors of pain is - *(PGI 85)*
a) Ruffini organs b) Meckel's bodies
c) Golgi bodies d) Free nerve endings

229. Parasympathetic nerve supply of heart comes through - *(AIMS 81, TN 90)*
a) Phrenic nerve b) Spinal accessory nerve
c) Vagus nerve d) None of the above

230. First relay station of pain is - *(AIIMS 80, PGI 81)*
a) Spinal cord b) Medulla
c) Pons d) Thalamus

231. Superficial reflexes are - *(PGI85, NIMHANS 87)*
a) Corneal b) Plantar
c) Ankle d) Hoffmans
e) Jaw

232. Percentage of sensory fibres in a pure motor nerve is - *(PGI 87, JIPMER 86)*
a) 0% b) 10%
c) 2% d)40%
e) 25%

233. Enzyme involved in acetylcholine synthesis is -
a) Choline acetyl transferase *(Jipmer 86)*
b) Choline esterase
c) Pseudo cholinesterase
d) Glycine

234. Inhibition of the spinal cord may be brought about by- *(AI88)*
a) Glutamic acid b) Aspartic acid
c) Glycine d) Strychinine

235. Somatostatin is produced in the -
a) Hypothalamus b) Anterior pituitary
c) Delta cells of pancreas d) Alpha cells of pancreas

236. Beta endorphines are found in high concentration in-
a) Substantia gelatinosa b) Post pituitary
c) Spinal cord d) Medulla

237. The neuromuscular transmitter is - *(AI89)*
a) Dopamine b) Epinephrine
c) Norepinephrine d) Acetyl choline

238. Melatonin is secreted by - *(AI 89)*
a) Hypothalamus b) Adrenal cortex
c) Pineal gland d) Melanocytes

239. The satiety centre is located in the - *(ARMS 85)*
a) Dorsomedian nucleus of hypothalamus
b) Ventromedian nucleus of hypothalamus
c) Perifomical region
d) Lateral hypothalamic area

240. Lesions in... lead to sensory ataxia -
a) Posterior column b) Vermis
c) Floculo-nodular lobe d) Vestibular apparatus

241. Crude touch sensations are carried by -
a) Lateral spinothalamic tract
b) Ventral spinothalamic tract
c) Posterior columns
d) Pyramidal tracts

242. The basic postural reflex is -
a) Corssed extensor reflex
b) Golgi tendo reflex
c) Stretch reflex
d) Positive supporting reflex

243. Transection of medullary pyramid result in -
a) Hypotonia b) Atrophy of muscles
c) Forced grasping d) Positive babinski sign

244. What is the mechanism by which infection causes fever- *(TN90)*
a) Increased heat production and decreased heat loss
b) Decreased heat production and decreased heat loss
c) Pyrogens action dependent on hypothalamus
d) None of the above

245. Damage to sensory area 1 of the cerebral cortex results in - *(ARMS 82)*
a) Loss of perception of pain
b) Loss of tactile and two point discrimination
c) Loss of perception of touch
d) Loss of only tactile discrimination

246. Vomiting centre is situated in the - *(TN 90)*
a) Hypothalamus b) Amygdala
c) Pons d) Medulla

247. Pain producing substance is - *(Jipmer 90)*
a) Serotonin b) Substance P
c) Histamine d) Acetyl choline

248. Swallowing centre is situated in - *(Jipmer 90)*
a) Midbrain b) Pons
c) Medulla d) Cerebellum

249. Pyrogens raise body temperature by - *(AI90)*
a) Setting the thermostat to higher level
b) Releasing interleukins
c) Decreasing peripheral heat liberating mechanism
d) causing peripheral vasoconstriction

250. Medial geniculate body is concerned with -
a) Hearing b) Vision *(Kerala 90)*
c) Smell d) Taste

224) c 225) b 226) d 227) c 228) d 229) c 230) a 231)a,b,d,e 232) d 233) a 234) c 235) a,c 236) c
237) d 238) c 239) b 240) a 241)b 242) c 243) a,d 244) c 245) b 246) d 247)a,c,d 248) c 249) a,b 250) a

251. Skeletal muscle contraction requires all except -
a) Depends on action potential *(AJ 91)*
b) Recruitment of more number of fibres produces more contraction
c) Increase in the strength of action potential increase contraction
d) Local tension

252. Smell receptors are seen in - *(Kerala 91)*
a) Lower 1/3 of nasal mucosa
b) Upper 1/3 of nasal mucosa
c) Amygdaloid body
d) Cribriform plate

253. Smooth muscle has the following characteristic -
a) Threshold is higher *(Jipmer 91)*
b) RMP is greater
c) Action potential is greater
d) Chronaxie is longer

254. Which is caused by Acetylcholine through Nicotinic receptors - *(Jipmer 91)*
a) Contraction of Skeletal muscle
b) Descrease of heart rate
c) Secretion of Saliva
d) Contraction of pupils

255. The intensity of sensory stimuli is determined by -
a) Duration of latent period *(Jipmer 91)*
b) Amplitude of action potential
c) Frequency of action potential
d) Amplitude of generation potential

256. Nucleus gracilis and Nucleus cuneatus are the first synapse for -
a) Dorsal columns
b) Dorsa lateral tract
c) Ventral spino thalamic tract
d) Lateral spinothalamic tract

257. First change to occur in the distal segment of cut nerves - *(AllIndia 92)*
a) Myelin degeneration
b) Axonal degeneration
c) Mitosis of schwann cell
d) Sprouting

258. Action potentials are produced by - *(All India 92)*
a) Na^+ Influx b) Na^+ K^+ Influx
c) K^+ Influx d) K^+ efflux

259. Paccinian corpuscles are major receptors for -
a) Pressure b) Pain
c) Touch d) Temperature

260. Conduction in which type of nerve fibres is blocked maximally by pressure - *(JIPMER 92)*
a) C fibres b) A-alpha fibres
c) A-Beta d) A- gamma

261. Which structure in the eye is pain sensitive-
a) Iris b) Choroid *(JIPMER 92)*
c) Ciliary body d) All of the above

262. Spinothalamic tract transmits all the following sensations except - *(A ll India 93)*
a) Proprioception b) Pain
c) Temperature d) Touch

263. Increased Gamma efferent discharge is seen in all except: *(Jipmer 93)*
a) Jendrassik's maneruvre b) Anxiety
c) Rapid shallow breathing d) Stimulation of skin

264. Purkinje cell is a - *(Jipmer 93)*
a) Output cell b) Input cell
c) Inter neuron d) Connector neuron

265. In cerebellar disease all the statements are correct except - *(Jipmer 80, Delhi 87)*
a) The Romberg's sign is positive
b) There is Adiodokokinesia
c) There is pendular knee jerk
d) There is involuntary tremor

266. A stimulus event is called a reinforcer only if it canbe shown to - *(AIIMS 89)*
a) Produce reduction of a homeostatic need
b) Lead to increased probability of response
c) Serve as an unconditioned response for operant behaviour
d) Elicit the response that follows it

267. In addition to kidney counter current multiplier system is present in - *(AIIMS 81, Delhi 93)*
a) Crypts of gastric submucosa
b) Bone
c) Muscles
d) Skin

268. The electroencephalographic (EEG) curves are called - *(Jipmer 78, Delhi 87)*
a) ABCDE curves b) Berger's Rhythm
c) Neurogenic Rhythm d) REM Rhythm

269. Relation between nerve thickness and conditions velocity is - *(AIIMS 78, Delhi 90, 92)*
a) Linear b) Parabolic
c) Hyperbolic d) No relation

270. Motor area of Brodman's is area - *(Delhi 93)*
a) 1 b)4
c) 5 d)7

271. The Helmholtz theory of colour vision states that -
a) There are three kinds of cones in the retina responding to the three primary colours *(DNB 91)*
b) There are two kinds of cones called dominators and modulators.
c) There is only one kinds of cone and the colour is recognised only in area 17
d) There are seven types of cones responding to the seven colours of the spectrum.

272. Satiety centre in hypothalamus is regulated by- *(Delhi 92)*
a) Gastric dilatation b) Blood glucose levels
c) Blood insulin levels d) All of the above

273. The cerebellum - *(Jipmer 79, Nimhans 89)*
a) Has a totally inhibitory output from its cortex
b) Has only excitatory signal output form its deep nuclear layers
c) Has a conscious interpretation of motor activity
d) Has inhibitory influence on muscle tone in humans

251)c 252) b 253) d 254) a 255) c 256) a 257) b 258) a 259) c 260) c 261) d 262) a 263) c 264) a
265) d 266) b 267) d 268) b 269) a 270) b 271) a 272) b 273) a,b

274. The condition known as REM sleep is- *(Nimhans 88)*
a) That point at which the individual becomes aware and alert
b) Referred to as paradoxical sleep
c) Characterized by total lack of all muscular activity
d) Charactrized by slow high voltage regular EEG activity

275. Red colour blindness is called - *(AMU 92)*
a) Deuteranopia b) Protanopia
c) Protanmaly d) Deuteranomaly

276. True visceral pain arise from - *(PGI80, AMU87)*
a) Distension b) Mechanical irritation
c) Excessive heat d) Compression
e) Chemical stimulation

277. EEG rhythm recorded from the surface of the scalp during REM sleep - *(AIIMS86)*
a) Alpha b)Beta
c) Delta d) Theta

278. Interneurons neurons are - *(AMC89)*
a) Essential part of stretch reflex
b) Essential part of all reflexes
c) Always excitatory
d) Always inhibitory
e) None of the above

279. Intraocular fluid- *(AIIMS88)*
a) Is produced at the canal of schlemm
b) Is reabsorbed by ciliary process
c) Helps to maintain the curve of cornea
d) None of the above

280. Non myelinated axons differ from myelinated in that they - . *(AIIMS 79, Bihar 89)*
a) Are more excitable
b) Lack nodes of Ranvier
c) Are not capable of regeneration
d) Are not associated with Schwann cells

281. What is true regarding the gamma efferent neuron - *(JIPMER 80, ROHTAK 85)*
a) An 'A' group motor neuron with a smaller diameter than that of alpha efferent neurons
b) Innervates intrafusal fibres
c) Innervates muscle fibres that stretch annulospiral endings
d) All of the above

282. A unilateral upper motor neuron lesion in the internal capsule is best characterized by -
a) Diminished use of contralateral appendages below the lesion *(Nimhans 89)*
b) Muscle fasciculations
c) Ipsilateral hypotonicity
d) Flexion of the leg

283. Which of the following reflexes disappear in the absence of functional connections between the spinal cord and the brain ? *(PGI 81, DNB 92)*
a) Swallowing reflex b) Seating reflex
c) Withdrawal reflex d) Erection of penis
e) All of the above

284. The attenuation reflex is due to - *(AP 91)*
a) Contraction of tensor tympani
b) Contraction of stapedius
c) Contraction of tensor tympani and stapedius
d) Inward movement of the oval window

285. Muscle spindle is - *(AP 90)*
a) Receptor for a variety of multisynaptic reflexes
b) Receptor for myotatic or stretch receptor reflex
c) Occurs only in antigravity extensor muscles
d) Excited by both stretch and contraction of the muscles in which it is located.

286. In excitable cells, repolarization is closely associated with one of the following events -
a) Na efflux b) Na influx *(PGI 89)*
c) K efflux d)K influx

287. The EEG rhythm having lowest frequency is-
a) Alpha b)Beta *(Delhi87)*
c) Delta d) Theta

288. Most of the refraction that occurs in the eye occurs at the- *(UP 92)*
a) Anterior surface of cornea
b) Posterior surface of cornea
c) Anterior surface of lens
d) posterior surface of lens

289. An EEG- *(AIIMS 80, BHU 87)*
a) Provides indication of inteligence
b) Tends to show waves of smaller amplitude during deep sleep than of alert state
c) Show waves with a lower frequency during intense thought than during sleep
d) Is bilaterally symmetrical

290. The reticular formation is a diffuse collection of
a) Only sensory neurons *(JIPMER 79,*
b) Only motor neurons *BIHAR 89)*
c) Only autonomic centres
d) All of the above

291. The receptors in retina for those of blue, green and red wave lengths are called - *(TN 91)*
a) Modulators b) Trichomators
c) Dominators d) None of the above

292. Which of the following cortical layers is stimulated by the diffuse thalamocortical system - *(PGI82, 84)*
a) Layer 2 b) Layer 3
c) Layer 4 d) Layer 5
e) Layer 6

293. Decerebrate animal results from the following experimental procedure- *(Bihar 89)*
a) Removal of the cerebrum
b) Transection at the upper border of midbrain
c) Inter collicular transection
d) Section above the thalamus

294. A unique characterstic of smooth muscle is that- *(AIIMS 84)*
a) It can sustain a contraction for prolonged periods
b) Calcium is not required for contraction
c) Repetitive contractions are not possible
d) Myosin filaments are not required
e) ATP is required for contraction

274) b 275) b 276) a 277) a 278) e 279) c 280) b 281)d 282) a 283) a 284) c 285) b 286) c 287) c 288) a 289) d 290) d 291) b 292) c 293) c 294) a

295. Under resting conditions the ganglion cells of the retina discharge at approximately what rate?
a) One per second *(A1IMS 78,DELHI 80)*
b) Five per second
c) 25 per second
d) 125 per second
e) 1250 per second

296. Which of the following statement is not true -
a) Decorticate rigidity is greater than decerebrae rigidity *(AP 91)*
b) Righting reflexes are absent in the decrebrate animal
c) Visual righting reflex is present in a thalamic
d) Decorticate rigidity is seen only when the animal is at rest

297. The medium with highest refractive index in the eye is - *(PGI88)*
a) Cornea b) Nucleus of the lens
c) Cortex of the lens d) Aqueous humor

298. Where is motor activity probably initiated in the brain ? *(AIIMS80, UPSC 82)*
a) Motor cortex b) Premotor cortex
c) Basal ganglia d) Cerebellum

299. The most susceptible fibre to hypoxia is -*(Delhi 86)*
a) A b)B
c) C d) All are equally sensitive

300. The fibre which is the thickest in human nerve is - *(ALIMS 79, DELHI 89)*
a) Touch b)Pain
c) Temperature d) Proprioception

301. The optical power of the eye is-*(Jipmer 81,Delhi 83)*
a) 25 Dioptres b) 50 Dioptres
c) 60 Dioptres d) 75 Dioptres

302. Lowest most level of integration of stretch reflex is at- *(AMC 87)*
a) Cerebral cortex b) Medulla
c) Lower medulla d) Spinal cord

303. The visible range in electromagnetic spectrum for human eye is - *(JIPMER 81, 91, DELHI 84)*
a) 200-300 nm b) 310-340 nm
c) 370-740 nm d) 740-870 nm

304. Buerger waves (alpha waves) of EEG have the rhythm per sec of- *(PGI 84, DELHI 84, 89*
a) 04 b) 4-7 *AIIMS 8 7, MAHE 07)*
c) 8-13 d) 13-30

305. The percentage of pyramidal fibres which are unmyelinated - *(PGI 84)*
a) 20 b)35
c) 50 d)75

306. The usual voltage of alpha rhythm in (microvolts)-
a) 5 b) 40 *(AIIMS 80, DELHI 87*
c) 50 d) 60 *PGI81)*

307. Rhodopsin is most sensitive and least sensitive to
a) Violet light, red light *(AIIMS 79, PGI 80)*
b) Red light, violet light
c) Green light, red light
d) Blue light, green light

308. The average number of muscle fibres attached to one golgi tendon organ are - *(AIIMS 84)*
a) 1-3 b) 5-10
c) 10-15 d) 15-75

309. Stapes rests in - *(AIIMS 84)*
a) Round window b) Oval window
c) Tympanic membrane d) Basilar membrane

310. Weber fechner law deals with - *(DNB 88)*
a) Frequency discrimination
b) Receptive field organization
c) Intensity discrimination
d) Two point discrimination

311. The band which disappears on muscular contraction is - *(JIPMER 81, DELHI 82)*
a) H b)I
c) A d)Z

312. An important facilitatory neurotransmitter mediating coitus induced ovulation is - *(PGI 88)*
a) Dopamine b) Serotonin
c) Adrenalin d) Noradrenaline

313. The frequency of beta waves (per sec) in EEG is-
a) 04 b)4-7 *(Delhi 87)*
c) 7-13 d) 13-30

314. Spike duration is maximum in which nerve fibre-
a) A- alpha b) A- beta *(PGI 79, AMU 84)*
c) A-delta d)C

315. pH of CSF is - *(PGI81, UP 99)*
a) 7.13 b) 7.23
c) 7.33 d)7.40

316. What are some of the modalities of sensation that are detected by free nerve endings ?- *(AIIMS 86)*
a) Crude touch b) Pain
c) Tickle snesations d) Muscle stretch

317. Sham rage is produced when - *(AIIMS 85)*
a) Section is made at L2 vertebrae
b) Pons is removed
c) Medulla is removed
d) All the cortex is removed from the brain

318. If the red cones and the green cones are stimulated approximately equally. What colour will the person-
a) Red b) Yellow *(PGI 80)*
c) Green d) Purple
e) Blue

319. In parkinsonism tremor is - *(AIIMS 84)*
a) 6-8 per second b) 2 per second
c) 2-4 per second d) Uncountable

320. Flocculonodular lobe of cerebellum is concerned with- *(Kerala 94)*
a) Equilibrium b) Co-ordination
c) Baroreception d)Chemoreception

321. Vestibular fibres relay in - *(Kerala 94)*
a) Vermis
b) Lateral genticulate body
c) Flocculonodular lobe of cerebellum
d) Auditory cortex

295) c 296) a 297)b 298)b 299)b 300)d 301)c 302)d 303)c 304)c 305)b 306)c 307)c 308)c 309)b 310)c 311)a 312)b 313)d 314)d 315)c 316)a,b,c,d 317)d 318)b 319)a 320)a 321)c

322. All of the following relay in sensory cortex except-
a) Pain b) Touch *(Kerala94)*
c) Temperature d) Olfaction

323. Destruction of lateral nucleus of thalamus lead to
a) Aphagia b) Hyperphagia *(Kerala 94)*
c) Satiety d) Somnolence

324. One of the following is seen in auditory pathway-
a) Trapezoid body *(AllIndia 95)*
b) Lateral geniculate body
c) Genu of internal capsule
d) Lateral lemniscus

325. Which of the following nerve fibres is affected by local anaesthetics first - *(AllIndia 95)*
a) Type II b)A
c) B d)C

326. Unidirectional transport is seen across - *(AI96)*
a) Axon b) Synapse
c) Both of above d) None of above

327. Decreased hypothalamic function causes depressed levels of all of following hormones except- *(Delhi96)*
a) Gorwth hormone b) Prolactin
c) TSH d)ACTH

328. One of the following is a function of hypothalamus-
a) Swallowing *(Delhi96)*
b) Vomiting
c) Respiration
d) Homeostasis of temperature

329. Plateau phase of action potential is due to-
a) Na^+influx b)K^+efflux *(Assam 95)*
c) Na^+ Ca^slow channel d) All of the above

330. Normal resting membrane potential is -
a) -50 to-60 mv b)-80to-90mv
c) -lOOto-llOmv d)-30to-50mv
e) None

331. Best method to increase, the muscle strength is -
a) Isometric excercise *(Kerala 96)*
b) Isotonic excercise
c) Aerobic Isotonic excercise
d) Electrical stimulation

332. The receptors/buds responsible for carrying bitter taste sensation are situated - *(CUPGEE 96)*
a) At the tip of the tongue
b) Just behing the tip
c) At the sides
d) At the posterior aspect

333. Rheobase indicates - *(Karnat 96)*
a) Magnitude of the current
b) Rate of discharge
c) Velocity of nerve conduction
d) Specificity of impulse transmission

334. Warmth sensation is sensed by - *(Karnat 96)*
a) Pacinian capsule b) Meissneirs capsule
c) Raffine end organ d) Krauses end bulb
e) None of the above

335. Lesion of Caudate N^+ putamen : Chorea parkinsonison : lesion of Negrostriatal pathway isolated lesion of globus pallidus causes - *(AP 96)*
a) Chorea b) Athetosis
c) Tremor d) Flexion dystonia

336. All these are seen in a spinal reflex except -
a) Summation b) Fatigue *(AIIMS97)*
c) Memory d) Adaptation

337. Hypothalmus regulates all except - **(***AI97)*
a) Food intake
b) Temperature
c) Anticipatory rise in heart rate
d) Hypophysis

338. Alpha - wave in EEG is seen in - **(***PGI96)*
a) Sleep b) REM sleep
c) Awake state d) Mental work

339. Loss of feel of size & shape of a object is seen in lesion of - *(AIIMS 96)*
a) Tractus solitarius
b) Tractus cuneatus
c) Lateral spinothalamic tract
d) Cerebral cortex

340. In hippocampus EEG Waves are - *{A 198)*
a) Alpha wave b) Beta-wave
c) Theta-wave d) Delta wave

341. Group B fibre are - **(***AI98)*
a) Symapthetic preganglionic
b) Sympathetic post ganglionic
c) Parasympathetic preganglionic
d) Parasympathetic post ganglionic

342. Stereoanesthesia is due to lesion of - **(***AI93)*
a) Nucleus Gracilis b) Nucleus cuneatus
c) Cerebral cortex d) Spinothalamic tract

343. Phagocytosis in the CNS is done by - **(***AI98)*
a) Astrocytes b) Schwann cells
c) microglia d) Oligocytes

344. Nissl's substance is composed of - *{MAHE 98)*
a) Rough endoplasmic reticulum
b) Nerve cell vesicles
c) Aggregated mitochondria
d) Deposits of pigmented granules

345. An adolescent desirous of increasing his muscle mass is advised to - *{MAHE 98)*
a) Increase protein intake
b) Take steroids
c) Excercise the muscle
d) Electricity stimulate the muscle

346. All of the following manifestations are seen in cases of cerebeller damage in human beings except- *{ICS 98)*
a) Loss of non-declarative/reflexive memory
b) Loss of adjustment of vestibulo-ocular reflex
c) Static tremor and rigidity
d) Ataxia, atonia and asthenia

322) d 323) a 324) a,d 325) d 326) b 327) b 328) d 329) c 330) b 331)b 332) d 333) a 334) e 335) b
336) c 337) c 338) c 339) d 340) c 341) a,c 342) c 343) c 344) a 345) c 346) c

347. Circadian rhythm is controlled by- *(Kerala98)*
a) Supra chiasmatic nucleus
b) Hypothalamus
c) Thalamus
d) Pineal gland

348. A twitch of motor unit is called - *(AI99)*
a) Myoclonic jerk b) Tremor
c) Fasciculation d) Chorea

349. Prosap agnosia is- *(A199)*
a) Inability to recognise faces
b) Inability to draw
c) Inability to count
d) Inability to smell

350. Wallenberg degeneration is seen in - *(AIIMS 98)*
a) Proximal cut end of nerve with cell body
b) Distal cut end of nerve without cell body
c) Both the free ends of the cut nerve
d) All are true

351. Raised ECF K^+ levels seen in - *(TN 99)*
a) Endolymph b)Ectolymph
c) Aquous humour d) vitreous humour

352. Receptor which itself is a dendrite of a nerve -
a) Olfactory b) Gustatory (*TN99*)
c) Visual d) Hearing

353. Osmoreceptor is located at which site -
a) Anterior hypothalamus *(TN 99, AI 89)*
b) Renal dedulla
c) Carotid body
d) Atrial chamber

354. Crossed extensor reflex is a- *(JIPMER99)*
a) Withdrawal reflex b) Postural reflex
c) Monosynaptic reflex d) Sympathetic

355. Renshaw cell inhibition is an example of -
a) Feed-forward inhibition *(AIIMS 99)*
b) Oscillating motor activity
c) Circuit for bio feedback
d) All of the above

356. Arousal response is mediated by - *(MP 2K)*
a) Dorsal column
b) Reticular activating system
c) Spinothalamic tract
d) Vestibulo cerebeller tract

357. ATP needs- *(MP2K)*
a) Calcium b) Magnesium
c) Manganese d)Zinc

358. High twitch muscle fibres in comparison to low twitch muscle fibres are having more - *(AMC 2K)*
a) Mitochondria b)C-AMP
c) Cytoplasm d) Enzymes

359. In severe exercise muscle spasm occurs due to -
a) Accumulation of K+ *(UP2K)*
b) Accumulation of Acetylcholine
c) AccummulationofCa-H-
d) Depletion ATP

360. End plate potential follows which law -
a) All or none law *(Burdwan 2K, PGI88)*
b) Depolarisation
d)Hyperpolarisation
d)Propagation

361. While seeing a colour chart a colour blind male hasdecreased vision for red light colour which appear very light than that of other colours, which of the following is the likely anomaly in him?
a) Protanomaly b) Dutanomaly *(AI02)*
c) Tritanomaly d)Butanomaly

362. IPSP is due to - *(NIMHANS 01)*
a) C! influx b)K^+influx
c) Na^+ influx d) Ca^ influx

363. EPSP is due to - *(NIMHANS 01)*
a) K^+influx b)Na^+efflux
c) Na^+influx d) Ca^ influx

364. Sine qua non for cerebral cortex - *(NIMHANS 01)*
a) Stellate cells b) Pyramidal cells
c) Granular cells d) Basket cells

365. Initiation of impulse starts in - *(NIMHANS 01)*
a) Axon b) Axon hillock+initial segment
c) Cell body d) Dendritic tree

366. Bitter taste is mediated by action of- *(KERALA 01)*
a) Guanyl cyclase b)G protein
c) Tyrosine kinase d) Epithelial Na^+ chain

367. Skilled voluntary movement is initiated at -
a) Cerebral cortex (motor cortex) *(JIPMER02)*
b) Basal ganglia
c) Cortical association
d) Cerebellum

368. Human brain is more intelligent than monkey's brain due to - *(PGI 03)*
a) Larger brain
b) Increased compilations
c) Increased brain area compaired to body surface area
d) More blood supply

369. Function of microglia in CNS- *(PGI 03)*
a) Phagocytosis b) Myeline synthesis
c) Fibrosis

370. Function of Dendrites - *(PGI 03)*
a) It generates the action potential
b) Wave activity in E.E.G
c) Ted Retrograde firing
d) Ted Retrograde firing
e) Involved in memory

371. UMN includes- *(PGI 02)*
a) Pyramidal cells b) Peripheral nerves
c) Anterior horn cells d) Glial Cells
e)Schwann cells

372. Which of the following is most prone to hypoxic injury- *(PGI 2K, 99, Bihar03)*
a) Thalamus b) Hippocampus
c) Caudate nucleus d) Cerebellum

347) a 348) c 349)a 350)b 351)a 352)a 353)a 354)a 355)c 356)b 357)a 358)a 359)d 360)b
361)a 362)a 363)c 364)b 365)a 366)b 367)a 368)a 369)a 370)b,d,e 371)a 372)b

373. All are controlled by autonomic nervous system except - *(PGI2000)*
a) Aldosterone b) Insulin
c) GH d) Somatostatin

374. Functions of Basal ganglia include - *(PGI 02)*
a) Gross motor movements
b) Skilled motor movements
c) Maintenance of equilibrium
d) Emotional responses
e) Cortical arousal

375. Vasopressin secretion is increased by -
a) Alcohol *(NIMHANS01)*
b) Decreased ECF volume
c) Carbamazepine
d) Procainamide

376. The only sensory modality which does not reach the thalamus directly is - **(***UPSC 02)*
a) Proprioception b) Taste
c) Olfaction d) Pain and temperature

377. The rod receptor potential differs from other sensory receptors in that it shows - **(***UPSC 02)*
a) Depolarization
b) Decreased negativity
c) Increased conductance of Sodium
d) Hyperpolarization

378. Earliest, definite sign of death is - **(***Kerala 03)*
a) Absent brain stem reflexes
b) Stoppage of mucosal ciliary action in respiratory passage
c) Retinal anterior column break down
d) None of these

379. A person with intractable pain over the right leg is benefited by - **(.***Kerala 03)*
a) Right Spinothalamic tract cordectomy
b) Left Spinothalamic tract cordectomy
c) Right hemicordectomy
d) Left hemicordectomy

380. Emotional effect to a physical stimulus is given by -
a) Amygdaloid b) Cortex (*Jipmer03*)
c) Cerebellum d) Hippocampus

381. One of the following is intraneural secondary messenger - **(***Jipmer 03)*
a) Dopamine b) Cyclic AMP
c) GMP d) Calcium

382. Circadian rhythum is maintained by - (*Jipmer 04)*
a) Suprachiasmatic nucleus
b) Pre optic nucleus
c) Supraoptic nucleus
d) Thalamic nucleus

383. Gate system for pain control at - *{Jipmer 04)*
a) Substantia gelatinosa
b) Dorsal root ganglion
c) Both
d) None

384. The primary motor area for shivering is -
a) Cerebrum (*SGPGI04)*
b) Red nucleus
c) Ventromedial anterior hypothalamus
d) Dorsomedial posterior hypothalmus

385. The distance by which two touch stimuli must be separated to be perceived as two separate stimuli is greatest at - *(Karnataka 04)*
a) The lips b) The palm of the hand
c) The back of scapula d) The dorsum of the hand

386. Thirst is activated by - *(UPPGMEE04)*
a) Increased Angitension II level
b) Extracellular hyperosmolarity
c) Increaed ANP levels
d) Increased Renin levels

387. Strychnine acts by - *(SGPGI 05)*
a) Exciting all the excitatory synapses in the cord
b) Blocking inhibitory synapses
c) Being incorporated as substitute transmitter in monoaminergic synapses
d) Directly exciting the skeletal muscle fibrosis

388. Neurotransmitter involved in nigrostriatial pathway is - **(***SGPGI 05, AI89)*
a) Serotonin b) Dopamine
c) Cholinergic d) Adrenergic

389. Parasympathetic fibre arise from all the following cranial nerve except - *(SGPGI 05)*
a) Abducent b) Oculomotor
c) Vagus d)Glossopharyn

390. Nerve fibres innervating sweat glands release the following at their endings - *(SGPGI 05)*
a) Noradrenaline b) Acetycholine
c) Dopamine d) Histamine

391. Autonomic fibres are rich in which type of neurotransmitter - *(AMU 05)*
a) Acetylcholine b) Noradrenaline
c) GABA d) Epinephrine

392. Pacinian corpuscles are - *(AMU 05)*
a) Rapidly adapting touch receptors
b) Slowly adapting touch receptors
c) Temperature receptor
d) Pressure receptors

393. Number of neurons in enteric nervous system -
a) 100 million b) 10 million *(AMU 05)*
c) 1 million d) llakh

394. The function of the neocerebellum are -
a) Maintenance of equilibrium *(COMEDK 05)*
b) Servo correction of voluntary movements
c) Planning and programming of voluntary movements
d) Maintenance of muscle tone

395. Depression of level of consciousness in hypothermia starts when the core body temperature is below -
a) 36 degrees C b) 34 degrees C *(COMEDK 05)*
c) 33 degrees C d) 32 degrees C

373)a 374)b 375)b,c 376)c 377)d 378)a 379)b 380)b 381)a 382)a 383)b 384)d 385)c 386)b
387) b 388) b 389)a 390)b 391)a 392)a 393)a 394)c 395)d

396. 'A' wave in Electro Retinogram corresponds to activity in - *(COMEDK 05)*
a) Rods and cones b) Pigment epithelium
c) Ganglion cell layer d) Nerve fibre layer

397. Tissue with least chronaxie - *(MAHE 05)*
a) Smooth muscle b) Cardiac muscle
c) Skeletal muscle d) All the above

398. Pain receptors are found in - *(MAHE 05)*
a) Ventral horn b) Dorsal horn
c) Substantia nigra d) None of the above

399. Vagal stimulation causes the following effects except-
a) Increase in intestinal secretion *(Jipmer 05, UP 97)*
b) Constriction of intestinal musculature
c) Relaxation of bronchial musculature
d) Fall in the blood pressure

400. Section of the vagus nerve results in - **(***ICS 05)*
a) Increased rate of respiration
b) Decreased depth of respiration
c) Irregular breathing patterns
d) Increases in breath - holding time

401. Which one of the following sensory receptors is found in epidermis - **(***ICS 05)*
a) Merkel disc b) Meissner's corpuscles
c) Ruffini ending d) Pacinian corpuscles

402. All of the following are thermal modalities except- **(***PGIJune05)*
a) Cold receptor b) Warm receptor
c) Pain receptor d) Stretch receptor
e) Pressure receptor

403. Mechanism of analgesia is by - *(PGIJune05)*
a) Nociceptin stimulation
b) Nocistatin stimulation
c) VLRJ
d) Anadamide receptors
e) Nicotinic & cholinergic receptors

404. Which of the following sensations is most affected by cortical lesions - **(***J&K05***)**
a) Proprioception b) Temperature
c) Itch d) Crude touch

405. Heart rate increase with one of the following -
a) Stimulation of trigeminal nerve pain receptor
b) Increased intracranial tension *(APPGE 05)*
c) Decreased stimulation of Baroreceptors
d) Increased parasympathetic stimulation

406. An anterolaternal corodotomy relieving pain in right leg is effective because it interrupts the -
a) Left dorsal column *{AIIMSNO V05)*
b) Left ventral spinothalmic tract
c) Left lateral spinothalmic tract
d) Right lateral spinothalmic tract

407. Beta waveforms in electroencephalogram designate which of the following states of the patient-
a) Deep Anaesthesia *{AIIMSNOV05)*
b) Surgical Anaesthesia
c) Light Anaesthesia, eyes closed, relaxed
d) Awake/alert state

408. The fibers from the contralateral nasal hemiretina project to the following layers of the lateral geniculate nucleus - *(AI05)*
a) Layers 2,3 & 5. b) Layers 1,2 & 6.
c) Layers 1,4 & 6. d) Layers 4,5 & 6.

409. The parvocellular pathway from lateral geniculate nucleus to visual cortex is most sensitive for the stimulus of - *(AI 05)*
a) Color contrast
b) Luminance contrast
c) Temporal frequency
d) Saccadic eye movements

410. The first physiological response to high environmental temperature is - *(AI 05)*
a) Sweating
b) Vasodilatation
c) Decreased heat production
d) Non-shivering thermogenesis

411. Neuronal degeneration is seen in all of the following except - *(AI 05)*
a) Crush nerve injury b) Fetal development
c) Senescence d)Neuropraxia

412. Group A nerve fibers are most susceptible to -
a) Pressure *(AIIMS May 05)*
b) Hypoxia
c) Local anaesthetics
d) Temperature

413. Most afferent fibers from the lateral nucleus terminate in the primary visual cortex is - *(AI06)*
a) Layer 1 b) Layer 2 & 3
c) Layer 4 d) Layer 5 & 6

414. The blobs of the visual cortex are associated with-
a) Ocular dominance *(AI 06)*
b) Orientation
c) Color processing
d) Saccadic eye movements

415. The parvocellular pathway, from the lateral geniculate nucleus to the visual cortex, carries signals for the detection of - *(AI 06)*
a) Movement, depth and flicker
b) Color vision, shape and fine details
c) Temporal frequency
d) Luminance contrast

416. The maintenance of posture in a normal adult human being depends upon - *(AI 06)*
a) Integrity of reflex are
b) Muscle power
c) Type of muscle fibers
d) Joint movements in physiological range

417. The first reflex response to appear as spinal shock wears off in humans is - *(AI 06)*
a) Tympanic reflex b) Withdrawal reflex
c) Neck righting reflex d) Labyrinthine reflex

396) a 397)? 398) b 399) c 400) d 401) a 402) d,e 403)a,c,d,e 404) a 405) c 406) c 407) d 408) c 409) a 410)b 411) d 412) a 413)c 414)c 415)b 416)a 417)b

418. The hyperkinetic features of the Huntington's disease are due to the loss of - *(AI06, AIIMS 04)*
a) Nigrostriatal dopaminergic system
b) Intrastriatal cholinergic system
c) GABA-ergic and cholinergic system
d) Intrastriatal GABA-ergic and cholinergic system

419. The cell bodies of orexinergic neurons are present in - *(AI 06)*
a) Locus ceruleus b) Dorsal raphe
c) Lateral hypothalamic area d) Hippocampus

420. Axonotmesis includes discontinuity in- *(PGI June 06)*
a) Perineurium b) Epineurium
c) Endoneurium d)Axon
e) Myelin sheath

421. Functions of limbic system - *(PGI June 06)*
a) Emotion b) Memory
c) Higher function d) Planned motor activity

422. Conduction velocity (m/s) of nerve fibers carrying fast pain is about -
a) 120 b) 70
c) 30 d)2

423. The ^{6}C' type nerve fibers are highly susceptible to -
a) Hypoxia b) Pressure
c) Local anesthetics d) All of the above

424. In hypoxic damage to brain, which of the following is damaged most - *(HP 2006)*
a) Claustrum
b) Mamillary body
c) Layer of corpus callosum
d) Purkinje layer of cerebellum

425. Vibration sensation is mediated by -
a) Merkel's disc *(NIMHANS 06)*
b) Ruffmi's endogran .
c) Paccinian corpuscle
d) Meissner's corpuscle

426. Impotence is seen with which lesion of spinal cord? *(PUNJAB 2006)*
a) Upper lumbar b) Lower sacral
c) Upper thoracic d)None

427. Which of the following is released from hypothalamus- *(APPG2006)*
a) Cortisol releasing hormone
b) Neuropeptide
c) Orexin
d) Ghrelin

428. Kluver bucy syndrome is due to the lesion in which of the following structure- *(APPG 06, UP 04)*
a) Amygdala b) Hippocampus
c) Hypothalamus d) Temporal lobe

429. Lesion in Wenicker's area results in -
a) Global aphasia
b) Non-fluent aphasia
c) Conduction aphasia
d) Failure of comprehension of spoken or written words

430. Nicotinic acetylcholine receptors - *(Manipal 2006)*
a) Myocardium
b) Motor end plates
c) Prejunctional sympathetic neurons
d) Neuromuscular junction

431. Phantom limb phenomenon is explained by -
a) Law of proj ection *(PGMCET 0 7, AIIMS 05)*
b) Webers law
c) Fechner's law of degeneration
d) Pascals law

432. Red cones in fovea are sensitive to which wavelength-
a) 460 nm b)480nm (*PGMCET0T1*)
c) 520 nm d)560nm

433. EEG in a male fully awake with eyes closed, electrodes placed at occipital position will record: (*PGMCET 01, Kerala 97, Jipmer 92)*
a) a waves b) (5 waves
c) y waves d) 8 waves

434. The principle that is the spinal cord dorsal roots are sensory and the ventral roots are motor is known as - *(Corned 07)*
a) Laplace's law b) Bell-Magendle's law
c) Frank Starling's law d) Weber-Fechner's law

435. Cutaneous vasocontriction is mediated by -
a) Sympathetic adrenergic nerves *(Corned 07)*
b) Sympathetic cholinergic nerves
c) Parasympathetic cholinergics
d) Somatic nerves

436. Which of the following types of nerve fibers carry pain - *(Corned 08, 07)*
a) Aa b)AP
c) Ay d)A8

437. The raphe nuclei located in lower pons and medulla secrete the following neurotransmitter-f*Corned 08)*
a) Norepinphrine b) Dopamine
c) Serotonin d) Acetycholine

438. Broca's area is concerned with - *(AI07)*
a) Word formation b) Comprehension
c) Repetition d) Reading

439. The nucleus involved in Papez circuit is - *(AI07)*
a) Pulvinar
b) Intralaminar
c) VPL nucleus
d) Anterior nucleus of Thalamus

440. The mechanism of hearing and memory, include all except - *(AI 0 7)*
a) Changes in level of neurotransmitter at synapse
b) Increasing protein synthesis
c) Recruitment by multiplication of neurons
d) Spatial Reorganization of synapse

441. The processing of short term memory to long term memory is done in- (*AI07***)**
a) Prefrontal cortex b) Hippocampus
c) Neocortex d) Amygdala

442. Delta waves are seen in - *(AI 07, JIPMER 92)*
a) Deep sleep b) REM sleep
c) Awake state d) Stage INREM sleep

418)c 419)c 420)d.e 421)a,b,c 422)c 423)c 424)d 425)c 426)a 427)a 428)a 429)d 430)c 431)a
432) d 433) a 434) b 435) a 436) d 437) c 438) a 439) d 440) c 441) b 442) a

443. Cerebral blood flow is regulated by all except -
a) Blood pressure *(Aiims May 07)*
b) Arterial $PC0_2$
c) Potassium ions
d) Cerebral metabolic rate

444. Avoiding response is due to_____ lesion in the brain- *(MAHE 07)*
a) Ipsilateral frontal lobe lesions
b) Contralateral frontal lobe lesions
c) Ipsilateral parietal lobe lesions
d) Contralateral parietal lobe lesions

445. Impairment of moral and social sense, lack of initiation and difficulty in planning with flight of ideas is a feature of lesion in the - *(UP 0 7)*
a) Frontal lobe b) Parietal lobe
c) Temporal lobe d) Occipital lobe

446. Broca's area situated in - *(UP 07, AI89, 93)*
a) Superior temporal gyrus
b) Inferior temporal gyrus
c) Superior temporal gyrus
d) Inferior frontal gyrus

447. Brown-sequardsyndrome- *(UP07, UP06)*
a) Pain loss in the opposite side of lesion
b) Fine touch lost in opposite side of lesion
c) UMN paralysis in opposite side of lesion
d) LMN paralysis in opposite side of lesion

448. Weber's syndrome occurs due to lesions in the -
a) Pons b) Midbrain *(UP 07)*
c) Medulla oblongata d) Cerebellum

449. According to herrington classification the decerebrate rigidity is characterised by all except-
a) Rigidity occurs all muscles of the body *(UP 07)*
b) Increased in the rate of discharge of the 'y* efferent neuron
c) Increased excitability of the motor neuron pool
d) Decerebration produces no phenomenon akin to spinal shock

450. Autonomic nervous system the cholinergic nerve fibres - *(UP 07)*
a) All preganglionic fibres, releases acetycholine
b) Post ganglionic cholinergic fibres secretes acetyl choline
c) The post ganglionic sympathetic cholinergic nerve fibres supplies sweat glands and blood vessels inheart and skeletal muscles
d) All of the above

451. All are neuroglial cells in CNS except - *(UP 07)*
a) Astrocytes b) Microglia
c) Oligodendrocytes d) Troposomes

452. Evacuation of the urinary bladder and stool with profuse sweating is a features of - *(UP 07)*
a) Mass reflex
b) Positive supportive reaction
c) Labyrinthine righting reflex
d) Stretch reflex

453. Pyramids are formed by - *(UP 07)*
a) Arcuate nucleus
b) Vestibular nuclei
c) Interstitial cells of cajal
d) Lateral corticospinal tract

454. Which of the following receptors are missing from the surface of the intestine - *(UPSC-II08)*
a) Temperature b) Pressure
c) Distension d) Touch

455. Auditory receptors are found in - *(UP 08)*
a) Semicircular canal b) Organ of corti
c) Ear ossicles d) Tympanic membrane

456. Adult human who are awake with mind wandering and the eyes closed. Most likely EEG pattern is -
a) Alpha - rhythm b) Beta rhythm *(UP 08)*
c) Theta rhythm d) Delta waves

457. A man loses his right hand in a farm accident, four year later, he has episodes of severe pain in the missing hand (phantom limb pain). A detailed PET scan study of his cerebral cortex might be expected to show - *(UP 08)*
a) Expansion of the right hand area in his right somatic sensory area I (SI)
b) Expansion of the right hand area in his left SI
c) Projection of fibre from neighboring sensory areas into the right hand area of his right SI.
d) Projection of fibers from neighbouring sensory areas into the right hand area of his left SI

458. Fine, irregular contraction of individual fibers called - *(UP08)*
a) Fasciculations b) Fibrillation
c) Tics d) Spasm

459. The site where myosin heads to action in skeletal muscles are covered by - *(AI08)*
a) Tropomyosin b) Troponin
c) Calcium d) None of the above

460. Which of the following is not a Sarcolemmal proteins ? *(AI08)*
a) Sarcoglycan b) Dystrophin
c) Dystroglycan d) Perlecan

461. Which of the following sensation are transmitted by the Dorsal tract/Posterior column - *(AI 08)*
a) Fine touch b)Pain
c) Temperature d) All of the above

462. Regarding Golgi tendon organ true is -
a) Senses dynamic length of muscle *(Aiims May 08)*
b) Involved in reciprocal innervation
c) a-motor neuron stimulation
d) Senses muscle tension

463. Increase in threshold level on applying subthreshold, slowly rising stimulus is k/a - *(Aiims May 08)*
a) Adaptation b) Accomodation
c) Refractoriness d) Electrotonus

443) c 444) d 445)a 446)d 447)a 448)b 449)a 450)d 451)d 452)a 453)d 454)d 455)b 456)a
457) d 458) b 459)a 460)d 461) a 462)d 463)b

464. Increased velocity of conduction in a nerve is favoured by - *(PGI June 08)*
a) Increased capacitance
b) Decreased capacitance
c) Increased resistance
d) Decreased resistance
e) Increased velocity

465. Posterior column lesion which of the following is not affected - *(PGI June 08)*
a) Vibration b) Temperature
c) Fine touch d) Position sense
e) Crude sense

466. All are true about olfaction except - *(Manipal 08)*
a) Key-lock system
b) Chemical mediated
c) Females have stronger sense of olfaction
d) Males have stronger sense of olfaction

467. Limbic system is concerned with - *(Manipal 08)*
a) Control of emotions, food habits
b) Sexual behavior
c) Autonomic functions
d) All of the above

468. Cholinergic receptor agonist in *brzin-(Manipal 08)*
a) Nicotine b) Acetylcholine
c) Both a and b d) None of above

469. In dark adaptation, there occurs - *(DPGEE 08)*
a) Decreased perception of vision
b) Decreased visual acuity
c) Pupillary dilatation
d) Breakdown of rhodopsin

470. Osmoreceptors are located in - *(DPGEE 08)*
a) Supraoptic nuclei
b) Paraventricular nuclei
c) Anterior hypothalamus
d) Lateral hypothalamus

471. Phagocytic cells in the CNS are - *(DPGEE 08)*
a) Oligodendrocytes b) Schwann cells
c) Astrocytes d) Microglial cells

472. The neurotransmitter in the autonomic ganglia is -
a) Adrenaline b) Noradrenaline *(DPGEE 08)*
c) Acetylcholine d) Nicotine

473. Which of the following statements is true about presynaptic inhibition? *(AIIMS Nov 08)*
a) It results due to failure of the action potential to reach the synapse
b) It occurs due to hyperpolarisation of presynaptic membrane
c) It occurs due to inhibition of release of neurotransmitter from presynaptic terminal.
d) It occurs due to blockade of neurotransmitter receptors

474. Which of the following nucleus controls the circadian rhythm? *(AIIMS Nov 08)*
a) Supraoptic nucleus
b) Paraventricular nucleus
c) Suprachiasmatic nucleus
d) Premamillary nucleus

475. Which of the following statements about vasomotor centre (VMC) is true - *(AI09)*
a) Independent of corticohypothalamic inputs
b) Influenced by baroceptor signals but not by chemoreceptors
c) Acts along with the cardiovagal centre (CVC) to maintain blood pressure
d) Essentially silent in sleep

476. Which of the following statements about myocardial oxygen demand is true - *(AI 09)*
a) Correlates with heart rate
b) Is directly proportional to external cardiac work
c) Is negligible when heart is at rest
d) Depends upon duration of systole

477. Appetite is stimulated by all of the following peptides, Except- *(AI 09)*
a) Agouti - Related Peptide (AGRP)
b) Melanocyte stimulating hormone (MSH)
c) Melanin concentrating hormone (MCH)
d) Neuropeptide Y

478. Key regulators of sleep are located in - *(AI 09)*
a) Hypothalamus b) Thalamus
c) Putamen d) Limbic cortex

479. Cortical representation of body in the cerebrum is-
a) Horizontal b) Vertical*(AIIMSMay 09)*
c) Tandem d) Oblique

480. Rods and cones differ in all, *e\cept~(AIIMSMay 09)*
a) Signal transduction b) Light sensitivity
c) Wavelength d) Acuity

481. True about spinocerebellar tract *is-(AIIMSMay 09)*
a) Equilibrium
b) Smoothens and coordinates movement
c) Learning induced by change in vestibulocular reflex
d) Planning and programming

482. For color vision, which is true? *(AIIMS May 09)*
a) Independent of wavelength of light
b) Depends on intensity discrimination
c) Involves opponent color cells
d) Minimum at fixation point

483. Nerve ending sensitive to noxious stimuli are present in all except - *(PGI June 09)*
a) Stomach b) Intestine
c) Mesentry d) Liver
e) Brain

484. Na &/or K^+ is/are involved in mechanism of action of which of the following receptor(s) -*(PGI June 09)*
a) $GABA_a$ receptor b)Nm receptor
c) Nn receptor d) 5-HT3 receptor
e) Dopamine

485. The only neurons in retina showing action potentials are- *(Corned 09)*
a) Roads and cones b) Bipolar cells
c) Amacrine cells d) Ganglion cells

464) a,d 465) b 466) d 467) d 468) a 469) c 470) c 471)d 472) c 473) c 474) c 475) c 476) a 477) b
478) a 479) b 480) a 481)b 482) c 483) e 484)b,c,d,e 485) d

486. The first reflex to return after recovery from spinal shock is - *(DELHIPG Feb. 09)*
a) Stretch reflex b) Flexor reflex
c) Stepping reflex d) Postural antigravity reflex

487. The refractory power of eye is normally 59 diopters. Two thirds of this is contributed by -
a) Anterior surface of the lens *(DELHI PG Feb. 09)*
b) Posterior surface of the lens
c) Anterior surface of the cornea
d) Aqueous humor and vitreous humor combined

488. Stimulation of proximal cut end of vagus causes -
a) Apnea b)iHR *(DELHIPG Feb. 09)*
c) *lEP* d)±BP

489. If the blood flow through a blood vessel is 2 ml/min, how much will it become if its radius is doubled -
a) Will remain the same *(DELHI PG Feb. 09)*
b) 4 ml/min
c) 8 ml/min
d) 16 ml/min

490. All are true about brown sequard syndrome except -
a) Ipsilateral loss of joint sensation *(PGI Nov 09)*
b) Contralateral loss of joint sensation
c) Ipsilateral loss of pain & temperature
d) Segmental sign are bilateral
e) Contralateral loss of vibration

491. Transection at mid pons level results in -
a) Asphyxia *(AIIMSNov09)*
b) Hyperventilation
c) Rapid and shallow breathing
d) Apneusis

492. Events occurring in the past one week is an example of- *(AIIMSNov 09)*
a) Recent memory b) Remote memory
c) Working memory d) Delayed memory

493. Appetite is stimulated by all except-*(ALIMSMay 10)*
a) Agouti related peptide
b) Melanocyte concentrating hormone
c) Melanocyte stimulating hormone
d) Neuropeptide Y

494. True about spinocerebellar tract \s*-*(AIIMSMay 10)
a) Equilibrium
b) Smoothens and coordinates movement
c) Learning induced by change in vestibulocular reflex
d) Planning and programming

495. Hot water bottle relieves pain of abdominal spasm by- *(AJ10)*
a) Stimulation of adrenergic fibers
b) Stimulation of cholinergic fibers
c) Inhibition of cold receptors
d) Inhibition of heat receptors

496. Lesions of the lateral cerebellum cause all of the following, except - *(AI10)*
a) Incoordination b) Intention tremor
c) Resting tremor d) Ataxia

497. Refractive Index of cornea is about - *(DPG10)*
a) 1.30 b) 1.33
c) 1.37 d) 1.42

498. Vomiting centre is situated in the - *(DPG 10)*
a) Hypothalamus b)Amygdala
c) Rons d) Medulla

499. The fibre which is the thickest in human nerve is -
a) Touch b)Pain *(DPG 10)*
c) Temperature d) Proprioception

500. The function of the neocerebellum is - *(DPG 10)*
a) Maintenance of equilibrium
b) Servo-correction of voluntary movements
c) Planning and programming of voluntary movements
d) Maintenance of muscle tone

501. When an inddividual is resting in a room with the air temperature 21°C and the humidity of 80%, the greatest amount of heat lost from body is by -
a) Elevation of body metabolism
b) Vaporisation of sweat *(Maharashtra 10)*
c) Respiration
d) Radiation and conduction

502. Which of the following carries fast pain?
a) A d fibres b) A15 fibres *(Maharashtra 10)*
c) A a fibres d) C fibres

503. Satiety centre is located at - *(Maharashtra 10)*
a) Ventromedial nucleus of hypothalamus
b) Dorsomedial nucleus of hypothalamus
c) Peritrigonal area
d) Lateral nucleus

504. In humans the Auditory receptors act by_____ for the phenomenon of[6] Masking' - *(Maharashtra 10)*
a) All or none Low
b) Relative or absolute refractoriness
c) Beneficial effect
d) Post-tetanic potentiation

505. Bruxism occurs in_____ phase of sleep -
a) ReM b) NREM I *(Maharashtra 10)*
c) NREMII d) NREM III

506. The representational hemisphere (cerebral) is better than the categorical hemisphere at?
a) Language functions *(Maharashtra 10)*
b) Recognition of objects by their form
c) Understanding oprinted words
d) Mathematical calculation

507. "Nerve terminals release chemicals"-discovered by-
a) Dale b) Withering *(PGI May10)*
c) Domagk d) Langley
e) Loewi

508. Ascending pain pathway is inhibited in dorsal midbrain by- *(PGINov 10)*
a) 5-HT (serotonin) b) Noradrenaline
c) Substance P d) Glutamate
e) Adenosine

---

486) b 487) c 488) a 489) d 490)b,c,d,e 491) d 492) a 493) c 494) b 495) a 496) c 497) c 498) d 499) d
500) c 501) d 502) a 503) a 504) b 505) c 506) b 507) a,e 508) a

509. Cortcospinal tract lesion leads to - *(PGINov. 10)*
a) Spaticity
b) Extensor plantar response
c) Cogwheel rigidity
d) Resting tremors
e) Exaggerated tendon reflexes

510. Difference between neuropraxia and neuronotomesis is- *(PGINov.10)*
a) EMG finding
b) Sensory loss
c) Motor loss
d) Nerve conduction studies in distal fragment
e) Axon integrity

511. Which of the following is not permeable through the Blood Brain Barrier? *(AIIMS Nov 10)*
a) Water b) Lipophilic drugs
c) Gas d) Proteins

512. Vasomotor centre of medulla is associated with -
a) Acts with the cardiovagal centre to maintain B.P.
b) Independent of corticohypothalamic inputs
c) Influenced by baroreceptors not chemoreceptors
d) Essetially silent in sleep

513. CSF pressure is mainly regulated by -
a) Rate of CSF formation *(AIIMS May 11)*
b) Rate of CSF absorption
c) Cerebral blood flow
d) Venous pressure

514. The nucleus involved in Papez circuit is - *(AI11)*
a) Pulvinar
b) Intralaminar
c) VPL nucleus
d) Anterior nucleus of Thalamus

515. Not included in cerebellar nuclei - *(PUNJAB 11)*
a) Dentate nuclei b) Emboliform nuclei
c) Fastigial nuclei d) Caudate nuclei .

516. Broca's motor speech area is present in -
a) Superior temporal gyrus *(PUNJAB 11)*
b) Precentral gyrus
c) Post central gyrus
d) Inferior frontal gyrus

517. Function of basal ganglia include - *(PUNJAB 11)*
a) Emotions
b) Skilled movements
c) Coordination of movements
d) Maintenance of equilibrium

518. Stimulation of bipolar cells results in all except -
a) Depolorisation *(Jipmer 10)*
b) Hyperpolarisation
c) Increased neurotransmitter release
d) Either hyperpolarizing or depolarizing

519. Circadian rhythm is influenced by - *(Jipmer 10)*
a) Supra optic nuclei
b) Postero lateral nucleus
c) Vnetrolateral nucleus
d) Supra chiasmatic nucleus

520. Dorsal column lesions are associated with loss of -
a) Ankle jerk *(Jipmer10)*
b) Knee jerk
c) Proprioception
d) Pain sensations

521. Vestibulo ocular relfex is concerned with -
a) Archicerebellum *(Jipmer10)*
b) Flocculonodular lobe
c) Neocerebellum
d) Occipital lobe

522. Gamma motor neurons are mainly influenced by -
a) Tectospinal tract *(Jipmer10)*
b) Vestibulo spinal tract
c) Reticulo spinal tract
d) Corticospinal tract

523. Not seen in accommodation reflex - *(Jipmer 10)*
a) Mydriasis
b) Contraction of cilliary muscle
c) Pupillary constriction
d) Curvature of lens increases

524. Which is not a medial pathway involved in maintenance of posture? *(Jipmer 11)*
a) Reticulospinal tract b) Rubrospinal tract
c) Tectospinal tract d) Vestibulospinal tract

525. Which of the following does not carry proprioceptive impulses? *(Jipmer 11)*
a) Olivo cerebellar tract b) Tecto cerebellar tract
c) Spino cerebellar tract d) Cuneo cerebellar tract

526. Ghrelin false is - **(***NEET/DNB Pattern)*
a) Produced by stomach cells
b) Increased appetite
c) Is related to regulation of thyroid hormone
d) Stimulates growth

527. Associative learning - **(***NEET/DNB Pattern)*
a) Associated with consciousness
b) Includes skills and habits
c) Relation of one stimulus to another
d) Facilitation of recognition of words

528. Posture is maintained by - *(NEET/DNB Pattern)*
a) Crossed extensor reflex b) Stretch reflex
c) Golgi tendon refkex d) None

529. Myelin in CNS - C*NEET/DNB Pattern)*
a) Oligodendrocyte b) Schwann cell
c) Astrocyte d) Microglia

530. Macrophage in CNS - C*NEET/DNB Pattern)*
a) Fibrous Astrocyte
b) Microglia
c) Oligodendrocyte
d) Protoplasmic astrocyte

531. Striatum damage affects priming -
a) Procedural memory (*NEET/DNB Pattern)*
b) Short term memory
c) Long term memory
d) Explicit memory

509)a,b,e 510)a,d,e 511)d 512)a 513)b 514)d 515)d 516)d 517)b 518)c 519)d 520)c 521)b 522)c 523)a 524)b 525)b 526)c 527)c 528)b 529)a 530)b 531) a

532. Somatosensory cortex lesion will cause -
a) Pain (*NEET/DNB Pattern*)
b) Temperature
c) Localization
d) Vibration

533. Renshaw inhibition - *{NEET/DNB Pattern)*
a) Feedback facilitation
b) Feed forward inhibhition
c) Feed forward facilitation
d) Feedback inhibhition

534. Semi circular canals are associated with -
a) Linear acceleration *{NEET/DNB Pattern)*
b) Angular acceleration
c) Static equlibirium
d) Hearing

535. Setting posture before planned movement -
a) Premotor cortex *{NEET/DNB Pattern)*
b) Motor cortex
c) Frontal
d) Supplementary motor cortex

536. Ventero lateral cordotomy for relief of pain in right lower limb due to cutting - *{NEET/DNB Pattern)*
a) Left ventral spinothalamic tract
b) Left lateral spinothalamic tract
c) Right ventral spinothalamic tract
d) Right lateral spinothalamic tract

537. Dysmetria - *{NEET/DNB Pattern)*
a) Cerebellum b) Cerebrum
c) Basal ganglia d) Premotor cortex

538. Unable to consolidate long term memory-
a) Frontal *{NEET/DNB Pattern)*
b) Parietal
c) Temporal
d) Hippocampi

539. Retinal cells which secrete acytyl choline
a) Bipolar cells *(NEET/DNB Pattern)*
b) Ganglion cells
c) Amacrine cells
d) H cells

540. Which is the first order neuron in optic pathway:
a) Bipolar cells *(NEET/DNB Pattern)*
b) Ganglionic cells
c) Cells of lateral geniculate body
d) Astrocytes

541. Photoreceptors on exposure to dark release -
a) Acetyl choline *(NEET/DNB Pattern)*
b) Glutamate
c) Adrenalin
d) Epinephrine

542. Dorsal root ganglia have - *(NEET/DNB Pattern)*
a) Unipolar b) Multipolar
c) Bipolar d) Psudounipolar

543. Pavlovs experiment on dogs shows -
a) Conditional response *(NEET/DNB Pattern)*
b) Unconditioned response
c) Procedural memory
d) Familiarity

544. Pt. is able to recognise person by name but not by face. Lesion is in.. *(NEET/DNB Pattern)*
a) Post parietal region b) Occipital
c) Frontal lobe d) Temporal lobe

545. The principal polypeptide that increase food intake are all except - *(NEET/DNB Pattern)*
a) Neuropeptide Y b)Leptin
c) OrexinA d)Ghrelin

546. CSF/plasma glucose ratio is - *(AI99)*
a) 0.2-0.4 b) 0.6-0.8
c) 1.2-1.6 d) 1.6 - 2.2

547. Second order neuron - *{NEET/DNB Pattern)*
a) Optic nerve b) MGB
c) LGB d) Layer of retina

548. Broca's area is present in - *(NEET/DNB Pattern)*
a) Superior temporal gyrus
b) Precentral gyrus
c) Post central gyrus
d) Inferior frontal gyrus

549. Node of Ranvier is seen in - *(NEET/DNB Pattern)*
a) Cell body b) Dendrites
c) Axons d) Terminal butons

550. Glucose in CSF - *(NEET/DNB Pattern)*
a) 1/3 of blood glucose b) 1/2 of blood glucose
c) 2/3 of blood glucose ^ d)None

551. Person wakes up with pain, parasthesia, tingling of the arms .he had slept with arm below the heacLwhich fibres are involved? *(NEET/DNB Pattern)*
a) Type A fibres b) Type B
c) Type C(pain) d) Type C(postganglionic)

552. Nociception from abdomen is transmitted by:
a) A gamma b)Aa *(NEET/DNB Pattern)*
c) C fibres d) B

553. Parasympathetic supply is from -
a) C234 b) T234 *(NEET/DNB Pattern)*
c) 1234 d) S234

554. Post ganglionic sympathetic fibres are -
a) A alpha b) C *(NEET/DNB Pattern)*
c) B fibres d) A gamma

555. Neurons in sympathetic ganglia are - *(NEET/DNB*
a) Unipolar b) Bipolar *Pattern)*
c) Pseudounipolar d) Multipolar

556. Burning pain is carried by which type of fibres -
a) A alpha b) A delta *(NEET/DNB Pattern)*
c) A beta d)C

557. Static equilibrium is due to - *(NEET/DNB Pattern)*
a) Macula b) Cupula
c) End organ of corti d) Cristae ampulla

558. Patient is able to recognise voice but not *face-(NEET/*
a) Temporal lobe b) Occipital *DNB Pattern)*
c) Frontal lobe d) Parietal lobe

559. Pain and temperature are carried by -
a) Anterior spinothalamic tract *(NEET/DNB*
b) Lateral spinothalamic tract *Pattern)*
c) Dorsal column
d) None

532) c 533) d 534) b 535) a 536) b 537) a 538) d 539) c 540) a 541) b 542) d 543) a 544) d 545) b
546) b 547) a 548)a 549)c 550)c 551)a 552)c 553)d 554)b 555)d 556)d 557)a 558)a 559)b

560. **Nerve Conduction is slowest in-***(NEET/DNB Pattern)*
a) C b) A alpha
c) A beta d) A delta

561. **What are the EEG waves recored for parietooccipital region with subject awake & eye closed-** *(NEET/*
a) Alpha waves b) Beta waves *DNB Pattern)*
c) Delta waves d) Theta waves

562. **Orthodromic conduction is -** *(NEET/DNB Pattern)*
a) An axon can conduct impulse in one direction only
b) An axon can conduct impulse in both direction
c) The jumping of depolarization from node to node
d) The print at which a runaway spike potential

563. **During the dark phase of visual cycle, which form of vitamin Acombines with opsin to make Rhodopsin-**
a) All trans-Retinaldehyde *(AIIMSNov04)*
b) All trans-Retinol
c) 11-cis-Retinaldehyde
d) 11-cis-Retinol

564. **Meissener's corpuscle are for-***(NEET/DNB Pattern)*
a) Touch b) Temperature
c) Pressure d) Proprioception

565. **Thickening of axon leads to -** *(NEET/DNB Pattern)*
a) Increased speed of conduction
b) Decreased speed of conduction
c) Increased absolute refractory period
d) Unmyelination

566. **Regarding Gherlin which is false -** *(NEET/DNB*
a) Secreted from oxyntic cells *Pattern)*
b) Increases fat deposition
c) Stimulates appetite
d) Secretion increased in anorexia

567. **Substrate P, actions all except -** *(NEET/DNB Pattern)*
a) Vasoconstriction b) Pain transmission
c) Axon reflex d) Peristalsis

568. **Pain and temperature in thalamus is controlled by nucleus-** *(NEET/DNB Pattern)*
a) VPM b) VPL
c) Anterior d) Posterior

569. **Circadian rhythm is regulated by-***(NEET/DNBPattern)*
a) Dorsomedial b) Ventromedial
c) Supraoptic d)Suprachiasmatic

570. **Which is not a peptide neurotransmitters -**
a) Enkephalin *(NEET/DNB Pattern)*
b) Substance P
c) Endorphin
d) Sorotonin

571. **Transducin is required for -** *(NEET/DNB Pattern)*
a) Small b) Hearing
c) Small d) Vision

572. **In decorticate animal which reflex is lost?**
a) Hopping and placing reflex *(NEET/DNB*
b) Tonic neck reflex *Pattern)*
c) Tonic labyrinthine reflex
d) Stretch reflex

573. **Short term memory conversion to long term memory takes place in -** *(NEET/DNB Pattern)*
a) Hypothalamus b) Thalamus
c) Hippocampus d) Amygdala

574. **The receptors/buds responsible for carrying bitter taste sensation are situated -** *(NEET/DNB Pattern)*
a) At the tip of the tongue
b) Just behing the tip
c) At the sides
d) At the posterior aspect

575. **All are effects of sympathetic stimulation except -**
a) Increased conduction velocity *(NEET/DNB*
b) Increased heart rate *Pattern)*
c) Increased refractory period
d) Increaed contractility of heart

576. **Endolymph in ear equivalent** *to-(NEET/DNB Pattern)*
a) ICF b) Lymph
c) CSF d) Blood

577. **Not a direct effect of Ach -** *(NEET/DNB Pattern)*
a) Decrease BP
b) Increase contraction of heart
c) Decrease heart rate
d) Decrease conduction

578. A **gamma nerve diameter is -** *(NEET/DNB Pattern)*
a) 13-20 b) 4-13
c) 3-6 d) 0.2-1.0

579. **Which of the following does not carry proprioceptive impulses?** *(Jipmer 11)*
a) Olivo cerebellar tract
b) Tecto cerebellar tract
c) Spino cerebellar tract
d) Cuneo cerebellar tract

580. **Vomiting centre -** *(NEET/DNB Pattern)*
a) Area postrema b) Suprachiasmatic
c) Medial nuclei d) Lateral nuclei

581. **Myelin sheath in CNS is produced by -**
a) Oligodendrocyte *(NEET/DNB Pattern)*
b) Schwann cell
c) Microglia
d) Macroglia

582. **Semicircular canals are stimulated by -** *(MP 2K)*
a) Gravity b) Linear acceleration
c) Rotation d) Sound

583. **Herring body is seen in -** *(NEET/DNB Pattern)*
a) Pars intermedia b) Pineal gland
c) Pars nervosa d)Adenohypoph

584. **Globus pallidus, putamen are present in -** *(NEETZ*
a) Pons b) Basal ganglia *DNB Pattern)*
c) Thalamus d) Cerebellum

585. **Broca's area is present in -** *(NEET/DNB Pattern)*
a) Superior temporal gyrus
b) Precentral gyrus
c) Post central gyrus
d) Inferior frontal gyrus

560) a 561) a 562) a 563) c 564) a 565) a 566) b 567) a 568) b 569) d 570) d 571) d 572) a 573) c
574) d 575) c 576) a 577) b 578) c 579) b 580)None> a 581) a 582) c 583) c 584)b 585) a

586. Motor march is seen in - *(NEET/DNB Pattern)*
a) Axontemesis b) Neurotemesis
c) Neuropraxia d) Nerve regeneration

587. Effect of aceytylcholine on LES-*(NEET/DNB Pattern)*
a) Contraction b) Relaxation
c) No effect d) Contraction followed by relaxation

588. The principle that is the spinal cord dorsal roots are sensory and the ventral roots are motor is known as - *(NEET/DNB Pattern)*
a) Laplace's law
b) Bell-Magendle's law
c) Frank Starling's law
d) Weber-Fechner's law

589. The distance by which two touch stimuli must be separated to be perceived as two separate stimuli is greatest at - *(NEET/DNB Pattern)*
a) The lips
b) The palm of the hand
c) The back of scapula
d) The dorsum of the hand

590. Purkinje fibres are inhibitory for -
a) Deep cerebellar nuclei *(NEET/DNB Pattern)*
b) Climbing fibre
c) Basket cells
d) Spinocerebellar tracts

591. Neurotransmitter involved in nigrostriatial pathway is - *(NEET/DNB Pattern)*
a) Serotonin b) Dopamine
c) Cholinergic d) Adrenergic

592. Nerve fibres innervating sweat glands release the following at their endings - *(NEET/DNB Pattern)*
a) Noradrenaline b) Acetycholine
c) Dopamine d) Histamine

593. Visceral noxious stimuli is mediated by -
a) Aa b)Ap *(NEET/DNB Pattern)*
c) Ay d)C

594. Shivering is controlled by - *(NEET/DNB Pattern)*
a) Medulla b) Hypothalamus
c) Thalamus d) Basal gonglia

595. Axonal transport is - *(NEET/DNB Pattern)*
a) Antegrade b) Retrograde
c) Antegrade & Retrograde d) None

596. Decrease reflex response after repetitive stimulation
a) Summation *(NEET/DNB Pattern)*
b) Fatigue
c) Irradiation
d) Occlusion

597. Nuclear bag fibers - *(NEET/DNB Pattern)*
a) Thinner b) Flower spray ending
c) Plate ending d) Trail ending

598. Loss of proprioception & fine touch -
a) Anterior spinothalamic tract *(NEET/DNB*
b) Lateral spinothalamic tract *Pattern)*
c) Dorsal column
d) Corticospinal tract

599. Pain-sensitive intracranial structure is -
a) Piamater *(NEET/DNB Pattern)*
b) Pial vessels
c) Duramater
d) Brain matter

600. Pyramids are formed by - *(NEET/DNB Pattern)*
a) Arcuate nucleus
b) Vestibular nuclei
c) Interstitial cells of cajal
d) Lateral corticospinal tract

601. True about spinocerebellar tract is-
a) Equilibrium *(NEET/DNB Pattern)*
b) Smoothens and coordinates movement
c) Learning induced by change in vestibulocular reflex
d) Planning and programming

602. Vomiting centre is situated in the -
a) Hypothalamus *(NEET/DNB Pattern)*
b) Amygdala
c) Rons
d) Medulla

603. Purkinje fibres are inhibitory for -
a) Deep cerebellar nuclei *(NEET/DNB Pattern)*
b) Climbing fibre
c) Basket cells
d) Spinocerebellar tracts

604. Somatosensory area I largest representation is for-
a) Arm b)Leg *(NEET/DNB Pattern)*
c) Back d) Head

605. Substrate P, actions all except -*(NEET/DNB Pattern)*
a) Vasoconstriction b) Pain transmission
c) Axon reflex d) Peristalsis

606. Amacrine cells secrete - *(NEET/DNB Pattern)*
a) Acetylcholine b) Glutamate
c) Adrenaline d) Dopamine

607. Vasoconstriction in skin - *(NEET/DNB Pattern)*
a) Sympathetic b) Parasympathetic
c) Wheal and flare d) Warm climate

608. Daily rhythm regulation - *(NEET/DNB Pattern)*
a) Dorsomedial b) Ventromedial
c) Supraoptic d) Suprachiasmatic

609. In a neuron, graded electrogenesis occurs at -
a) Soma - dendritic zone *(NEET/DNB Pattern)*
b) Initial segment
c) Axon
d) Nerve ending

610. Which of the following are Chemoreceptors -
a) Rods *(NEET/DNBPattern)*
b) Cones
c) Taste buds
d) Muscle spindle

611. Vestibulo ocular relfex is concerned with -
a) Archicerebellum *(NEET/DNBPattern)*
b) Flocculonodular lobe
c) Neocerebellum
d) Occipital lobe

586) a 87) a 588) b 589) c 590) a 591)b 592) b 593) d 594) b 595) c 596) b 597) c 598) c 599) c
600) d 601) b 602) d 603)a 604)a 605)a 606)a 607)a 608)d 609)b 610)c 611)b

612. Salty tase is due to- *(NEET/DNB Pattern)*
a) Ca^{+2} channels b) Na^{+} channels
c) G-protein d) H^{+} channels

613. Which is a cerebellor nucleus -*(NEET/DNB Pattern)*
a) Caudate b) Subthalamic
c) Globus pallidus d) Dentate

614. Disease of Basal ganglia dysfunction are all except -
a) Alziemer's disease *(NEET/DNB Pattern)*
b) parkinsonism
c) Chorea
d) Athetosis

615. Earliest reflex to reappear after spinal shock -
a) Knee jerk *(NEET/DNB Pattern)*
b) Ankle jerk
c) Bulbocavernous reflex
d) Planter reflex

616. In stretch reflex, the stimulus is -
a) Change in muscle length *(NEET/DNB Pattern)*
b) Change in muscle tension
c) Pain in muscle
d) Cessation of blood supply

617. Most sensitive nerve fiber to hypoxia -
a) A b)B *(NEET/DNB Pattern)*
c) C d) All are equally sensitive

618. Best prognosis in nerve injury-*(NEET/DNB Pattern)*
a) Neuropraxia b) Axonotemesis
c) Neurotemesis d) Complete transection

619. Ganglion cell-Order of *neuron-(NEET/DNB Pattern)*
a) 1st b)2nd
c) 3rd d)4th

620. Pseudounipolar cells - *(NEET/DNB Pattern)*
a) Sympathetic ganglia
b) Parasympathetic
c) Cranial nerve ganglion
d) Dorsal Root Ganglion

621. Proprioceptions are carried by-*(NEET/DNB Pattern)*
a) A a fibers b) A (3 fibers
c) B fibers d) C fibers

622. Fine touch is lost in lesion of - *(NEET/DNB Pattern)*
a) Anterior spinothalamic tract
b) Lateral spinothalamic tract
c) Dorsal column
d) Pyromidal tract

623. Dysmetria is seen in lesion of - *(NEET/DNB Pattern)*
a) Basal ganglia b)Cerebellum
c) Pons d) Midbrain

624. Basal ganglia is involved in which types ofmemory -
a) Conditioning *(NEET/DNB Pattern)*
b) Procedural memory
c) Explicit memory
d) None

625. Agnosia is caused by lesion of - *(NEET/DNB*
a) Representative hemisphere, left *Pattern)*
b) Categorial hemisphere, left
c) Representative hemisphere, right
d) Categorial hemisphere, right

626. Nonshivering thermogenesis is due to -
a) Acetylcholine *(NEET/DNB Pattern)*
b) Norepinephrine
c) Dopamine
d) Serotonin

627. Post ganglionic fibers are longer in -
a) Para sympathetic system *(NEET/DNB Pattern)*
b) Sympathetic system
c) Both have same length
d) It is variable

628. CSF is formed by - *(NEET/DNB Pattern)*
a) Arachnoid villi b) Venous plexus
c) Choroidal plexus d) Subfornical nucleus

629. Lens derives nutrition from -
a) Vitreous *(NEET/DNB Pattern)*
b) Aqueous
c) Optic artery
d) Ophthalmic artery

630. A man slept with head over forearm, next morning he complains of tingling, numbness over forearm. It is caused by - *(NEET/DNB Pattern)*
a) Sensitivity to hypoxia is A>B>C
b) Sensitivity to pressure is A>B>C
c) Sensitivity to hypoxia is C>B>A
d) Sensitivity to pressure is B>A>C

631. Destruction of anterior cerebellum in a decerebrate animal leads to - *(NEET/DNB Pattern)*
a) No effect on rigidity
b) Increased flexor muscle tone
c) Increased rigidity via alpha motor neurons
d) Decrease in rigidity

632. Na^{+} channel concentration is highest at -
a) Dendrites *(NEET/DNB Pattern)*
b) Soma
c) Axon hillock
d) Axon

633. Lesion of Globus pallidus causes -
a) Chorea b) Ballismus *(NEET/DNB Pattern)*
c) Athetosis d) Akinesia

634. Postural reflex with integrating center in spine -
a) Righting reflex *(NEET/DNB Pattern)*
b) Tonic labyrinthine reflex
c) Righting reflex
d) Crossed extensor reflex

635. Function of Basal ganglia -*(NEET/DNB Pattern)*
a) Motor b) Sensory
c) Olfaction d) None

ENDOCRINOLOGY

METABOLISM

636. During starvation the non-protein RQ value is close to - *(DNB 90)*
a) 1 b) 0.5
c) 0.25 d) 0.75
e) 0.0

612) b 613)d 614) a 615)c 616)a 617)b 618) a 619) b 620)d 621) a 622)c 623)b 624)b 625)c
626) b 627) b 628) c 629) b 630) b 631)c 632) c 633) c 634) d 635) a 636) a

637. Specific dynamic action is maximum in - *(A.1.90)*
a) Protein b)Carbohydrate
c) Fats d) Vitamins

638. Respiratory Quotient of fat, protein and carbohydrate are... respectively - *(AIIMS 86, 87)*
a) 0.70,0.80,1.0 b) 0.80,0.70,1.0
c) 0.8,1.0,0.7 d) 1.0,0.8,0.7

639. BMR is low in the following except - *(Delhi 83)*
a) Newborn of old age b) Larger individuals
c) Females d) Cold climate

640. Specific dynamic action is - *(JIPMER 80, PGI83)*
a) 6% for proteins
b) 30% for lipids
c) Energy expended on consumption of foods
d) Due to gastrointestinal factors

641. Cells with decreased oxidative phosphorylation have- *(AI93)*
a) Increased Ribosomes
b) Decreased mitochondria
c) Low protein
d) No motility

642. When energy is derived from creatine phosphate to cause muscle contraction, what is the first step in this transfer of energy - *(AIIMS 80)*
a) The creatine phosphate transfers its energy to the cross bridges to cause them to become locked
b) The creatine phosphate cause the power stroke of the cross bridges
c) The creatine phosphate transfers its energy to the actin filament
d) The creatine phosphate transfers its energy to the myosin filament
e) The energy of the creatine phosphate is used to convert ADP in ATP

643. The normal non-fasting blood ketone levels is -
a) 0.1-0.5 mg% b) 0.5-2 mg % *(AIIMS85)*
c) 2-10 mg % d) 100-500 mg %

644. BMR is decreased in - *(Kerala 94)*
a) Hyperthyroidism
b) Increased body temperature
c) Cushing syndrome
d) Addisons disease

645. BMR is dependent on - *(AI95)*
a) Body weight
b) Surface area
c) Amount of adipose tissue
d) Amount of lean body mass

646. BMR increase in all except - *(AMU 95)*
a) Low environmental temperature
b) Anxiety
c) Thyrotoxcosis
d) Sleep

647. The following is true about brain metabolism except- *(AI98)*
a) Use fatty acid in starvation
b) In resting state 60% of total energy utilised
c) Ketone bodies are used in starvation
d) Has no energy store

648. Non-shivering thermogenesis is mediated by-
a) a, receptor b) P_2 receptor *(PGI03)*
c) P_3 receptor d) UCP-2
e) UCP-1

649. Prostaglandin causing renal vasodilatation -
a)PGD_2 b)PGE_2 *(PGI01)*
c) PGF_2 d)PGI_2
e) $Tx A_2$

650. 02 consumption is minimal when temp, gradient between skin and ext. env. is - *(PGI2000)*
a) <0.5° b)>2.5°
c) < 1.5° ‘ d)>3.5°

651. Diet devoid of carbohydrates causes - *(PGI 02)*
a) Ketosis b)DM
c) No effect d) Obesity

652. TVue about intracellular receptors - *(PGI 01)*
a) Mainly on nuclear surface
b) Steroids act on them
c) Estrogen does not act on it
d) GH act on it

653. cAMP action mediates all except - *(PGI2000)*
a) Glucagon b) FSH
c) LH d) Estrogen

654. TVue about non shivering thermo genesis - *(TN 02)*
a) Glucose converted toe lactate
b) Fatty acids uncouple oxidative phosphorylates
c) ADP is burnt into heat
d) Adipose tissue is entirely absent

655. Proteins targeted for destruction in eukaryotes are covalently linked to - *(AI04)*
a) Clathrin b) Pepsin
c) Laminin d)Ubiquitin

656. Substrate controlled hormone is - *(MAHE 05)*
a) Glucogon b) FSH
c) LH d)TRH

657. Calorogenic hormone is - *(MAHE 05)*
a) Epinephrine b) Nor-epinephrine
c) Thyroid hormones d) All of the above

658. At 20 degree centigrade atmospheric temperature, body reacts by - *(MAHE 05)*
a) Cutaneous vasoconstriction
b) Shivering
c) TBMR
d) None of above

659. In human being, the least useful physiological response to low environmental temperature is - *(AI06)*
a) Shivering b) Vasoconstriction
c) Release of thyroxine d) Piloerection

660. All are examples of negative feed back except-
a) Coagulation of the blood *(UP 07)*
b) Regulation of blood pressure
c) Regulation of blood glucose
d) Regulation of carbon monoxide

637) a 638) a 639) d 640) c 641)b 642) e 643) b 644) d 645) b 646) d 647) a 648) c,e 649) b,d 650) a
651)a 652)a,b 653)d 654)b 655)d 656)a 657)d 658)b 659)d 660)a

661. Hyperkalemia stimulates secretion of - *(UP 07, 06)*
a) ADH b) Secretin
c) Aldosterone d) Parathormone

662. Sulfation factor is - *(UP 07)*
a) Somatostatin b) Somatomedian
c) GIP d)VTP

663. Steroid receptors at - *(UP 07)*
a) Cellular membrane b) Cytoplasm
c) Nucleus d) All of the above

664. Cytochrome P450 is identified to 11-p hydroxylase is known as - *(UP 08)*
a) CYMA- IB b) CYPA- 2B
c) CYPA-3B d)CYPA-4B

665. In a seriously ill patient, addition of amino acids in diet results in a positive nitrogen balance. The mechanism for this is - *(Aiims May 08)*
a) Increased Growth hormones secretion
b) Enhanced rate of gluconegenesis
c) Increased absorption of amino acids from diet
d) Increased secretion of Insulin

666. Energy expenditure in resting state depends on -
a) Lean body mass b) Adipose tissue
c) Resting heart rate d) Exercise *(AIIMS May 11)*

667. Basal Metabolic Rate depends most closely on -
a) Lean body mass b) Body mass index *(A111)*
c) Obsesity d) Body surface area

668. Increased glycolysis and decreased gluconeogenesis
a) Insulin (*NEET/DNB Pattern)*
b) Glucagon
c) Epinephrine
d) Cortisol

669. Hyperthermia - (.*NEET/DNB Pattern)*
a) Temperature > 41.5
b) > 40 with autonomic dysfunctuion
c) No change in hypothalamic thermostat
d) One which normalises with anti pyretic

670. Fat is maximum snythesised in -
a) Liver *{NEET/DNBPattern)*
b) Adipose tissue
c) Intestine
d) Muscle

671. Main mechanism in thermoregulation-heat loss is-
a) Radiation *{NEET/DNBPattern)*
b) Evaporation
c) Conduction
d) Convection

672. Motilin secretion decreased in -
a) Thirsty *{NEET/DNBPattern)*
b) Starving
c) Ingested meal
d) Interdigestive state

673. 1st response to hypoglycemia -
a) Decreased insulin *{NEET/DNBPattern)*
b) Increased glucagon
c) Increased cortisol
d) Increased nor epinephrine

674. Sprinter gets its immediate energy from - *(NEETZ*
a) Glycogen b) Fatty acid *DNB Pattern)*
c) Creatine phosphate d) None

675. BMR depends on - *(NEET/DNB Pattern)*
a) Body weight
b) Surface area
c) Amount of adipose tissue
d) Amount of lean body mass

676. Anti-inflammatory action of steroids due to -
a) Inhibiton of phospholipase A_2 *{NEET/DNB*
b) Inhibhition of cyclooxegenase *Pattern)*
c) Increased activity of lipolipase
d) Inhibition of lipo oxegenase

677. Which hormone acts on cytoplasmic membrane receptor- *(NEET/DNB Pattern)*
a) TSH b)Thyroxine
c) Androgen d) Cortisol

678. Temperature at which regularating mechanism does not work - *(NEET/DNB Pattern)*
a) 40>C b) 35°C
c) 30°C d) 25°C

THYROID

679. The percentage of total body iodine in the thyroid gland is - *(PG185)*
a) 50% b) 70 %
c) 90% d) 96 %

680. Calcitonin is produced by - *(AT 89)*
a) Thyroid b) Parathyroid
c) Thymus d) Kidney

681. TRH Stimulates TSH and- *(AI92)*
a) (H b) Oxytocin
c) Prolactin d) Gonadotrophin

682. Thyroxine binding globulin is increased in -
a) Pregnancy *(Delhi 96)*
b) Nephrotic syndrome
c) Glucocorticoid treatment
d) Cancer chemotherapy

683. Iodine uptake is seen in following organs- *{PGI03)*
a) Ovary b) Thyroid
c) Parathyroid d) Salivary gland
e) Mammary gland

684. Thyroid hormones in blood is transported by-
a) Albumin b) Globulin *(PGI 01)*
c) Prealbumin d) Transferrin
e) Ceruloplasmin

685. Thyroxine injected to rat produces A/E - *(PGI2K)*
a) *i* A lipolysisb) T T 0_2 consumption
c) *IBMR* d) T myocardial contractility

686. The principle of ''Wolff-Chaikoff effect" is used in- *(MAHE07)*
a) Iodide for thyrotoxic patients after surgery
b) Iodide for thyrotoxic patients before surgery
c) Stimulation of hormone synthesis
d) Increased vascularity of thyroid gland

661)c 662) b 663) d 664)b 665)d 666)a 667)a>d 668)a669)c 670)a 671)a 672)c 673)a 674)c 675) b 676) a 677) a 678) d 679) c 680) a 681) c 682) a 683)b,d,e 684)a,b,c 685) a,c 686) b

687. Which of the following is NOT essential for normal biosynthesis of thyroid hormone - *(UP 08)*
a) Iodine b) Ferritin
c) Thyroglobulin d) TSH

688. Which of the following would be least affected by injections of TSH? *(Maharashtra 10)*
a) Uptake of Iodine by Thyroid
b) Synthesis of thyroglobulin
c) cGMP in Thyroid cells

689. Wolf chaikoff effect is due to- *(NEET/DNB Pattern)*
a) Suppression of TSH secretion
b) Decreased iodination of MIT
c) Decreased t3 to t4 concersion
d) Iodine intake

690. In Thyroid follicle for how long Thyroxine is stored-
a) 2-3 weeks b) 2-3 days *(NEET/DNB Pattern)*
c) 2-3 months d) 2-3 years

PANCREAS

691. Somatostatin inhibits release of - *(SCTIMS 98)*
a) GH b) Gastrin
c) TSH d)MSH

692. Somatostatin is produced by---------- cells of the pancreas- *(A189)*
a) Alpha b) Beta
c) Delta d) Acinar

693. Experimental diabetes in caused by - *(Kerala 90)*
a) Alloxan b)PgEl
c) Radioactive yittrium d) Gold chloride

694. Beta cells of pancreas produce - *(Kerala 91)*
a) Glucagon b) Gastrin
c) Insulin d) Pancreatin

695. Which is false regarding insulin - *(JIPMER 92)*
a) Secreted Beta cells
b) Glycopeptide
c) Causes lipogenesis
d) Promotes giycogenesis

696. Increase in insulin receptors in seen in -
a) Starvation b) Obesity *(JIPMER 93)*
c) Acromegaly d) Diabetes

697. An adult human pancreas has about -
a) 100-2000 islest *(J1MPER 80, DNB 90)*
b) 100,000-200,000 islests
c) 250,000-750,000 islets
d) Above of 1000,000 islets

698. Insulin facilitates glucose uptake in - *(Karn 94)*
a) Kidney tubules b) Red blood cells
c) Brain d) Skeletal muscle

699. Glucagon stimulates all of the following except -
a) Glycogenolysis *(UPSC95)*
b) Bile secretion
c) Hydrochloric acid secretion
d) Intestinal secretion

700. How many parts are there in insulin receptor -
a) 1 b) 2 *(Burdwan 2K)*
c) 3 d)4

701. Insulin secretion is decreased by - *{PGI03)*
a) Glucagon b) Glucose
c) Adrenaline d) Vagal stimulation
e) Acetylcholine

702. Following hormones are produced by endocrinal part of pancreas - *(PGI01)*
a) Insulin b) Somatostatin
c) Glucagon d) Bombesin
e) Pancreatic polypeptide

703. True about Insulin action is - *(PGI2000)*
a) Causes neoglucogenesis
b) Not useful for growth & development
c) Required for transport of glucose, aminoacid, K^+ &Na^+
d) Catabolic hormone

704. Insulin helps glucose entry into cell except in -
a) Liver b) Muscles *(Kerala 03)*
c) Fat d)All

705. Glucose increases plasma insulin by a process that involves - *{Karnataka 04)*
a) GLUT1 b)GLUT2
c) GLUT3 d)SGLTl

706. Increased ratio of insulin to glucagon causes -
a) Decreased levels of cyclic AMP (*MAHA 05)*
b) Decreased levels of lipoprotein lipase
c) Decreased amino acid synthesis
d) Enhanced lipolysis in adipose tissue

707. In a foetus the insulin secretion begins by -
a) 3 rd month **b) 5th month** *(AIIMSMay05)*
c) 7th month d) 9th month

708. Insulin is secreted along with the following molecule in a 1:1 ratio - *(PGI June 06)*
a) Pancreatic polypeptide b) Glucagon
c) GLP-1 d) Somatostatin
e) C-peptide

709. Insulin dependent glucose transport is through -
a) GLUT 2 b) GLUT 3 *{Manipal 2006)*
c) GLUT 4 d) GLUT 5

710. Which of the following compound antagonizes the actions of insulin - *(MAHE 07)*
a) Neuropeptide Y b) Growth hormone
c) Substance P d) Vasoactive intestinal peptide

711. Which of these is the correct pair - *(ARMS Nov 07)*
a) A cell - Insulin b) B cell - Somatostatins
c) D cell - Glucagon d) G cell - Gastrin

712. C-peptide occurs in - *(UP 08)*
a) Proinsulin b) Glucagon
c) Paratharmone d) Thyroxine

713. Insulin increases the entry of glucose into-*(UP 08)*
a) All tissues
b) Renal tubular cells
c) The mucosa of the small intestine
d) Skeletal muscle

687) b 688) a 689)d 690)a 691)b 692)c 693)a 694)c 695)b 696)a 697)d 698)d 699)b,c,d 700)d 701)c 702)a,b,c,e 703)c 704)None 705)b 706)a 707)a 708)c 709)c 710)b 71 l)d 712)a 713)d

714. Glucose dependent release of insulin through -
a) Cyclic AMP *(UP 08)*
b) Carrier's modulators
c) Recipients phosphorylation
d) ATP dependent K^+ channel

715. True about insulin is - *(Manipal 08)*
a) Anabolic steroid
b) Induce lipolysis
c) Produced by a-cells
d) Glucose production in liver

716. Not done by insulin - *(AIMS May 09)*
a) Glycogen synthesis b) Glycolysis
c) Lipogenesis d) Ketogenesis

717. Not done by insulin - *(AIMS May 10)*
a) Glycogen synthesis b) Glycolysis
c) Lipogenesis d) Ketogenesis

718. Insulin secretion is inhibited by - *(AI10)*
a) Secretin b) Epinephrine
c) Growth hormone d) Gastrin

719. Insulin secretion is / are increased by all except -
a) Gastrin b) Secretin *(PGINov. 10)*
c) VIP d)GIP
e) OCK

720. Glucagon is secreted by - *(PGINov. 10)*
a) a cell b)pcell
c) 8 cell d) G cell
e) Ccell

721. Machanism of action of insulin includes all except -
a) Activation of tyrosine kinase *(Jipmer 10)*
b) Incorporation of GLUT-4 into cells
c) Inhibition of Na+ K+ ATPase
d) Hexokinase stimulation

722. Insulin mediated glucose uptake in skeletal muscles & adipose tissue is mediated by - *(Jipmer 11)*
a) GLUT-1 b) GLUT - 2
c) GLUT-4 d)GLUT-6

723. Glucose is transported in renal tubular cells by -
a) K symport *(NEET/DNB Pattern)*
b) Kantiport
c) Na antiport
d) Na cotransport

724 Epinephrine reduces insulin *by-(NEET/DNB Pattern)*
a) Alpha action predominantly
b) Beta action predominantly
c) Alpha and beta
d) Muscarinic receptors

725. Adrenaline effects insulin by-*(NEET/DNB Pattern)*
a) Stimulation of alpha cells
b) Stimulation of beta cells
c) Stimulation of delta cells
d) Stimulation of g cells

726. GLUT2 is present mainly in - *(NEET/DNB Pattern)*
a) Beta cells of pancreas b) Placenta
c) Skeletal muscle d) Cardiac muscle

727. Glucose transporter involved in insulin stimulated glucose transport is GLUT - *(NEET/DNB Pattern)*
a) 1 b)2
c) 3 d)4

728. Insulin is essential for glucose entry in-
a) Muscle *(NEET/DNB Pattern)*
b) Cortical neurons
c) Renal tubular cells
d) Beta cells of pancreas

729. Half life of insulin is - *(NEET/DNB Pattern)*
a) 1-2 min b) 4-6 min
c) 10-12min d) 12-16 min

730. Glucose is transported in renal tubular cells by -
a) K symport *(NEET/DNB Pattern)*
b) K antiport
c) Na antiport
d) Na cotransport

ADRENAL

731. In addisons disease the following is seen - *(AP 88)*
a) Hyperkalemia b) Hypernatremia
c) Hyperglycemia d) High blood pressure

732. Renin secretion is stimulated by all except -
a) Cardiac failure *(AI 93)*
b) Low Na+ in promimal tubule
c) Sympathetic stimulation
d) High Na+ in proximal tubule

733. Cortisol - *(AIMS 78, Delhi 90, 92)*
a) Secretion increases following injury
b) Favours protein synthesis
c) Enhances effects of antigen-antibody reactions
d) Tends to lower blood pressure

734. In a male newborn the adrenogenital syndrome (congenital hyperplasia of the adrenal glands) is most often associated with - *(JIPMER 80, UP 92)*
a) Normal appearing genitalia
b) Hypoglycemia
c) Pseudohermaphroditism
d) Persistent paramesonephros(Mullerian ducts)

735. Adrenal insufficiency causes - *(PGI84)*
a) A rise in plasma Sodium/Potassium ratio
b) Low blood pressure
c) Increased breakdown of protein
d) A fall in extra cellular fluid volume

736. What is not true for aldosterone - *(AIMS81)*
a) Secreted in increased amounts when blood volume falls
b) Is a polypeptide
c) Secretion tends to increase renal arterial pressure
d) Secretion results in a reduction in uninary volume

737. Regarding ACTH the following statements are true except - *(PGI 81, AMU86)*
a) Secreted by the basophil cells
b) Controls secretion of adrenal cortex
c) It is not protein in nature
d) In can withstand heating up to 100 degree C

714)a 715)None 716)d 717)d 718)b 719)c 720)a 721)c 722)c 723)d 724)a 725)b 726)a *121)6*
728) a 729) b 730) d 731) a 732) d 733) a 734) d 735) b,d 736) b 737) c

738. In Cushing syndrome the following features are found except- *(JIPMER 78, UP 92)*
a) Rapidly increasing adiposity
b) Polycythaemia
c) Hypotension
d) Impotence with atrophy of testis

739. Cushing's syndrome is characterised by-*(Kam 94)*
a) Eosinophilia b) Hyperkalemia
c) Nitrogen retention d) Poor wound healing

740. Hormones secreted by adrenal medulla are-
a) Glucagon b) Cortisol *(PGI02)*
c) Norepinephrine d) Insulin
e) Aldosterone

741. ACTH level is highest during - *(PGI99)*
a) Early morning b) Evening
c) Afternoon d) Night

742. Epinephrine action in liver - *(PGI98)*
a) Glycogenolysis b) Gluconeogenesis
c) Glycolysis d)Lipolysis

743. Aldosterone synthesis is inhibited by - *(PGI 03)*
a) Renin b)Endothelin
c) Dopamine d) Endorphin
e) Hypernatremia

744. All of the following development events are dependent on the production of maternal or fetal glucocorticoid, *except* **-** *(AI06)*
a) Induction of thymic involution
b) Production of surfactant by type II alveolar cells
c) Functional thyroid
d) Functional hypothalamopituitary axis

745. Aldosterone receptors are present in all except -
a) Liver b) Colon *(AiimsMay07)*
c) Hippocampus d) distal nephron

746. Mineralocorticoid receptors are present in all of the following sites, except - *(AIIMS Nov 08)*
a) Hippocampus b) Kidney
c) Colon d) Liver

747. In cushing syndrome, which of the following are seen - *(PGI Dec 08)*
a) T Aldosterone b) *i* Aldosterone
c) T Epinephrine d) *i* Epinephrine
e) Edema

748. Excessive production of aldosterone results in -
a) Metabolic acidosis *(Corned 09)*
b) Severe hypotension
c) Potassium retention
d) Depressed plasma renin

749. Hyperaldosteronism is associated with all except -
a) Hypernatremia b) Hypokalemia *(AIIMSMay 10)*
c) Hypertension d) Metabolic acidosis

750. In a male newborn the adrenogenital syndrome (congenital hyperplasia of the adrenal glands) is most often associated with - *(DPG10)*
a) Normal appearing genitalia
b) Hypoglycemia
c) Pseudohermaphroditism
d) Persistent paramesonephros (Mullerian ducts)

751. Mineralocorticoid receptors are present in all of the following sites, except - *(NEET/DNB Pattern,*
a) Hippocampus *AI II, AIIMS Nov 08, May 07)*
b) Kidney
c) Colon
d) Liver

752. Which of the following increases during surgical stress - *(NEET/DNB Pattern)*
a) Cortisol b) Glucagon
c) Insulin d) Gastrin

753. Aldosterone mainly acts upon - *(NEET/DNBPattern)*
a) PCT b)LoopofHenle
c) Glomerulus d) Collecting duct

754. Effect of cortisol - *(NEET/DNB Pattern)*
a) Decreased bone matrix
b) Increased bone mattix
c) Increases lymphocytes
d) Increases RBCs.

755. Major adrenal androgen is - *(NEET/DNB Pattern)*
a) Testosterone
b) 11-hydroxy derivative of androstenedione
c) 17-ketosteroid dehydroepiandrosterone
d) Cortisol

756. Zona glomerulosa secretes- *(NEET/DNB Pattern)*
a) Aldosterone b) Cortisol
c) Testosterone d) Catecholamines

CALCIUM METABOLISM

757. Which of the following does not interfere with calcium metabolism - *(AIIMS 85)*
a) Calcitonin b) Cholecaliferol
c) Vitamin D d) Thyroxine

758. Which of the following organ is not involved in Calcium metabolism - *(PGI 01)*
a) Lung b) Liver
c) Spleen d)Skin
e) Kidney

759. True of the following - *(PGI 01)*
a) Calcium reabsorbed in DCT
b) 90% calcium excreted by glomerulus
c) Parathormone (PTH) promotes absorption of Ca^ from intestine
d) PTH promote action of calcitonin

760. Hypocalcemia due to calcitonin is by - *(PGI99)*
a) Increased excretion in kidney
b) Decreased bone resorption
c) Decreased intestinal absorption
d) Decreased renal reabsorption

761. Calcium absorption is from - *(PGI 99)*
a) Proximal small intestine b) Distal Ileum
c) Middle small intestine d) Ascending colon

738) c 739) d 740) c 741) a 742) a 743) e 744) d 745) a 746) d 747)a,c,e 748) d 749) d 750) d 751)d
752) a>d 753)d 754)a 755)c 756)a 757)d 758)c 759)c 760)b 761) a

762. Parathyroid hormone is responsible for all actions except- *(PGI97)*
a) Absorption of phosphorous increase
b) Vit D absorption increases
c) Mobilizes calcium from bone
d) Increase intestinal absorption of calcium

763. Osteomalacia is associated with - *(AI03)*
a) Decreases in osteoid volume
b) Decrease in osteoid surface
c) Increase in osteoid maturation time
d) Increase in mineral apposition rate

764. Calcium absorption from gut is enhanced by -
a) Parathyroid hormone *(APPGE 05)*
b) Calcitonin
c) 1,25 dihydroxy cholecalciferol
d) AJ1

765. Osteoclasts are inhibited by - *(AI 05)*
a) Parathyroid hormone
b) Calcitonin
c) 1,25-dihydroxycholecalciferol
d) Tumor necrosis factor

766. Hypercalcemia associated with malignancy is most often mediated by - *(AI 05)*
a) Parathyroid hormone (PTH)
b) Parathyroid hormone related protein (PTHrP).
c) Interleukin - 6 (IL-6)
d) Calcitonin

767. Which of the following organs is not involved in calcium homeostasis ? *(AI 06)*
a) Kidneys b)Skin
c) Intestine d) Lungs

768. Calcitonin is secreted by - *(AI06)*
a) Thyroid gland b) Parathyroid gland
c) Adrenal glands d) Ovaries

769. True of the following - *(DPG10)*
a) Calcium reabsorbed in DCT
b) 90% calcium excreted by glomerulus
c) Parathormone (PTH) promotes absorption of Ca++ from intestine
d) PTH promote action of calcitonin

770. Parathormone (Parathroid hormone/PTH) increase calcium levels and reduces phosphate level by acting on_____- *(Maharashtra 10)*
a) Proximal tubules
b) Distal tubules
c) Thick ascending limb of Loop of Henle
d) All of the above

771. Which of the following organ is not involved in Calcium metabolism - *(PGI May 10)*
a) Lung b) Liver
c) Spleen d) Skin
e) Kidney

772. Effect of steroids on calcium - *(NEET/DNB Pattern)*
a) Increased plasma level
b) Increased absorption from gut
c) Increased excretion from kidney
d) None

773. Increased calcium levels lead to -
a) Increased 1,25 dihydroxycholecalciferol
b) Increased 24,25 dihydroxycholecalciferol
c) Decreased calcitonin *(NEET/DNB Pattern)*
d) Increased parathormone

774. Site of 25-hydroxylation of cholecalciferol -
a) Kidney b) Skin *(NEET/DNB Pattern)*
c) Liver d) Lung

775. Calcium absorption is increased by -
a) Proteins b) Bile *(NEET/DNB Pattern)*
c) Acid d) Phosphates

776. Bone removing cells - *(NEET/DNB Pattern)*
a) Osteoblasts b) Osteoclasts
c) Stem cells d) Cytotoxic T cells

111. **Which of the following cause low serum calcium-**
a) Vit D deficiency b) Parathyroid *(NEET/DNB*
c) GH d) Glucocorticoids *Pattern)*

778. Which of the following cause low serum calcium-
a) Vit D deficiency b) Parathyroid *(NEET/DNB*
c) GH d) Glucocorticoids *Pattern)*

PITUITARY

779. Anterior pituitary gland secretes all except -
a) GRH b)GH *(TN89)*
c) TSH d)LH-FSH

780. Hormones secreted form the anterior pituitary lobe- *(PGI87, NIMHANS86, Kerala 88)*
a) Growth hormone b) Prolactin
c) TSH d)ACTH
e) Somatostatin

781. Which of the following are true about median eminnce - *(AIIMS 85, AI 88)*
a) Portion of ventral hypothalamus
b) Hypothalmus hypophyseal vessels arise here
c) Outside the blood-brain barrier
d) All are correct

782. Site of ADH action is - *(AI 91)*
a) Proximal tubule b) Loop of Henle
c) Vasa recta d) Collecting tubule

783. Which of true regarding oxytocin - *(JIPMER 91)*
a) Increased by stress
b) Secreted by para ventricular tissue
c) Effective in males
d) Important for maintaining pregnancy

784. The effect of hypophysectomy is - *(JIPMER 91)*
a) Glucocorticoid deficiency
b) Mineralo corticoid deficiency
c) Menstrual failure
d) Ail

785. Transection of pituitary stalk leads to increase in -
a) TSH b) Prolactin *(JIPMER 92)*
c) GH d)ACTH

786. Neurotransmitter which controls secretion of prolactin - *(JIPMER 93)*
a) Serotonin b) GABA
c) Somatostatin d) Dopamine

762) a 763)c 764)c 765)b 766)b 767)d 768)a 769)c 770) d 771)c 772)c 773)b 774)c 775) a
776) b 777) a 778) a 779) a 780)a,b,c,d 781)d 782) d 783)a,b,c 784) a, c 785) b 786) d

787. Injection of hypertonic saline into which area causes diuresis - *(AIIMS 94)*
a) Supraoptic nucleus
b) Paraventricular nucleus
c) Preoptic nucleus
d) Posterior pituitary

788. Oxytocin causes all except - *(IN 97)*
a) Lactogenesis
b) Milk ejection
c) Contraction on uterine muscle
d) Myoepithelial cell contraction

789. True about growth Hormone is that - *(AI99)*
a) Causes diabetes mellitus resistant to insulin
b) Causes hyperglycemia
c) Enhances lipogenesis
d) Causes hypoglycemia

790. In the Neurohypophysis, secretory granules accumulate in - *(Karnataka 2001)*
a) Pituicytes
b) Nerve endings
c) Intercellular spaces
d) Capillary endothelium

791. Hormone secreted by adenohypophysis are/is -
a) Oxytocin b) TSH *(PG103)*
c) Gonadotropins d) Ariginine vesopressin
e) ACTH

792. Basophillic cells of pituitary secretes - *(PGI02)*
a) Prolactin b) GH
c) TSH d)ACTH
e) LH

793. Posterior pituitary secretes - *(PGI 01)*
a) Oxytocin b) Prolactin
c) ADH d)MSH
e) FSH

794. GH secretion is- **(***SGPGI05*)
a) Greater in early morning
b) Greater in evening
c) Increases on preolonged fasting
d) Stimulates B-cells of pancreases directly

795. Pro-opimdanocartin (POMC) releases all of the following except - *(SGPGI05)*
a) ACTH b)MSH
c) B_2-endorphins d) FSH

796. Hormone which initiates milk ejection- *(MAHE 05*
a) Lactogen b) Prolactin *Kerala94)*
c) LH d) Oxytocin

797. Greatest stimulator for ADH secretion-(PG7 *June*
a) Hyperosmolarity b) Hyponatremia*06)*
c) Hypotension d) Hypovolemia

798. Suckling releases which of the following from the anterior - *(MAHE 07)*
a) Prolactin b) Oxytocins
c) Somatostatins d)Somatomedins

799. Dwarfism is caused by all except - *(UP 07)*
a) Thyroid deficiency
b) Growth hormone deficiency
c) Castration before puberty
d) Receptor unresponsive

800. Somatomedin mediates - *(AIIMS May 10)*
a) Deposition of chondroitin sulfate
b) Lipolysis
c) Gluconeogenesis
d) Decreased rate of glucose uptake by cells

801. Oxytocin causes all except - *(DPG10)*
a) Lactogenesis
b) Milk ejection
c) Contraction of uterine muscle
d) Myoepithelial cell contraction

802. True about milk secretion - *(PGIMay 10)*
a) Neuroendocrine part of post pituitary is involved
b) Secretion by contraction of lactiferous sinus oxytocin
c) Oxytocin hormone is involved
d) Prolactin cause contraction of Myoepithelial cells
e) Affected by emotion

803. Which of the pairs about vasopressin receptors is incorrect - (AIIMS Nov 10)
a) V,-smooth muscles b) V_2-collecting ducts
c) V_3-anterior pituitary d)V_4-CNS

804. About Neuropeptide Y all are true except -
a) It is mediated through melanocorticotropin hormone *(AIIMS Nov 10)*
b) Decreases thermogenesis
c) Its level decreases during starvation
d) Contains 36 aa residues

805. Secretion of all the following hormones are decreased in section of pituitary stalk except -
a) Prolactin b)GH *(Jipmer10)*
c) Vasopressin d)FSH

806. Prolactin is secreted by - *(Jipmer 11)*
a) Acidophil b) Basophil
c) Chromophobe d) Herring bodies

807. Ejection of milk is caused by - *(NEET/DNB Pattern)*
a) Oxytocin b) ADH
c) Progesterone d) Thyroxine

808. Vasopressin induced thirst is - *(NEET/DNB Pattern)*
a) Subfomicial nuclei
b) Posterior hypothalamus osmoreceptors
c) Pretectal nucleus

809. Efferent pathway for milk ejection reflex - *(NEET/*
a) Prolactin b) Oxytocin *DNB Pattern)*
c) ACTH d) Growth hormone

810. Function of preoptic nucleus of hypothalamus -
a) Temperature regulation *(NEET/DNB Pattern)*
b) Thirst
c) GI stimulation
d) Satiety centre

787) a 788) a 789) a,b 790) b 791)b,c,e 792)c,d,e 793) a,c 794) c 795) d 796) d 797) a 798) b 799) c
800) a 801) a 802)a,b,c,e 803) d 804) c 805) a 806) a 807) a 808) a 809) b 810) a

811. Where does ADH not act ? *(NEET/DNB Pattern)*
a) PCT b) Collecting duct,
c) Collecting tubules d)DCT

812. Which of the following nucleus controls the circadian rhythm? *(NEET/DNBPattern)*
a) Supraoptic nucleus
b) Paraventricular nucleus
c) Suprachiasmatic nucleus
d) Premamillary nucleus

813. Lesion of which hypothalamic nuclei leads to loss of circadian rhythm - *(NEET/DNB Pattern)*
a) Dorsomedial b) Ventromedial
c) Supraoptic d) Suprachiasmatic

814. Pituitary secretes all hormones except ?
a) GH *(NEET/DNBPattern)*
b) Prolactin
c) Oxytocin
d) Thyroxine

815. Diurnal variation of ACTH depends on -
a) Suprachiasmatic nucleus *(NEET/DNB Pattern)*
b) Supraoptic nucleus
c) Ventrolateral nucleus
d) Thalamus

816. Hypothalamus increases release of all hormones from the pituitary except - *(NEET/DNB Pattern)*
a) TSH b)FSH
c) CRH d) Prolactin

817. Hypothalamus controls the hormone secretion of-
a) Anterior hypophysis *(NEET/DNB Pattern)*
b) Posterior hypophysis
c) Kidney
d) Pineal gland

818. Acidophils secrete - *(NEET/DNB Pattern)*
a) GH b) TSH
c) ACTH d)FSH

819. Vasopressin is secreted by - *(NEET/DNB Pattern)*
a) Supraoptic b) Preoptic
c) Paraventricular d) Posterior nucleus

820. Growth hormone level decreased in -
a) Mypoglycemia *(NEET/DNB Pattern)*
b) Fastiny
c) Sleep
d) Exercise

821. Circumentricular organ is - *(NEET/DNB Pattern)*
a) Anterior pituitary b) Posterior pituitary
c) Pineal gland d) None

822. ACTH is increased in all *except-(NEET/DNB Pattern)*
a) Exercise b) Emotions
c) Evening d) Tumors

823. Function of vasopressine - *(NEET/DNB Pattern)*
a) Absorption of water in PCT
b) Absorption of water in loop of Henle
c) Absorption of water in collecting duct
d) Absorption of Na^+ in PCT

824. Lesion of preoptic nucleus of hypothalamus causes-
a) Hyperphagia *(NEET/DNB Pattern)*
b) Hyperdypsia
c) Hyperthermia
d) Hyperglycemia

SEX HORMONES

825. Mullerian inhibiting substance that causes degeneration of paramesonephric ducts is secreted by- *(Jipmer95)*
a) Leydig cells b) Anterior pituitary
c) Adrenal cortex d) Theca cells

826. Which of these contain 19 carbon atoms -
a) Estradiol b) Testosterone *(ROHTAK88)*
c) Aldosterone d) Cortisol

827. Which is not a peptide hormone - *(JIPMER 92)*
a) Growth Hormone b) Prolactin
c) Progesterone d) Oxytocin

828. Best proof of ovulation is by - *(Delhi 87)*
a) Basal body Temp, chart
b) Study of cervical mucus
c) Vaginal cytology
d) Endometrial biopsy

829. Inhibin is secreted by - *(TN 95)*
a) Leydig cells b) Sertoli cells
c) Uterine endometrium d) Myometrium

830. Absence of fructose in semen indicates-£4//MS' *92)*
a) Prostatic atrophy
b) Testicular failure
c) Obstruction of vas
d) Obstruction of ejaculatory duct

831. To rule out azoospermia as a cause of infertility due to obstruction of seminal vesicles substance to be found in semen is - *(JIPMER 95)*
a) Fructose b) Carnitine
c) Pus cells d) All of the above

832. Testes does not produce- *(AI89)*
a) Estradiol b) Testesterone
c) Fructose d) Inhibin

833. Levels of which of the following hormones are increased in post menopausal women - *(AI89)*
a) Estrogen b) FSH
c) Progesterone d) Cortisone

834. The excretion of estrogens and progesterones are through- *(AP88)*
a) Bile b) Sweat
c) Urine d) Faces

835. Prostaglandin secretion is maximum in-
a) Urine b) Semen *(AIIMS89)*
c) Amniotic fluid d) Saliva

836. Function of leutenising hormone is - *(AI90, AJ 93)*
a) Follicle maturation and ovulation
b) Milk secretion
c) Causes progesterone secretion during ovulation
d) Maintains placenta

811)a 812)c 813)d 814)d 815)a 816)d 817)a>b 818)a 819)a 820)c 821)b 822)c 823)c 824)c
825) None 826) b 827) c 828) d 829) b 830) d 831) a 832) c 833) b 834) c 835) b 836) a

837. Cart wheel appearance of nucleus is seen in -
a) Leydig cell b) Sperms *(JIPMER 92)*
c) Sertoli of ovary d) Germinal epithlium

838. FSH is secreted by - *(JIPMER 92)*
a) Chromophobesb) Basophils
c) Acidophils d) Theca interna cells

839. Estrogen acts on - *(AIIMS 92)*
a) Nucleus b) Mitochondria
c) Cell membrane d) Cytoplosmic receptor

840. Which is not caused by Estrogen - *(AIIMS 92)*
a) Decreased folate levels
b) Decreased HDL
c) Increased blood sugar
d) Decreased serum alkaline phosphatase

841. Menopausal hot flushes is due to - *(AIIMS 92)*
a) Decreased Estrogen
b) Decreased progesterone
c) LH surge
d) FSH surge

842. Spermatozoa mature in which of the following organs- *(PGI80)*
a) Epidydimis b) Vas-Deferens
c) Rate-testes d) Prostate

843. Ovulation coincides with - *(AIIMS 8 7, Dehli 93)*
a) Increase in progesterone
b) GnRH release
c) LH Surge
d) Increase in Oestrogen

844. If a lady presents with a very regular 29 days messtrual cycle, ovulation should occur on day -
a) 14 b) 15 *(AIIMS 80, Delhi 8 7)*
c) 17 d) 19

845. In the female genital tract the spermatozoa do not live for more than - *(JIPMER 80, Orissa 91*
a) 12 hours b) 24 hours *AIIMS85)*
c) 36 hours d) 48 hours

846. The sperms are normally motile at the rate of -
a) 0-lmm/min b)l-3mm/min*(AIIMS 84)*
c) 3-10mm/min d)10-15mm/min

847. Following are the effects of testostone except -
a) Haemopoiesis *(JIPMER 81, Delhi 86)*
b) Calcium retention
c) Increase total quantity of bone matrix
d) Increase BMR
e) None

848. Which of the following determines the sex of the individual - *(BIHAR 89, 91)*
a) Genotype only b) Genotype + Phenotype
c) FSH+LH d) Hormones only
e) Any of the above

849. Normal-body temperature can be raised by -
a) Androgens b) Gonadotrophins *(Delhi 87)*
c) Oestrogen d) Progesterone

850. Menopausal hormonal relations are - *(AI95)*
a) LH/TSH increase
b) Gonadotropins increase estrogens decrease
c) Estrogens and gonadotropins decrease
d) Both increase

851. Progeterone is produced by - *(AI 95)*
a) Granulosa Luteal cells b) Theca cells
c) Stroma of ovary d) Sertoli cells

852. Testosterone is formed from - *(AMU 95)*
a) Cholesterol b) Pregnenolone
c) Androstendione d)All

853. Motility of sperms starts in - *(AIIMS 96)*
a) Testis b) Epididymis
c) Vas defedrens d) Prostratic urethra

854. Elasticity of cervical mucous is seen in - *(MP 98)*
a) Proliferative b) Midcycle
c) Luteal stage d) Menstruation

855. Prostaglandins found in the seminal fluid are secreting products of - *(Orissa 99)*
a) Prostate gland b) Seminal vesicle
c) Leydig cells d) Sertoli cells

856. Blood-testis barrier is formed by - *(MP 2K)*
a) Sertoli cells b) Leydig cells
c) Epididymis d) Vas deferens

857. Sperms persist in female genital tract for - *(Orissa 04)*
a) 1 -2 days b) 1 -2 weeks
c) 1 -2 months d) 1 -2 hours

858. Which among the following are polypeptides -
a) LHRH b) FSH *(PGI 02)*
c) Prolactin d) Estrogen

859. Before the onset of puberty, the GnRH neurons are under the inhibitory control of - *(AI 04)*
a) Glycine
b) Glutamate
c) Gamma amino butyric acid (GABA)
d) Beta endorphin

860. Features of HCG- *(PGI02)*
a) Is a glycoprotein
b) Levels increases in third trimester
c) Alpha subunit is specific for HCG
d) Secreted by Trophoblasts
e) Has 2 subunits

861. Capacitation of sperms takes place in - *(SRMC 02)*
a) Epididymus b) Seminal vasicle
c) Uterine tubes d) Uterus

862. Spermatozoa gets nourishment from - *(Kerala 03)*
a) Glucose b) Fructose
c) Galactose d) Lactose

863. Testesterone - *(Kerala 04)*
a) Causes salt and water retention
b) Has protein catabolic effect
c) Inhibits erythropoiesis
d) None of the above

864. Ovum is released due to - *(MAHE 05)*
a) FSH b)LH
c) Prolactin d)HCG

837) c 838) b 839) a 840)a,b,c,d 841) a 842) a 843) c 844) b 845) d 846) b 847) e 848) a 849) d 850) b
851) a 852) d 853) b 854) b 855) b 856) a 857) a 858)a,b,c 859) c 860) a,e 861) c 862) b 863) a 864) c

865. Which of the following statements can be regarded as primary action of inhibin - *(AI05)*
a) It inhibits secretion of prolactin
b) It stimulates synthesis of estradiol
c) It stimulates secretion of TSH
d) It inhibits secretion of FSH

866. Testosterone production is mainly contributed by- *(Ad 06)*
a) Ley dig cells b) Sertolie cells
c) Seminiferous tubules d) Epididymis

867. Ovulation is primarily caused by preovulatory surge of- *(AI06)*
a) Estradiol
b) Luteinizing hormone
c) Progesterone
d) Follicle stimulating hormone

868. After bilateral vasectomy which of the following substance deficiency is seen - *(Manipal 2006)*
a) Fructose b) Prostaglandin
c) Fibrinolysin d)None

869. By the time of implantation in uterine endometrium the typical fertilized ovum is devided into how many cells - *(HP 2006)*
a) 2 b) 4
c) 16 d)750

870. Males and females show difference in the age of onset of puberty. The difference in the age of onset of puberty amongst males may be explained by -
a) Increased Activin-A levels *(A107)*
b) Decreased Follistatin levels
c) Increased Inhibin levels
d) Easily releasable FSH pool

871. Normal testicular development requires which of the following chromosomes - *(MAHE 0 7)*
a)XY b)XX
c) Y chromosome d) X chromosome

872. Breast feeding often - *(UP 07)*
a) Stimulates FSH
b) Stimulates LH
c) Stimulates prolactin initiation
d) Stop suppression of FSH

873. Sertoli cells have receptors for - *(AIIMSNov07)*
a) FSH b)LH
c) Inhibin d) Progesterone

874. Sperms acquirs motility in - *(UP 08)*
a) Testis b) Epididymus
c) Vas deferences d) Seminal vesicles

875. Spermatogenesis occurs at - *(AI 08)*
a) Body temperature
b) Temperature lower than core body temperature
c) Temperature higher than core body temperature
d) Temperature does not play a role

876. Which of the following is correct regarding fertilization and implantation ? *(AI 08)*
a) Fertilisation usually occurs in the uterus
b) Implantation occurs 24 hours after fertilization
c) The tubes are lined by ciliated epithelium
d) The cilia beat towards fimbriae

877. Inhibin is secreted by - *('Manipal 08)*
a) Ovarian follicle
b) Stroma
c) Surface epithelium of ovary
d) Corpus luteum

878. Mellerian inhibiting substance (MIS) is produced by- *(Manipal 08)*
a) Stroma b) Sartoli cells
c) Ley dig cells d) All of the above

879. Source of progesterone during normal menstrual cycle- *(Manipal 08)*
a) Corpus luteum
b) Stroma
c) Surface epithelium of ovary

880. Spermatogenesis is maintained by which hormones (s)- *(PGI Dec 08)*
a) Testosterone b)FSH
c) LH d) Prolactin
e) Gonadotropin releasing hormone (GnRH)

881. Sertoli cells play a key role in which of the following process - *(AI 09)*
a) Spermiogenesis
b) Testosterone secretion
c) Secretion of seminal fluid
d) Production of germ cells

882. Capacitance of sperms takes place in - *(AIIMSMay 09)*
a) Seminiferous tubules b) Epididymis
c) Vas deference d) Uterus

883. Estrogen action on carbohydrate metabolism -
a) Increases uptake of glucose through increase in insulin sensitivity *(AIIMS May 09)*
b) Glycolysis increases
c) Increasing central adipose deposition
d) Worsening of NIDDM

884. Fern pattern in cervical mucus is due to high- *(Corned 09)*
a) Potassium chloride b) Sodium chloride
c) Calcium chloride d) Protein content

885. The principal steroid secreted by testis is -
a) Testosterone *(Corned 09)*
b) Dihydrotestosterone
c) Androstenidione
d) Dihydroepiandrosterone

886. Capacitance of sperms takeṗ *m-(ARMS May 10)*
a) Seminiferous tubules b) Epididymis
c) Vas deference d) Uterus

887. Which of the following is not seen in humans-^/*10)*
a) Estrous cycle b) Menstrual cycle
c) Endometrial cycle d) Ovarian cycle

888. Ductules in breast develop due to action of?
a) Progesteron b) Oestrogen *(Maharashtra 10)*
c) Activin d) All of the above

889. A man is given continuous testosterone.lt would lead to- *(ARMS Nov 10)*
a) Azoospermia
b) Increased sperm motility
c) Increased spermatogenesis
d) Increased gonadotrophins

865) d 866) a 867) b 868) d 869) c 870) c 871)c 872) c 873) a 874) b 875) b 876) c 877) a 878) b
879) a 880) a,b,c 781) a 882) d 883) a 884) b 885) a 886) d 887) a 888) b 889) a

890. Which of the following is not seen in humans -
a) Estrous cycle b) Menstrual cycle
c) Endometrical cycle d) Ovarian *cyc\e(AIll)*

891. Menopausal hot flushes coincides with - *(Korn 11)*
a) FSH secretion b) Decrease in estrogen
c) LH surge d) Increase in progesterone

892. FSH is secreted by - *(Punjab 10)*
a) Chrompphobes b) Basophils
c) Acidophils d) Theca interna cells

893. Androgen is secreted by - *(Jipmer 10)*
a) Leyding cell b) Sertoli cell
c) Cowper's gland d) Intermediate cells

894. Sperm acquires motility in - *(NEET/DNB Pattern,*
a) Seminal vesicle *A199, 94, ARMS 97, UP 08)*
b) Testes
c) Epididymis
d) Ejaculatory duct

895. Corpus luteum in pregnancy is maintained by which hormone - *(NEET/DNB Pattern)*
a) Progesterone b) Oestrogen
c) LH d)FSH

896. In post ovulatory phase thickness of endometrium is because of - *(NEET/DNBPattern)*
a) Progesterone b) Oestrogen
c) FSH d)LH

897. What is thelarche - *(NEET/DNB Pattern)*
a) Pubertal breast enlargement in girls
b) Breast enlargement in pregnancy
c) Hormone induced breast enlargement in boys
d) Post hormonal therapy breast enlargement in postmenopausal females

898. LH is secreted by - *(NEET/DNB Pattern)*
a) Ovary b) Pituitary
c) Corpus luteum d) Hypothalamus

899. Ovulation of ovary is influenced by.,
a) LH b)FSH *(NEET/DNBPattern)*
c) LH+FSH d)GnRH

900. Fertilization occurs at - *(NEET/DNB Pattern)*
a) Cervix b) Uterus
c) Ampulla d) Ovary

901. Haploid number of chromosomes is seen in -
a) Spermatogonia *(NEET/DNB Pattern)*
b) Primary spermatocytes
c) Secondary spermatocyte
d) None

902. Leydig cells secrete - *(NEET/DNB Pattern)*
a) Inhibin
b) MIS
c) Testosterone
d) Androgen binding protein

903. PGs in semen are secreted by *'(NEET/DNB Pattern)*
a) Prostate b) Seminal vesicle
c) Sperms d) Testes

904. Ovulation of ovary is influenced by -
a) LH b) FSH *(NEET/DNB Pattern)*
c) LH + FSH d)GnRH

905. 17 OH steroid - (NEET/DNB Pattern)
a) Androgen b) Progesterone
c) Estrogen d)None

906. Progestreone has how many carbons -
a) 18 b) 19 *(NEET/DNB Pattern)*
c) 20 d) 21

907. FSH is secreted by - *(NEET/DNB Pattern)*
a) Ovary b) Hypothalamus
c) Posterior pituitary d) Anterior pituitary

908. Ovulation in a women with 28 day cycle occurs at-
a) 14 days prior to mensturation *(NEET/DNB*
b) Just before LH surge *Pattern)*
c) Just after corpus leuteal maturation
d) Due to progesterone rise

909. Estrogen is secreted during pregnancy, mostly by-
a) Maternal ovary *(NEET/DNB Pattern)*
b) Fetal ovary
c) Pituitary
d) Hypothalamus

910. Spermatogenesis is mostly controlled by-
a) Inhibin b) FSH *(NEET/DNB Pattern)*
c) LH d)GnRH

911. Sperm maturation takes place in -
a) Vas deferens *(NEET/DNB Pattern)*
b) Seminiferous tubules
c) Epididymis
d) Female genital tract

912. Beta HCG is secreted by - *(NEET/DNB Pattern)*
a) Ovary b) Pituitary
c) Corpus luteum d) Placenta

913. Semen is released by - *(NEET/DNB Pattern)*
a) Epididymis b) Testes
c) Vas deferens d) Prostate

914. Sperm maturation takes place in -
a) Vas deferens *(NEET/DNB Pattern)*
b) Seminiferous tubules
c) Epididymis
d) Rete testis

915. Ovarian follicles at birth in ovary are -
a) 2 million b) 7 million
c) 10 million d) 20 million

916. Velocity of human sperm - *(NEET/DNB Pattern)*
a) 1 -3 mm/min b) 4-6 mm/min
c) 6-9 mm/min d) 10-13 mm/min

917. Dihydrotestosterone acts on - *(NEET/DNB Pattern)*
a) Pituitery b) External genitalia
c) Internal genitalia d) Tests

918. Ovary produces all except - *(NEET/DNB Pattern)*
a) Gonadotropin b) Testosterone
c) Estrogen d) Inhibin B

919. Negative feedback in spermatogenesis is by -
a) ABP *(NEET/DNB Pattern)*
b) Inhibin
c) Progesterone
d) None

890) a 891) c 892)b 893)a 894)c 895)c 896)a 897)a 898)b 899)a 900)c 901) c 902)c 903)b 904)a 905)b 906)d 907)d 908)a 909)a 910)c>b 911)d 912)d 913)c 914)c 915)a 916)a 917)b 918) a 919)b

920. Function of oxytocin - *(NEET/DNB Pattern)*
a) Milk ejection b) Milk secretion
c) Ovulation d) Maintainance of pregnancy

921. Size of sperm - *(NEET/DNB Pattern)*
a) 100 microns b)65nm
c) 100 nm d) 65 micrometer

922. Luteal phase dominant hormone-
a) Estrogen *(NEET/DNB Pattern)*
b) Progesterone
c) Prolactin
d) Oxytocin

923. Testosterone is produced in leydig cells in fetus due to - *(NEET/DNB Pattern)*
a) FSH b) pHCG
c) Cortisol d) Estrogen

924. Immune rejection in fetus is prevented by -
a) HOG *(NEET/DNB Pattern)*
b) HPL
c) Oestrogen
d) Progesterone

925. Sertoli cell feedback mechanism involves -
a) Decreased LH *(NEET/DNB Pattern)*
b) Decreased FSH
c) Decreased TRH
d) Decreased CRH

MISCELLANEOUS

926. Least half life is for which hormone - *(JIPMER 99)*
a) Nor adrenaline b) Renin
c) Aldosterone d) Thyroxine

927. Which of the following have natriuretic actions -
a) Aldosterone b) Natriuretic peptide *(PGI88)*
c) Angiotensin d) Prednisolone

928. Beta endorphin is - *(Kerala90)*
a) A lipoprotein
b) Analogue of morphine
c) Hormone of the intermediate lobe of pituitary
d) Morphine receptor in brain

929. Anabolic action on protein is mediated by -
a) ACTH b) Insulin *(JIPMER92)*
c) Testesterone d)TSH

930. Following are local hormones except- *(JIPMER 79,*
a) Insulin b) Heparin *Delhi 92)*
c) Bradykinin d) Acetyl choline

931. Erythropoietin is secreted by - **(***AI96)*
a) Liver b) Adrenal cortex
c) Kidney d) Bone marrow

932. Thromboxane A2 is mainly produced by- *(AI97, 95)*
a) Vascular endothelium b)Plateletes
c) Liver d) Damaged tissue

933. Erythropoietin level is raised by - *(AI98)*
a)$iP0_2$ b)$iPC0_2$
c) iHb d)iPH

934. True about creatine - *(UP 2K)*
a) It is a muscle protein
b) High energy compound
c) Measures GFR
d) None

935. Not a glycoprotein - *(DNB 2001)*
a) FSH b)LH
c) TSH d)GH

936. Angiotensionogen is produced by - *(Karnat. 2001)*
a) Liver b) Kidney
c) Atrium d) Hypothalamus

937. Stress-induced hyperglycemia is due to - *(PGI02)*
a) Glucocorticoids b)GH
c) Thyroxine d) Epinephrine
e) Insulin

938. T HIAA urine levels are suggestive of- (*MANE 05)*
a) Carcinoid tumors b) Colon cancer
c) Malignant melanoma d) None of the above

939. Diuresis produced by alcohol is due to - *(ICS 05)*
a) Decreased tubular reabsorption
b) Increased glomerular filtration rate
c) Osmotic diuresis
d) Inhibition of ADH secretion

940. Endothelium Derived Relaxing Factor (EDRF) induced vasodilatation is mediated by -
a) Increased intracellular CGMP *(APPGE05)*
b) Decreased intracellular CGMP
c) Increased extracellular cyclic Amp
d) Decreased intracellular cyclic Amp

941. Exercise is also prescribed as an adjuvant treatment for depression. Most probably is acts by -
a) Increasing pulse pressure *(AIIMSMay 2005)*
b) Improving hemodynamics
c) Raising endorphin levels
d) Inducing good sleep

942. There is mutation of gene coding for the ryanodine receptors in malignant hyperthermia. Which of the following statements best explains the increased heart production in malignant hyperthemia -
a) Increased muscle metabolism by excess of calcium ions *(AIIMSMay 05)*
b) Thermic effect of food
c) Increased sympathetic discharge
d) Mitochondrial thermogenesis

943. Which of the following hormones is an example of a peptide hormone - *(AIIMS May 05)*
a) Parathormone b) Adrenaline
c) Cortisol d) Thyroxine

944. Thyroid hormone acts through receptors present on- *(PGMCET0T1)*
a) Cell membrane b) Cytoplasmic membrane
c) Nuclear membrane d)DNA

945. Insulin with glucagon secretion occurs simultaneously in which condition or by which substance - *(PGMCET07)*
a) Hyperglycaemia b) Hypoglycaemia
c) Fatty acid d) Arginine

920)a 921)d 922)b 923)b 924)a>d 925)b 926)a 927)b 928)c 929)b 930)a 931)a,c 932)b 933)a
934) a 935) d 936) a 937)a,b,d 938) a 939) d 940) a 941) c 942) a 943) a 944) c 945) d

946. cAMP action mediates all except - *(Corned 08, 07)*
a) Glucagon
b) Follicle stimulating hormone
c) Leutinizing hormone
d) estrogen

947. A patient is on low calcium diet for 8 weeks. Following increases to maintain serum calcium levels- *(AIMS Nov 07)*
a) PTH
b) Calcitonin
c) Active 24,25 dihydroxy cholecaliferol
d) Serum phosphate level

948. Which one of the following does not cause small vessel vasculitis ? *(UPSC-108)*
a) Churg - strauss syndrome
b) Henoch - Schonlein purpura
c) Kawasaki disease
d) Microscopic polyangiitis

949. All of the following are increased in Acute stress EXCEPT- *(UP 08)*
a) Growth hormone b) Insulin
c) Epinephrine d) Glucagon

950. Which of the following statements about Histamine is true - *(AI08)*
a) Is found in mast cells
b) Increases gastric acid secretion
c) Related to arousal and blood pressure
d) All of the above

951. Natural light causes all except - *(Manipal 08)*
a) Vitamin D synthesis b) Destroys organ of corti
c) *i* Bilirubin level d) Melanin synthesis

952. 5 percent dextrose is ? *(APPG 08)*
a) Hypotonic b) Isotonic
c) Normotonic d) Hypertonic

953. Which set of hormones have nuclear receptor -
a) Estrogen, thyroxin & glucagon *(PGIDec 08)*
b) Estrogen, thyroxin & TSH
c) Estrogen, TSH & Gonadotropin releasing hormone (GnRH)
d) Retinoic acid, thyroxin & Luteinizing hormone (LH)
e) Testosterone, cortisol & Estogen

954. Hormone synthesized as peptide precursor is/are -
a) Insulin b) PTH *(PGI June 09)*
c) Renin d) Thyroid hormone
e) Angiotensin II

955. All the following hormones have receptors on the plasma membrane of target tissues except -
a) Thyrotropin b) Glucagons *(Corned 09)*
c) Estradiol d) Epinephrine

956. Which one of the following hormones decreases Na^+-K^+ AT-Pase activity - *(Corned 09)*
a) Thyroid hormone b) Aldosterone
c) Dopamine d) Insulin

957. The primary site of haematopolesis in the foetus before midpregnancy is - *(Corned 09)*
a) Bone b) Liver
c) Spleen d)Lung

958. Which of the following acts through tyrosine kinase receptor - *(Corned 09)*
a) Insulin b) Glucagon
c) Growth hormone d) Follicle stimulating hormone

959. All of the following use c-AMP as a second messenger except - *(AIMS Nov 09)*
a) Corticotropin b) Dopamine
c) Glucagon d) Vasopressin

960. Insulin-like Growth factor H plays an important role in_____ - *(Maharashtra 10)*
a) Control of metablism b) Skeletal growth
c) Cartilage growth d) Devolop of foetus

961. True about function of Angiotensin *H-(PGI Nov 10)*
a) Constriction of afferrent arteriole
b) Autoregulation of GER
c) Secreted from endothelial
d) Release aldosterone
e) Increased sodium and water reabsorption

962. Intrauterine growth of fetus is affected by -
a) Growth hormone *(PGI Nov. 10)*
b) Insulin
c) Thyroxine
d) Glucocorticoids
e) Parathormone

963. All are glycoprotein hormones except -
a) IH b) FSH *(Jipmer 10)*
c) Lh d) ADH

964. Which of the following occurs in acute trauma?
a) Increase in insulin *(Jipmer 11)*
b) Decrease in glucagon
c) Decrease in cortisol
d) Increase in thyroxine

965. Nissl's bodies located intracytbplasmic are in?
a) Perikaryon of neuron *(NEET/DNB Pattern)*
b) Smooth muscle
c) Skeletal muscle
d) Cardiac muscle

966. Which is incorrectly matched - *(NEET/DNB Pattern)*
a) Eyes-rods& cones
b) Olfaction- hair cells
c) Tongue- Na channels
d) Carotid body- chemoreceptor

G.I.T.

967. The rate of absorption of sugars by small intestine is highest for - *(AIMS 83)*
a) Disaccharides b) Polysaccharides
c) Hexoses d) Pentose

968. Which of the following is not secreted by the pancreas - *(PGI 92)*
a) Procarboxypeptidase b) Trypsinogen
c) Phospholipase A d) Pepsinogen

969. Liver does not produce - *(AI89)*
a) Albumin b) Gamma globulin
c) Fibrinogen d) Prothromobin

946) d 947) a 948)c 949)b 950)d 951)b 952)b 953)None 954)a,b,c,e 955)c 956)b 957)b 958)a 959)None>d 960)d 961)a,b,c,d 962)b,c,d 963)d 964)d 965)a 966)b 967)c 968)d 969)b

970. Pancreas Secretes all of the following except -
a) Amino peptidase b) Elastase *(AI 93)*
c) Ribonuclease d) Colipase

971. The major ejection force in vomiting is provided by-
a) Stomach *(JIPMER 80, PGI81)*
b) Reverse peristalsis of intestines
c) diaphragm
d) abdominal muscles

972. Normal acid level in stomach is - *(AIIMS 91)*
a) 300-400 m Eq b) 100-200 m Eq
c) 20-40 m Eq d) 15-20 m Eq

973. Gastrin secretion by pyloric antrum is stimulated by - *(JIPMER 88, UPSC 86)*
a) Cholecystokinin
b) Alteration in pH of gastric contents
c) Distension of antrum
d) All of the above
e) None of the above

974. Pancreatic secretion contain - *(PGI 87)*
a) Trypsin b) Lipase
c) Enteropeptidase d) Pepsin
e) Renin

975. Chymotrypsinogen in activated into chymotrypsin by- *(AIIMS 87)*
a) Trypsin b) Pepsin
c) Fatty acids d) Bile salts

976. Most potent stimulus for bile secretion is -
a) Cholecystokinin *(AIIMS 87)*
b) Gastrin c) Secretin
d) Bile acid e) Bile salt

977. Secretin does not cause - *(AI88)*
a) Bicarbonate secretin
b) Auguments the action of CCK
c) Contraction of pyloric sphincter
d) Gastric secretion increase

978. The gastric phase of gastric secretion is brought about by- *(AI89)*
a) Neural factors
b) Hormonal factors
c) Gastric distension
d) Presence of proteins in the stomach

979. Gastric secretion is stimulated by all of the following except - *(AI88)*
a) Secretin b) Gastric distension
c) Gastrin d) Vagal stimulus

980. Pancreatic juice rich in water and electrolytes but poor in enzymes is secreted in response to -*(Jipmer*
a) Pancreatozymin b) Cholecystokinin *90)*
c) Secretin d) Porteins

981. Gastrin is produced by - *(Jipmer 90)*
a) Pancreas b) Gastric antral cells
c) Pituitary d) All

982. Cephalic phase of gastric secretion is mediated by- *(A190)*
a) Neurohormones b) Parasympathetic
c) Sympathetic d) Gastrin

983. Most potent stimulus for secretin is - *(AI 90)*
a) Dilatation of intestine b) Acid chyme
c) Protein d)Fat

984. Which of the following is absorbed in the colon -
a) Iron b) Proteins
c) Bile salts d) Electrolytes

985. Which of the following is absorbed in the proximal intestine - *(AI 91)*
a) Iron b) Electrolytes
c) Bile salts d)VitaminB12

986. Best stimuli for CCK secretion is - *(AI 92)*
a) Acid b) Protein
c) Bile d)Fat

987. Gastric emptying is decreased by all except -
a) Fatty meal *(AIIMS 92)*
b) Hyperosmolarity in duodenum
c) Distension of duodenum
d) Hypoosmolarity in duodenum

988. Pepsinogen is activated by - *(All India 93)*
a) Enterokinase b) Low pH
c) Trypsin d) Chymotrypsin

989. The normal basal acid output is - *(Jipmer 93)*
a) 1 -2 mmol/hr b) 5-10 mmol/hr
c) 10-15 mmol/hr d) 20-25 mmol/hr

990. Which of the following is the fastest to be absorbed from the stomach - *(Jipmer 79, Delhi 92)*
a) Carbohydrate b) Proteins
c) Fats d) Water
e) None

991. Gastrin secretion is - *(UPSC 89)*
a) Inhibited by curare
b) Stimulated by nor adrenaline
c) Increased by stomach distention
d) Stimulated by an increase in tonic activity

992. Liver is the only organ which normally -
a) Synthesizes heparin *(AIIMS 82)*
b) Synthesizes urea
c) Degrades haemoglobin
d) Convents glycogen to glucose
e) All of the above

993. The only sugar normaly absorbed in the intestine against a concentration gradient is - *(AIIMS 84*
a) Xylose b) Mannose*PGI 81, Delhi 82)*
c) Glucose d) Ribose
e) Galactose

994. Maximum absorption of bile occurs at-
a) Jejunum b) Duodenum
c) Ileum d) Colon

995. The duodeum secretes a hormone which has following effects except - *(DNB 91)*
a) Causes copious pancretic juice rich in bicarbonate and poor in enzymes
b) Increases gastric motility
c) Causes gall bladder to contract and sphincter of Oddi to relax
d) Leads to meagre flow of pancreatic juice rich in enzymes

970) a 971) d 972) c 973) c 974) a,b 975) a 976) d 977) d 978) a,b 979) a 980) c 981)d 982) b 983) b
984) d 985) a,b 986) b 987) d 988) b 989) a 990) e 991) c 992) b,d 993) c,e 994) c 995) b

996. Small intestinal peristalsis is controlled by -
a) Myentric piexus *(Kerala 94)*
b) Meisners piexus
c) Vagus nerve
d) Para sympathetic system

997. Dietary fiber includes one of following - *(Al 96)*
a) Collagen b) Pectins
c) Keratin d)Elastin

998. The final sugars in intestinal chyme ar*t-(Delhi 96)*
a) Glucose & fructose b) Ribose & mannose
c) Ribose & xylulose d) Xylulose & fructose

999. All of the following are secreted proenzyme form except- *(Delhi 96)*
a) Trypsin b) Chymotrypsin
c) Pepsin d) Ribonuclease

1000. Bile is formed at the rate of how many ml/hr in liver - *(AMU95)*
a) 20 b)40
c) 80 d) 100

1001. Fat is maximally absorbed in - *(AMU 95)*
a) Ileum b) Colon
c) Stomach d) Jejunum

1002. All are actions of CCK except - *(Al 99)*
a) Relax lower esophageal sphinctor
b) Increased pancreatic secretion
c) Increased gastric secretion
d) Causes GB contraction

1003. Gastro-colic reflex is related to - *(Orissa 98)*
a) Mass preistalsis b) Segmental movement
c) Pendularmovement d) Colonic cases

1004. Actions of cholecystokinin include all of the following except- *(Kerala 2000)*
a) Contraction of gall bladder
b) Secretion of pancreatic juice rich in enzymes
c) Increases the secretion of enterokinase
d) Augments the action of secretion of gastrin
e) Stimulated gastric emptying

1005. Stimulation for gastric emptying - *(DNB 2001)*
a) Secretin b) CCK
c) Gastrin d) Distension

1006. Intestinal absorption is faster for - *(J&K2001)*
a) Hexoses b) Hissacharides
c) Oligosaccharides d) Polysaccharides

1007. Which of the following does not stimulate enterogastric reflex? *(J&K2001)*
a) Products of protein digestion in the duodeum
b) Duodenal distension
c) H + ions bathing duodenal mucosa
d) Hormones

1008. Which inhibits gastrin secretion - *(Kerala 2001)*
a) Secretin b) High gastric pH
c) Insulin d) Calcium

1009. Short chain fatty acid produced by bacteria are maximally absorbed in - *(Jipmer 2002)*
a) Duodenum b) Colon
c) ileum d) Jejunum

1010. Following are gastrointestinal hormones except
a) CCK-PZ b) GIP *(TN2002)*
c) Motilin d) Chymotrypsin

1011. Secretomotor fibers of parotid gland passes through-
a) Auriculotemporal nerve (*PGI03)*
b) Lesser petrosal nerve
c) Deep petrosal nerve
d) Otic ganglion

1012. Which of these statements are correct regarding acid secretion in stomach - *(PGI02)*
a) Gastrin increases acid secretion
b) Secretin decreases acid secretion
c) H_2 blockers decrease acid secretion
d) Total acid secretion reflects functional parietal cell mass
e) Somatostatin increases acid secretion

1013. All of these are required for digestion of dietary fat-
a) Bile pigments b) Gastric lipase
c) Colipase d) Bile salts
e) Pancreatic lipase

1014. HCL secretion is stimulated by- *(PGI 01)*
a) Secretin b) Somatostatin
c) Histamine d) Gastrin
e) VIP

1015. Maximum contraction of gall bladder is seen with -
a) CCK b) Secretin *(PG12K)*
c) Gastrin d) Enterogastrone

1016. TVue about secretin is - *(PGI1999)*
a) Incresed gall-bladder contraction and $HC0_3$ rich pancreatic fluid
b) Increased gastrin secretion
c) Gastric hypermotility
d) Increased enzyme rich pancreatic fluid

1017. Enterogastric reflex is stimulated by all except -
a) Aik. content of small int *(PGI 98)*
b) Hyperosmolarity of chyme
c) Distension of duodenum
d) None

1018. Chyme is propulsed forward in small intestine by-
a) Segmentation *(PGI 98)*
b) Haustrations
c) Migratory motor complexes (MMC)
d) Peristalsis

1019. Pacemaker of the GI.T. is located in - *(PGI98)*
a) Cardiac end of stomach
b) Long muscle of small intestine
c) Pyloric end of stomach
d) Central control at CBD origin
e) Fundus of stomach

1020. Longest transit time in GIT is seen in - *(PGI 97)*
a) Stomach b) Jejunum
c) Colon d) Ileum

1021. Which one of the following is the primary site of production of gastrin - **(***UPSC 02)*
a) Pylorus b) Antrum
c) Pancreas d) Small intestine

996) a,c,d 997)b 998)a 999)d 1000)a 1001)d 1002)c 1003)a 104)d,e 105)c 1006)a 1007)d 1008)a 1009)b 1010) d 1011) a,b,d 1012)a,b,c,d 1013)c,d,e 1014)c,d 1015)a 1016)None 1017)a 1018)d 1019)e 1020)c 1021)b

1022. Intrinsic factor is secreted by- *{Orissa 04,Kerala 94, AI09)*
a) G-cells
b) Pepsinogen secreting cells
c) Parietal or oxyntic cells
d) Pyloric glands

1023. Salivary amylase is activated by - (*Karnataka 04)*
a) Na^+ b)K^+
c) $HC0_3$ d)Cl

1024. Mixing waves of stomach - *{Kerala 04)*
a) Originates in body of stomach
b) Originates in fundus of stomach
c) Originates at incisura angularis
d) Originates in any part of stomach

1025. Gastrin - *{Kerala 04)*
a) Is a hormone secreted by pepsinogen cells
b) Is a polypeptide
c) Is released in cephalic phase
d) Cause gastric juice secretion at a rate of500-700 ml/hr

1026. Gastric secretions are increased by all of the following except - *{SGPGI05)*
a) Somatostatin b) Histamine
c) Vagal stimulation d) Gastrin

1027. Mass movement of the colon would be abolished by- *{COMEDK 05)*
a) Extrinsic denervation
b) Distension of the colon
c) Gastrocolic reflex
d) Destruction of auerbach's plexus

1028. Migrating motility complex - *{KARNAT05)*
a) Occurs upon arrival of food in the stomach
b) Begins in the lower part of the small intestine
c) Are initiated by pacemaker cells in the intestine
d) Occurs at a rate of 5 cms per minute from the stomach

1029. Paneth cells in the Mucosa of the small intestine secrete - *{KARNAT05)*
a) Lysozyme
b) Bioactive peptides and bioamines
c) Bicarbonate
d) Pepsin and Rennin

1030. Parietal cell secretes - *{MAHE 05)*
a) Mucus b) Pepsinogens
c) Gastrin d) Intrinsic factor

1031. Which of the following secretions has a very high pH- *(AI06)*
a) Gastric juice b) Pancreatic juice
c) Bile in gall bladder d) Saliva

1032. Which of the following parameter will be increased after hepatectomy? *(APPG 06, Kerala 03)*
a) Glucose b) Fibrinogen
c) Estrogen d) Conjugated bilirubin

1033. Which of the following undergo enterohepatic circulation ? - *(Manipal 2006)*
a) Bilirubin
b) Biliverdin
c) PAHA (para amino hippuric acid)
d) Bilinogen

1034. Micelles is formed by - *(Manipal 2006)*
a) Triacylglycerol in polar solvent
b) Amphipathic lipids in water
c) Triacyl glycerol in gut
d) Cholesterol esters

1035. Which of the following is true upper esophageal sphincter ? *(Manipal 2006)*
a) Its physiological not anatomical
b) It has pressure of 10 to 20 mmHg
c) It is under hormonal control
d) It is formed by striated muscles

1036. In the stomach, H+ ions are secreted in exchange for - *{Corned 08)*
a) Na^+ b)K^+
c) Ca^+ d)Cl-

1037. All of the following statements are true for 'Intestinal Motility' except - *{A10 7)*
a) Does not depend on Gastric motility
b) Increased by Distension
c) Increased by Acetylcholine
d) Increased by cholecystokinin

1038. Liver synthesizes all, except - *(Aiims May 07)*
a) C_3 complement component
b) Haptoglobin
c) Fibrinogen
d) Immunoglobulin

1039. Bile acids are synthesized from - *(Aiims May 07, AI 89)*
a) Cholesterol b) Amino acids
c) Bilirubin d) Protein

1040. Iron is actively absorbed in- *(Aiims May 07, Delhi 85)*
a) Stomach
b) Duodenum and proximal jejunum
c) Large intestine
d) Ileum

1041. Function of Kupffer cells in liver is - *(MAHE 07)*
a) Phagocytic b) Lytic
c) Secretory d) Excretory

1042. Glucose transport occur with the help of following ion in absorption in gut region - *(UP 07)*
a) Na^+ b)K^+
c) Ca^+ d)Cl-

1043. Which of the following inhibits gastric secretion and motility - *(UP 0 7)*
a) Vasoactive intestinal poly peptide (VIP)
b) Gastric inhibitory peptide (GIP)
c) Somatostatin
d) Ghrelin

1044. All are endo peptidases except- *(UP 07)*
a) Trypsin b) Chymotrypsin
c) Elastase d) Carboxy peptidases

1045. In infants, defecation often follows a meal. The cause of colonic contractions in this situation is - *(UP 08)*
a) Gastroileal reflex
b) Enterogastric reflex
c) Increased circulating levels of CCK
d) Gastrocolic - reflex

1022) c 1023) d 1024) a 1025)b 1026)a 1027)d 1028)d 1029)a 1030)d 1031)b 1032)c 1033)a 1034)b 1035)a
1036) b 1037) a 1038)d 1039)a 1040)b 1041)a 1042)a 1043)c 1044)d 1045)d

1046. Which of the following statement, regarding 'secretin[1] is least correct ? *(AI08)*
a) Increases bicarbonate rich secretion
b) Inhibit gastric acid secretion
c) Increases gastric acid secretion
d) Causes contraction of pyloric sphincter

1047. All are true about secretin except -
a) Inhibits gastric emptying *(PGI June 08)*
b) Increases bicarbonate rich pancreatic secretion
c) Potentiates action of CCK
d) T ses bile salt & bile acids
e) Increases bile secretion

1048. Motilin is secreted by cells in - *(Manipal 08)*
a) Stomach b) Duodenum/ileum
c) Pancreas d) Liver

1049. Which is not secreted by stomach - *(APPG 08)*
a) Lipase b) Pepsinogen
c) HQ d) All

1050. Maximum postprandial motility is seen in -
a) Ascending colon *(A1IMS Nov 08)*
b) Transverse colon
c) Descending colon
d) Sigmoid colon

1051. Intrinsic Factor of Castle is secreted by which of the following cells in gastric glands - *(AI 09)*
a) Chief cells b) Parietal cells
c) Enterochromaffin cells d)B cells

1052. Maximum potassium ions secretion is seen in -
a) Saliva *(AIIMS May 09)*
b) Gastric secretions
c) Jejunal secretions
d) Colonic secretions

1053. The mechanism involved in the absorption of glucose from the small intestine is - *(DELHIPG Feb. 09)*
a) Passive diffusion
b) Facilitated diffusion
c) Secondary active cotransport with sodium
d) Actively by insulin dependent uptake

1054. Gastric secretion of H^+ ions - *(DELHIPG Mar. 09)*
a) Is by chief cells
b) Is regulated in part by number of H^+ pumps
c) Is enhanced by carbonic anhydrase inhibitors
d) Occurs in exchange for luminal Na^+ ions

1055. Highest concentration of potassium is seen in- *(AIIMS Nov 09)*
a) Rectum b) Pancreatic juice
c) Ileal secretions d)Bile

1056. Intrinsic factor of Castle is secreted by -*(AIIMSMay*
a) Chief cells b) Parietal cells *10)*
c) Mucous cells d) P cells

1057. Maximum water reabsorption in the Gastrointestinal tract occurs in - *(AI 10)*
a) Stomach b) Jejunum
c) Ileum d) Colon

1058. The primary action on Nitric oxide (NO) in the gastrointestinal tract is - *(AI 10)*
a) Vasodilatation
b) Vasoconstriction
c) Gastrointestinal smooth muscle relaxation
d) Gastrointestinal slow smooth muscle contraction

1059. Iron is absorbed actively in the - *(DPG10)*
a) Stomach b) Duodenum
c) Terminal ileum d) Proximal ileum

1060. Which of the following is produced by the stomach and has a role in control of food intake?
a) Ghrelin *(AIIMS Nov 10)*
b) Insulin like growth hormone-I
c) Grexin
d) Cholecystokinin

1061. Maximum postprandial motility is seen in -
a) Ascending colon *(AIIMS May 11)*
b) Transverse colon
c) Descending colon
d) Sigmoid colon

1062. Maximum water reabsorption in the Gastrointestinal tract occurs in - *(AI 11)*
a) Stomach b) Jejunum
c) Ileum d) Colon

1063. Intrinsic factor is produced by- *(Punjab 10)*
a) Argentaffin cells b) Oxyntic cells
c) Chief cells d) Antral cells

1064. Normal Brown colour of stool is due to -*(Punjab 10)*
a) Urobilin b) Stercobilinogen
c) Stercobilin d) Urobilinogen

1065. Unconjugated hyperbilirubinemia is seen in -
a) Neonatal hepatitis *(Punjab 10)*
b) Gilbert syndrome
c) Dubin Johnson syndrome
d) Rotor syndrome

1066. Intrinsic factor secreted by - *(PUNJAB 11)*
a) Chief cells b) Parietal / oxyntic cells
c) Antral cells d) Mucous secreting cells

1067. Most potent stimulus for bile secretion -
a) Cholecystokin b) Secretin *(PUNJAB 11)*
c) Bile acid d) Bile salt

1068. Not true about bile salts - *(PUNJAB 11)*
a) Contain amino acid
b) Acts by increasing surface tension
c) They are amphipathic
d) Responsible for emulsification of fat

1069. Vitamin B12-Intrinsic factor absorption occur in -
a) duodenum b) Ileum *(Jipmer10)*
c) Colon d) Jejunum

1070. Entero hepatic circulation is necessary for the secretion of - *(Jipmer 11)*
a) Bile b) Intestinal juice
c) Pancreatic juice d) Gastric juice

1071. Pepsin is activated by- *(Jipmer 11)*
a) Enterokinase b)HCl
c) Uropepsinogen d) Trypsinogen

1046) c 1047) d 1048)b 1049) None 1050) c 1051)b 1052) a 1053) c 1054)b 1055) a 1056)b 1057)b 1058) c
1059)b 1060) a 1061)c 1062)b 1063)b 1064)c 1065)b 1066)b 1067)d 1068)b 1069)b 1070)a 1071)b

1072. Receptor for absorption of Vit-B12 intrinsic factor complex is located in - *(Jipmer 11)*
a) Ileum b) Duodenum
c) Transverse colon d) Descending colon

1073. Secretion of bile into bile canaliculus is by -
a) Osmotic gradient *(NEET/DNB Pattern)*
b) Facilitated diffusion
c) Active transport across the membrane
d) Simple diffusion

1074. Trypsinogen is converted to trypsin by -
a) Pepsin *(NEET/DNB Pattern)*
b) Enterokinase
c) HQ
d) None

1075. Resection of which intestinal segment causes marked electrolyte imbalance - *(NEET/DNB Pattern)*
a) Duodenum b) Jejunum
c) Ileum d) Sigmoid

1076. Cephalic phase of gastric secretion -
a) 20% b) 70 % C*NEET/DNB Pattern)*
c) 10% d) 100%

1077. What is Intrinsic Factor related to -
a) Cobalmin absorption *{NEET/DNB Pattern)*
b) Vitamin D
c) Folate absorbtion
d) Vitamin C

1078. Which vitamins are synthesised by intestinal bacteria- *{NEET/DNB Pattern)*
a) Vit K and D b) Vit K and B
c) Vit A and D d) Vit K and C

1079. Gastric acid decreased by - *(NEET/DNB Pattern)*
a) Secritin
b) Vagal stimulation
c) Proteins in gastric fluids
d) Gastric antral distension

1080. Which causes antral gastrin release -
a) Antral distension *(NEET/DNB Pattern)*
b) Acid
c) Secretin
d) Calcitonin

1081. Role of bile salts - *(NEET/DNB Pattern)*
a) Vit B12 absorption
b) Formation of lipid bilayer
c) Emulsification of lipids
d) Fatty acid degradation

1082. Gastric secretion is increased by all except -
a) Histamine *(NEET/DNB Pattern)*
b) Acetylcholine
c) Gastrin
d) HCl

1083. Gastric emptying sequence into duodenum -
a) Fat > protein > carbohydrate *(NEET/DNB*
b) Fat < carbohydrate < protein *Pattern)*
c) Protein < fat < carbohydrate
d) Protein > fat > carbohydrate

1084. HC1 secretion in gastric phase is increase by -
a) Pepsinogen *(NEET/DNB Pattern)*
b) CCK
c) Gastrin
d) Secretin

1085. Intestinal motility is increased *by-(NEET/DNBPattern)*
a) Secretin b) Gastrin
c) CCK d) None

1086. Intrinsic factor in stomach is secreted by -
a) Parietal cells *(NEET/DNB Pattern)*
b) Chief cells
c) Zymogen cells
d) Enterochromaffm cells

1087. Vitamin B12 is absorbed in - *(NEET/DNB Pattern)*
a) Duodenum b) Jejunum
c) Ileum d) Colon

1088. Short chain fatty acid produced by bacteria are maximally absorbed in - *(Jipmer 02)*
a) Duodenum b) Colon
c) Ileum d) Jejunum

1089. Slow waves/BER maximum in -*(NEET/DNBPattern)*
a) Stomach b) Ileum
c) Colon d) Rectum

1090. Which is maximally absorbed from GIT -
a) Pentose *(NEET/DNB Pattern)*
b) Hexose
c) Diasaccharide
d) Polysaccharide

1091.1 cells secrete - *(NEET/DNB Pattern)*
a) Secretin b) Gastrin
c) CCK d)Motilin

1092. Pepsinogen is secreted by - *(NEET/DNB Pattern)*
a) Parietal cells b) Mucus cells
c) Chief cells d) Oxyntic cells

1093.1 cells of duodenum secrete - *(NEET/DNB Pattern)*
a) Secretin b) Gastrin
c) CCK d) Motilin

1094. In blood bilirubin is with - *(NEET/DNB Pattern)*
a) Protein b) Steroid
c) Vitamin d) Carbohydrates

1095. Myentric plexus is present in - *(NEET/DNB Pattern)*
a) Muscularis externa b) Submucosa
c) Mucosa d) Serosa

1096. Pancreatic lipase hydrolyses ester linkage of tri acid glycerides at position- *(NEET/DNB Pattern)*
a) 1&2 b) 1&3
c) 2&3 d) Only 3

1097. Gastric secretions are essential for absorption of -
a) Cobalamin b)Fat *(NEET/DNB Pattern)*
c) Thiamine d) Protein

1098. Intrinsic factor of castle is secreted by-
a) Gcell b) Chief cell *(NEET/DNB Pattern)*
c) Parietal cell d)Dcell

1099. Major initiating response for peristalsis is -
a) Hormonal *(NEET/DNB Pattern)*
b) Local stretching of gut
c) Neural
d) None

1072) a 1073)c 1074)b 1075)b 1076)a 1077)a 1078)b 1079)a 1080)a 1081)c 1082)d 1083)a 1084)c 1085)c
1086) a 1087)c 1088)b 1089)b 1090)b 1091)c 1092)c 1093)c 1094)a 1095)a 1096)b 1097)a 1098)c 1099)b

1100. Secretin - *(NEET/DNB Pattern)*
a) Reduces the action of CCK PZ
b) Reduces Gastric secretion
c) Increases Gastric secretion
d) Secretion of pancreatic juice rich in enzyme

1101. Major initiating response for peristalsis is -
a) Hormonal *(NEET/DNB Pattern)*
b) Local stretching of gut
c) Neural
d) None

1102. Lysozyme is present in - *(NEET/DNB Pattern)*
a) Saliva b) Human milk
c) Tears d) Mucus

1103. Amount of water lost in stools - *(NEET/DNB Pattern)*
a) 50 ml b) 200 ml
c) 300ml d) 350 ml

1104. A man cannot digest carbohydrate. The enzyme deficient is - *(NEET/DNB Pattern)*
a) Lipase b)Amylase
c) Pepsin d) Trypsin

1105. Iron absorption takes place in which part of intestine
a) Duodenum *(NEET/DNB Pattern)*
b) Ileum
c) Jejunum
d) Colon

1106. Best absorbable monosaccharide -
a) Glucose *(NEET/DNB Pattern)*
b) Mannose
c) Fructose
d) Lactose

1107. What is responsible for clearing & flushing food from the intestinal lumen in the interdigestive period - *(NEET/DNB Pattern)*
a) Gastrin
b) Migrating motor complexes
c) Secretin
d) CCK

1108. Catecholamines - *(NEET/DNB Pattern)*
a) Decrease gut contraction
b) Bronchoconstriction
c) Decrease plasma glucose
d) Inhibit lipolysis

1109. Which enzyme is not release as proenzyme -
a) Pepsin *(NEET/DNB Pattern)*
b) Amylase
c) Trypsin
d) Chymotrypsin

1110. Cephalic phase of gastric secretion -
a) On food entering stomach *(NEET/DNB Pattern)*
b) On food entering intestine
c) On seeing food
d) On stress

1111. Goblet cells secrete - *(NEET/DNB Pattern)*
a) HQ b) Pepsin
c) Mucus d) Serolonin

1112. Gastric acid decreased by - *(NEET/DNB Pattern)*
a) Secretin
b) Vagal stimulation
c) Proteins in gastric fluids
d) Gastric antral distension

1113. Daily pancreatic secretion - *(NEET/DNB Pattern)*
a) 1.5L b)2.5L
c) 5.0 L d) 10 L

1114. Salivary amylase is inavated by -
a) Enteropeptidase *(NEET/DNB Pattern)*
b) Low pH of stomach
c) High pH of intestine
d) None

1115. Ptylin is secreted by - *(NEET/DNB Pattern)*
a) Gastric gland b) Salivary gland
c) Duodenal gland d) Pancreatic gland

CIRCULATION

1116. Blood brain barrier is maximally permeable to -
a) Na^+ b) K^+ *(AIMS 83, 85; Delhi 89,*
c) Chloride d)$C0_2$ *90)*

1117. Which Substance does not cross the blood brain barrier - *(A,I. 89)*
a) Insulin b)Urea
c) Testosterone d) Glucose

1118. Absolute refractory period of heart is the gap of time in which - *(AIMS 88)*
a) Heart is in diastole
b) Unresponsive to neural stimuli
c) No action potential from another part of heart will reexcite the heart muscle
d) None of the above

1119. Following acute failure of the left ventricle is the heart is man, pulmonary edema generally begins to appearwhen left atrial pressure approaches -
a) 7 mm Hg b) 15 mm Hg *(AIMS 80)*
c) 20mmHg d)30mmHg
e) 50mmHg

1120. In mature erythrocytes the major available anion is - *(PGI80, ROHTAK 85)*
a) Haemoglobin b) Chloride
c) Bicarbonate d) Diphosphoglycerate
e) ATP

1121. All of the following factors are produced by liepatocytes except - *(Kerala 2K)*
a) Fibrinogen b) Prothrombin
c) Von willebrand factor d) Factor VIII
e) Factor IX

1122. Preservation used for storing blood for transfusion is- *(AIMS92)*
a) Heparin + dextrose b) Citrate + glucose
c) EDTA d) CDP-A

1123. Coagulation factor VII is - *(JIMPER79)*
a) Thromboplstin b)Accalerin
c) Proconvertin d) Antihaemophilic factor

1100)b 1101) b 1102) a 1103)b 1104)b 1105)a 1106)a 1107)b 1108)a 1109)b 1110)c 1111) c 1112)a 1113)a
1114) b 1115) b 1116) d 1117) a 1118)c 1119)c 1120)b 1121)c 1122)d 1123)c

1124. Colostrum contains more of-------- than milk -
a) Ca b) Mg *(AP 96)*
c) Fe d) Cu

1125. Colostrum contains all in excess of milk accept -
a) Protein b)Fat *(AI99)*
c) Mineral d) Immunoglobulins

1126. At what stage of erythropoiesis does Hemoglobin appear- *(AIIMS 92)*
a) Reticulocyte b) Intermediate normobalst
c) Early normoblast d) Erythroblast

1127. Human colostrum has a relatively highter concentration of all of the following except -
a) Protein b) Fat *(UPSC 99)*
c) IgA d) Sodium

1128. The most common cause of painful pericarditis is- *(AIIMS 80, Bihar 91)*
a) Viral b) Tuberculous
c) Uraemic d) All of these

1129. Absent P waves with wide QRS complex indicates serum potassium of - *(PGI78, PGI80)*
a) 5.4meq/L b)6.5meq/L
c) More than 8 meq/L d) More than 10 meq/L

1130. In the RBC series, proliferation occurs at which stage - *(AIIMS 79, PGI 81)*
a) Early normoblast b) Intermediate normoblast
c) Late normoblast d) Proerythroblast

1131. Recticulocytosis is not seen in - *(AIIMS 94)*
a) Hereditary sphercytosis
b) Chronic renal failure
c) Haemorrhage
d) Paroxsmal nocturnal Hemoglobinuria

1132. Earliest change in iron deficiency anaemia is-
a) Decreased serum iron *(AI95)*
b) Decreased serum ferritin
c) Drcreased TIBC
d) Decreased hemoglobin

1133. Half life of monocytes in circulation is -
a) 6 hrs b) 12 hes *(JIPMER 79, PGI 81)*
c) 24 hrs d) 1 -3 days

1134. ABO antigens are present in all except - *(AI97)*
a) Sweat b) Saliva
c) Semen d) CSF

1135. Left ventricular systole corresponds to -
a) ST segment in ECG *(JIPMER 92, Assam 95)*
b) Right ventricular diastole
c) P wave in ECG
d) Auricular diastole

1136. A loud first sound is heard frequently in all of thefollowing except - *(ICS 2K)*
a) Mitral stenosis
b) Fever
c) Lown-Ganong levine syndrome
d) Mitral incompetence

1137. Aortic valve closure corresponds to beginning of-
a) Systole *(JIPMER 93)*
b) Parasystole
c) Isolvolumetric relaxation
d) Isovolumetric contraction

1138. 'P' waves normally absent in - *(Kerala 95)*
a) LI b)LH
c) aVF d) aVL

1139. 50 year old businessman with 50 % reduction in coronary artery diameter would be expected to have a blood flow how many times less than a normal person - *(MAHE 98)*
a) 4 b) 8
c) 32 d) 16

1140. Gold blatt hypertension is seen in ..... Hypertension- *(KERALA 91)*
a) Renovascular
b) Drug induced
c) Adrenal medullary tumour
d) Idio pathic

1141. Atrial natriuretic peptide acts by - *(PGI 93)*
a) Increasing renin sectetion
b) Increasng venous pressure
c) Decreasing cardiac output
d) Increasing blood volume

1142. Life-span of Neutrophil - *(PGI2000, 97)*
a) 15 days b) 6 Hours
c) 6 days d) 10 days

1143. Blood turbulence is increased in which of the following situations - *(AIIMS 2000)*
a) Multiple myeloma b) Leukemia
c) Polycythemia d) Anemia

1144. Left ventricular failure is indicated if pulmonary artery wedge presure exceeds - *(AIIMS 84)*
a) 5mmHg b)100mmHg
c) 15mmHg d)20mmHg

1145. The coronary artery most commonly involved in atherosclerosis is - *(AI93)*
a) Left main coronary artery
b) Right coronary artery
c) Circumflex coronary artery
d) Anterior Descending artery

1146. The oxygen consumption in the arrested, asystolic heart is - *(AIIMS 81, AMC 84)*
a) lOml/min b)100ml/min
c) 2ml/min/100 gm d)30ml/min
e) None of the above

1147.....% of the cardiac output flows through the liver
a) 10 b) 20 *(PGI 88)*
c) 30 d)40

1148. The percentage of the circulating blood volume inthe venous system and splanchnic vessels is normally between - *(JIPMER 70, AMU88)*
a) 20-30% b) 40-50%
c) 60-70% d) None of these

1124) d 1125)b 1126)b 1127)b 1128)a 1129)c 1130)a,b,d 1131)b 1132)b 1133)d 1134)d 1135)d 1136)d
1137) c 1138) None 1139)d 1140)a 1141)None 1142)b 1143)d 1144)d 1145)d 1146)c 1147)c 1148)c

1149. The greatest drop in systemic arterial blood pressure occurs in - *(JIPMER 79, PGI84)*
a) Capacitance vessels b) Venules
c) Pre capillary resistance d) None of the above

1150. Carotid body is not stimulated by - *(DNB 90, 91)*
a) Hypoxic hypoxia b) Anaemic hypoxia
c) Stagnant hypoxia d) Histotoxic hypoxia

1151. How much blood goes to brain in a normal healthy conscious individual-
a) Half of total cardiac output*(Jipmer 81, AIIMS 84)*
b) l/4th of total cardiac output
c) l/6th of total cardiac output
d) l/8th of total cardiac output

1152. Pre-Capillary vessels in pulmonary circulations differs from those of systemic circulation is, that in former, they are - *(Jipmer 80, PGI 87)*
a) Thick walled b) Thin walled
c) Easily distensible d) Both a and c are true
e) Both b and c are true

1153. Minimum pressure in lt.atrium for development of pulmonary edema - *{JIPMER 95)*
a) 15mmHg b)20mmHg
c) 30mmHg d)45mmHg

1154. In Hemophilia - *(PGI 87, NIM86, Keralal 86)*
a) Factor VIII is decreased
b) Factor VII is decreased
c) Bleeding time is increased
d) Clotting time is increased

1155. T-Lymphocyte- *(PGI87,NIMHANS85)*
a) Mature in lymphnodes
b) Produce anti-bodies
c) Comprise 10 to 15% lymphnodes
d) Principal cells in lymphonode cortical centre

1156. Half life of transfused plateletes is - *(AIIMS 8 7)*
a) 4 Hours b) 4 Days
c) 8 Days d) 15 Days

1157. CSF pressure in the lying down posture is- *(A188)*
a) 20-50mm b) 50-150 mm
c) 150-200mm d) 200-300 mm

1158. Normal blood pH is- *(AJ 88)*
a) 7.20 b) 7.30
c) 7.40 d) 7.70
e) 7.10

1159. Life span of RBC is- *(A188)*
a) 120 days b) 90 days
c) 60 days d) 30 days

1160. Thrombosthenin is - *(AIIMS 84)*
a) Coagulation factor
b) Contractile protein
c) A thrombosis promoting protein
d) A protein regulation platelet producting

1161. Hemophillia is due to deficiency of factor- *(AP 88)*
a) n b)V
c) vm d)XHI

1162. Immunity is most suppressed in- *(AP 88)*
a) Liver failure b) Patients on ACTH therapy
c) Anemia d) Renal failure

1163. The cause of post extrasystolic potentiation is -
a) Ca^{2+} b)K^{+} *(PGI88)*
c) Na^{+} d) Mg^{2+}

1164. Blood group antigens are - *(AIIMS 82, AI97)*
a) Carried by sex chromosomes
b) Attached to plasma proteins
c) Attached to Hemoglobin molecule
d) Found in Saliva

1165. Reticulocytes are stained with - *(TN90)*
a) Methyl violet b) Brilliant cresyl blue
c) Sudan Black d) Indigo carmine

1166. Autoregulation is seen in - *(PGI 90)*
a) Liver b) Muscles
c) Kidneys d) Brain

1167. Stimulation of baroreceptor leads of - *(AI 90)*
a) Increase in B.P. and heart rate
b) Decrease in B.P. and heart rate
c) Increased intracranil tension
d) Decreased intracranial tension

1168. Conduction velocity is maximum *in-(AI90, AIIMS 86*
a) SA node b) Av node *Kerala 90, Delhi)*
c) Bundle of His d) Right ventricle *86*

1169. Which is true about serum albumin - *(AI90)*
a) Contributes maximally to plasma oncotic presure
b) It is anionic
c) Freely permeable in Kidney
d) Not synthesised in liver

1170. CSF does not pass through - *(AI 90)*
a) Ventricles b) Venous sinuses
c) Epidural spaces d) Subarachnoid space

1171. Vagus inhibits pacemaker potential by all except-
a) Hyperpolarisation *(AI90)*
b) Increased pre potential
c) Stabilising resting membrane potential
d) Increase K^{+} permeability

1172. P-R Interval in the ECG corresponds to - *(A191)*
a) Time interval between onset of atrial contraction and onset of ventricular contraction
b) Time delay in the A-V- Node
c) S-A Nodal conduction time
d) Ventricular depolarisation

1173. Myocardial oxygen demand- *(AI91)*
a) Inversely proportional to heart rate
b) Directly proportional to heart rate
c) Increased by digitalis
d) Not related to heart rate

1174. Which of the following is true about ventircular filling- *(AI91)*
a) Atrial contraction mainly contributes
b) Maximum during isometric ventricular relaxation
c) Filling pressure is important for cardiac output
d) Inotorpic state of myocardium limits the cardiac output

1149) c 1150) b 1151) c 1152)e 1153)c 1154)a 1155)None 1156)b 1157)b 1158)c 1159)a 1160)b 1161)c 1162) b 1163) a 1164)d 1165)b 1166)A11 1167)b 1168)c 1169)a,b 1170)c 1171)b 1172)a 1173)b 1174)c

1175. S.A. Node all are true except- *(AI91)*
a) Initiates the impulse at faster rate
b) Generate the impulse spontaneously
c) Increased by the parasympathetic activity
d) Increased by sympathetic activity

1176. Decreased MCHC is found in - *(AI91)*
a) Microcytic hypochromic anemia
b) Megaloblastic anaemia
c) Sideoblastic anemia
d) Vit. B12 deficiency

1177. The first reactive change to occur after hemorrhage is - *(All India 92)*
a) Vasocontriction b) Tachycarida
c) Raised cortisol d) Raised adrenaline

1178. CSF is principally secreted by - *(JIPMER92)*
a) Choroid plexus
b) Arachnoid granulation
c) Floor of fourth ventricle
d) Periaqueductal grey

1179. In wolf parkinson white syndrome, there exists a connection between atria and - *(JIPMER 93)*
a) Bundle of His b) Ventricles
c) A.V. node d) Purkinjee fibres

1180. Conduction velocity is least in - *(JIPMER 93,PGI 98)*
a) AV node b) Bundle of Hs
c) SAnode d) Purkinjee fibres

1181. Upto what systolic pressure is the brain capable of autoregulation - *(JIPMER 81, Delhi 92)*
a) 65 mm of Hg b)55mmofHg
c) 45 mm of Hg d) 75 mm of Hg

1182. Sympathetic vasoconstrictor tone is diminished in response increased activity of - *(PGI81, 85)*
a) Carotid body chemoreceptors
b) Carotid sinus pressure receptors
c) Plain receptors
d) Medullary chemoreceptors

1183. Direct Fick method of measuring cardiac output requires estimation of - *(PGI 79, DNB 89)*
a) 0_2 content of arterial blood
b) 0_2 consumption per unit time
c) Arteriovenous 0_2 difference
d) 0_2 content of blood from right ventricle
e) All of the above

1184. Arneth Count is - *(PGI81, AIIMS88)*
a) Counting the Lymphocytes
b) Counting the lobes in the neutrophil
c) Counting the granules in the Eosinophil
d) WBC counting in Bone Marrow

1185. In vitro coagulation in intiated by factor- *(PGI 78, Delhi 86, 92)*
a) XU b) XI
c) X d)VH

1186. CSF in comparison to blood contains all except - *(AMU 90, Delh i 93)*
a) Lower calcium b) Lower chloride
c) Lower sodium d) Lower cells

1187. When pacemaker is in another area of heart, it denotes- *(AIIMS 86)*
a) Abnormal conducting tissue
b) Abnormal S-A node
c) Abnormal neural controlling system
d) None of the above
e) All of the above

1188. Blood flow through left coronary artery - *(AIIMS 85)*
a) Regulated by sympathetic vasodilator nerves
b) Increase when myocardial hypoxia is present
c) Greates during early systole
d) Decreased in reflex response to fall in blood pressure

1189. Endothelial cells synthesize - *(Delhi 87, 93)*
a) Fibrinogenb) Factor VII
c) Factor X d) Factor XII

1190. Cardiaccycle duration in man is - *(JIPME 78, DNB 92)*
a) 0.4 Seconds b) 0.8 Seconds
c) 1.2 Seconds d) 1.6 Seconds

1191. Normal hepatic blood flow per minute is -
a) 50 cc/lOOgm of liver tissue *(DNB 90)*
b) 100 cc/lOOgm of liver tissue
c) 200 cc/100 gm of liver tissue
d) 300 cc/100 gm of liver tissue

1192. Dicrotic notch in aortic pressure curve is -
a) Magnified by aortic regurgitaion *(AIIMS 86)*
b) Absent in arteriosclerosis
c) Of no diagnostic value
d) Coincident with 2nd heart sound

1193. Under resting condition the cardiac output is -
a) 2.5 b) 4.25 *(PGI87, PGI82)*
c)5.25 d)9.5
e) 7.5

1194. Cardiac output in L/min divided by heart rate equals-
a) Cardiac efficiency *(AIIMS 93)*
b) Cardiac index
c) Mean stroke volume
d) Mean arterial pressure

1195. Electrocardiographic leads designated VI, V2 etc. refer to - *(TN 89)*
a) Unipolar limb leads b) Unipolar chest leads
c) Bipolar limb leads d) Bipolar chest leads

1196. What is not true for extrasystole in ventricle -
a) Fails to produce radial pulse *(NIMHANS 87)*
b) Hints at serious heart ailment
c) Associated with abnormal QRS complex
d) Tendency to be followed by a compensatory pause

1197. The basis for Korot koff ounds is due to -
a) AV valve closure *(PGI 78, Delhi 83)*
b) Aortic valve closure
c) Arterial expansion
d) Arterial turbulence

1198. The normal A/G ratio blood is- *(AP 89)*
a) 5:1 b) 2:1
c) *12* d) 1:1

1175)c 1176) All 1177) a 1178) a 1179)b 1180)a 1181)a 1182)b 1183)e 1184)b 1185)a 1186)b 1187)d 1188)b 1189) None 1190)b 1191)a 1192)d 1193)c 1194)c 1195)b 1196)b 1197)d 1198)b

1199. Linear velocity of blood at normal cardiac output in the aorta is - *(ROHTAK 88)*
a) 32cms/sec. b)64cms/sec.
c) 8 cms/sec. d) 50 cms/sec.

1200. Which one of the following is released by blood platelets during haemorrhage to produce vasoconstriction - *(Orissa 91)*
a) Serotonin b) Histamine
c) Thrombosthenin d) Accelerator globulin
e) Bradykinin

1201. Which one of the following statements about lymphocytes is incorrect - *(AIIMS 80, Kerala 89)*
a) Produced by thymus, red bone marrow, spleen and lymph nodes
b) Concentration falls in the blood abruptly and immune reaction is disturbed after removal of thymus in adult
c) Probably change into plasma cells
d) Constitute 20-40% of leukocytes
e) Do not perform an important phygocytic function

1202. What increases the stroke work done by left ventricle - *(AIIMS 79, DNB 91)*
a) Systemic hypertension
b) Increased sympathetic tone in heart
c) Aortic stenosis
d) Aortic insufficiency
e) All of the above

1203. Which one of the following statements concerning the monocyte is incorrect - *(JIPMER 80, Kerala89)*
a) More common in blood than eosinophil and basophil
b) Produced in the adult by the bone marrow and lymph nodes
c) Unlike neutrophil does not accumulate outside circulation in area of inflammation
d) Not classiffed as a granulocyte

1204. During B.P. measurement if the muffled sound does not disappear with return of mercury to 'O' the conclusion is - *(AIIMS 79, ROHTAK 86)*
a) Aortic stenosis
b) Low haematocrit
c) Zero diastolic pressure
d) Patent ductus arteriosus

1205. Patient with anaemia tends to have all, except -
a) Compensatory increase in cardiac output
b) Increased incidence of heart mumurs *(AIIMS 84)*
c) Pallor of mucous membrane
d) A low PO_2 in arterial blood

1206. Vascular distensibility is least for the following vascular segment - *(DNB 89)*
a) Pulmonary artery b) Systemic artery
c) Systemic vein d) Pulmonary vein

1207. Pulse pressure in a particular vessel is determined chiefly by- *(Bihar 91)*
a) Distance from heart
b) Frictional characteristics lumen
c) Distensibility
d) Cross sectional area

1208. Venoconstriction is exhibited by all except -
a) Valsalva manoeuvre *(Delhi 90)*
b) Asphyxia
c) Haemorrhage
d) Lying down
e) Carotid artery occlusion

1209. Ventricular fibrillation - *(JIPMER 79, DNB 91)*
a) Follows ventricular tachycardia
b) Associated with quick fall in cardiac output
c) Induced by alternating current
d) Induced by alternating current during vulnerable phase

1210. What does prevent blood loss after rupture of small blood vessel - *(Orissa 91)*
a) Vasocontriction
b) Formation of fibrin threads
c) Formation of platelet plug
d) Production of haematoma to increase perivascular pressure
e) All of the above

1211. Work performed by the left ventricle is greater than that performed by the right ventricle due to difference in - *(JIPMER 81, AMU 86)*
a) Blood velocity b) Stroke volume
c) Arterial pressures d) Atrial pressures

1212. Essential hypertension is generally assocaited with an early increase in - *(Bihar 89)*
a) Oxygen use b) Coronary flow
c) Cardiac work d) Cardiac ouput

1213. A procoagulant not normally circulating in the plasma is - *(AIIMS 80, AMC 85)*
a) Prothrombin b) Fibrinogen
c) Antithemophilic factor d) Factor V
e) None of the above

1214. Fibres of A-V junction - *(JIPMER 79, AMU 91)*
a) Modified muscle fibres
b) Medifled nerve fibres
c) Highly contactile
d) Conduct impulse rapidly

1215. The arterial pulse pressure in the femoral artery is normally - *(PGI91)*
a) Less than the pulse pressure in the upper aorta
b) Less than 20 mm Hg
c) Greater than the pulse pressure in the upper aorta
d) Equal to the pressure in the upper aorta
e) None of the above

1216. Macrophages are the mature form of- *(PGI82)*
a) Neutrophils b) Eosinophils
c) Basophils d) Monocytes
e) Lymphocytes

1217. Absolute refractory period in heart - *(AIIMS 79,*
a) Lasts till cardiac contraction *ROHTAK 91)*
b) Longer than refractory period in skeletal muscle
c) A phase of cardiac cycle in which heart cannot be stimulaed by any amount of stimulus
d) Corresponds with duration of action potential
e) All of the above

1199) a 1200) a 1201)b 1202)e 1203)b,cl204)b 1205)d 1206)b 1207)c 1208)d 1209)a,b,d 12010)e 1211)c 1212) a,c 1213) e 1214)a 1215)a 1216)d 1217)e

1218. Turbulant blood flow is produced by - *(Delhi 88)*
a) Decreased velocity of circulation
b) Decreased cardiac output
c) Decreased heamatocrit
d) All of the above

1219. First component of first heart sound is usually clearly heard on ventral surface of chest at- *(ROHTAK91)*
a) 2nd intercostal space to right of sternum
b) 2nd intercostal space to left of stemmum
c) 5th intercostal space to left or sternum
d) 5th intercostal space over sternum

1220. The second heart sound differs from first heart sound in that - *(TN 92)*
a) Is ocassionally split
b) Has higher frequency
c) Duration greater than first sound
d) Due partly to turbulence set up by valve closure

1221. A decrease in the velocity of impulse conduction through the A-V node will usually cause -
a) The PQ interval to increase *(AIIMS 79,*
b) The PQ inteval to decrease *AMC 83)*
c) Disappearance of the T-wave
d) Increased heart rate
e) Atrial fibrillation

1222. For each 1° rise of temperature, cerebral blood flow falls by - *{PGI79, DELHI 89)*
a) 1 % b)2%
c) 4% d)7%

1223. Weightlessness result in - *{DELHI 85, DNB 89)*
a) Decreased cardiac output b) Hypotension
c) Gut motility d) Osteoporosis

1224. Blood supply of liver in ml per minute is-
a) 800 b) 1200 *{JIPMER 79, AIMS 83)*
c) 1500 d) 1800

1225. First heart sound occurs during the period of-
a) Isotonic relaxation *{JIPMER 80)*
b) Isovolumetric relaxation
c) Isovolumetric contraction
d) Isotonic contraction

1226. For cardiac muscle, V max can be used as a measure of - *{AIIMS 86)*
a) Excitability b) Contractility
c) Rhythmicity d) Conductivity

1227. Oxygen consumption of whole human brain in ml/min is about - *{PGI 90, DNB90)*
a) 29 b)35
c) 49 d)61

1228. Oxygen consumption of renal cortex and inner medulla are ml/100/min respectively- *{AIIMS83)*
a) 9,4 b)4,9
c) 9,0,4 d)o,4,6

1229. Repolarization of ventrucular muscle - *{DNB 86)*
a) Occurs last at apex b) Begins in septum
c) Bigins in epicardium d) Begins at **AV** node

1230. Velocity of blood flow is inversely proportional to-
a) Viscosity b)Flow *{AIIMS 86)*
c) Cross-sectional area d) Length

1231. Major blood reservoirs of the body include all of the following except - *(AIIMS 8 7)*
a) Throracic vena caca
b) Liver sinuses
c) Major abdominal viens
d) Venous plexus of the skin
e) Venous sinuses of the spleen

1232. Viscosity of blood is--------times that of urine -
a) Same as of ECF *{PGI 81, AIIMS 82)*
b) 10 times of urine
c) 5-6 times more than of water
d) 5-6 times less than of water

1233. In brain ischaemia, systemic blood pressure rises, that of water - *{AIIMS 86)*
a) Monro-Kellie b) Cushing reflex
c) Autoregulation d) White reaction

1234. Which of the following is wrongly matched about ECG waves and their duration - *{UPSC 82)*
a) P wave-0.10 sec
b) S wave - 0.04 sec
c) QRS complex - max 0.10 sec
d) Q wave-0.10 sec

1235. To prolong lee white clotting time in a patient for the next eleven hours what would be the procedure of choice - *{PGI 93)*
a) I/V heparin b) IV sodium citrate
c) IV Vitamin K d) Dicumarol therapy

1236. All of the following ions cause vasodilatation except-
a) Mg b) K *(JIPMER 80, AIIMS 83)*
c) Ca*+ d)Kinins
e) None of the above

1237. The oxygen consumption of human brain is-
a) 1.0 ml/1 OOg brain/min *{JIPMER 82)*
b) 1.5 ml/1 OOg brain/min
c) 3.5 ml/1 OOg brain/min
d) 5.0 ml/1 OOg brain/min

1238. The renal blood flow (in ml/mt) is - *{AIIMS86)*
a) 250 b)800
c) 1260 d) 1500

1239. Right and left vagus respectively go to - *{PGI84)*
a) S A node, AV node
b) AV node, SA node
c) AV node, bundle of His
d) SA node, bundle of His

1240. Bathmotropic effect is produced by - *{PGI88)*
a) Stimulation of vagus
b) Nerves other than vagus
c) Atropine
d) Section of vagus

1241. Liver has the maximum 0_2 consumption (51ml mt) the next organ to have the maximum 0_2 oxygen (ml/mt) is - *{AIIMS 85)*
a) Heart b) Brain
c) Skeletal muscle d) Kidney

1218) c 1219)c 1220)b 1221)a 1222)c 1223)d 1224)c 1225)c 1226)b 1227)c 1228)None 1229)c 1230)c
1231) a 1232) c 1233)b 1234)d 1235)a 1236)a,c 1237)c 1238)c 1239)a 1240)b,c,d 1241)c

1242. The average coronary blood flow in human being at rest is--------% of cardiac output - *{PGI83)*
a) 4-5% b) 5-10%
c) 10-15% d) 15-20%

1243. The resistance of a blood vessel is 16 PRU. doubling the vessel diameters would change the resistance to - *{AIIMS 89)*
a) 1 PRU b) 2 PRU
c) 8PRU d) 12PRU

1244. R-wave in healthy subjects denote a dipole with and electrical axis of - *(ARMS 84)*
a) 0° b) -60°
c) 60° d) 120°

1245. Severe hypoxia may produce - (*PGI81, AMU85)*
a) Bp rise b) Bp fall
c) Fall followed by Bp rise d) No change

1246. Respiratory quotient of cerebral tissue *is-(AMC 86)*
a) 0.75-0.95 b) 0.95-0.99
c) 1.0-1.1 d)l.1-1.2

1247. Q-wave in healthy individual denotes a diploe in
a) Apex with axis of 180 % *(PGI 82)*
b) Base with axis of 80 %
c) Base with axis of 60 %
d) Apex with axis of 60 %

1248. The organ with maximum 0_2 consumption per minute- **(***PGI84, 87)*
a) Liver b) Brain
c) Skeletal muscle d) Heart

1249. Major part of total peripheral resistance is due to- *(DNB 89)*
a) Medium and small arteries b) Venules
c) Capillaries d) Arterioles

1250. Blood flow in ml/1 OOg/min is maximum in -
a) Kidneys b) Liver *{Jipmer 80, Delhi80)*
c) Heart d) Skin

1251. Cardiac index in a normal person is - **(***IN86)*
a) 2.1 b)3.2
c) 4.6 d)5.9

1252. Heart sound heard immediately before the first heart sound when atrial pressure is high -
a) First b) Second *(AP86)*
c) Third d) Fourth

1253. Splanchnic vessels and venules contain what percentage of blood volume - **(***AMC 86,87)*
a) 10-20% b) 20-30%
c) 40-50% d) 60-70%

1254. Calculate the peripheral resistance if is 5.4 L and BP 90 mm Hg - **(***DELHI 89)*
a) 11 b) 12
c) 14 d) 16

1255. Coronary blood flow stops during- *{DELHI84,89)*
a) Proto diastole
b) End of deastole
c) Isometric relaxation
d) Isovolumetric contraction

1256. The purkinje fibres - *(ARMS 85)*
a) Are myelinated axons
b) Have a conduction velocity of about fives time that seen in heart muscle
c) Have action potentials about a tenth as long as those in heart muscle
d) All of the above

1257. Baroreceptors mainly act through - *{ARMS 86)*
a) Sympathetic system b) Parasympathetic system
c) Cerebral cortex d) Blood volume

1258. In athletes bradycardia is because of -
a) Decreased sympathetic tone *{DELHI 86, 88)*
b) Increased vagal tone
c) Cardiac output
d) Low venous return

1259. All of the following factors in increase cardiac output except- *{AMC 83)*
a) Pregnancy in late stages
b) Histamine
c) Eating
d) Sitting from lying position

1260. Plasma sodium concentration is - *{Kerala 94)*
a) 120 meq/1 b)3.5meq/l
c) 140 meq/1 d) 110 meq/1

1261. Arteriolar dialation is caused by the following except- *{Karn94)*
a) Decrease in adrenergic discharge
b) Histamine
c) Substance P
d) Serotonin

1262. Tachycardia at the onest of exercise is due to stimulation of - *(JIPMER95)*
a) Chemoreceptors b) Baroreceptors
c) Stretch receptors d) Joint proprioceptors

1263. During exercise, blood flow does not decrease in
a) Cutaneous circulation *(AI95)*
b) Hepatosplanchnic circulation
c) Coronary circulation
d) Renal circulation

1264. Mean life of RBCs in trans used blood is - *(AI95)*
a) 120 b) 100
c) 60 d)35

1265. Normal QRS interval is - *(AI96, ARMS 84)*
a) 0.08-0.1 sec b) 0.12-0.20 sec
c) 0.24-0.32 sec d) 0.05-0.08 sec

1266. Arterial 0_2 content is reduced in one of following- *{AI 96)*
a) Stagnant hypoxia b) Anemic hypoxia
c) Histotoxic hypoxia d) Ischemic hyopxia

1267. Capillaries with tight junctions allowing the passage of only small molecules are found in -
a) Brain b) Skin *{Delhi 96)*
c) Kidney d) Muscle

1242) a 1243)b 1244)c 1245)a 1246)b 1247)a 1248)a 1249)d 1250)a 1251)b 1252)d 1253)b 1254)d 1255)d
1256) b 1257) a 1258)b 1259)d 1260)c 1261)d 1262)d 1263) a,c 1264) d 1265)a 1266)b 1267)a

1268. Venous return (VR) is given by formula - *(Delhi 96)*
a) VR=$\frac{RVR-RAP}{MFSP}$
b) VR $\frac{-MFSP-RVR}{RAP}$
c) VR-$\frac{MFSP-RAP}{FVR}$
d) None

1269. Most potent stimulus for vaso constriction is -
a) Cerebral hypoxia *{Kerala 96)*
b) Renal perfusion
c) Cardiac Perfusion
d) Skeletal muscle perfusion
e) None of the above

1270. For cerebral blood flow to be doubled, $PC0_2$ should be- *(PGI95)*
a) 40mmHg b) 80mmHg
c) lOOmgHg d)200mgHg

1271. In which of the following is change of blood flow least during exercise - *(CUPGEE 96)*
a) Brain b) Heart
c) Skeletal Muscle d)GIT

1272. Biconcave shape of RBC's is helpful because -
a) Easily passage through capillaries (*AP96)*
b) Rouleax formation
c) Increased surface area for a given diameter
d) None

1273. True aboutRh factor- *(AP 96)*
a) Has no naturally occurring antibody
b) Seen only in humans
c) Not important for blood transfusion
d) None

1274. Ejection fraction of the ventricle refers to the ratio of- *(UP 97)*
a) Amount of blood received/amount of blood ejected
b) Stroke volume/end-diastolic volume
c) End-systolic volume/end-diastolic volume
d) Stroke volume /end-systolic volume

1275. Fastest conducting tissue in human heart - (*TN97***)**
a) AV node b) S A node
c) Bundle of His d) Purkinje fibres

1276. Increased blood flow in muscle during exercise is not because of - *{AI97)*
a) Low PH b) High Lactate
c) High$C0_2$ d)Low$P0_2$

1277. Splanchnic circulation in vigorous activity is affected by - *(A197)*
a) Decrease blood supply due to vasoconstriction
b) Decrease blood supply due to venoconstriction
c) Decrease capacitance with shunting of blood
d) Increase capillary congestion

1278. All are increased during exercise except- *{AP 97)*
a) Cardiac output
b) Venous return
c) Coronary blood flow
d) Peripheral vascular resistance

1279. Carotid sinus afferents pass through - *{MAHE 98)*
a) IX nerve b) X nerve
c) V nerve d) VII nerve

1280. Carotid sinus stimulation would result in -
a) Decreased vagal activity *{MAHE 98)*
b) Increased heart rate
c) Decreased sympathetic discharge to heart
d) Increased vasomotor tone

1281. True statement regarding CSF is - *{MAHE 98)*
a) Daily production < 700 ml
b) CSF analysis rules out active secretion as a cause of formation of CSF
c) It flow from III ventricle to the IV ventricle
d) Produced only by choroid plexus

1282. Immune complexes are removed from blood by -
a) Bcell b)Basephil *{MAHE 98)*
c) Plasma cell d) Kupffer cell

1283. Which one of the following is the correct sequence in increasing order of their basal blood supply (ml/min/lOOg of tissue) - *{ICS 98)*
a) Heart, brain, kidney b) Brain, Kidney, Heart
c) Kidney, heart, brain d) Brain, Heart, Kidney

1284. Pre-capillary sphincter relaxation is caused by -
a) Local metabolites *{AIIMS98)*
b) Circulating catecholamines
c) Sympathetic activity
d) Fall in capillary pressure

1285. Repolarization in isolated muscle piece fibre proceeds from - *(PG198)*
a) Epicardium to endocardium
b) Endocardium to epicardium
c) Left to right
d) Right to left

1286. Increased blood viscosity and slow circulation causes - *{TN 99)*
a) RBC rouleux formation
b) Increased plasma skimming
c) Increased number of RBC in capillaries
d) None

1287. Maximum heart rate with exercise - *(JIMPER99)*
a) 120 b) 140
c) 160 d)200

1288. Most permeable capillaries - *(JIPMER99)*
a) Post pituitary b) Liver
c) Kidney d) Small intestine

1289. Reperfusion injury is caused by- *(PGI99)*
a) Vitamin E b) superoxide ion
c) Calcium ion d) Magnesium ion

1290. The cardiac output can be determined by all except -
a) Fick's principle b)V/Q ratio
c) Echocardiography d) Thermodilution

1291. True about blood flow in various organs -
a) Liver > Kidney > brain > heart *(PGI99)*
b) Liver > brain > Kidney > heart
c) Kidney > brain > heart > liver
d) Liver > heart > brain > kidney

1268) c 1269) a 1270)b 1271)a 1272) a,c 1273) a 1274)b 1275)d 1276)None 1277)c 1278)d 1279)a 1280)c
1281) c 1282) d 1283)d 1284)a 1285)a 1286) a,c 1287) d 1288)c 1289)b 1290)b 1291)a

1292. Not a vit K dependent factor- *(PGI98)*
a) ß **b)vn**
c) DC d)XII

1293. Activity of factor VIII procoagulant is deficient in- *(PGI 98)*
a) Haemophilia b) Von Willibrand's disease
c) ITP d) Sickle cell anemia

1294. Helper and cytotoxic cells belong to - *(PGI97)*
a) T cells b) B cells
c) Monocytes d) Macrophages

1295. Maximum surface area is present in - *(Jipmer 90*
a) Capillary b) Arterioles *Burdwan 2K)*
c) Artery d) Vein

1296. Hypovolemic shock is characterised by all of the following except - **(***Kerala 2K)*
a) Hypotension b) Cold and clammy skin
c) Intense thirst d) Tachycardia
e) Inhibition of respiration

1297. If an unacclatimised person is suddenly exposed to cold atmosphere, change seen are - **(***AIIMS 01)*
a) Increase in systolic BP
b) Shift of blood from shell to core
c) Non-thermogenic shivering
d) Tachycardia

1298. Nitric oxide is produced in - *(PGI2K)*
a) Endothelium b) Plasma
c) Platelets d) Serum

1299. Ejection fraction increase with - *(DNB 2001)*
a) End systolic volume
b) End diastolic volume
c) Peripheral vasculalr resistance
d) Venodilation

1300. CSFproduction per minute - *{SCTIMS 2K)*
a) 0.30 - 0.35 ml/min b)0.5 ml/min
c) 2 ml/min d) 1 ml/min

1301. CSF pressure (lumbar) - *(SCTIMS2K)*
a) 70-180 mm CSF b) 50-100 mm CSF
c) >200 mm CSF d) 150-200 mm CSF

1302. Volume of CSF is about- *{SCTIMS 2K, PGI 85)*
a) 50ml b) 100 ml
c) 150ml d) 200 ml

1303. Below-------pressure, CSF absorption stops -
a) 60 mm CSF b) 68 mm CSF *{SCTIMS 2K)*
c) 80 mm CSF d) 50 mm CSF

1304. All the following are more in CSF compared to plasma except - **(,***SCTIMS 2K)*
a) Mg b) Cl
c) $HC0_3$ d)Glucose

1305. Carotid body baroreceptor is most sensitive to -
a) Mean blood pressure *(JIPMER 2001)*
b) Diastolic blood pressure
c) Systolic blood pressure
d) Pulse pressure

1306. Blood flow through a vessel varies directly with - *(Kerala 2001)*
a) Resistance b) Viscosity
c) Pressure of difference d) Length of vessel

1307. Occlusion of common carotid artery on both sides leads to- *(TN2002)*
a) Increase in HR & BP
b) Increase in BP& decrease in HR
c) Decrease in HR & BP
d) No effect on BP & HR

1308. Antigen presenting cells are specialised cells presention all of the following except - *(TN2002)*
a) Skin b) Lymph node
c) Spleen d) Kidney

1309. Physiological changes during severe exercise are
a) Hyperventilation in the beginning *{PGI 03)*
b) Hyperkalemia c) Ted Pa 0_2
d) Ted Pa $C0_2$ **e) Ted** H2 $C0_3$

1310. Central lymphoid organs are - *{PGI 03)*
a) Bone Marrow b) Lymph node
c) Thymus d) Spleen
e) Tonsil

1311. Function of lymphatics- *(PGI 02)*
a) Increase oncotic pressure
b) Carries protein
c) Immunocompetent cells
d) Fat absorption
e) Preventive role in infection

1312. What is true of iron- *(PGI2000)*
a) It is stored in ferritin
b) It is absorbed by Transferrin in the intestine
c) Spleen is major storage organ
d) Fe^ is excreted in urine

1313. In a patient with a transplanted heart which of these are the reasons for increased cardiac output during exercise - *(PGI 02)*
a) Reinnervation of transplanted heart by vagus
b) Intrinsic mechanism
c) Epinephrine from medulla
d) Bainbridge reflex
e) Frank-Starling mechanism

1314. Pressure on carotid sinus cause - *(PGI99)*
a) Hyperapnea b) Reflex bradycardia
c) Tachycardia d) Dyspnea

1315. Blood pressure is defined as the product of -
a) Systolic pressure x pulse *(PGI 98)*
b) Diastolic pressure x pulse rate
c) Pulse pressure x pulse rate
d) Cardiac output x peripheral resistance

1316. In exercising muscle; true about metabolism is- *(PGI 98)*
a) Same in aerobic and anaerobic
b) Fatty acids used mainly
c) Glycogen and creatine kinase used aerobically
d) All of the above

1317. Volume determining preload is - *(PGI98, AI93)*
a) End diastolic volume of ventricles
b) End systolic volume
c) Volume of blood in aorta
d) Ventricular ejection volume

1292) d 1293) a 1294)a 1295)a 1296)e 1297)b 1298)a 1299)b 1300)a 1301)a 1302)c 1303)b 1304)d 1305)a
1306) c 1307) a 1308)d 1309)a,b,d 1310)a,c 1311)b,d,e 1312)a 1313)c 1314)b 1315)d 1316)c 1317)a

1318. Cardiac index ratio is determined by- *(PGI97)*
a) CO & surface area b) SV & surface area
c) Surface area only d) Peripheral resistance

1319. Main site of peripheral vascular resistance is -
a) Pre-Capillary arterioles (*Jipmer04*)
b) Pre-Capillary sphincters
c) Capillaries
d) Wind kessel vessels

1320. Choose the right statement regarding red blood cell physiology - *(SGPGI04)*
a) Erythropoietin is primarily produced in spleen
b) Mature red cell do not have ribosomes
c) Haemoglobin has 3 pairs of polypeptide chains
d) 2,3 diphosphoglycerate cleaves haemoglobin into 3 fragments

1321. The pressure-volume curve is shifted to the left in- *{AIIMS 04)*
a) Mitral regurgitation b) Aortic regurgitation
c) Mitral stenosis d) Aortic stenosis

1322. In which Hb iron is in Fe^{3+} form - *{Kerala 03)*
a)Hb_F b)Hb_{A2}
c) Hb gower d) Meth HB

1323. During blood clotting, the conversion of fibrinogen to fibrin is catalysed by-*{Karnataka 02)*
a) Thrombin b) Thromboplastin
c) Stuart-Power factor d) Proconvertin

1324. The type of hemoglobin without a-chain is - *{TN 03)*
a) Gower-1 b) Fetal hemoglobin
c) Hemoglobin d) Gower-2

1325. Bernoulli's principle states - *{TN 03)*
a) Sum of kinetic energy of flow and pressure energy is constant
b) Low tones producing maximal stimulation at apex of cochlea
c) Magnitude of the sensation felt is proportionate to the intensity of stimulus
d) Force of contraction is proportional to the stretch of cardiac muscle

1326. Laminal flow is dependent on - *{TN 03)*
a) Critical velocity b) Viscosity
c) Constant velocity d) Critical closing pressure

1327, AV nodal delay is - *{Orissa 04)*
a) 0.2 sec b) 0.13 sec
c) 0.01 sec d) 0.3 sec

1328. Amount of coronary flow per minute is -*{Orissa 04)*
a) 225 ml b) 300 ml
c) 50ml d) 300 ml

1329. Cardiac output = 5 lit/min. BSA = 1.7 m^2, calculate the cardiac index - *{PGI04)*
a) 51/m^2 b)4.8
c) 3.0 d)3.7

1330. Bilateral occlusion of carotids causes -*{Manipal 04)*
a) iBP&iHR b) **T** BP & **T** HR
c) TBP&lHR d) **1** BP & **T** HR

1331. Endothelial derived relaxing factor include all except- *{Manipal04)*
a) Deficiency presents as systemic hypertension
b) Vasodilator
c) Arises from arginine
d) Acts through adenyl cyclase

1332. In erythropoiesis - *{Kerala04)*
a) Size of the cells increases in subsequent stages
b) Haemolobin appears at early normoblast stage
c) Mitosis occurs in late normoblast at the fastest rate
d) Folic acid is useful as a maturation factor

1333. The pacemaker potential is due to - *{Jipmer 03)*
a) Fast Na+ channel
b) Decrease in K+ permeability
c) Slow Ca++ channel
d) Rapid repolarisation

1334. Two students, Vincent and Kamlesh were asked to demonstrate in dogs the role of sinus nerve in hypovolumic shock. Vincent severed the sinus nerve when the mean blood pressure (MBP) was 85 mm Hg and Kamlesh cut the sinus nerve when the mean blood pressure was 60 mm Hg. On cutting the sinus nerve- *{AI03)*
a) Vincent recorded the increasesin MBP but Kamlesh recorded a decrease in MBP
b) Vincent recorded a decrease in MBP but Kamlesh recorded an increase in MBP
c) Both recorded an increase in MBP
d) Both recorded a decrease in MBP

1335. Cardiac output measured by thermodilution technique is unreliable in all of the following situations except - *{AI03***)**
a) Ventricular septal defect
b) Tricuspid regurgitation
c) Low cardiac output
d) Pulmonary regurgitation

1336. As a part of space-research program, a physiologist was asked to investigate the effect of flight induced stress on blood pressure. Accordingly, the blood pressure of the cosmonauts were to be measured twice: once before the take-off and once after teh spacecraft entered the designated orbit around the earth. For a proper comparison, the preflight blood pressure should be recorded in - *{AI 03)*
a) The lying down position
b) The sitting position
c) The standing position
d) Any position as long as the post - flight recording is made in the same position

1337. Calcium enters the cardiac cell during -*{Kam 03)*
a) Rapid upstroke of the action potential
b) Down slope of the action potential
c) Plateau phase of the action potential
d) Slow diastolic depolarization (phase 4) of the action potential

1318)a 1319)a 1320)b 1321)d 1322)d 1323)a 1324)a 1325)a 1326) a,bl327) b 1328)a 1329)c 1330)b 1331)d 1332) d 1333)b 1334)c 1335)a,d 1336) a 1337) c

1338. Most potent Chemoattractent for neutrophils is due to - *(SGPGI05)*
a) LL-1 b)IL-6
c) EL-8 d) IL -2

1339. Factors involved in intrinsic pathway are all except-
a) vn **b)Vin** *(SGPGI 05)*
c) DC d)XII

1340. Thromboxane A_2 produced mainly by- *(SGPGI*
a) Vascular endothelium b) Platelets *05, AI95)*
c) Liver d) Damaged tissue

1341. In a standard Electrocardiogram, an augmented limb lead measures the electrical potential difference between- *(Corned 05)*
a) Two limbs
b) One limb and two other limbs
c) One limb and neutral (Zero)
d) Two limbs and two other limbs

1342. Carotid sinus massage sometimes stops supraventricular tachycardia because - *(Corned 05)*
a) It decrease sympathetic discharge to SA node
b) It decrease vagal discharge to the conducting tissue between the atria and the ventricles
c) It decreases sympathetic discharge to the conducting tussue between the atria and the ventricles

1343. Blood pressure in right ventricle - *(MAHE05)*
a) 25mmHg b)80mmHg
c) 95mmHg d)120mmHg

1344. A 59 year old man complains of recurrent of pain in the region of left shoulder radiating to sternum stomach. The attacks of pain came at lengthy intervals until the two days when it became continuous. The physician diagnosed it as angina pectoris. In this case the pain pathway from the heart is carried by - *(Jipmer 05)*
a) Superior cervical cardiac nerve
b) Middle and inferior cervical cardiac nerve
c) Thoracic splanchnic nerve
d) Vagus

1345. A patient exhibits swelling of the ankles and a bloated abdomen and has a history of malnutrition. The bloated abdomen is probable caused by -
a) Increased intestinal gas *(MAHE05)*
b) Slow, chronic abdominal hemorrhage
c) Increased capillary hydrostatic pressure
d) Decreased capillary colloid osmotic pressure

1346. Baroreceptor stimulation produces -
a) Decreased heart rate & BP *(PGIJune05)*
b) Increased heart rate & BP
c) Increased cardiac contractility
d) Decreased cardiac contractility

1347. A patient was admitted to the hospital, and ECG lead III was recorded. It was found to contain no S wave. The P, R, and T waves appeared normal. What conclusions can you draw - *(MAHA 05)*
a) Activation of parts of the base of the heart are abnormal
b) Activation of parts of the apex of the heart are abnormal
c) There has been cardiac depression
d) There are no indications of cardiac abnormalities

1348. Dicumarol is a drug that impairs the utilization of vitamin K by the liver. Dicumarol therapy, therefore, would decrease the plasma concentration of which of the following procoagulants -
a) Prothrombin *(MAHA 05)*
b) Fibrinogen
c) Antihemophillic factor (factor VIII)
d) Ac-globulin (factor V)

1349. Which of the following situations will lead to increased viscosity of blood - *(AIIMS NO V 05)*
a) Fasting state b) Hypoglycemia
c) Multiple myeloma d)Amyloidogene

1350. Distribution of blood flow in mainly regulated by the- *(AI05)*
a) Arteries b) Arterioles
c) Capillaries d) Venules

1351. All of the following factors normally increase the length of theventricular cardiac muscle fibers except- *(AI05)*
a) Increased venous tone
b) Increased total blood volume
c) Increased negative intrathoracic pressure
d) Lying to standing change in posture

1352. S.A. node acts as a pacemaker of the heart because of the fact that it - *(AI 05)*
a) Is capable of generating impulses spontaneously
b) Has rich sympathetic innervations
c) Has poor cholinergic innervations
d) Generates impulses at the highest rate

1353. Heme is converted to bilirubin mainly in - *(AI 05)*
a) Kidney b) Liver
c) Spleen d) Bone marrow

1354. The ECG of a 40 year old male was recorded using standard bipolar limb leads. The sum of voltages of the three standard leads was found to be 5 millivots. This indicates - *(AIIMS May 05)*
a) A normal heart
b) Right ventricular hypertrophy
c) Left ventricular hypertrophy
d) Increased cardiac muscle mass

1355. The velocity of blood is maximum in the -
a) Large veins b) Small veins *(AIIMSMay 05)*
c) Venules d) Capillaries

1356. Which of the following methods is not used for measurement of body fluid volumes -
a) Antipyrine for total body water *(AIIMS May 05)*
b) Insulin for extracellular fluid
c) Evans blue for plasma volume
d) ^{125}I-albumin for blood volume

1357. Which one of the following is not a transport or binding protein - *(AIIMS May 05)*
a) Erythropoietin b) Ceruloplasmin
c) Lactoferrin d) Transferrin

1338) c 1339) a 1340)b 1341)b 1342)c 1343)a 1344)b 1345)d 1346)a,d 1347)dl348)a 1349)c 1350)b 1351)d 1352)d 1353)c 1354)d 1355)a 1356)d 1357)a

1358. A pilot in Sukhoi aircraft is experiencing negative G. Which of the following physiological events will manifest in such situation - *(AI06)*
a) The hydrostatic pressure in veins of lower limb increases
b) The cardiac output decreases
c) Black out occurs
d) The cerebral arterial pressure rises

1359. All of the following inflammatory mediators produce vasoconstriction except -
a) Leukotrienes b)Bradykinin
c) Thromboxane A_2 d) Platelet activating factor

1360. Which of the following is expected to increase in response to haemorrhage - *(HP 2006)*
a) Arteriolar diameter in skeletal muscle
b) Sympathetic activity
c) Sodium excretion
d) Water excretion

1361. Poiseuille's law is - *{PGMCET01)*
a) $F = (PA\text{-}PB) \frac{nr^4}{8\ n^l}$
b) $F = (PA \times PB) \frac{nr^4}{8\ n^1}$
c) $F = \{PA + PB) \text{-} \frac{nr^4}{8\ n^l}$
d) $F = (PA/PB) \frac{nr^4}{8\ n^l}$

1362. Laplace's law, all except - *(PGMCET07)*
a) P = T/r b) P = 2T/r
c) T = Pr/w d) T = WP/r

1363. Plateau phase of cardiac muscle is due to -
a) East Na^+ channel opening *(PGMCET07,*
b) Opeaning of Ca^{++} Na^+ channels *Jipmer 95)*
c) Opening of Slow Ca"^ channels
d) Opening of K^+ channels

1364. Which one of the following is a potent stimulus for the production of erythropoietin - *(UPSC 07)*
a) Alpha interferon b) Interleukin - 3
c) Hypoxia d) Hypercarbia

1365. The fourth heart sound is caused by -
a) Closure of the aortic and pulmonary valves
b) Vibrations in the ventricular wall during systole
c) Ventricular filling *(Corned 07, Karn 04)*
d) Closure of the mitral and tricuspid valves

1366. A 78-year-old patient is anaesthetized for resection of a liver tumour. After induction and tracheal intubation, a 20 guage arterial line is placed and connected to a transducer which is located 20 cm below the level of heart. The system is zeroed at the stopcock located at the wrist while the patient's arm is stretched out on an arm board. How will the arterial line pressure compare with the true blood pressure - *(Corned 07)*
a) It willbe 20 mm Hg higher
b) It will be 15 mm Hg higher
c) It will be the same
d) It will be 15 mm Hg lower

1367. Von Willebrand factor is produced by - *(Corned 07)*
a) Liver b) Platelets
c) Endothelial cells d) Spleen

1368. The ECG change seen in hyerkalemia is -
a) Narrowing of the QRS complex *(Corned 08)*
b) Increased amplitude of P waves
c) Narrowing and peaking of T waves
d) Prominent U waves

1369. Which one of the following causes of hypoxemia is NOT corrected by giving supplemental oxygen -
a) Ventilation perfusion mismatch *(Corned 08)*
b) Alveolar hypoventilation
c) Impairment of diffusion
d) Right to left shunt

1370. The substance that is present in both serum and plasma is- *(A107)*
a) Fibrinogen b) Factor VII
c) Factor V d) Factor II

1371. Site of RBC formation in 20 year old healthy male is - *(AI 07)*
a) Flat bones b) Long bones
c) Liver d) Yolk sac

1372. Which of the following is true about fourth heart sound 'S4' - *(AI 07)*
a) Can be heard by the unaided ear
b) Frequency is greater than 20 Hz
c) Heard during ventricular filling phase
d) Heard during ventricular ejection phase

1373. Heart muscle, true are all except - *(AI 07)*
a) Act as syncitium b) Has multiple nuclei
c) Has gap junctions d) Has branching

1374. True regarding endothelin-1 are all except-
a) Bronchodilatation *(Aiims May 07)*
b) Vasoconstriction
c) Decreased GFR
d) Has inotropic effect

1375. True about blood pressure measurement is all/ except - *(A iims May 0 7)*
a) Cuff width should be 40% of arm circumference
b) Diastolic blood pressure is indicated by fourth Korotkoff sound
c) Small cuff measures spuriously elevated Diastolic blood pressure
d) Monkenberg sclerosis causes pseudohypertension

1376. In isometric exercise all are increased except-
a) Heart rate *(Aiims May 07)*
b) Cardiac output
c) Mean arterial pressure
d) Systemic vascular resistance

1358) d 1359) b 1360)b 1361)a 1362)d 1363)c 1364)c 1365)c 1366)c 1367)c 1368)c 1369)d 1370)b 1371) a 1372) c 1373) b 1374)a 1375)b 1376)d

1377. Which of the following does not occur as the blood passes through systemic capillaries-fPGMCisT*07 Maharashtra 07, AIIMSNov 07)*
a) Increased protein content
b) Shift of hemoglobin dissociation curve to left
c) Increased hematocrit
d) Decreased pH

1378. Atrial natriuretic polypeptide (ANP) acts by -
a) Decreasing aldosterone production *(MAHE 07)*
b) Decreasing sodium reabsorption from renal tubules
c) Inhibiting release of renin
d) All of the above

1379. QRS complex is due to- *(UP 07)*
a) Ventricular repolarization
b) Ventricular depolarization
c) Atrial repolarization
d) Atrial depolarization

1380. True about cardiac 0_2 demand is - *(AIIMSNov 07)*
a) Directly proportional to mean arterial pressure
b) Inversely proportional to heart rate
c) Inversely proportional to cardiac work
d) Has a constant relation to the external work done by the heart

1381. Following change is noted during exercise -
a) Blood flow to brain increases with increase in mean systolic blood pressure *(AIIMS Nov 07)*
b) Body temperature increases
c) Lymphatic flow from muscle decreases
d) Blood flow to muscles increase after half a minute

1382. In a normal person which of the following occurs when he changes to supine position from standing -
a) Cerebral perfusion increases *(AIIMSNov 07)*
b) Heart rate settles to a higher level
c) Immediate increase in venous return
d) Decreased perfusion to the apex

1383. Changes in blood passing through the systemic capillaries are all except - *(AIIMS Nov 07)*
a) Increase in hemotocrit
b) pH decreases
c) Shift of oxygen dissociation curve to the left.
d) Increase in protein content

1384. Which of the following is not true about CSF -
a) Removal of CSF during dural tap causes intense intracranial headache *(AIIMS Nov 07)*
b) Normally contain no neutrophils
c) Formed by arachnoid villi within the ventricles
d) pH less than that of plasma

1385. All are true about nitric oxide except -
a) Acts through cAMP *(AIIMSNov 07)*
b) Helps to regulate vascular tone
c) Important role in penile erection
d) Present in low concentration in cigarette smokers

1386. Function of the blood plasma are all except -
a) Transport hormones *(UP 08)*
b) Transport oxygen
c) Transport antibodies
d) Transport chylomicrons

1387. Conversion of Prothrombin to thrombin requires -
a) Ca^ b) Va, Ca^ *(UP 08)*
c) V, X, Ca^ d) X, V, XII, & Ca^

1388. Albumin exerting high oncotic pressure because - *(UP 08)*
a) High molecular weight and low concentration
b) Low molecular weight and high concentration
c) High molecular weight and High concentration
d) Low molecular weight and Low concentration

1389. Which of the following has high molecular weight and possess no role in transport mechanism is -
a) Albumin b) Alpha-globulin *(UP08)*
c) Beta globulin d) Fibrinogen

1390. Decrease in contributing factor in chronic hypertension is associated with - *(UP 08)*
a) Aldosterone b) Angiotensin II
c) Nitric oxide d) Reduced sympathetic nerve

1391. Slowest conduction of velocity occurs in - *(UP 08)*
a) Atrial muscle b) A.V. node
c) Purkinje fibre d) Ventricular muscles

1392. Largest % of blood volume in - *(UP 08)*
a) Aorta b)Artery/Arterioles
c) Venules / Veins d) Capillaries

1393. Lewis triple response is mediated by - *(AI08)*
a) Histamine b) Axon reflex
c) Injury to endothelium d) None of the above

1394. Which of the following coagulation factors causes cross Unking and stabilization of clot - *(AI 08)*
a) Factor XIII b) Thrombin
c) Factor Vm d) Factor IX

1395. The blood within the vessels does not clot normally because - *(AI08)*
a) Vitamin K antagonists are present in plasma
b) Thrombin has a positive feedback on plasminogen
c) Sodium citrate in plasma chelates calcium ions
d) Vascular endothelium is smooth and coated with glycocalyx

1396. The blood pressure measured by a sphygmomanometer - *(AI08)*
a) Is lower than the intraarterial pressure
b) Is higher than the intraarterial pressure
c) Is same as the intraarterial pressure
d) Is the same with different cuff sizes

1397. Which of the following statement is least correct -
a) Vagal stimulation decreases rate of contraction
b) Noradrenaline increases force of contraction
c) Denervated heart has more heart rate *(AI 08)*
d) During Exercise systole is shortened more than diastole

1377)b 1378) d 1379)b 1380)a 1381)b 1382)c 1383)c 1384)c 1385)a 1386)b 1387)b 1388)b 1389)d 1390)c
1391)b 1392)c 1393) a1394)a 1395)d 1396)b 1397)d

1398. Which of the following statements regarding the flow of lymph from lower limb is true- *(AI08)*
a) T ed with change from supine to standing position
b) *i* ed in increased capillary permeability
c) *i* ed in deep vein valve incompetence
d) T ed by massage of foot

1399. What is the effect of moderate exercise on cerebral blood flow ? *(AI08)*
a) Does not change
b) Increases
c) Decreases
d) Intially increases and then decreases

1400. In standing position, Venous return to heart from lower limbs is affected by all of the following except-
a) Competant valves *(Aiims May 08)*
b) Deep fascia
c) Arterial pressure
d) Contraction of calf muscles

1401. Cerebral blood flow is regulated by all except -
a) Blood pressure *(Aiims May 08)*
b) Arterial $PC0_2$
c) Potassium ions
d) Cerebral metabolic rate

1402. CSF pressure is mainly regulated by -
a) Rate of CSF formation *(Aiims May 08)*
b) Rate of CSF absorption
c) Cerebral blood flow
d) Venous pressure

1403. Stroke volume is less than 50% of the end diastolic volume is seen in - *(PGI June 08)*
a) CHF
b) Acute coronary syndrome
c) Increased systemic arterial pressure
d) ACE inhibitor therapy
e) Cardiomyopathy

1404. Turbulence of blood flow increases when -*(Manipal 08)*
a) Viscosity b) Diameter of blood vessel *i*
c) Density *i* d) Straight arteries

1405. The duration of atrial systole is - *(DPGEE 08)*
a) 0.80 second b) 0.57 second
c) 0.11 second d) 0.44 second

1406. The conduction velocity is maximum *m~(DPGEE 08)*
a) SA node b) AV node
c) Bundle of his d) Purkinje fibres

1407. During exercise, blood flow to brain is -
a) Decreased *(DPGEE 08)*
b) Increased
c) Unaltered
d) Initially increased and then decreases

1408. Blood flow to brain is not influenced by *1(APPG 08)*
a)$PaC0_2$ b)$P0_2$
c) Cerebral circulation d) Systemic circulation

1409. Which of the following statement (s) is/are true about Hb/02 dissociation curve - *(PGI Dec 08)*
a) Foetal Hb shift curve to left
b) Hypothermia shifts curve to left
c) Hypercarbia shifts curve to left
d) Acidosis shifts curve to left
e) Left shift cause more O_2 release to tissue

1410. About CSF following statement (s) is/are true -
a) Specific gravity is 1.003-1.0008 *(PGIDec 08)*
b) Specific gravity is 1.0003-1.0008
c) Total volume of CSF is 150 ml
d) Daily production is 550 ml/day
e) Daily production is 1500 ml/day

1411. Mean circulatory filling pressure is?
a) Difference between systemic and pulmonary arterial pressure *(AIIMS Nov 08)*
b) Difference between central venous pressure and central arterial pressure
c) Mean atrial pressure
d) Arterial pressure taken at the point when heart stops beating

1412. Vagal stimulation of the heart causes -
a) Increased heart rate *(AIIMS Nov 08)*
b) Increased R-R interval in ECG
c) Increased force of heart contraction
d) Increased cardiac output

1413. CSF pressure is mainly regulated *by-(AIIMSNov 08)*
a) Rate of CSF formation b)Rate of CSF absorption
c) Cerebral blood flow d) Venous pressure

1414. The oxygen - hemoglobin dissociation curve is sigmoid because - *(AI 09)*
a) Binding of one oxygen molecule increases the affinity of binding other 0_2 molecules
b) Binding of one oxygen molecule decrease the affinity of binding other 0_2 molecules
c) Oxygen affinity of Hemoglobin decreases when the pH of blood falls
d) Binding of oxygen to Hemoglobin reduces the affinity of Hb for $C0_2$

1415. An increase in the concentration of 2 - 3 Biphosphoglycerate (2,3 DPG) may be seen in all of the following except - *(AI09)*
a) Anemia b) Hypoxia
c) Inosine d) Hypoxanthine

1416. Central chemoreceptors are most sensitive to following changes in blood - *(AI09)*
a) $tPC0_2$ b) *i* $PC0_2$
c)TH^+ d) T P02

1417. The primary direct stimulus for excitation of central chemoreceptors is - *(AI09)*
a) TH^+ b) T $C0_2$
c)$T0_2$ d) *i* CO_z

1418. During diastole, the arterial pressure is maintained by- *(AI09)*
a) Elastic recoil of aorta
b) Musculature of arteries
c) Constriction of capillaries
d) Contraction of left ventricle

1398)d>A 1399) a 1400)c 1401)c 1402)b 1403)a,b,c,e 1404)b 1405)c 1406)d 1407)c 1408)b 1409)a,b 1410)a,c,d 1411) d 1412)b 1413)b 1414) a 1415)d 1416)a 1417)a 1418)a

1419. Cyanosis does not occur in severe anemia because -
a) Hypoxia stimulates erythropoietin production
b) Oxygen carrying capacity of available Hb is increased *(AI09)*
c) Critical concentration of Hb required to produce cyanosis is reduced
d) Oxygen Hemoglobin curve shift to the right

1420. Which of the following is not involved in intrinsic pathway? *(AI 09)*
a) Factor XII b) Factor XI
c) Factor IX d) Factor VII

1421. Which of the following helps in bridging the fibrin in a clot and stabilizes the clot ? *(AI 09)*
a) Factor XIII b) Factor V
c) Factor VIII d) Factor III

1422. When a person changes position from standing to lying down, following change is seen - *(AI 09)*
a) Heart rate increases
b) Venous return to heart increases immediately
c) Cerebral blood flow increases
d) Blood flow at apices of lung decreases

1423. The main cause of increased blood flow to exercising muscles is - *(AI 09)*
a) Raised blood pressure
b) Vasodilatation due to local metabolites
c) Increased sympathetic discharge to peripheral vessels
d) Increased heart rate

1424. Which of the following statements about cutaneous shunt vessels is true - *(AI 09)*
a) Perform nutritive function
b) Have role in thermoregulation
c) Not under the control of autonomic nervous system
d) These vessels are evenly distributed throughout the skin

1425. Fetal hemoglobin has higher affinity for oxygen due to - *(AIIMSMay 09)*
a) Decreased 2,3 DPG concentration
b) Reduced pH
c) Increased release of carbon dioxide
d) Oxygen dissociation curve is shifted to right

1426. During first 3-4 month of gestation erthrocytes are formed by - *(PGI June 09)*
a) Yolk sac b) Liver
c) Spleen d) Bone marrow
e) Thymus

1427. The cell which forms blood-testis barrier is -
a) Spermatogonia *(Corned 09)*
b) Primary spermatocyte
c) Leydigcell
d) Sertoli cell

1428. The basis of Korotkoff sound is related to -
a) Aortic valve closure *(Corned 09)*
b) Production of heart sound
c) Arterial turbulence
d) Arterial valve expansion

1429. Oxyhaemoglobin dissociation curve is shifted to left in - *(Corned 09)*
a) Metabolic acidosis b) Hyper apnoea
c) Hypothermia d) Increased 2-3 DPG levels

1430. Von Willebrand factor is produced by -*(COMED 09)*
a) Liver b) Platelets
c) Endothelial cells d) Spleen

1431. The positive chronotropic action of epinephrine is due to all of the following effecs on cardiac action potential, except - *(DELHI PG Feb. 09)*
a) Increase in the rate of rise of phase zero
b) Increase in the rate of repolarization in phase one
c) Shortening of phase two
d) Increase in the rate of repolarization of phase three

1432. Thrombomodulin-thrombin complex prevents clotting because - *(DELHI PG Feb. 09)*
a) Thrombomodulin inhibits prothrombin activator
b) Thrombomodulin-thrombin complex activities an tithrombin III
c) The binding of thrombomodulin with thrombin removes thrombin and also activities a plasma protein C which inactivates activated factors V & **vm**
d) Thrombomodulin-thrombin complex activates heparin

1433. Which of the following is not a measure of stroke volume ? *(DELHI PG Mar. 09)*
a) Left ventricular end diastolic volume minus left ventricular end systolic volume
b) Ejection fraction times left ventricular end diastolic volume
c) Ejection fraction times cardiac output
d) Cardiac output/heart rate

1434. On decreasing the alveolar ventilation to half of the normal, what will be the change in $PaCO_z$?
a) $PaC0_2$ double immediately *(DELHI PG Mar. 09)*
b) $PaC0_2$ halves immediately
c) $PaC0_2$ doubles over next several minutes
d) $PaC0_2$ halves over next several minutes

1435. Platelets contribute to clot retraction by the following mechanisms except -*(DELHIPG Mar 09)*
a) By release of fibrin stabilizing factor
b) By activation of thrombosthenin, actin and myosin
c) By release of Ca^+ ions form its mitochondria
d) By activation of factor XIII

1436. Which ofthe following is not true about bone marrow derived stem cells ? *(DELHI PG Mar. 09)*
a) A subset of bone marrow derived stem cells circulate in peripheral blood
b) Hematopoeisis occurs in marrow because of its specialized environment
c) Hematopoeisis occurs in marrow as stem cells are restricted to the marrow
d) Bone marrow transplantation is done by infusing donor stem cells into peripheral blood

1419) c 1420) d 1421) a 1422)b 1423)b 1424)b 1425)a 1426)b,c 1427) d 1428) c 1429)c 1430)c 143 l)c 1432)c 1433)c 1434)c 1435)d 1436)c

1437. 0_2 (oxygen) dissociation curve is shifted to right in the following EXCEPT - *(UPSC-II09)*
a) Rise in temperature b) Hypercapnia
c) Riased 2,3 DPG level d) Metabolic alkalosis

1438. Myocardial oxygen demand depend upon -
a) Preload *(PGINov09)*
b) Afterload
c) Intramyocardial tension
d) Myocardial muscle mass
e) Blood Hb concentration

1439. Memory cells doesn't undergo apoptosis due to presence of which growth factor - *(AIIMSNov 09)*
a) Platelet derived growth factor
b) Nerve growth factor
c) Insulin like growth factor
d) Fibroblast growth factor

1440. The main cause of increased blood flow to exercising muscles is - *(AIIMS May 10)*
a) Raised blood pressure
b) Vasodilatation due to local metabolites
c) Increased sympathetic discharge to peripheral vessels
d) Increased heart rate

1441. Vitamin K dependent coagulation factors include -
a) II and III b) IX and X *(AI10)*
c) III and V d) VIII and XII

1442. During heavy exercise the cardiac output (CO) increases upto five fold while pulmonary arterial pressure rises very little. This physiological ability of the pulmonary circulation is best explained by -
a) Increase in the number of open capillaries
b) Sympathetically mediated greater distensibility of pulmonary vessels *(AI 10)*
c) Large amount of smooth muscle in pulmonary arterioles
d) Smaller surface area of pulmonary circulation

1443. Venous return to heart during quiet standing is facilitated by all of the following factors, except -
a) Calf muscle contraction during standing *(AI 10)*
b) Valves in perforators
c) Sleeves of deep fascia
d) Gravitational increase in arterial pressure

1444. During cardiac imaging the phase of minimum motion of heart is - *(AI 10)*
a) Late systole b) Mid systole
c) Late diastole d) Mid diastole

1445. All of the following statements about bronchial circulation are true, except - *(AI 10)*
a) Contribute 2% of systemic circulation
b) Contribute to gaseous exchange
c) Cause venous admixing of blood
d) Provide nutritive function to lung

1446. Low CSF protein may be seen in all of the following conditions, except - *(AI 10)*
a) Recurrent lumbar puncture
b) Hypothyroidism
c) Pseudotumor cerebri
d) Infants

1447. At what stage of erythropoiesis does Hemoglobin appear? *(DPG 10)*
a) Reticulocyte
b) Intermediate normoblast
c) Early normoblast
d) Erythroblast

1448. Which one of the following is released by blood platelets during haemorrhage to produce vasoconstriction? *(DPG10)*
a) Serotonin b) Histamine
c) Thrombosthenin d)Bradykinin

1449. A patient was admitted to the hospital and ECG lead HI was recorded. It was found to contain no S wave. The P, R and T waves appeared normal. What conclusions can you draw? *(DPG 10)*
a) Activation of parts of the base of the heart are abnormal
b) Activation of parts of the apex of the heart are abnormal
c) There has been cardiac depression
d) There are no indications of cardiac abnormalities

1450. Which of the following does not occur as the blood passes through systemic capillaries?
a) Increased hematocrit *(Maharashtra10)*
b) Increased protein content
c) Shift of Hemoglobin dissociation curve to left
d) Decreased pH

1451. Low pressure receptors that play role in Minimal arterial pressure changes, due to volume changes are located in - *(Maharashtra10)*
a) Left Atrium b) Right Atrium
c) Pulmonary arteries d) All of above

1452. In coagulation pathway, "FIBRINSTABILIZINGFACTOR'' is -
a) Factor XII *(Maharashtra10)*
b) Factor XIII
c) High Molecular Weight Kinimogen (HMWK)
d) Factor IX

1453. Which of the following required for iron absorption is synthesized in liver and transported to intestine by secretion through bile? *(Maharashtra10)*
a) Apoferitin b) Apotransferrin
c) Transferin d) All of the above

1454. Which of the following is not true about "Laplace Law"? *(Maharashtra10)*
a) T = Pr/W b) P = 2T/r
c) P = T/r d) p =T/W

1455. Relation between current, electromotive forces and resistance in a circuit by Ohm's law is stated as -
a) **i** = E/R b) i = R/E *(Maharashtra 10)*
c) i=RE d) All of the above

1456. A Patient with increased BP and decreased heart rate is likely to have - *(PGINov. 10)*
a) Increased ICT b) Deep sea diving
c) Brain tumor d) Head tumor

1437) d 1438)A11 1439) b 1440) b 1441)b 1442)a 1443)d 1444)d 1445)b 1446)b 1447)b 1448)a 1449)d 1450)c 1451) d 1452)b 1453)b 1454)d 1455)a 1456)a,c,d

1457. Which is Vitamin K dependent clotting factor?
a) Factor VII *(AIIMS Nov 10)*
b) Factor I
c) Factor XI
d) Factor XII

1458. True about shunt vessels - *(AIIMSMay 11)*
a) Evenly distributed throughout the skin
b) Role in nutrition
c) Play a role in thermoregulation
d) No autonomic nervous regulation

1459. True regarding myocardial O_z demand -
a) Inversely related to heart rate *(AIIMSMay 11)*
b) Has constant relation to external cardiac work
c) Directly proportional to duration of systole
d) Is negligible at rest

1460. The primary action of Nitric oxide (NO) in the gastrointestinal tract is - *(AI11)*
a) Vasodilatation
b) Vasoconstriction
c) Gastrointestinal smooth muscle relaxation
d) Gastrointestinal slow smooth muscle contraction

1461. Orthopnea is heart failure develops due to - *(AI 11)*
a) Reservoir function of pulmonary veins
b) Reservoir function of leg veins
c) Reservoir function of pulmonary arteries
d) Reservoir function of leg arteries

1462. Which of the following is true about IgG antibody?
a) Produced in primary immune response
b) Cannot cross placenta *(Karn 11)*
c) Provides local protection
d) Produced in secondary immune response

1463. Korotkow's sound is produced due to - *(Karn 11)*
a) Stream line flow of blood
b) Increase in viscosity of blood
c) Murmur
d) Turbulent flow of blood

1464. All are effects of sympathetic stimulation except -
a) Increased conduction velocity *(Punjab 10)*
b) Increased heart rate
c) Increased refractory period
d) Increaed contractility of heart

1465. Normal cardiac index is- *(PUNJAB 11)*
a) 3.2 b)2.8
c) 2.4 d)4.4

1466. Serum does not contain- *(PUNJAB 11)*
a) Fibrinogen b) Cerruloplasmin
c) Albumin d) Globulin

1467. Osmotic fragility is increased in - *(Jipmer 10)*
a) Sickle cell anemia
b) Thalassemia
c) Hereditary elliptocytosis
d) Hemophilia

1468. Preload to the heart depends on- *(Jipmer 10)*
a) End diastolic volume b) End systolic volume
c) Stroke volume d) Cardiac output

1469. Normal AV delay of 0.1 seconds is due to -
a) Decrease in amplitude of firing *(Jipmer 10)*
b) Resistance offered by myocytes
c) Decrease in number of gap junctions
d) Lack of tight junctions

1470. Cortisol therapy increases the count of all except -
a) RBC's b) Platelets *(Jipmer 10)*
c) Eosinophils d) Monocytes

1471. Not a complication of massive blood transfusion -
a) Hyperkalemia *(Jipmer 10)*
b) Hypercalcemia
c) Volume overload
d) Hypocalcemia

1472. True regarding BP measurement with sphygmomanometer versus intra arterial pressure measurement is - *(Jipmer 10)*
a) Less than intra vascular pressure
b) Equal to intravascular pressure
c) Depends on velocity of flow
d) Greater than intravascular pressure

1473. Detectable fall in blood pressure occur in -
a) Sympathetic stimulation *(Jipmer 10)*
b) Inhibition of VMC
c) Disinhibition of VMC
d) Stimulation of vagal centre

1474. Megaloblastic anemia is due to defective maturation of- *(Jipmer 11)*
a) DNA b)RNA
c) Globin d) Cytoplasm

1475. Compensatory mechanism in a patient with hypovolemic shock - *(Jipmer 11)*
a) Increased renal blood flow
b) Decrease in cortisol
c) Decrease in vasopressin
d) Decreased cutaneous blood flow

1476. Biconcave shape of RBC is beneficial in all aspects except - *(Jipmer 11)*
a) Cellular metabolism
b) Prevention of osmotic lysis
c) Passage through small capillaries
d) Increased diffusion of gases

1477. Clotting of transfused blood is due to -
a) ABO incompatibility *(Jipmer 11)*
b) Rh incompatibility
c) Transfusion with ringer lactate
d) Transfusion with 5% dextrose & water

1478. Kidney receives about_____ % of cardiac output -
a) 5% b) 10% *(Jipmer 11)*
c) 15% d) 20%

1479. Total cardiac output doesn't change during -
a) Sleep *(Jipmer 11)*
b) From supine to standing position
c) Exercise
d) Arrhythmias

1457)a 1458)c 1459)b 1460)c 1461)b 1462)d 1463)d 1464)c 1465)a 1466)a 1467)c 1468)a 1469)c 1470)c
1471)b 1472) d 1473)b 1474)a 1475)d 1476)a 1477)a 1478)d 1479)a

1480. Microcirculation consists of -(*NEET/DNB Pattern)*
a) Capillaries
b) Capillaries venules and arterioles
c) Aorta
d) Arteries and veins

1481. Arteriole is - (*NEET/DNB Pattern)*
a) Conducting vessel b) Resistance vessel
c) Exchange vessels d) Capacitance vessel

1482.3rd heart sound is d/t - (*NEET/DNB Pattern)*
a) Closure of av valve
b) Closure of aortic valve
c) Mid diastolic flow in the ventricle
d) Atrial contraction

1483. Volume receptors are - (*NEET/DNB Pattern)*
a) Affected by total cardiovascular output
b) Stimulated by atrial systole and diastole
c) Stimulated by left ventricular contraction
d) Stimulated by aortic pressure

1484. Role of Vitamin K for activation in clotting cycle-
a) Carboxylation (*NEET/DNB Pattern)*
b) Hydroxylation
c) Oxidation
d) Reduction

1485. Fourth heart sound is caused by -
a) Closure of AV valves *(NEET/DNB Pattern)*
b) Closure of semilunar valves
c) Rapid ventricular filling
d) Atrial contraction

1486. Starlings law implies - *(NEET/DNB Pattern)*
a) Increased VR- increased CO
b) Increased discharge - increased CO
c) Increased HR- increased CO
d) Increased BP- increased CO

1487. 2nd Most Common Hb in adult *\s-(NEET/DNBPattern)*
a) a2 (32 b) a 2 y2
c)oc2S2 d) (3 2y2

1488. Isometric relaxation is defined as-
a) Relaxation of both atria *(NEET/DNB Pattern)*
b) Relaxation of both atria with all valves open
c) Relaxation of LV with mitral & aortic valve closed

1489. Isotope used to measure RBC volume is -
a) Cr51 *(NEET/DNB Pattern)*
b) H3
c) D_20
d) I^{135}

1490. Windkessel effect is seen in - *(NEET/DNB Pattern)*
a) Large elastic vessels
b) Capacitance vessels
c) Throughfare channels
d) Capillaries

1491. On increasing vagal tone following occurs in pacemaker - *(NEET/DNB Pattern)*
a) Increased Na^+ increased slop
b) Decreased Na^+ decreased slop
c) Increased Na^+ decreased slop
d) Decreased Na^+ increased slop

1492. Gatekeeper of the heart is - *(NEET/DNB Pattern)*
a) S A node b) AV node
c) Purkinje fibers d) Bundle of His

1493. Maximum reservoir of blood - *(NEET/DNB Pattern)*
a) Large vein b) Aorta
c) Heart d) Capillaries

1494. Increased BP & decreased heart rate is seen in -
a) Hemorrhage *(NEET/DNB Pattern)*
b) High altitude
c) Raised intracranial pressure
d) Anemia

1495. Which of the following protein inhibits heme loss from plasma - *(NEET/DNB Pattern)*
a) Ferritin b) Hemopexin
c) Ceruloplasmin d) Hemosiderin

1496. P wave is absent in - *(NEET/DNB Pattern)*
a) Atrial fibrillation b)CCF
c) Atrial flutter d)PSVT

1497. Hypokalemia ECG changes all except-
a) Tall T wave *(NEET/DNB Pattern)*
b) Prolonged QRS interval
c) Depressed ST segment
d) Prominent U waves

1498. Baroreceptor reflex, true is - *(NEET/DNB Pattern)*
a) From aortic and carotid body
b) Causes arterial vasoconstriction when BP falls
c) Causes decrease in HR when BP increases
d) Causes increase in HR when BP increases

1499. Isometric relaxation is defined as -
a) relaxation of both atria *(NEET/DNB Pattern)*
b) relaxation of both atria with all valves open
c) relaxation of LV with mitral & aortic valve closed

1500. Coronary blood flow, true is - *(NEET/DNB Pattern)*
a) 500 ml/min
b) Maximum during systole
c) Adenosine decreases it
d) More than skin

1501. Conduction velocity is maximum in -
a) Bundle of His *(NEET/DNB Pattern)*
b) Purkinje System
c) Ventricular muscles
d) Atrial pathway

1502. Einthoven's triangle, what is the value of lead IH when lead 1=2 mv and Lead II=1 mv - *(NEET/DNB Pattern)*
a) 1 b)2
c) 3 d)4

1503. A wave in JVP is due to - *(NEET/DNB Pattern)*
a) Atrial systole b) Atrial diastole
c) Ventricular systale d) Ventricular diastole

1504. Highest compliance is seen in which vessel-
a) Arteries *(NEET/DNB Pattern)*
b) Veins
c) Aorta
d) Capillaries

1480)b 1481)b 1482)c 1483)a 1484)d 1485)d 1486)a 1487)c 1488)c 1489)a 1490)a 149l)b 1492)b 1493)a
1494) c 1495) b 1496)a 1497)a 1498)c 1499)c 1500)None>d 1501)b 1502)a 1503)a 1504)b

1505. Erythopoiesis in gestation age takes place in -
a) Yolk sac *(NEET/DNB Pattern)*
b) Placenta
c) Amniotic sac
d) Chorion

1506. Thrombin activity is inhibited by ■ *(A1 08)*
a) Chymotrypsin
b) Heparin cofactor II
c) Alpha 2 antitrypsin
d) Alpha 2 macroglobulin

1507. ANP acts at which site - *(NEET/DNB Pattern)*
a) Glomerulus b) Loop of Henle
c) PCT d) Collecting duct

1508. Which of these carries maximum blood?
a) Arteries b) Veins *(NEET/DNB Pattern)*
c) Aorta d) Arterioles

1509. What is the normal left ventricular ejection fraction?
a) 20% b) 30% *(NEET/DNB Pattern)*
c) 50% d)65%

1510. Duration of 2nd heart sound is - *(NEET/DNB Pattern)*
a) 0.15sec b) 0.12 sec
c) 0.08 sec d) 0.1 sec

1511. Brain blood supply - *(NEET/DNB Pattern)*
a) 55ml/1 OOgm/min b) 400 ml/1 OOgm/min
c) 100 ml/1 OOgm/min d) 200 ml/1 OOgm/min

1512. Half life of factor Vm- *(NEET/DNB Pattern)*
a) 2-4 hours b) 8-12 hours
c) 6 minutes d) 60 days

1513. Cardiac output is determined by-
a) Ratio of organ to total peripheral resistance
b) Mean stroke volume *(NEET/DNBPattern)*
c) mean BP
d) Contractility of heart

1514. Regulation of coronary circulation is?
a) Autonomic *(NEET/DNBPattern)*
b) Autoregulatory
c) Hormonal
d) Sympathetic

1515. Conversion of fibrinogen to fibrin is by-
a) Prothrombin *(NEET/DNBPattern)*
b) Factor XIII
c) Thrombin
d) Kallikrein

1516. Maximum reservoir of blood - *(NEET/DNB Pattern)*
a) Large vein b) Aorta
c) Heart d) Capillaries

1517. About arterioles true is - *(NEET/DNBPattern)*
a) Resistance b) Exchange
c) Reservoir d) Pressure

1518. All are vasodilators except - *(NEET/DNB Pattern)*
a) Prostacyclin b)NO
c) Bradykinin d) Endothelin

1519. Normal cardiac index is ■ *(NEET/DNB Pattern)*
a) 3.2 b)2.8
c) 2.4 d)4.4

1520. Rate of impulse generatin is maximum in -
a) SA node *(NEET/DNB Pattern)*
b) AV node
c) Bundle of His
d) Purkinje system

1521. Mean arterial pressure depends upon-
a) Cardiac output *(NEET/DNB Pattern)*
b) Cardiac output & peripheral resistance
c) Arterial complaince
d) Peripheral resistance

1522. Ejection fraction is - *(NEET/DNB Pattern)*
a) SV/EDV b) EDV/SV
c) ESV/EDV d) SV/EDV

1523. Thromboxane A2 causes - *(NEET/DNB Pattern)*
a) Vasodilatation and platelet aggregartion
b) Vasodilatation and anti platelet aggregatory
c) Vasoconstriction and anti platelet aggregatory
d) Vasoconstriction and platelet aggregartion

1524. Preload leads to - *(NEET/DNB Pattern)*
a) Isovolumetric relaxation
b) Isovolumetric contraction
c) Peripheral resistance
d) Parasympathetic nervous system activation

1525. HbA_2 has - *(NEET/DNB Pattern)*
a) ot2p2 b) oc2y2
c) cc2S2 d)y282

1526. Cardiac output is increased in -
a) Sleep *(NEET/DNB Pattern)*
b) Pregnancy
c) Sitting
d) Standing

1527. Plateau phase of ventricular muscle is d/t opening of- *(NEET/DNBPattern, PGlMay 11)*
a) Na^+ channel b) K^+ channel
c) Ca-Na channel d) Closure of K^+channel

1528. Erythopoiesis in gestation age takes place in -
a) Yolk sac *(NEET/DNB Pattern)*
b) Placenta
c) Amniotic sac
d) Chorion

1529. Largest cross-sectional area -*(NEET/DNB Pattern)*
a) Artery b) Veins
c) Capillaries d) Venules

1530. Normal duration of PR interval - *(NEET/DNB Pattern)*
a) 0.12- 0.2 sec. b) 0.2 - 0.3 sec.
c) 0.3 - 0.4 sec. d) 0.4 - 0.5 sec.

1531. In Fetal Life RBC are produced in all except -
a) Liver *(NEET/DNB Pattern)*
b) Lymph node
c) Spleen
d) Bone marrow

1532. Prepotential SA node is due to all EXCEPT?
a) Ca^{2+} spark *(NEET/DNB Pattern)*
b) Fast sodium channels opening
c) K^+ decay
d) Transient Ca channel opening

1505) a 1506)d 1507)d 1508)b 1509)d 1510)b 1511)a 1512)b 1513)b 1514)b 1515)c 1516)a 1517)a 1518)d
1519)a 1520) a 1521)b 1522)a 1523)d 1524)b 1525)c 1526)b 1527)c 1528)a 1529)c 1530)a 1531)b 1532)b

1533. Lymphocytes are produced in -*(NEET/DNB Pattern)*
a) Lymph node b) Thymus
c) Bone marrow d) None

1534. Normal interstitial pressure *is-(NEET/DNB Pattern)*
a) 10 to 15 mmHg b) -5 to 0 mmHg
c) 20 to 30 mmHg d) -10 to -20 mmHg

1535. What is charle's law - *(NEET/DNB Pattern)*
a) PV = constant b) P/T = constant
c) PV = nRT d) None

1536. Which is not synthesised by vascular epithelium-
a) Prostacyclin *(NEET/DNB Pattern)*
b) Angiotensin 2
c) Endothelin
d) Heparin

1537. Amount of blood in heart - *(NEET/DNB Pattern)*
a) 250-300 ml b) 500-600 ml
c) 1-2 litre d) 100-200 ml

RESPIRATORY

1538. Unloading of oxygen to tissues cells by oxy-Hb is assisted by - *(AIMS 86)*
a) Bohr- affect
b) 2-3 diphosphoglycerate
c) Low $P0_2$ and high $PC0_2$ in tissues
d) All of the above

1539. The most important buffer in RBC is -
a) 0_2 Hb + Na Hemoglobinate *(JIPMER 92)*
b) O_z Hb + K Hemoglobinate
c) $E£Q_3+KH.C0_3$
d) H_2C0_3+$NaHC0_3$

1540. Halden effect is - *(Delhi 96)*
a) Binding of $0_2$to Hb favors exhalaion of Co_2
b) Binding of $C0_2$ to Hb favors release of 0_2
c) Important mechanism of 0_2 transport in body
d) All of above

1541. The cause of death in cyanide poisoning is - *(JIPMER 81, AIMS 82)*
a) Anoxic anoxia b) Anaemic anoxia
c) Histotoxic anoxia d) Stagnant anoxia

1542. Volume of air taken into the lungs in normal respiration is known as - *(PGI88)*
a) Vital capacity b) Timed vital capacity
c) Tidal volume d) Inspiratory reserve volume

1543. The normal respiratory quotient is - *(PGI85)*
a) 0.5 b)0.75
c) 0.8 d) 1.0

1544. Normal intrapleural pressure is - *(PGI 85)*
a) 1-2 mm Hg b) 2-4 mm Hg
c) 9.5-1.0mmHg d)-3to-4mmHg

1545. Increased resistance to airflow during expiration is due to- *(AIMS 92)*
a) Bronchoconstriction
b) Compression of airways
c) Tubulent flow of air
d) High vapour saturation

1546. Anatomical dead space of normal lung is-
a) 150 ml b) 250 ml *(PGI 78, AIMS 79)*
c) 300ml d) 350 ml

1547. Most of the airway resistance is from- *(UP 96*
a) Terminal bronchioles *AIMS 79, JIPMER 80)*
b) Respiratory bronchioles
c) Medium sized bronchi
d) Trachea

1548. Normal $C0_2$ tension in venous blood is-
a) 36-45 mm of Hg *(UPSC 83, 86, 91,Delhi 84)*
b) 32-37 mm of Hg
c) 47-52 mm of Hg
d) 50-60 mm of Hg

1549. The following are acceptable as normal results-
a) $P0_2$ 100 mm Hg *(JIPMER 79, AIMS 85)*
b) V/Q ration 1.0
c) Resting tidal ventilation 5L/min
d) FEVj 60% of vital capacity

1550. After hyperventilating for some time, holding the breath is dangerous since- *(AIMS 2K)*
a) It can lead to $C0_2$ nacrosis
b) Due to lack of stimulation by $C0_2$ anoxia can go into dangerous levels
c) Decreased $C0_2$ shift the oxygen dissociation curve to the left
d) Alkalosis cal lead on the tetany

1551. A patient is having normal lung compliance and increased airway resistance way of breathing for him- *(AIMS 2K)*
a) Slow and deep b) Slow and shallow
c) Rapid and deep d) Rapid and shallow

1552. After hyperventilation prolonged voluntary breath holding is dangerous because- *(AIMS2K)*
a) Tetany develops due to Ca^{2+}
b) Hypoxemia is furthur aggravated
c) Shifts 0_2' Hb curve to lefts
d) $C0_2$ fails to stimulate respiratory centre

1553. Pulmonary surfactant is - *(JIPMER 79, AIMS 80)*
a) Lectithin
b) Dipalmitoyl phosphatidyl choline
c) Dipalmitoyl phosphatidyl serine
d) Sphingosine

1554. Pathological changes in Caison's disease is due to- *(NIMS96)*
a) N_2 b) 0_2
c)$C0_2$ d)CO

1555. Cyanosis in which $Pa0_2$are normal often results due to - *(AIMS 80, UPSC 81, 84)*
a) Congenital heart disease
b) Respiratory disease
c) Valvular lesion
d) Abnormal hemoglobin

1556. Gas with greatest affinity for Hemoglobin -
a) 0_2 b)CO *(AIMS87)*
c) $C0_2$ d)N_zO

1533)c 1534) b 1535)b 1536)b 1537)b 1538)d 1539)b 1540)a 1541)c 1542)c 1543)c 1544)d 1545)b 1546)a
1547)d 1548) None 1549)a,c 1550)b 1551)a 1552)d 1553)b 1554)a 1555)d 1556)b

1557. Siggard - Anderson normogram determines -
a) Plasma bicarbonate b) Hypercapnia
c) Hypoxia d) Respiratory alkalosis

1558. The normal dead space is about - *(Jipmer 81 AIIMS 86, Delhi 96)*
a) 30% of tidal volume
b) 40% of tidal volume
c) 50% of tidal volume
d) 60% of tidal volume

1559. Ventilation perfusion ratio is - *(AIIMS 79, DNB 89)*
a) 0.5 b) 0.8
c) 1.0 d) 1.2

1560. The sole channel of Hydrogen ion excretion from the body is- *(Jiper 81, DNB 91)*
a) Blood b) Urine
c) Sweat d) Stools
e) Bile

1561. The venous concentration of 0_2($P0_2$) is - *(Delhi 96)*
a) 100 mm Hg b) 46 mm Hg
c) 40mmHg d)60mmHg

1562. In hyperbaric oxygenation the maximum allowed pressure of 0_2 is - *(Delhi96)*
a) 3 atm b) 1 atm
c) 5 atm d)atm

1563. All of the following differ in males and females except- *(Assam95)*
a) Tidal volume b) Vital capacity
c) Residual volume d) Expiratory reserve volume

1564. In hypercapnic acidosis all are correct except -
a) Plasma bicarbonate rises *(AIIMS97)*
b) May be associated with pickwickian syndrome
c) Kaussmal breathing may be present
d) Cerebral vasodiliation can occur

1565. Type II pulmonary epithelial cells secrete -
a) Surfactant *(AIIMS 85, 87, NIMHANS 86,*
b) Mucus *PGI86, Kerala 88)*
c) Heparin
d) Polypeptides

1566. Oxygen dissociation curve is shifted to the right in all except - *(AIIMS 8 7, AI86)*
a) Fall in pH
b) Rise in temperature
c) Increase of 2,3 DPG
d) HbF

1567. Oxygen therapy is not affective in - *(AIIMS 87)*
a) Hypoxic hypoxia b) Anaemic hypoxia
c) Ischemic hypoxia d) Histoxic hypoxia

1568. Spirometer cannot measure- *(AI89)*
a) Tidal volume b) Vital capacity
c) Expiration reserve volume d) Residual volume

1569. Most potent respiratory stimulant is - *(AI 89)*
a) Oxygen b) Carbondioxide
c) H^+ d) K^+

1570. Hypoxia is characterised by - *(AIIMS 84)*
a) Low arterial P02
b) Intense chemoreceptor response
c) Favourable response to 100% oxygen
d) All of the above

1571. J-Receptors are situated by - *(PGI 88)*
a) Heart b) Blood vessels
c) Alveolar interstitium d) Carotid body

1572. Which of the following does not occur in high altitude acclimatisation - *(Jipmer 90)*
a) Reticulocytosis
b) Increase serum erythropoiten
c) Increased serum cortisol
d) Increased blood glucose

1573. Shift to right of 0_2 dissociation curve is seen in - *(AI 90)*
a) Increase Pa $C0_2$ b) Decreased Pa $C0_2$
c) Increased pH d) Decreased pH

1574. A person ascends to 12,000 feet develops acute breathlessness this is due to - *(AI 90)*
a) Increased pulmonary blood flow
b) Carbon dioxide washout
c) Decreased hypoxic stimulation of respiration
d) Mechanical interference of thorax

1575. In Bohr effect - *(Kerala 91)*
a) 0_2 dissociation increased in hypoxia
b) 0_2 dissociation decreases in hypoixa
c) 0_2dissociation increase with elevated temperature
d) None of the above

1576. In normal adult, the lung is kept dry because of- *(Kerala 91)*
a) Osmotic pressure b) Surfactant
c) Hydrostatic pressure d) Tidal volume

1577. Vital capacity is a measure of- *(Kerala 91)*
a) Total volume
b) Inspiratory reserve volume plus expiratory reserve volume
c) Tidal volume plus inspiratory reserve volume plus expiratory reserve volume
d) Expiratory reserve volume plus reserve volume

1578. The Alveolar $P0_2$ is- *(Jipmer91)*
a) lOOmmHg b)110mmHg
c) 120mmHg d)150mmHg

1579. Respiratory acidosis can cause - *(Jipmer 91)*
a) Decreased $PC0_2$ and decreased PH
b) Increased $PC0_2$ and decreased PH
c) Increased $PC0_2$ and increased PH
d) Decreased $PC0_2$ and increased PH

1580. Addition of glucose to stored blood is to - *(AIIMS 91)*
a) Prevent hemolysis b) Provide nutrition
c) Increase Hb content d) Increase 2,3 DPG

1581. Which occurs after hyperventilation with 6% $C0_2$- *(AIIMS91)*
a) Apnea
b) Continued hyperventilation
c) Cheyne stoke's breathing
d) Kussmaul's breathing

1557) a 1558) a 1559)b 1560)b 1561)c 1562)a 1563)d 1564)c 1565)a 1566)d 1567)b,c,d 1568)d 1569)b
1570)d 1571) c 1572)d 1573)a,dl574)b 1575)d 1576)a 1577)c 1578)a 1579)b 1580)d 1581)b

1582. The most important factor in transport of $C0_2$ as Bicarbonate is - *(AIIMS 91)*
a) Affinity to Hb
b) Basic nature of $HC0_3$
c) Increased solubility of $C0_2$
d) Carbonic anhydrase in RBC

1583. Normal value of FEVj in an adult male is -
a) 80% b)95% *(Jipmer 92)*
c) 65% d) 50%

1584. [6] J' Receptor Stimulation causes - *(AIIMS 92)*
a) Tachynoea b) Apnoea
c) Tachycardia d) Hypotension

1585. Closing volume of lung determines- *(AI93)*
a) Distensibility of lung b) Residual volume
c) Small air way resistance d) Dead space

1586. The Aveolar ventilation in an individual with Tidal volume 600 ml. dead space 150 ml. and Respiratory rate of 15/minute is - *(Jimper 93)*
a) 2.5 Lit/Min b) 4.0 Lit/Min
c) 6.75 Lit/Min d) 9 Lit/Min

1587. Which of the following diffuses freely from plasma to extracellular space- *(Jipmer 93)*
a) $C0_2$ b)H_20
c) Glucose d) Proteins

1588. What is not true for respiration centre -*(AIIMS 79,*
a) Situated in the medulla and pons *AMU 91)*
b) Sends out regular bursts of impulses to expiratory muscles during quiet respiration
c) Sends out regular impulses to inspiratory muscles during quiet respiration
d) Is inhibited during swallowing and vomiting

1589. Structure through which 0_2 must diffuse in passing from alveolar lumen to haemoglobin-
a) Surfactant containing liquid *(PGI81, 85)*
b) Alveolar membrane basement membrane
c) Capillary endothelium, Plasma and RBC membrane
d) All of the above

1590. An increase in ventilation occurs in all situation except - *(AIIMS 84)*
a) Fall in plasma bicarbonate
b) Sleep
c) Fall in pH of CSF
d) Rise in blood adrenaline level

1591. What happens when $C0_2$ in inspired air increases beyond 10% at atmospheric pressure - *(AP 89)*
a) Depression of CNS
b) Decreased ventilation
c) Diminshed sensory acuity
d) Confusion, coma and death
e) All of the above

1592. During the initial part of inspiration, which of the following does not occur -*(AIIMS 79, DNB 90)*
a) Intrapulmonary pressure falls
b) Intrathoracic pressure rises
c) Intrabdominal pressure rises
d) The partial pressure of 0_2 in dead space rises

1593. $C0_2$ is carried in the blood - *(AIIMS 81, Orissa 91)*
a) In combination with hemoglobin
b) In physical solution in plasma
c) In combination with plasma proteins
d) Mainly as bicarbonate
e) All of the above

1594. The surfactant material lining the lung alveoli -
a) Decrease the surface tension of alveolar fluid
b) Increase the compliance of lungs *(AIIMS 86)*
c) Has increasingly less effect, the more lungs are inflated
d) Is decreased when pulmonary blood flow is interrupted
e) All of the above

1595. The instrument used for measuring the vital capacity and FEV is - *(JIPMER 78, DNB 90)*
a) Wright peak flow meter b) Vitalograph
c) Carlen's catheter d) None of the above

1596. When the atmospheric pressure is halved, which of the following is not likely to develop- *(AIIMS 80, 85)*
a) An increase in pulmonary ventilation
b) A fall in arterial $p0_2$
c) A rise in arterial pH
d) A rise in cerebral blood flow

1597. The most important substance controlling alveolar ventilation- *(AIIMS 89)*
a)0_2 b)$C0_2$
c) F^O d) None of the above

1598. Destruction of lung tissue and defective gaseous exchange causes all except - *(AP 89)*
a) Prominent P wave
b) Decreased cerebral blood circulation
c) Increased red cell number
d) Pulmonary hypertension

1599. The diffusing capacity for carbon dioxide compared to that for oxygen is - *(AIIMS 79, Delhi 84)*
a) 20 times b) 10 times
c) 5 times d) 2 times

1600. The intrapleural pressure at the end of deep inspiration is - *(Delhi 93)*
a) -4mmHg b) + 4mmHg
c)-18mmHg d)+18mmHg

1601. Effort during normal respiration is done due to -
a) Lung elasticity *(Delhi 90)*
b) Respiratory air passages
c) Alveolar air spaces
d) Creating negative pleural pressure

1602. Compliance of the lung is decreased in all conditions except - *(Jipmer 81, Delhi 92)*
a) Fibrosis of lung b) Emphysema
c) Pulmonary oedema d) Kyphosis

1603. N2 has a role in body as it - *(AIIMS81, 80, 83 AMC 85)*
a) Decrease rate of combustion
b) Delays alveolar collapse
c) Prevents atelectesis
d) All of the above

1582)d 1583) a 1584)a,b,d 1585)c 1586)c 1587)a 1588)b 1589)d 1590)b 1591)e 1592)b 1593)e 1594)e 1595)b 1596) None 1597)b 1598) b 1599) a 1600) c 1601) a 1602)b 1603)d

1604. Arterial $p0_2$ is reduced in - *(PGI87)*
a) Anaemia
b) KCN poisoning
c) Pulmonary hypoventilation
d) CO poisoning

1605. Oxygen dissociation curve is-*(AIIMS 84, Delhi 85)*
a) Bell shaped b) S-shaped
c) Normal curve type d) Delta shaped

1606. In strenuous exercise, $P0_2$ (mm/Hg) falls from -
a) 40 to 15 b) 60 to 35 *(AIIMS82)*
c) 20 to 10 d) 35 to 0

1607. Work done in quiet breathing is - *(AIIMS 79.*
a) 0.1 Kg-m/min b) 0.2 Kg-m/min *ROHTAK86)*
c) 0.5 Kg-m/min d) 2.5 Kg-m/min

1608. Functional residual capacity in a male is - *(PGI80*
a) 3.8 litres b) 3.3 litres *AI93)*
c) 2.8 litres d) 2.2 litres

1609. Blood flow in carotid body in ml/100 gm of tissue-
a) 500 b)1000 *(PGI80, AMU87)*
c) 2000 d)4000

1610. In an normal adult, the ratio of physiological and anatomical dead space is - *(AMC 87, PGI84)*
a) 2:1 b)1:3
c) 3:1 d)1:1

1611. Respiratory minute volume in a normal person -
a) 1.2 L/min b) 2.1 L/min *(PGI 79, UPSC 85)*
c) 4.2 L/min d) 6.0 L/min

1612. Maximum voluntary ventilation (L/min) is -
a) 90-120 b) 125-170 *(AMC 85, 86, 95)*
c) 170-210 d) 210-250

1613. In cigarette smoking, surfactant is - *(PGI82)*
a) Increased
b) Decreased
c) Increased followed decreases
d) Unaltered

1614. The most common form of hypoxia is - *(AIIMS 86)*
a) Hypoxic b)Stagnant
c) Anemic d)Histotoxic

1615. C02 affects Respiratory centre via - *(AIIMS 84)*
a) $CSFH^+$Conc.
b) Carotid body
c) Inflation and deflation receptors
d) Aortic body

1616. $H^+$is more bound to - *(AMU 85)*
a) Deoxygenated hemoglobin
b) Oxygenated hemoglobin
c) Both a+b equally
d) Not related to oxygenation

1617. In a normal adult, 24 hour production of $C0_2$ is about- *(UPSC 80)*
a) 150L b)290L
c) 330 L d)410L

1618. Oxygen toxicity limits exposures to less than - hours and pressures to atmospheres or less respectively - *(AIIMS 82)*
a) 3,5 b) 5,3
c) 1,2 d)2,1

1619. Hemotocrit of venous blood is - *(PGI80, DNB 89)*
a) 3% greater than arterial blood
b) 3 times greater than arterial blood
c) 3% less than arterial blood
d) 3 times less than arterial blood

1620. Total dead space can be calculated from -
a) PC02 of expired air *(AIIMS 78, UPSC 80)*
b) PC02 of alveolar gas
c) Tidal volume
d) All of the above

1621. Hyperbaric oxygenation is useful in all except -
a) Congenital heart disease *(JIPMER 80,*
b) Gas gangrene *AMC 83)*
c) Carbon monooxide poisoning
d) Nitrogen toxicity

1622. In anemia, the concentration of 2,3-DPG is -
a) Decreased b) Increased *(DNB 89)*
c) A or b d) Not changed

1623. There are about - *(AMC 87)*
a) 50 million alveoli in man
b) 100 million alveoli in man
c) 300 million alveoli in man
d) 500 million alveoli in man

1624. Rise of pulmonary arterial pressure is cause by -
a) Hypoxia b) Acidosis *(PGI 84,88)*
c) Alkalosis d) All of the above

1625. In which of the following diseases would you expect to find an increase in thickness of the respiratory membrane- *(PGI85)*
a) Emphysema
b) Asthma
c) Pulmonary artery thrombosis
d) Skeletal abnormalities of the chest
e) Pulmonary edema

1626. Surfactant is - *(Kerala94)*
a) Protein b) Glycoprotein
c) Sphingolipid d) Alpha palmityl lecithin

1627. Right shift of oxygen dissociation curve occurs in all except - *(JIPMER95)*
a) Transfusion b) Shock
c) RDS d)CHF

1628. Chemoreceptor mechanism is not triggered in- *(AIIMS 94, AI97)*
a) Anemic hypoxia b) Hypoxic hypoxia
c) Stagnant hypoxia d) Histotoxi hypoxia

1629. Difference of pulmonary microcirculation from systemic is - *(AI 95)*
a) Resistance low, pulsatile flow
b) Resistance low, capillary pressure decrease
c) Capillary pressure high, pulsatile flow
d) None of the above

1630. One of the following does not stimulate peripheral chemoreceptors - ***(AI** 95)*
a) Hypoxia b) Hypocapnia
c) Acidosis d) Low perfusion pressure

1604)c 1605)b 1606) a 1607)c 1608)d 1609)c 1610)d 161 l)d 1612)b 1613)b 1614)a 1615)a 1616)a 1617)b
1618)b 1619)a 1620) a,c 1621) a 1622)b 1623)c 1624)a,b 1625) e 1626) d 1627)a 1628)a 1629)b 1630)b

1631. Oxygen affinity is increased by all except - *(AI95)*
a) Alkalosis b) Hypoxia
c) Increased HbF d) Hyperthemia

1632. Pulmonary surfactant reduces the following except- *(Karnatak 96)*
a) The filtration forces from pulmonary capillaries
b) The surface tension in the Lungs
c) Transpulmonary pressure
d) Alveolar radius

1633. Fastest acting enzyme is - *(AI97)*
a) Pepsin b) Trypsin
c) Carbonic anhydrase d) Thrombin

1634. All are true about 2,3 DPG except - *(AI97)*
a) Low affinity of 0_2 to Hemoglobin
b) Altered binding to fetal Hemoglobin
c) Causes Bohr effect
d) High levels in red cells

1635. Lung diffusion capacity is measured with -
a) $C0_2$ b) CO *(NMS96)*
c)0_2 d) H_2

1636. Ventilation perfusion Ratio is maximum in -
a) Base of lung b) Apex of lung *(AI98)*
c) Post lobe of lung d) Middle lobe of lung

1637. Moderate excercise tachypnea is due to stimulation of which receptor - *(AI98, MP 98)*
a) Propioception b) J receptor
c) Lung receptor d) Baro receptor

1638. Non-respiratory function of the lung is-
a) Dopamine metabolism *(MAHE 98)*
b) Adrenaline metabolism
c) Serotomin metabolism
d) PGE 2 prediction

1639. Vital capacity is - *(ROHATAK 97)*
a) Tidal Vo 1 ume+Expir atory Reserve Volume
b) Tidal Volume+Inspiratory Reserve Volume
c) LRV.+ERV
d) TV+I.RV+E.RV.
e) Tidal volume

1640. C02 is transported in plasma - *(India 99)*
a) Bicarbonate b) Carbamine compounds
c) Dissolved form d)CO

1641. Flow during last stage of expiration decreases because of - *(AIIMS 98)*
a) Braking by inspiratory muscles
b) Dynamic compression of airways
c) Collapse of alveoli
d) All

1642. Oxygen dissociation is increased by all except -
a) Hypercapnia *(AIIMS 98)*
b) 2,3 DPG increase
c) Increased temperature
d) Metabolic alkalosis

1643. Role of 2,3 DPG in hemoglobin - *(IN 99)*
a) Unloading oxygen to tissues
b) Increased affinity for oxygen
c) Buffering capacity
d) Osmotic fraglity

1644. Hypoxia causes vasoconstriction in - *(JIPMER 99)*
a) Muscle b) Lungs
c) Liver d) Spleen

1645. Which is seen in high altitude - *(CUPGEE 99)*
a) Respiratory alkalosis b) Metabolic alkalosis
c) Respiratory acidosis d) Metabolic acidosis

1646. Oxygen affinity decreases in - *(Calcutta 2K)*
a) Hypoxia b) Hypothermia
c) HbF d) Increase in pH

1647. If we cut the spinal cord above medulla, what happens to respiration - *(AIIMS 2K)*
a) It becomes slower and deeper
b) Apneustic breathing
c) Breathing ceases
d) Irregular & gasping

1648. Decreased O_2 affinity of Hb in blood with decreased pH - *(Orissa R, JIPMER 95)*
a) Haldane effect b) Double Haldane effect
c) Bohr's effect d) Double Bhor effect

1649. Earliest change in high altitude is - *(Kerala 2001)*
a) Hyperventillation
b) Decrease in work capacity
c) Drowsiness
d) Polycythemia

1650. Total lung capacity is - *(CUPGEE 02)*
a) 3-4 litres b) 4-5 litres
c) 6-7 litres d) 7-8 litres

1651. Peripheral chemoreceptors is stimulated maximally by - *(IN 2002)*
a) Cyanide b) Anaemia
c) Hypocapnia d)Alkalosis

1652. 0_2 delivery to tissue is decreased by - (.*PGI03)*
a) ted Haemoglobin level
b) ted$Pa0_2$ * c)ted$PaC0_2$
d) ted$HC0_3$ e) ted pH

1653. A mountaineer ascents 18,000 feet in 2 days without supplemental oxygen. At the height of ascent the changes are - *(PGI 03)*
a) ted Pa $C0_2$ b) ted Barometric pressure
c) ted inspired 0_2 d) ted $Pa0_2$
e) ted PH

1654. True about pulmonary circulation - *(PGI 03)*
a) It receives 30% of cardiac output
b) Hypoxia causes vasoconstriction
c) Blood volume in lung is 450 ml
d) Pulmonary capillaries contain most of the blood volume in lung
e) It has low resistance

1655. Decompression sickness is seen in - *(PGI 02)*
a) Diver
b) Pilot
c) Diver and pilot
d) Diver, pilot and mountainers
e) Diver, pilot, mountainers and astronauts

1631) b,d 1632) c,d 1633)c 1634)c 1635)b 1636)b 1637)a 1638)c 1639)d 1640)a,b,c 1641)b 1642)d 1643)a 1644)b 1645) a 1646) a 1647)d 1648)c 1649) a 1650)b 1651) None 1652)a,b,e 1653)b,d,e 1654)b,c,e 1655)a,b,c

1656. Carbon dioxide retention is seen in the following condition - *(PGI01)*
a) Carbon monoxide poisoning
b) Lung failure
c) Drowning
d) Ventilatory failure
e) High altitude

1657. Which of the following is seen in high altitude climbers- *(PGI 01)*
a) Hyperventilation b) Decreased $PaC0_2$
c) Pulmonary edema d) Hypertension
e) Bradycardia

1658. Oxygen dissociation curve shift to right in -
a) Hypothermia b) Hypercarbia *(PGI 02)*
c) Fetal Hb d) Sickly Hb

1659. Central cyanosis is seen if- *(PGI 01)*
a) Methemoglobin0.5 gm/dl
b) 0_2 saturation <85%
c) 0_2 saturation < 94%
d) Hb - 4 gm%

1660. Hyperbaric oxygen is dangerous because it -
a) Decreases desplacement of 02 from Hb *(PGI 99)*
b) Decreases repiratory drive
c) Enzyme damage
d) Is toxic to tissues

1661. In normal adult Vd/Vt ratio is- *(PGI 99)*
a) 20 b)0.35
c) 40 d)50

1662. In high altitude mountain sickness, feature of pulmonary edema is - *(PGI99)*
a) Decreased pulmonary capiillary permeability
b) Increased pulmonary capillary pressure
c) Normal left atrial pressure
d) Increases left ventricular back pressure

1663. Administration of pure 0_2 to hypoxic patients is dangerous because - *(PGI 99)*
a) Apnea occurs due to hypostimulation of peripheral chemoreceptors
b) Pulmonary edema
c) DPG
d) Convulsions

1664. Nitrogen washout method is used for estimating-
a) Dead space volume *(PGI 98)*
b) Functional residual capacity
c) Tidal volume
d) Diffusion capacity

1665. Following are true about HCO_s -except - *(PGI 98)*
a) Extracellular concentration 25 m mol
b) Intracellular concentration 10 m mol
c) 7.5% solution gives 2 nmols
d) In kidney, $HC0_3'$ is produced by carbonic anhydrase

1666. Arterial blood 0_2 in ml of 0_2 per dL - *(PGI 02)*
a) 12.1 b) 19.8
c) 15.6 d) 27.8

1667. Functional residual capacity of lung is defined as -
a) Volume expired after normal expiration *(PGI 97)*
b) Volume remaining after forced expiration
c) ERV+RV
d) Tidal volume + volume inspired forcefully

1668. Apnoea is defined as - *(PGI02)*
a) Stoppage of heart beat
b) Cessation of respiration
c) Irregular respiration
d) RR

1669. Least amount of $C0_2$ is in - **(***Jipmer04)*
a) Anatomical dead space-end inspiration phase
b) Anatomical dead space-end expiration phase
c) Alveoli-end inspiration phase
d) Alveoli-end expiration phase

1670. Surfactant is- *(PGI 04)*
a) Secreted by Type I pneumocytes
b) Secreted by bronchial glands
c) Contains mucin
d) Necessary for alveolar stability
e) Secreted as eosinophilic nodules

1671. Surfactant is - *(PGI 04)*
a) Secreted by 26th week of GA
b) Deficiency causes RDS in new bom
c) Composed of cytokeratin
d) It can be used therapeutically
e) Increased in bronchoalveolar carcinoma

1672. In Caissons disease all seen except - *(Jharkand 03)*
a) Myonecrosis b) Lymphedema
c) Paraplegia d)None

1673. Dissolved oxygen is not dependent on-*(Jharkand 03)*
a) Hb b) Atmospheric pressure
c) Alveolar pressure d) Arterial tension of 0_2

1674. All of the following lead to increased dissociation of 0_2 from Hb except - *(SGPGI05)*
a) HbF b) Increased $C0_2$
c) Increase H^+ d) Increase Temperature

1675. Physiological effects of emphysma may include all of the following, except - *(SGPGI 05)*
a) Increased vital capacity
b) Irregular ventilation
c) Impaired gas diffuse
d) Pulmonary hypertension

1676. The primary function of surfactant is - *(SGPGI 05)*
a) Prevent overexpansion of alveoli
b) Decrease the surface tension of the fluid lining the alveoli
c) Facilitate diffusion of oxygen
d) Prevent airway closure

1677. Respiratory burst in neutrophils occurs due to- *(SGPGI 05)*
a) NADPH oxidase b) NADP oxidase
c) FADH2 oxidase d)FAD

1678. Earliest symptom of acute mountain sickness is -
a) Blurring of vision b) Fever *(AMU 05)*
c) Nausea and vomiting d) Headache

1656)b,c,d 1657)a,b,c 1658)b,d 1659)b 1660)d 1661)b 1662)b,cl663)a 1664)b 1665)c 1666)b 1667)c 1668)b 1669) a 1670) d 1671)a,b,d 1672)b 1673)a 1674)a 1675)a,c 1676)b 1677)a 1678)d

1679. The oxygen buffer function of haemoglobin is related to - *(COMEDK 05)*
a) Dissociation curve shape
b) Haldane effect
c) Bohr effect
d) Respiratory exchange ratio

1680. Normal alveolar ventilation pressure on inspiration is- *(MAHE05)*
a) - 1 cm water b) -1 cm Hg
c) + 1 cm Water d) + 1 cm Hg

1681. The stimulation of which of the following causes hyperventilation at high altitude - *(ICS 05)*
a) Peripheral chemoreceptors
b) Vagal afferents
c) Central chemoreceptors
d) Proprioceptors

1682. Which of the following conditions leads to tissue hypoxia without alteration of oxygen content of blood- *(AIMS May 05)*
a) CO poisoning b) Met Hb
c) Cyanide poisoning d) Respiratory acidosis

1683. The spirometer can estimate all the following except- *(APPGE 05)*
a) Total lung capacity
b) Forced expiratory volume in 1 second
c) Peak expiratory flow
d) Vital capacity

1684. The volume of $C0_2$ exhaled by a healthy person is -
a) 100 ml b) 150 ml *(Orrisa05)*
c) 200ml d) 250ml

1685. Arterial blood gas of a 5 year old child done at sea level gives the following results: pH 7.41, PaO_z 100 mmHg, and $PaCO_z$ 40 mm Hg. The child is being ventilated with 80% oxygen. What is the (A-a) PO_z- *(AIMS NOV 05)*
a) 570.4mmHg b)520.4mmHg
c) 470.4mmHg d)420.4mmHg

1686. Pulmonary function abnormalities in interstitial lung diseases include all of the following except -
a) Reduced vital capacity *(AIMSNOV05)*
b) Reduced FEVj/FVC ratio
c) Reduced diffusion capacity
d) Reduced total lung capacity

1687. Fetal haemoglobin has all the following characteristic features except - *(AIMSNOV 05)*
a) Strong affinity for *2*,3-DPG
b) Oxygen dissociation curve is shifted to left
c) At low fetal $P0_2$ gives up more oxygen to tissues than adult haemoglobin
d) Forms 80% of haemoglobin at birth

1688. Pulmonary surfactant is secreted by- *(AI05)*
a) Type I pneumocytes
b) Type II pneumocytes
c) Clara cells
d) Bronchial epithelial cells

1689. In which of the following a reduction in arterial oxygen tension occurs - *(AI 05)*
a) Anaemia b) CO poisoning
c) Moderate exercise d) Hypoventilation

1690. The vasodilatation produced by carbon dioxide is maximum in one of the following - *(AI 05)*
a) Kidney b) Brain
c) Liver d) Heart

1691. The type of hemoglobin that has least affinity for 1, 3- Diphosphoglycerate (2,3-DPG) or (2,3-BPG) is -
a) HgA b) HgF *(AI05)*
c) HB d)HgA_2.

1692. The intrapleural pressure is negative both during inspiration and expiration because - *(AIMSMay*
a) Intrapulmonary pressure is always negative *05)*
b) Thoracic cage and lungs are elastic structure
c) Transpulmonary pressure determines the negativity
d) Surfactant prevents the lungs to collapse

1693. Surfactant synthesis starts after about -
a) 26 weeks of foetal life
b) 20 weaks of foetal life
c) 30 weeks of foetal life
d) 18 weeks of foetal life

1694. Which of the following true about ventilation and perfusion in alveoli in erect posture - *(Manipal 06)*
a) Ventilation/perfusion ratio is max^m at apex
b) Ventilation/perfusion ratio is max^m at base
c) Ventilation is max at apex
d) Perfusion is max at apex

1695. Myoglobin binds to_____molecules of 0_2 -
a) 1 b) 2 *(PGMCET07, PGI80, AP 85)*
c) 3 d)4

1696. J-receptors which are responsible for rapid shallow breathing are located in - *(UPSC 07)*
a) Thoracic cage and lung
b) Carotid artery
c) Alveoli-capillary junction
d) Respiratory musceles

1697. Respiratory distress syndrome is due to a defect in the biosynthesis of - *(Corned 07)*
a) Dipalmitoyl lecithine b) Dipalmitoyl cephaline
c) Dipalmitoyl serine d) Dipalmitoyl inositol

1698. Carbon dioxide trasported in blood mostly as -
a) CarboxyHb *(Corned 07, AI 05)*
b) In combination with plasma proteins
c) Bicarbonate
d) Carbonic acid dissolved in plasma

1699. Toxic effects of high oxygen tension include all of the following except - *(AI07)*
a) Pulmonary edema
b) Decreased cerebral blood flow
c) Retinal damage
d) CNS excitation and convulsion

1679) a 1680) a 1681)a 1682)c 1683)a 1684)c 1685)d 1686)b 1687)a 1688)b 1689)d 1690)b 1691)b 1692)b
1693)b 1694) a 1695)a 1696)c 1697)a 1698)c 1699)b

1700. Which of the following adaptations will be apt to increase the work capacity at high altitude - *(A107)*
a) Increasing workload, decreasing duration of exercise
b) Increasing workload, increasing duration of exercise
c) Decreasing workload, increasing duration of exercise
d) Decreasing workload, decreasing duration of exercise

1701. 0_2 delivery to tissues depends on all/except -
a) Cardiac output *(Aiims May 07)*
b) Type of fluid administered
c) Hemoglobin concentration
d) Affinity of hemoglobin for 0_2

1702. Not a correct formula for calculating the percentage of 0_2 saturation in arterial blood excep*t-(MAHE 07)*
a) Saturation 0_2% = (oxygen content/oxygen)
b) Saturation 0_2% = (oxygen carrying capacity)
c) Saturation 0_2% = (carbon dioxide content/oxygen carrying capacity) x 100%
d) Saturation 0_2% = (oxygen content/carbon dioxide carrying capacity) x 100%

1703. Pleural pressure positive in - *(UP 07)*
a) End of inspiration
b) End of expiration
c) End of forced expiration
d) Start or beginning of inspiration

1704. Diffusion of gas in respiratory membrane-ff/F *07)*
a) Directly proportional to thickness of respiratory membrane
b) Inversely proportional to molecular weight of the gas
c) No lipid - water solubility
d) Inversely proportional to pressure gradient

1705. Surfactant production is accelerated by - *(UP 07)*
a) Thyroxine b) Glucocorticoids
c) Carbamazepine d) Iodine

1706. Hyperventilation in high altitude is due to -
a) Respiratory alkalosis *(UP 07)*
b) Respiratory acidosis
c) Hypercapnea
d) Decreased concentration of bicarbonate

1707. In hyperventilation - *(PGIJune07)*
a) p50 and Hb affinity for 0_2 increases
b) p50 and Hb affinity for 0_2 decreases
c) p50 increases and 0_2 affinity decreases
d) p50 decreases and 0_2 affinity increases
e) No change

1708. The mechanism of action of surfactant is -
a) Lubricates the flow of $C0_2$ diffusion
b) Binds oxygen *(AIIMSNov 07)*
c) Makes the capillary surface hydrophilic
d) Breaks the structure of water in the alveoli

1709. The following factors shift the oxygen dissociation curve to the right, *except* **-** *(UPSC-108)*
a) Hypoxia b) Fever
c) Increase in 2,3-DPG d) Alkalosis

1710. Oxygen-hemoglobin dissociation curve shifted to Right side in all EXCEPT - *(UP 08)*
a) Fresh blood transfusion b) Anemia
c) Acidosis d) Alkalosis

1711. Most important form of carbon-dioxide transport in the blood- *(UP 08)*
a) It is mostly transported as carboxy hemoglobin
b) As dissolved $C0_2$
c) As bicarbonates
d) Due to $C0_2$ molecules attached to hemoglobin

1712. Comparision of the apex of the lung, the base of the lung has - *(UP 08)*
a) High pulmonary arterial pressure 0_2
b) High pulmonary arterial pressure $C0_2$
c) High ventilation / perfusion ratio
d) Same ventilation / perfusion ratio

1713. In which of the following conditions the respiratory muscles are relaxed - *(UP 08)*
a) Residual volume
b) Functional residual capacity
c) Expiratory reserve volume
d) Inspiratory reserve volume

1714. In which of the following disease normal structure of hemoglobin but their blood volume reduced in- *(UP 08)*
a) Chronic blood loss b) Sickle - cell anemia
c) Hemolytic anemia d) Thalassemia

1715. Pulmonary circulation differs from systemic circulation - *(Aiims May 08)*
a) Pulmonary vasodilation in hypoxia
b) Pulmonary vasoconstriction in hypoxia
c) Decreased blood volume during systole
d) Increased basal vasoconstrictor tone

1716. Oxygen toxicity causes all except - *(Manipal 08)*
a) Rupture of alveoli b) Atelectasis lung
c) Pulmonary edema d) Convulsions

1717. Oxygen carrying capacity of blood is largely determined by- *(Manipal 08)*
a) Hb level b) Amount of $C0_2$ inblood
c) Acidosis d) Plasma concentration

1718. $P0_2$ over 8 kPa is (Hb saturation) - *(Manipal 08)*
a) 60% b) 70%
c) 80% d) 90%

1719. In which of the following conditions oxygen delivery is least to muscles ? *(APPG 08)*
a) Person inhaling 100 percent oxygent at the top of mount everest
b) Marathon runner at sea level
c) Person with carbon monoxide poisoning
d) None of the above (this option none of the above was also there)

1720. Hb 0_2 dissociation curve to left **by** ? *(APPG 08)*
a) Increase pH b) Increased $PC0_2$
c) Increased2.3. DPG d) Exercise

1700) c 1701)b 1702) a 1703)c 1704)None 1705)b 1706)a 1707)c 1708)d 1709)d 1710)d 1711)c 1712)c 1713)a 1714) d 1715)b 1716)a 1717)a 1718)d 1719)c 1720)a

1721. At the end of normal *expiration*-*(DELHIPGFeb. 09)***
a) The outward recoil tendency of the chest
b) The volume inside the lung is expiratory reserve volume
c) The chest wall has a tendency to move inwards
d) Alveolar pressure is usually negative

1722. The following acute respiratory response to ascent to high altitude, there is normalization of blood pH. The mechanism is - *(DELHIPGMar. 09)*
a) Increased erythropoesis leads to increased buffering by haemoglobin
b) Increased excretion of $HC0_3^-$ by the kidneys
c) Increased levels of 2,3-DPG
d) Retention of bicarbonate by the kidneys

1723. Physiological response to smoking, are all, except-
a) Decreased HDL *(AIMS May 09)*
b) Increased hematocrit
c) Increased heart rate and increased catecholamine release
d) Decreased carboxyhemoglobin

1724. Surfactant is produced by - *(Corned 09)*
a) Pulmonary alveolar macrophages
b) Plasma cells
c) Type 1 pneumocytes
d) Type 2 pneumocytes

1725. Stability of alveoloi is maintained by -
a) Compliance of the lungs *(AIMS Nov 09)*
b) Residual air in alveoli
c) Negative intrapleural pressure
d) Reduce surface tension by surfactant

1726. Pacemaker regulating the rate of respiration -
a) Pneumotaxic centre *(AIMS Nov 09)*
b) Dorsal group of nucleus
c) Apneustic centre
d) Pre-Bötzinger Complex

1727. An important non-respiratory function of lungs is-
a) Anion balance b) Sodium balance *(AI10)*
c) Potassium balance d) Calcium balance

1728. Arterial 0_2 content is reduced in one of the following - *(DPG10)*
a) Stagnant hypoxia b) Anemic hypoxia
c) Histotoxic hypoxia d) Ischemic hypoxia

1729. Vital capacity is sum of- *(Maharashtra 10)*
a) Inspiratory reserve volme, Tidal volume and Expiratory Expiratory reserve volume
b) Tidal volume, Inspiratory reserve volume and Residual volume
c) Expiratory reserve volume, Inspiratory reserve volume and Residual volume.
d) Residual volume, Inspiratory volume, and Expiratory volume

1730. Normal intrapleural pressure at the start/beginning of inspiration is_____ cm of H_20.
a)-7.5 b)-5.0 *(Maharashtra 10)*
c)-2.0 d)-0.5

1731. $C0_2$ retention is seen in - *(PGI May 10)*
a) Carbon monoxide poisoning
b) Respiratory failure
c) High altitude
d) Ventilatory failure
e) Pulmonary edema

1732. TVue about normal expiration - *(PGINov. 10)*
a) At the end of normal expiration air in lung is ERV
b) Chest wall has a tendency to move outward which is balanced by inward recoil of alveoli
c) In expiration pleural pressure is equal to alveolar pressure
d) Muscles that elevate the chest cage are classified as muscles of expiration

1733. Caisson's disease is - *(AIMSNov 10)*
a) Gas embolism b) Fat embolism
c) Amniotic fluid embolism d) Tumor embolism

1734. In lung, true about Hyaline membrane disease -
a) FRC is smaller than closing volume
b) FRC is larger than closing volume
c) FRC is equal to closing volume *(AIMS Nov 10)*
d) FRC doesn't depend on closing volume

1735. Gas used to measure the diffusion capacity of lung -
a) CO b) NO *(AIMS Nov 10)*
c) $C0_2$ d) Nitrogen

1736. Hypoxiema independent of - *(AIMS Nov 10)*
a) Fi02 b) Altitude
c) Hb d)$PaC0_2$

1737. Not a stimulus for normal/resting ventilation?
a) Stretch receptors *(AIMS Nov 10)*
b) J receptors
c) $P0_2$
d) $PC0_2$

1738. $C0_2$ diffuses more easily through the respiratory membrane than 0_2 because it is - *(AIMSNov 10)*
a) Less dense
b) More soluble in plasma
c) Less molecular weight
d) Less $PC0_2$ in the alveoli

1739. Pacemaker regulating the rate of respiration -
a) Pneumotaxic centre *(AIMS Nov 10)*
b) Dorsal group of nucleus
c) Apneustic centre
d) Pre-Bötzinger Complex

1740. Negative intrapleural pressure is due to -
a) Uniform distribution of surfactant over alveoli
b) Negative intraalveolar pressure
c) Absorption by lymphatics *(AIMS Nov 10)*
d) Presence of cartilage in the upper airway

1741. Cyanosis in trauma is interpreted as -
a) Early sign of hypoxia *(AIMS Nov 10)*
b) Late sign of Hypoxia
c) Absence of cyanosis means adequate tissue ventilation
d) Absence of cyanosis means adequate tissue oxygenation

1721) a 1722) d 1723)d 1724)d 1725)d 1726)d 1727)b 1728)b 1729)a 1730)b 1731)b,d,e 1732)a,b 1733)a
1734) a 1735) a 1736) c 1737)b 1738) b 1739) d 1740) c 1741)b

1742. The primary direct stimulus for excitation of central chemoreceptors regulating ventilation is -
a) Increased H^+ *(AIIMS May 11)*
b) Increased $C0_2$
c) Increased 0_2
d) Decreased $C0_2$

1743. Nitrogen narcosis is caused due *to-(AIIMSMay 11)*
a) Nitrogen inhibits dismutase enzyme
b) Increase production of nitrous oxide
c) Increased solubility of nitrogen in nerve cell membrane
d) Decrease in oxygen free radicals

1744. Small airways have laminar air flow because-
a) Reynold's number >2000 *(AI11)*
b) Very small diameter
c) Extremely low velocity
d) Low cross sectional area.

1745. Pulmonary Compliance is decreased in all of the following conditions, Except - *(AI 11)*
a) Pulmonary Congestion b)COPD
c) Decreased Surfactant d) Pulmonary Fibrosis

1746. A man connected to a body plethysmograph for estimation of FRC inspires against a closed glottis. Which of the following statements is true - *(AI 11)*
a) The pressure in both the lungs and the box increases
b) The pressure in both the lungs and the box decreases
c) The pressure in the lungs decreases, but that in the box increases
d) The pressure in the lungs increases, but that in the box decreases

1747. A 32 year old high altitude mountaineer is observed to have a hematocrit of 70 percent. Which of the following represents the most likely cause/ explanation - *(AI 11)*
a) Polycythemia with increased red cell mass
b) Relative Polycythemia due to dehydration
c) Polycythemia due to hemoconcentration
d) Polycythemia with high altitude pulmonary edema

1748. Acclimatization does NOT include- *(Karn 11)*
a) Hyperyentilation
b) Decreased concentration of 2,3 DPG in RBC
c) Increased erythropoiesis
d) Kidney excrete more alkali

1749. Depth of inspiration controlled by - *(Punjab 10)*
a) Pneumotaxic center b) Posterior medula
c) Apneustic center d) Pons

1750. 0_2 which is about 21% of inspired air exerts a partial pressure of- *(Jipmer 10)*
a) 160mmHgb)240mmHg
c) 58QmmHg d) 760mmHg

1751. Surfactant is synthesized by - *(Jipmer 10)*
a) Type-I pneumocytes
b) Type-II pneumocytes
c) Alveolar macrophages
d) Dust cells

1752. Respiratory causes of hypoxemia are all except -
a) Voluntary hypoventilation *(Jipmer 11)*
b) Physiological shunt
c) Ventilation perfusion mismatch
d) Dead space ventilation

1753. Carbon monoxide poisoning is a type of-
a) Anemic hypoxia *(Jipmer 11)*
b) Histotoxic hypoxia
c) Hypoxic hypoxia
d) Stagnant hypoxia

1754. Inspiratory depth is halted by - *(NEET/DNB Pattern)*
a) Pneumotaxic centre b) Apneustic centre
c) Inspiratory centre d) Expiratory centre

1755. Carbon monoxide poisoning is a type of -*(Jipmer 11)*
a) Anemic hypoxia b) Histotoxic hypoxia
c) Hypoxic hypoxia d) Stagnant hypoxia

1756. Surfactant is secreted by which alveolar cells -
a) Type 1 cells *(NEET/DNB Pattern)*
b) Type 2 cells
c) Alveolar macrophages
d) Endothelial cells

1757. Measurement of anatomic dead space is by -
a) 0_2 breath test *(NEET/DNB Pattern)*
b) Helium dilution test
c) N2 breath test
d) $PC0_2$

1758. Best denotes airway resistance -
a) Vital Capacity *(NEET/DNB Pattern)*
b) Mid respiratory flow rates
c) FEV_1
d) Total volume

1759. Oxygen therapy is least useful in -
a) Anemia *(NEET/DNB Pattern)*
b) ARDS
c) Alveolar damage
d) COPD

1760. Which of these is not a cause of rightward shift of Oxygen - Hemoglobin dissociation curve?
a) Increased hydrogen ions *(NEET/DNB Pattern)*
b) Decreased $C0_2$
c) Increased temperature
d) Increased BPG

1761. Oxygen dissociation curve is shifted to right in -
a) Hyperkalemia *(NEET/DNB Pattern)*
b) Hypokalemia
c) Anemia
d) Metabalic alkalosis

1762. Most important stimulus to peripheral chemoreceptrs - *(NEET/DNB Pattern)*
a) $P0_2$ b) $C0_2$
c) pH d) $HC0_3$

1763. Difference in the amount of 0_2 inspired and $C0_2$ expired - *(NEET/DNB Pattern)*
a) 20ml/min b)50ml/min
c) 75 ml/min d) 100 ml/min

1742) a 1743)c 1744)c 1745)b 1746)c 1747)a 1748)b 1749)a 1750)a 1751)b 1752)d 1753)a 1754)a 1755)a
1756) b 1757) c 1758)b 1759)a 1760)b 1761)c 1762)a 1763)b

1764. In moderate excercise the respiratory rate is increased due to response of - *(NEET/DNB Pattern)*
a) Propioception receptor in the joints
b) TPCO in arterial blood
c) TPO fti arterial blood
d) J-receptor stimulation

1765. Spirometry can demonstrate and measure all of the following except - *(NEET/DNB Pattern, AI9 7)*
a) Tidal volume
b) Residual volume
c) Vital capacity
d) Inspiratory reserve capacity

1766. Oxygen therapy is least useful in -
a) Anemia *(NEET/DNB Pattern)*
b) ARDS
c) Alveolar damage
d) COPD

1767. Peripheral & central chemoreceptors may both contribute to increased ventilation that occurs as a result of decreased - *(NEET/DNB Pattern)*
a) Arterial BP
b) Arterial tension
c) Arterial 0_2 concentration
d) H^+

1768. Compliance of lungs is - *(NEET/DNB Pattern)*
a) 200 ml/cm water b)500ml/cmwater
c) 800 ml/cm water d) 1000 ml/cm water

1769. When gases flow through an orifice which factor is least likely to effect turbulence -
a) Density of gas *(NEET/DNB Pattern)*
b) Viscosity of gas
c) Pressure of gas
d) Diameter of orifice

1770. True about caisson's disease - *(NEET/DNB Pattern)*
a) 0_2 release from tissues
b) $C0_2$ release from tissues
c) N_2 release from tissues
d) H_2 release from tissues

1771. Difference in the amount of 0_2 inspired and $C0_2$ expired - *(NEET/DNB Pattern)*
a) 20ml/min b)50ml/min
c) 75 ml/min d) 100 ml/min

1772. Increased oxygen delivery to tissues in reponse to increased $C0_2$ is - *(NEET/DNB Pattern)*
a) Bohr effect b) Haldane Effect
c) Hamburger effect d) Chloride shift

1773. Respiratory minute volume of lung is - *(NEET/DNB*
a) 6L b)4L *Pattern)*
c) 500mL d) 125L

1774. Carbon monoxide poisoning is a type of- *(Jipmer 11)*
a) Anemic hypoxia b) Histotoxic hypoxia
c) Hypoxic hypoxia d) Stagnant hypoxia

1775. Gas exchange in tissues takes place at -
a) Artery b) Capillary *(NEET/DNB Pattern)*
c) Vein d) Venules

1776. Compliance of lung is measured by -
a) Elasticity *(NEET/DNB Pattern)*
b) Amount of air
c) Blood flow
d) Presence if fluid

1777. Surfactant is secreted by - *(NEET/DNB Pattern)*
a) Type II pneumocytes
b) Type I pnuemocytes
c) Alveolar capillaries
d) Alveolar macrophages

1778. Normal diffusion of $C0_2$ at rest -
a) 20-25 ml/min *(NEET/DNB Pattern)*
b) 50-100 ml/min
c) 100-200 ml/min
d) 300-400 ml/min

1779. A person unacclimatised develops pulmonary edema- *(NEET/DNB Pattern)*
a) 19-21 days b) 2nd-3rd month
c) 2 -3 days d) 6-7 days

1780. Haldane effect - *(NEET/DNBPattern)*
a) Effect of 2,3-BPG
b) Dissociation of C02 on oxygenation
c) Dissociation of 02 on addition of C02
d) Chloride shift

1781. Pulmonary vasoconstriction is caused by all except-
a) Hypoxia *(NEET/DNBPattern)*
b) Hypercarbia
c) Prostocyclin
d) Thromboxane A2

1782. In caissons disease pain in joint is because of -
a) Nitrogen bubble *(NEET/DNBPattern)*
b) Oxygen bubble
c) Carbon monoxide
d) Air in joint

1783. Cyanosis is not seen in - *(NEET/DNB Pattern)*
a) CHF b) COPD
c) CO poisoning d) High altitude

1784. Effect of fetal hemoglobin on 0_2 dissociation curve-
a) Right Shift *(NEET/DNB Pattern)*
b) Left Shift
c) No effect
d) May be right or left

1785. Uncompensated metabolic acidosis shows -
a) Increased pH with increased $HC0_3$- *(NEET/DNB*
b) Increased pH with Decreased $HC0_3$- *Pattern)*
c) Decreased pH with increased $HC0_3$-
d) Decreased pH with Decreased $HC0_3$-

1786. False about the 0_2 dissociation curve:
a) Sigmoid curve *(NEET/DNB Pattern)*
b) Combination of the first heme in the Hb molecule with 0_2 increases the affinity of the second heme for 0_2
c) Increase in ph shifts curve to right
d) Fall in temperature shifts curve to left

1764) a 1765)b 1766)a 1767)d 1768)a 1769)c 1770)c 1771)b 1772)a 1773)a 1774)a 1775)b 1776)a 1777)a
1778) d 1779)c 1780)b 1781)c 1782)a 1783)c 1784)b 1785)d 1786)c

1787. Increase in P50 in oxygenation curve is due to decrease in - *(NEET/DNB Pattern)*
a) PH b) Oxygen
c) Temperature d)$C0_2$

1788. Regarding Dead space Volume in a normal individual -
a) Anatomical dead space>Physiological Dead space
b) Anatomical dead space=Physiological Dead space
c) Anatomical dead space<Physiological Dead space
d) Anatomical dead space is not related to Physiological Dead space *(NEET/DNB Pattern)*

1789. Alveoli are kept dry because *oi-(NEET/DNB Pattern)*
a) Surfactants b) Glycoproteins
c) Buffers d) Bohr's Effect

1790. Vital capacity is sum of - *(NEET/DNB Pattern)*
a) Inspiratory reserve volme, Tidal volume and Expiratory reserve volume.
b) Tidal volume, Inspiratory reserve volume and Residual volume.
c) Expiratory reserve volume, Inspiratory reserve volume and Residual volume.
d) Residual volume, Inspiratory volume, and Expiratory volume.

1791. Herring Breuer reflex is an increase in -
a) Duration of inspiration *(NEET/DNB Pattern)*
b) Duration of expiration
c) Depth of inspiration
d) Depth of expiration

1792. Ventilation perfusion ratio is least at-
a) Apex b) Middle lob *(NEET/DNB Pattern)*
c) Base d)None

1793. When gases flow through an orifice which factor is least likely to effect turbulence -
a) Density of gas *(NEET/DNB Pattern)*
b) Viscosity of gas
c) Pressure of gas
d) Diameter of orifice

1794. Bohr Effect is? *(NEET/DNB Pattern)*
a) Facilitates oxygen transport
b) Facilitates C02 transport
c) Facilitates Chloride transport
d) None

1795. Volume of air taken in and given out during normal respiration is referred to as - *(NEET/DNB Pattern)*
a) IRV b)TV
c) EKV d)VC

1796. CO_z increases ventilation by acting mainly on receptors of - *(NEET/DNB Pattern)*
a) Apneustic center
b) Pneumotaxic center
c) Ventral surface of medulla
d) DRG

1797. Intrapleural pressure is - *(NEET/DNB Pattern)*
a) Transpulmonary pressure + Alveolar pressure
b) Transpulmonary pressure - Alveolar pressure
c) Transmural pressure + Alveolar pressure
d) Alveolar pressure - Transpulmonary pressure

1798. $P0_2$ is maximum - *(NEET/DNB Pattern)*
a) Base of lung b) Posterior lobe
c) Apex of lung d) Middle lobe

KIDNEY

1799. In metabolic acidosis, true about urinary change is-
a) Increase in ammonia *(UPSC 83, Delhi 84)*
b) Decrease in ammonia
c) Decrease in lactic acid
d) $HC0_3$

1800. High threshold substance is - *(Delhi 89)*
a) Uric acid b) Urea
c) Glucose d) Creatinine

1801. Norman filtration fraction is - *(PGI84)*
a) 0.9 b)0.2
c) 0.6 d) 1.0

1802. Normal PAH clearance is - m/minute -
a) 100-250 b) 250-500 *(AIIMS84,85)*
c) 500-800 d) 800-1200

1803. Minimum urinary pH that can be attained is -
a) 3.8 b) 3.5 *(PGI 81, JIPMER 81)*
c) 4.8 d)6.5

1804. Angiotensinogen is synthesized in the-
a) Liver b) Kidney *(Jipmer 79, Aiims 80)*
c) Lungs . d) Adrenals

1805. Glomerular filtration drops when the systolic pressure falls below - *(JIPMER 86,87)*
a) 90mmHg b)80mmHg
c) 70mmHg d)50mmHg

1806. GFR is increased when - *(AIIMS 87)*
a) Plasma oncotic pressure is increased
b) Glomerular hydrostatic pressure is decreased
c) Tubular hydrostatic pressure is increased
d) Increased renal blood flow

1807. Each kidney contains about-----nephrons - *(AP 88)*
a) One million b) Two million
c) Four million d)**1/2** million

1808. The renal clearance of - *(AI89)*
a) Creatinine indicates glomerular filtration rate
b) Insulin is lower than that of urea
c) Chloride increases after an injection of aldosterone
d) PAH continues to rise as the plasma concentration of pAH rises.

1809. Normal levels of creatinine in serum is -*(AIIMS 82,*
a) 0.6 to 1.2 mg % b) 1 to 2 mg % ***AI90)***
c) 0.01 to 0.04 mg % d) 0.04 to 0.1 mg %

1810. In renal glycosuria, the renal threshold for glucose is - *(TN 90)*
a) Low b)High
c) Same d) Greatly increased

1811. In Hypertension, there is - *(AIIMS 89)*
a) Reflex vasoconstriction
b) Renal afferent arteriolar dilatation
c) Sodium retention
d) Water retention

1787)a 1788) b 1789)a 1790)a 1791)b 1792)c 1793)c 1794)a 1795)b 1796)c 1797)d 1798)c 1799)a 1800)c
1801) b 1802) c 1803)c 1804)a 1805)a 1806)d 1807)a 1808)a 1809)a 1810)a 181 l)c

1812. Tubular maximum for kidney in practice is actually less than the calculated value because -
a) Different nephrons have different transport maximum *(TN 91)*
b) Depends on GFR
c) Depends of renal blood flom
d) Depends on blood pressure

1813. Major portion of glomerular filtrate is absorbed in- *(AI92)*
a) Loop of henle b) Distal convoluted tubule
c) Collecting duct d) Proximal segment

1814. True statement regarding creatinine clearance is -
a) 80 ml/min ***(AI93)***
b) Most accurate renal function test
c) Represents tubular function
d) Represents GFR

1815. Ammonia in the kidney tubules is excreted in exchange for - *(J1PMER 93)*
a) $HC0_3$ b) Na^+
c) Cl- d)$P0_4^{2}$-

1816. Two substances that can probably be used to determine filtration fraction are - *(PGI79, 87)*
a) Insulin and mannitol b) Urea and diodrast
c) PAH and phenol red d) Inulin and PAH

1817. Juxtamedullary nehprons in kidney are what percentage of total nephrons - *(JIPMER 81,*
a) 15 b)50 *Delhi 93)*
c) 70 d)90

1818. In a normal adult the desire for micturition is felt - *(AIIMS 81, AMC 87)*
a) When about 100-200 cc of urine has collected in the bladder
b) When about 300-400 cc of urine has collected in the bladder
c) When about 600-800 cc of urine has collected in the bladder
d) When about 1000 cc of urine has collected in the bladder

1819. Which of the following has no Tm value-
a) Albumin, arginine *(ARMS 78, Delhi 87)*
b) Betahydroxybutyrate, glucose
c) Glucose haemoglobin, phosphate
d) Sulfate, Uric acid
e) Urea

1820. Inulin clearance closely resembles - *(ARMS 78,*
a) GFR *Delhi 92)*
b) Renal Plasma flow
c) Creatinine clearance
d) P.A.H. clearance

1821. What is the urea clearance - *(ARMS 89)*
a) 4.4 ml/min b) 88 ml/min
c) 440 ml/min d) 44 ml/min
e) 22 ml/min

1822. Where in the kidney does acitve reabsorption of sodium ions occur-
a) Collecting duct b) Distal tubule
c) Ascending limb of Henle d) All of the above
e) Only B and C

1823. The hyperosmolarity of the renal medulla is due to increased content of - *(ARMS 8 7)*
a) K b) Na
c) Glucose d) Na+

1824. The length of distal convoluted tubule is - *(PGI 80,*
a) 2mm b) 5 mm *ARMS81)*
c) 8mm d)12mm

1825. In humans, effective renal blood flow is -
a) 425 b) 525 *(AIIMS83, 86)*
c) 625 d)725

1826. The excretion of sodium (meq) in 24 hours is -
a) Zero b) 50 *(ARMS82)*
c) 150 d)250

1827. What is the glomerular filtration rate -
a) 100 ml/min b) 125 ml/min *(JIPMER 80,*
c)150ml/min d) 175ml/min *PGI 81, 03)*
e) 200 ml/min

1828. Addis test is used for - *(PGI 81, AMU 85)*
a) Urinary sugar b) Urinary sediment
c) Blood lactate d) Serum magnesium

1829. Haemoglobin is a buffer because of - *(Kerala 94)*
a) Histidine residue b) Glycoprotein nature
c) Weak acidic nature d) Iron molecule

1830. One of the following does not form filtration barrier in nephrons - ***(AI** 95)*
a) Mesangium b) Podocytes
c) Endothelial cell d) Basement membrane

1831. Macula densa in kidney is located in relation to -
a) PCT b) DCT *(AMU 95)*
c) Afferent arteriole d) Efferent arteriole

1832. Which one the following is not responsible for concentration of urine in the kidneys - *(UPSC 97)*
a) Aldosterone b) Angiotensin II
c) Vasopressin d) Epinephrine

1833. The urge for micturition is felt when the bladder is filled with - *(TN97)*
a) 100-200cc of urine b) 200-3OOcc of urine
c) 500-700cc of urine d) 700-800cc of urine

1834. True statement among the following is - *(MAHE 98)*
a) Bladder emptying cannot occur if volume < 100ml.
b) Bladder muscles contains intrafusal fibres
c) Pressure increase in bladder very linerly with time
d) One time of fluid intake results in complete excretion in 1 hour

1835. The majority of body sodium is present - *(Kam 98)*
a) Extra cellular fluid b) Intra cellular fluid
c) Plasma d)Bone

1812) a 1813) d 1814)d 1815)a 1816)d 1817)a 1818)a 1819)e 1820)a 1821)b 1822)d 1823)b 1824)b 1825)c 1826)c 1827)b 1828)b 1829)a 1830)a 1831)c,d 1832)dl833)a 1834)a 1835)d

1836. True about nephron is - *(AI99)*
a) Na is absorbed actively in descending loop of henle
b) 60 to 70 % of GFR is absorbed in proximal tubule
c) Absorption of water occurs in ascending loop of henle
d) The filtrate reaching distal convoluted tubule is hypertonic with respect to surroundings

1837. Transport maximum (Tm) means - *(JIPMER 2002)*
a) Maximum reabsorption & secretion
b) Maximum amount of glomerular filtration/min
c) Substance cleared from plasma/min
d) Amount of toxic substances excreted/min

1838. Following cells are responsible for acid secretion in kidney - *(JIPMER 2002)*
a) I cells b)P cells
c) Mesangial cell d) Pericytes

1839. Relaxation of mesangial cells of kidney is brought about by - *(JIPMER 2002)*
a) cAMP b)Endothelin
c) PGF2 Vasopressin

1840. Inulin clearance is equal to - *(TN 2002)*
a) 55 ml/min b)625ml/min
c) 125 ml/min d) 40 ml/min

1841. P.G increasing the renal blood flow is/are -
a) PGL, b) PGE_2 *{PGI 03)*
c) TXA, d)PGF_{1a}
e) PGF_2

1842. Renal medullary hyperosmolarity is due to -
a) Increased Na+ *(PGI03, PGI04)*
b) Increased Na content
c) Increased Glucose
d) Increased urea
e) Increased Potassium

1843. All of these are correct of renal physiology except -
a) Sodium absorption occurs in DCT *(PGI 02)*
b) Potassium is both secreted and absorbed in tubules
c) Glucose is reabsorbed in DCT
d) Hb is not excreted as it is a large molecule
e) Amino acids are reabsorbed in CD

1844. Maximum water absorption takes place in -
a) Proximal convoluted tubule *(PGI2000)*
b) Distal convoluted tubule
c) Collecting duct
d) Loop of Henle

1845. Elimination of waste product from a normal person requires minimal amount of urine of-
a) 100 ml b) 500 ml *(PGI 98)*
c) 100ml d) 2000 ml

1846. lYue about juxta-glomerular apparatus of kideny-
a) Important source of angiotensinogen *(PGI 2000)*
b) Important source of renin
c) Consist of macula densa
d) Consist of afferent arteriole forming lacis cells

1847. Which is true about renin - *(PGI 2000)*
a) It helps to convert angiotensinogen to Angiotensin -1
b) Secreted by PCT
c) T GFR causes T secretion of renin
d) *i* plasma Na^+ & H_20

1848. Loop of Henle handles the following ions except-
a) Na^+ b)K^+ *(PGI 97)*
c) Q- d) Urea

1849. The renal plasma flow (RPF) of a patient was to be estimated through the measurement of Para Amino Hippuric acid (PAH) clearance. The technician observed the procedures correctly but due to an error in the weighing inadvertently used thrice the recommended dose of PAH. RPF estimated is likely to be - **(***AI03)*
a) False - high
b) False - low
c) False - high or false - low depending on the GFR
d) Correct and is unaffected by the PAH overdose

1850. GFR increases if- **(***Jipmer04)*
a) Efferent arteriole constricts
b) Efferent arteriole dilates
c) Afferent arteriole constricts
d) Afferent arteriole dilates

1851. Renal plasma flow is best determined by - **(***TN02)*
a) Inulin b)Creatinine
c) PAH d)Mannitol

1852. Filtration pressure in glomeruli of kidney -
a) 10 mm of Hg b) 6 mm of Hg *{Orissa 04)*
c) 15mmofHg d)2.0mmofHg

1853. Least clearance is for among these - *{Jipmer 04)*
a) Glucose b) Inulin
c) Urea d)Creatinine

1854. In renal disease albumin is first to appear in urine because - *{AIIMS 04)*
a) Of its high concentration in plasma
b) Has molecular weight slightly greater than the molecules normally getting filtered
c) High albumin: globulin ratio,
d) Tubular epithelial cells are sensitive to albumin

1855. Over half of the potassium that appears in the urine of a patient, who has ingested some potassium salts, is derived form - *(UPSC 02)*
a) Glomerular filtrate
b) Secretion by the distal tubule
c) Reabsorption in the proximal tubule
d) Secretion by the loop of Henle

1856. Potassium is maximally absorbed in which part of nephron - *(Jimper 03)*
a) Proximal convoluted tubules
b) DCT
c) Collecting ducts
d) Loop of Henle

1836) b 1837) a 1838)a 1839)a 1840)c 1841)a,b 1842)a,d,e 1843)c,d,e 1844)a 1845)b 1846)b,cl847)a 1848)b
1849) b 1850)a,dl851)c 1852)c 1853)a 1854)b 1855)b 1856)a

1857. The kidney normally does NOT allow transglomerular passage of - *(SGPGI05)*
a) B-2 microglobulin b) Lysozyme
c) Myoglobin d) Immunoglobulin

1858. GFRis measured by- *{SGPGI05)*
a) Creatine clearance b) Inulin clearance
c) PAH clearance d) Creatinine clearance

1859. Endocrine functions associated with kidney include all of the following *except* **-** *(SGPGI05)*
a) Erythropoietin secretion
b) Natriuretic peptide secretion
c) 1,25 hydroxy D3 Formation
d) Renin secretion

1860. PCT absorbs A/E- *(MAHE05)*
a) Sodium b) Glucose
c) Hydrogen ions d) Amino acids

1861. Stretch reflex of bladder is integrated at-*(MAHE 05)*
a) Sacral portion b) Lumbar portion
c) Substantia gelatinosa d) Sympathetic plexus

1862. Which one of the following substances, actively transported by the tubular cells, has the highest Tabular Transport Maximum- *(ICS 05)*
a) Plasma protein b) Haemoglobin
c) Glucose d) Sodium

1863. According to myogenic hypothesis of renal autoregulation, the afferent arterioles contract in response to stretch induced by - *(AI1MSNOV05)*
a) NO release
b) Noradrenaline release
c) Opening of Ca^{2+} channels
d) Adenosine release

1864. Which one of the following statement regarding water reabsorption in the tubules - *(AI05)*
a) The bulk of water reabsorption occurs secondary to Na^{+}reabsorption
b) Majority to facultative reabsorption occurs in proximal tubule.
c) Obligatory reabsorption is ADH dependent.
d) 20% of water is always reabsorbed irrespective of water balance.

1865. Urinary concentrating ability of the kidney is increased by - *(AI 05)*
a) ECF volume contraction
b) Increase in RBF
c) Reduction of medullary hyperosmolarity
d) Increase in GFR

1866. The tubuloglomerular feedback is mediated by -
a) Sensing of Na+ concentration in the macula densa *(AI06)*
b) Sensing of C1+ concentration in macula densa
c) Sensing NaCl concentration in the macula densa
d) Opening up of voltage gated Na+ channels in afferent arteriole

1867. The prime driving force for counter current multiplier system is - *(AI 06)*
a) Medullary hyperosmolarity
b) Reabsorption of Na+ in thick ascending limb
c) Action of ADH via aquaporin channels
d) Urea recycling

1868. Hormones secreted by kidney - *(PGIJune06)*
a) Erythropoietin
b) 1,25 dihydroxy cholecalcifevol
c) Granulocyte-Monocyte-CSF

1869. The intravesical pressure rises abrupyly when the bladder volume is about -
a) 400ml b) 300ml
c) 200ml d) 100ml

1870. Most important buffer system present in the distal convoluted tubule - *(Manipal 2006)*
a) Bicarbonate b) Phosphate
c) Protein d) Ammonia

1871. Which of the following ion is secreted in proximal convoluted tubule?
a) Na^{+} b)C
c) K^{+} d) Mg^{+}

1872. The plasma clearance value of glucose in a diabetes mellitus patient will be - *(Karnataka PGMEE2006)*
a) Zero
b) Equal to that of insulin clearance
c) Greater than that of PAH clearance
d) Greater than zero.

1873. Which of the following hormone is not secreted by the kidney - *(AI07)*
a) Renin b) AngiotensinI
c) Erythropoietin d) 1,25 DHCC

1874. During voiding (iv) pressure in bladder is -
a) 25-30 mmHg *(PGMCET01)*
b) 50-70 mmHg
c) 70-100 mmHg
d) > 100 mmHg

1875. Autosomal vanant of nephrogenic diabetes insipidus is due to defect in - *(PGMCET01)*
a) Aquaporin 2
b) Angiotensin I receptor
c) Angiotensin II receptor
d) VIP receptors

1876. Proximal convoluted tubule have which type of aquaporins- *(Corned08)*
a) Aquaporin 1 b) Aquaporin 2
c) Aquaporin 5 d) Aquaporin 9

1877. The supraoptic nucleus of the hypothalamus is believed to control secretion of which of the following hormones - **(***Corned 08)*
a) Antidiuretic hormone
b) Oxytocin
c) Growth hormone
d) Adrenocortiocotrophic hormone

1857) a 1858) b 1859)b 1860)c 1861)a 1862)c 1863)c 1864)a 1865)a 1866)c 1867)b 1868) a,b 1869) a 1870)d
1871) a 1872) a 1873)b 1874)a 1875)a 1876)a 1877)a

1878. Juxtaglomerular apparatus lies in relation to -
a) Proximal convoluted tubule *(AiimsMay07)*
b) Ascending loop of Henle
c) Descending loop of Henle
d) Glomerulus

1879. Renin is secreted by - *(Aiims May 07)*
a) PCT b) DCT
c) Collecting duct d) Juxatglomerular apparatus

1880. True about free water clearance is -
a) Regulated by ADH *(A iims May 0 7)*
b) Regulated by aldosterone
c) Increased by furosemide
d) None of the above

1881. GFRdecreases with the following- *(MAHE07)*
a) Hypotension b) Hypoproteinemia
c) ACE inhibitors d) All the above

1882. Rate of excretion of sodium in a normal male when GFR = 125 mL/min - *(MAHE 07)*
a) 400 - 425 eq/min b) 60 - 70 eq/min
c) 50-60 eq/min d)70-80 eq/min

1883. Ureteric peristalsis is due to intact supply of -
a) Sympathetic innervation *(AIIMSNov 07)*
b) Parasympathetic innervation
c) Both sympathetic and parasympathetic
d) Intrinsic smooth muscle pacemaker activity of renal calyces

1884. Bicarbonate is maximally absorbed in -
a) PCT *(AIIMSNov 07)*
b) DCT
c) Thick ascending loop of Henle
d) Collecting duct

1885. Maximum absorption of the water occurs at -
a) Proximal convoluted tubule *(UP08)*
b) Distal convoluted tubule
c) Collecting duct
d) Loop of henle

1886. All are functions of angiotensin, except -
a) Acts on adrenal cortex to aldosterone secretion
b) Decreases GFR *(Manipal08)*
c) Directly causes vasoconstriction
d) Acts on adrenal medulla and stimulates steroids

1887. Maximum osmotic gradient is found in-*(Manipal 08)*
a) Outer medulla b) Inner medulla
c) Outer cortex d) Inner cortex

1888. GFR is determined by the following - *(Manipal 08)*
a) Bowman capsule pressure
b) Hydrostatic pressure
c) Plasma oncotic pressure
d) All of the above

1889. Mechanism by which water is reabsorbed from proximal convoluted tubule is - *(DPGEE 08)*
a) Active transport b) Passive transport
c) Facilitated diffusion d) Osmosis

1890. Which of the following statement is true?
a) Fluid coming from the descending limb of loop of Henle is hypotonic *(AIIMS Nov 08)*
b) Descending limb of loop of Henle is permeable to solutes
c) If clearance of a substance is greater than GFR, then tubular secretion must be present
d) Clearance of a substance is always more than GFR if there is tubular secretion

1891. All of the following structures lie in the renal medulla, except - *(AIIMS Nov 08)*
a) Juxtaglomerular apparatus b) Loop of Henle
c) Collecting duct d) Vasa Recta

1892. Macula densa is present in - *(Corned 09)*
a) Collecting tubule
b) Proximal convoluted tubule
c) Distal convoluted tubule
d) Loop of Henle

1893. All of the following statements about Renal physiology are true, Except - *(AI09)*
a) Distal tubule always receives hypoosmotic solution
b) The kidneys receive 5% of the cardiac output
c) GFR is controlled by resistance in afferent and efferent arterioles
d) The Glomerulus receives capillaries from the afferent arteriole

1894. Angiotensin II causes all of the following, except - *(AI 09)*
a) Stimulation of thirst b) Increased ADH secretion
c) Vasodilatation d) Aldosterone secretion

1895. What is the clearance of a substance, if its concentration in plasma in 10 mg%, concentration in urine is 100 mg% and urine flow is 2 ml/min -
a) 0.2ml/min b) 0.2 ml/min *(Delhi Feb. 09)*
c) 2 ml/min d) 20 ml/min

1896. Which of the following product is primarily filtered with little secretion or re-absorption in renal tubules? *(DELHIPG Mar. 09)*
a) Sodium b) Creatinine
c) Glucose d) Amino acids

1897. Which of the following is not a component of glomerular filtration barrier *1 (DELHIPG Mar 09)*
a) Capillary endothelial cell
b) Basement membrane of endothelial and visceral epithelial cells
c) Podocytes with their foot processes
d) Mesangial cells

1898. Kidney produces - *(PGI Nov 09)*
a) Vasopressin b) Erythropoietin
c) Renin d)Angiotensinogen
e) 25 hydroxy vit D

1899. Substance (s) freely filtered across glomerular capillaries - *(PGINov 09)*
a) Glucose b) Albumin
c) Thyroxin d) Creatinine
e) Bicarbonate

1878) d 1879) d 1880)a 1881)a,c 1882)None 1883)d 1884)a 1885)a 1886)d 1887)b 1888)d 1889)d 1890)c 1891) a 1892)d 1893)b 1894)c 1895)d 1896)b 1897)d 1898)b,c 1899)a

1900. Glomeruiar Filtration Rate is increased when -
a) Plasma oncotic pressure is increased *(DPG10)*
b) Glomerular hydrostatic pressure is decreased
c) Tubular hydrostatic pressure is decreased
d) Increased renal blood flow

1901. Minimum urine osmolality that can be human kindney - *(Maharashtra 10)*
a) lOOmOsm/L b)80mOsm/L
c) 50 mOsm/L d)20mOsm/L

1902. Not absorbed from the PCT - *(ARMS Nov 10)*
a) Na^+ b) Phosphate
c)HC03- d)H^+

1903. Angiotensin II causes all of the following except -
a) Stimulation of thirst *(AIIMS May 11)*
b) Aldosterone secretion
c) Increased ADH secretion
d) Vasodilation

1904. Which of the following statement is true?
a) Fluid coming from the descending limb of loop of Henle is hypotonic *(AIIMS May 11)*
b) Descending limb of loop of Henle is permeable to solutes
c) If clearance of a substance is greater than GFR, then tubular secretion must be present
d) Clearance of a substance is always more than GFR if there is tubular secretion

1905. In a healthy individual on a normal diet, which of the following ion is completely absorbed in tubules -
a) Na^+ b)K^+ *(Jipmer 11)*
c) Cl- d)$HC0_3$-

1906. Macula densa is a part of - (*NEET/DNB Pattern)*
a) pet b) det
c) Renal arteriole d) Glomerulus

1907. Destruction of zona glomerulosa will deplete -
a) Aldosterone **(***NEET/DNB Pattern)*
b) Cortisol
c) Testosterone
d) Catecholamines

1908. Renin is secreted by - (j*NEET/DNB Pattern)*
a) Juxtaglomerular cells b) Macula densa
c) Mesangial cells d) Glomerulus

1909. The main cause of minimal change ds is:
a) Increase in pore size (*NEET/DNB Pattern)*
b) Loss of negative charge on membrane
c) Loss of cells
d) Decreased circulation

1910. A negatively charged molecule is filtered with more difficulty compared to a positive one because -
a) Presence of negatively charged sialoproteins on the filtering membrane (.*NEET/DNB Pattern)*
b) Negatively charged molecules are larger
c) Postively charged proteins on filtering membrane
d) Urine is acidic

1911. Lacis cells are located at - (*NEET/DNB Pattern)*
a) JGA b) Proximal tubule
c) Distal tubule d) Loop pf henle

1912. Relaxation of mesangial cells is caused by -
a) Histamine (*NEET/DNB Pattern)*
b) Dopamine
c) Angiotensin 2
d) Vasopressin

1913. Which causes raised angiotensin in blood -
a) Increased blood volume *(NEET/DNB Pattern)*
b) Raised cardiac output
c) Decreased blood pressure
d) Increased sympathetic tone

1914. Least reabsorption out of- *(NEET/DNB Pattern)*
a) Glucose b) Urea
c) Na^+ d)$HC0_3$

1915. Net filtration pressure is ■· *(NEET/DNB Pattern)*
a) 32mmHg b) lOmmHg
c) 60mmHg d) 20 mm Hg

1916. Rennin is present in - *(NEET/DNB Pattern)*
a) Gastric juice b) Liver
c) Kidney d)Lung

1917. Erythropoietin is secreted from -
a) Juxtraglomerular cells *(NEET/DNB Pattern)*
b) Macula densa
c) Intersititial cells
d) Glomerulus

1918. K+ secretion from loop of henle is decreased by -
a) Furosemide *(NEET/DNB Pattern)*
b) Thiazide
c) Spironolactone
d) Acetazolamide

1919. Rennin is present in - *(NEET/DNB Pattern)*
a) Gastric juice b) Liver
c) Kidney d)Lung

1920. Substance that is completely reabsorbed from the kidney - *(NEET/DNB Pattern)*
a) Na^+ b)K^+
c) Urea d) Glucose

1921. GFR is measured by- *(NEET/DNB Pattern)*
a) Urea b) Inulin
c) Creative d) Hippuric acid

1922. Normal range of urine osmolality(mosm/l)-
a) 50-1400 *(NEET/DNB Pattern)*
b) 100-1400
c) 200-1000
d) 300-1200

1923. Two substances that can probably be used to determinefiltration fraction are -
a) Insulin and mannitol *(NEET/DNB*
b) Urea and diodrast *Pattern, PGI98)*
c) PAH and phenol red
d) Inulin and PAH

1924. Renin secretion is increased by all EXCEPT?
a) Na^+ in PCT *(NEET/DNB Pattern)*
b) Low afferent arteriolar pressure
c) Na^+ in DCT
d) Sympathetic nerve stimulation

1900)d 1901)c 1902) d 1903)d 1904)c 1905)d 1906)b 1907)a 1908)a 1909)b 1910)a 1911)a 1912)b 1913)d

1925. Which of the following relaxes mesangial cells in glomerulus - *(NEET/DNB Pattern)*
a) Dopamine b) Histamine
c) AT III d)PDGF

1926. Which of the following relaxes mesangial cells in glomerulus - *(NEET/DNB Pattern)*
a) Dopamine b) Histamine
c) AT III d)PDGF

1927. Countercurrent mechanism in the kidney is responsible for - *(NEET/DNBPattern)*
a) Absorption of glucose
b) Maintenance of blood flow
c) Osmotic gradient in medulla
d) Secretion of uric acid

1928. Substrate which is both secreted & filtered -
a) Uric Acid *(NEET/DNBPattern)*
b) Glucose
c) Urea
d) Na^+

1929. Which of the following is most important in sodium and water retention - *(NEET/DNBPattern)*
a) Rennin angiotensin system
b) ANP
c) BNP
d) Vasopressin

1930. Which of the following causesincrease in both GFR and renal plasma flow - *(NEET/DNB Pattern)*
a) Increased plasma colloid osmotic pressure.
b) Dilatation of afferent arteriales
c) Constriction of afferent arterioles
d) Increased tubular pressure

1931. Maximum reabsorption of $HC0_3$-occurs in -
a) PCT *(NEET/DNB Pattern)*
b) DCT
c) CD
d) Loop of henle

1932. Bicarbonate is absorbed - *(NEET/DNB Pattern)*
a) Activity in PCT b) Actively in DCT
c) Indirectly in PCT d) Actively in DCT

1933. Counter current mem chanism, all are true except-
a) Occurs due to opp flow in vasa recta and loop of henle *(NEET/DNB Pattern)*
b) Seen in medullary nephron
c) Helps in creating osmolarity gradient
d) Urea has no role

1934. As fluid comes down the PCT, what is true -
a) Concentration of urea **falls** ***(NEE T/DNB*** *Pattern)*
b) Concentration of HC03- falls
c) Concentration of Na^+ increases
d) Concentration of inulin decreases

***

BIOCHEMISTRY

STRUCTURE & FUNCTION OF PROTEIN

1. Sulphur containing amino acids are - *(PGI85,8 7*
a) Cysteine b) Asparagine *AP 86)*
c) A and B d) Methionine
e) Glycine

2. Heme in Hemoglobin is in the - *(AI89)*
a) Hydrophobic Pocket b) Positive region
c) Negative region d) Polar region

3. Blood group antigens belong to the class..... -
a) Conjugated proteins *(AP 88)*
b) Unconjugated proteins
c) Simple proteins
d) Hemoglobin binding proteins

4. Fluorescamine is used to detect - *(TN89)*
a) Amino acids b) Fatty acids
c) Glucose d)All

5. Acidic amino acids are - *(PGI83)*
a) Asparagine b)Arginine
c) Glutamine d) Lysine
e) None

6. Basic amino acids are - *(PGI83)*
a) Asparagine b)Arginine
c) Glutamine d) Lysine
e) All

7. Aromatic amino acids are - *(PGI83)*
a) Typtophan b) Tyrosine
c) Lysine d) Arginine
e) Phenylalanine

8. Ninhydrin is a reagent used in detection of -
a) Ketone bodies b) Blood sugar *(Kerala 90)*
c) Blood urea d) Alpha amino acids

9. Non - Essentieal amino acid is - *(AP91)*
a) Tyrosine b) Phenyalanine
c) Lysine d) Threonine

10. Alpha Helix structure- *(AI91)*
a) Free rotation
b) Hydrogen bond between peptides
c) H bond with in peptide
d) Electrostatic band between two adjacent peptides

11. Same charged two proteins separation is done by -
a) Agrose b) DEAE Cellulose *(AI91)*
c) Sephadex d)None

12. Iron in the haemoglobin is held by - *(AI 91)*
a) Polar bonds b) Non polar bonds
c) Co- ordinate bonds d) Covalent bonds

13. Vibrational property of proteins is due to..... structure - *(AIIMS 92)*
a) Primary b) Secondary
c) Tertiary d) Quaternary

14. Tertiary structure of proteins is maintained by all except - *(All India 93)*
a) H2 bond b) Hydrophobicbond
c) Ionic bond d) Disulpide bond

15. The colour of cheloglobin is - *(AIIMS 83,86)*
a) Red b) Pink
c) Orange d) Green

16. Sulphaemoglobin has a..... colour - *(AIIMS 80,*
a) Cherry Red b) Pink *KERALA 88)*
c) Dirty Green d)Blue

17. Siderophyllin is_____ globulin - *(AIIMS 85)*
a) Alpha- 1 b) Alpha -2
c) Beta d) Gamma

18. Helical content of polypeptides can be estimated -
a) By comparison of viscocity with polyproline
b) By analysis for related sheet structure *(AIIMS 85)*
c) Only by X- ray crystallography
d) From optical rotatory

19. In determining protein structure, performic acid is used to - *(AIIMS 86)*
a) Identify N- terminal residue
b) Identify C- terminal residue
c) Denature protein
d) Reduce disulphide bonds
e) Oxidize disulphide bonds

20. In electrophoresis, if the pH is above isoelectric point a protein will - *(AIIMS 80, RPHTAK 8 7)*
a) Precipitate b) Not move
c) Form a zwitterion d) Migrate to anode
e) Migrate to cathode

21. Which of the following is correct about breakdown of hemoglobin (Hb) - *(AIIMS 85)*
a) Hb—>Heme—>bilirubin—>urobilinogen
b) Heme—>Hb—>biliverdin—>bilirubin—>urobilinogen
c) Hb-»Heme—>biliverdin—>bilirubin—> urobilinogen
d) Hb—>Heme—»bilirubin—mrobilinogen —» biliverdin

22. Prophyrin is formed by joining together four pyrrole rings by means of bridges-*(JIPMER 81)*
a) Hydrogen b) Hydroxy
c) Phosphate d) Methenyl

23. Which of the following is a derived protein -
a) Protamines b) Peptones *(DNB 91)*
c) Prolamines d) Lactalbumin

24. Monoclonal electrophoresis is useful in the diagnosis of - *(AIIMS 84; Delhi 86)*
a) Thalassemia b) Sickle cell anemia
c) Multiple myeloma d) Gout

25. Siderophyllin is - *(PGI 84)*
a) Haematin b) Ferrtin
c) Haemin d) Transferrin

26. Which of the following is not a part of hemoglobin molecule - *(AIIMS 83)*
a) Pyrrole rings b) Vinyl gourps
c) Histidine d) Ferric ions

27. The Klett Summerson's photoelectric calorimeter is used for haemoglobin estmation and the reagent used for this is - *(AIIMS 84)*
a) Ringer's solution b) Isotonic saline
c) Nayem's reagent d) Drabkin's reagent

l)a,d 2) a 3) a 4) a 5)e 6)b,d 7)a,b,e 8)d 9) a 10)c 11) c 12)a 13)c 14)None
15) d 16)c 17)c 18) d 19)e 20)d 21)c 22)d 23)b 24)c 25)d 26)d 27)d

28. Aromatic ring is present in - *(Delhi 90)*
a) Arginine b) Glycine
c) Phenylalanine d) Phenylalanine Glycine

29. What is the average number of high energy bonds required for the synthesis of 1 peptide bond -
a) 1 b)2 *(AIMS 82)*
c) 3 d)4
e)5

30. Bohr effect is - *(AIMS 82,84,85,87, PGI88)*
a) Effect on Zn on carbonic anhydrase activity
b) Effect of $PC0_2$ on oxyhemoglobin dissociation
c) $HC0_3$- leaving the RBC in exchange of Cl
d) H leaving RBC for each $C0_2$ that inters

31. Heme in hemoglobin is - *(AIMS 83)*
a) Between Helix C and D
b) Surrounded by non polar environment
c) Bonded to E7 histidine
d) Protoporphyrin IX

32. Collagen is unique in that it contains much -
a) Cystine b) Cysteine *(TN 88)*
c) Hydroxyproline d) Lysine
e) Desmosine

33. The most abundant protein in the human body is -
a) Myosin b) Albumin *(PGI 83)*
c) Hemoglobin d) Collagen
e) Keratin

34. Ninhydrin reaction gives a purple colour and evolves $C0_2$ - *(AIMS 86)*
a) With peptide bonds b) With histamine
c) With aspargine d) With serotonin

35. Collagen is a major component of - *(AIMS 84, 87)*
a) Synovial fluid b) Wharton's jelly
c) Bone d)Hair
e) Blood

36. Flexibility of protein chain is determined by -
a) Glycine b) Tryptophan *(AIMS 88)*
c) Serine d) Proline

37. Myoglobin - *(CMC 85)*
a) Contains four hemes per molecule
b) Shows the Bohr effect
c) Has an 0_2 dissociation curve that is unaffected by wide range of pH
d) None of the above

38. Quartenary structure of protein is - *(Kerala 94)*
a) The arrangement sequence of amino acids in the polypeptide chain
b) Inter relation between amino acids in a single polypeptide chain
c) Inter relation of amino acids in 2 polypeptide chains
d) The inter relation and arrangement of polypeptides in a protein with more than 2 polypeptide chains

39. Structure of proteins is best studied by -
a) X-ray crystallography *(Kerala 94)*
b) Ultra centrifugation
c) Using sangers reagent
d) Sucrose density gradient centrifugation

40. Iron is complexed in heamoglobin to - *(AI95)*
a) Leucine b)Histidine
c) Isoleucine d) Valine

41. Amino acid which does'nt participate in alpha-helix formation is - *(All India 96)*
a) Leucine b) Glycine
c) Proline d) Lysine

42. The amino acid whose Ionisation is maximum affected by changes in local microenvironment-
a) Glycine b) Histidine *(AIMS95)*
c) Glutamic acid d) Aspartic acid

43. The integral membrane glycoprotein of human RBCs is - *(AIMS 95)*
a) Porin b)Ankylin
c) Spectrin d) Glycophorin

44. In terms of chemical structure which one of the following is a tetrameric glycoprotein - *(UPSC 97)*
a) Insulin receptors b) Leptins
c) Neuropeptide d)Thyrotrophin

45. The Coiling & folding of protein requires -
a) Amide bond b) Phosphate bonds *(AIMS 97)*
c) Sulphide bonds d) Hydrogen/covalent bonds

46. False statement about haemoglobin structure -
a) Hb has 2 polypeptide *(PGI96)*
b) Iron is present in ferrous state
c) Hb structurally similar to myoglobin
d) Ferrous ions are in porphyrin rings

47. Indole ring is present in - *(Kerala 97, Delhi 87)*
a) Tryptophan b) Valine
c) Methionine d) Histidine

48. Triple helix is found in - *(All India 98)*
a) Cystine b) Collagen
c) Pectin d) DNA

49. Albumins and globulins are proteins -*(ROTHAK 97)*
a) Simple b) Derived
c) Conjugated d) Structural
e) Lipoproteins

50. Regarding isoelectric pH true is (regarding enzymes) - *(AIMS98)*
a) All amino acids exist as zwitter ions
b) Net + ve and -ve on molecule are equal
c) Enzyme activity maximum
d) None of the above

51. Which is a denaturing agent - *(AIMS 98)*
a) Guanidine b) Glutamate
c) Glycine d) Guanosine

52. Electrophoresis done under pH gradient is -
a) Isoosmotic b) Isoelectric *(CUPGEE 99)*
c) Ion exchange d)None

53. Most abudant collagen in body is - *(CUPGEE 99)*
a) Type I b) Type II
c) TypeV d) Type VI

54. At pH 7 the binding of 2.3-DPG to hemoglobin occurs at which site - *(AIIMS2K)*
a) Sulphydryl gorup b)Carboxy terminal
c) Aminoterminal d) Histidine

28) c 29) d 30) b 31)b 32)c,d 33) d 34) c 35) c 36) a 37) c 38) d 39) a 40) b 41) c
42) b 43) d 44) a 45) c 46) a,c 47) a 48) b 49) a 50) b 51) a 52) b 53) a 54) c

55. Keratin in the nail is exceptionally stronger than others because of - *(AIIIMS 2K)*
a) Disulphide bond b) Van der Wall's forces
c) Ionic bonds d) Calcification

56. Phospholamban is a protein - *(AIIMS 2K)*
a) That increase interaction of calcium with myofilaments
b) That leads to sequestration of calcium in endoplasmic reticulum
c) That leads to sequestration of calcium by mitochondria
d) That activates Ca/Na pump

57. When the following amino acids are separated by running them on agarose gel, at pH 7, which one of them will migrate slowest to the anodic end -
a) Glycine b) Valine
c) Aspartic acid d) Lysine

58. Molecular separation of two proteins with same charge can be done by- *(PGI9 7)*
a) Ion exchange chromatography
b) Dialysis
c) Gel diffusion chromatography
d) Electrophoresis

59. Intact peptide bond is necessary for which test-
a) UV diffraction b) Ninhydrin *(PGI 98)*
c) Diazo reaction d)AU

60. The best method to differentiate proteins is by -
a) Gel chromatography *(PGI 99)*
b) Affinity chromatography
c) Ion exchange electrophoresis
d) None of the above

61. Defect in collagen formation is seen in - *(PGI 02)*
a) Scurvy b) Hunter's syndrome
c) Marfan's syndrome d) Osteogenesis imperfecta

62. Optical transmission through a solution depends on- *(PGI03)*
a) Time b) Concentration
c) Scale d) Path length
e) Spectrophotometer

63. Which of the following statement characterize both Hemoglobin and Myoglobin - *(PGI 03)*
a) Non-helical
b) Subunits which are held together by hydrogen bonds
c) Binds with 2 Hema
d) Hema at hydrophobic pockets
e) Bind with 1 molecule of 0_2

64. At isoelectric pH protein - *(PGI03)*
a) Have Net charge'O'
b) Are positively charged
c) Are negatively charged
d) Don't migrate

65. Proteins are separated on the basis of size by -
a) SDS-PAGE *(PGI03)*
b) HPLC
c) Affinity Chromatography
d) Ion-exchange Chromatography

66. Proteins can be separated by the following except -
a) Electrophoresis *(Jipmer03)*
b) Ultra - centrifugation
c) Gas chromatography
d) Salt separation

67. The following separation technique depends on the molecular size of the protein - *(AI03)*
a) Chromatography on a carboxymethyl (CM) cellulose column
b) Iso-electric focusing
c) Gel filtration chromatography
d) Chromatography on a diethylaminoethyl (DEAE) cellulose column

68. The conversion of optically pure isomer (enantiomer) into amixture of equal amounts of both dextro and levo forms is called as - *(AI 03)*
a) Polymerization b) Stereoisomerization
c) Racemization d) Fractionation

69. The collagen triple helix structure is not found in
a) Cytoplasm *(AI 03)*
b) Golgi apparatus
c) Lumen of endoplasmic reticulum
d) Intracellular vesicles

70. Protein acts as buffer due to which property -
a) Colloid *(Orissa 04)*
b) Basic
c) Acidic
d) Amphipathic (amphoteric in nature)

71. Alpha helix and Beta pleated sheet are examples of-
a) Primary structure *(AI 04, COMED 06)*
b) Secondary structure
c) Tertiary structure
d) Quaternary structure

72. Cytochrome C of the bacteria has 50% identity of amino acid sequence with that of human. Which of the following is the most conserved parameter in these 2 protreins - *(AI 04)*
a) Quartemary structure
b) Tertiary structure
c) Amino acid sequence
d) Loop and turn segments

73. Copper is required in collagen synthesis for - *(Jipmer 04)*
a) Lysyl hydroxylase b) Lysyl oxidase
c) Prolyl hydroxylase d) Prolyl oxidase

74. Which one of the following is not true for alpha helix-
a) It is one of the most important secondary structure
b) It has a net dipole moment *(AIIMS 04)*
c) All hydrogen bonds are aligned in the same direction
d) Long stretches of left handed helice occur in proteins

75. Which of the following amino acids have side chains that are negatively charged under physiological conditions - *(SGPGI04)*
a) Aspartic acid b) Histidine
c) Tyrosine d) Serine

55)a 56)b 57)d 58)c 59)b 60)a 61)a,d 62)b,d 63)d 64)a,d 65)a 66)None 67)c
68) c 69) a 70) d 71)b 72) b 73) b 74) b 75) a

76. One of the following is an example of phosphoprotein-
a) Histone b) Casein *{Korn 04)*
c) Ceruloplasmin d) Albumin

77. Which of the following can be a homologous substitution for valine in hemoglobin - *{AI04)*
a) Iso leucine b) Glutamic acid
c) Phenylalanine d) Lysine

78. Biological value of protein is related to - (.*PGI04)*
a) Amino Acid content
b) Essential amino acid content
c) N_2 content
d) Content of NH_3 to urea
e) Protein quality

79. The molecular weight of a protein can be determined by- (.*JIPMER 05)*
a) Native poly acrylamide Gel Electrophoresis (PAGE)
b) Sodium dodecyl Sulphate h-PAGe
c) Isoelectric focusing
d) Ion Exchange Chromatography

80. In chromatography mass movements of the substances in due to - (*MAHA OS)*
a) Diffusion b) Electrophoresis
c) Paper chromatography d) Osmosis

81. Zwitter ions, have - (*Orissa 05)*
a) +ve ions > - ions b) + ve ions < - ions
c) + ve ions = -ve ions d) None of these

82. At physiological pH, the carboxy-terminal of a peptide is - (*AIIMS Nov 05)*
a) Positively charged b) Negatively charged
c) Neutral d) Infinitely charged

83. Substitution of which one of the following amino acids in place of alanine would increase the absorbance of protein at 280 nm - (*AIIMS Nov 05)*
a) Leucine b) Arginine
c) Tryptophan d) Proline

84. Secretory proteins are synthesized in -
a) Cytoplasm (,*AIIMS Nov 05)*
b) Endoplasmic Reticulum
c) First in cytoplasm and then in Endoplasmic Reticulum
d) First in Endoplasmic Reticulum and then in cytoplasm

85. Which one of the following can be a homologous substitution for isoleucine in a protein sequence?
a) Methionine b) Aspartic acid *(AI06)*
c) Valine d) Arginine

86. Proteins are linear polymers of amino acids. They fold into compact structures. Sometimes, these folded structures associate to form homo or hetero-dimers. Which one of the following refers to this associated form - *(AI06)*
a) Denatured state b) Molecular aggregation
c) Precipitation d) Quaternary structure

87. The structural proteins are involved in maintaining the shape of a cell or in the formation of matrices in the body. The shape of these proteins is - *(AI 06)*
a) Globular b) Fibrous
c) Stretch of beads d) Planar

88. Protein purification and separation can be done by all except - *(AI07)*
a) Chromatographyb) Centrifugation
c) Electrophoresis d) Densitometry

89. Protein that precipitates on heating to 45° C and redissolves on boiling is - *(AI 0 7)*
a) Bence Jones Protein b) Gamma globulin
c) Albumin d) Myosin

90. Hemoglobin electrophoresis is based on -*(Aiims May 07)*
a) Molecular weight b) Charge
c) Solubility d) Calorimetric properties

91. In collagen synthesis, hydroxyproline is formed from- *(MAHE07)*
a) Prolene b) Lysine
c) Hydroxylysine d) None of the above

92. Lipids and proteins interact in membrane by -
a) Hydrophobic interactions *(PGI June 07)*
b) Both hydrophobic and covalent interactions
c) Covalent bonds
d) H bonds

93. Which of the following is/are extracellular matrix protein - *(PGI Nov 09)*
a) Collagen b) Laminin
c) Fibronectin d) Integrin
e) Elastin

94. Basic amino acid (s) is/are - *(PGINov 09)*
a) Arginine b) Proline
c) Lysine d) Histidine
e) Methionine

95. Folding protein are - *(PGINov 09)*
a) GLLJT-1 b)Calnexin
c) Cytochrome 450 d) Insulin receptor
e) Protein disulfide isomerase

96. Method (s) to determine protein structure is/are - *(PGI Nov 09)*
a) X-ray crystallography b) NMR spectroscopy
c) Electrophoresis d) Ultrasonography
e) Infra red spectroscopy

97. Which of the following has maximum buffering capacity? *(Maharashtra 10)*
a) Threonineb) Histidine
c) Serine d) Arginine

98. Which component transfers four protons -
a) NADH-Q Oxidoreductase *(PGIMay 10)*
b) Cytochrome-C Oxidase
c) Cytochrome-Q oxidoreductase
d) Isocitrate Dehydrogenase

99. Hydrophobic amino acids are - *(PGIMay 10)*
a) Methionineb) Isoleucine
c) Tyrosine d) Alanine
e) Asparagine

100. Trypsin cleaves - *(PGI May 10)*
a) Arginine b)Glutamate
c) Lysine d) Proline

76) b 77) b 78) e 79) b 80) a 81) c 82) b 83) c 84) b 85) c 86) d 87) b 88) d 89) a
90) b 91) a 92) a_5d 93)a,b,e 94)a,c,d 95)b,e 96)a,b,e 97) b 98) a,c 99)a,b,d 100) a,c

101. Method (s) to determine protein structureis/are -
a) X-Ray Crystallography *(PGIMay 10)*
b) NMR Spectroscopy
c) Electrophoresis
d) Ultrasonography
e) Infra red spectroscopy

102. Non Polar Amino Acids are - *(PGINov. 10)*
a) Alanine b) Tryptophan
c) Isoleucine d) Lysine
e) Tyrosine

103. Enzyme catalyzing reversible step in glycolysis is/are - *(PGI Nov. 10)*
a) Phosphofructokinase
b) Enolase
c) Pyruvate kinase
d) Phospho- glyceromutase
e) Glyceraldehyde 3- phosphate- dehydrogenase

104. Protein fragments separation is/ are done by- *(PGINov. 10)*
a) Western blot b) Chromatography
c) Centrifugation d) Ultrafiltration
e) Electrophoresis

105. Movement of protein from nucleus to cytoplasm can be seen by - *(AIIMS May 11)*
a) FISH b) FRAP
c) Confocal microscopy d) Electron microscopy

106. Transfer of an amino group from an amino acid to an alpha -keto acid is done by- *(AI11)*
a) Transaminases b) Oxidases
c) Transketolases d) Deaminases

107. All are essential amin o acids except - *(Punjab 10)*
a) Glycine b) Valine
c) Isoleucine d) Tryptophan

108. Function ofubiguitin in the cells is- *(Jipmer 10)*
a) Protein degradation
b) Election transport chain
c) Endocytosis
d) Acute inflammation

109. Protein present in brown adipose tissue -
a) Thermogeninb) Dinitro protein *(Jipmer 11)*
c) Spectrin d) Adiponectin

110. Alpha helix formation is inhibited by - *(Jipmer 11)*
a) Glutamateb) Valine
c) Tryptophan d) Proline

111. Nitrogen content in a 200g protein is - *(Jipmer 11)*
a)24g b) 48g
c) 16g d) 32g

112. Function of ubiquitin in the cell is - *(Jipmer 11)*
a) Protein degradation b) Electron transport chain
c) Endocytosis d) Acute inflammation

113. Protein synthesis occurs in-*(NEET/DNB Pattern)*
a) Ribosomeb) Golgi apparatus
c) Lysosomes d) Endosomes

114. In first step of Heme synthesis, what is required-
a) Fe b) Folate *(NEET/DNB Pattern)*
c) Glycine d) Histidine

115. This attaches to protein before destruction -
a) Ubiquitin b) RNAseF *(NEET/DNB Pattern)*
c) Zymase d) Chaperone

116. Taurine is biosynthesized by - *(NEET/DNB Pattern)*
a) Arginine b) Leucine
c) Valine d) Cysteine

117. Which is 21st amino acid - *(NEET/DNB Pattern)*
a) Alanine b) Cystine
c) Arginine d) Seleno cysteine

118. Separation of proteins by their mass -
a) Electrophoresis *(NEET/DNB Pattern)*
b) Salting out
c) SDS-PAGE
d) Ion exchange chromatography

119. Protein segregation occurs in-*(NEET/DNB Pattern)*
a) Golgi appparatus b) Peroxisomes
c) ER d) Mitochondria

120. 250 mm light is absorbed by - *(NEET/DNB Pattern)*
a) Arginine b) Alanine
c) Tyrosine d) Histidine

121. Protein folding is done by - *(NEET/DNB Pattern)*
a) Chaperones b) Preosomes
c) Ubiquitin d) None

122. Which of the following tripeptide-(A£ET/DVB *Pattern)*
a) Glutathione b) Angiotensin
c) Glucagon d) Oxytocin

123. Non-essential amino acid - *(NEET/DNBPattem)*
a) Valine b) Leucine
c) Tryptophan d) Aspartate

124. Which of following is an analouge guanosine -
a) Abacavir *(NEET/DNB Pattern)*
b) Allopurinol
c) Bromodeoxyuridine
d) None

125. About Denaturation of protein,which is true -
a) Biological property persists
b) Primary structure lost *(NEET/DNB Pattern)*
c) Always irreversible
d) Mostly renders protein insoluble

126. Which process involves formation of non essential amino acid from keto acid ? *(NEET/DNB Pattern)*
a) Deamination b) Transamination
c) Dehydrogenation d) Oxidation

127. Collagen in basement *membrane-(NEET/DNBPattem)*
a) Type I b) Type II
c) Type III d) Type IV

128. Sulphar containing bond is not found in -
a) Chondroitin *(NEET/DNB Pattern)*
b) Keratan
c) Dermatan
d) Hyaluronic acid

129. Myoglobin contains - *(NEET/DNB Pattern)*
a) Iron b) Copper
c) Zink d) Selenium

101)a,b,e 102) a,d 103)b,d,e 104)b,c,d 105) b 106) a 107) a 108) a 109) a 110)d lll)d 112) a 113) a 114)c 115) a 116) d 117)d 118)c 119)a 120)c 121)a 122)a 123)d 124)a 125)d 126)b 127)b 128) d 129) a

130. Two same charged proteins can be separated by all except - *(NEE T/DNB Pattern)*
a) Agarose b) DEAE Cellulose
c) Sephadex d) None of these

131. Which of following is polar - *(NEET/DNB Pattern)*
a) Isoleucine b) Methionine
c) Glutamic acid d) Tryptophan

132. Precursor of norepinephrine -*(NEET/DNB Pattern)*
a) Tryptophan b) Tyrosine
c) Methionine d) Asparagine

133. Which of the following is monoenoic acid - *(NEET/DNB Pattern)*
a) Arachidonic acid b) Linoleic acid
c) Oleic acid d) Linolenic acid

134. True about alkaptonuria - *(NEET/DNB Pattern)*
a) Deficiency of Tyrosinase
b) Urine is black
c) banedict test is not useful
d) $Fecl_3$ test gives red colour

135. The fold in collagen is because of presence of -
a) Glutamate b) Glycine *(NEET/DNB Pattern)*
c) Arginine d) Histidine

136. Most abundant in bone - *(NEET/DNB Pattern)*
a) Alanine b) Hydroxyproline
c) Lysine d) Arginine

137. Which of the following dose not contain uronic acid -
a) Hyaluronic acid *(NEET/DNB Pattern)*
b) Heparin
c) Heparan sulfate
d) Keratan sulfate

138. Amino acid sequence in protein is determined by -
a) Sanger's reagent *(NEET/DNB Pattern)*
b) Banedit's reagent
c) Fehling's reagent
d) Ehrlich's reagent

139. Amino sugar are formed *forms-(NEET/DNBPattern)*
a) Glucose-1-phosphate b) Glucose-6-phosphate
c) Fructose-1-phosphate d) Fructose-6-phosphate

ENZYMES

140. Cardiac enzymes are - *(PGI87)*
a) CPK b)LDH
c) SGOT d) Aik. Phosphatase

141. Enzymes stored in muscle is - *(TN 89)*
a) Alkaline phosphatase b) SGOT
c) SGPT d)CPK

142. The enzyme diagnostic of MI in a case of hypothyroidism is - *(TN 91)*
a) SGOT b)LDH
c) Aldolase d) CPK-MB

143. Aspartate transaminase, an enzyme, is most abundant in - *(DELHI 83)*
a) Brain b) Heart
c) Spleen d) Retina

144. Tyrosinase is - *(AIIMS 86)*
a) Oxidase b) Transferase
c) Lyase d) Isomerase

145. Fumarase is a - *(PGI 84)*
a) Oxidoreductase b) Transferase
c) Oxidase d) Lyases

146. Michaelis-Menten hypothesis states that - *(DNB 91)*
a) Rate of enzymatic reaction is independent of substrate concentration
b) Rate of non enzymatic reaction is proportional to substrate concentration
c) Km is the enzyme-substrate complex association constant
d) Enzyme-substrate complex formation is essential in enzymatic reaction

147. Dehydrogenases use as coenzymes all of the following, except - *(AIIMS86)*
a) FMN b)FAD
c) NADOP+ d)NAD
e) Ferriprotoporphyrin

148. Glutamine synthetase is a - ■ *(AIIMS 80, DELHI 83)*
a) Isomerase b) Ligase
c) Lyase d) Transferase

149. Histidine decarboxylase is present in - *(AIIMS 86)*
a) RBC's b) Heart
c) Liver d) Kidney

150. Coenzyme, in an enzymatic reaction usually functions to - *(AIIMS 86)*
a) Activate the substrate
b) Increase the active sites of apoenzyme
c) Enhance the specificity of apoenzyme
d) Accept one of the cleavage products

151. Coenzymes are.....organic compounds -
a) Lipoprotein b) Proteinaceous *(PGI 84)*
c) Non-protein d) Any of the above

152. Incompetitive inhibition - *(DELHI 84)*
a) Vmax unchanged
b) Apparent Km unchanged
c) Apparent Km decreased
d) Vmax decreased
e) Rate independent of substrate concentration

153. Which of the following is not a component of coenzyme A - *(AIIMS 83)*
a) Pantothenic acid b) Adenylic acid
c) Sulfhydryl group d) Acetic acid

154. Kinases require - *(AIIMS 84, Delhi 82)*
a) Mn++ b)Cu++
c) Mg++ d) Inorganic phosphate

155. Lactate dehydrogenase is - *(AIIMS 86)*
a) Isozyme b) Coenzyme
c) Antienzyme d) Zymogen

156. Hexokinase is a - *(AIIMS 79, Delhi 85)*
a) Transferase b) Reductase
c) Oxidoreductase d) Oxidase

130)b 131) c 132)b 133)c 134)b 135)b 136)b 137)d 138)a 139)d 140)a,b,c 141)b,c,d 142)d
143) b 144) a 145)d 146)c,d 147)e 148)b 149)c,d 150)d 151)c 152)a 153)d 154)c 155)a 156)a

157. The lactate dehydrogenase (LDH) levels are increased in - *(UPSC 83, 86, AIIMS 83)*
a) Myocardial infarction
b) Acute pancreatitis
c) Diabetes mellitus
d) Acute glomerulonephritis

158. Hormone substrate concentration affects the velocity of enzymatic action, this is known as -
a) Zimmerman reaction *(DNB 90, AIIMS 84,*
b) Salkowski reaction *PGI96)*
c) Michales Menton reaction
d) Lieberman-Burchard reaction

159. Which of the following enzymes do not need cofactor- *(Delhi 87)*
a) Oxidoreductase b) Isomerase
c) Aldolase d) Lyases

160. The combination of main supporting enzyme is called - *(PGI 83, AIIMS 91)*
a) Apoenzyme b) Coenzyme
c) Holoenzyme d) Constitutive enzyme

161. Coenzymes forms are correctly matched except -
a) Biotin - carboxylated biotin *(DNB 88)*
b) Vitamin B - ATP
c) Niacin - NAD + NADP
d) Vitamin B2-FMN + FAO

162. Disopropyl phosphofluoridate (DFP) reacts with serine proteases irreversibly and therefore is -
a) Allosteric inhibitor *(AP87)*
b) Competitive inhibitor
c) Non competitive inhibitor
d) A repressor

163. Adenyl Cyclase is composed of - *(TN 89)*
a) C-AMP
b) Phosphodiesterase
c) Nuclear receptors
d) GTP dependant regulatory proteins

164. The maximum number of substrate per mole enzymes is seen with - *(Al96)*
a) Amylase b) Trypsin
c) Lipase d) Collagenase

165. Which of the following is a synthetic reaction -
a) Reduction b) Acetylation *(Karnat 97)*
c) Oxidation d) Hydrolysis

166. Km Increases but Vmax same enzyme is - *(PGI 98)*
a) Competitive b) Non - competitive
c) Irreversible d) Uncompetitive

167. Hydrogen peroxide is a product of reaction catalysed by- *(TN 2002)*
a) Fumarase
b) Catalase
c) L-amino acid oxidase
d) Lactate dehydrogenase

168. True about isoenzymes is/are - *(PGI 01)*
a) Different km value
b) Act on different substrate
c) Consist of multimeric complex
d) Same electrophoretic mobility
e) Have different physical properties

169. True about enzyme specificity - *(PGI 01)*
a) Amount of enzyme required per second, per mole of product formation
b) Number of sites per substrate
c) Amount of enzyme binding with various substrates
d) Number of enzyme units per milligram of enzyme protein
e) Amount of enzyme causing transformation of 1 mol of substrate per minute under standard conditions

170. Ribozymes is/are- *(PGI 02)*
a) Splicing of heterogenous RNA (hnRNA) to form mRNA
b) Splicing of polypeptide chain and mRNA
c) Transcription of codons in introns
d) Recognition of codons in introns
e) RNA polymerase

171. H_20_2 is br eaked or formed by which of the following enzyme - *(PGI 03)*
a) Oxidase b) Oxygenase
c) Hydrolase d) Peroxidase
e) Catalase

172. Enzyme marker for Golgi apparatus - *(PGI 03)*
a) Peroxidase b) Galactosidase
c) Galactosyl transferase d) Catalase
d) Acid phosphatase

173. Which one of the following is an example of antioxidant endogenous enzyme - *(UPSC 02)*
a) Cytochrome oxidase
b) Superoxide dismutase
c) Creatine kinase
d) Xanthine oxidase

174. In competitive inhibition the relation Km and Vmax is one of the following - *(Jipmer 03)*
a) Km and Vmax are the same
b) Km increases and Vmax is the same
c) Km decreases and Vmax increases
d) Km and Vmax decreases

175. The main enzyme responsible for activation of xenobiotics is - *(AI03)*
a) Cytochrome P-450
b) Glutathione S - transferase
c) NADPH cytochrome P - 450 reductase
d) Glucoronyl transferase

176. The buffering capacity of a buffer is maximum at pH equal to - *(AI 03)*
a) 0.5 pKa b)pKa
c) pKa + 1 d)2pKa

177. Km of an enzyme is - *(AIIMS 03, PGI 98)*
a) Dissociation constant
b) The normal physiological substrate concentration
c) The substrate concentration at half maximum velocity
d) Numerically identical for all isozymes that catalyze a given reaction

157)a,b 158)c 159)c,d 160)c 161) b 162)c 163)None 164)b 165) b 166)a 167)c 168)a,c,e 169)e 170)a,d 171)a,d,e 172)c 173) b 174)b 175)a 176)b 177) c

178. Non vitamin co enzyme is - *(Orissa 04)*
a) Lipoicacid b)CoA
c) S-adenosyl methionine d) Niacin

179. Enzymes that move a molecular group from one molecule to another are known as - *(AI05)*
a) Ligases b) Oxido-reductases
c) Transferases d) Dipeptidases

180. A common feature of all serine proteases \s- *(AI06)*
a) Auto catalytic activation of zymogen precursor
b) Tight binding of pancreatic trypsin inhibitor
c) Cleavage of protein on the carboxyl site of serine residues
d) Presence of Ser-His-Asp catalytic triad at the active site

181. Which of the following is an example of a reverse transcriptase - *(Karnataka - PG MEE 06)*
a) Gyrase b)Helicase
c) Telomerase d) RNA polymerase

182. All of the following are true regarding oxygenases except- *(AI07)*
a) Incorporate 2 atoms of oxygen
b) Incorporate 1 atom of oxygen
c) Required for hydroxylation of steroids
d) Required for carboxylation of drugs

183. Treatment of Multiple Carboxylase deficiency is -
a) Biotin b)Pyridoxine (*A107)*
c) Thiamine d) Folic acid

184. Which of the following enzymes is stable at acidic pH- *(A107)*
a) Pepsin b) Trypsin
c) Chymotrypsin d) Carboxypeptidase

185. The adenylate cyclase system is mediated by -
a) cAMP *(MAHE 07)*
b) Phosphodiesterase
c) GTP regulating proteins
d) Nuclear receptors

186. Different sequence of amino acids having similar structure of proteins is an example of - *(AIIMSNov*
a) Divergence b) Convergence *07)*
c) Opportunistic d) Incidental

187. All are true about glutathione except -
a) It is a tripeptide *(AIIMS Nov 08)*
b) It converts hemoglobin to methemoglobin
c) It conjugates xenobiotics
d) It is co-factor of various enzymes

188. Non-functional enzymes are all except -
a) Alkaline phosphatase *(AIIMS Nov 08)*
b) Acid phosphatase
c) Lipoprotein lipase
d) Gamma glutamyl transpeptidase

189. Refsum's disease is due to deficiency of which of the following enzyme? *(AIIMS Nov 08)*
a) Malonate dehydrogenase
b) Thiophorase
c) Succinate thiokinase
d) Phytanic alpha oxidase

190. In muscle, phosphorylase b is inactivated by -
a) cAMP b) Ca ions *(AIIMS Nov 08)*
c) Glucose d) ATP

191. All of the following enzymes are involved in oxidation-reduction reactions, Except - *(AI 09)*
a) Dehydrogenases b) Hydrolases
c) Oxygenases d) Peroxidases

192. Serine proteases - *(DELHIPG Feb. 09)*
a) Hydrolyze peptide bonds involving carboxyl groups of serine residues
b) Are characterized by having several active sites per molecule, each containing a serine residue
c) Are inactivated by reaching with one molecule of di-isopropyl-fluorophosphate per molecule of protein
d) Are exopeptidases

193. The specific activity of an enzyme would be reported in which of the following units of measures ?
a) Millimoles per liter *(DELHI PG Mar 09)*
b) Units of activity per milligram of protein
c) Micromoles per minute
d) Units of activity per minute

194. A non-competitive inhibitor of an enzyme -
a) Increases K_m with no or little change in V_{max}
b) Decreases K_m *(DELHIPG Mar 09)*
c) Decreases V_{max}
d) Increases V_{max}

195. All known effects of cyclic AMP in eukaryotic cells results from - *(DELHIPG Mar. 09)*
a) Activation of the catalytic unit of adenylate cyclase
b) Activation of synthetase
c) Activation of protein kinase
d) Activation Phosphorylation of G protein

196. Aspirin inhibits which of the following enzymes ? *(DELHIPG Mar. 09)*
a) Lipoprotein lipase b) Lipoxygenase
c) Cyclooxygenase d) Phospholipase D

197. Which of the foilwing enzymes are activated in dephosphorylated state - *(PGI Nov 09)*
a) HMG Co A reductase
b) Glycogen phosphorylase
c) Glycogen phosphorylase kinase
d) Citrate lyase
e) Glycogen synthase

198. TVue about reversible non-competetive inhibitors -
a) Lower Vmax b) Lower Km *(PGI Nov 09)*
c) Not affect Km d) Not affect Vmax
e) Affect both V max & Km

199. TVue about Km - *(PGINov 09)*
a) Half the substrate concentration at which velocity is maximum
b) Substrate concentration at which reaction rate is half the maximum
c) Michaelis constant
d) Dissociation constant of enzyme-substrate complex
e) Dissication constant of enzyme-product complex

178) a 179) c 180) d 181)c 182)d 183)a 184) a 185)a 186)b 187) b 188) c 189)d 190)d
191) b 192)b 193) b 194)c 195)c 196) c 197)a,e 198)a,c 199)b,c

200. Which component transfers four protons -
a) NADH-Q oxidoreductase *(PGI Nov 09)*
b) Cytochrome oxidase
c) Cytochrome-Q c oxidoreductase
d) Isocitrate dehydrogenase
e) Succinate Q reductase

201. Zinc is a cofactor for - *(AIIMSNov 09)*
a) Pyruvate dehydrogenase
b) Pyruvate decarboxylase
c) a-keto glutarate dehydrogenase
d) Alcohol dehydrogenase

202. Which of the following liver enzymes is predominantly mitochondrial - *(AI10)*
a) SCOT (AST) b) SGPT (ALT)
c) GGT d) 5'Nucleotidase

203. Kinase require - *(DPG10)*
a) Mn++ b) Cu++
c) Mg++ d) Inorganic phosphate

204. Pyridoxal phosphate acts as coenzyme for the following except- *(Maharashtra 10)*
a) Alanine transferase b) Tranketolase
c) ALA Synthase d) Cystathionine Synthase

205. True about competitive inhibition of enzyme -
a) T Km b) *i* Km *(PGI May 10)*
c) TVmax d) No change in Km and Vmax
e) Vmax remain same

206. Non- competitive enzyme inhibition leads to -
a) VmaxT b) Vmax *i*
c) Vmax unchanged d) Km T *(PGINov. 10)*
e) Kmi

207. A transporter has a Km for glucose of 45 mM and a Vmax of 36 micromoles glucose sec/mg of transporter. If the glucose concentration in peripheral blood is 15 mM, what will the rate of glucose transport (in micromoles glucose/sec/mg transporter) be? *(Karn 11)*
a) 6 b) 3
c) 12 d) 9

208. Which of the following causes hydrolysis of Peptidoglycans - *(Punjab 10)*
a) Lysozymeb) Lactoferrin
c) Protease d) Aflatoxin

209. Following is true statement about enzymes -
a) In competitive inhibition Vmax unchanged but Km increased *(Punjab 10)*
b) In uncompetitive inhibition Km unchanged but Vmax increased
c) In uncompetitive inhibition Km unchanged but Vmax changed
d) In uncompetitive inhibition mixed increase of Vmax and Km value

210. All of the following cells contain telomerase enzyme except- *(Punjab 10)*
a) Cancer cells b) Germ cells
c) Somatic cells d) Hemopoetic cells

211. Hexokinase is - *(PUNJAB 11)*
a) Ligase b) Transferase
c) Oxidoreductase d) Reductase

212. The predominant isoenzyme of LDH occuring in liver injury is- *(PUNJAB 11)*
a) LDH-1 b)LDH-2
c) LDH-4 d) LDH-5

213. Marker for peroxisomes - *(Jipmer 10)*
a) Glucose-6-phosphatase
b) Glutamate dehydrogenase
c) 5-nucleotidase
d) Uric acid oxidase

214. Digestive enzymes are - *(NEET/DNB Pattern)*
a) Hydrolases b) Oxidoreductases
c) Dehydrogenases d) Ligases

215. Rate limiting enzyme in heme synthesis -
a) ALA synthase *(NEET/DNB Pattern)*
b) Hmg coa reductase
c) ALA dehydratase
d) Uroporphyrinogen 1 synthase

216. Zinc is a cofactor for - *(NEET/DNB Pattern)*
a) Carbonic anhydrase
b) Pyrovate carboxylase
c) Alpha-ketoglutarate
d) Enolase

217. Enzymes that move a molecular group from one molecule to another are known as - *(AI 05,02, 92)*
a) Ligases b)Oxido-reductases
c) Transferases d) Dipeptidases

218. Enzymes act by - *(NEET/DNB Pattern)*
a) Increase in activation energy
b) Decrease in activation energy
c) Shift equilbrium constant
d) None

219. Carboxylases require - *(NEET/DNB Pattern)*
a) Vitamin B, b) Vitamin B_2
c) Vitamin $B_{,2}$ d) Vitamin $B_?$

220. Which of the following enzymes is active in phosphorylated form - *(NEET/DNB Pattern)*
a) Pyruvate dehydrogenase
b) HMG-CoA reductase
c) HMG-CoA reductase kinase
d) Pyruvate kinase

221. Serum enzyme used for MI - *(NEET/DNB Pattern)*
a) CPK
b) Alkaline phosphatase
c) Acid phosphatase
d) Lipase

222. Km value is defined as - *(NEET/DNB Pattern)*
a) Substrate concentration at Vmax/2
b) Substrate concentration of twice Vmax
c) Substrate concentration of thrice Vmax
d) Substrate concentration of one third Vmax

200)a,c 201)d 202)a 203)c 204)b 205)a,e 206)b 207)c 208)a 209)a>c 210)c 21 l)b 212)d 213)d 214) a 215)a 216)a 217) c 218)b 219)d 220)c 221)a 222)a

223. Carboxylases requires - *(NEET/DNBPattern)*
a) Vitamin B_{j2} b) Folic acid
c) Niacin d) Biotin

224. The predominant isoenzyme of LDH occuring in liver injury is - *(NEET/DNB Pattern)*
a) LDH-l b)LDH-2
c) LDH-4 d)LDH-5

225. In competitive inhibition the relation Km and Vmax is one of the following - *(NEET/DNB Pattern)*
a) Km and Vmax are the same
b) Km increases and Vmax is the same
c) Km decreases and Vmax increases
d) Km and Vmax decreases

226. What are isoenzyme - *(NEET/DNB Pattern)*
a) Physically same forms of different enzymes
b) Physically disinct forms of same enzyme
c) Forms of same enzyme that catalyze different reactions
d) Forms of different enzyme that catalyze same reactions

227. Which of the following is not secreted as zymogen-
a) Pepsin *(NEET/DNB Pattern)*
b) Trypsin
c) Amylase
d) Colipase

228. Cofator for glutathione peroxidase -
a) Mg^{+2} b) Se *(NEET/DNB Pattern)*
c) Mn^{+2} d) Ca^{+2}

229. Fumarase is- *(NEET/DNB Pattern)*
a) Lyase b) Ligase
c) Hydrolase d) None

230. Which isoform of LDH is raised in Anemia -
a) LDH 5 b) LDH 4 *(NEET/DNB Pattern)*
c) LDH 3 d) LDH 2

231. Following is true statement about enzymes-
a) In competitive inhibition Vmax unchanged but Km increased *(NEET/DNB Pattern)*
b) In uncompetitive inhibition Km unchanged but Vmax increased
c) In uncompetitive inhibition Km unchanged but Vmax changed
d) In uncompetitive inhibition mixed increase of Vmax and Km value

232. Apoenzymeis- *(NEET/DNB Pattern)*
a) Cofactor b) Coenzyme
c) Protein moiety d) None

233. Enzyme causing covalent bond cleavage without hydrolysis ? *(NEET/DNB Pattern)*
a) Lyase b) Ligase
c) Hydrolase d) Transferase

234. Specific activity of enzyme is - *(NEET/DNB Pattern)*
a) mol of enzyme per gram of substrate
b) Enzyme units per mg of protein
c) Cone, of substrate transformed per minute
d) None

235. CoA requires - *(NEET/DNB Pattern)*
a) Pantothenicgroup b) Biotin
c) Folic acid d) Cabalamine

236. Type of inhibition of aconitase by Transaconitate is - *(NEET/DNB Pattern)*
a) Non-competitive b) Competitive
c) Allosteric d)None

237. Functional plasma enzyme is - *(NEET/DNB Pattern)*
a) Fibrinogenb) LDH
c) SGOT d) SGPT

238. Isoenzyme, true is - *(NEET/DNB Pattern)*
a) Same structure and similar function
b) Different structure and similar function
c) Catalse different reaction
d) Have same Km

239. Aldolase is a/an - *(NEET/DNB Pattern)*
a) Transperaseb) Isomerase
c) Lyase d)Reductase

RESPIRATORY CHAIN

240. All these reactions take place inside the mitochondria except - *(PGI85, 86, Kerala, 88, AP 86, Delhi 86)*
a) EM pathway b) Krebs cycle
c) Urea cycle d) Electron transfer
e) Fatty acid oxidation

241. Detoxification of drugs is controlled by - *(AP 88)*
a) Cytochrome b) Cytochrome P450
c) Cytochrome C d) Cytochrome A

242. Livings cells require which of the following as a component of ATP, NAD, NADP and flavins -
a) Organic sulfar *(Karnatak 89)*
b) Magnesium ion
c) Inorganic phosphates
d) Ferrous ion

243. The main function of mitochondria is - *(Kerala 91)*
a) Protein synthesis b) Oxidation
c) Electron transfer d) Fat synthesis

244. The enzyme marker of electron transport system is -
a) Cytochrome reductase *(All India 92)*
b) Fumarase
c) Pyruvate
d) Malate dehydrogenase

245. Conversion of phenylacetic acid into phenol is an example of - *(PGI 82)*
a) Oxidation b) Reduction
c) Hydrolysis d) Conjugation

246. Which of the following is a constituent of Cytochrome C reductase - *(AIIMS 85, 82)*
a)B, b) B,
c) Biotin d)Pyridoxine
e) Ascorbic acid

247. Which of the following is not a component of transport system - *(PGI 79, AIIMS 81)*
a) Receptor activation
b) Selective gate
c) Non-selective channel
d) Energy coupling system

223) d 224) d 225) b 226) b 227) b 228) b 229) a 230) d 231) a 232) c 233) a 234) b 235) a 236) b
237) a 238) b 239)c 240)a 241)b 242)c 243)c 244)a 245)None 246)b 247)a

248. **Cytochromes are -** *(AIMS 83, DNB 88)*
a) Pyridine nucelotides
b) Metal containing flavoproteins
c) Peroxidases
d) Iron-porphyrin proteins

249. **Uncouplers of oxidative phosphorylation -***(AIMS 81)*
a) Snake venom b) High levels of serum bilirubin
c) High level of T_4 d) High level of free F. A.
e) All the above

250. **Aerobic oxidation of reduced cytochromes shows P/O ratio of-** *(AIMS 79, 84)*
a) 4 b)3
c) 2 d) 1

251. **Cyanide is toxic because it -** *(Karnatak 94)*
a) Inhibits cytochrome oxidase
b) Forms cyan meth Hb
c) Inhibits ATP carrier in mitochondria
d) Inhibits Na-K-ATP ase

252. **NADPH is used in -** *(AI95, 98)*
a) Fatty acid synthesis b) Ketone synthesis
c) Glucogenesis d) Glycolysis

253. **Which of the following is an effect of dinitrophenol on oxidative phosphorylation -**
a) Inhibition of cytochrome b
b) Blockade of both electron transport and ATP synthesis
c) Inhibition of ATP synthesis with normal electron transport
d) Inhibition of electron transport but not ATP synthesis

254. **In cytochrome P 450, P stands for -** *(AI 99)*
a) Structural proteins b) Substrate protein
c) Pigment d) Polymer

255. **About oxidative phosphorylation true is-** *(PGI97)*
a) Generation of ATP's b) Generation of ADP's
c) Utilization of ATP's d) Utilization of NADP

256. **Acetyl CoA is necessary for-** *(PGI 97)*
a) Aminoacid b) Fatty acid synthesis
c) Glucose storage d)All

257. **In TCA cycle, $C0_2$ is released from-** *(PGI98)*
a) Thioinase
b) Isocitrate dehydrogenase
c) Citrate dehydrogenase
d) Alpha ketoglutrate

258. **Among the following, the maximum redox potential is for-** *(PGI 99)*
a) NADH/NAD b) Succinyl Co A fumarate
c) Ubiquinone d)Fe2+

259. **Proper functioning of Kreb cycle does not occur with deficiency of-** *(PGI2000)*
a) Thiamine b) Riboflavin
c) VitaminE d)VitK

260. **In vivo control of citric acid cycle is effected by-**
a) Acetyl CoA b) Coenzyme A *(PGI 01)*
c) ATP d) Citrate
e) NADH

261. **Cytochrome oxidase is inhibited by-** *(PGI 02)*
a) Cyanide b) Aluminium phosphide
c) Phenobarbitone d) Carbonmonoxide
e) NO

262. **Mitochondrial membraneprotein contain transporter of-** *(PGI 03)*
a) NADH b) Acetyl COA
c) NADPH d)ATP

263. **Internal respiration are -** *(PGI 03)*
a) Exergonic and anabolic
b) Exergonic and catabolic
c) Endergonic and anabolic
d) Endergonic and catabolic
e) Cytochrome-C reductase involved

264. **Intermediate metabolite in TCA cycle are A/E -**
a) Pyruvate b) Isocitrate *(PGI 01)*
c) Oxaloacetate d) Malonate
e) Nitric oxide

265. **Electron transport chain is located in -***{St.Johns 02)*
a) Inner mitochondrial membrane
b) Inner part of mitochondrial membrane
c) Intermembranous
d) Matrix

266. **What is the connecting link between urea cycle and TCA cycle-** *{Bihar 03)*
a) Fumarate b) Sucinate
c) Oxaloacetale d) Arginino sucinate

267. **Least important in final pathway of Electron Chain Reaction is -** *{SGPGI05)*
a) Ph
b) Temperature (morning)
c) Enzyme concentration
d) Substrate concentration

268. **All of the following is true when one molecule of acetyl CoA is oxidized by citric acid cycle except-**
a) NADH is produced & each of this molecule produces 3 ATP *{SGPGI 05)*
b) FADH2 is produced which from 2 ATP
c) Succinyl CoA to succinate-one molecule of ATP is generated
d) Total of 14 ATP are generated

269. **$NADPH^+$, H^+ is generated in the reaction catalysed by-** *{SGPGI 05)*
a) LDH b) G-6 PD
c) G-3 PD d) Alcohol dehydrogenase

270. **Total number of dehydrogenases Krebs cycle -**
a) 3 b)2 *{MAHE05)*
c) 4 d) 5

271. **True about electron transport chain-(PG7** *June 05)*
a) FADH gives 2 ATP
b) Entry point of NADH is at complex II
c) NADH gives 3 ATP
d) FADH gives 3 ATP
e) NADH enters the step 1 of cycle

248)d 249)e 250)b,c 251)a 252)a 253)c 254)c 255)a 256)b 257)b 258)d 259)a,b 260)c,e 261)a,d 262) a,c,d 263) b,e 264)a,d,e 265) a 266) a 267) c 268) d 269) b 270) c 271)a,c,e

272. During phagocytosis, the metabolic process called respiratory burst involves the activation of - *(AI06)*
a) Oxidase b) Hydrolase
c) Peroxidase d)Dehydrogenase

273. The specialized mammalian tissue/organ in which fuel oxidation serves not to produce ATP but to generate heat is - *(AI06)*
a) Adrenal gland b) Skeletal muscle
c) Brown adipose tissue d) Heart

274. The comparison of the amino acid sequence of Cytochrome C from different species shows many variations. Most of these variations are found -
a) Randomly *(AI 06)*
b) Only in helical regions
c) Only in strand regions
d) Mainly in loop regions

275. 3 ATP's are formed in the following steps of kreb's cycle- *(PGIJune06)*
a) Isocitrate dehydrogenase
b) Succinate dehydrogenase
c) Succinate thiokinase
d) Malate dehydrogenase

276. Which of the following inhibit complex IV -
a) Amylobarbital b)Aconitase *(APPG06)*
c) Secobarbitone d) Cyanide

277. CoA and Acylcarier protein (ACP) are similar in that- *{PGMCET01)*
a) Both are present in mitochondria
b) Both contain pantothenic acid
c) Both are used in fatty acid degradation
d) Both are required for activation of fatty acids

278. Which of the following vitamin is used in the electron transport chain - *{PGMCET01)*
a) Thiamine b) Riboflavin
c) Nicotinic acid d) Vitamin B_{12}

279. Copper is a constituent of the enzyme - *(Corned 07)*
a) Lysyl oxidase b) Glucose oxidase
c) Xanthine oxidase d) Transketolase

280. All the following are inhibitors of cytochrome oxidase except - *{Corned 0 7)*
a) Carbon monoxide b) Amytal
c) Cyanide d) Azide

281. A maj or lipid of mitochondrial membrane is -
a) Lecithin b) Inositol *{Corned 08)*
c) Plasmalogen d) Cardiolipin

282. All of the following occur in mitochondria except -
a) Citric acid cycle (Kreb's cycle) *(AI 07)*
b) Glycogenolysis
c) Fatty acid oxidation
d) Electron transport chain

283. Dinitrophenol causes - *(AI07)*
a) Inhibition of ATP synthase
b) Inhibition of electron transport
c) Uncoupling of oxidation and phosphorylation
d) Accumulation of ATP

284. Enzyme responsible for complete oxidation of glucose to $C0_2$ to water is present in -
a) Cytosol **b) Mitochondria** *(Aiims May 07)*
c) Lysosomes d) Endoplasmic reticulum

285. First substrate of Kreb's cycle is- *(Aiims May 07)*
a) Pyruvate b) Glycine
c) HQ d) Lipoprotein

286. Cytochrome oxidase contains - *(UP 07)*
a) Ca^ b) Cu
c) Mn d)Zn

287. Which of the following metabolic pathways does not generate ATP- *(AI 08)*
a) Glycolysis b)TCA cycle
c) Fatty acid Oxidation d) HMP pathway

288. Transport of fatty acids through mitochondrial membrane is by - *(DPGEE 08)*
a) Active transport b) Facilitated transport
c) Diffusion d) Lipases

289. The following poisons act by causing inhibition of complex IV of respiratory chain except -
a) Cyanide b)Malonate *(Maharashtra10)*
c) H2S d)CO

290. Methionine can entre the TCA cycle at which level - *(NEET/DNB Pattern)*
a) Fumarate b) Oxabacetate
c) Succinyl - CoA d) Citrate

291. Cyanide inhibits - *(NEET/DNB Pattern)*
a) Pyrurate kinase b) Cytochrome Coxidase
c) Enolase d) None

292. Mitochondria have - *(NEET/DNB Pattern)*
a) Plasmid DNA
b) Circular DNA
c) Single stranded DNA
d) Double stranded DNA

293. Uncoupler in ETC - *(NEET/DNB Pattern)*
a) H_2S b) Antimycin a
c) 2, 4-dinitrophenol d) Barbiturates

294. The number of ATPs generated in krebs cycle are -
a) 12 b)24 *(NEET/DNBPattern)*
c) 15 d) 30

295. Electron transport chain is located in - *(NEET/DNB Pattern)*
a) Inner mitochondrial membrane
b) Inner part of mitochondrial membrane
c) Intermembranous
d) Matrix

296. Why citric acid cycle called amphibolic pathway -
a) Both exergonic and endergonic reactions takes place *(NEET/DNBPattern)*
b) Metabolites are utilized in other pathways
c) It can proceed both in forward and backward direction
d) Same enzymes can be used in reverse directions

297. The activity of pyruvate carboxylase is dependent upon the positive allosteric effector -
a) Succinate b)AMP *(NEET/DNBPattern)*
c) Iso citrate d) Acetyl CoA

272) a 273) c 274) a 275) a,d 276) d 277) a 278) b 279) a 280) b 281) d 282) b 283) c 284) b 285) a
286) b 287) d 288) b 289) b 290) c 291)b 292) b,d 293) c 294) None >a 295) a 296) a 297) d

298. Substrate level phosphorylation in glycolysis is seen in - *(NEET/DNBPattern)*
a) Pyruvate kinase b) Succinate thiokinase
c) Enolase d) PDH

299. The biosynthesis of the enzyme pyruvate carboxylase is repressed by - *(NEET/DNBPattern)*
a) Insulin b) Glucagon
c) Cortisol d) Epinephrine

300. Which is inhibitor to cytochrome oxidase?
a) Malonate b) BAL *(NEET/DNBPattern)*
c) Oligomycin d) Cyanide

301. Enzyme involved in oxidative phosphorylation -
a) Pyruvate kinase *(NEET/DNBPattern)*
b) Succinyl CoA thiokinase
c) NADH dehydrogenase
d) None

302. Which couple has minimum Redox potential -
a) $NADP^+$/NADPH *(NEET/DNBPattern)*
b) NAD^+/NADH
c) FAD/$FADH_2$
d) CoQ-CoQ H_2

303. Substrate-level phosphorylation seen in reaction catalysed in - *(NEET/DNBPattern)*
a) Succinate dehydrogenase
b) Alfa-ketoglutarate dehydrogenase
c) Succinyl CoA thiokinase
d) Malate dehydrogenase

304. In ETC NADH generates - *(NEET/DNB Pattern)*
a) 1 ATPs b) 2 ATPs
c) 3ATPs d) 4 ATPs

305. Total number of dehydrogenases Krebs cycle -
a) 3 b)2 *(NEET/DNBPattern)*
c) 4 d) 5

306. Energy currency of the cell is - *(NEET/DNBPattern)*
a) Nucleotide diphosphate
b) Nucleotide triphosphate
c) Deoxynucleotide diphosphate
d) Nuceotide monophosphate

307. Respiratory burst is due to which enzyme -
a) NADH oxidase *(NEET/DNB Pattern)*
b) Catalase
c) SOD
d) Glutathione peroxidase

308. Chemiosmotic coupling of oxidation phosphorylation is related to - *(NEET/DNBPattern)*
a) Formation of ATP at substrate level
b) ATP generation of pumping of protein
c) ATP generation of pumping of neutron
d) ATP formation by transport of 0_2

309. RQ is least in - *(NEET/DNB Pattern)*
a) Brain b) RBC
c) Adipose d) Heart

310. Which of the following enters the TCA cycle at succinyl-CoA - *(NEET/DNB Pattern)*
a) Tyrosine
b) Methionine
c) Tryptophan
d) Histidine

311. High energy compound is - *(NEET/DNBPattern)*
a) ADP b) ATP
c) Glucose-6-phosphate d) AMP

312. Anaplerotic reaction is catalyzed by -
a) Pyruvate carboxylse *(NEET/DNB Pattern)*
b) Enolase
c) Pyruvate kinase
d) G6PD

313. Rate limiting step in TCA cycle is catalyzed by -
a) a-ketoglotarate *(NEET/DNB Pattern)*
b) Pumarase
c) Aconitase
d) Thiokinase

314. Complex I of ETC is inhibited *by-(NEET/DNB Pattern)*
a) Amobarbital b) Cyanide
c) CO d) H_2S

315. Rate limiting steps in TCA cycle - *(NEET/DNB*
a) a Ketoglutarate —> Succinyl CoA *Pattern)*
b) Citrate —> Isocitrate
c) Succinyl CoA —> Succinate
d) Succinate —» Fumarate

316. Which of the following is physiological uncoupler- *(NEET/DNB Pattern)*
a) Thermogenin b) 2, 4 nitrophenol
c) 2, 4 Dinitrophanal d) Oligomycin

317. Maximum energy store in -*(NEET/DNB Pattern)*
a) Adipose b) Liver
c) Muscle d) Blood glucose

318. Cytochrome C oxidase is inhibited by- *(NEET/DNB*
a) Barbiturate b) 2,4-dinitrophanol *Pattern)*
c) HjS d) Rotenone

319. ATP is generated in ETC by -*(NEET/DNB Pattern)*
a) Na^+ K^+ ATPase b) Na^+ Cl' ATPase
c) FoFj ATPase d) ADP Kinase

320. Substrate for ATP synthase is - *(NEET/DNB Pattern)*
a) AMP b) ADP
c) IMP d) GMP

321. **ATPs generated in TCA cycle -** (NEET/DNB Pattern)
a) 15 b) 20
c) 30 d) 40

METABOLISM OF CARBOHYDRATE

322. Me Ardles disease is due to the deficiency of -
a) Glue-1, Phosphatase *(JIPMER 86, PGI86, 87*
b) Glue-1,6 diphosphatase *Kerala 88)*
c) Glue 6 phosphatse
d) Myophosphorylase

323. NADPH is generated by the action of - *(AIIMS 87)*
a) Glucose 6 Phosphate dehydrogenase
b) Glucose 1 phosphate dehydrogenase
c) Glucose 1.6 diphosphate dehydrogenase
d) All of the above

298) a 299) a 300)d 301) c 302)a 303)c 304)None>c 305)c 306)b 307)a 308)b 309)d 310)b
31 l)b 312) a 313)a 314) a 315)a 316)a 317)a 318)c 319) c 320)b 321) c 322)d 323)a

324. Cyclic AMP accelerates glycogenolysis by -
a) Converting inactive protein kinase *(AIIMS 87)* to active protein kinase
b) Acting on glue l phosphatase
c) Acting on glue 6 phosphatase
d) All of the above

325. Von Gierke's disease is due to the deficiency of -
a) Gluc-6 phosphatase *(PGI85)*
b) Gluc-l phosphatase
c) Branching enzyme
d) Mycophosphorylase
e) Glue 1,6 diphosphotase

326. Galactosaemia commonly is due to deficiency of -
a) Galactose-1 phosphatate uridyl transferas
b) Galactose-1 phosphatase *(PGI 85)*
c) Glucose-1 phosphatase
d) Glucose-6 phosphatase

327. Adrenaline acts on which enzyme in glycogenolysis-
a) Glucokinase b)Hexokinase *(AI89)*
c) Phosphorylase d) Glue diphosphatase

328. Insulin acts on which enzyme in glycolysis *~(AI 89)*
a) Glucokinase b)Hexokinase
c) Glucose 6-Phosphatase d) Adenylate kinase

329. The tissue with the highest glycogen content (mg/100mg)— *(PGI 88)*
a) Liver b) Muscle
c) Kidneys d) Testes

330. Which of the following are reducing sugars-
a) Sucrose b) Maltose *(PGI 88)*
c) Trehalose d) Glucose
e) Lactase

331. Key glycolytic enzymes - *(PGI 88)*
a) Phosphofructokinase b)Hexokinase
c) Pyruvate kinase d) Glue 1,6 diphosphatase

332. Sites where HMP shunts can occur include -
a) Liver b)WBC *(PGI 83)*
c) Lactating mammany gland d) Testes
e) All

333. Glucose can be synthesised from all except -
a) Amino acids b) Glycerol
c) Acetoacetate d) Lactic acid

334. What is the major fate of glucose-6-phosphate in the tissue in the fed state - *(AI89)*
a) Isomerisation to Fructose-6-phosphate
b) Hydrolysis to glucose
c) Conversion to glycogen
d) Conversion to ribulose-6-phosphate

335. Which of the following is completely dependent on glucose as fuel - *(AIIMS 82)*
a) Renal cortex b) Adrenal cortex
c) Heart d) Retina

336. Gluconeogenesis does not occur significantly from... in humans - *(AIIMS 92)*
a) Lactate b) Fatty acids
c) Pyruvate d) Amino acid

337. Oxaloacetate+Acetyl CoA+H_20=Citrate+GoA. This is an example of- *(IN 97)*
a) Hydration b) Deacylation
c) Dehydrogenation d) Condensation

338. Which of the following is not decreased in diabetes mellitus - *(AI 90)*
a) Glucokinase b) Acetyl CoA carboxylase
c) Pyruvate carboxylase d)All

339. All increase serum glucose except - *(AI 91)*
a) Glucagon b) Edpinephrine
c) Cortisol d) Vasopressin

340. All are true regarding glucose-6-phosphate deficiency except - *(AI 91)*
a) Hyperuricemia
b) Hyperglycemia
c) Defective cori cycle
d) Increased mobilisation of glycogen from liver

341. All are common in diabetes and starvation except
a) Increased gluconeogenesis *(AI 91)*
b) Increased glycogen degradation
c) Increased fatty acid mobiliation from adipose tissue
d) Cholesterol synthesis

342. The end product of one stage fermentation is -
a) Formic acid b) Pyruvate *(JIPMER91)*
c) Lactate d) Ethanol

343. Glycogen synthetase is increased by -*(JIPMER 91)*
a) Cortisone b) Insulin
c) GH d) Epinephrine

344. TCA cycle does not take place in - *(JIPMER 91)*
a) Hepatocyte b) Osteocyte
c) Neuron d) Erythrocyte

345. Glucose-6-phosphatase deficiency is seen in -*(AI92)*
a) Pompe's disease b) Von gierke's disease
c) Me Ardles syndrome d) Downs syndrome

346. Which is not seen in starvation - *(AI 92)*
a) Ketoacidosis b) Hypoglycemia
c) Hypercholesterolemia d) Hypertriglyceridemia

347. Muscle glyocogen is mainly utilised for supplying energy to- *(AI92)*
a) Liver b) Heart
c) Brain d) Muscle

348. Major contribution towards gluconeo genesis is by- *(A192)*
a) Lactate b) Glycerol
c) Ketones d) Alanine

349. Lactate is transported from muscle to Liver because - *(AI 92)*
a) Liver has mitochondria
b) Lactate is stored in Liver
c) Liver has Glucose-6-Phosphatase
d) Lactate is Oxidised in Liver

350. Which of the following is not a product of HMP shunt
a) NADPH *(AIIMS 92)*
b) D fructose-6-phosphate
c) D sedoheptulose-7-phosphate
d) D Glyceraldehyde-3-phosphate

324)a 325)a 326)a 327)c 328)a 329)a 330)b,c,d,e 331)a,b,c 332)a,c,d 333)c 334)c 335)d 336)b
337)d 338)c 339)d 340)b 341)d 342)d 343)b 344)d 345)b 346)c,d 347)d 348)d 349)c 350)c

351. Allosteric inhibition with ATP affects - *(AI93)*
a) Phosphofructokinase
b) Phospho - enol - pyruvase
c) G-6PD
d) Pyruvate kinase

352. Gluconeogenesis occurs in the Liver and.....-
a) Kidney b) Muscle *(Al 93)*
c) Heart d)Fat

353. Insulin promotes transport of glucose in which of these- *(JIPMER93)*
a) Hepatocytes b) Muscles
c) RBC d) Adipose tissue

354. Which of the following hepatic enzyme activities is not increased in the diabetic state - *(AP 89)*
a) Pyruvate carboxylase
b) G-6-phosphatase
c) Serine dehydratase
d) Co A - camtine acyl transferase
e) Citrate cleavage enzyme

355. An enzyme not involved in glycolysis is -*(A1IMS 96)*
a) Enolase b) Phosphoglyceromulase
c) Aldolase d) Glycerophosphate dehydrogenase

356. Glycerol is convered to glucose in - *(AIIMS 86,*
a) Liver b) Muscle *Delhi 93)*
c) Heart d) Brain

357. Starch and glycogen are both polymers of-*(PGI83)*
a) Mannose b)Alpha-glucose
c) Beta-glucose d) Fructose
e) Glucose-1-phosphate

358. GT.P. is a substrate for the following except -
a) Pyruvate carboxykinase *(PGI 83)*
b) Succinate thiokinase
c) Nucleoside diphosphate kinase
d) None of the above

359. In Glycolysis which of the ions is most important -
a) Ca b) Mg *(PGI 79, BIHAR 80)*
c) Cu d)Zn

360. Which of following inhibitor in TCA cycle acts by blocking citrate - *(ROHTAK 89)*
a) Fluoroacetate b) Arsenite
c) Malonate d) None of the above

361. About Galactose which is true - *(AIIMS 83)*
a) Has the same molecular weight as glucose
b) Is directly converted to glucose by the enzyme galactose oxidase
c) Is liberated when lactose is hydrolysed
d) From the diet is stored in the liver as galactose-1 -phosphate
e) In Ihe urine gives a positive test with clinitest tablets

362. Which of the following interconversions of monosacharides does not require a nucleotide linked sugar intermediate - *(ROHTAK 90)*
a) Galactose-1-phosphate to glucose-1-phosphate
b) Glucose-6-phosphate to mannose - 6 -phosphate
c) Glucose-phosphate-UDP glucose
d) D-glucuronic acid to UDP glucuronic acid

363. The main products of HMP shunt are all except- *(PGI 81)*
a) 6-NADPH b) 2-Fructose-6-$P0_4$
c) l-Glyceraldehyde-3-$P0_4$ d)l-$C0_2$

364. Transketolase - *(PGI 82)*
a) Transfers two carbon fragments to an aldehyde acceptor
b) Transfers a three carbon ketone containing fragment to an acceptor
c) Converts ribose-5-phophate to xylulose-5-phosphate
d) Concerts two five carbon sugar phosphates to fuctose-6-phosphate and erythrose-4-phosphate

365. Which of the following has no free aldehyde or ketone group - *(AIIMS 8 7)*
a) Fructose b) Maltose
c) Sucrose d) Galactose

366. Dehydrogenases of HMP shunt are specific for -
a) FAD b) NAD
c)NADPH d)FMN

367. Which of the following is not an intermediate in the formation of glucoronic acid from glucose is - *(AIIMS85)*
a) UDP glucose b) UDP gucoronic acid
c) UDP galactose d) Glucose-6-Po_4

368. Chitin is a - *(AIIMS87)*
a) Polypeptide b) Polysaccharide
c) Fatty ester d)None

369. Which of the following is a debranching enzyme
a) Glycogen synthetase *(AIIMS80)*
b) Glucose-6-phosphatase
c) Amylo (1,6) glucosidase
d) Amylo 1,4, -1,6 transglycosylase

370. Which of the following is a component of polysaccharide - *(PGI 79, 82)*
a) Synovium b) Glucosamine
c) Glucoronic acid d) Ascorbic acid

371. I molecule of glucose forms.. .molecules of pyruvate-
a) 1 b)2
c) 3 d) 5

372. In TCA cycle of tricarboxylic acid, which is first formed - *(RAJASTHAN92)*
a) Isocitrate b) Citrate
c) Succinate d)Fumarate

373. Which of the following enzyme is a constituent of HMP shunt- *(AIIMS83)*
a) Glucose-6-phosphatase b)Hexokinase
c) G-6-P dehydrogenase d) Phosphorylase

374. UDP glucose is converted to UDP-glucoronic acid by- *(AIIMS83)*
a) ATP b)FAD
c) NAD d)NADP

375. Which of the following cannot be metabolished in the body - *(AIIMS 84, Delhi 84)*
a) Galactose b) Sucrose
c) Fructose d) Dextrose

351) a 352) a 353)a,b,d 354) e 355) d 356) a 357)b 358) c 359)b 360) a 361)a,c,e 362)b 363) d 364) a
365) c 366) c 367) c 368) b 369) c 370) b 371) b 372) b 373) c 374) c 375) b

376. Reduction of glucose with calcium in water produces - *(AIIMS 86, 84)*
a) Sorbose b)Dulcitol
c) Mannitol d) Sorbitol
e) Glucuronic acid

377. In TCA cycle, citrate is converted into, after losing a molecule of H_20 - *(AMU 86)*
a) Isocitrate b) Cis-aconitate
c) Oxaloacelate d)Glutarate

378. HMP shunt is of great importance in cellular metabolism because it produces - *(ARMS 83)*
a) ATP b)ADP
c) Acetyl Co A d)NADPH

379. Mature RBC contains all except - *(ARMS 84)*
a) Enzyme of HMP shunt pathway
b) Enzyme of TCA cycle
c) Glycolytic enzymes
d) Pyridine nucleotides

380. The sugar component of cerebrosides is - *(PGI81, 85,97)*
a) Fructose b) Sucrose
c) Galactose d) Glucose

381. Specific poison for succinate dehydrogenase is -
a) Arsenic b) Cyanide *(ARMS 83)*
c) Malonate d) Fluoride

382. Abnormal glycogen structure is found in disorder type- *(ARMS 97)*
a) I b) II
c) m d)IV
e) V

383. The first product of glycogenolysis is - *(DNB 90)*
a) Glucose 6 phosphate
b) Glucose 1, 6 diphosphate
c) Glucose 1-phosphate
d) Fructose 1-phosphate

384. C-AMP increases glycogenolysis by -
a) Contributing phosphate *(ARMS 94, 88)*
b) Causing deposphorylation
c) Uncoupling
d) All of the above

385. Which of the following is not a polymer of glucose - *(JIPMER 78, DNB 88)*
a) Glycogen b) Cellulose
c) Amylose d) Inulin

386. What is the substrate for the only physiologically irreversible reaction in the Kreb's Citric acid cycle-
a) Citrate b) Alpha ketoglutarate *(TN 89)*
c) Succinate d)Malate

387. Sorbitol is - *(ARMS 88, 87)*
a) A reducing sugar b) A sugar ester
c) Sugar alcohol d) An O-glycoside

388. An essential for the conversion of glucose to glycogen in liver is - *(DNB 91)*
a) UTP b)GTP
c) Pyrubate kinase d) Guanosine

389. Enzyme that hydrolyzes sucrose is -
a) Invertase b) Amylase *(PGI 78, Delhi 80)*
c) Emulsin d) Sucrose phosphorylase
e) Saccharase

390. Inhibition of glycolysis by 0_2 is known *as-(DNB 91)*
a) Muni effect b) Pasteur effect
c) Hill reaction d) Gluconeogenesis

391. Reduced glutathione - *(BIHAR 88)*
a) Removes water from RBC
b) Requires function of 6-6 PD
c) Maintains proper enzyme activity in tissue cells
d) All of the above

392. The reducing ability of a carbohydrate is due to the presence of - *(ARMS 92)*
a) A hemiacetal b) Cupric ions
c) Afreecarboxy d) A free hydroxy

393. A deoxy-sugar characteristic of blood group polysaccharides is - *(JIPMER 78, KERALA 88)*
a) L-Rhannose b)L-Fructose
c) 2-deoxy-D-ribose d) 6-deoxy-L-mannose

394. Enzyme deficiency in glycogen storage disease type five is- *(Kerala 94)*
a) Glucose-6-phosphatase
b) Acid maltase
c) Debranching enzyme
d) Myophosporylase deficiency

395. Metabolites in HMP shunt are all except- *(AI95)*
a) Carbon dioxide b) Sedoheptulose phosphate
c) NADPH d) Glycerol-3-phosphate

396. In which type of glycogen storage disease is hyperuricemia a feature - *(TN 95)*
a) I b) II
c) m d)IV

397. Aldolase is an enzyme whose substrate is -
a) Glucose-6-phosphate *(Delhi 96)*
b) Fructose-6-phosphate
c) Fructose
d) Fructose-1,6-biphosphate

398. Untreated diabetes lead to - *(AIIMS 95)*
a) Tissue use fatty acids as main fuel
b) Inhibition of gluconeogenesis & stimulation of glycolysis
c) Insulation of breakdown of triacylglycercol
d) Storage of glucose as glycogen

399. Step in HMP pathway requiring TPP - *(AP 96)*
a) G6PD
b) 6 Phosphogluconate dehydrogenase
c) Transketolase
d) Trans aldolase

400. Increased uronic acid in the urine is pathognomonic of- *(ARMS 97)*
a) Maple syrup urine disease
b) Tyrosinemia
c) Mucopolysaccharidosis
d) Cushing disease

376)d 377)b 378)d 379)b 380)c,d 381)c 382)c,d 383)c 384)a 385)d 386)b 387)c 388)a 389)a 390)b 391)d 392)a 393)None 394)d 395)d 396)a,c 397)d 398)a 399)c 400)c

401. All the following gluconeogenic except -
a) Glycerol b) Alanine *(AIIMS 97)*
c) Acetoacetate d) Lactate

402. Andersen disease is due to deficiency of - *(TN 97)*
a) Debranching enzyme
b) Branching enzyme
c) Myophosphorylase
d) Acid maltase

403. The maj or fuel for the brain after several weeks of starvation - *(AI9 7)*
a) Glucose b) Fatty acid
c) Beta hydroxy butyrate d) Glycerol

404. An Exclusive protein meal intake will cause -
a) Hypoglycemia *(JIPMER98)*
b) Hepatic glycogen stores depletion
c) Decreased release of insulin
d) Increase release of insulin

405. Fluroacetate inhibits - *(JIPMER98)*
a) Citrate synthetase
b) Aconitase
c) Succinic dehydrogenase
d) Alphaketoglutarate dehydrogenase

406. Heart uses one of following as energy source during starvation - *(JIPMER98)*
a) Glucose b) Acetoacetate
c) Fats d) Proteins

407. Muscle cannot make use of glycogen for energy due to the absense of - *(PGI9 7)*
a) Glucose-6-phosphatase
b) Glucokinase
c) Phosphorylase
d) Phosphoglucomutase

408. First committed step in Glycolysis is - *(AIIMS97)*
a) Hexokinase b) Glucokinase
c) Phosphofructokinase d) Aldolase

409. Pyruvate dehydrogenase contains all except -
a) Biotin b)NAD *(IN 98)*
c) FAD d) Co A

410. Kreb's cycle does not occur in - *(Kerala 97)*
a) Muscle b) RBC
c) Heart d) All the above

411. Aldose sugar is converted to ketose sugar by-
a) Oxido reductase b) Aldose *(AP 98)*
c) Decarboxylase d) Isomerase

412. The reaction : Acetoacetyl CoA + succinate a succinyl CoA+acetoacetate occurs in all of the following except - *(MAHE 98)*
a) Brain b) Striated muscle
c) Liver d) Cardiac muscle

413. Blood glucose levels cannot be augmented by mobilization of muscle glycogen due to lack of -
a) G-6-P dehydrogenase *(MAHE 98, JIMPER 93,*
b) G - 6-phosphatase *UP 99, ARMS98)*
c) Adolase
d) Glucokinase

414. Which one of the following is the correct sequential order in which the given enzymes of Kreb's cycle are formed after a molecule of acetyl CoA enters the cycle - *(ICS 98)*
a) Citrate, Oxaloacetate, Ketoglutarate
b) Ketoglutarate, Oxaloacetate, Citrate
c) Citrate, Ketoglutarate, Oxaloacetate
d) Oxaloacetate, Ketoglutarate, Citrate

415. The reaction inhibited in thiamine deficiency is -
a) Pyruvate to acetyl CoA *(AI99)*
b) Citrate to alpha ketoglutarate
c) Succinyl CoA to fumarate
d) None

416. TCA cycle substrate level phosphorylation occurs at- *(ARMS98)*
a) Succinate dehydrogenase
b) Malonate reduction
c) Thiokinase
d) Fructase

417. Production of fructose in seminal fluid is by following steps - *(ARMS98)*
a) Glucose-6-phosphate > fructose-6-phosphate > fructose
b) Glucose-6-phosphate > sorbitol phosphate > fructose phosphate > fructose
c) Glucose-6-phoaphate > glucose > sorbitol > fructose
d) Glucose-6-phosphate > fructose-1-phosphate > fructose

418. About glycolysis - true is - *(PGI 88)*
a) Glucose to 3 C products
b) Takes place in mitochondria
c) Complete breakdown of glucose
d) No ATP production

419. Which one of the following enzymes use NADP as coenzyme - *(Kerala 2K)*
a) Glyceraldehyde-3-phosphate dehydrogenase
b) Lactate dehydrogenase
c) Glucose-6-phosphate dehydrogenase
d) Beta hydroxy acyl CoA dehydrogenase
e) Mitochondrial isocitrate dehydrogenase

420. Insulin stimulate the activity of the following enzymes except - *(Kerala 2K)*
a) Acetyl CoA carboxylase b) Pyruvate kinase
c) Hormone sensitive lipase d) Glycerol kinase
e) Phosphofructokinase

421. Which is a fructosan - *(J & K 2001)*
a) Pectin b)Chitin
c) Inulin d) Glycogen

422. The oxidation of primary alcohol group in glucose results in - *(TN 2002)*
a) Gluconic acid b) Glutaric acid
c) Glucuronic acid d) Hyaturonic acid

401) c 402) b 403) c 404)d 405)b 406)c 407)a 408) a 409)a 410) b 41 l)d 412)c 413)b 414)c
415)a 416)c 417)c 418)a 419)c 420)c,d 421)c 422)c

423. Enzyme levels which are decreased during starvation - *(PGI2002)*
a) Fatty acid synthase b) Co A carnitine transferase
c) Citrate lyase d) Lipoprotein lipase
e) Tyrosine kinase

424. Substrate level phosphorylation in TCA cycle involves - *(PGI 2002)*
a) Alpha KG dehydrogenase
b) Succinate thiokinase
c) Isocitrate dehydrogenase
d) Fumarase
e) Malata dehydrogenase

425. Products accumulated in Hunter's syndrome are - *(PGI 02)*
a) Keratan sulfate b) Dermatan sulfate
c) Chondroitin sulfate d) Heparan sulfate
e) Hyaluronic acid

426. In starvation, nitrogen is carried from muscle to liver and kidney by- *(PGI 9 7)*
a) Alanine b) Aspartic acid and Serine
c) Glycine c) Asparagine

427. Pompe's disease is due to deficiency of which enzyme-
a) Branching enzyme *(PGI 97)*
b) Glucose 6 phosphatase
c) Acid maltase deficiency
d) Muscle phosphorylase

428. Muscles are not involved in which glycogen storage disease - *(PGI 97)*
a) I b) II
c) m d)IV

429. Fructokinase is necessary for - *(PGI98)*
a) Fructose-1-$P0_4$
b) Ructose 1,6 diphosphate
c) Fructose 6 phosphate
d) Glyceraldehyde

430. Reducing sugar in urine is seen in - *(PGI 01)*
a) Fanconi anemia b) Lactose intolerance
c) Galactosemia d) Phenylketonuria
e) Salicylate poisoning

431. True regarding galactosemia- *(PGI 01)*
a) Mental retardation occurs
b) Absent disaccharidase in intestine
c) Defect in epimerase
d) Defect in galactose 1 $P0_4$ uridyl transferase

432. Glycogen storage disesses include all the following except- *(PGI 01)*
a) Von Gierke's disease b) Fabry's disease
c) Me Ardle's disease d) Fragile syndrome
e) Krabbe's disease

433. Which of the following enzymes is/are involved in neoglucogenesis all except - *(PGI 01)*
a) Phospoglycerate kinase
b) Fructose 1, 6-biphosphatase
c) Phosphoglucomutase
d) Pyruvate carboxylase
e) Isomerase

434. True statements about Glucokinase is/are-fPG/ *03)*
a) Km value is higher than normal blood sugar
b) Found in liver
c) G-6P inhibit it
d) Has both glucose 6 phosphatase and kinase activity
e) Glucose enter into cells through GLUT-2

435. Phosho-dephosphorylatio of phosphofrue tokinase and fructose 1, 6 Biphosphatase by fructose 2, 6 Biphosphate regulation is seen in - *(PGI 03)*
a) Brain b) Liver
c) Adrenal Cortex d)RBC
e) Muscle

436. Marquios disease not seen is - *(APPG 03)*
a) Corneal opacity b) Mental retardation
c) Stunted growth d) Absent clavicle

437. Enzymes in glycogen metabolism - *(PGI 04)*
a) Phosphorylase a b) Phosphorylase b
c) Glycogen Synthase I d) Glycogen Synthase C
e) Branching enzyme

438. In the fasting state, glucose is obtained from- *(Jharkhand 03)*
a) Liver glycogen b) Muscle glycogen
c) Both d) None

439. The metabolite that is regarded as the dead end in glycolysis - *{Kerala 04)*
a) Pyruvate b) Lactate
c) 2,3-bisphosphoglycerate d) 3-phosphoglycerate

440. Cyclic AMP increase the rate of glycogenolysis by -
a) Promoting the formation of phosphorylated form of glycogen phosporylase *(SGPGI05)*
b) Acting as a cofactor for glycogen phosphorylase
c) Furnishing phosphate for the phosphorylysis of glycogen
d) Acting as a precursor of 5' AMP which is a cofactor for glycogen phosphorylase

441. The following types of reaction occur in glycolysis, except - *(SGPGI 05, 97, AI89)*
a) Hydration b) Isomerisations
c) Phosphoryl transfer d) Aldol cleavage

442. Chitin contains - *(AMU 05)*
a) Alfa 1-4 bond b) Alfa 1-6 bond
c) (3-1-6 bond d) (3-1-4 bond

443. Enzymes not used in glycogen metabolism -
a) Glycogen phosphorylase B *(PGI June 05)*
b) Glycogen synthase I
c) Glycogen synthase C

444. Hexose monophosphate shunt occurs in A/E- *(PGI June 05)*
a) Liver b) Adipose tissue
c) Mammary gland d) Skeletal muscle
e) Skin

445. Which of the following is an aldose - **(***J & K 05)*
a) Ribulose b)Ribose
c) Erythrulose d) Dihydroxyacetone

446. End-Product of the action of salivary amylase is -
a) Mannose b) Maltose *(J&K05)*
c) Sucrose d) Fructose

423)a,c 424)b 425)b,d 426)a 427)c 428)a 429)a 430)c 431)a,c,d 432)b,d,e 433)c 434)a,b,e 435)b 436) b 437) a,b,c,e 438) a 439) b 440) a 441) a 442) d 443) c 444) e 445) b 446) b

447. Biosynthesis of glucuronic acid requires the -
a) Oxidation of UDP glucose *(MAHA05)*
b) Oxidation of glucose 6-phosphate
c) Oxidation of 6-phophogluconate
d) Oxidation of glucose

448. Which one of the following statements concerning gluconeogenesis is correct - (*MAHA 05)*
a) It occurs in muscle
b) It is stimulated by fructose 2, 6-bisphosphate
c) It is inhibited by elevated levels of acetyl CoA
d) It is important in maintaining blood glucose during the normal overnight fast

449. Composition of Hyaluronic acid - *(APPGE 05)*
a) N-acetyl glucosamine + b glucosamine acid
b) N-acetyl glucosamine + b - glucoraunic acid
c) N-acetyl glucosamine + sulfated glucosamine acid
d) N-acetyl glucosamine + iduranic acid

450. By which of the following anticoagulants used in estimating blood glucose, glycolysis is prevented - *(AIIMSNov 05, DNB 91)*
a) EDTA b) Heparin
c) Sodium fluoride d) Sodium citrate

451. Fluoride, used in the collection of blood samples for glucose estimation, inhibits the enzyme - *(AI05, ICS 05, PGI86, 93)*
a) Glucokinase b)Hexokinase
c) Enolase d) Glucose-6-phosphatase

452. The molecule, which is the intiator of cataract formation in the eye lens and whose 1-phosphate derivative is responsible for liver failure, is -
a) Sorbitol b) Mannitol *(AIIMSMay05)*
c) Inositol d)Galacticol

453. Which of the following when absent would impair the rate limiting step of glycogenolysis - *(HP 06)*
a) 1,4-Glucoronosyl troanterase
b) Glycogen synthetase
c) Glycogen phosphorylase
d) Phosphoglucomutase

454. Fructose 2-6 biphosphate is - *(Manipal 2006)*
a) Intermediate of glycosis
b) Positive allosteric regulation of PF1 (phosphofructokinase 1)
c) Negative allosteric regulation of PF1
d) Positive allosteric regulation of PF2

455. Positive signals for glycogen breakdown include in all the following except -
a) Cyclic AMP b) Blood glucose
c) Epinephrine d)$Ca2^{+}$

456. Essential Pentosuria is due to defect in -
a) HMP pathway *(PGMCET01)*
b) Glycolysis
c) Gluconeogenesis
d) Uronic acid pathway

457. Hemolytic anaemia is seen most commonly due to -
a) Pyruvate kinase *(PGMCET01)*
b) Phospho fructokinase I
c) Phospho fructokinase II
d) Pyruvate dehydrogenase

458. The activities of all the following enzymes are increased in starvation except - *(Corned 07)*
a) Pyruvate kinase
b) Pyruvate carboxylase
c) Phosphoenolpyruvate carboxykinase
d) Glucose 6-phosphatese

459. The biosynthesis of the enzyme pyruvate carboxylase is repressed by - *(Corned 08)*
a) Insulin b) Glucagon
c) Cortisol d) Epinephrine

460. Regarding HMP shunt all of the following are true except- (*AI07***)**
a) Occurs in the cytosol
b) No ATP is produced in the cycle
c) It is active in Adipose tissue, Liver and Gonads
d) The oxidative phase generates NADPH and the Non oxidative phase generates pyruvate

461. Within the RBC, hypoxia stimulates glycolysis by which of the following regulating pathways-(^47 *07)*
a) Hypoxia Stimulates pyruvate dehydrogenase by increased 2,3 DPG
b) Hypoxia inhibits hexokinase
c) Hypoxia stimulates release of all Glycolytic enzymes from Band 3 on RBC membrane
d) Activation of the regulatory enzymes by high PH

462. Glycolysis occurs in - *(Aiims May 07)*
a) Cytosol b) Mitochondria
c) Nucleus d) Ly so some

463. In Lysosomal storage disorders, true is -
a) The lysosomes are deficient in the enzyme hydrolase
b) There is a defect in the fusion of lysosomes and phagosomes
c) There is a defect in the lysosomal membrane
d) There is increased degradation of heteroglycans

464. The rate limiting enzyme in glycolysis is - *(UP 08)*
a) Glucose 6-dehydrogenase
b) Phosphofructokinase
c) Glucokinase
d) Pyruvate kinase

465. Maximum carbohydrate concentration in strict vegetarian diet present is - *(UP 08)*
a) Amylase b) Maltose
c) Fructose d)Glycogen

466. In which of the following tissues, is glycogen incapable of contributing directly to blood glucose ?
a) Liver b) Muscle *(AI 08)*
c) Both d)None

467. Phosphorylase b is maintained in an inactivated state by- *(4108)*
a) ATP b) c AMP
c) Calcium d) Insulin

447) a 448) d 449)b 450)c 451)c 452)d 453)c 454)b 455)b 456)d 457)a 458)a 459)a 460)d 461)c 462)a 463)a 464)b,c,d 465)d 466)b 467)d

46$. Insulin causes lipogenesis by all except -
a) Increasing acetyl-CoA carboxylase activity
b) Increases the transport of glucose into the cells
c) Inhibits pyruvate dehydrogenase *(Aiims May 08)*
d) Decreases intracellular cAMP level

469. Main source of energy derived from - *(PGI June 08)*
a) Fat b) Glycogen
c) Lactate d) Ketone
e) Acetone

470. Enzyme regulated by phosphorylation-fPG/ *June 08)*
a) Glucokinase
b) Glycogen synthetase
c) Pyruvate dehydrogenase
d) Isocitrate
e) Citrate lyase

471. After 50 gm of glucose of feed orally -
a) Decrease ketone body production *(PGI June 08)*
b) Increased lactate production upon exercise
c) Decreased gluconeogenesis
d) Increased gluconeogenesis

472. High energy phosphates are produced in the following pathways except - *(DPGEE 08)*
a) HMP shunt b) Oxidative pathway
c) Glycolysis d)TCA cycle

473. Glycolytic enzymes (s) inhibited by fluoride -
a) Hexokinase b) Aldolase *(PGIDec 08)*
c) Enolase d) Pyruvate kinase
e) Phosphofructokinase

474. NAD acts as aconfactor for - *(PGI June 09)*
a) Citrate synthetase
b) Isocitrate dehyrogenase
c) a ketoglutarate dehyrogenase
d) Malate dehydrogenase
e) Succinyl thiokinase

475. Hyperammonaemia inhibit TCA cycle by depleting -
a) Oxaloacetate b) a ketoglutarate *(PGI June 09)*
c) Citrate d) Succinyl Co-A
e) Fumarate

476. Which of the following metabolites is involved in glycogenolysis, glycolysis and gluconeogenesis ?
a) Galactose-1-phosphate *(DELHIPG Mar. 09)*
b) Glucose-6-phosphate
c) Uridine diphosphoglucose
d) Fructose-6-phosphate

477. The activity of pyruvate carboxylase is dependent upon the positive allosteric effector:
a) Succinate b)AMP *(DELHIPG Mar. 09)*
c) Isocitrate d) Acetyl Co A

478. Epimer combination(s) is/are - *(PGI Nov 09)*
a) D-glucose & D-fructose
b) D-glucose & D-talose
c) D-glucose & D-mannose
d) D-glucose & D-idose
e) D-galactose & D-glucose

479. True about gaucher disease - *(PGI Nov 09)*
a) Due to deficiency of enzyme sphingomyelinase
b) Due to deficiency of enzyme (J-Gluco-cerebrosidase
c) Deposition of glucosylceramide
d) Foam cell deposition
e) PAS staining positive

480. Acetyl coA can be directly converted to all except -
a) Glucose b) Fatty acids *(AIIMS May 10)*
c) Cholesterol d) Ketone bodies

481. After overnight fasing, levels of glucose tranporters reduced in - *(AIIMS May 10)*
a) Brain cells b)RBCs
c) Adipocytes d) Hepatocytes

482. Insulin like fructans are used as prebiotics as they are non digestible. Resistance to digestion in the upper Gj tract results from - *(AI10)*
a) Absence of digestive enzyme in the upper GIT
b) Beta configuration of anomeric C_2
c) Low pH of the stomach
d) Presence of a-osidic linkages

483. Von Gierke's disease is due to the deficiency of -
a) Gluc-6 phosphatase *(DPG10)*
b) Glue -1 phosphatase
c) Branching enzyme
d) Mycophosphorylase

484. Skeletal muscle is deficient in - *(DPG10)*
a) Glucose -6 phosphatase
b) Hexokinase
c) Isomerase
d) Phosphofructokinase

485. Mechanism by which pyruvate cytosol is transported to mitochondria is - *(Maharashtra10)*
a) Chloride antiport b) Proton symport
c) ATP dependent antiport d) Facilitated uniport

486. Von Geirke's occurs due to deficiency of -
a) Glucose-6-phosphatase *(Maharashtra 10)*
b) Liver Phosphorylase
c) Muscle phosphorylase
d) Debranching enzyme

487. Fhuoride inhibits - *(Maharashtra10)*
a) Glucose-6-phosphatase b) Glucokinase
c) Hexokinase d) Enolase

488. Epimer combination (s) is/are - *(PGIMay 10)*
a) D-glucose & D-fructose
b) D-mannose & D-talose
c) D-glucose & D-mannose
d) D-glucose & D-gulose
e) D-galactose & D-glucose

489. Glycosphingolipid is made up of - *(PGIMay 10)*
a) Glucose b) Glycerol
c) Sphingosine d) Fatty acids
e) Thromboxane A_2

468)c 469)b 470)b,c 471)a,c 472)a 473)c 474)b,c,d 475)b 476)b 477)d 478)c,e 479)b,c,e 480)a 481)c
482) b 483) a 484) a 485) b 486) a 487) d 488) c_5e 489)a,c,d

490. Enzymes of Calvin cycle are - *(PGIMay 10)*
a) G-6-PD
b) Sedoheptulose-1-7- bisphosphatase
c) Glycerol Kinase
d) Phosphoribulose kinase

491. Which of the following substance binds to CoA and condenses oxaloacetate to inhibit the TCA cycle -
a) Malonate b)Arsenite *(AllMS Nov 10)*
c) Fluoroacetate d)Fumarate

492. Which of the following is not degraded by colonic flora? *(AIIMS May 11)*
a) Pectin b) Lignin
c) Starch d) Glucose

493. Acetyl coA can be directly converted to all except -
a) Glucose b) Fatty acids *(AIIMS May 11)*
c) Cholesterol d) Ketone bodies

494. Enzyme deficient in von gierke's disease -
a) Glucose 1 phosphatase *(Punjab 10)*
b) Glucose 6 phosphatase
c) Acidmaltase
d) (i Glucosidase

495. G6PD stands for - *(Punjab 10)*
a) Glucose 6 phosphatase dehydratase
b) Glucose 6 phosphate dehydrogenase
c) Glucose 6 phosphodiesterase
d) Glucose 6 phosphate decarboxylase

496. Compound that joints glycolysis with glycogenesis and glycogenolysis is - *(Punjab 10)*
a) Glucose 1,6 biphosphate
b) Glucose 1 phosphate
c) Glucose 6 phosphate
d) Fructose 1, 6 biphosphate

497. Substrate level phosphorylation is catalysed by -
a) Succinate dehydrogenase *(PUNJAB 11)*
b) Pyruvate kinase
c) Malate dehydrogenase
d) Acetyl CoA carboxylase

498. Rate limiting enzyme in glycolysis - *(PUNJAB 11)*
a) Phosphofructokinase
b) Glucose 6 dehydrogenase
c) Pyruvate kinase
d) Pyruvate carboxylase

499. Hydrogen ions are not formed by which complex or which is not a proton pump? *(PUNJAB 11)*
a) Complex I b) Complex II
c) Complex in d) Complex IV

500. Collagen has which amino acid - *(PUNJAB 11)*
a) Tryptophan b) Glycine
c) Threonine d) Tyrosine

501. Cofactor for glycogen phosp horylase -*(Jipmer 10)*
a) Thiamine pyrophosphate
b) Pyridoxal phosphate
c) Citrate
d) FAD

502. Von Grieke's disease includes all except-*(Jipmer 11)*
a) Hyperlipidemia b) Hyperuricemia
c) Muscle atrophy d) Metabolic acidosis

503. Benedict's test will be positive in the urine after administration of- *(Corned 10)*
a) Folic acid b) Ascorbic acid
c) Pantothenic acid d) Retinoic acid

504. Substrate level phosphorylation is catalysed by which enzyme? *(NEET/DNB Pattern)*
a) Succinate dehydrogenase
b) Alpha keto glutarate dehydrogenase
c) Succinate thiokinase
d) Malate dehydrogenase

505. Co-factor for phosphofructokinase is- *(NEET/DNB*
a) Mg^{+2} b) Mn^{+2} *Pattern)*
c) Fe^{+2} d) Zn

506. Reverse folding of proteins is carried out by which enzyme- *(NEET/DNB Pattern)*
a) Valine b) Threonine
c) Chaperone d) Aspartate

507. In glycolysis, inorganic phosphate is used reaction, catalyzed by- *(NEET/DNB Pattern)*
a) Enolase
b) Pyruvate kinase
c) Glyceraldehyde-3-p dehydrogenase
d) Aldolase

508. Glycogen storage disorder due to muscle phosphorylase deficiency - *(NEET/DNB Pattern)*
a) Mcardle's disease b) Pompe's disease
c) Andersen's disease d) Tarui's disease

509. Another name for glucose - *(NEET/DNB Pattern)*
a) Dextrin b) Dextrose
c) Sucrose d) Saccharin

510. True about glycolysis - *(NEET/DNB Pattern)*
a) Hexokinase produce ATP
b) 1 cycle produces 2 ATP
c) It produces directly 2 molecules of lactate
d) Aldolase produces irreversible polymerization

511. Nafinhibits- *(NEET/DNBPattern)*
a) Enolase b) Glucokinase
c) Hexokinase d) G-6 PD

512. Essential fructosuria is due to deficiency of -
a) (3-galactosidase *(NEET/DNBPattern)*
b) Aldolase-B
c) Fructokinase
d) Aldose reductase

513. 6-phospho Gluconate dehydrogenase need- *(NEET/*
a) NAD b) NADP *DNB Pattern)*
c) FAD d)FMN

514. Von Geirke's occurs due to deficiency of-
a) Glucose-6-phosphatase *(NEET/DNB Pattern)*
b) Liver Phosphorylase
c) Muscle phosphorylase
d) Debranching enzyme

515. Hexosaminidase A deficiency causes -
a) Tay-sach disease *(NEET/DNB Pattern)*
b) Niemann pick disease
c) Gaucher's disease
d) Krabbe's disease

490)b,d 491)c 492)b 493)a 494)b 495)b 496)c 497)b 498)a 499)b 500)b 501)b 502)c 503)b
504) c 505) a 506)c 507)c 508)a 509)b 510) b 511)a 512)c 513) c 514) a 515)a

516. NADPH via glycerophosphate shunt makes how many ATP- *(NEET/DNB Pattern)*
a) 1 b) 2
c) 3 d)4

517. Essential pentosuria is due to deficiency of -
a) Gulonolactone oxidase *(NEET/DNB Pattern)*
b) Phosphoglucomutase
c) Xylulose reductase
d) Fructokinase

518. The metabolite that is regarded as the dead end in glycolysis - *(NEET/DNBPattern)*
a) Pyruvate
b) Lactate
c) 2,3-bisphosphoglycerate
d) 3-phosphoglycerate

519. Pentose pathway produces - *(NEET/DNB Pattern)*
a) ATP b) NADPH
c) ADP d) Acetyl CoA

520. Fructose is transported by - *(NEET/DNB Pattern)*
a) GLUT 5 b) GLUT 4
c) GLUT3 d) GLUT 7

521. Aldehyde dehydrogenase requires NAD as -
a) Cofactor *(NEET/DNB Pattern)*
b) Apoenzyme
c) Coenzyme
d) None

522. Gaucher's disease is due to deficiency of enzyme -
a) Sphingomyelinase *(NEET/DNB Pattern)*
b) (3-Glucosidase
c) Hexosaminidase-A
d) (3-Galactosidase

523. Flouride cause inhibition of - *(NEET/DNBPattern)*
a) PDH b) Enolase
c) G6PD d) Pyruvate kinase

524. Sandhoff s disease is d/t absence of which enzyme?
a) Beta-hexosaminidase *(NEET/DNB Pattern)*
b) Beta-glucuronibase
c) Aryl sulphatase
d) Alpha galactosidase

525. Muscle cannot make use of glycogen for energy because of deficiency of - *(NEET/DNB Pattern, PGIDec 97)*
a) Glucokinase
b) Phosphoglucomutase
c) G-6-phosphatase
d) Muscle phosphorylae

526. Net gain of ATP in glycolysis -*(NEET/DNB Pattern, PGI Dec 97)*
a) 5 b) 8
c) 15 d)20

527. Glucose oxidase converts glucose to-
a) Gluconic acid *(NEET/DNBPattern)*
b) Glucuronic acid
c) Iduronic acid
d) Galactic acid

528. Niemann-Pick disease is due to dificiency of -
a) Hexosaminidase *(NEET/DNBPattern)*
b) Sphingomyelinase
c) Galactokinase
d) Glucosidase

529. During starvation, brain utilizes- *(NEET/DNB Pattern)*
a) Glycogen b) Fattey acids
c) Ketone bodies d) None

530. Glucose is converted to glucuronate by- *(NEETZ DNBPattern)*
a) Oxidation of aldehydo group
b) Oxidation of terminal alcohol
c) Oxidation of both
d) None

531. All of the following are regulating enzymes of glycolysis, except - *(NEET/DNBPattern)*
a) Hexokinase b) Glucokinase
c) Enolase d) Phosphofructokinase I

532. Glycogen phosphorylase is active in-
a) Phosphorylated form *(NEET/DNBPattern)*
b) Dephosphorylated form
c) Both phosphorylated & dephosphorylated form
d) No rate of phosphorylation

533. Fructose intolerance is due to deficiency of ?
a) Aldolase B *(NEET/DNBPattern)*
b) Fructokinase
c) Triokinase
d) Aldolase A

534. Increased uric acid levels are seen in which glycogen storage disease - *(NEET/DNB Pattern)*
a) Type I b) TypeII
c) Type III d) TypeIV

535. Gluconate dehydrogenase requires - *(NEET/DNB Pattern)*
a) NADP b) NAD
c) FAD d) FMN

536. Glycogen synthase is activated by - *(NEET/DNB Pattern)*
a) Insulin b) Glucagon
c) Epinophrine d) AMP

537. Anerabic glycolysis occurs in all except - *(NEET/DNBPattern)*
a) RBCs b)Lens
c) Brain d)Testis

538. Which of the following is NADH linked -
a) G6PD *(NEET/DNB Pattern)*
b) APDH
c) a-keto glutarate dehydrogenaes
d) None

539. In glycolysis, NADH is produced at -
a) Pyruvate kinase *(NEET/DNB Pattern)*
b) Enolase
c) Glyceraledehyde-3 -P-dehydrogenase
d) PFK-1

540. True about glycolysis - *(NEET/DNBPattern)*
a) Hexokinase produce ATP
b) 1 cycle produces 2 ATP
c) It produces directly 2 molecules of lactic acid
d) Aldolase produces irreversible polymerization

516) None>b 517))c 518)b 519)b 520)a 521)c 522)b 523)b 524)a 525)c 526)None>b 527)a
528) b 529) c 530) b 531) c 532) a 533) a 534) a 535) a 536) a 537) c 538) a 539) c 540) c

541. The rate limiting step in glycolysis is catalyzed by- *(NEET/DNB Pattern)*
a) Pyruvate kinase b) Enolase
c) Glucokinase d) Phosphofructokinase

542. Inhibitors of glycolysis are all except -
a) Fluoride *(NEET/DNB Pattern)*
b) Fluoroacetate
c) Arsenite
d) Iodoacetate

543. Which of the following metabolites is involved in glycogenolysis, glycolysis and gluconeogenesis ?
a) Galactose-1-phosphate *(NEET/DNBPattern)*
b) Glucose-6-phosphate
c) Uridine diphosphoglucose
d) Fructose-6-phosphate

544. Where can glucose 6 phosphate not be converted to glucose ? *(NEET/DNBPattern)*
a) Muscle b) Liver
c) Adipose tissue d) Kidney

545. Glycogen storage disease which presents as lysosomal storage disease - *(NEET/DNB Pattern)*
a) Von gierke's disease b) Pompes disease
c) Mcardle's disease d) Andersen's disease

546. Phosphofructokinase is the key enzyme of -
a) Glycogenolysis *(NEET/DNBPattern)*
b) Glycogenesis
c) Glycolysis
d) TCA cycle

547. Hexokinase is inhibited by - *(NEET/DNBPattern)*
a) Glucose-6-phosphate b) Glucagon
c) Glucagon d) Insulin

548. Benedict test is for - *(NEET/DNB Pattern)*
a) Bile salts in urine
b) Bile pigment in urine
c) Reducing sugar in urine
d) Ketone bodies in urine

549. Which of the following is not a reducing sugar -
a) Fructose *(NEET/DNB Pattern)*
b) Galactose
c) Sucrose
d) Maltose

550. Which one of the following statements concerning gluconeogenesis is correct - *(NEET/DNBPattern)*
a) It occurs in muscle
b) It is stimulated by fructose 2, 6-bisphosphate
c) It is inhibited by elevated levels of acetyl CoA
d) It is important in maintaining blood glucose during the normal overnight fast

551. Energy source of brain in later part of starvation -
a) Glucose *(NEET/DNB Pattern)*
b) Fatty acids
c) Ketones
d) Glycogen

552. Overnight fasting what *occurs-(NEET/DNB Pattern)*
a) Glucose decreases
b) FFA increases
c) Increased gluconeogenesis
d) Increased beta-hydroxybutyrate

553. Cori's cycle is concerned with transport of -*(NEET/*
a) Alanine b) Glutamate *DNB Pattern)*
c) Lactate d) None

554. Essential pentosuria is seen in defect of which pathway - *(NEET/DNB Pattern)*
a) HMP shunt b) Uronic acid pathway
c) TCA cycle d) Gluconeogenesis

555. Which of the following is not a ketose - *(NEET/DNB*
a) Ribose b) Erythrulose *Pattern)*
c) Fructose d) Ribulose

556. Final product in anaerobic *g\yco\ysi\s-(NEET/DNB*
a) Pyruvate b) Acetyl CoA *Pattern)*
c) Lactate d) Oxaloacetate

557. All are substrates for gluconeogenesis except -
a) Lactate *(NEET/DNB Pattern)*
b) Propionate
c) Alanine
d) Acetyl-CoA

558. Rate limiting step in Gluconeoganesis is catalyzed by- *(NEET/DNBPattern)*
a) Phyruvate Carboxylase b) Glucokinase
c) Glycoral kinase d) PDH

559. Forbe's disease is due to deficiency of -
a) Branching enzyme *(NEET/DNB Pattern)*
b) Debranching enzyme
c) Myophosphorylase
d) Hepatic phosphorylase

560. Co-factor for phosphofructokinase is - *(NEET/DNB*
a) $^{+2}$ M| b) Mn^{+2} *Pattern)*
c) Fe^{2} d) Zn

561. Aldolase-B is involved in metabolism of -*(NEET/DNB*
a) Galactose b) Fructose *Pattern)*
c) Sucrose d)None

562. ATP is consumed at which step of glycolysis -
a) Enolase b) Hexokinase*(NEET/DNB*
c) Pyruvate kinase d) Isomerase *Pattern)*

563. Allosteric activator of PFK - *(NEET/DNB Pattern)*
a) Fructose 1-6 bisphosphate
b) Fructose 2-6 bisphosphate
c) Phosphoenolpyruvate
d) Pyruvate

564. G-6-PD deficiency causes - *(NEET/DNB Pattern)*
a) Leukemia b) Hemolytic anemia
c) Hemophilia d)None

565. Enzyme deficient in Galactose, most commonly - *(NEET/DNB Pattern)*
a) Galactokinase b) Epimerase
c) Uridyl transferase d) None

541)d>a,c 542)b 543)b 544)a 545)b 546)c 547)a 548)c 549)c 550)d 551)c 552)c 553)c 554)b
555) a 556) c 557) d 558) a 559) b 560) a 561) b 562) b 563) b 564) b 565) c

566. Major amino acid released from muscles during starvation- *(NEET/DNB Pattern)*
a) Arginine b) Alanine
c) Hitidine d) Glutamate

567. Arsenite inhibits - *(NEET/DNB Pattern)*
a) Enolase b) G-6-PD
c) Phosphoglycarate Kinase d) Hexokinase

568. Inhibition of glycogenolysis and gluconeogenesis is caused by - *(NEET/DNB Pattern)*
a) Insulin b) Glucogon
c) Glucocorticoid d) Epinephrine

569. Which helps in production of more glucose -
a) Pyruvate kinase *(NEET/DNBPattern)*
b) Pyruvate carboxylase
c) PDH
d) Pyruvate decarboxylase

570. Lactate is formed in all except -*(NEET/DNB Pattern)*
a) RBCs b) Lens
c) Brain d) Testis

571. Renal threshold for glycosuria- *(NEET/DNB*
a) 100 mg/dl b) 170 mg/dl *Pattern)*
c) 300 mg/dl d) 350 mg/dl

572. Rate limiting step in cholesterol synthesis -
a) HMG CoA reductase *(NEET/DNB Pattern)*
b) HMG CoA synthase
c) Mevalonate kinase
d) Squalene synthetase

573. Fluroacetate inhibits - *(NEET/DNBPattern)*
a) Citrate synthetase
b) Aconitase
c) Succinate dehydrogenase
d) Alphaketoglutarate dehydrogenase

574. Mechanism by which pyruvate cytosol is transported to mitochondria is - *(NEET/DNB Pattern)*
a) Chloride antiport
b) Proton symport
c) ATP dependent antiport
d) Facilitated uniport

575. Which of the following is true - *(NEET/DNB Pattern)*
a) Glucokinase has high effinity for glucose
b) Hexokinase has low affinity for glucose
c) Glucokinase has low effinity for glucose
d) Hexokinase is induced by insulin

576. Which of the following is not a rate limiting enzyme-
a) HMG CoA reductase *(NEET/DNB Pattern)*
b) Phosphofructokinase
c) Acetyl CoA carboxylase
d) Malonate dehydrogenase

METABOLISM OF LIPID

577. Lipotropic factors are - *(PGI86)*
a) Choline b)Betain
c) Methionine d) Tryptophan

578. Essential fatty acids - *(PGI 86)*
a) Linoeicacid
b) Linolenic acid
c) Arachiconic acid Palmitic acid
d) Plamitic acid
e) Stearic acid

579. Atherosclerosis is due to - *(AI89)*
a) HDL receptor defect
b) Apo protein E deficiency
c) Decreased LDL activity
d) Decreased lipoprotein lipase

580. Fredrickson's type II hyperlipoprotiemia is due to excess amount of - *(AP 88)*
a) VLDLremnats b)VLDL
c) Floating LDL d) HDL

581. Examples of mononusaturated fatty acids are -
a) Oleic b) Arachidonic acid *(PGI 83)*
c) Linolenic acid d) Lysine
e) None

582. Triacylglycerol synthesis is enhanced *by-(PGI 83)*
a) Cortisol b) Glucagon
c) Insulin d)Epinephime

583. Cerebrosides contain which of the following-^ *89)*
a) Phytol b) Glycerol
c) Galactitol d) Sphinogosine

584. The following is a Ketone body - *(AI89)*
a) Oxalocetate b) Pyruvic acid
c) Acetyl COA d) Acetoacetate

585. Rare limiting step in cholesterol synthesis is -
a) HMG CoA synthetase *(AI 90)*
b) HMG CoA lyase
c) HMG CoA reductase
d) Mevalonate synthetase

586. Stored triacy glycerol and cholesterol are released by- *(AI91)*
a) Lysosomal lipase b) Lipoprtein lipase
c) LCAT d) Harmone senstive lipase

587. Cholesterol from the liver is transported to the tissue mainly by - *(AI91)*
a) HDL b)LDL
c) VLDL d) Chylomicrons

588. Limiting factor for Fatty acid synthesis -
a) Acetoacetate synthesis *(JIPMER91)*
b) Acyl transferase
c) Acetyl COAcarboxylase
d) Biotin

589. Which is a lipotropic factor - *(JIPMER 91)*
a) HDL b) Insulin
c) Choline d) Carnitine

590. Ketoacidosis without glycosuria is seen in -
a) Aspirin poisoning *(JIPMER92)*
b) Renal tubular
c) Prolonged starvation
d) Paracetamol poising

566) b 567) c 568) a 569) b 570) c 571) b 572) a 573) b 574) b 575) c 576) d 577)a,b,c 578)a,b,c
579) b 580)c 581)a 582)c 583) d 584)d 585)c 586) d 587)b 588)c 589)c 590) c

591. NADPH is required in - *(A1IMS 92)*
a) HMP shunt b) Gluconeogensis
c) Lipogensis d) Glycogenolysis

592. The Lipid which accumulates in fatty liver is -
a) Trigylcerids b)FFA
c) Lipoprotein d) Cholesterol

593. Which Cholesterol ester is maximum in plasma -
a) HDL b)LDL *(JIPMER 93)*
c) VLDL d) Chylomicron

594. Which of the following has a Ketogenic effect on liver- *(JIPMER 93)*
a) Insulin b) Glucagon
c) (H d) Androgen

595. Which has highest cholestrol content -*(JIPMER 93,*
a) HDL b) LDL *AI90, UP 97, TN 99)*
c) VLDL d) Chylomicron

596. Substances that can be classified as steroids include-
a) Chenodoxycholic acid b) Prolactin *(PGI88)*
c) Glucocerebroside d) Beta carotene
e) Testosterone

597. Protective factor for heart - *(MPGI8 7)*
a) Low HDL b) High LDL
c) Hightriglyeride d) High HDL
e) None of above

598. Which of the following undergoes auto-oxidation-
a) FFA b) PUFA *(AIIMS 92)*
c) Chylomicrons d) Cholestrol

599. C_{I7} H_{29} COOH is formula of- *(AIIMS83, 84)*
a) Linoleicacid b) Linolenic acid
c) Arachidonic acid d) Clupanodonic acid

600. Ketone bodies are by products of metabolism of - *(AIIMS81, UPSC 83)*
a) Carbohydrate b) Protein
c) Fat d) All of above

601. Ketone bodies are normaly synthesised from -
a) Acetyle-CoA b) Glucose *(AP 88)*
c) Glycerol d) Acetone

602. In man the serum liprotein with the highest cholesterol content is - *(DELHI92)*
a) Prealbumin b) Chylomicrons
c) Beta-lipoprotein d)Pre-beta-lipoprotein
e) Alpha-lipoprotein

603. The daily normal excretion of ketone bodies is -
a) 0.1 mg b) 0.5mg *(PGI81, AMC87)*
c) l.Omg d)2.0mg

604. Basic structure unit from which fatty acids are derived - *(JIPMER 80, DELHI 84)*
a) Acetyle CoA b) Succinyl Coa
c) Acetoacetate d) Mevalonate

605. Which of the following is not a phospho lipid - *(PGI 83, AIIMS 84, 86, Kerala 8 7)*
a) Cerebroside b)Sphingomyelein
c) Lectithin d) Cephelin

606. If choline moity is replaced by ethanolamice the net product is - *(AIIMS 84)*
a) Cerebroside b) Sphingomyelien
c) Ceaphalin d) Plasminogen

607. Triglycerides in serum are transported by -
a) HDL *b)\UJL(Delhi 85, 90)*
c) LDL d) Chylomicron

608. Cholestrol detection can be done with following except- *(PGI 78,DNB 88)*
a) Lieberman-burchard reaction
b) Zimmerman reaction
c) Winslow test
d) Salkwski reaction

609. Which of the following essential fatty acid contains maximum cumber of carbon atoms - *(AIIMS 83)*
a) Linolicacid b)Linlenic
c) Arachidonic acid d) Oxaloacetic acid

610. Cholestrol is synthesized from - *(ROHTAK 88,*
a) Acetyl Co A b) Malonate *AIIMS 84)*
c) Alpha keto glutaric acid d) Oxalate

611. Which of the following is not a ketone body -
a) Acetone b) Acetic acid *(PGI84)*
c) Oxaloacetic d) Beta-hydroxybutyric acid

612. Which of the following aids in preventing fatty liver-
a) Thiamine *(AIIMS 84)*
b) Guanidocetate
c) Dietary choline
c) Dimethyl propiothenate

613. Ketosis is partly due to - *(PGI 83)*
a) Overutilization of glucose
b) Overproduction of acetyl CoA
c) Under production of acetyl CoA
d) A slowdown in fat metabolism

614. Which of the following is a product of microbial reduction - *(PGI80, AIIMS 82)*
a) Cholic acid b)Glycime
c) Coprostanol d) Pregnenolone

615. Which of the following is a phospholipid -*(NIMHANS*
a) Glycogen b) Sphingomyelin *88)*
c) Prostagladin d)01icacid

616. The major lipid in adipose tissue is-*(Rajasthan 89)*
a) Cholesterol b) Phospholipids
c) Triglyceride d) Glyceride

617. Which of following is not a constituent of ganglioside molecule - *(AIIMS 81, KERALA 87)*
a) Glycerol b) Sialic acid
c) Lecithins d) Long chain fatty acid

618. The transport of fatty acids from adipose tissues to other tissues for metabolism is primarily a function-
a) Carnitine b) Chylomicrons *(DNB89)*
c) Plasma albumin d) High density lipoproteins

619. Phosoholipids include all except - *(DNB 90)*
a) Plasmalogens b) Dipalmityl lecithin
c) Ceramide d) Cardiolopin

591) c 592) a 593) b 594) b,c 595) b 596)a,e 597)d 598)b 599)b 600)c 601)a 602)c 603)c 604)a 605) a 606) c 607)) b,d 608) c 609) c 610)a 611)b,c 612)c 613)b 614)c 615)b 616)c 617)a 618)c 619)c

620. The molecular weight of linoleic acid is 280 and atomic weight of iodine is 127. What is iodine number of this acid - *(AMU 87)*
a) 270 b) 135
c) 180 d)90
e) 0

621. In diabetes the factor limiting synthesis of triglycerides in adipose tissue is - *(JIPMER 80,*
a) ATP b) Lectithin *AMU 88)*
c) Alpha-glycerophosphate d) Acetyl CoA

622. What is the following is a dietary essential fatty acid- *(DELHI87, 88; UPSC84, 88, PGI83)*
a) Glycine b) Cholesterol
c) Glycerol d) Linoeic acid
e) Galactose

623. "Squalene" is the intermediate product during synthesis of - *(ROHTAK 86, BIHAR 91)*
a) VLDL b) Cholesterol
c) Tachysterol d) Lonosterol

624. A compound that stimulate transfer of acetate from cytosol into mitochondria is - *(AIIMS 84)*
a) TPP b) Carnitine
c) Citrate d) Tetrahydrofolic acid
e) Acetyl CoA

625. Ganglioside is composed of all except - *(AIIMS 86,*
a) Galactose b) Phosphate *92)*
c) Ceramide d) Sialic acid

626. HMG-CoA is formed during metabolism of all except-
a) Cholesterol b) Lecucine *(Kerala 94)*
c) Ketone bodies d) Bile acids

627. Which of the following organs cannot use ketone bodies - *(JIPMER 95)*
a) Brain b) Liver
c) Kidney d) Spleen

628. Lipid from tissues is carried to liver by-*(Kerala 95)*
a) LDL b)VLDL
c) HDL d) Chylomicrons

629. Unsaturated fatty acids are converted to -*(Kerala 95)*
a) Prostaglandins b) Cholesterol
c) Cell membrane lipid d) Saturated fatty acid

630. The product of oxidation of odd chain fatty acids is - *(AIIMS 94)*
a) Aceto acetyle CoA b) Malonyl CoA
c) PropionylCoA d)FumarylcoA

631. Oxidation of fatty acids occur in - *(IN 95)*
a) Cytoplasm b) Ribosomes
c) Centrioles d) Mitochondria

632. Endogenous triglyceride carrier in plasma is -
a) Chylomicron b) VLDL *(AI96, 90)*
c) LDL d)HDL

633. The apoprotein in HDL is mainly - *(AI 96)*
a) B-100 b)B-48
c) A-l d)C-l

634. Cholesterol is a - *(DELHI96)*
a) Steriod b) Tocopherol
c) Lipoprotein d) Lipoposaccharide

635. Type II hyperlipoproteinmia is characterized by- *(DELHI 96)*
a) Increased LDL b) Decreased LDL receptors
c) Decreased HDL d) Increased triglycerides

636. Which of the following biochemical changes is not indicative of Hyperlipidemia type 11a -*(CUPGEE 96)*
a) VLDL is increased b) VLDL normal
c) LDL increased d) HDL increased

637. Which is the most essential fatty acid-*(CUPGEE 96)*
a) Linolenic acid b) Linoleic acid
c) Arachiodonic acid d) Oleic acid

638. Accumulation of increased amount of sphingomyline in liver and spleen is found in - *(KARNAT 97)*
a) Goucher's disease b) Niemann-Pick disease
c) Obstructive jaundice d) VonGierke's disease

639. All of derived of cholesterol except - *(AP 96)*
a) Chenodeoxy Cholic acid b) Glycocholic acid
c) Testesterone d) Cholecystokinin

640. One of the following is a scavenger of cholesterol from tissue and prevents atheroscalerosis-(PG7 *96,*
a) VLDL b) LDL *97, AP 88)*
c) Chylomicrons d) HDL

641. Immediate precursor in the production of acetoacetate is - *(PGI96)*
a) Acetoacyl CoA b) Hydroxymethyl glutaryl
c) Malonyl CoA d) Isocaleric acid

642. Multienzyme complex in humans - *(PGV96)*
a) Fatty acid synthetase
b) Malonyl CoA Carboxylase
c) Carbamoyl phosphate synthetase
d) Adenosine phosphoribosyl transferase

643. The regulatory enzyme in the biosynthetic pathway of Cholesterol is correct - *(UP 97)*
a) Hyffoxymethyl glutaryl co. A synthetase
b) Hydroxymethyl glutaryl coA reductase
c) Mevalonate Kinase'
d) Isopentenyl 1 pyrophospho isomerase

644. Carnitine is formed from - *(CUPGEE 97)*
a) Arginine b) Leucine
c) Lysine d) Serine

645. Apoprotein-A is found in - *(AI98)*
a) LDL b)HDL
c) Chylomicrons d)VLDL

646. Triglyceride content is lowest in - *(KERALA 98)*
a) HDL b)LDL
c) VLDL d) Chylomicrons

647. Alcoholic group is found in - *(PGI 98)*
a) Galactoside b) Cerebroside
c) Sphingomyelin d) Lecthin

648. Familial hypercholeserolemia is - *(PGI98)*
a) Deficient LDL receptors
b) Deficient HDL receptors
c) HMG CoA reductase deficiemcy
d) Deficient VLDL receptors

620)None 621)c 622)d 623)b 624)b 625)b *626)6 621)6* 628)c 629)a 630)c 631)d 632)b 633)c 634)a 635)a,b 636)a,d 637)b 638)b 639)d 640)d 641)b 642)a 643)b 644)c 645)b,c 646)a 647)b,c 648) a

649. Which of the following is used to transport cholesterol from intestine to liver - *(AI 2K)*
a) Apo E b) Apo C
c) Apo A d) Apo B

650. The metabolic adaptations in alcoholic are the following except - *(Kerala 2K)*
a) Lactic acidosis
b) High NAD^+ level
c) Accumulation of fat in the liver
d) Ketogenesis
e) Decreased excretion of uric acid

651. Which of the following acts as Lung surfactant - *(Kerala 2K)*
a) Spingomyelin b) Lysolecithin
c) Dipalmitiyl lecithin d) Cephalin
e) Phosphotidyl inositol

652. Fatty acid of Cholesterol are mainly - *(PGI2K)*
a) Oleic acid b) Linoleic acid
c) Linolenic acid d) Palmitic acid
e) Stearic acid

653. Hormone sensitive lipase is not activated by -
a) Insulin b) Glucagon*(DNB01)*
c) Catecolamines d) T_4

654. Which fatty acid is not synthesized by man - *(J&K 01, AIIMS 86)*
a) Linoleic acid b) Stearic acid
c) Palmitic acid d) Oleic acid

655. Saponification means hydrolysis of fats by -
a) Acid b)Alkali *(J&K 01)*
c) Water d) Enzymes

656. Eicosanoids are derived from - *(J&K 01, Kerala 01)*
a) NSAJDS b) 20 Carbon cyclic fatty acids
c) Steroids d) Tyrosine

657. The APO-B-48 & APO-B-100 are, main proteins of different lipoproteins due to - *(AI2002)*
a) RNA splicing b)RNA editing
c) Misreading of mRNA d) DNA Duplication

658. Ketone bodies utilized by conversion of -
a) Acetoacetate to acetoacetyl Co A *(NIMHANS 01)*
b) Series of changes leads to Pyruvate
c) Alphaketo glutaric acid
d) Succinyl CoA

659. The following fatty acid does not belong to W6 series - *(JIPMER 02)*
a) Linoleic acid b) Arachidinic acid
c) Gamma linolenic acid d) Alpha linolenic acid

660. Which of the following is an activator of LCAT-
a) Apo B 100 b) Apo B 48 *(JIPMER 02,*
c) Apo E d) Apo AI *Orrisa R)*

661. Eicosanoids are derived from - *(TN 2002)*
a) Oleocacid b) Linoleic acid
c) Linolenic acid d) Archidonic acid

662. Long chain fatty acid is transported into inner mitochondria membrane by - *(TN02, JIPMER 95)*
a) Acyl carrier protein b) Acyl carnitine
c) Simple diffusion d) Energy mediated

663. Dietary cholesterol is transported to extrahepatic tissue by - *(PGI 02, AI 99)*
a) LDL b)HDL
c) VLDL d) Chylomicrons
e) ApoE

664. Ketone body formation without glycosuria seen in-
a) DM b)DI *(PGI97)*
c) Prolonged starvation d) Obesity

665. Bile Salts undergo xenobiotics - *(PGI 97)*
a) After conjugation with taurine and glycine
b) After conjugation with lysine
c) After conjugation with betaglucuronic acid
d) After conjugation with derived proteins

666. One of the following is having least density-
a) Chylomicron b) HDL *(PGI 98)*
c) LDL d)VLDL

667. Alcoholic group is found in- *(PGI 98)*
a) Ganglioside b) Sphingomyelin
c) Cerebroside d) Teipen

668. Bile acids synthesized in liver (Primary bile acids)-
a) Lithocolic acid *(PGI 2000)*
b) Cholic acid
c) Chenodeoxycholic acid
d) Deoxycholic acid
e) Taurocholic acid

669. True about lipid bilayer of cell wall - *(PGI 01)*
a) Asymmetrical arrangement of cell wall component
b) Lateral diffusion of ions
c) Symmetrical arrangement of cell wall components
d) Not made up of amphipathic lipids

670. Hypolipidemic agents act on - *(PGI 02)*
a) HMG CoA synthetase b) HMG CoA oxygenase
c) HMG CoA reductase d) HMG Co A hydratase
e) HMGCoAmutase

671. In Abetaltipoproteinemia result in absence of -
a) Chylomicron b)LDL *(PGI 02)*
c) VLDL d)HDL
e) TG

672. For reduction of cholesterol, the best management includes - *(PGI 03)*
a) Cholesterol restricted diet
b) High fiber diet
c) Diet with high unsaturated FA and low saturated FA
d) Diet with low unsaturated FA and high saturated FA
e) Cholesterol restricted diet, high fiber and diet with low saturted FA to unsaturated FA ratio

673. Beta-Oxidation in peroxisome is differentiated from that occuring in mitochondria by - *(PGI 03)*
a) Acetyl CoA
b) H_20_2 formed
c) Different enzymes are found in different sites
d) NADH is required

674. Lipotrophic factor are all except - *{Jipmer 03)*
a) Choline b) Lecithin
c) Arginine d) Methionine

649) d 650) b 651)c 652)a,b,d 653) a 654) a 655) b 656) b 657) b 658) a 659) d 660) d 661) d 662) b
663) a 664) c 665) a 666) a 667)a,b,c 668) b,c 669) a 670) c 671)a,b,c,e 672) e 673) b 674) c

675. Enzyme deficient in "type I Hyperlipidemia is -
a) HMG CoA reductase *(Jipmer03)*
b) Lipoprotein lipase
c) Cholesterol acyl transferase
d) Peroxidase

676. Which one of the following pairs of lipids and related compounds exhibits opposite biologic activities - **(***Karnataka 03)*
a) 5 - HPETE and leukotriene D4
b) Cholic acid and lithocolic acid
c) Thromboxane A_2 and prostacyclin (PGI_2)
d) Acetone and beta - hydroxybutyrate

677. A person on a fat free carbohydrate rich diet continues to grow obese. Which of the following lipoproteins is likely to be elevated in his blood -
a) Chylomicrons b)VLDL *(AI04)*
c) LDL d)HDL

678. Fatty acids does not produce glucose due to absence of-
a) Glucokinase *(Manipal04)*
b) Hexokinase
c) Phosphoenolpyruvate kinase
d) Strong extensor

679. Apoproteins present in LDL- *{Manipal04)*
a) B-48 b)B-100
c) C-I d)C-ffl

680. Chylomicrons contain - *{Jharkhand03)*
a) Apo A b) Apo B
c) Apo C d) Apo E

681. All of the following statements about LDL are true except - *{AIIMS04)*
a) It delivers cholesterol to cells
b) It contains only one Apoprotein
c) It is a marker for cardiovascular disease
d) It contains Apo-B4

682. Steroid biosynthesis occur at - *{APPGE 04)*
a) Rough endoplasmic retinaculum
b) Smooth endoplasmic retinaculum
c) Nucleolus
d) Ribosomes

683. The highest quantity of lipid and lowest concentration of protein are found in - *{Kerala 04)*
a) Chylomicrons
b) Very low density lipoproteins
c) Low density lipoproteins
d) High density lipoproteins

684. Ketone bodies are formed in the -(*TN 04, Kerala 91)*
a) Liver b) Pancreas
c) Kidneys d) Lungs

685. Triglycerides are transported from the liver to the tissues by - *{TN 04)*
a) HDL b)LDL
c) VLDL d) Chylomicrons

686. Cholesterol is a (an) - *{CMC 05)*
a) Ester b)Phospholipid
c) Sterol d) Lipoprotein
e) Protein

687. In the mucosal cells triglycerides are formed primarily in the - *{COMEDK 05)*
a) Rough endoplasmic reticulum
b) Smooth endoplasmic reticulum
c) Golgi apparatus
d) Ribosomes

688. A membrane phospholid that does not contain glycerol is - *{COMEDK 05)*
a) Lecithin b) Sphingomyelin
c) Cardiolipin d)Ceramide

689. The principal precursor of cholesterol is -
a) Citrate b) Acetate *(MAHE 05)*
c) Glycerol d) Lanosterol

690. ATP yield in stearic acid oxidation - *{MAHE05, Rohtak87)*
a) 146 ATP b) 142 ATP
c) 129 ATP d) 139 ATP

691. Ligand for LDL- *{PGI June 05)*
a) APO B 100 b)APOE
c) APO 48 d) APO All

692. In synthesis of fatty energy is supplied by -
a) NAD b)FAD *(MAHA 05)*
c) GTP d) NADPH

693. Respiratory destress syndrome in premature infants is due to inadequate secretion of which one of the following lipids - *{MAHA 05)*
a) Dipalmitoyl phosphatidylcholine
b) Spingomelin
c) Cholesterol
d) Phosphatidylinositol

694. To be defined as a ganglioside, a lipid substance isolated from nervous tissue must contain in its structure - *{MAHA 05)*
a) N-Acetylneuraminic acid (NANA), hexoses, sphingosine, long chain fatty acid
b) NANA, a hexose, a fatty acid, sphingosine, phosphorylcholine
c) NANA, Phingosine, ethanolamine
d) NANA, hexoses, fatty acid, glycerol

695. The immediate precursor of mevalonic acid is -
a) Mevalonyl CoA *{MAHA 05)*
b) Mevalonyl pyrophosphate
c) Acetoacetyl CoA
d) 3-hydroxy-3-methyglutaryl CoA

696. The human plasma lipoprotein containing the highest percentage of triacyglycerol by weight is - *(AI06, PGI86, 87, AIIMS May 07)*
a) VLDL b) Chylomicrons
c) HDL d)LDL

697. Lack of alpha oxidation of fatty acids leads to -
a) Accumulation of phytanic acid *(COMED2006)*
b) Formation of dicarboxylic acid
c) Formation of propionic acid
d) Oxidation of branched chain fatty acid

698. Organ which can utilize glucose, FA and ketone bodies is- *{PGMCETOf7)*
a) Liver b) Brain
c) Skeletal muscle d) RBC

675) b 676) c 677)b 678)c 679)b 680)A11 681)d 682)b 683)a 684)a 685)c 686)c 687)b 688)b
689) b 690) a 691)a,b 692) d 693) a 694) a 695) d 696) b 697) a 698) c

699. Which cholesterol is designated as "Good Cholesterol" - *(Corned 07)*
a) VLDL b)LDL
c) HDL d)IDL

700. Regarding synthesis of triacyl glycerol in adipose tissue, all of the following are ture except - *(AI07)*
a) Synthesis from Dihydroxyacetone phosphate
b) Enzyme Glycerol kinase plays an important role
c) Enzyme Glycerol 3 phosphate dehydrogenase plays an important role
d) Phosphatidate is hydrolyzed

701. Cardiolipin is found in - *(UP 07)*
a) Outer membrane of Mitochondria
b) Inner membrane of mitochondria
c) Lysosomes
d) Rough endoplasmic reticulum

702. Important intermediate product of biosynthesis of fatty acid is - *(UP 08)*
a) Cholesterol b)MalonylCoA
c) Acetyl CoA d) Thioesterases

703. All of the following statements about apoproteins are true Except - *(AI 08)*
a) Apoprotein A-I activates LCAT
b) Apoprotein C-I activates lipoprotein lipase
c) Apoprotein C-II inhibits lipoprotein lipase
d) Apoprotein C-II activates lipoprotein lipase

704. Which of the following types of hypertriglyceridemia is associated with an increase in chylomicron and VLDL remnants ? *(AI 08)*
a) Type I b) Type Ha
c) Type III d) Type IV

705. The reaction which requires HMG-COA reductase activity- *(Manipal08)*
a) P-hydroxy-b-methyl glutaryl COA —> Mevalonic acid
b) Acetyl COA+ $C0_2$ + ATP -> Malonyl COA+ADP + Pi
c) L-Methyl malonyl COA —> Succinyl COA
d) Lactose + H_20 —> Glucose + Galactose

706. Apoprotein - C - *(DPGEE08)*
a) Activates lipoprotein lipase
b) Inactivates lipoproteindipase
c) Facilitates triglyceride transport
d) All of the above

707. Sphingolipids are chiefly accumulated in -
a) Cardiac muscle *(DPGEE08)*
b) Adipose tissue
c) Skeletal muscle
d) CNS

708. Gangliosides consists of - *(PGIDec 08)*
a) Long chain fatty acid (LCFA)
b) Alcohol-sphingosine
c) Phosphate
d) Sailic acid
e) Glycerol

709. In chronic alcoholism the rate limiting component for alcohol metabolism excluding enzymes is/are -
a) NADP b) NAD^+ *(PGI Dec 08)*
c) NADPH d)FADH
e) FAD

710. All of the following statements about Lipoprotein Lipase are true, Except - *(AI 09)*
a) Found in adipose tissue
b) Found in myocytes
c) Deficiency leads to hypertriacylglycerolemia
d) Does not require CII as cofactor

711. Which receptors are present in liver for uptake of LDL- *(AIMS May 09)*
a) Apo E b) Apo A and Apo E
c) Apo E and Apo B100 d) Apo B100

712. A patient was diagnosed with isolated increase in LDL. His father and brother had the same disease with increased cholesterol. The likely diagnosis is-
a) Familial type III hyperlipoproteinemia
b) Abetalipoproteinemia *(AIIMSMay 09)*
c) Familial lipoprotein lipase deficiency (type I)
d) LDL receptor mutation

713. The parameter used as an index of lipid peroxidation is the level of - *(Corned 09)*
a) Ascorbic acid b) Hydrogen peroxide
c) Malondialdehyde d) Volatile fatty acids

714. Saturated fatty acids containing up to 16 carbon atoms are assembled in -*(DELHIPG Feb. 09)*
a) Mitochondria
b) Rough endoplasmic reticulum
c) Smooth endoplasmic reticulum
d) Cytoplasm

715. The elevated liver concentration of NADH produced by ingestion of ethanol - *(DELHI PG Feb. 09)*
a) Is restricted to the mitochondria
b) May lead to an acidosis by inhibiting the gluconeogenesis from lactate
c) Leads to fatty liver by stimulating fatty acid synthesis
d) Increase the conversion of acetate to acetyl CoA

716. Which of the following may be classified as a hydrophobic amino acid at pH 7.0 ?*(DELHI PG Mar. 09)*
a) Isoleucine b)Aginine
c) Aspartic acid d) Lysine

717. The end product of cytosol fatty acid synthetase in humans is: *(DELHI PG Mar. 09)*
a) Oleic acid b) Arachidonic acid
c) Linoleicacid d) Palmitic acid

718. False about trans fatty acid - *(PGINov 09)*
a) Increase risk of cardiovascular disease
b) Fried foods have high content of TFA
c) Hydrogenation increases TFA
d) Hydrogenation decreases TFA
e) It T LDL & f HDL

719. Eukaryotic plasma membrane is made up of all except-
a) Carbohydrates b) Triglycerides *(AIIMSMay 10)*
c) Lecithin d) Cholesterol

699) c 700) b 701)b 702)b 703)c 704)c 705)a 706)d 707)d 708)a,b,d 709)b,c 710)d 711)c
712) d 713)c 714) d 715)c 716)a 717)d 718)d 719)b

720. Branched chain ketoacid decarboxylation is defective in - *(AI10)*
a) Maple syrup urine disease
b) Hartnup disease
c) Alkaptonuria
d) GM1 gangliosidosis

721. Sphingomyelinase deficiency is seen in - *(AI 10)*
a) Niemann - Pick disease b) Farber's disease
c) Tay Sach's disease d) Krabbe's disease

722. Which of the following lipoproteins does not move towards charged end in electrophoresis - *(AI 10)*
a) VLDL b)LDL
c) HDL d) Chylomicrons

723. Phospholipids include all except - *(DPG10)*
a) Plasmalogens b) Dipalmitoyl lecithin
b) Ceramide d) Cardiolipin

724. Respiratory distress syndrome in premature infants is due to inadequate secretion of which one of the following lipids? *(DPG 10)*
a) Dipalmitoyl phosphatidylcholine
b) Sphingomyelin
c) Cholesterol
d) Phosphatidylinositol

725. Enzyme required for conversion of cholesterol to Pregnenalone? *(Maharashtra 10)*
a) Cytochrome P450 b) 11 (3-hydroxylase
c) 3 (3-hydroxylase d) 17-hydroxylase

726. False about trans fatty acid - *(PGINov. 10)*
a) Fried rice have high content of TFA
b) Hydrogenation increases TFA
c) Refining decreases TFA
d) TLDL
e) iHDL

727. Which of the following is a cardioprotective fatty acid- *(AI 11)*
a) Palmitic acid b) Stearic acid
c) Oleic acid d) Omega-3 fatty acids

728. Which of the following statements about High Density Lipoprotein (HDL) is false - *(AI 11)*
a) HDL increases oxidation of LDL
b) HDL reduces foam cell production by LDL
c) HDL is the best predictor of CAD
d) HDL helps to clear lipids from atheromas

729. All of the following are associated with increased risk of atherosclerotic plaque formation except -
a) Apo E mutation *(AI 11)*
b) Oxidized LDL
c) Increased homocysteine
d) Increased Alpha 2 macroglobulin

730. Which of the following is not a component of Sphingomyelin? *(PUNJAB 11)*
a) Choline b) Sphingosine
c) Phosphoric acid (H_3P0_4) d) Glycerol

731. Ketone bodies are synthesized in which part of body?
a) Brain b) Liver *(PUNJAB 11)*
c) Heart d) Intestine

732. Rate limiting enzyme in cholesterol synthesis -
a) HMG CoA synthetase *(PUNJAB 11)*
b) HMG CoA lyase
c) HMG CoA reductase
d) Mevalonate synthetase

733. Acetyl CoA carboxylase is activated by -
a) Malanyl CoA *(Jipmer 10)*
b) Citrate
c) PalmitoylCoA
d) Acetoacetate

734. HDL is increased by - *(Jipmer 11)*
a) Exercise b) 400 mg Vit. E daily
c) Aspirin d)DHEA

735. Aromatic enzyme complex is used for the synthesis of- *(Jipmer 11)*
a) Estradiol b) Cortisone
c) Cholesterol d) Progesterone

736. Metabolically the most active of the plasma lipids is-
a) Phospholipids b) Cholesterol *(Corned 10)*
c) Triacylglycerol d) Free fatty acids

737. What will you give to stop chyluria in diet?
a) Small chain Fa' *(NEET/DNB Pattern)*
b) Medium chain Fa
c) Long chain Fa
d) Omega 3 unsaturated Fa

738. Type 2 hypercholesterolemia occurs due to -
a) Lipoprotein lipase deficiency *(NEET/DNB*
b) Absence of LDL receptors on cells *Pattern)*
c) Abnormality in apo E
d) LCAT deficiency

739. Type 2 hypercholesterolemia occurs due to -
a) Lipoprotein lipase deficiency *(NEET/DNB*
b) Absence of LDL receptors on cells *Pattern)*
c) Abnormality in apo E
d) LCAT deficiency

740. In beta oxidation of fatty acids carnitine is required for - *(NEET/DNB Pattern)*
a) Conversion of short chain fatty acids to long chain fatty acids
b) Transport of long chain fatty acid to mitochondrial inner layer
c) Transport of long chain fatty acid to cytoplasm
d) Conversion of long chain fatty acids to short chain fatty acids

741. Rate limiting step in cholesterol synthesis -
a) HMG CoA reductase *(NEET/DNB Pattern)*
b) HMG CoA synthase
c) Mevalonate kinase
d) Squalene synthetase

742. Role of bile salts - *(NEET/DNB Pattern)*
a) Vit B12 absorption b) Formationoflipidbilayer
c) Emulsification of lipids d) Fatty acid degradation

743. Essential fatty acid - *(NEET/DNB Pattern)*
a) Linoleic acid b) Palmitoleic acid
c) Oleic acid d) Arachidonic acid

720) a 721)a 722)d 723)c 724)a 725)a 726)a,b,d,e 727)d 728)a 729)d 730)d731)b 732)c 733)b
734) a 735) a 736) d 737) b 738) b 739) b 740) b 741) a 742) c 743) a

744. 1st acetyl group donor in fatty acid synthesis is -
a) Malonyl CoA *(NEET/DNB Pattern)*
b) Palmitate
c) Acetyl CoA
d) Citrate

745. Enzyme deficient in Type I Hyperlipidemia is -
a) HMG Co A reductase *(NEET/DNB Pattern)*
b) Lipoprotein lipase
c) Cholesterol acyl transferase
d) Peroxidase

746. Rate controlling enzyme of fatty acid synthesis -
a) Thioesterase *(NEET/DNB Pattern)*
b) Transacetylase
c) Acetyl-CoA carboxylase
d) Ketacyl synthase

747. Which of the following is required for fatty acid synthesis - *(NEET/DNBPattern)*
a) NADPH b) NADH
c) FADH d)None

748. Which cholesterol is designated as "Good Cholesterol" - *(NEET/DNB Pattern)*
a) VLDL b)LDL
c) HDL d)IDL

749. All occur in mitochondria except - *(NEET/DNB*
a) ECT b)TCA cycle *Pattern)*
c) Ketogenesis d) Glycolysis

750. Mitochondria have - *(NEET/DNB Pattern)*
a) Plasmid DNA
b) Circular DNA
c) Single stranded DNA
d) Double stranded DNA

751. Serum appeary milky white in -
a) Increased LDL *(NEET/DNB Pattern)*
b) Increased hDL
c) Increased VLDL
d) Increased Chylomicrons

752. Which fatty acid is not synthesized by man -
a) Linoleicacid *(NEET/DNB Pattern)*
b) Stearic acid
c) Palmitic acid
d) Oleic acid

753. Which of the following is <d-6 fatty acid -
a) Cervonicacid *(NEET/DNBPattern)*
b) Linoleic acid
c) Alpha linolenic acid
d) Elaidic acid

754. Apoprotein - C - *(NEET/DNB Pattern)*
a) Activates lipoprotein lipase
b) Inactivates lipoprotein lipase
c) Facilitates triglyceride transport
d) All of the above

755. What is true regarding medium chain fatty acids -
a) Don't require pancreatic lipase *(NEET/)*
b) Not deposited in adipose tissue *DNBPattern*
c) Diffuse directly into portal circulation
d) All of the above

756. Adipose tissue fat metabolism is done by -
a) Lipoprotein lipase *(NEET/DNB Pattern)*
b) Hormone sensitive lipase
c) Acid lipase
d) Acid maltase

757. Oxidised LDL is more athreogenic because -
a) Binds to Apo E *(NEET/DNB Pattern)*
b) Binds to scavenger R
c) Binds to ATP binding
d) Accumulates in macrophages

758. Enzyme deficient in Type I Hyperlipidemia is -
a) HMG CoA reductase *(NEET/DNB Pattern)*
b) Lipoprotein lipase
c) Cholesterol acyl transferase
d) Peroxidase

759. Fatty acid metabolism gives - *(NEET/DNB Pattern)*
a) Acetyl CoA b) Malonyl CoA
c) Ketone bodies d) Cholesterol

760. Adipose tissue fat metabolism is done by -
a) Lipoprotein lipase *(NEET/DNBPattern)*
b) Hormone sensitive lipase
c) Acid lipase
d) Acid maltase

761. Role of somatomedin in fat *metabotism-(NEET/DNB*
a) Antilipolytic b) Lipolytic *Pattern)*
c) Ketogenic d) glucogenic

762. Ketone body formation without glycosuria seen in -
a) DM b)DI *(PGIJune 97)*
c) Prolonged starvation d) Obesity

763. Arachidonic acid is synthesized from -
a) Stearic acid *(NEET/DNB Pattern)*
b) Linodeic acid
c) Linolenic acid
d) Oleic acid

764. Hormone sensitive lipose is inhibited *by-(NEET/DNB*
a) Thyroid homone b) Insulin *Pattern)*
c) CH d) ACTH

765. Which is not true of chylomicrons -
a) Lowest desnsity *(NEET/DNBPattern)*
b) Max. content is TGs
c) Max. content is cholesterol
d) Largest size

766. Ketone bodies are synthesized -*(NEET/DNBPattern)*
a) Cytosol b)ER
c) Miochondria d) Peroxisomes

767. Autooxidation is seen in - *(NEET/DNB Pattern)*
a) Cholesterol b) Arachidonic acid
c) Stearic acid d) Palmitic acid

768. Difference between ganglioside & cerebroside,all except- *(NEET/DNB Pattern)*
a) Charge
b) Presence of NANA
c) Presence of carbohydrate
d) Native tissue

744) c 745) b 746) c 747) a 748) c 749) d 750) b 751)d 752) a 753) b 754) d 755) d 756) b 757) d
758) b 759)b 760)b 761) a 762)c 763)b 764)b 765)c 766)c 767)b 768) c

769. Lipogenesis is stimulated by - *(NEET/DNB Pattern)*
a) Insulin
b) Glucagon
c) Epinephrine
d) Corticosteroids

770. Chylomicron remnants are associated with -
a) Apo-A *(NEET/DNB Pattern)*
b) Apo-BlOO
c) Apo-E
d) Apo-C

771. Linoleic acid is - *(NEET/DNB Pattern)*
a) co-3 fatty acid b) co-6 fatty acid
c) co-9 fatty acid d) Saturated fatty acid

772. Ketosis is caused by - *(NEET/DNB Pattern)*
a) Excessine utilization of glucose
b) Over production of acetyl-CoA
c) Excessine secretia of insulin
d) Excessine intake of carbohydrates

773. Which of the following is a lipotropic factor: -
a) Sphingomyelin *(NEET/DNB Pattern)*
b) Histidine
c) Methionine
d) Bilirubin

774. Apo-E dificiency is seen in - *(NEET/DNB Pattern)*
a) Tpye I hypolipoproteinemis
b) Tpye II hypolipoproteinemis
c) Tpye III hypolipoproteinemis
d) Tpye IV hypolipoproteinemis

775. In Zellweger syndrome,there is-*(NEET/DNB Pattern)*
a) Accumulation of long fatty acids
b) Accumulation of short chain fatty acids
c) Accumulation of very long chain fatty acids
d) Accumulation of medium chain fatty acids

776. Primary ketone body - *(NEET/DNB Pattern)*
a) p-hydroxybutyrate b) Acetoacetate
c) Acetone d) None

///. Lipogenesis occurs in - *(NEET/DNB Pattern)*
a) Liver b) Skeletal muscles
c) Myocardium d) Lungs

778. Free fatty acid produced in adipose tissue is transported by - *(NEET/DNB Pattern)*
a) Globulin b) Albumin
c) Ceruloplasmin d) None

779. Which of the following is not affected in Abetalipoproteinemia - *(NEET/DNB Pattern)*
a) LDL b) VLDL
c) HDL d) IDL

780. Endogenous triglycerides in plasma are maximally carried in - *(NEET/DNB Pattern)*
a) VLDL b) Chylomicrons
c) IDL d)HDL

781. Which of the following has maximum density -
a) VLDL b)LDL *(NEET/DNB Pattern)*
c) HDL d) Chylomicrons

782. Glucosylceramide is accumulated in -
a) Tay-Sach disease *(NEET/DNB Pattern)*
b) Krabbe's disease
c) Gaucher's disease
d) Niemanm Pick disease

783. Which of the following is a secondary bile acid -
a) Cholic acid *(NEET/DNB Pattern)*
b) Chenodeoxy cholic acid
c) Litho Cholic acid
d) None

784. Omega oxidation of fatty acids occu*r-(NEET/DNB*
a) ER b) Mitochondria *Pattern)*
c) Cytosol d) None

785. Carnitine helps in - *(NEET/DNBPattern)*
a) Transport of fatty acids from mitochandria to cytosol
b) Transport of fatty acids from cytosol to mitochondria
c) Transport of pyrurate into mitochondria
d) Transport of Malate in Malate shuttle

786. Desired ratio of total cholesterol/HDL should be -
a) <7.5 b) < 10 *(NEET/DNB Pattern)*
c) <3.5 d) < 4.5

787. a-oxidation occurs in - *(NEET/DNB Pattern)*
a) Mitochondria b) Peroxisomes
c) Cytosol d) Golgi apparatus

788. Accumulatiom of following causes fatty liver - *(NEET/DNBPattern)*
a) Cholestrol b) Triglycerides
c) Cholestrol ester d) Phospholipids

789. Essential fatty acid - *(NEET/DNB Pattern)*
a) Linoleic acid b) Palmitoleic acid
c) Oleic acid d) Arachidonic acid

790. Medium chain fatty acids - *(NEET/DNB Pattern)*
a) Require pancreatic lipase for digestion
b) Absorbed through lymphatics
c) Hydrolyzed in stomach
d) Stored in Adipose tissue

791. Phospholipid is - *(NEET/DNB Pattern)*
a) Leukotrienes b) Lecithin
c) Cerebroside d) Ganglioside

792. Ketone bodies are all except- *(NEET/DNB Pattern)*
a) Acetoacetate b) Acetone
c) b-hydroxy butyrate d) Acetyl-CoA

793. Metachromatic leukodystrophy is due to deficiency of- *(NEET/DNB Pattern)*
a) Hexosaminidase A b) Hexosaminidase B
c) Ceramidase d) Arylsulfatase

794. LCAT is involved in - *(NEET/DNB Pattern)*
a) Transport of dictory cholesterol
b) Transport of dietory TGs
c) Reverse cholesterol transport
d) None

795. Citrate used in fatty acid synthesis uses which enzyme- *(NEET/DNB Pattern)*
a) Citrate Synthese b) ATP citrate lyase
c) Aconitase d) Malic enzyme

769)a 770)c 771)b 772)b 773)c 774)c 775)c 776)b 777)a>d 778)b 779)c 780)a 781)c 782)c
783) c 784) a 785) b 786) c 787) a 788) b 789) a 790) c 791)b 792) d 793) d 794) c 795) b

796. Hurler syndrome is due to deficiency of -
a) Beta galactosidase *(NEET/DNB Pattern)*
b) Sphingomyelinase
c) Induronate Sulfatase
d) Hyaluronidase

797. Endogenous triglycerides in plasma are maximally carried in - *(NEET/DNB Pattern)*
a) VLDL b) Chylomicrons
c) LDL d)HDL

798. Eicosanoids are derived from - *(NEET/DNB Pattern)*
a) Oleocacid b) Linoleic acid
c) Linolenic acid d) Archidonic acid

799. Which of the following fatty acid has maximum number of carbon atoms - *(NEET/DNB Pattern)*
a) Oleic acid b) Linolenic acid
c) Arachedonic acid d) Cervonic acid

800. HMG-CoA in liver mitochondria is inhibited by -
a) Insulin *(NEET/DNB Pattern)*
b) Glucogon
c) Glucocorticoid
d) Epinephrine

801. Common intermediate between gluconeogenesis and fatty acid synthesis - *(NEET/DNB Pattern)*
a) Glucose-6-phosphate b) Acetyl-CoA
c) Citrate d) Succinyl-CoA

802. Receptors on blood cells accept choleterol from -
a) HDL b) LDL *(NEET/DNB Pattern)*
c) VLDL d) Chylomicrons

803. Scavanger receptors uptake -*(NEET/DNB Pattern)*
a) HDL b) VLDL
c) LDL d) IDL

804. True about triacylglycerol and phospholipids -
a) Same structure *(NEET/DNB Pattern)*
b) Common pathway for synthesis
c) Same pathway for catabolism
d) None

805. All are true about fatty acid synthesis except -
a) Requires NADPH *(NEET/DNB Pattern)*
b) Requires NADH
c) Occurs in cytosol
d) Intermediately linked with glycolysis

806. True about conversion of 20C fatty acid conversion to prostaglandin by prostaglandin synthase -
a) First PG synthesized is PGIL, *(NEET/DNB Pattern)*
b) It is rate limiting enzyme
c) It convertes PGI H_2 to PGI E_2
d) The primary prostaglandin is PG H_2

METABOLISM OF PROTEIN AND AMINO ACID

807. Melatonin is synthesised from - *(AIIMS 87*
a) Tryptophan b) Serotonin *AI89)*
c) Phenyllanine d) Histidine
e) Leucine

808. Amino acids excreted in the urine in cystinosis-
a) Cystine b) Ornithine *(PGI 87)*
c) Arginine d) Lysine
e) All of the above

809. In maple syrup urine disease the amino acids excreted in the urine are - *(PGI85, 87, AP 86)*
a) Leucine b) Isoleucine
c) Valine d) a, b & c
e) Arginine

810. In Hartnup's disease..... is excreted in the urine -
a) Ornithine b) Glycine *(PGI 86)*
c) Tryptophan d) Phenylalanine
e) Cystine

811. In alkaptonuria the urine contains - *(NIMHANS 86)*
a) Homogentisic acid b) Phenylalanine
c) Ketones d) Acetates
e) None of the above

812. Glutamate is not a precusor of - *(AI 88)*
a) Ammonia b) Proline
c) Glutathione d) Histidine

813. All are essential amino acid except - *(AI 89)*
a) Phenylalanine b) Lysine
c) Leucine d) Glycine

814. Bilirubin glucoronide in the urine in the absence of Urobilinogen suggests - *(AIIMS 86)*
a) Hemolytic jaundice b) Hepatocellular jaundice
c) Obstructive jaundice d) None of the above

815. Which amino acid causes hypoglycemia -
a) Phenylalanine b) Lysine *(AIIMS 86)*
c) Leucine d) Valine

816. Glycine is used in the synthesis of - *(PGI 88)*
a) Hearn b) Glycocholic acid
c) Taurocholic acid d) Purines
e) All

817. Which of the following are metalloporphyrines -
a) Hemoglobin b) Catalase *(PGI 84)*
c) Bilirubin d) Cytochrome
e) Pyrolase

818. Glycine is present in - *(PGI 84)*
a) Hemoglobin b) Gulatathione
c) Purine d) Creatine
e) AH

819. The semi essential amino acids are - *(PGI 84, 85,*
a) Phenylalanine b) Lysine *86,89)*
c) Tryptophan d) Arginine
e) Histidine

820. The immediate precurosor of nor epinephrine is - *(TN87)*
a) Epinephrine b) Tyrosine
c) Dopamine d) Phenylalanine

821. Metabolite of epinephrine is - *(AI 90, JIPMER90)*
a) Metanephrine
b) Nor metanephrine
c) Hydroxy mandelic acid
d) 3 methoxy-2 hydroxy glycol

796) c 797) a 798) d 799) d 800) a 801) c 802) b 803) c 804) b 805) b 806) d 807) a 808) e 809) d
810)c,d 811)a 812)d 813)d 814)c 815)c 816)a,b,d 817)a,b,d,e 818)e 819)d,e 820)c 821)a

822. The urea in the brain is derived from - *(AI91)*
a) Glutamine b) Glutamic acid
c) Lactate d) Uric acid

823. Aminoacid carrier defect is found in - *(TN 91)*
a) Maple syrup urine disease
b) Alcaptonuria
c) Phenylketonuria
d) Cystinuria

824. Maple syrup urine disease is due to deficiency of -
a) Decarboxylation b) Dehydroxylation *(TN91)*
c) Transamination d) Deamination

825. The amino acid that can be converted into a vitamin-
a) Glycine b) Tryptophan*(Kerala 91)*
c) Phenylalanine d) Lysine

826. Histamine is produced by - *(Kerala 91)*
a) Oxedation b) Reduction
c) Deamination d)Decarboxylation

827. Glutathione is a - *(Kerala 91)*
a) Monopeptide b) Dipeptide
c) Tripeptide d) Tetrapeptide

828. Xanthurenic acid is a product of metabolism of-
a) Tryptophan *(JIPMER 91)*
b) Glucoronic acid
c) Xanthine
d) None of the above

829. The following is false about TVyptophan -
a) Non essential amino acid *(JIPMER 91)*
b) Involved in serotonin synthsis
c) Involved in niacin synthesis
d) Involved in melatonin synthesis

830. Ammonia is detoxified in brain by - *(JIPMER 91,*
a) Uric acid b) Glutamine*AUMS 89, AI 99)*
c) Creatinine d)Urea

831. Key enzyme in urea synthesis is - *(AI 92)*
a) Urease b) Carbamoyl transferase
c) Arginase d) Ornithine

832. S. Adenosyl methionine is necessary for synthesis of- *(JIPMER 92)*
a) Serine b) Cysteine
c) Homocysteine d) Choline

833. Melanin is synthesized *irom-(AIIMS 86, DELHI 93)*
a) Glycine b) Leucine
c) Tyrosine d)Phenylalanine

834. Guanido acetic acid is formed in.....from ...-
a) Kidney; Arginine + Glycine *(JIPMER 80*
b) Liver; Methionine + Glycine *DNB 88)*
c) Liver; Cysteine + Arginine
d) Muscle; Citrulline + Aspartate

835. Catabolism of tryptophan begins with formation of- *(PGI87)*
a) N-formyl kynurenine b) Anthranilic acid
c) Uroconic acid d) Serotonin

836. DFP, is useful in enzyme chemistry; combine with an active site of - *(DNB 89)*
a) Serine b) Lysine
c) Aspartate d) Histidine

837. In ureotelic animals carbamoyl group are transferred to - *(PGI83)*
a) Urea b) Uric acid
c) Ornithine d) Creatine
e) Phosphate

838. Decarboxylation yields a vasodilator from -
a) Aspartate b) Arginine *(AIIMS85,*
c) Histidine d) Serine *JIPMER 03)*
e) Glutamate

839. Which of the following is precursor of adrenaline and thyroxine synthesis - *(ALIMS84, 88, TN 98)*
a) Phenyl alanine b) Tyrosine
c) Tryptophan d) None of the above

840. Kynurenine is formed from - *(PGI 84)*
a) Phenylalanine b) Tryptophan
c) Tyrosine d) Histidine

841. Hair is rich in amino acid - *(AIIMS 84)*
a) Cystine b) Lysine
c) Glycine d) Leucine

842. Methionine is important in - *(DNB 90)*
a) Chain termination in protein synthesis
b) Disulphide bridge formation
c) Formation of choline
d) Transcarboxylation reactions

843. Choline, a most important lipotropic factor is formed with the help of following - *(NIMHANS 87)*
a) Methionine b) Serine
c) Glycine d) Histidine

844. Which is the by product of the urea cycle -
a) Aspartate b) Succinate *(DNB91)*
c) Ornithine d)Fumarate

845. Which of the following is the initiating amino acid for protein synthesis - *(AIIMS 84)*
a) Alanine b)Methionine
c) Serine d) Lysine
e) Cysteine

846. Which of the following is seen in obstructive j aundice - *(AIIMS 82,83)*
a) Excess of urobilinogen in urine
b) Excess of unconjugated serum bilirbin
c) Excess of bile salts in the urine
d) All of the above

847. Millon'stest is used for dectection of - *(DNB 91)*
a) Phenylanine b) Cystine
c) Tyrosine d) Tryptophan

848. Urea is produced by the enzyme- *(PGI 83)*
a) Urease b)Uricase
c) Arginase d) Glutaminase

849. Coproporphyrin IH is - *(Delhi 88, AI88, AIIMS 83)*
a) Normal hemoglobin breakdown product
b) Abnormal Hb precursor
c) Excreted in lead poisoning
d) Excreted in hepatic porphyria

822) a 823) d 824) a 825) b 826) d 827) c 828) a 829) a 830) b 831) None 832) b,c 833) c 834) a 835) a 836) a 837) c 838) c 839) b 840) b 841) a 842) c 843) a 844) d 845) b 846) c 847) c 848) c 849) c

850. The most direct precursor of taurine is- *(AIIMS 81)*
a) Glycine b) Cysteine
c) Methionine d) Glutathione

851. Negative nitrogen balance is produced in humans by elimination from the diet of all of the following amino acids except - *(Delhi 90, 93)*
a) Leucine b) Methionine
c) Lysine d) Serine
e) Threonine

852. Ingestion of benzoic acid in man result in an increase in urinary - *(AIIMS 79, DNB 88)*
a) Hippuricacid b) Phenyl piruvic acid
c) Phenlyalanine d) Noradrenaline

853. Which of the following is found in conjugation with bile acids - *(DELHI 84)*
a) Cholic acid b) Pregnenolone
c) Glycine d) Cholylacetyl CoA

854. An essential amino acid in man is - *(AP 87)*
a) L-methionine b)L-tyrosine
c) L-serine d)L-proline

855. Betaine is a - *(JIPMER 81, DNB 88)*
a) Purine like compound
b) Quartemary ammonium compound
c) Phosphogen
d) Mammalian glycoside

856. A plasma albumin concentration of less than 2g/ L would affect specifically the transport of -
a) Glucose b) Iron *(AIIMS 88)*
c) Bilirubin d) Cholesterol

857. Which of the following is not a catabolic product of tryptophan - *(AMU 8 7)*
a) Glutamine b) Xanthrurenic acid
c) Nicotinic acid d) Urocanic acid
e) Kynurenine

858. An amino acid not involved in urea synthesis is -
a) Ornithine b)Citrulline *(DNB 91)*
c) Histidine d) Arginine
e) Aspartic acid

859. Decarboxylation of which of the following occurs in the pathway for spermine and spermidine bio synthesis - *(AIIMS 79)*
a) Ornithine b) 5-hydroxytryptophan
c) Glutamate d) Histidine
e) Dihydroxphenylanine

860. Major source of ammonia in the kidney is - *(Delhi87,*
a) Urea b) Aspartate *Aiims88)*
c) Glutamine d)Glutamate

861. Which of the following is a precursor of protoporphyrin - *(PGI83, AIIMS 81)*
a) Leucine b) Alanine
c) Proline d) Histidine
e) Glycine

862. Millon test is positive in - *(PGI 83)*
a) Maple syrup disease b) Hartnup disease
c) Wilson's disease d) Tyrosinosis

863. In mammalian tissue glycine is not a synthetic precursor of - *(DNB 89)*
a) Heme b) Thymine
c) Creatine d) Guanine

864. 5-HIAA test may be false negative if patient is taking - *(JIPMER 79)*
a) Aspirin b) Colchicine
c) Phenothiazines d) Methotrexate

865. The rationale for feeding benzoic acids to subjects with a urea cycle enzyme defect is - *(BIHAR 88)*
a) It provides an alternative route for N_2 excretion through glycine conjugate, hippuric
b) It provides an alternative route for N_2 excretion through the N- acetyl glucoronic acid conjugate kynurenine
c) It inhibits adenylate deaminase
d) It inhibits glutamate dehydrogenase
e) It neutralizes NH_3 in both blood as well urine

866. Sources of the nucleotide portion of NAD include -
a) N-methyl nicotinamide *(TN 89)*
b) The vitamin reboflavin
c) PRPP
d) Tryptophan

867. The enzymes that synthesize pyruvate from cystine and gamma amino levulinate from succinyl CoA and glycine are both - *(BIHAR 89)*
a) Metaloproteins
b) Pyridoxil phosphate dependent
c) Biotin dependent
d) Flavoporteins
e) Any

868. Ehrlich's test is done to detect - *(PGI81, Kerala 88)*
a) Urinary amylase b) Urinary cystine
c) Abnormal porphyrin d) Urobilinogen

869. Enzyme deficiency in alkaptonuria is - *(Kerala 94)*
a) Tyrosine hydroxylase
b) Homogentisic acid oxidase
c) Cystathionine synthase
d) Phenylalanine hydroxylase

870. Creatinine is synthesised from - *(Kerala 94)*
a) Glycine, arginine and methionine
b) Glycine and methionine
c) Ornithine and glycine
d) Thymine and ornithine

871. Homocystinuria is due to abnormal metabolism of -
a) Methionine b) Valine *(AI95)*
c) Tryptophan d) Leucine

872. The normal value of BUN is - *(TN 95)*
a) 20-40 mg/dl b) 40-60 mg/dl
c) 8-16 mg/dl d) 10-20 mg/dl

873. Acholuric jaundice is caused by - *(TN 95)*
a) Obstructive jaundice b) Hemolytic jaundice
c) Cholestatic jaundice d) Infective jaundice

874. The compound metabolized in a manner similar to Xenobiotics is - *(AIIMS 95)*
a) Bilirubin b) Cholesterol
c) Urea d) Acetylcholine

850)b 851)d 852)a 853)c 854)a 855)b 856)c 857)a,d 858)c 859)a 860)c 861)e 862)d 863)b
864) a 865) a 866)c 867)b 868)d 869)b 870)a 871)a 872)d 873)b 874)a

875. Urea is formed in - *(Kerala 96, AMC 90)*
a) Brain b) Kidney
c) Liver d) Intestine
e) Muscle

876. Which of the following amino acids is involved in the synthesis of thyroxine - *(Karnat 97)*
a) Glycine b)Methionine
c) Threonine d) Tyrosine

877. One nitrogen atom of urea is derived from -
a) NH_3 of Glycine *(AP 96)*
b) Glycine of aspartate
c) NH_3 of aspartate
d) Glutamate of aspartate

878. Amino acid deficiency which result in defective phosphorylation in scurvy - *(AIIMS 9 7)*
a) Serine b) Folic acid
c) Leucine d) Isoleucine

879. lyrosinemia type II is due to deficiency of -
a) Tyrosine Transaminase *(TN 97)*
b) Fenanyl acetoacetyl hydrolase
c) Tyrosine hydroxylase
d) Tyrosinase

880. Aminoacid that enters the TCA cycle for gluconeogenesis & Ketogenic in nature - *(PGI96)*
a) Phenylalanine b) Alanine
c) Glycine d) Serine

881. Preservative used for urine in testing for porphyrin-
a) NaOH b) Formalin *(JIPMER 98)*
c) HCL d) Boric acid

882. Mousy odour urine is seen in - *(PGI 97)*
a) Phenylketonuria
b) Maple syrup urine disease
c) Isovalericaciduria
d) None of the above

883. Arthritis occur in - *(Kerala 97)*
a) Alkaptonuria b) Cytinosis
c) Maple syrup diseases d) Homocystinuria

884. Norepinephrine is converted to epinephrine by -
a) Dopamine hydroxylase *(AP98)*
b) Dopa decarboxylase
c) O-methylation
d) N-methylation

885. Guanido acetate is converted to - *(AP 97)*
a) Creatinine b) Creatine phoshpate
c) Choline d) Hydroxyproline

886. Not produced in Adrenaline synthesis pathway -
a) DOPA b) Dopamine *(MP98)*
c) Nor adrenaline d)Tyramine

887. Decarboxylation of aromatic Amino acid produces all except - *(MP98)*
a) Histamine b) Acetylcholine
c) Phenylalanine d)Tyramine

888. Regarding NH3 in glutamine-true is - *(PGI98)*
a) Cannot be used for purine syythesis
b) Cannot be degraded by enzymes
c) Toxic product
d) Major excretory pathway is kidney

889. Which metabolite of TCA cycle is used in detoxification of ammonia in brain - *(AIIMS2001)*
a) Alpha ketoglutarate b) Ornithine
c) Oxaloacetate d) Glycine

890. Regarding glutathione which of the following is/ are true - *(PGI 2K)*
a) It helps in the absorption of certain amino acids
b) It inactivates some enzymes
c) It help in membrane transport
d) It helps in conjugation reactions

891. Which of the following is not synthesised from tyrosine - *(KERALA 2001)*
a) Norepinephrine b) Melatonin
c) Thyroxine d) Dopamine

892. Naturally occuring amino acids - *(NIMHANS 01)*
a) Homocystein b) Beta alanine
c) Alanine d) Hydroxyproline

893. Carbamoyl phosphate is used in - *(NIMHANS 01)*
a) Urea b) Uric acid
c) Pyruvic acid d) Stearic acid

894. Methyl donor is - *(CIP 01)*
a) N-5 methyl tetra hydro folate
b) Homocystiene
c) Adenosyl methionine
d) Tetra hydro folate

895. The following amino acid is essential for synthesis of nitric oxide - *(JIPMER 02)*
a) Arginine b) Aspartate
c) Alanine d) Glycine

896. Source of ammonia in urine - *(JIPMER 02)*
a) Glutaminase b) Urease
c) Glutamate dehydrogenase d) Arginase

897. Pigment providing colour to stool is - *(PGI97)*
a) Stercobilinogen b) Urobilinogen
c) Mevobilirubin d) Bilirubin

898. Succinyl Co- A is formed by- *(PGI 98)*
a) Histidine b) Leucine
c) Valine d) Lysine

899. Phosphorylation of amino acid is by- *(PGI 98)*
a) Serine b) Tyrosine
c) Leucine d) Tryptophan

900. Glutamine in blood acts as - *(PGI 98)*
a) NH3 transporter b)Toxic element
c) Stored energy d)Abnormal metabolite

901. Of the following groups of amino acids produce common component of the TCA cycle is - *(PGI 99)*
a) Alaine, isoleucine, leucine, lysine
b) Serine, asparagine, glycine, glutamate
c) Isoleucine, valine, methionine
d) Prolone, leucine, tryptophan

902. The enzyme deficient in erythropoietic porphyria is - *(PGI 99)*
a) PBG deaminase
b) Uroporphyrin II cosynthetase
c) Coprophyrin
d) Ferrochelatase

875) a,c 876) d 877) c 878) None 879) a 880) a 881) c 882) a 883) a 884) d 885) b 886) d 887) b,c 888) d
889)a 890)a,d 891)b 892)d 893)a 894)a,c 895)a 896)a 897)a 898)c 899)a,b 900)a 901)c 902)d

903. Metabolites of tryptophan can give rise to - *(PGI 02)*
a) Diarrhoea
b) Vasoconstriction
c) Flushing
d) Can predispose to albinism
e) Phenylketonuria

904. Active sites of serine protease contain - *(PGI03)*
a) Histidine b) Lysine or threonine
c) Arginine d) Serine

905. Amino acid used in the synthesis of purines -
a) Glycine b) Ornithine (*Jipmer 03)*
c) Alanine d) Threonine

906. In porphyra cutanea tarda the type of porphyrin excreted in urine is - *(Jipmer 03)*
a) Coproporphyrin -1
b) Uroporphyrin -1
c) Uroporphyrins - II
d) Type I & III uroporphyrins

907. The conjugation of bilirubin to glucuronic acid in the liver- *(ARMS 03)*
a) Converts a hydrophilic compound to a hydrophobic one
b) Converts a hydrophobic compound to a hydrophilic one
c) Enables the bilirubin molecule to cross the cell membrane
d) Is increased during neonatal jaundice

908. Which is false about Alkaptonuria -(*Jharkhand 03)*
a) Genitourinary system not involved
b) Homogentistic oxidase deficiency
c) Black urine
d) Calcification in vertebral bodies

909. Which of the following gives a positive reaction with Ferrous chloride - *(APPGE 04)*
a) Phenylketonuria
b) Alkaptonuria
c) Maple syrup urine disease
d) None

910. In the body, metabolism of 10 gms. of protein would produce approximately - *(Karnataka 04)*
a) 1 K. Caorie b) 41K calories
c) 410 K calories d) 41 calories

911. A 45 years male, blood sample gives purple brown colour in Ehlerich's solution, the substance is -
a) Urobilinogen *(SGPGI05)*
b) Conjugated bilirubin
c) Unconjugated bilirubin
d) Haemosedrin

912. Which one of the following combination is wrong-
a) Phenylalanine - Niacin *(SGPGI 05)*
b) Tryptophon - Serotonin
c) Phenylalanine - Melanin
d) Tyrosine - Epinephrine

913. During Protein biosynthesis, high energy bonds are not utilized in which one of the following steps-
a) Formation of aminoacyl RNA *(ICS 05)*
b) Binding of aminoacyl tRNA to A site of ribosome
c) Formation of peptide bond (peptidyl transferase step)
d) Translocation step

914. Guanidinium group is associated with-(PG7 *June 05)*
a) Tyrosine b) Arginine
c) Histidine d) Lysine
e) Tryptophan

915. Transversion seen in - *(PGI June 05)*
a) Guanine - cytosine b) Guanine - adenine
c) Guanine - thymine d) Adenine - thymine
e) Cytosine - thymine

916. Which of these is a conservative mutator -
a) Glutamic acid-glutamine *(MAHA 05)*
b) Histidine glycine
c) Alanine-leucine
d) Arginine - aspartic acid

917. If cellular proteins do not fold into a specific conformation, their function are affected. Certain disorders arise, if specific proteins are misfolded. Which of the following disorders arises due to conformational isomerization - *(AIIMSNov 05)*
a) Familial fatal insomnia
b) Hepatitis delta
c) Pernicious anemia
d) Lesch-Nyhan syndrome

918. The amino acid residue having an iminoside chain is - *(AI05)*
a) Lysine b) Histidine
c) Tyrosine d) Proline

919. There are more than 300 variants of human hemoglobin gene. Among these only a few are fatal. Hence, the most important factor to be conserved in a protein for its function is the -
a) Amino acid sequence *(AI06)*
b) Ligand binding residues
c) Structure
d) Environment

920. All of the following amino acids are converted to succinyl-CoA, except - *(AI 06)*
a) Methionine b) Isoleucine
c) Valine d) Histidine

921. The amino acid which serves as a carrier of ammonia from skeletal muscle to liver is - *(AI 06)*
a) Alanine b) Methionine
c) Arginine d) Glutamine

922. Hemoprosthetic group is found in - *(PGI June 06)*
a) Myoglobin b) Cytochromeoxidase
c) Xanthine oxidase d) Tyrosine

923. Creatinine is formed from - *(PGI June 06, DNB 91)*
a) Arginine b) Lysine
c) Leucine d) Histamine

903)a,b,c 904)d 905)a 906)d 907)b 908)a 909)a 910)b 91 l)a 912)a 913)a 914)b 915)a,c,d
916)c 917)a 918)d 919)b 920)d 921)a 922)a,b 923)a

924. Mousy odour urine is seen in- *(PGMCET07, PGI 97)*
a) Phenylketonuria
b) Maple syrup urine disease
c) Homocystinuria
d) Tyrosinemia

925. FIGLU is an intermediate in - C*PGMCETOH)*
a) Valine b) Histidine
c) Methionine d) Arginine

926. Which of the following amino acids is purely ketogenic - **(***Corned 08)*
a) Phenylalanine b) Leucine
c) Proline d) Tyrosine

927. Regarding proteoglycans, false is - *(AI07)*
a) Chondroitin sulfate is a proteoglycan
b) They hold less amount of water
c) They are made up of sugar and aminoacids
d) They carry charge

928. The amino acid producing ammonia in kidney is -
a) Glutamine b) Alanine*(Aiims May 07, 86)*
c) Methionine d) Glycine

929. All of the following are essential aminoacids except-
a) Methionine b) Lysine *(Aiims May 07)*
c) Alanine d) Leucine

930. The protein synthesis is sorted out at / by -
a) Ribosomes b) Mitochondria*(UP 07,05)*
c) Golgi-apparatus d) Endoplasmic reticulum

931. All the following degradation product of Glycine except- *(UP 06,07)*
a) Serine b) Oxalates
c) Pyruvates d) Ornithine

932. "Classical phenylketonuria" is caused by deficiency of - *(UP 06,07)*
a) Phenylalanine transaminase
b) Phenylalanine hydroxylase
c) Tyrosine transaminase
d) Tyrosine hydroxylase

933. The two nitrogen atoms that are incorporated into the urea cycle. The source of the nitrogen are -
a) Glutamate & Aspartate *(UP 07,05)*
b) Aspartate & Arginine
c) Aspartate & NH_3
d) Glutamate & NH_3

934. Phenylalanine metabolism products are all except-
a) Epinephrine b) Dopamine *(UP 08)*
c) Melanin d) Melatonin

935. Basic amino acids are - *(UP 08)*
a) Lysine and arginine
b) Serine and cystein
c) Phenylalanine and tyrosine
d) Aspartic acid and Glutamic acid

936. A young male presented with X-linked recessive disorder with hyper uricemia and mild retardation develops - *(UP 08)*
a) Bronch chain amino acids metabolites deficiency
b) Homogentisate oxidase defective enzymes
c) Hypoxanthine phosphoribosyl transferase deficiency
d) Phenylalanine hydroxylase deficiency

937. All are true about glutathione except -
a) It is a tripeptide *(Aiims May 08)*
b) It converts hemoglobin to methemoglobin
c) It conjugates xenobiotics
d) It scavenges free radicals and superoxide ions

938. PKU is a congenital amino acid metabolic disorder. In one of the following rare variants of PKU dihydro biopterin synthesis is affected. The enzyme deficient is - *(PGI June 08)*
a) Histidine decarboxylase
b) Phenylalanine hydroxylase
c) Dihydropterin reductase
d) Tyrosine deficiency

939. All are aromatic amino acids except -
a) Lysine b) Phenylalanine *(DPGEE 08)*
c) Tyrosine d) Tryptophan

940. Phenylketonuria is caused by deficiency of -
a) Tyrosine transaminase *(DPGEE 08)*
b) Tyrosine hydroxylase
c) Phenylalanine transaminase
d) Phenylalanine hydroxylase

941. In which organelle (s) of hepatocyte, the elongation of long chain fatty acid takes place - *(PGI Dec 08)*
a) Endoplasmic reticulum (ER)
b) Golgi body
c) Mitochondria
d) Lysosomes
e) Ribosome

942. Which of the following are intracellular events occurring in fibroblast during synthesis of collagen-
a) Hydrolysis of procollagen to collagen
b) Glycosylation of proline *(PGI Dec 08)*
c) Formation of triple helix
d) Formation of covalent cross link b/w fibrils
e) Self assembly of tropocollagen molecules into fibrils

943. What is role of insulin in lipid metabolism -
a) Activate lipoprotein lipase *(PGI Dec 08)*
b) Increase lipolysis
c) Activate hormone sensitive lipase
d) Activate acetyl CoA carboxylase
e) Decrease free fatty acid level

944. Replacing alanine by which amino acid will increase UV absorbance of protein at 280nm wavelength -
a) Leucine b) Proline *(AIIMS Nov 08)*
c) Arginine d) Tryptophan

945. All of the following can determine the protein structure, except - *(AIIMS Nov 08)*
a) High performance liquid chromatography
b) Mass spectrometry
c) X-ray crystallography
d) NMR spectrometry

924) a 925) b 926) b 927) b 928) a 929) c 930) c 931)d 932) b 933) c 934) d 935) a 936) c 937) b
938) c 939) a 940) d 941) a,c 942) c 943)a,d,e 944) d 945) a

946. A protein with molecular weight of 100 kD is subjected to SDS PAGE electrophoresis. The SDS PAGE electrophoresis pattern show two widely separated bands of 20kD after addition of Mercaptoethanol. The true statement regarding this will be- *(AI09)*
a) The protein has undergone complete lysis
b) The protein is a monomer of 20kD and 30kD protein
c) The protein is a dimer of two 20kD proteins
d) The protein is a tetramer of 20kd and 30kD proteins

947. Which amino acid migrates fastest on paper chromatography on methylceOulose medium?
a) Aspartic acid b) Valine *(AIIMSMay09)*
c) Lysine d) Glycine

948. NO is synthesized by - *(AIIMSMay 09)*
a) Uracil b) Aspartate
c) Guanosine d) Arginine

949. Protein is purified using ammonium sulfate by -
a) Salting out *(AIIMSMay 09)*
b) Ion exchange chromatography
c) Mass chromatography
d) Molecular size exclusion

950. In SDS-PAGE (Sodium Dobecyl Sulfate-polyacrylamide Gel Electrophoresis) proteins are seperated on basis of- *(PGI June 09)*
a) Mass b) Charge
c) Density d) Molecular weight
e) Solubility

951. The amino acid that produces kinks in the |3 pleated structure of proteins is - *(Corned 09)*
a) Glycine b) Serine
c) Proline d) Alanine

952. During standard plasma electrophoresis, a protein that moves ahead of albumin is - *(Corned 09)*
a) Fibrinogen b) Alpha feto protein
c) Haemopexin d) Retinol binding protein

953. In type I collagen, telopeptides corresponds to- *(DELHIPGFeb. 09)*
a) COOH-terminal with superhelical conformation
b) NH_2-terminal with superhelical conformation
c) Both COOH andNH_2-terminals with superhelical conformation
d) Both COOH and NH_2-terminals superhelical conformation

954. Branched chain amino acids - *(DELHIPG Feb. 09)*
a) Are normally completely catabolised by muscle to $C0_2$ and H_20
b) Can be catabolised by liver but not muscle
c) Are the main dietary amino acids metabolized by intestine
d) Are a major source of nitrogen for alanine and glutamine produced in muscle

955. Dopamine beta-hydroxylase catalyzes:
a) Dopa to dopamine *(DELHI PG Mar. 09)*
b) Norepinephrine to dopamine
c) Epinephrine to norepinephrine
d) Dopamine to norepinephrine

956. The rate limiting step for norepinephrine synthesis - *(DELHIPG Mar. 09)*
a) Conversion of phenylalanine to Tyrosine
b) Conversion of Tyrosine to DOPA
c) Conversion of DOPA to dopamine
d) Conversion of dopamine to norepinephrine

957. Urea cycle enzymes are - *(PGINov 09)*
a) Glutaminase
b) Asparginase
c) Arginosuccinate synthetase
d) Ornithine transcaroxylase
e) Glutamate dehydrogenase

958. Two same charged proteins can be separated by -
a) Agarose b) DEAE Cellulose *(DPG10)*
c) Sephadex d) None of these

959. In metabolic alkalosis, which Is true about excretion in urine - *(DPG10)*
a) More ofNH_3
b) Less of aceto-acetic acid
c) Betahydroxy butyric acid
d) Less ammonia

960. Nicotinamide is derived from - *(Maharashtra 10)*
a) Histidine b) Methionine
c) Tryptophan d) Phenylalanine

961. Urea cycle enzymes are - *(PGIMay 10)*
a) Glutaminase
b) Asparginase
c) Arginosuccinate synthetase
d) Ornithine transcaroxylase
e) Glutamate dehydrogenase

962. In Phenylketonuria the main aim of first line therapy is- *(AIIMS Nov 10)*
a) Replacement of the defective enzyme
b) Replacement of the deficient product
c) Limiting the substrate for deficient enzyme
d) Giving the missing amino acid by diet

963. Urea cycle occurs in - *(A111)*
a) Liver b) Gastrointestinal tract
c) Spleen d) Kidney

964. All of the following represent disorders or protein misfolding, Except - *(A111)*
a) Alzheimer's disease b) Tuberculosis
c) Cystic fibrosis d) Creutzfeldt- Jakob disease

965. Deamination of the following amino acid occurs in liver- *(Jipmer 10)*
a) Asparatate b) Alanine
c) Glutamine d) Glycine

966. Urea synthesis is mediated by - *(Jipmer 11)*
a) Ornithine decarboxylase
b) Aspartate transaminase
c) Arginase
d) Citrulline synthase

946) c 947) b 948) d 949) a 950) a,d 951)a,c 952) d 953) d 954) d 955) d 956) b 957) c,d 958) c 959) d 960) c 961) c,d 962) c 963) a 964) b 965) c 966) c

967. Cysteine is formed from - *(NEET/DNB Pattern)*
a) Methionine and serine
b) Methionine and glycine
c) Alanine and glycine
d) Serine and glycine

968. The following metabolite is a derivative of tryptophan- *(NEET/DNB Pattern)*
a) Melatonin b) Thyroxine
c) Epinephrine d) Nor epinephrine

969. Carbamoyl phosphate is used in - *(NEET/DNB*
a) Urea b) Uric acid *Pattern)*
c) Pyruvic acid d) Stearic acid

970. Glutathione is composed of - *(NEET/DNB Pattern)*
a) Cysteine & glycine
b) Glutamic acid, cysteine &glycine
c) Glutamic acid, glycine & cystine
d) Lysine & methionine

971. Beta-alanine is derived from -*(NEET/DNBPattern)*
a) Adenosine b) Guanosine
c) Adenosine d) Uricil

972. Glutamine synthetase is a - *(NEET/DNB Pattern)*
a) Isomerase b) Ligase
c) Lyase d)Transferase

973. Which of the following amino acids is purely ketogenic- *(NEET/DNB Pattern)*
a) Phenylalanine b) Leucine
c) Proline d) Tyrosine

974. Gamma amino butyrate is synthesized from? -
a) Fumarate b) Glutamate
c) Histidine d) Glycine

975. Which of the following transports nitrogen from muscle to liver - *(NEET/DNB Pattern)*
a) Lactate b) Alanine
c) Glutamine d) Aspertate

976. Increased uric acid level in plasma is due to -
a) Increased purine utilization *(NEET/DNB Pattern)*
b) Decreased purine synthesis
c) Decreased degradation of purine
d) Decreased reutilization of purine

977. Which of the following porphuyrin is soluble in water and excreted in urine - *(NEET/DNB Pattern)*
a) Protoporphyrin b) Delta-ALA
c) Coproporphyrin d) Uroporphyrin

978. Glucuronyl conjugation of which amino acid leads to maximum excretion through urine?-*(NEET/DNB*
a) Glycine b) Alanine*Pattern)*
c) Proline d) Serine

979. NO is synthesized by -*(NEET/DNB Pattern, AMTS May 09)*
a) Uracil b) Aspartate
c) Guanosine d) Arginine

980. Maple syrup urine disease is due to -
a) a-ketoacid decarboxylase *(NEET/DNBPattern)*
b) Transaminase
c) Isomerase
d) Mutase

981. Selenocysteine is derivative of which aminoacid -
a) Cysteine *(NEET/DNBPattern)*
b) Alanine
c) Arginine
d) Glycine

982. Ochronosis is due to accumulation of?
a) Homogentisic acid *(NEET/DNB Pattern)*
b) Phenylpyruvate
c) Xanthurenate
d) Glyoxylate

983. Urea& Kreb's cycle are linked at - *(NEET/DNB*
a) Arginine b) Ornithine *Pattern)*
c) Oxaloacetate d) Fumarate

984. In blood bilirubin is with - *(NEET/DNB Pattern)*
a) Protein b) Steroid
c) Vitamin d) Carbohydrates

985. Carnitine is synthesised from -*(NEET/DNBPattern)*
a) Lysine b) Agrinine
c) Histidine d) Choline

986. Which will activate carbomoyl phosphate synthase I - *(NEET/DNBPattern)*
a) Alanine b) N-acetyl glutamate
c) Ornithine d) None

987. Transamination of Alanine results in formation of -
a) Oxaloacetate *(NEET/DNB Pattern)*
b) Pyruvate
c) Aspartate
d) Arginine

988. UAC to UAG - *(NEET/DNB Pattern)*
a) Nonsense mutation b) Frameshift mutation
c) Deletion d) Missense mutation

989. All are ketogenic & glucogenic amino acids except- *(NEET/DNB Pattern)*
a) Tyrosine b) Isoleucine
c) Phenyalanine d) Serine

990. Serotonin is synthesized *from-(NEET/DNB Pattern)*
a) Tryrosine b) Alanine
c) Tryptophan d) Glycine

991. All are in cystinuria except -*(NEET/DNB Pattern)*
a) Cystine b) Ornithine
c) Alanine d) Arginine

992. Mousy odour urine is seen in - *(NEET/DNB Pattern)*
a) Phenylketonuria
b) Maple syrup urine disease
c) Homocystinuria
d) Tyrosinemia

993. Which of the following enzyme is not used by liver in urea cycle - *(NEET/DNB Pattern)*
a) CPS-I b) CPS-II
c) Arginase d) Arginosuccinate

994. Acute intermittent porphyria is due to deficiency of- *(NEET/DNBPattern)*
a) Uroporphyrinogen I synthase
b) Uroporphyrinogen III synthase
c) Ferrochelatase
d) ALA synthase

967) a 968) a 969) a 970) b 971) d 972) b 973) b 974) b 975) b 976) d 977)d>c978)b 979) d 980) a
981)a 982) a 983)d 984)a 985)a 986)b 987)b 988)a 989)d 990)c 991) c 992)a 993)b 994)a

995. Lecithine hydrolysis yeilds - *(NEET/DNBPattern)*
a) Choline b) Pyruvate
c) Glycine d)None

996. Tryptophen is - *(NEET/DNB Pattern)*
a) Glucogenic
b) Ketogenic
c) Both glucogenic & ketogenic
d) None

997. Hyperammonemia type I is due to deficiency of -
a) CPS-I *(NEET/DNB Pattern)*
b) CPS-H
c) Arginase
d) Arginosuccinase

998. Which of the following amino acid is required for synthesis of hemoglobin - *(NEET/DNB Pattern)*
a) Alanine b) Glycine
c) Arginine d) Histidine

999. Enzyme dificient in alkaptonuria- *(NEET/DNB Pattern)*
a) Kynureninase
b) Tyrosine hydroxylase
c) Homogentisate oxidase
d) Tyrosinase

1000. Defect in phenylketonuria- *(NEET/DNB Pattern)*
a) Phenylanine hydroxylase
b) Homogentisate oxidase
c) Pyruvate hydroxylase
d) Fumarylacetoacetate hydroxylase

1001. Transamination reaction requires- *(NEET/DNB Pattern)*
a) Biotin b) Folic acid
c) Pyridoxin d) Niacin

1002. Major source of ammonia in kidney- *(NEET/DNB Pattern)*
a) Glutamate b) Glutamine
c) a-ketoglutarate d) Alanine

1003. Amino acid used by liver in urea cycle-*(NEET/DNB Pattern)*
a) Glutamine b) Glutamate
c) Aspartate d) Fumarate

1004. Cysteine is synthesized *irom-(NEET/DNB Pattern)*
a) Methionine b) Arginine
c) Histidine d) Lysine

1005. Albinism is due to deficiency of- *(NEET/DNB Pattern)*
a) Tyrosinase
b) Homogentisate oxidase
c) Fumaryl acetoacetate hydrolase
d) Chylomicrons

1006. Hartnup disease, limiting amino acid -*(NEET/DNB Pattern)*
a) Tyrosine b) Tryptophan
c) Rhenylalanine d) None

1007. Enzyme deficient in Isovaleric acidemia -
a) Isolvaleryl CoA dehydrogenase *(NEET/DNB Pattern)*
b) Phenylalanine hydroxylase
c) Arginase
d) None

1008. Cystine is formed from - *(NEET/DNB Pattern)*
a) Arginine b) Histidine
c) Cystane d) Alanine

1009. Which of the following is the rate limiting enzyme in pyrimine synthesis - *(NEET/DNB Pattern)*
a) Asportate transcarbamylase
b) Dihydro-orotase
c) Redvctase
d) UMP kinase

1010. Maple syrup urine disease is due accumulation of -
a) Phenylalanine *(NEET/DNB Pattern)*
b) Tyrosine
c) Branched chain amino acids
d) Tryptophan

1011. Xanthurenic acid, accumulation occurs due to pyridoxin deficiency, is a metaboline of which amino acid- *(NEET/DNBPattern)*
a) Tyrosine b) Phenylalanine
c) Tryptophan d) Alanine

1012. Selenocystein is synthesized from - *(NEET/DNB Pattern)*
a) Alamine b) Cysteine
c) Arginine d) Histidine

1013. lyrsoine is the precursor of all except -*(NEET/DNB Pattern)*
a) Thyroxine b)Melanine
c) Dopmine d) Nicotinic acid

1014. Hydrolysis occurs at which step of urea cycle -
a) Cleavage of arginine *(NEET/DNB Pattern)*
b) Formation of Arginosuccinate
c) Formation of citrullin
d) Formation of ornithine

1015. 1st product of tryptophan Catabolism - *(NEET/DNB Pattern)*
a) Kynurenine b) xantheurenic acid
c) Bradykinin d) Melatonin

1016. Indole ring is present in - *(NEET/DNB Pattern)*
a) Tryptophan b) Tyrosine
c) Phenylalanine d) Threonine

1017. Neonatal tyrosenemia is due to deficiency of -
a) Tyrosinase *(NEET/DNB Pattern)*
b) Fumarylacetoacetate hyroxyase
c) Hydroxyphenyl pyruvate hydroxylase
d) Tyrosine transminase

1018. Xantheurenic acid is produced in -
a) Tyrosine metabolism *(NEET/DNB Pattern)*
b) Tryptophan metabolism
c) Cysteine metabolism
d) Valine metabolism

1019. Which of the following requires vitamin B_{12} -
a) Serine to lysine *(NEET/DNB Pattern)*
b) Homocysteine to methionine
c) Serine to glycine
d) Glutamine to glutamate

1020. Non-protein nitrogen product in blood -
a) Sucrose b) Triglyceride
c) Urea d) Cholesterol

995)a 996)c 997)a 998)b 999)c 1000)a 1001)c 1002)b 1003)c 1004)a . 1005)a 1006)b 1007)a 1008)c

GENETICS & METABOLISM OF PURINE AND PYRIMIDINES

1021. Which base is not found in DNA - *(AI89)*
a) Adenine b) Guanine
c) Cytosine d) Uracil

1022. End product of purine metabolism is - *(JIPMER 90)*
a) Creatinine b) Uric acid
c) Xanthine d) Phosphates

1023. Part of M-RNA removed during protein synthesis
a) Interon b) Codon *(AI91)*
c) Exon d) Cistron

1024. DNA double helix is bound by - *(AIIMS 92)*
a) Covalent bond b) Disulfide linkage
c) Vanderwaal forces d) Hydrogen bond

1025. Lesch Nyhan syndrome is dur to - *(AI92)*
a) Total deficiency of HGPRT
b) Partial deficiency of HGPRT
c) Total deficeincy of PRPP
d) Partial deficeincy of PRPP

1026. Sickle cell anaemia is the clinical manifestation of homozygous genes for an abnormal haemoglobin molecule. The event responsible for the mutation in the B chain is - *(AIIMS 81,KERALA 90)*
a) Insertion b) Deletion
c) Nondisjunction d) Point mutation

1027. Orotic acid - *(AIIMS 82)*
a) React with PRPP to from OMP
b) Utilized for pyrimidine synthesis
c) Can be converted to UMP and CMP
d) All of the above
e) None of the above

1028. MRNA is a complimentary copy of - *(DNB90)*
a) TRNA b)RRNA
c) Ribosomal DNA d) Both strands of DNA
e) A single strand of DNA

1029. A codon consists of - *(DELHI 83)*
a) Two complementary base pairs
b) Three consecutive nucleotide units
c) An individual ribosome
d) Four individual nucleotides

1030. The degradation of RNA by pancreatic ribonuclease produces - *(Kerala 90)*
a) Nucleoside *T* phosphates
b) Nucleoside 3' phosphates
c) Nucleoside 5' phosphates
d) Nucleotides

1031. In sickle cell anaemia, the defect can be explained as having arisen from - *(PGI84)*
a) A base insertion in DNA
b) A base deletion in DNA
c) A base substitution in DNA
d) None of the above

1032. Inosinic acid is biological precursor of -
a) Uracil and thymine *(NIMHANS 8 7)*
b) Purines and pyrimidines
c) Adenylic acid and guanylic acid
d) Orotic acid and uridylic acid

1033. In mammalian cells protein synthesis takes place chiefly at the - *(AMU 8 7)*
a) Smooth endoplasmic reticulum
b) Rough endoplasmic reticulum
c) Nucleus
d) Nucleolus
e) Lysosomes

1034. HbS has defect in aminoacid position -
a) 4 b)6 *(PGI 84, TN 91)*
c) 11 d) 12

1035. Atoms found in UTP are derived from all of the following except - *(DNB 89)*
a) Phosphoribosyl pyrophosphate
b) Aspartate
c) $C0_2$
d) Glutamine
e) Glycine

1036. The percentage of a bacterial chromosome usually involved in transformation is - *(AIIMS 85)*
a) 1 percent b) 10 percent
c) 25 percent d) 50 to 100 percent

1037. Doland and Da Silva method is used to detect- *(AIIMS 83, 84)*
a) Hemosiderinuria b) Hemoglobinuria
c) Sickling trait d) RBC fragility

1038. R-RNA is mainly produced in - *(AIIMS 84)*
a) Nucleus b) Nucleolus
c) Ribosome d) Endoplasmic reticulum

1039. The attachment site of DNA dependent RNA polymerase to a gene is the - *(PGI 80, 89)*
a) Operator b) Promoter
c) Structural gene d) Regulatory gene
e) Repressor

1040. The term modified base refers to - *(Orissa 89)*
a) Purine or pyrimidine attached to deoxyribose
b) A purine or pyrimidine that has been altered
c) A nitrogen containing ring other than a purine or pyrimidine that is part of a nucleotide
d) A purine or pyrimidine attached to a sugar by O-glycoside linkage

1041. Chargaff rule states that - *(BIHAR 89)*
a) A+G = T+C b) A/T = G/C
c) A = U = T = G = C d)A+T=G+C

1042. Thermostability of DNA is provided by - *(AI96)*
a) G-C bonds
b) A-T pairing
c) N-glycosolic bond
d) Antiparallel arrangement

1021) d 1022)b 1023) a 1024)d 1025)a 1026)d 1027)d 1028)e 1029)b 1030)b,c,d 1031)c 1032)c 1033)b
1034)b 1035)e 1036)a 1037)c 1038)b 1039)b 1040)b 1041)a 1042)a

1043. One of the following mutations is potentially lethal-
a) Substitution of adenine for cytosine *(Delhi 96)*
b) Substitution of methylcytosine for cytosine
c) Substitution of guanine for cytoxine
d) Insertion of one base

1044. The breakdown product of ribonuclease action is -
a) Nucleoside 5' phosphates only *(Delhi 96)*
b) Nucleoside 3' phosphates only
c) Nucleoside 3' phosphate + oligonucleotides
d) Purine & pyrimidine bases

1045. Protein Synthesis takes place mainly in-
a) The ribosomes *(CUPGEE 96, JIPMER 92,*
b) The mitochondria *A1IMS 80, 81)*
c) The Centrosome
d) The golgi apparatus

1046. Proteins binding to DNA has - *(AllIndia 97)*
a) Copper b)Zinc
c) Cobalt d)Iron

1047. Restriction endonuclease cleaves - *(AllIndia 97)*
a) Double stranded DNA
b) Single stranded DNA
c) Single stranded RNA
d) Polypeptide

1048. DNA fragments are separated by- *(AIIMS96)*
a) Centrifugation
b) Paper chromatography
c) Agarose gel electrophoresis
d) Thin layer chromatography

1049. Enzyme most important in translation is -
a) DNA polymerase *(AIIMS96)*
b) RNA polymerase
c) T-RNA tranferase
d) Ribosomal transcriptase

1050. B-alaniane is a end product of - *(JIPMER 98)*
a) Heparin b) Albumin
c) Adenosined) Thymidylate

1051. Histones activation ingene expression is by- *(AIIMS97)*
a) Formylationb) Methylation
c) Acetylationd) Aldolase

1052. Unwinding of DNA is done by- *(AIIMS 97)*
a) DNAse b) Topoisomerase
c) Ligase d) Reverse transcriptase

1053. Leucine zipper motif is a mediator for -
a) Membrane attack complexes *(AIIMS97)*
b) Ligand membranes
c) Binding of regulatory proteins to DNA
d) Cyclic GMP

1054. Fidelity enzyme in protein synthesis - *(Al 98)*
a) DNA polymerase
b) RNA polymerase
c) Amino-Acyl t-RNA synthase
d) Amino acyl reductase

1055. Chain initiation in protein synthesis is by-
a) AUG b) GLAA *(MAHE 98, AIIMS 82)*
c) UGA d)UAG

1056. Which one of the following is the function of small nuclear ribonucleoprotein particles (SnRNP) -
a) Initiation of protein synthesis *(ICS 98)*
b) Activation of amino acids
c) Processing of RNA
d) Replication of DNA

1057. Nonsense codons bring about - *(ICS 98)*
a) Elongation of polypeptide chain
b) Pre-translational modiflcastion of protein
c) Initiation of protein synthesis
d) Termination of protein synthesis

1058. Function of endonucleoses - *(KERALA 98)*
a) Cut DNA at specific DNA sequences
b) To point out the coding regions
c) Enhancers
d) To find out antibiotic resisetance

1059. Translation occurs at - *(AI99)*
a) Mitochondria b) Centrosome
c) Nucleus d) Ribosome

1060. Polymerase Chain Reaction is - *(Al 99)*
a) Enzymatic amplificastion of gene
b) Genetic engineering mediated gene amplification
c) Duplication of gene
d) Cleavage of gene

1061. Visualisation of specific RNA fragment using RNA probe is - *(ALL INDIA 99)*
a) Southern blotting b) Western blotting
c) Eastern blotting d) Northern blotting

1062. Examples of conservative mutation is - *(AIIMS 98)*
a) Glutamine to glutamate
b) Alanine to leucine
c) Aspartate to asparagine
d) Leucine to alanine

1063. Photolyase helps in - *(CUPGEE99)*
a) DNA repair b) DNA replication
c) Protein synthesis d)None

1064. What is the technique by which DNA can be amplified- *(Karnat 99)*
a) Southern blot b) Polymerase chain reaction
c) Hybridization d) Western blot

1065. In restriction fragment length polymorphism, DNA separation is done using - *(AllIndia 2K)*
a) Gel electrophoresis
b) Ultra centrifugation
c) High performance liquid
d) Ion exchange chromatography

1066. Which one is nonsense codon - *(Burdwan 2K)*
a) UUA b)UAG
c) UGA d)UAU

1067. What is the first step in the synthesis of human insulin by genetic engineering - *(AIIMS 2K)*
a) CDNA identification in somatic cell
b) Genomic DNA identification in Pancreatic cell
c) CDNA identification in pancreatic cell
d) Genomic DNA identification in somatic cell

1043) d 1044)c 1045) a 1046)b 1047)a 1048)c 1049)None 1050)d 1051)b,c 1052)b 1053)c 1054)c 1055)a
1056) c 1057) d 1058) a 1059)d 1060)a 1061)d 1062)a 1063)a 1064)b 1065)a 1066)b,c

1068. On complete hydrolysis of DNA we will get all the following except - *(AIIMS2K)*
a) Deoxy pentose sugar b) Phosphoric acid
c) Adenosine d) Purine bases

1069. Amber codon is - *(AIIMS 2001)*
a) Initiator codon b) Terminator codon
c) Alters protein structures d) None

1070. Action of 'Telomerase' is - *(CUPGEE2001)*
a) DNA repair
b) Longetivity of cell - Ageing
c) Breakdown of telomer
d) None

1071. Which of the following is/are the features of polymerase used in recombinant synthesis -
a) Thermo stable *(PGI2K)*
b) Does not require a primer
c) Unusually active
d) Replicates double stranded DNA

1072. Which of the following RNA contains thymidine -
a) TRNA b) Ribosomal RNA *(PGI2K)*
c) Eukaryotic RNA d) Prokaryotic RNA

1073. All are true of the genetic code except - *(DNB 2001)*
a) Degenerate b) Universal
c) Punctuation d) Non overlapping

1074. Total number of genes in a human being is -
a) 80,000 b) 50,000 *(Kerala 01)*
c) 100,000 d) 30,000

1075. Northern blot uses - *(AIIMS 2001)*
a) Amplification of mRNA
b) Amplification of tRNA
c) Amplification of nucleotides
d) DNA

1076. Nucleic acid absorbs light at wavelength of 260 mm due to - *(PGI 2002)*
a) Proteins b) Ribose
c) Purines & Pyrimidines d) Deoxyribose
e) Phosphates

1077. DNA finger printing is done by- *(PGI 97)*
a) Splitting DNA b)DNAofWBC
c) DNA from nucleated cells d) All of the above

1078. The enzyme deficient in Lesch-Nyhan syndrome is -
a) GIRT b) Glutaminase *(PGI 99)*
c) Transcarboxylase d)HGPRT

1079. DNA synthesis requires- *(PGI 2000)*
a) DNA polymerase b)DNAligase
c) DNA topoisomerase d)Primase
e) RNA polymerase

1080. Which is the smallest fundamental unit coding for DNA synthesis- *(PGI 01)*
a) Cistron b) Operon
c) Replican d) Anticodon

1081. Polypetide chain termination is enhanced by-
a) Stop codon b) Promoter *(PGI 01)*
c) Ribosomal d) Peptidyl transferase
e) UAA

1082. Correct sequence of enzymes required for DNA formation is- *(PGI 01)*
a) DNA polymerase —> Protein unwinding enzyme —> DNA ligase —» DNA Isomerase —> Polymerase-1
b) Protein unwinding enzyme -> Polymerase 1 —> DNA ligase —> DNA Isomerase —> DNA polymerase
c) RNA polymerase —> DNA polymerase III —» DNA polymerase I -DNA ligase
d) RNA polymerase —» DNA Polymerase III —> DNA ligase —> Exonuclease —> DNA polymerase I

1083. The hydrolytic step leading to release of polypeptide chain from ribosomes is catalysed by - *(PGI 02)*
a) Stop codons b) Peptidyl transferase
c) Release factors d) AUG codon
e) Dissociation of ribosomes

1084. True statements about PCR - *(PGI 02)*
a) Protein amplification
b) DNA amplification
c) Same as western blot test
d) Detection of infecting organisms

1085. True about PCR - *(PGI 02)*
a) Primers required
b) DNA dependant RNA polymerase
c) DNA polymerase
d) RNA dependent DNA polymerase

1086. Somatic mutations involve - *(PGI 02)*
a) Deletion
b) Plasmid mediated
c) Frame-shift alteration in coding nucleotides
d) Trinucleotide repeat mutations
e) Non-sense alteration of DNA

1087. True about coding strand of DNA- *(PGI 03)*
a) Template strand
b) Minus strand
c) Runs at 5' - 3' direction
d) Runs at 3' - 5' direction
e) Plus strand.

1088. Autosomal dominant disorders are A/E - *(PGI 03)*
a) Huntington's disease
b) Neuro fibromatosis
c) Wilm's tumour
d) Adult polycystic kidney disease
e) Thalassemia

1089. Prenatal genetic diagnostic tests are performed in conditions - *(PGI 03)*
a) X-linked disorders
b) Advanced maternal age
c) Infertility
d) Multiple spontaneous abortions
e) Ethnic groups at high risks

1090. True about telomerase or telomere is/are - *(PGI 03)*
a) They are present at the ends of eukaryotic chromosome
b) Increased telomerase activity favours cancer cells
c) DNA dependent RNA polymerase
d) DNA polymerase

1067) c 1068) c 1069)b 1070)b 1071)a,d 1072)a 1073)c 1074)d 1075)a 1076)c 1077)d 1078)d 1079)A11 1080) a 1081)a,el082)c 1083)c 1084)b,d 1085)a,c 1086)a,c,d,e 1087)c 1088)e 1089)a,b,d,e 1090)a,b

1091. Metaphase II is seen in- *(PGI03)*
a) 1 N Chromosome b) 2 N Chromosome
c) 4 N Chromosome d) Seen only in Meiosis
e) Seen only in Mitosis

1092. Components of chromosome are - *(PGI 03)*
a) DNA b) tRNA
c) mRNA d)rRNA
e) Histones

1093. Correct statements regarding restriction endonuclease is/are - *(PGI 03)*
a) Restriction endonuclease recognizes specific sites of DNA sequence.
b) Resteiction endonuclease recognizes short sequence of DNA
c) It acts at 5' - 3' direction
d) It acts at 3' - 5' direction

1094. Autosomal recessive diseases are A/E- *(PGI 03)*
a) Hereditary spherocytosis b) Thalassemia
c) Sickle cell anaemia d) Cystic fibrosis
e) Haemophilia

1095. DNA polymerase have - *(PGI 03)*
a) 3' - 5' polymerase activity
b) 5' - 3' polymerase acitivity
c) 3' - 5' exonuclease activity
d) 5' - 3' exonuclease activity
e) Endonuclease activity

1096. Purpose of Gene therapy - *(PGI 03)*
a) Replacement of abnormal gene by normal gene
b) Replacement of normal gene by abnoral gene
c) Knock out of abnormal gene
d) Introduction of viral gene

1097. Gene therapy methods are - *(PGI 03)*
a) Electroporation
b) Intranuclear injection
c) Site directed mutagenesis
d) Retrovirus

1098. Highly repetetive DNA is seen in - *(PGI 03)*
a) Cloning of DNA b) Microsatelite DNA
c) Telomere d) Centromere

1099. True about reverse transcriptase - *(PGI 03)*
a) Forms DNA from RNA
b) Forms RNA from DNA
c) Important for replication of HIV
d) Amplification of DNA
e) DNA dependent RNA polymerase

1100. Mitochondrial DNA is - *(PGI 03)*
a) Paternally inherited
b) Maternally transmitted
c) Horizontal inheritance
d) Vertical inheritance

1101. True about coding strand of DNA- *(PGI 03)*
a) DNA acts as template for mRNA
b) Minus strand
c) Plus strand
d) Matches with RNA transcript that encodes protein

1102. Starting from the 3* end (acceptor arm) the correct sequence (towards 5' end) of arms in tRNA is -
a) Pseudouridine arm, anticodon arm, variable arm, Darm *(UPSC 02)*
b) D arm, anticodon arm, variable arm, pseudouridine arm
c) Pseudouridine arm, variable arm, anticodon arm, Darm
d) D ami, variable arm, anticodon arm, pseudouridine arm

1103. Degenerancy of codons means - *(Jipmer 03)*
a) More than one codon for a single amino acid
b) Termination of protein synthesis
c) Transcription
d) Translation

1104. The following enzymes are needed for DNA synthesis except - *(Jipmer 03)*
a) DNA polymeraseb) Restriction endonuclease
c) Ligase d)None

1105. The primary role of chaperones is to help in -*(AI03)*
a) Protein synthesis b) Protein degradation
c) Protein denaturationd) Protein folding

1106. Which one of the following is not a post transcriptional modification of RNA - *(AI 03)*
a) Splicing b) 5' capping
c) 3'polyadenylation d) Glycosylation

1107. Restriction fragment length polymorphism is used for - *(AI03)*
a) Analysis of chromosomes structures
b) DNA estimation
c) Synthesis of nucleic acid
d) Detecting proteins in a cell

1108. Which one of the following procedures as routine technique for karyotyping using light microscopy-
a) C - banding b) G - banding *(AI03)*
c) Q - banding d) Brd V - standing

1109. At the physiological pH the DNA molecules are- *(AIMS 03)*
a) Positively charged b) Negatively charged
c) Neutral d) Amphipathic

1110. Replication and transcription are similar processes in mechanistic terms because both -
a) Use RNA primers for initiation *(AIIMS 03)*
b) Use decoxybonucleotides as precursors
c) Are semi conserved events
d) Involve phosphodiester bond formation with elongation occuring in the 5^5 - 3' direction

1111. Chromosomal nomenclature is based on -
a) Position of the centromere *(Karnataka 03)*
b) Standing properties
c) Number of chromosomes
d) Length of the arms

1112. Major component of DNA- *(PGI 04)*
a) Histone b) Repressor
c) Deoxyribonucleotides d) Inducer
e) Uracil

1091) a,d 1092)a,e 1093)a,b 1094)b,c,d 1095)b,c,d 1096)a 1097) All 1098)c,d 1099)a,c 1100) b 1101)d 1102)c 1103)a 1104)b 1105)d 1106)d 1107)a 1108)b 1109)b 1110)d llll)a 1112)c

1113. Codon consists of- *(PGI04)*
a) 3 base pair b) 2 Base pair
c) Two nucleotide d) 5 Base pair

1114. Operon model was elucidated by - *(PGI04)*
a) Jacob & Monad b) Waston & Crick
c) Leiderburg & Tautum d) Twort D Herell
e) Weibelpalada

1115. DNA selected for genetic information as compared to RNA because - *(PGI 04)*
a) It is stable
b) Double stranded compared to RNA
c) Two strands are complementary
d) I has genes
e) Scmireplicating

1116. Selective suppression of a functional gene by a funtional allele is called - *(PGI 04)*
a) Transgene b) Pseudogene
c) Insertion d) Knockout
e) Repression

1117. Gene amplification is by - *(PGI 04)*
a) Polymerase Chain Reaction
b) Ligase chain reaction
c) DNA hybridization
d) In situ hybridization
e) Cloning

1118. An enzyme that makes a double stranded DNA copy from a single stranded RNA template molecule is known as - *(AI04)*
a) DNA polymerase b) RNA polymerase
c) Reverse transcriptase d) Phosphokinase

1119. A segment of an eukaryotic gene that is not represented in the mature mRNA, is known as -
a) Intron b) Exon *(AI 04)*
c) Plasmid d) TATA box

1120. Which of the following groups of proteins assist in the folding of other proteins - *(AI 04)*
a) Proteases b) Proteosomes
c) Templates d) Chaperones

1121. In PCR, DNA polymerase is used in-*{Jharkhand 03)*
a) DNA replication b) DNA Elongation
c) DNA Multiplication d)All

1122. Excessive ultraviolet (UV) radiation is harmful to life. The damage caused to the biological systems by ultraviolet radiation is by - *(AIIMS 04)*
a) Inhibition of DNA synthesis
b) Formation of thymidine dimers
c) Ionization
d) DNA fragmentation

1123. The protein rich in basic amino acids, Which functions in the packaging of DNA in chromosomes is-*(AI 03)*
a) Histone
b) Collagen
c) Hyaluronic acid binding protein
d) Fibrinogen

1124. New DNA synthesis occurs in - **(***SGPGI05)*
a) Prophase b) Anaphase
c) Telophase d) Interphase

1125. Number of t-RNA present in cells is - (*AMU 05)*
a) 23 b)25
c) 28 d)30

1126. DNA repair proof reading in prokarytotes are caused by - **(***AMU 05)*
a) DNA Polymerase I b) DNA polymerase II
c) DNA Polymerae III d)Gyrase

1127. The relationship between sulphonamide and PABA is -
a) Metabolic antagonism (*MAHE 05)*
b) Synergism
c) Intermediate compound formation
d) Chelation

1128. Using written convention, which one of the following sequences is complementary to TGGCAGCCT -
a) ACCGTCGGA b)ACCGUCGGA
c) AGGCTGCCA d)TGGCTCGGA

1129. A molecule used to direct the presence of specific fragment of DNA or RNA is known as - **(7***CS 05)*
a) Primosome b) Probe
c) Pseudo gene d) Signal

1130. Complemetary RNA sequence of 5' AGTCTGACT3' - *{PGI June 05)*
a) 5' UCAGACUGA3' b) 5'UCAGACUGA 3'
c) 5'UCAGACUGA3' d)5'UCAGACUGA3'
e) 5'UCAGACUGA3'

1131. DNA or RNA fragment which is radioactive or chemically labile to detect a specific fragment -
a) Probe *{PGIJune 05)*
b) Okazaki fragment
c) Antibody

1132. Acridine, which is a part of proflavin proflavin producing genetic mutation - *{PGI June 05)*
a) Gene re-arrangement
b) Point mutation
c) Fram shift mutation

1133. Enzyme used for p roof reading - *{PGI June 05)*
a) Prokaryote DNA polymerase 3'-5' exonuclease activity
b) Prokaryote DNA polymerase 5' - 3'

1134. PCR requires- *{PGI June 05)*
a) Primer
b) DNA Polymerase
c) De-oxyribonucleotide phosphate
d) Di-oxyribonucleotide phosphate

1135. Gene transfer in bacterial system by -*{PGI June 05)*
a) Transformation b) Transduction
c) Conjugation d) Location
e) Mutation

1136. All are true about topoisomerase - II - *{PGI June 05)*
a) Separates the DNA and ligates them
b) Initiates RNA priers synthesis
c) Cut single strand of DNA

1137. Watson and Crick theory is related *to-(PGI June 05)*
a) DNA structure b) RNA structure
c) Base pairing of DNA

1113) a 1114) a 1115)a,b,c,e 1116)d 1117)a,e 1118)c 1119)a 1120)d 1121)c 1122)b 1123)a 1124)d 1125)a
1126)b 1127) a 1128)c 1129)b 1130)a 1131)a 1132)c 1133)a 1134)a,b,c,e 1135)a,b,c 1136)a 1137)a

1138. Wobble's hypothesis is - (*PGIJune05*)
a) First 2-bp are specific for t-RNA
b) First 3-bp are not specific for t-RNA
c) First 5-bp are specific for t-RNA

1139. Apart from occurring in nucleic acids, pyrimidines are also found in - *(AIIMSNov 05)*
a) Theophylline b) Theobromine
c) Flavin mononucleotide d) Thiamine

1140. Xeroderma pigmentation is caused due to a group of closely related abnormalities in -
a) Mismatch repair *(AIIMS Nov 05)*
b) Base excision repair
c) Nucleotide excision rapair
d) SOS repair

1141. To synthesize insulin on a large scale basis, the most suitable starting material obtained from the beta cells of the pancreas is - *{AIIMS Nov 05)*
a) Genomic DNA b) Total cellular RNA
c) cDNA of insulin d) mRNA of insulin

1142. Euchromatin is the region of DNA that is relatively-
a) Uncondensed b) Condensed *(AI06)*
c) Overcondensed d) Partially condensed

1143. Microsatellite sequence is - *(AI 06)*
a) Small satellite
b) Extra chromosomal DNA
c) Short sequence (2-5) repeat DNA
d) Looped-DNA

1144. Mitochondrial DNA is - *(AI 06)*
a) Closed circular b) Nicked circular
c) Linear d) Open circular

1145. Which type of RNA has the highest percentage of modified base ? *(AI 06)*
a) mRNA b)tRNA
c) rRNA d) snRNA

1146. The sigma (a) subunit of prokaryotic RNA polymerase - *(AI 06)*
a) Binds the antibiotic rifampicin
b) Is inhibited by a-amanitin
c) Specifically recognizes the promoter site
d) Is part of the core enzyme

1147. Which one of the following is the complementary sequence of 5' TTAAGCTAC 3' ? *(AI 06)*
a) 5'GTACGCTTAA3' b)5'AATTCGCATG3'
c) 5^5 CATGCGAATT 3 ' d) 5 ' TTAAGCGTAC 3 '

1148. During replication of DNA, which one of the following enzymes polymerizes the Okazaki fragments - *(AI 06)*
a) DNA Polymerase I b) DNA Polymerase II
c) DNA Polymerase III d) RNA Polymerase I

1149. All of the following cell types contain the enzyme telemerase which protects the length of telomeres at the end of chromosomes, except - *(AI 06)*
a) Germinal b) Somatic
c) Hemopoietic d) Tumor

1150. Base substitution mutations can have be following molecular consequence except - *(AI 06)*
a) Changes one codon for an amino acid into another codon for that same amino acid
b) Codon for one amino acid is changed into a codon of another amino acid
c) Reading frame changes downstream to the mutant site
d) Codon for one amino acid is changed into a translation termination codon

1151. The following methods can be used to detect the point mutation in the beta (P)-globin gene that causes sickle cell anemia, except - *(AI 06)*
a) Polymerase chain reaction with allele-specific oligonucleotide hybridization
b) Southern blot analysis
c) DNA sequencing
d) Northern blot analysis

1152. Stop codon - *(PGI June 06)*
a) UAG b) UCA
c) UAC d)AUG

1153. Trinucleotide repeats are found in - *(PGI June 06)*
a) Huntington's disease
b) Spinocerebellar ataxia
c) Amyotropic lateral sclerosis

1154. Which of the following are situated away from the coding region - *(PGI June 06)*
a) Promoter
b) Enhancer
c) Operator

1155. True statements about DNA structure -
a) All nucleotides are involved in linkage
b) Antiparallel *(PGI June 06)*
c) Parallel
d) Bases are perpendicular to DNA
e) Attached by hydroxy bond

1156. Transcription is inhibited by - *(PGI June 06)*
a) ActinomycinD b)Amanitin
c) Chloramphenicol d) Streptomycin
e) Puromycin

1157. Zinc finger is- *(PGI June 06)*
a) Nuclear receptor
b) Membrane receptor
c) Receptor associated kinase

1158. DNA fingerprinting was founded by - *(PGI June 06)*
a) Watson b)Galton
c) Jeffrey

1159. DNA Amplification is done in - *(PGI June 06)*
a) PCR
b) NASBA (Nucleic acid sequential based amplification)
c) Ligase chain reactions
d) DNA sequencing

1160. Anticodon is present in - *(NIMHANS06,*
a) mRNA b) tRNA *Kerala 2k, 90)*
c) rRNA d) hn RNA

1138) a 1139) d 1140)c 1141)d 1142)a 1143)c 1144)a 1145)b 1146)c 1147)a 1148)c 1149)b 1150)c 1151)d 1152) a 1153)a,b 1154)a,b 1155)a,b,d 1156)a,b 1157)a 1158)c 1159)a,b,c 1160)b

1161. Okazaki fragment - *(APPG 2006)*
a) DNA fragment
b) RNA fragment
c) DNA fragment with RNA head
d) RNA fragment with DNA head

1162. In E.coli structural gene of lac operon is stimulated in- *(Manipal 2006)*
a) Presence of glucose only
b) Presence of lactose only
c) Presence of glucose and absence of lactose
d) Presence of lactose and absence of glucose

1163. Okazaki fragments are found *during-(PGMCET07, AI96)*
a) Replication b) Translation
c) Translocation d) Transcription

1164. Translocation is necessary for- *(PGMCET01)*
a) Initiation of codon
b) Binding of mRNA to ribosomes
c) Finding of proteins
d) Elongation of proteins

1165. Study of multiplication of proteins in disease process is called - *(AI 07)*
a) Proteomics b) Genomics
c) Glycomics d) Nucleomics

1166. Nothern blot is used for the separation of - *(AI07)*
a) mRNA b) DNA
c) Protein d) Protein DNA interaction

1167. Ragarding cytosolic Eukaryotic gene expression false is - *(AI07)*
a) Capping helps in attachment of mRNA to 40 S Ribosome
b) N formyl methionine tRNA will be the first t - RNA to come into action
c) EF2 shifts between GDP & GTP
d) Releasing factor releases the polypeptide chain from the P site

1168. CAP in Lac operon is an example of - *(AI 07, 01)*
a) Positive regulator b) Negative regulator
c) Constitutive expression d) Attenuation

1169. Rapid method of chromosome identification in intersex is - *(Aiims May 07)*
a) FISH b) PCR
c) SSCP d) Karyotyping

1170. SYBR Green Dye is used for - *(Aiims May 07)*
a) HPLC b) Immunofluorescence
c) PCR d) ELISA

1171. Y-chromosome is - *(Aiims May 07)*
a) Metacentric
b) Sub-metacentric
c) Acrocentric
d) Longer than the X-chromosome

1172. End product of purine metabolism in non-primate mammals is - *(Aiims May 07)*
a) Uric acid b) Ammonia
c) Urea d) Allantoin

1173. Abnormal base in tRNA is - *(MAHE07)*
a) Dihydrouracil b) Orotic acid
c) Methyl Xanthine d) Cystine

1174. The proteins presents in Deoxyribonucleic acid is -
a) Protamines b) Histone *(UP07)*
c) Albumins d) Globulins

1175. Human genome contains — base pairs- *(UP 07, PGI05)*
a) 3×10^9 b) 3×10^8
c) 3×10^7 d) 3×10^6

1176. "Transition mutation" occurs in - *(UP 07)*
a) A-G b) A-C
c) A-T d) D-G

1177. What is involved in formation of d-TMP from d-UMP- *(PGI June 07)*
a) N5, N10-methylene tetrahydro folate
b) Form imino folate
c) N5 formyl folate
d) Dihydro folate

1178. If there are 4 nucleotides instead of 3 in codon, how many amino acids may be formed -
a) 16 b) 21 *(PGI June 07)*
c) 256

1179. In leucine zipper model, leucine residue seen after every - *(PGI June 0 7)*
a) 3 amino acids b) 6 amino acids
c) 9 amino acids d) 12 amino acids
e) 7 amino acid

1180. Cation used in PCR is - *(AIIMSNov 07)*
a) Calcium b) Lithium
c) Magnesium d) Sodium

1181. Lesch - Nyhan Syndrome - associated with - *(UP 08)*
a) Purine necleoside phosphorylase deficiency
b) Adenosine deaminase deficiency
c) Hypoxanthine - guanine phosphoribosyl transferase defect
d) Xanthine oxidase deficiency

1182. Which of the following functionally competent of largest unit of the ribosomes - *(UP 08)*
a) tRNA
b) mRNA
c) Catalyze formation of the peptides
d) Formation of the polyribosomes

1183. Which of the following groups of proteins assist in the folding of other proteins ? *(AI 08)*
a) Proteases b) Proteosomes
c) Templates d) Chaperones

1184. Proteins are sorted by - *(AI 08)*
a) Golgi bodies b) Mitochondria
c) Ribosomes d) Nuclear membrane

1185. Okazaki fragments are formed during the synthesis of- *(AI08)*
a) ds DNA b) ss DNA
c) mRNA d) t RNA

1186. Poly(A) tail translates into - *(Aiims May 08)*
^ a) Polyproline b) Polylysine
c) Polyalanine d) Polyglycine

1161) c 1162) d 1163) a 1164)d 1165)a 1166)a 1167)b 1168)a 1169)a 1170)c 1171)c 1172)d 1173)a 1174)b
1175) a 1176) a 1177)a 1178)c 1179)e 1180) c 1181)c 1182) c 1183)d 1184)a 1185)a 1186)b

1187. In molecular cloning, Blue-white screening is used for - *(Aiims May 08)*
a) To screen for recombinant vectors
b) To detect gene mutations
c) To identify desired chromosomal DNA insert in plasmid vectors
d) To detect host DNA in situ

1188. True about DNA polymerae in eukaryotes -
a) Components are a, (J, y, A, £ *(PGI June 08)*
b) P associated with repair
c) y associated with repair
d) A associated with synthesis of mitochondrial DNA
e) Alpha is abundant amount

1189. True about DNA reconstruction technology -
a) Restriction endonucleases are involved
b) DNA ligase is used *(PGI June 08)*
c) Acid phosphatase is used
d) Reverse transcriptase needed

1190. DNA repair defect is seen in - *(PGI June 08)*
a) Xeroderma pigmentosa
b) Bloom's syndrome
c) Ataxia telangiectasia
d) Li-Fraumani syndrome
e) Retinoblastoma

1191. True about G-protein receptor complex -
a) It interacts transmembrane domain *(PGI June 08)*
b) GTP to GDP
c) Adenyl cyclase activation leads to increased cAMP
d) GPCR has no phosphorylation property
e) Helical structure

1192. 5' TTACGTAC-3' after transcription what will be theRNA- *(PGI June 08)*
a) 5'-TTACGTAC-3' b)3'-TTACGTAC-5'
c) 5 ' - CATGCATT-3 ' d) 3 ' - CATGCATT-5 '
e) 5'-GUACGUAA-3'

1193. InPCR- *(PGI June 08)*
a) Thermostable enzyme is needed
b) 211 copies formed after 'n' numbers of multiple
c) Non specific
d) Thermolabile enzyme
e) Primer is needed

1194. RELP, TVue are - *(PGI June 08)*
a) Endonuclease cuts DNA at nucleotide level
b) It acts at specific site
c) Only cohesive ends are produced
d) Only blunt ends are produced

1195. Radiasensitive stage of cell cycle - *(PGI June 08)*
a) G_2 b) M
c) S d)G,
e) G_0

1196. In conversion of DNA to RNA, enzyme required - *(PGI June 08)*
a) DNA-Polymerase b) DNA Ligase
c) DNA-Polymerase d) RNA polymerase
e) Primase

1197. The following is an example for unusual base -
a) Di hydro uracil b) Adenine *(Manipal 08)*
c) Cytosine d) Uracil

1198. Folding of nascent polypeptide chains is the function of- *(DPGEE 08)*
a) Chaperones b) Proteosome
c) Heat shock proteins d) Ribosomes

1199. Effect of ultraviolet radiation on DNA is formation of- *(DPGEE08)*
a) Purine dimers b) Pyrimidine dimers
c) DNA-DNA cros linking d) All of the above

1200. Cytoplasmic translation system has the following number of t-RNAs - *(DPGEE08)*
a) 20 b) 26
c) 28 d) 31

1201. Which of the following bond is preserved during denaturation of proteins - *(DPGEE08)*
a) Hydrogen bond b) Peptide bond
c) Ionic bond d) All of the above

1202. Gene is ? *(APPG08)*
a) Codon b) Anticodon
c) Cistron d) Okazaki fragment

1203. mRNA codes for which tail ? *(APPG 08)*
a) Poly A b)PolyU
c) PolyC d) Poly G

1204. True about Hybridoma- *(PGIDec 08)*
a) Immortalise myeloma cell
b) Hybridoma cell produced by fusion of T-cell & myeloma
c) Cell is human origin
d) Prior immunisation is done
e) Produce monospecific & monoclonal Ab

1205. Micro RNA transcribed by- *(PGI Dec 08)*
a) RNA polymerase I b) RNA polymerase II
c) RNA polymerase III d) DNA polymerase
e) Drosha

1206. DNA fingerprinting is based on possessing in DNA of-
a) Constant tandem repeat *(PGIDec 08)*
b) Variable number tandem repeats (VNTR)
c) Non-repetative sequence
d) Exon
e) Intron in eukaryotes

1207. What will happen to DNA if salt is added to it -
a) Increase melting point (Tm) *(PGI Dec 08)*
b) Decrease Tm
c) Not affect Tm
d) Melting lead to denaturation of DNA
e) Both increase & decrease in Tm depending on concentration of salt

1208. Which statements are true about E.coli chromosomal DNA in relation with eukaryotic chromosomal DNA - *(PGIDec 08)*
a) Circular
b) Packed into nucleolus
c) Postively supercoiled
d) Negatively sepercoiled
e) Nucleus present

1187) c 1188)a,b 1189)a,b,d 1190)a,b,c 1191)a,b,c,e 1192)e 1193)a,e 1194)b 1195)a,b 1196)d 1197)a
1198) a 1199) b 1200)a 1201)b 1202)c 1203)a 1204)a,d,e 1205)b,e 1206)b 1207)a,d 1208)a,c,e

1209. Supercoiled DNA is separated by relaxed DNA by- *(PGI Dec 08)*
a) ELISA b) Gel electrophoresis
c) DNA footprinting d) DNA fingerprinting
e) Microarray assay

1210. Ribosome has following enzymatic activity?
a) Pep tidy 1 transferase *(AIIMS Nov 08)*
b) Peptidase
c) Aminoacyl tRNA synthetase
d) GTPase

1211. Intron is not found in which DNA? *(AIIMSNov 08)*
a) Nuclear DNA b) Mitochondrial DNA
c) BDNA d) Z DNA

1212. Synthesis of an immunoglobulin in membrane bound or secretory form is determined by -*(AIIMSNov 08)*
a) One turn to two turn joining rule
b) Class switching
c) Differential RNA processing
d) Allelic exclusion

1213. The gaps between segments of DNA on the lagging strand produced by restriction enzymes are rejoined/ sealed by - *(AI09)*
a) DNA ligases b) DNA helicase
c) DNA topoisomerase d) DNA phosphorylase

1214. Normal role of Micro RNA is - *(AI 09)*
a) Gene Regulation
b) RNA splicing
c) Initiation of translation
d) DNA conformational change

1215. Splicing activity is a function of- *(AI 09)*
a) mRNA b) sn RNA
c) rRNA d)tRNA

1216. CAP in Lac operon is an example of - *(AI 09)*
a) Positive regulator b) Negative regulator
c) Constitutive expression d) Attenuation

1217. All of the following are true about Sickle cell disease, Except - *(AI 09)*
a) Single nucleotide change results in change of Glutamine to valine
b) RFLP results from a single base change
c) 'Sticky patch' is generated as a result of replacement of a non polar residue with a polar residue
d) HbS confers resistance against malaria in heterozygotes

1218. A ten year old child with aggressive behavior and poor concentration is brought with presenting complaints of joint pain and reduced urinary output. Mother gives history of self mutilitative behavior stating that he tends to mutilate his fingers. Which of the following enzymes is likely to be deficient in this child - *(AI 09)*
a) HGPRTase b) Adenosine deaminase
c) APRTase d) Acid maltase

1219. All of the following statements about Lambda phase are true, Except - *(AI 09)*
a) In lysogenic phase it fuses with host chromosome and remains dormant
b) In Lytic phase it fuses with host chromosome and replicates
c) Both lytic and lysogenic phases occur together
d) In lytic phase it causes cell lysis and releases virus particles

1220. False about eukaryotic protein synthesis is -
a) N formyl Met is the first t-RNA to come into action
b) mRNA read from 5' to 3^5 *(AIIMSMay 09)*
c) Ef2 shifts between GDP to GTP
d) Capping helps in attachment of mRNA to 40 S ribosome

1221. Which test uses oligomer with single base pair substitution - *(AIIMS May 09)*
a) PCR
b) RFLP
c) Error coded mutation analysis

1222. All of the following abbreviations are true except -
a) AMP- adenosine monophosphate *(PGI June 09)*
b) CMP- Cutidine monophosphate
c) GMP- Guanosine monophosphate
d) TMP- Thymine monophosphate
e) UMP- Uracil monophosphate

1223. Hemoproteins are - *(PGI June 09)*
a) Cytochrome C b) Cytochrome 450
c) Myoglobin d) Hemoglobin
e) Catalase

1224. Which DNA polymerase is/are involved in repair of mammalian DNA- *(PGI June 09)*
a) a b) p
c) *y* d) e
e) 8

1225. True about genetic code except - *(PGI June 09)*
a) Degenerate b) Overlapping
c) Ambiguous d) Universal
e) Commaless

1226. True about generic code - *(PGI June 09)*
a) AUA codes for methionine in mitochondria
b) UGA codes for selenocysteine
c) AUG codes for initiator codon in mammalian cell
d) AG A & AGG act as chain terminator in mammalian
e) UAA, UAG & UGA are stop codon.

1227. True about mitochondrial DNA- *(PGI June 09)*
a) UGA codes for trytophan
b) codes for 13 protein
c) High content of untranslated sequence
d) Circular double stranded DNA
e) Mitrochondrial disease occur due to point mutation and large scale rearrengements.

1209)b 1210) a 1211)b 1212)c 1213)a 1214)a 1215)b 1216)a 1217)c 1218)a 1219)c 1220)a 1221)b 1222)d,e 1223) All 1224) b,d 1225) b,c 1226)a,c,d,e 1227)a,b,d,e

1228. True about polymerase chain reaction (PCR) -
a) Carried out by thermostable DNA polymerase
b) Exponential *(PGI June 09)*
c) Additive
d) specific
e) Single-stranded DNA is required

1229. Mutation that completely disrupt the function of the gene used in which of the following techniques -
a) Knock out *(PGI June 09)*
b) Non sense mutation
c) Restriction fragment length polymorphism
d) Targetted gene disruption
e) Knock-in

1230. Concentration of DNA is measured by-
a) Absorption of 360 nm *(PGI June 09)*
b) D-oxyribose estimation

1231. Lesch-Nyhan syndrome is caused by the deficiency of- *(DELHI PG Feb. 09)*
a) Folic acid
b) Carbamoyl phosphate synthetase II
c) UMP synthase
d) HGPRT

1232. Which of the following enzymes in DNA dependent RNA polymerase - *(DELHIPG Feb. 09)*
a) DNAligase b)Primase
c) DNA polymerase III d) RNA transcriptase

1233. The Z DNA helix - *(DELHIPG Feb. 09)*
a) Has fewer base pairs per turn than B DNA
b) Is favored by an alternating GC sequences
c) Tends to be found at 3 end to genes
d) Is inhibited by methylation of the bases

1234. Which of the following is not true about the buffering action of haemoglobin (Hb) ? *(DELHIPG Mar. 09)*
a) Hb is technically intracellular buffer
b) Hb is functionally a plasma buffer
c) Hb's buffering action is due to its histidine content
d) Oxygenated Hb is a strong base

1235. Which one of the following is porphyrinesgives stools their characteristics brown color ? *(DELHI PG Mar. 09)*
a) Biliverdin . b) Urobilinogen
c) Heme d) Stercobilin

1236. Which of the following compounds is an analogue of hypoxanthine ? *(DELHI PG Mar 09)*
a) Arabinoside C
b) Allopurinol
c) Ribose phosphate
d) 5-phosphoribosylpyrophosphate (PRPP)

1237. Which of the following statements describing restriction endonucleases is true ?
a) They always yield overhanging single-stranded ends *(DELHIPG Mar 09)*
b) They recognize methylated DNA sequences
c) They recognize triplet repeats
d) They cleave both strands in duplex DNA

1238. A potent inhibitor of protein synthesis that acts as an analogue of aminoacyl t-RNA is- *(DELHIPG Mar 09)*
a) Mitomycin C b) Streptomycin
c) Nalidixic acid d)Puromycin

1239. Components of 60 S subunit of ribosome are -
a) 5.8 S b) 23 S *(PGINov 09)*
c) 16S d) 18S
e) 28 S

1240. True about gene library - *(PGINov 09)*
a) Also known as chromosome
b) Library that contains books on gene
c) Computer base with all gene knowledge
d) DNA nucleotide or fragment
e) Complete collection of gene copies of one organism

1241. tRNA met would recognize - *(PGI Nov 09)*
a) AUG b)UGC
c) GUG d)GCU
e) UUG

1242. True about silent mutation in gene - *(PGINov 09)*
a) No change in mRNA
b) No change in Amino acid sequence in protein
c) No expression of protein
d) No change in expression of protein
e) Termination of protein synthesis

1243. Antigen antibody reaction is detected by -
a) ELISA b) Southern blot *(PGI Nov 09)*
c) Northern blot d) Western blot
e) Eastern blot

1244. Biotechnology is/are used for - *(PGINov 09)*
a) Viral vaccine production
b) To cure genetic disorder
c) Genetic crop
d) Gene production
e) Production of genetic products

1245. True about ribosomes - *(PGINov 09)*
a) Conserved in nature
b) Role is to bring t-RNA and m-RNA together
c) DNA forms RNA and protein are formed from RNA
d) They are always free
e) Have two subunits

1246. True about nucleosome - *(PGI Nov 09)*
a) Use only one type of histone protein
b) Each complex is separated from each other by non histone proteins
c) Regular repeating structure of DNA & histone proteins
d) Reflect small nucleus
e) Core of DNA with protein wrapped

1247. True about Restriction enzymes - *(PGI Nov 09)*
a) Palindromic
b) Produce DNA sticky end
c) Restrict replication of DNA
d) Restriction sites are not specific
e) Breaks at sugar-phosphate bond

1228) a,b,d,e 1229)a,d 1230)a 1231)d 1232)b 1233)b 1234)b 1235)d 1236)b 1237)d 1238)d 1239)a,d 1240) d,e 1241) a 1242) b,d 1243)a,d 1244) All 1245)a,b,c,e 1246)c 1247)a,b,c,e

1248. Karyotyping under light microscopy is done by -
a) R banding b) Q banding *(AIIMS Nov 09)*
c) G banding d) C banding

1249. Western Blot detects?
a) DNA b)RNA
c) Protein d)mRNA

1250. Splicing activity is a function of - *(AIIMSMay 10)*
a) mRNA b) snRNA
c) tRNA d)rRNA

1251. After digestion by restriction endonucleases DNA strands can be joined again by - *(AIIMSMay 10)*
a) DNA polymerase b)DNAligase
c) DNA topoisomerase d) DNA gyrase

1252. True about Sickle cell disease are all, except -
a) Single nucleotide change results in change of Glutamine to Valine *(AIIMS May 10)*
b) Sticky patch is generated as a result of replacement of a non polar residue with a polar residue
c) HbS confers resistance against malaria in heterozygotes
d) RFLP results from a single base change

1253. Which of following techniques is used for detection of variations in DNA sequence and Gene expression-
a) Northern blot b) Southern blot *(AI10)*
c) Western blot d) Microarray

1254. Which of the following tests is not used for detection of specific aneuploidy - *(AI 10)*
a) FISH b) RT - PCR
c) QF-PCR d) Microarray

1255. Sickle cell anemia is the clinical manifestation of homozygous genes for an abnormal haemoglobin molecule. The event responsible for the mutation in the Beta chain is - *(DPG10)*
a) Insertion b) Deletion
c) Non-disjunction d) Point mutation

1256. Xeroderma pigmentation is caused due to a group of closely related abnormalities in - *(DPG 10)*
a) Mismatch repair
b) Base excision repair
c) Nucleotide excision repair
d) SOS repair

1257. Formation of okazaki fragments occur in -
a) Transcription b) Translation *(Maharashtra*
c) Transduction d) Replication *10)*

1258. A part from proteins which of the following exhibits the cataytic activity? *(Maharashtra 10)*
a) Phospholipids b)DNA
c) RNA d) Heteropolysacharides

1259. In cell with damaged DNA and potential for malignant transformation, the tumor suppressor p53 gene invoves- *(Maharashtra 10)*
a) Triggering of the production of p21
b) Inducing apoptosis
c) Getting complexed with other transforming proteins
d) All of the above

1260. PCR detects- *(Maharashtra 10)*
a) Antigen b) Antibody
c) Nucleic acid d) All of above

1261. High energy phosphate compounds are -
a) ATP b)ADP *(PGI May 10)*
c) Creatinine phosphate d) Acetyl CoA

1262. Non coding RNAs are- *(PGI May 10)*
a) siRNA b)miRNA
c) tRNA d)mRNA
e) rRna

1263. Termination process of protein synthesis is performed by all except - *(PGI May 10)*
a) Releasing factor b) Stop codon
c) Peptidyl transferase d) UAA codon
e) AUG codon

1264. Nucleosome consists of - *(PGI May 10)*
a) Histone b) DNA
c) RNA d) DNA & RNA both
e) Carbohydrate

1265. Nucleoside is made up of - *(PGI Nov. 10)*
a) Pyrimidine b) Histone
c) Sugar d) Purine
e) Phosphate

1266. True about Ig gene rearrangement & Ig diversity-
a) Somatic mutations theory *(PGINov. 10)*
b) One loop and two loop joining theory
c) DNA rearrangement
d) Appropriate class switching

1267. True about DNA methylation - *(PGINov. 10)*
a) Alters gene expression
b) Genetic code remains intact
c) Role in carcinogenesis
d) Protective mechanism aganist cleavage by restriction endonuclease

1268. Stop codons are - *(PGINov. 10)*
a) UAA b)UAG
c) UGA d)UAC
e) UCA

1269. True about genes - *(PGINov. 10)*
a) Smallest functional unit of genome
b) Not capable of independent expression
c) Promoter & ehnancer genes are typical example
d) Cistron is single funcitonal unit

1270. True about DNA structure - *(PGINov. 10)*
a) Purines are adenine and guanine & pyrimidines are uracil and cytosine
b) Waston and Crick discovered structure in 1973
c) Deoxyribose- phosphate backbone with bases stacked inside
d) Mainly consists of left handed helix
e) 5-3 phosodiester bonding is present

1271. True statement about transgenic *mice-(PGINov. 10)*
a) Developed from DNA insertion into fertilized egg
b) Have same genome as parents except one or more genes
c) Identical genome to parent mice
d) Produced by breeding over several generations
e) Homozygous are selected

1248) c 1249) c 1250)b 1251)b 1252)b 1253)d 1254)d 1255)d 1256)c 1257)d 1258)c 1259)d 1260)c
1261) a,c,d 1262) a,b,c,e 1263) c,e 1264) a,b 1265) a, c,d 1266) a, c,d 1267) a, c,d 1268) a,b,c 1269) a,c,d 1270) c
1271) a,b

1272. Incorrect statement are - *(PGINov 10)*
a) T4 DNA polymerase has 3' ->5' exonuclease activity
b) Klenow fragment of DNA polymerase I function is almost similar to T4 DNA polymerase
c) Restriction endonuclease cut DNA chains at specific location
d) Endonuclease cut DNA at 5' terminus
e) Right handed helix of DNA is more common

1273. A four-year-old child is diagnosed with Duchenne muscular dystrophy, an X-linked recessive disorder. Genetic analysis shows that the patient's gene for the muscle protein dystrophin contains a mutation in its promoter region. What would be the most likely effect of this mutation? *(AIIMS Nov 10)*
a) Tailing of dystrophin mRNA will be defective.
b) Capping of dystrophin mRNA will be defective.
c) Termination of dystrophin transcription will be deficient.
d) Initiation of dystrophin transcription will be deficient.

1274. Methods of introducing gene in target cells are all except - *(AIIMS Nov 10)*
a) Electroporation
b) Transfection
c) Site directed recombination
d) FISH

1275. CAP in LAC operon is - *(ARMSMay 11)*
a) Positive regulator
b) Negative regulator
c) Attenuation
d) Constitutive expression

1276. Apo B48 & Apo B100 is synthesized from the same mRNA; the difference between them is due to -
a) RNA splicing *(ARMS May 11)*
b) Allelic exclusion
c) Deamination of cytidine to uridine
d) Upstream repression

1277. Gene duplication plays an important role in the evolution of - *(ARMS May 11)*
a) mRNA b) rRNA
c) tRNA d) hnRNA

1278. Histone acetylation causes - *(ARMSMay 11)*
a) Increased Heterochromatin formation
b) Increased Euchromatin formation
c) Methylation of cystine
d) DNA replication

1279. Triplex DNA is due to - *(ARMS May 11)*
a) Hoogsteen pairing
b) Palindromic sequences
c) Large no. of guanosine repeats
d) Polypyramidine tracts

1280. After digestion by restriction endonucleases DNA strands can be joined again by - *(ARMSMay 11)*
a) DNA polymerase b) DNA ligase
c) DNA topoisomerase d) DNA gyrase

1281. True about Sickle cell disease are all, Except -
a) Single nucleotide change results in change of Glutamine to Valine
b) Sticky patch is generated as a result of replacement of a non polar residue with a polar residue
c) HbS confers resistance against malaria in heterozygotes
d) RFLP results from a single base change

1282. Which of the following process in a vector is used to increase the yield of protein produced in recombinant protein synthesis - *(AI11)*
a) Promoter induction
b) Origin of Replication
c) Translation Initiation
d) Translation of Transcription inhibition

1283. Which of the following factors is responsible for deciding whether an antibody/immunoglobulin will remain membrane bound or get secreted - *(AI 11)*
a) RNA Splicing
b) Class Switching
c) Differential RNA Processing
d) Allelic Exclusion

1284. Methods of fusing two cells in genetic recombination technique include all of the following techinques, Except- *(AI 11)*
a) Fusion mediated by Ethylene Glycol
b) Fusion mediated by Electric current
c) Fusion mediated by viral transformation
d) Fusion Mediated by altering membrane viscocity

1285. Two transgenic plants were genetically enginerred using Recombinant DNA technology. One plant was transformed using a plamid vector with GFP (Green Fluorescent Protein) gene and another plant was transformed with Luciferase gene. Which of these two plants will glow spontaneously in the dark -
a) Plant with GFP Gene *(AI 11)*
b) Plant with Luciferase Gene
c) Both plants
d) None of the above

1286. During heme synthesis, which enzyme is responsible for conversion of Coproporphyrinogen HI to Protoporphyrinogen HI? *(Karn 11)*
a) Protoporphyrinogen oxidase
b) Coproporphyrinogen reductase
c) Uroporphyrinogen decarboxylase
d) Coproporphyrinogen oxidase

1287. A hypothetical gene contains coding strand of 5' - TGGAATTGTATG-3. What would be the sequence of the resultant mRNA following transcription -
a) 3'ACCTTAACATAC-5' *(Karn 11)*
b) 5'-ACCUUAACAUAC-3'
c) 5'- UGGAAUUGUAUG - 3'
d) 3'-UCCTTUUCAUAC-5'

1288. Eukaryotic DNA polymerase involved in proof reading and DNA repair during replication is -
a) a b) P *(Karn 11)*
c) £ d)5

1272) d,e 1273) d 1274)d 1275)a 1276)c 1277)a 1278)b 1279)a 1280)b 1281)b 1282)a 1283)c 1284)d 1285)b 1286)d 1287)c 1288)c

1289. Genetic material possessing the dual capacity to exist chromosomal and extrachromosomal entity -
a) Auto some b)Episome *(Punjab 10)*
c) Endosome d) Mesosome

1290. Disorders associated with defect in Mitochondrial DNA are all except - *(Jipmer 10)*
a) Leber's hereditary optic atrophy
b) Mitochondrial encephalopathy with lactic acidosis
c) Huntington's disease
d) Pearson syndrome

1291. Defect in xeroderma pigmentosum - *(Jipmer 10)*
a) Mismatch repair
b) Base excision repair
c) Nucleotide excision repair
d) All of the above

1292. 7-methyl guanidine cap is added to - *(Jipmer 11)*
a) mRNA b) tRNA
c) rRNA d)DNA

1293. Porphyrias absorb light in the wavelength of -
a) 340 nm b)400nm *(Jipmer 11)*
c) 540nm d) 67Gnm

1294. In sickle cell anemia, translocation on codon 6 is due to substitution of - *(NEET/DNB Pattern)*
a) Valine for glutamate b) Glutamate for valine
c) Isoleucine for valine d) Valine for isoleucine

1295. What do restriction endonucleases do- *(NEET/DNB Pattern)*
a) Cut ds DNA at specific sites
b) Cut RNA at specific sites
c) Cut ss DNA at specific sites
d) Break peptide chains

1296. Primase functions as - *(NEET/DNB Pattern)*
a) Joining DNA fragments
b) Synthesining small RNA fragments during transcription
c) Synthesising small RNA fragments during translation
d) Unwinding of DNA

1297. Which of the following is a ribozyme- *(NEET/DNB Pattern)*
a) Peptidyl transferase
b) Elongation factor 2
c) Primase
d) RNA polymerase

1298. What is attatched to 3[f] end of mRNA after transcription - *(NEET/DNB Pattern)*
a) Poly Atail b) CCA
c) Intron d) 7-methylguanosine

1299. Not present in DNA - *(NEET/DNB Pattern)*
a) Uracil b) Thymine
c) Cytosine d) Adenine

1300. Oncogenes can be best studied by-
a) Transfection *(NEET/DNB Pattern)*
b) Transduction
c) Transformation
d) Conjugation

1301. Enzyme used in PCR is- *(NEET/DNB Pattern)*
a) Reyerse transcriptase b) Taq polymerase
c) RNA polymerase d) None

1302. Ribosomes have following enzymatic activity -
a) Peptidyl transferase *(NEET/DNB Pattern)*
b) Peptidase
c) Carboxylase
d) Dehydratase

1303. Telomerase is - *(NEET/DNB Pattern)*
a) DNA dependant RNA polymerase
b) RNA dependant DNA polymerase
c) RNA dependant RNA polymerase
d) DNA dependant DNA polymerase

1304. Pyrimidine metabolism end product -
a) Urea *(NEET/DNB Pattern)*
b) Uric acid
c) Beta alanine
d) Allantoin

1305. Nucleotide includes - *(NEET/DNB Pattern)*
a) Base + sugar
b) Base + phosphate group
c) Base + sugar + phosphate group
d) None

1306. Not present in DNA - *(NEET/DNB Pattern)*
a) Uracil b)Thymine
c) Cytosine d)Adenine

1307. Which of the following usually require a RNA intermediate for cloning/replication? *(NEET/DNB Pattern)*
a) Transposons b) Plasmids
c) Phages d)Cosmids

1308. Inhibition of protein synthesis in translocation steps occurs by - *(NEET/DNB Pattern)*
a) Tetracycline b) Erythromycin
c) Aminoglycosides d) Penicillin

1309. In sickle cell anemia, translocation on codon 6 is due to substitution of - *(NEET/DNB Pattern)*
a) Valine for glutamate
b) Glutamate for valine
c) Isoleucine for valine
d) Valine for isoleucine

1310. Purine are formed by - *(NEET/DNB Pattern)*
a) Aspartic acid, glycine, uric acid
b) Aspartate, glycine,
c) Aspartate, glutamate
d) Aspartate,glycine,glutamine

1311. What is the function of dna ligase ?
a) Unwinding (denaturation) of dsDNA to provide an ssDNA template *(NEET/DNB Pattern)*
b) Seals the single strand nick between the nascent chain and Okazaki fragments on lagging strand
c) Initiation of DNA synthesis and elongation
d) Initiates synthesis of RNA primers

1312. Chargaff s rule states that - *(NEET/DNB Pattern)*
a) A=T, G=C
b) A=QT=C
c) A=C,G=T
d) Any combination possible

1289)b 1290)c 1291)c 1292)a 1293)b 1294)a 1295)a 1296)b 1297)a 1298)a 1299)a 1300)a 1301)b 1302)a
1303) b 1304) c 1305)c 1306)a 1307)a 1308)b 1309)a 1310)d 131 l)b 1312)a

1313. In DNA, adenine always pairs with - *(NEET/DNB*
a) Guanine b) Cytosine*Pattern)*
c) Thymine d) Uracil

1314. R-RNA is mainly produced in - *(NEET/DNBPattern)*
a) Nucleus b) Nucleolus
c) Ribosome d) Endoplasmic reticulum

1315. Which of the following protein is synthesized in free ribosome - *(NEET/DNB Pattern)*
a) Cytosolic proteins
b) Secretery proteins
c) Membrane proteins
d) None

1316. Watson crick model is for which DNA -*(NEET/DNB*
a) B DNA b) A DNA*Pattern)*
c) C DNA d) Z DNA

1317. Termination codon is - *(NEET/DNB Pattern)*
a) AUG b) UAA
c) AUA d) AGG

1318. Which of the following is not involved in synthesis of pyrimidines? *(NEET/DNB Pattern)*
a) Glutamine b) CO_2
c) Aspartic acid d) Glycine

1319. Modified nucleotide is seen in - *(NEET/DNB Pattern)*
a) tRNA b) rRNA
c) hnRNA d) mRNA

1320. Which RNA is used in RNA spilicing -
a) mRNA *(NEET/DNB Pattern)*
b) small nuclear RNA
c) Small cytosolic RNA
d) tRNA

1321. Chian initiation in protein synthesis is by -
a) AUA b)GLA *(NEET/DNB Pattern)*
c) UGA d)UAG

1322. Nonsense codons bring about - *(NEET/DNB Pattern)*
a) Elongation of polypeptide chain
b) Pre-translational modificastion of protein
c) Initiation of protein synthesis
d) Termination of protein synthesis

1323. Protein glycosylation occurs in-*(NEET/DNB Pattern)*
a) ER b) Golgi bodies
c) Mitochondria d) Peroxisomes

1324. Function of UGA codon - *(NEET/DNB Pattern)*
a) Initiates transcription
b) Translates
c) Terminates protein synthesis
d) None

1325. Glysine is useful in all of the following except -
a) Purine synthesis *(NEET/DNBPattern)*
b) Creatine synthesis
c) Spermine synthesis
d) Heme synthesis

1326. Reverse transcription involves ? *(NEET/DNB*
a) RNA dependent DNA synthesis *Pattern)*
b) DNA dependent RNA synthesis
c) DNA dependent DNA synthesis
d) RNA dependent RNA synthesis

1327. Transcription is the process of -
a) Protein synthesis *(NEET/DNB Pattern)*
b) DNA replication
c) Synthesis of RNA
d) None

1328. Nuclosomes are- *(NEET/DNB Pattern)*
a) DNA+RNA
b) DNA+Hi stones
c) RNA+Histones
d) DNA+RNA+Histones

1329. Which of the following is the disorder of purine -
a) Hyperammonemia *(NEET/DNB Pattern)*
b) Gout
c) Orotic acduria
d) Hartnop disease

1330. Codons are present in - *(NEET/DNB Pattern)*
a) t-RNA b) r-RNA
c) m-RNA d) si-RNA

1331. Anticodon is present in - *(NEET/DNB Pattern)*
a) mRNA b) tRNA
c) rRNA d) hmRNA

1332. For RNA, which blotting technique is used -
a) Western blot *(NEET/DNB Pattern)*
b) Northern blot
c) Southern blod
d) None

1333. DNA replication occurs in how many phases -
a) Two b) Three *(NEET/DNB Pattern)*
c) Four d) Five

1334. Enzyme require for cutting the strand DNA synthesis - *(NEET/DNB Pattern)*
a) DNA polymerase b) DNA ligase
c) Topoismerase d) Helicase

1335. In DNA, Cytosine is passed with - *(NEET/DNB Pattern)*
a) Thymine b) Guanine
c) Ademine d) Uracil

1336. DNA synthesis occurs in phase - *(NEET/DNB Pattern)*
a) G_t b) G_2
c) S d) M

1337. Dihydrouridine is found in -*(NEET/DNB Pattern)*
a) DNA b) mRNA
c) tRNA d) rRNA

1338. All of the following are require in protein synthesis except- *(NEET/DNB Pattern)*
a) elF-1 b)mRNA
c) Mg^{+2} d)Ca^{+2}

1339. Unwinding of DNA during replication is done by -
a) Ligase b) Helicase *(NEET/DNB Pattern)*
c) Polymerase d)Prinase

1340. Peptidyl transfer is a / an - *(NEET/DNB Pattern)*
a) Termination factor b) Elongation factor
c) Ribozyme d) None

1341. Nucleotide consists of all *except-(NEET/DNB Pattern)*
a) Sugar b) Phosphate
c) Fatty acid d) Base

1313) c 1314)b 1315) a 1316)a 1317)b 1318)d 1319)a 1320)b 1321)a 1322)d 1323)b 1324)c 1325)c 1326)a 1327) c 1328)b 1329)b 1330)c 1331)b 1332)b 1333)b 1334)c 1335)b 1336)c 1337)c 1338)d 1339)b 1340)c 1341)c

1342. Which of the following statements regarding mature cytoplasmic messeng er RNA is true -
a) Transcribed from Nuclear DNA *(NEET/DNB Pattern)*
b) Has Thiamine in place of Uracil
c) Sugar is Deoxy Ribose
d) Its molecular weight is more than hn-RNA

1343. Which of the following is not a pyrimidine -
a) Uracil b) Thymine *(NEET/DNB Pattern)*
c) Adenine d) Cytosine

1344. Central Dugma of molecular biology includes all except - *(NEET/DNB Pattern)*
a) Transcription b) Translation
c) RNA replication d) DNA replication

1345. Uric acid is formed in humans in - *(NEET/DNB*
a) Liver b) GIT mucosa *Pattern)*
c) Kidney d) Joints

1346. Primer function is in - *(NEET/DNB Pattern)*
a) Transcription
b) Translation
c) Initiation of DNA replication
d) Termination of DNA replication

1347. Nitrogen atoms in purines are derived from all except - *(NEET/DNB Pattern)*
a) Aspartate b) Glutamine
c) THF d) Glycine

1348. Function of exonuclease - *(NEET/DNB Pattern)*
a) Polymerization b) Proofreading
c) Chain elongation d) Termination

1349. Sencent cells are deficient in - *(NEET/DNB Pattern)*
a) RNA polymerase b) DNA polymerase
c) Telomerase d) Helicase

1350. Identification of individed by their DNA was invented by- *(NEET/DNBPattern)*
a) Shapiro b) Lewis
c) Jeffreys d) Pasture

1351. Adenine phosphoribosyl transferase is involved -
a) De novo purine synthesis *(NEET/DNB Pattern)*
b) Purine degradation
c) Salvage synthesis of purine nucleotides
d) None

1352. Deficiency of purine nucleoside phosphorylase causes - *(NEET/DNB Pattern)*
a) Complement deficiency
b) Cellular immunodeficiency
c) Humoral immunodeficiency
d) Combined immunodeficiency

1353. TVansposons are - *(NEET/DNBPattern)*
a) Jumping genes b) Cosmid
c) Episome d) None

1354. In which of the following oligonucleotide primer is used - *(NEET/DNB Pattern)*
a) RFLP b) PCR
c) FISH d) Chromosomal walking

1355. Degeneracy of codon is related to -
a) Transcription *(NEET/DNB Pattern)*
b) Translation
c) Post-translation modification
d) None

MEMBRANE STRUCTURE & FUNCTION

1356. The lipid bilayer of cell membrane exists as -
a) Solid b) Semisolid *(PGI93)*
c) Gel d) Fibres

1357. Biological Cell membrane contains all the following except - *(AT 93)*
a) Steroid receptors b) Prostaglandins
c) Cholesterol d) Cytochrome

1358. A bilipid layer is most permeable to - *(AIMS 82, 83,*
a) Potassium b) Sodium *85,AI88)*
c) Glucose d) Urea

1359. The major driving force for formation of membrane lipid bilayer is - *(DNB 88; AIMS 81)*
a) Hydrogen bonding b) Hydrophobic interactions
c) Van der waal forces d) Not known

1360. "Molecular logic of living state" states all except -
a) Cells maintain a rigid state *(AP 87)*
b) A basic simplicity in biological macromolecular
c) Cells maintain maximum economy
d) All of the above

1361. The following statement about biological membrane is correct - *(UP 97, AIMS 82)*
a) They are symmetric bileaflet structure
b) They constituent lipid & Protein moieties are held together by covalent interaction
c) They are rigid assemblies of protein; lipid & carbohydrates
d) Their lipid molities are amphipathic in nature

1362. Transition temperature of lipid bilayers of cell membranes is increased by - *(AIMS 2K)*
a) Cholesterol
b) Saturated fatty acids
c) Unsaturated fatty acids
d) Hydrocarbons

1363. In cell membrance, following are true except -
a) Lipids are regularly arranged *(PGI98)*
b) Lipids are symmetrical
c) Protein displaced laterally
d) None

1364. Which important component of cell wall has carbohydrate moiety- *(PGI 01)*
a) Phosphoglyceride b) Triacylglycerol
c) Sphingomyelin d) Cholesterol
e) GM_2 Gangliosides

1365. Bilayer cell membrane contains - **(***Orissa 04)*
a) Cholesterol b) Triacyl glycerol
c) Cholesterol ester d) Glycerol

1342) a 1343)c 1344) c 1345)b 1346)c 1347)c 1348)b 1349)c 1350)c 1351)c 1352)b 1353)a 1354)b 1355)b 1356) c 1357) a,b 1358)d 1359)b 1360)a 1361)d 1362)b 1363)b 1364)e 1365)a

1366. The transmembrane region of a protein is likely to have- **(*AI04*)**
a) A stretch of hydrophilic amino acids
b) A stretch of hydrophobic amino acids
c) A disulphide loop
d) Alternating hydrophilic and hydrophobic amino acids

1367. Membrane fluidity is increased by - *(AIIMSMay 05,*
a) Stearic acid b) Palmitic acid *Kerala 01)*
c) Cholesterol d) Linoleic acid

1368. The ligand-receptor complex dissociates in the endosome because - *(AI06)*
a) Of its large size
b) The vesicle looses its clathrin cost
c) Of the acidic pH of the vesicle
d) Of the basic pH of the vesicle

1369. Type of collagen forming basement membrane of kidney - *(PGI June 06)*
a) I b) II
c) m d)IV
e) V

1370. Basement membrane degeneration is mediated by -
a) Metalloproteinases b) Oxidases(*AI07)*
c) Elastases d) Hydroxylases

1371. What is marker for cell membrane - *(PGI June 07)*
a) 5'nucleotidase
b) LDH
c) Galactosyl transferase

1372. Which of the following statements about facilitated diffusion is true - *(AI 09)*
a) It is a form of active transport
b) It requires a carrier protein
c) Rate of transport is proportionate to the concentration gradient
d) Requires creatine phosphate

1373. Eukaryotic plasma membrane is made up of all except - *(AIIMS May 09)*
a) Carbohydrates b) Triglycerides
c) Lecithin d) Cholesterol

1374. Plasmamembrane marker(s) is/are - *(PGIJune 09)*
a) 5'- Nucleotidase b) Galactosy Transferase
c) ATP synthetase d) Adenyl cyclase
e) Na^+-K^+ ATPase

1375. Which of the following is/are plasma membrane enzyme(s)- *(PGI June 09)*
a) Glucose-6-phosphatase b) 5'-Nucleotidase
c) Adenyl cyclase d) Na^+-K^+ ATPase
e) Sialyl transferase

1376. The translocation of Ca^ across a membrane -**
a) Is a passive mediated transport
b) Is an example of a symport system
c) Involves the phosphorylation of a serine residue by ATP *(DELHI PG Feb. 09)*
d) May be regulated by the binding of a Ca^{++}-calmodulin complex to the transporter

1377. Biological membrane has all of the following properties except - *(Punjab 10)*
a) A lipid bilayer
b) Ion channels are mainly lipids
c) Lipids form the membrane
d) Signal transmission

ENDOCRINOLOGY

1378. Insulin has.... amino acids - *(NIMHANS 86)*
a) 49 b)50
c) 51 d)62

1379. Biochemical abnormalities in primary hyper parathyroidism is - *(PGI 87)*
a) Increase Ca + increase $P0_4$
b) Increase Ca_2+decrease $P0_4$
c) Decrease Ca_2+decrease $P0_4$
d) Decrease Ca_2 + increase $P0_4$
e) None of the above

1380. 17-Alpha hdroxylase deficiency causes - *(AJ.89)*
a) Decreased testesterone
b) Decrease of estrogens
c) Decrease glucagon
d) Increase estrogen

1381. The most active form of vitamin D is - *(AIIMS 84)*
a) 25 Hydrocholecalciferol
b) 25 Hydrooxyergocalciferol
c) 24,25 dihydroxycholecalciferol
d) 1.25 dihydroxycholecalciferol

1382. Insulin resistance is seen in - *(AIIMS 86, 81)*
a) Hypothyroidism b) Acromegaly
c) Addision's disease d) Hypopituitarism

1383. What is known as the "second messenger"? -
a) ATP b)ADP *(AIIMS 86)*
c) Cyclic AMP d)GMP

1384. Which of the following hormones are dependant on cyclic AMP? - *(AIIMS 86)*
a) Vasopressin b) Aldosterone
c) Renin d) Angiotensin

1385. Secondary hyperparathyroidsm is caused by -
a) Parathyroidenoma *(IN 89)*
b) Parathyroid hyperplasia
c) Chronic renal failure
d) Milk - alkali syndrome

1386. In secondary hyperparathyroidism there is-
a) Hypercalcemia *(PGI 88)*
b) Hypocalcemia
c) Increased parathoromone
d) Decreased parathoromone

1387. Polypeptide hormones are - *(PGI 86)*
a) Insulin b) Angiotensin
c) Growth hormones d) Progesterone

1388. Major site of action of insulin are - *(PGI 84)*
a) Muscle b) Adipose tissue
c) Liver d) Kidney

1366) a 1367)d 1368)c 1369)d 1370)a 1371)a 1372)b 1373)b 1374)a,d,e 1375)b,c,d 1376)d 1377)b 1378)c 1379)b 1380) a 1381)d 1382)b 1383)c 1384)a 1385)c 1386)b,c 1387)a,b,c 1388)b

1389. Ratio of adrenaline to Noradrenaline - *(PGI83)*
a) 50:60 b) 60:40
c) 70:30 d) 856:15

1390. Tetany can be caused by - *(PGI 83)*
a) Hypocalcemia b) Hypecalcemia
c) Hyperthyroidism d) Hypomagnesemia

1391. The Hormone which has a receptor in the plasma membrane is - *(AI91)*
a) Thyroxine b) Gonadotrophins
c) Cortisone d)Proclactin

1392. The precursor of steroid is - *(AI91)*
a) Amino acids b) Fatty acids
c) Cholesterol d)None

1393. Which of the following is a direct precursor of hormones - *(AIIMS 92)*
a) Ergosterol b) Cyclic AMP
c) Cholesterol d) Tyrosine

1394. Biosynthesis of oestrogens: which is true -
a) Phenol end product *(AIIMS 86)*
b) Aromatization occurs, which requires 0_2 and NADPH
c) Angular methyl at C - 10 is lost
d) Androgens serve as precursors
e) All of the above

1395. True about Insulin is - *(AIIMS 83)*
a) Is a glycoprotein
b) Has a half - life of 4 hours after intervenous injection
c) Increases protein synthesis from aminoacids in muscle
d) Increases the activity of glycogen phosphorylase

1396. Steroids with 8-10 c-atorm side chains at C-17 and a OH group at C-3 are - *(AIIMS 78, ROHTAK 89)*
a) Androgens b) Andrenal corticoids
c) Progestins d) Sterols
e) Bile acids

1397. Urine osmolality in Diabetes insipidus is -
a) < 150 mmol/L b) < 300 mmol/1 *(JIPMER 93)*
c) < 600 mmol/L d) < 900 mmol/L

1398. Chemically, oestrogens are characterised by -
a) Absence of 02 at D - 17 *(PGI 83)*
b) Aromatic charactr at D-ring
c) Absence to methyl group at C - 10
d) A 21 - carbon steroid skeleton

1399. Chemically steroids are derivatives of - *(PGI 85)*
a) Cholesterol
b) Ergosterol
c) Fatty acids
d) Perhydrocyclopentanophenantherene
e) All of the above

1400. Phosphaturia is seen in the following except -
a) Metabolic alkalosis *(JIPMER 80, UPSC 86)*
b) Lead, cadmium or uranium poisonings
c) Hypervitaminosis D
d) Hyperparathyriodism

1401. What serves as a precursor of testosterone -
a) Aldosterone *(AIIMS 86, AI90, PGI 84)*
b) Estrone
c) Methyltestosterone
d) Pregnenolone
e) Andrenosterone

1402. Which of the following contains an aromatic a ring? - *(JIPMER 80, AMC 84)*
a) Estradiol b) Testosterone
c) Aldosterone d) Cortisol
e) Progesterone

1403. Steroles are metabolized to - *(AMU 86)*
a) Coenzyme A b)VitA
c) VitD d)VitE

1404. Enzymes not important in testoterone biosynthesis- *(PGI 81)*
a) 5-alpha reductase b) Delta 5-4 isomerase
c) 18 hydroxylase d) Alpha hydroxylase

1405. Calcium as a second messenger in hormone action involves all except - *(PGI 81, KERALA 87)*
a) Gastrin b) Oxytocin
c) ADH d) Insulin

1406. Estrogen receptors are seen in - *(AI95)*
a) Microsomes b) Membrane bound
c) Nucleus d) Mitochondria

1407. For which is cGMP second messenger - *(TN95)*
a) Thyroxine b) Atrial natriureptic peptide
c) GH d) Cortiosone

1408. Which inhibits adenyl cyclase enzyme - *(TN98)*
a) Somatostatin b) Calcitonin
c) Epinephrine d) Thyroxine

1409. Insulin receptors are - *(ROHTAK 98)*
a) Tyrosine Kinase receptors
b) Phosphodiesterase
c) Calcium calmodulin
d) Lipoprotein lipase
e) All

1410. Which of the following belongs to steroidal receptor superfamily - *(AIIMS 98)*
a) Vitamin D3 b) Encephalins
c) *CM* d) Insulin

1411. Shortest peptide is- *(DNB 2001)*
a) Encephalin b) Vasopressin
c) Angiotensin III d) Glucagon

1412. Following are second messengers - *(PGI 2002)*
a) CAMP b) CGMP
c) Inositol triphosphate d) Diacylglycerol
e) ADP

1413. Insulin acts on glucose metabolism by- *(PGI2000)*
a) T permeability of glucose across cell membrane
b) T permeability across cell membrane against glucose gradient
c) T permeability of renal cells
d) T glucose transport to brain

1389) d 1390) a,d 1391)b,d 1392)c 1393)a 1394)e 1395)c 1396)d 1397)a 1398)c 1399)a,d 1400)a
1401) d 1402) a 1403)c 1404)c 1405)d 1406)c 1407)b 1408)a 1409)a 1410)a 141 l)c 1412)a,b,c,d 1413)b

1414. Which one of the following is present intracellularly in muscle cells - *(AI03)*
a) Insulin b) Corticosteroid
c) Epinephrine d) Glucagon

1415. Early stage of trauma is characterized by - *(AI 03)*
a) Catabolism b) Anabolism
c) Glycogenesis d) Gluconeogenesis

1416. Which of the following is an uncoupler -(*Orissa 04)*
a) Insulin b) Epinephrine
c) GH d) Thyroxine

1417. Which of the following is a membrane-bound enzyme that catalyzes the formation of cyclic AMP from ATP-
a) Tyrosine kinase b) Polymerase*(AI 04)*
c) ATP synthase d) Adenylate cyclase

1418. A small Ca2+ binding protein that modifies the activity of many enzymes and other proteins m response to changes of Ca2+ concentration, is known as - *(AI 04)*
a) Cycline b) Calmodulin
c) Collagen d)Kinesin

1419. In which of the following tissues is glucose transport into the cell enhanced by insulin - *(COMEDK 05)*
a) Brain b) Lens
c) Red blood cells d) Adipose tissue

1420. All the following hormones use cylic AMP as a second messenger except - *(COMED 2006)*
a) Glucagon b) Estrogen
c) Epinephrine d) Luteinizing hormone

1421. Norepinephrine is synthesized from epinephrine by- *(PGMCET01)*
a) Hydroxylation b) N-methylation
c) Deamination d) Carboxylation

1422. C terminal end of androgen receptor is concerned with- *(AI07)*
a) Ligand binding
b) Increasing biological half life
c) Increasing the affinity of receptor to DNA
d) Increasing the level of transcription

1423. Steroid hormone receptors have attachment site for all except - *(Aiims May 08)*
a) Steroid hormone
b) Transcription repressors
c) Hormone responsive element
d) Transcription activators

1424. Human insulin gene receptor found on chromosome-
a) 11 b) 15 *(DPGEE08)*
c) 19 d) 21

1425. What is effect of cortisol on metabolism -
a) t Neoglucogenesis *(PGIDec 08)*
b) T Lipogenesis
c) T Proteolysis
d) Protein anabolism in liver
e) t Glycolysis

1426. Increased blood levels of cholesterol that are seen in hypothyroidism are most likely due to -
a) Decreased calorigenesis *(DELHIPG Feb. 09)*
b) Decreased production of LDL receptor in liver and the thus decreased clearance by liver
c) Decreased production of LDL receptor in the adipose tissue and increased release of cholesterol from adipose tissues
d) Increased breakdown of lipoproteins releasing cholesterol in circulation

1427. Glucose transporter in myocyte stimulated by insulin is- *(AIIMS Nov 09)*
a) GLUT 1 b)GLUT2
c) GLUT 3 d) GLUT 4

1428. Among the following all are hydrophilic hormones that act on cytosolic receptors except one which is a lipophilic hormone that acts on nuclear receptor -
a) Thyroxine b) Epinephrine *(AIIMS May 11)*
c) GH d)ACTH

1429. The rate limiting step in the biosynthesis of catecholamine is catalyzed by - *(Corned 10)*
a) Tyrosin hydroxylase
b) Dopa decarboxylase
c) Dopamine (3 hydroxylase
d) Catechol O-methyl transferase

1430. GLUT-5 is transporter for- *(NEET/DNB Pattern)*
a) Glucose b) Fructose
c) Mannose d) Galactose

1431. Which of the following does not dependent on insulin via GLUT4 for glucose uptake - *(NEET/DNBPattem)*
a) Brain b) Skeletal muscles
c) Cardiac muscles d) Adipose tissue

1432. In which of the following conditions a low/controlled glycemic index diet is preferred? *(NEET/DNB*
a) Diabetes b) hypertension *Pattern)*
c) children d) Normal adults

1433. Glucose transporter involved in insulin stimulate glucose transport is GLUT - *(NEET/DNBPattern)*
a) 1 b) 2
c) 3 d) 4

1434. All are activated by insulin except -
a) Lipoprotein lipase *(NEET/DNB Pattern)*
b) Pyruvate kinase
c) Hormone sensitive lipase
d) Acetyl-CoA carboxylase

1435. Shortest peptide - *(NEET/DNB Pattern)*
a) Angiotensin II b) Angiotensin III
c) Glycogon d) Vasopressin

1436. Insulin stimulates all except - *(NEET/DNBPattem)*
a) Glycolysis b)Lipolysis
c) Protein synthesis d) Lipogenesis

1437. GLUT responsible for secretion of insulin from beta cells of pancreas - *(NEET/DNB Pattern)*
a) 1 b) 2
c) 3 d) 4

1414) b 1415) a 1416)d 1417)d 1418) b 1419)d 1420)b 1421)b 1422)a 1423)b 1424)c 1425)a,c,d 1426)c
1427) d 1428) a 1429)a 1430)b 1431) a 1432)a 1433)d 1434)c 1435)b 1436)b 1437)b

1438. Mutation in GLUT-2 causes-*(NEET/DNB Pattern)*
a) Dandy walker syndrome
b) Fanconi becker syndrome
c) Beckwith syndrome
d) Menke's disease

1439. Which of the following is not steroid -*(NEET/DNB*
a) Estrogen b) Cholic acid *Pattern)*
c) Leukotrians d) Vitamin D

1440. Rate limiting enzyme in testosterone synthesis -
a) 17,20 lyase *(NEET/DNB Pattern)*
b) 20, 22-desmolase
c) 3-pHSD
d) 17-hydroxylase

1441. Increased insulin receptors are seen in -*(.NEET/DNB*
a) Obesity b) Starvation *Pattern)*
c) Acromegaly d) None

VITAMINS

1442. Wernicke's encephalopathy is caused by deficiency of- *(AUNS 87, AT88)*
a)B_1 b) B_2
c)B_6 d) B_{J2}
e) B,

1443. Vitamin essential for transamination is - *(PGI86, JIPMER 87, A.I. 88, Kerala 88, NIMHANS 87)*
a)B_1 b)B_2
c)B_6 d) B_{12}
e)B,

1444. Vitamin K dependent clotting factors are -
a) n b)vn *(PGI 85, 87)*
c) DC d)X
e) All of the above

1445. Cofactor for transaminations *is-(PGI86, AIIMS87,*
a) Thymine *JIPMER 87, Kerala 88)*
b) Riboflavine
c) Pyridoxine
d) Niacin
e) Cyanocobalamine

1446. Vitamine B_{12} is - *(PGI87)*
a) Extrinsic factor of castle
b) Intrinsic factor of castle
c) Cyanocobalamine
d) Decrease Ca_2+decrease Po_4

1447. Biotin is not a coenzyme in - *(AI89)*
a) Propionyl-COA carboxylase
b) Pyruvate carboxylase
c) Pyruvate dehydrogenase
d) Acetyl-COA carboxylase

1448. Biochemical test in thymine deficiency is -
a) FIGLUtest *(PGI 88)*
b) Histidine test
c) Erythrocyte transketolase test
d) Ferric chloride test

1449. Vitamin C is present in largest amount in the body in- *(PGI 83, AI98)*
a) Eye b) Kidneys
c) Testes d) Adrenal cortex
e) Pancreas

1450. Metal in Vitamin B_{12} is - *(PGI 89)*
a) Copper b) Cobalt
c) Iron d)Zinc

1451. Vitamin E prevents rancidity by virtue of its..... property- *(Kerala 90)*
a) Antioxidant b) Oxidant
c) Sulfuration d) Hydrogenation

1452. Malonyl aciduria is seen in deficiency of- *(AIIMS*
a) Pyridoxine b) B_{12} *86, JIPMER91)*
c) Folic acid d) Riboflavin

1453. Conversion of prothrombin to thrombin requires -
a) Factor x only *(AI92)*
b) Factor V only
c) Factors VII,X,V and Ca^{2+}
d) Factors XIVI Ca^{2+}

1454. Conversion of proline to hydroxy proline is by -
a) Vitamin C mediated hydroxylation *(JIPMER 92)*
b) Reverse hydroxylation
c) Inversion
d) Post translation induction

1455. Biotin is essential for - *(JIMPER 92)*
a) Translation b) Carboxylation
c) Hydroxylation d) Choline

1456. The Vitamine required for Carboxylation reaction is - *(AI93)*
a) VitB_2 b) Vitamin B6
c) Biotin d)VitB_{12}

1457. Germ oil has a high content of Vitamin -
a) B b)C *(JIPMER93)*
c) A+B d) E

1458. Vit K plays an essential role in - *(AIIMS 85)*
a) Preventing bile stasis
b) Electron transport
c) Preventing thrombosis
d) Biosynthesis of prothrombin and proconvertin
e) Maintaining retinal integrity

1459. Pantothenic acid acts on - *(AIIMS 94)*
a) NADP b) NAOpH
c) FAD d)CoA

1460. A vitamin which function as reducing agent is -
a) Vitamin C b) Vitamin B_{12} *(AIIMS 86,*
c) Folic acid d) Thiamine *PGI83)*
e) Nicotiamide

1461. Biotin deficiency is characterized by the following execpt - *(AIIMS 80, Kerala 88)*
a) Muscular pain b) Anaemia
c) Nausea d) Dermatitis

1438) b 1439) c 1440)b 1441)b 1442)a 1443)c 1444)e 1445)c 1446)a,c 1447) c 1448) c 1449)d 1450)b 1451)a
1452) b 1453) c 1454)a 1455)b 1456)c 1457)d 1458)d 1459)d 1460)a 1461)b

1462. Biological activity of tocopherols has been attributed, in part of their action as - *(AIIMS 87)*
a) Antioxidant
b) Anticoagulants
c) Provitamin
d) Antidotes for selenium poisoning
e) Carriers in electron transport system

1463. Trigonelline, an excretory product is formed in detoxification of - *(AIIMS88)*
a) Thiamine b) Nicotinic acid
c) Riboflavin d) Folic acid

1464. Which of the following vitamin act as a respiratory catalyst - *(PGI84)*
a) B_2 b)Pyridoxine
c) B_{12} d)C

1465. Which vitamin is found as a constituents of warburg yellow enzyme - *(AMU87)*
a)B_J b)B_2
c) Niacin d) Pantothen acid

1466. Which of the following compounds in not a metabolite of niacin - *(PGI81)*
a) Nicotinuric acid
b) Trigonelline
c) Para-aminobenzoic acid
d) N-methylnicotinamide
e) N- methyl-6 pyridone-3 carboxamide

1467. A vitamin related to a co-factor in glycine metabolism is- *(ARMS 83, 85)*
a) VitE b) Folic acid
c) Thiamine d)Cobalamine
e) Pantothenic acid

1468. Two vitamins whose derivatives are involved in transformation of serine to glycine are - *(PGI86)*
a) B_6andB_2 b)B_{12} and nicotinamide
c) Folic acid and B_6 d) Folic acid

1469. Whole wheat is an excellent source of - *(AMU 88)*
a) Vitamin D b) Vitamin C
c) Vitamin A d) Thiamine

1470. Which of the following is not a useful form of Vitamin A - *(JIPMER 78, Delhi 85)*
a) Retinol b) Retinal
c) Retinoic acid d) None of the above

1471. Of prime importance in the structure of flavoproteins is - *(ARMS 78, 82)*
a) VitB6 b) VitB2
c) VitBl d) VitA

1472. Dicumarol is an antimetabolite of - *(AMU85, 88)*
a) Heparin b) Vit K
c) Prothrombin d) Folic acid
e) Coumarin

1473. A low serum carotene level is caused by - *(PGI83)*
a) Vit A deficiency
b) Intrinsic factor deficiency
c) Malabsorption syndrome
d) Achlorhydria

1474. Patients with severe renal disease may not be able to use normal dietary sources of Vitamin -
a) A b)B *(Bihar 89)*
c) C d)D
e) E

1475. Wernickes encephalopathy is due to the dificiency of - *(Kerala 94)*
a) Niacin b) Cyanocobalamine
c) Pantothenic acid d) Thiamine

1476. Vitamin used in the treatment of homocysteinuria is - *(Kerala 94)*
a) B1 b)B5
c) B12 d)B6

1477. Vitamin necessary for Co A **synthesis -** *(A 195,*
a) Pantothenic acid b) Vit C *ARMS 86)*
c) B4 d) Biotin

1478. Thiamine is essential for - *(All India 95)*
a) Pyruvate dehydrogenase
b) Isocitrate dehydrogenase
c) Succinate dehydrogenase
d) Acetyl CoA syntheatase

1479. People eating only maize as staple diet develop niacin deficiency due to - *(All India 95)*
a) Low niacin b) Histidine
c) Isoleucine d) Valine

1480. Vitamin also acting as hormone - *(ARMS97)*
a) Vitamin D b) Vitamin A
c) Vitamin B1 d) Vitamin C

1481. Which vit is synthesized by intestinal sites -
a) VitB b) VitA *(JIPMER 98)*
c) VitD d) VitK

1482. In Beri-Beri,which enzyme activity is measured - *(JIPMER 98)*
a) Transketolase b) Tranaminase
c) Decarboxylase d) Deaminase

1483. Which is not Pyridoxine dependent - *(AUMS97)*
a) Oxaluria
b) Homocystinurea
c) Maple syrup urine disease
d) Xantkenuric aciduria

1484. All are vitamin K dependent clotting factors of hepatic origin except - *(PGI 99)*
a) n b)vn
c) vm d)X

1485. FIGLU is a metabolite of - *(J&K01)*
a) Folic acid b) Histidine
c) Tyrosine d) Alanine

1486. Total serum folic acid is - *(HPU2001)*
a) 5-20 mg/ml b) 10-20 mg/ml
c) 2-20 mg/ml d) 15-20 mg/ml

1487. HDN is seen due to deficiency of vitamin -
a) A b)C *(PGI99)*
c) K d)E

1462) a 1463) b 1464)d 1465)b 1466)c 1467)b 1468)d 1469)d 1470)d 1471)b 1472)b 1473)c 1474)d 1475)d 1476) d 1477) a 1478) a 1479) a 1480) a,b 1481) d 1482) a 1483) c 1484) c 1485) b 1486) None 1487) c

1488. Metabolic bone disease is caused by excess intake of which vitamin- *(PGI2000)*
a) A b)B
c) C d)D
e)E

1489. Which of the following acts as cofactor after it's modification- *(PGI01)*
a) Vit-C b) Pantothenic acid
c) Biotin d)Zinc
e) Copper

1490. Conversion of glycine to serine requires- *(PGI 02)*
a) Folic acid b) Thiamine
c) VitC d) Fe^{2+}
e) Pyridoxal phosphate

1491. During the formation of hydroxyproline and hydroxylysine, the essential factors required is/ are- *(PGI 03)*
a) Pyridxal phosphate
b) Ascorbic acid
c) Thiamine pyrophosphate
d) Methylcobalamine

1492. The pyruvate utilization in tissues is decreased in -
a) Pernicious anemia b) Scurvy *(UPSC 02)*
c) Beriberi d) Pellagra

1493. Thiamine deficiency is known to occur in all of the following except - *(AI03)*
a) Food faddist b) Homocystinemia
c) Chronic alcoholic d) Chronic heart failure

1494. The acitivity of the following enzyme is affected by biotin deficiency - *(AIIMS 03)*
a) Transketolase b) Dehydrogenase
c) Oxidase d) Carboxylase

1495. Not seen in thaimine deficiency - *(APPG 03)*
a) Cerebellar dysfunction b) Amnesia
c) Confabulation d) Nystagmus

1496. Which of the following combinations of biologically active molecules does vitamin A consists of -
a) Retinol, retinal and retinoic acid *(AIIMS 04)*
b) Retinol, retinal and tetrahydrofolate
c) Retinol, Iconjugase and retinoic acid
d) PABA, retinal and retinaldehyde

1497. All are antixidants except - *(HPU 05)*
a) VitA b)VitC
c) VitD d)VitE

1498. Tryptophan load test helps in the evaluation of deficiency of the Vitamin - *(MAHE 05)*
a) Folic acid b) Niacinamide
c) Pyridoxine d) Cyanocobolamine

1499. Diagnosis of folic acid deficiency is done by -
a) FIGLU estimation *(MAHE 05)*
b) Peripheral blood smears
c) AICAR estimation
d) All the above

1500. Following Vitamin Prevents Peroxidation of lipids of cellular level - *(Orissa 05)*
a) Vitamin A b) Vitamin C
c) Vitamin E d) Vitamin K

1501. Which of the following is a component of the visual pigment rhodopsin - *(AIIMS NO V 05)*
a) [3-Carotene b) Retinal
c) Retinol d) Retinoic acid

1502. Vitamin A is stored mainly as retinol esters in -
a) Kidney b) Muscle*(AIIMS NO V 05)*
c) Liver d) Retina

1503. Both Vitamin K and C are involved in - *(AI 05)*
a) The synthesis of clotting factors
b) Post translational modifications
c) Antioxidant mechanisms
d) The microsomal hydroxylation reactions

1504. Vitamin B_{J2} acts as co-enzyme to which one of the following enzymes - *(AI 06)*
a) Isocitrate dehydrogenase
b) Homocysteine methyl transferase
c) Glycogen synthase
d) G-6-P dehydrogenase

1505. All of the following enzymes are regulated by calcium or calmodulin, except - *(AI 06)*
a) Adenylate cyclase b) Glycogen synthase
c) Guanylyl cyclase d)Hexokinase

1506. Amino acid involved in 1 carbon metabolism -
a) Folic acid *(PGI June 06)*
b) Thiamine
c) Pyridoxine

1507. Consumption of raw egg may lead to deficiency of -
a) Biotin b) Riboflavin *(COMED06)*
c) Thiamine d)Avidin

1508. Principle function of cyanocobalamine is -
a) Post translational carboxylation of protein
b) Acts as coenzymes for methionine synthase and **L** methyl melonyl CoA synthase
c) A coenzyme for one carbone transfer in nucleic acid metabolism
d) A cofactor for decarboxylase of ketoacid

1509. Pyridoxine in required as co-factor in all, except -
a) Transamination *(PGMCETOT)*
b) Transketolation
c) Glycogen phosphonylase
d) Decarboxylation

1510. Vitamin A intoxication causes injury to -
a) Lysosomes *(Aiims May 07)*
b) Mitochondria
c) Endoplasmic reticulum
d) Microtubules

1511. Active form of vitamin D is - *(Aiims May 07)*
a) Cholecalciferol b) 24,25 $(OH)_2$ vit-D
c) l,25$(OH)_2$ vit-D d)25-OH vit-D

1512. Vitamin which is excreted in urine is -
a) Vitamin A b) Vitamin C *(Aiims May 07)*
c) Vitamin D d) Vitamin K

1513. Thiamine pyrophosphate is coenzyme required for-
a) Branched - chain amino acid dehydrogenase complex
b) 2 - hydroxyphytanoyl - CoA lyase *(MAHE 07)*
c) Transketolase
d) All of the above

1488) a,d 1489) b 1490)a 1491)b 1492)c 1493)b 1494)d 1495)a 1496)a 1497)c 1498)b 1499)d 1500)c
1501)b 1502)c 1503)b 1504)b 1505)d 1506)a 1507)a 1508)c 1509)b 1510)a 1511)c 1512)b 1513)d

1514. Thiamine deficiency, the thiamine level is best monitored by - *(UP 07, 05)*
a) Tansketolase level in serum
b) Transketolase level in RBC
c) Trans aminase level in serum
d) Trans aminase level in RBC

1515. Biotin deficiency is due to - *(UP 07)*
a) Avidin b) Flavoproteins
c) Metallo flavoproteins d) Oxireductase

1516. Vitamin K is required for - *(AIIMSNov 07)*
a) Hydroxylation b) Chelation
c) Transamination d) Carboxylation

1517. Which of the following is a Water soluble Vitamin?
a) Folic acid b) Vitamin A *(A108)*
c) Vitamin K d) Linolenic acid

1518. Which vitamin is required for carboxylation of clotting factors ? *(AI08)*
a) Vitamin A b) Vitamin D
c) Vitamin E d) Vitamin K

1519. Thiamine deficiency causes decreased energy production because - *(Aiims May 08)*
a) It is required for the process of transamination
b) It is co-factor in oxidative reduction
c) It is co-enzyme for transketolase in pentose phosphate pathway
d) It is co-enzyme for pyruvate dehydrogenase

1520. Diarrhea, Dementia and Dermatitis are seen in deficiency of- *(Manipal 08)*
a) Niacin b) Thiamine
c) Riboflavin d) Folic acid

1521. Thiamine deficiency causes - *(Manipal 08)*
a) Wemickie psychosisb) Pellagra
c) Scurvy d) Night blindness

1522. Thiamine pyrophosphate is coenzyme required for -
a) a-Ketoglutarate —> Succinyl CO A *(Manipal 08)*
b) Transketolase
c) Pyruvate —> Lactate
d) All the above

1523. Post-translational modification of clotting factors requires - *(DPGEE 08)*
a) Vitamin A b) Vitamin B
c) Vitamin E d) Vitamin K

1524. Which of the following statement about thiamine is true? *(AIIMS Nov 08)*
a) It is a co-enzyme of lactate dehydrogenase
b) Its deficiency is associated with scurvy
c) Its co-enzyme function is done by thiamine monophosphate
d) It is co-enzyme for pyruvate dehydrogenase and a-ketoglutarate dehydrogenase

1525. Carboxylation of clotting factors by vitamin K is required to be biologically active. Which of the following amino acid is carboxylated?
a) Histidine b) Histamine *(AIIMS Nov 08)*
c) Glutamate d) Aspartate

1526. Which coenzyme is responsible for carboxylation reaction? *(AIIMS Nov 08)*
a) Biotin b)FAD
c) NADH d) Thiamine pyrophosphate

1527. Panthothenic acid is coenzyme of which of the following reaction (s) - *(PGI Dec 08)*
a) Dehydrogenation b) Oxidation
c) Decarboxylation d) Reduction
e) Acetylation

1528. Initiation of visual impulse is associated with -
a) Condensation of opsin with vitamin A aldehyde
b) Photoisomerization and hydrolysis of visual purple *(AI 09)*
c) *i* NADP
d) 4 NAD

1529. Thiamin requirement increases in excessive intake of- *(AIIMS May 09)*
a) Carbohydrate b) Amino acid
c) Fat d)Lecithine

1530. Overdose of vitamin A mainly affects_____
a) Cytosol *(Maharashtra 10)*
b) Mitochondria
c) Lysosome
d) Cell membrance

1531. Which of the vitamin deficiency lead to lactic acidosis? *(AIIMS Nov 10)*
a) Riboflavin b) Thiamin
c) Niacin d) Panthotheic acid

1532. Vitamin K is involved in post translation modification of- *(AI 11)*
a) Glutamate b) Aspartate
c) Lysine d) Proline.

1533. Thiamine deficiency causes decreased energy production because - *(AI 11)*
a) It is required for the process of transamination
b) It is co-factor for oxidative reduction
c) It is co-enzyme for transketolase in pentose phosphate pathway.
d) It is co-enzyme for pyruvate dehydrogenase and a- ketoglutarate dehydrogenase in Tricarboxylic acid pathway.

1534. Homocystinuria is caused by deficiency of -
a) Riboflavin b) Biotin *(PUNJAB 11)*
c) Pyridoxine d) Thiamine

1535. Conversion of Pyruvate to Acetyl CoA does not require- *(PUNJAB11)*
a) Thiamine b)TPP
c) Pyridoxine d)FAD

1536. Which water soluble vitamin is synthesized in the body? *(PUNJAB11)*
a) Thiamine b) Vitamin C
c) Niacin d) Pyridoxine

1537. Hypervitaminosis-A present with all except -
a) Hyperlipidemia *(Jipmer10)*
b) Alopecia
c) Pseudotumor carebri
d) Hyperstosis

1514) b 1515)a 1516)d 1517)a 1518)d 1519)d 1520)a 1521)a 1522)d 1523)d 1524)d 1525)c 1526)a 1527)e
1528)b 1529) a 1530)c 1531)b 1532)a 1533)d 1534)c 1535)c 1536)c 1537)d

1538. Manifestations of Vitamin E deficiency does not include - *(Jipmer 11)*
a) Hemolysis
b) Testicular atrophy
c) Neurological involvement
d) Thrombocytopenia

1539. Thiamin status of an individual can be detected by activity of which of the following enzymes in erythrocytes? *(Corned 10)*
a) Transaldolase b) Glucose-6-phosphatase
c) Transketolase d) Enolase

1540. Pellagra is caused by deficiency of which vitamin-
a) B_2 b) B_3 *(NEET/DNB Pattern)*
c) Bi d) Folic acid

1541. Which of the following is not an antioxidant -
a) Beta carotene b) Vit C *(NEET/DNB Pattern)*
c) VitE d) Vit Bi

1542. Carboxylation is governed by -*(NEET/DNB Pattern)*
a) Biotin b) Niacin
c) Thiamine d) Pyridoxine

1543. Ascorbic acid is required for synthesis of -
a) Phenylserine *(NEET/DNB Pattern)*
b) Homoserine
c) Hydroxylysine
d) Selenocysteine

1544. Which vitamins are synthesised by intestinal bacteria ? *(NEET/DNB Pattern)*
a) Vit K and D b) Vit K and B
c) Vit K and H (biotin) d) Vit K and E

1545. What is function of Intrinsic Factor - *(1WET/DNB Pattern)*
a) Increases cobalamin absorption
b) Increases folate absorption
c) Converts prothrombin to thrombin
d) Converts fibrinogen to fibrin

1546. Role of Vitamin K for activation in clotting cycle-
a) Carboxylation *(NEET/DNB Pattern)*
b) Hydroxylation
c) Transamination
d) Deamination

1547. Which of the following is not an antioxidant- *(NEET/DNB Pattern)*
a) SOD b) Vitamin A
c) Gluthione peroxidase d) Xanthine oxidase

1548. The role of vitamin K in epoxide cycle is -
a) Carboxylation of glucatamate(7VEE77Z)7V5 *Pattern)*
b) Dehydrogenation of glucatamate
c) Carboxylation of glutamate
d) Dehydrogenation of aspartate

1549. Which vitamin is required for hydroxylation of proline-
a) A b) B *(NEET/DNB Pattern)*
c) C d) D

1550. In humans, ascorbic acid cannot be synthesized because of - *(NEET/DNB Pattern)*
a) Deficiency of G6PD
b) Deficiency of xylulose kinase
c) Deficiency of L-gulonolactone oxidase
d) Deficiency of phosphoglucomutase

1551. Pantothenic acid is needed for donating the following moiety - ***(NEET/DNB Pattern)***
a) Acetyl (or acyl) Co A
b) Carboxyl
c) Hydroxyl
d) Amino

1552. Most potent anti oxidant - *(NEET/DNB Pattern)*
a) Vit A b) Vit K
c) VitE d) VitC

1553. Which of the following is a canstituent of vitamin B12 - *(NEET/DNBPattern)*
a) Iodine b)Zinc
c) Cobalt d) Iron

1554. Coenzyme form of pyridoxine *i$-(NEET/DNB Pattern)*
a) ADP b)NAD
c) PLP d)FAD

1555. B^{12} is needed in which step of folate synthesis - *(NEET/DNBPattern)*
a) Tetrahydrofolate to folinic acid
b) Methyl tetrahydrofolate to tetrahydrofolate
c) Formyl tetrahydrofolate to tetrahydrofolate
d) Methylene tetrahydrofolate to methyltetrahydrofolate

1556. Methylmalonyl aciduria is seen in deficiency of -
a) VitB12 b)VitB6 *(NEET/DNB Pattern)*
c) VitC d) Folic acid

1557. Vit BI is a cofactor for- *(NEET/DNB Pattern)*
a) Transketolaseb) Transaldolase
c) Aldolase A d) AldolaseB

1558. Transketolase activity is seen with which vitamin- *(NEET/DNBPattern)*
a) VitBl b) Vit B2
c)VitB3 d) Vit B4

1559. Pyridoxine helps in generation of which coenzyme -
a) FAD b) ATP *(NEET/DNB Pattern)*
c) NAD d) None

1560. Menadione is an analogue of - *(NEET/DNBPattem)*
a) Vitamin C b) Vitamin A
c) Vitamin D d) Vitamin K

1561. Which vitamin is required for transfer of 1-carbon unit - *(NEET/DNBPattem)*
a) VtaminA b) Folic acid
c) VtaminB_{12} d) Niacin

1562. Scurvy is due to deficiency of - *(NEET/DNB Pattern)*
a) VtaminC b) Vitamin A
c) Vitamin K d) Vitamin E

1563. Diagnosis of vitamin BI deficiency is made by -
a) Thiamine level *(NEET/DNB Pattern)*
b) Transketolase activity
c) Carboxylase activity
d) Transaminase activity

1564. Which vitamindeficiency causes glossitis and cheilosis - *(NEET/DNB Pattern)*
a) Thiamine b) Riboflavin
c) Folic acid d) Vitamin A

1565. 25 hydroxylation of vitamin D occurs - *(NEET/DNB Pattern)*
a) Skin b) Liver
c) Kidney d) Spleen

1566. Only vitamin that help in carbon fixation - *(NEET/DNB Pattern)*
a) Folic acid b) Pantotheinc acid
c) Niacin d) Thiamine

1567. VitaminEis- *(NEET/DNBPattern)*
a) Anticoagulant b) Coagulant
c) Antioxidant d) Antiinflammatory

1568. Vitamin B6 deficiency cause increased oxcretion of- *(NEET/DNB Pattern)*
a) Methylmalonyl CoA
b) Xanthurenic acid
c) Branched cheun keto acids
d) Ketore Bodies

1569. Which of the following is a Fat Soluble vitamin -
a) Thiamine b) Niacine *(NEET/DNB Pattern)*
c) Vitamin A d) Ribaflavin

1570. Vitamin required for collagen synthesis -
a) Vitamin A b) Vitamin C *(NEET/DNB Pattern)*
c) Thiamine d) Folic acid

1571. Decarboxylation reactions require - *(NEET/DNB Pattern)*
a) Riboflavin b) Thiamine
c) Niacin d) Biotin

1572. In folic acid deficiency which of the following is excreted in urine - *(NEET/DNB Pattern)*
a) Kynurenine b) Xantheurenic acid
c) FIGLU d) Methylmalonate

1573. Which of the following is rate limiting step -
a) 25 hydroxylation of vitamin D *(NEET/DNB Pattern)*
b) 24 hydroxylation of vitamin D
c) 1 hydroxylation of vitamin D
d) None

1574. Post translation carboxylation of clotting factors requires- *(NEET/DNB Pattern)*
a) Vitamin C b) Vitamin K
c) Vitamin A d) Vitamin D

1575. Which of the following in not a form of vitamin D-
a) Cholecalceferol b) Calcifediol *(NEET/DNB Pattern)*
c) Ergosterol d) Calcitriol

1576. Which of the following is a provitamin -
a) Ascorbic acid *(NEET/DNB Pattern)*
b) Vitamin-E
c) P-carotene
d) Vitamin-K

NUTRITION & DIGESTION

1577. Vit.B_{12} is absorbed in the- *(JIPMER85,NIMHANS 86, Kerala 87, 90)*
a) Stomach
b) Duodenum
c) Lower jejunum
d) Proximal ileum
e) Terminal ileum

1578. The serine proteases are all except- *(AIIMS 82AI89)*
a) Elastase b) Chymotrypsin
c) Trypsin d) Pepsin

1579. The brush border bound hydrolase linked with sucrase is - *(AIIMS 82, A.L 89)*
a) Alpha dextrinase b) Glucose hydrolase
c) Trehalase d) Alpha fructase

1580. The enzyme primarily responsible for protein degradation in stomach is - *(AI91)*
a) Trypsin b) Pepsin
c) Chymotrypsin d) Endopeptidase

1581. Which is not an endopeptidase - *(Jipmer 92)*
a) Trypsin b) Pepsin
c) Chymotrypsin d) Aminopeptidase

1582. Dietary fibre is rich in - *(AIIMS 92)*
a) Starch b) Pectin
c) Collagen d) Proteoglycan

1583. Zinc is a component of the following except- *(ROHTAK87)*
a) Hexokinase b) Carbonic anhydrase
c) Insulin d) Carboxypeptidase

1584. Rennin is present in - *(AMC86, 89)*
a) Liver b) Kidney
c) Stomach d) Testes

1585. Which of the following is not a trace element-
a) Zn b) Cu *(AIIMS 80, Delhi 86)*
c) Selenium d) Ca^

1586. Ferritin - an inactive form of iron is stored in -
a) Gut b) Spleen *(AMC 82; Delhi*
c) Liver d) All of the above *83, 87)*

1587. Tea and coffee contains - *(Delhi 88)*
a) Tannin b)Zinc
c) Amino acids d) Lactate

1588. Iron overload- *(PGI84)*
a) Cannot occur because very efficient excretory mechanism are available
b) Occur in a deficiency of ferroxidase I
c) Would be accompanied by an increase in total serum transferrin
d) Might be caused by an ingestion of large amounts of iron alongwith alcohol

1589. pH is maximum in - *(JIPMER 80)*
a) Pancreatic secretion b) Intestinal secretions
c) Salivary secretions d) Gastric secretion

1590. Alpha amylase acts on which bond - *(AI96)*
a) Alpha 1-4 bond b) Alpha 1-6
c) Beta 1-4 d) Beta 1-6

1591. All the following are trace elements required by body except - *(TN 97)*
a) Zinc b) Copper
c) Selenium d) Boron

1592. Ferritin stores are present in following sites except- *(JIPMER '98)*
a) Intestine b) Liver
c) Spleen d)Bone

1565)b 1566) a 1567)c 1568)b 1569)c 1570)b 1571)b 1572)c 1573)c 1574)b 1575)c 1576)c 1577)e 1578)d 1579) a 1580) b 1581)d 1582)b 1583)a 1584)c 1585)d 1586)d 1587)a 1588)d 1589)a 1590)a 1591)d 1592) None

1593. Glutathione peroxidase contains - *(Orissa R, AI98,*
a) Selenium b) Iron *96, TN 04)*
c) Zinc d) Copper

1594. Zinc is an essential component of the following enzymes except - *(Kerala 2K)*
a) Carbonic anhydraseb) Alkaline phosphate
c) Xanthine oxidase d) Ethanol dehydrogenase
e) Carboxypeptidase

1595. Absorption of fats is associated with all except -
a) Pancreatic lipase b) Colipase *(PGI02)*
c) Gastric lipase d) Bilirubin
e) Bile salts

1596. Zinc acts as co-factor in- *(PGI 02)*
a) Lactate dehydrogenase
b) Carbonic anhydrase
c) Glutathione peroxidase
d) Alkaline phosphatase
e) Superoxide dismutase

1597. Ceruloplasmin has the activity of - *{Jiprner 03)*
a) Hydrolase b) Enolase
c) Aminotransferase d) Ferroxidase

1598. Which of the following elements is known to influence the body's ability to handle oxidative stress-
a) Calcium b)Iron *(AI 04)*
c) Potassium d) Selenium

1599. Best indicator of iron deficiency - **(,***Jiprner 04)*
a) Serum iron b) Serum ferritin
c) TJBC d) Transferrin

1600. Xeroderma pigmentosum is produced as a result of a defect in - *{AI 04)*
a) DNA polymerase III b) DNA polymerase II
c) DNA exonuclease d) DNA ligase

1601. Dietary fibre contain - *(UP 08)*
a) Collagen b) Pectin
c) Proteoglycans d) Starch

1602. Which of the following vitamins deficiency occurs in exclusively in carnivores - *(UP08)*
a) Thiamine b) Niacin
c) Cobalamine d) Vitamin C

1603. Which of the following is considered the active form of calcium - *(AI08)*
a) Ionised calcium
b) Albumin bound calcium
c) Phosphate bound calcium
d) Protein bound calcium

1604. Which of the following plant components is not fermented by gastrointestinal microorganisms -
a) Lignin b) Cellulose *(AI09)*
c) Hemicellulose d) Pectin

1605. Menkes Kinky hair syndrome is characterized by congenital deficiency of - *(Maharashtra 10)*
a) Serum ceruloplasmin
b) Serum copper
c) Ferochelatase
d) Copper binding ATPase

1606. Which of the following is a non-essential metal/ mineral? *(AIIMS Nov 10)*
a) Sodium b) Manganese
c) Iron d)Lead

1607. Toxicity of ethanol is due to- *(Jiprner 11)*
a) Increased NADH7NAD ratio
b) Decreased lactate/Pyruvate ratio
c) Inhibition of gluconeogenesis
d) Stimulation of fatty acid oxidation

1608. Which of the following trace elements is important for conversion of procollagen to collagen -
a) Se b) Cu *(NEET/DNB Pattern)*
c) Zn d) Mg

1609. The pyruvate utilization in tissues is decreased in - *(NEET/DNB Pattern)*
a) Pernicious anemia b) Scurvy
c) Beriberi d)Pellagra

1610. Which of the following is not a micronutrient -
a) Iodine b)Iron *(NEET/DNB Pattern)*
c) Glucose d)Iron

1611. Conversion of Fe^{+2} to F^{4-3} reaction is called -
a) Haber weiss reaction *(NEET/DNB Pattern)*
b) Fenton's reaction
c) Nemst reaction
d) Donnan reaction

MISCELLANEOUS

1612. Enzyme deficient in Marfans syndrome is -
a) Cystanthione B synthetase *(AIIMS 87, PGI86*
b) Elastase type II *AI88)*
c) Lysyl oxidase
d) Collagenase
e) None of the above

1613. Abnormal constituents of urine are -
a) Ketone *(PGI 8 7, UPSC86, AP 86)*
b) Glucose c) B2 globulin
d) Creatinine e) Urea

1614. Amount of proteins excreted in urine/24 hours -
a) Less than 150mg b) 200 mg *(PGI87)*
c) 225 mg d) 450 mg
e) 800 mg

1615. The following is not a carrier protein - *(AP88)*
a) Ceruloplasmin b) Transferrin
c) Transcobalamine d)Haptoglobulin

1616. Abormal urinary constituents are - *(PGI 89)*
a) Albumin b) Amino acid
c) Creatinine d) Ketone
e) Glucose

1617. Physiological constituents of urine - *(PGI 86)*
a) Urea b) Sugar
c) Albumin d) Creatinine

1618. Myocardium normally utilises - ***(A.I** 90)*
a) Glucose b) Lactose
c) Fatty acid d) Ketones

1593) a 1594)c 1595)d 1596)a,b,d,e 1597)d 1598)d 1599)b 1600)d 1601)b 1602)d 1603)a 1604)a 1605)d 1606)d 1607) a 1608)b 1609)c 1610)c 1611)b 1612) e 1613)a,b,c 1614) a 1615)Noneora 1616)a,d,e 1617) a,d 1618) c

1619. The cellular organelle that stores peroxidases is-
a) Lysozomes b) Peroxisome *(AI91)*
c) Microsomes d) Mitochandria

1620. True blood sugar level measures the levels of- *(JIPMER 92)*
a) Glucose b) Frutose
c) Glucose and Ribose d) A + B

1621. Skeletal muscle in comparison to Heart muscle has - *(AIMS 80, PGI87)*
a) High phospholipid b) High cholesterol
c) Low creatine d) High camosine

1622. Hemoglobinuria is detected by - *(TN 91)*
a) Presence of RBC's on microscopy
b) Spectrophotometry
c) Nitric acid test
d) Fauchet's test

1623. Infant's gastric juice pH is -*(AIMS 94, Kerala 88)*
a) *l A* b)2.1
c) 5.0 d)7.0

1624. Anticoagulant used for preserving blood for prothro -mbin time estimation is- *(AIMS 86,Delhi 82)*
a) Heparin b) Sodium citrate
c) Double Oxalate d)Na

1625. Excess of indican in urine is present in -*(AIMS 86)*
a) Severe constipation b) Gangrene of lung
c) Cholera d) Any of the above

1626. Which of the following is not a correct Match -
a) Murexide test - Uric acid *(AIMS 83, 85)*
b) Jaff's test - Creatinine
c) Rothera's test - Acetone bodies
d) Ehrlich's aldehyde test - Urobilinogen
e) Fourchet test - bile

1627. Ergothioneine is mainly found in - *(PGI 83)*
a) RBC's b) Muscle
c) Brain d) Testes

1628. Prostaglandins- *(PGI86, Karn 89)*
a) Increase irritability of nerve tissue
b) Synthesized from oleic acid
c) Are acyclic fatty acid derivatives
d) Cause hypertension

1629. All of the following are present in sweat except -
a) Calcium b) Lactic acid *(AIMS 94)*
c) Urea d) Uric acid

1630. Normal diastatic index is - *(AIMS 81)*
a) 7-33.3 b) 31.3-51.2
c) 51.2-71.3 d) 71.3-93.1

1631. Indican in urine is tested by - *(AIMS 84)*
a) Ehrlich's aldehyde test b) Obemeyer's test
c) Hay's test d) Fouchet's test

1632. Actin, a muscle protein of molecular weight.. .exists in two forms - *(PGI81, AMU 85)*
a) 50,000A,Bb) 50,000 C,D
c) 60,000 F,G d) 60,000 C,D

1633. Etheral su phates are mainly excreted in -
a) Sweat b) Tears *(PGI85)*
c) Urine d) Faeces

1634. The effect of 2,4 dinitrophenol is to — *(PGI 87)*
a) Lower BMR b) Raise R.Q.
c) Lower R.Q. d) Decrease H. gradient

1635. The freezing point of normal human plasma is -
a) 4°C b)0°C
c) -0.54°C d) -4°C

1636. Xeroderma pigementosum, a rare skin disease is due to an autosomai recessive trait which causes a deficiency of - *(NIMHANS 86)*
a) DNA polymerase
b) DNA - dependent RNA polymerase
c) DNAligase
d) A specific DNA endonuclease

1637. Which of the following is not a major reaction occuring in the hepatocytes - *(AIMS 87)*
a) Bile pigment synthesis
b) Esterification of cholesterol
c) Transamination
d) Glycogenolysis

1638. Myoglobin has molecular weight of.....-
a) 12,600 b) 16,800 *(AIMS 79, PGI83)*
c) 18,200 d) 24,200

1639. I mmol of NaCl contains - *(UPSC 81, 84)*
a) 35.5 g b) 58.3 g
c) 35.5 mg d) 58.3 mg

1640. Bi-Urate test is mainly done for - *(AIMS 87)*
a) Carbohydrate b) Protein
c) Lipids d) Any of the above

1641. Endoplasmic reticulum is not permeable to -
a) Malate b) Phenylpyruvate *(Delhi82,90)*
c) Glycopyrrote d) Triacylglycerol

1642. The blood concentration of H_2C0_3 (meq/L) is -
a) 5 b) 15
c) 20 d)50

1643. Half saturation test is done for -*{AIMS 81, AMU87)*
a) Albumin b) Globulin
c) Fibrin d) Prothrombin

1644. The brain contains relatively high amounts of all of the following except - *(AIMS 83)*
a) Glutamine
b) N-acetylaspartate
c) Gamma-aminobulyric acid (GABA)
d) Glycogen
e) Proteolipid

1645. Urinary specific gravity in a new born is -
a) 1.004-1.005 b) 1.005-1.007 *(NIMHANS86)*
c) 1.007-1.010 d) 1.010-1.020

1646. The mucopolysaccharide hyaluronic acid is found primarily in - *(DNB 89)*
a) Cartilage
b) Mast cells
c) Outer layers of epidermis
d) Vitreous humour of the eye

1647. The anticoagulant normally present in animal cell -
a) Vitamin K b) Heparin *{PGI 85)*
c) Hyaturonidase d) Dicumarol
e) None of the above

1619)? 1620)d 1621) d 1622)b 1623)c 1624)b 1625)d 1626)b 1627)a 1628)a 1629)d 1630)a 1631)b 1632) None 1633)c 1634)d 1635)c 1636)d 1637)a 1638)b 1639)d 1640)b 1641)b 1642)d 1643)b 1644)d 1645) a 1646)d 1647)b

1648. Benedict reagent can detect minimum of Glucose-
a) 0.001% b) 0.02% *(JIPMER 79, DNB 88)*
c) 0.1% d) 0.3%

1649. The most important buffer in extracellular fluid is -
a) Hemoglobin b) Protein *(AIIMS 83, 85,*
c) Phosphate d)$H_20_3/HC0_2$ *Delhi85)*

1650. The earliest sign of impaired renal tubular function is - *(AIIMS 8 7)*
a) Specific gravity
b) Dilution test
c) Osmolality determination
d) Free water clearance

1651. S.G of whole blood is - *(AIIMS 87)*
a) 1.025-1-1.035 b) 1.035-1.045
c) 1.045-1.065 d) 1.065-1.075

1652. Colour index of blood is- *(AIIMS 86)*
a) 0.1-0.5 b) 0.6-0.9
c) 0.9-1.0 d) 1.0-1.2

1653. Addis urine sediment count is a renal-
a) Diagnostic test *(AIIMS 81, 84)*
b) Therapeutic test
c) Test of severity of disease
d) All of the above

1654. Which is the total energy expenditure for protein synthesis per day as a percent of basal metabolism in humans - *(AIIMS 86, AMC 89)*
a) 5% b) 15%
c) 30 d)40%
e) 50%

1655. Sehlesingar's test is done to detect - *(AIIMS 82)*
a) Bile pigment b) Hemoglobinuria
c) Urobilinogen d) Urobilin

1656. Modified koopanyi method is used to estimate in urine - *(PGI81, AMU 84)*
a) Bromide b) Galactose
c) Cystine d) Barbiturates

1657. Daily Excretion of iron in urine is - *(JIPMER 79,*
a) Nil b) 0.01-0.04 mg *AMU85)*
c) 00.06-0.1 mg d)0.1-0.8 mg

1658. Winslow test is used to estimate serum or urinary-
a) Calcium b) Chloride *(AIIIMS 80, 81)*
c) Amylase d) Lipase

1659. Gerhardt's test is positive in significant degree of -
a) Hematuria b) Ketosis *(AIIMS85)*
c) Bilirubinuria d) Pancreatitis

1660. Mature erythrocyte possesses - *(Kerala 98)*
a) Lecithin b) Ganglioside
c) Hemoglobine d) ATP
e) All of the above

1661. The following are crystals of a abnormal urine except- *(PGI81, 83)*
a) Leucine b) Tyrosine
c) Cholesterin d) None of the above

1662. Sulkowitch test is used to estimate of - *(DNB 89)*
a) Serum calcium b) Urinary calcium
c) Urinary 5 HIAA d) Acetone

1663. Laminin is present in - *(AI95)*
a) Basement membrane
b) Inner nuclear membrane
c) Outer nuclear membrane
d) Mitochondria

1664. The normal specific gravity of urine is - *(TN 95)*
a) 1.005-1.015 b) 1.015-1.020
c) 1.030-1.040 d) None

1665. Urinary protein is detected by - *(AI96)*
a) Barfoed test b) Hay's test
c) Boiling test d) Ehrlich test

1666. Which is correct about intracellular fluid -
a) Amount less than ECF *(Assam 95)*
b) Amount more than ECF
c) Amount equal to ECF
d) 70% of total body weight

1667. Keratin is chemically - *(Assam 95)*
a) Leucine b) Cystine
c) Lithium d) None of the above

1668. TVue about prostaglandins is - *(AMU 95)*
a) Short acting
b) Present in many tissues
c) Some require C-AMP for their action
d) All the true

1669. Liver doesn't synthesise - *(UP 97)*
a) Fibrinogen b) Prothrombin
c) Alumin d) Gammaglobulin

1670. In which parameter monitoring urine sample is prevented from such exposure to prevent photo degradation - *(JIPMER 98)*
a) Creatin b) Carotein
c) Cortisol d) Uric acid

1671. Guaiac test is used for - *(KARNAT. 98)*
a) Pentosuria b) Fructosuria
c) Hematuria d) Pancreatitis

1672. Most important compensatory mechanism in metabolic acidosis - *(ROTHAK 97)*
a) Hyperventilation
b) Increased NH3 excretion by kidneys
c) Increased urinary phosphates
d) Increased HC03 production
e) None

1673. Which is true regarding nitric oxide in human beings- *(AI99)*
a) Produced from nitrous oxide
b) Produced only in macrophage
c) Potent vasoconstrictor
d) Potent vasodilator effect

1674. Iron staining is with - *(TN 2001)*
a) H-E stain b) Prussian blue
c) Giemsa stain d) Romanovsky stain

1675. Which Amino acid can proteinate and deproteinate at neutral pH is - *(AIIMS 92)*
a) Serine b) Proline
c) Glycine d) Histidine

1648)c 1649)d 1650)a 1651)c 1652)c 1653)c 1654)b 1655)d 1656)d 1657)c 1658)c 1659)b 1660)e 1661)c
1662)b 1663) a 1664)b 1665)c 1666)b 1667)b 1668)d 1669)d 1670)b 1671)c 1672)b 1673)d 1674)b 1675)d

1676. Base Stacking of DNA is by- *(AIIMS 92)*
a) Hyperchromicity b) Linear dichromicity
c) Hypochromicity d) Electrophoresis

1677. The physiologically important anion other than chloride is - *{ARMS 93)*
a) Nitrate b) Phosphate
c) Bicarbonate d) Sulphate

1678. Marker of Golgi apparatus- ***(A195)***
a) Galactosyl transferase
b) Acetyl CoA synthase
c) Pyruvate kinase
d) Malonyl Co A

1679. Most important intracellular anion is - *(PGI95)*
a) Proteins b)$HC0_3'$
c) Cf d)None

1680. Most diffusible ion in excitable tissue is -
a) Na^+ b)K^+ ***(Am)***
c) $P0_4$- d)Cl-

1681. Aggrecan are - *(PGI 2K)*
a) Meant for platelet aggregation
b) for adhesion of cells to basement membrane
c) For adhesion of fibrinogen receptors to platets
d) Proteoglycan found in cartilage

1682. Energy of the brain starvation is form - *(AI88)*
a) Glucose b) Ketones
c) Fatty acids d) Amino acids

1683. Levostatin acts by - *(ARMS 92)*
a) Metabolising cholesterol
b) HMG Co A reductase inhibition
c) Inhibiting mevalonate Kinase
d) Inhibition of Cholesterol absorption

1684. Which is not encountered in HMG Co A pathway -
a) Cholesterol b) Mevalonate *(PGI 93)*
c) Acetyl Co A d) Pyruvate

1685. The number of ATP molecules generated in the conversion of glycogen to lactate is - *(PGI 93)*
a) 2 b) 14
c) 36 d)38

1686. A sprinter utilises in the first 3 to 4 minutes of a race- *(TN 97)*
a) Creatinine Phosphate b) Muscle glycogen
c) Blood glucose d) None of the above

1687. The poison cyanide inhibits the reaction between -
a) Cytochrome oxidase and molecular oxygen
b) Cytochrome A and cytochrome B *(CUPGEE 02)*
c) Phosphofructokinase and glucose oxidase
d) Haemoglobin and oxyhaemoglobin

1688. Gluconeogenesis is promoted by - *(AI 97)*
a) Insulin b) Calcitonin
c) **CH** d)LH

1689. Cyanide posoning affects--------- function - *(PGI 88)*
a) Respiratory b) Cardiac
c) Renal d) Liver

1690. The feature o Enzyme cascade system is -
a) Amplification *(ARMS 92)*
b) Allostearic inhibition
c) Feedback regulation
d) Counter regulation

1691. In exercising muscle; true about metabolism is -
a) Same in aerobic and anaerobic *(PGI98)*
b) Fatty acids used mainly
c) Glycogen and creatine kinase used aerobically

1692. Melatonin is - *(NIMHANS 01)*
a) Serotonergic b) Dopaminergic
c) Adrenergic d) Estrogenic

1693. Iron is stored in the body in the following except -
a) R.E system b) Spleen *(PGI 79, Rohtak 88)*
c) Gallbladder d) Bone marrow

1694. The state of iron responsible for 0_2 transport -
a)Fe^{++} b) Fe^ *(NMS96)*
c) Both d)None

1695. Hemoglobin unlike myoglobin shows - *(PGI98)*
a) Parabolic curve of oxygen association
b) Positive cooperativity
c) Cooperative index of 81
d) Hill's cofficient of 1

1696. Carbon monoxide combines with - *(Calcutta 2K)*
a) Heme part of hemoglobin
b) Glubin part of hemoglobin
c) Myglobin
d) Plasma

1697. Hydroxylation of Lysine & Proline in collagen synthesis requires all except - *(AllIndia 97)*
a) Dioxygenase b) Ascorbate
c) Pyridoxal phosphate d)0_2

1698. One of the following is due to point mutation -
a) Color blindness *(JIPMER 80,92)*
b) Sickle cell anemia
c) Diabetes mellitus
d) Porphyria

1699. Gene mapping for segments larger than 50-100 kilobases is done by - *(PGI98)*
a) RFLP b)SSCP
c) Picking d) Chromosome walking

1700. Glucose is indispensible source of energy for -
a) Muscle b) Kidney *(JIPMER 95)*
c) Heart d) Erythrocytes

1701. Orange colour of the urine is associated with- *(JIPMER92)*
a) Jaundice b) Diabetes insipidus
c) Urobilinogen d) Alkaptonuria

1702. Green colouration on Benedict's quantitative test implies - *(BIHAR90)*
a) Negative test
b) Sugar less than 0.5%
c) Sugar between 0.5-1%
d) Sugar between 1-2%
e) Sugar over 2%

1676) a 1677)c 1678)a 1679)a 1680)d 1681)d 1682)a,b 1683)b 1684)d 1685)a 1686)b 1687)a 1688)c 1689) a 1690) c 1691)c 1692)a 1693)c 1694)a 1695)b 1696) a,c 1697) c 1698)b 1699)d 1700)d 1701)None 1702)b

1703. Trace element in carbonic anhydrase is -
a) Copper b) Molybdenum *(JIPMER 90)*
c) Zinc d) Magnesium

1704. DNA melting refers to- *(AIIMS 98)*
a) Splitting of DNA into single strands
b) Breaking DNA into fragments
c) Breaking DNA down to bases
d) Fusion of DNA

1705. RFLP is used to identify- *(PGI2002)*
a) Sickle cell anaemia b) B thalassemia trait
c) Von Gierke's disease d) Gilbert's disease
e) Phenylketonuria

1706. Child of Vasanthi, was weaned from breast milk on the fifth day and was given suger cane juice. The child developed hypoglycemia and hepatomegaly. Biochemical examination showed hypophosphatasia and reducing substances in urine. The child is probably suffering from which of the following enzyme deficiencies - *(AIIMS 2K)*
a) Aldolase B b) Fructokinase
c) Glucose 6 Phosphatase d) Beta galactosidase

1707. Prenatal diagnosis is possible for all of following except- *(AI96)*
a) Sickle cell trait
b) B-thalassemia
c) Ectodermal dysplasia
d) Duchennes muscular dystrophy

1708. Cataract in a diabetic is caused by sorbitol which is formed by interaction on glucose by- *(AIIMS 99)*
a) Glucose oxidase
b) Aldose reductase
c) NADPH dependent phosphokinase
d) Hexokinase

1709. FIGLU determination in urine demonstrate deficiency of- *(AIIMS 88)*
a) Iron b) Vitamin B_{12}
c) Folic acid d)Pyridoxine

1710. The enzyme avidin inactivates... in the egg -
a) Pyriodoxine b) Riboflavin *(NIMHANS88)*
c) Biotin d) Thiamine

1711. Micronutrients are those whose daily requirements is less than - *(JIPMER 78, PGI 79)*
a) 100 meg b)10mg
c) 100 mg d)2gm

1712. Features of Vitamin C deficiency is due to defect of which enzyme - *(JIPMER 2K)*
a) Lysl hydroxylase b) Lysl oxidase
c) Procoilagen d) Peptidase

1713. Ferritin is the storage form of iron in -*(Kerala 94)*
a) Spleen b) Intestine
c) Bone marrow d) Pancreas

1714. Thalassemia is produced by which of the following genetic changes - *(PGI2K)*
a) Frame shift mutations b) Non sense mutations
c) Missense mutations d) Deletions
e) Point mutations

1715. The porphyrin present in normal erythrocyte haemoglobin is - *(PGI 81, AIIMS 87)*
a) Coproporphyrin I b) Uroporphyrin III
c) Protoprophyrin III d) Uroporphyrin I

1716. Black Urine is seen in - *(UPSC 87)*
a) Bilirubinuria b) Black water fever
c) Melanuria d) Alkaptonuria
e) All

1717. Green urine is seen in - *(UPSC 87)*
a) Bilirubinuria b) Oxalate poisoning
c) Pneumonia d) Pleural effusion

1718. On a normal diet, the daily excretion of urea is about- *(UPSC95)*
a) 0.5 gm b)5.0gm
c) 25.0 gm d) 100.0 gm

1719. Acholuric jaundice is seen in - *(JIPMER 98)*
a) Infective hepatitis
b) Hemolytic anemia
c) Ca head of pancreas
d) Congenital atresia of bile ducts

1720. Hormone acting on distal convoluted tubule and collecting tubule of kidney are - *(Kerala 94)*
a) Aldosterone b) Oxytocin
c) ADH d) Renin

1721. The action of insulin is primarily on- *(PGI 86)*
a) Muscle b) Liver
c) Adrenals d) Nervous tissue
e) Adipose tissue

1722. Enzyme deficient in diabetes mellitus is - *(JIPMER 79, PGI 84, A189)*
a) Glucokinase b) Hexokinase
c) Phosphorylase d) Pyrophosphate

1723. The following statement about magnesium are true except - *(KERALA2K)*
a) It is the second most common intracellular electrolyte
b) It plays a major role in glycolysis
c) Sixty percent of body magnesium is in bone
d) Most of the intracellular magnesium is in the muscle
e) The range of serum magnesium normally is 15-18 meq/L

1724. Normal serum cholesterol level is - *(AIIMS81, UPSC 84)*
a) 50 to 150 mg/100ml.
b) 300 to 350 mg/100ml.
c) 410 to 560 mg/100ml.
d) 20 to 30 mg/100ml.

1725. Methylmalonic aciduria is due to defect in the metabolism of - *(NIMHANS 01)*
a) Methylmalonic acid b) Valine
c) Lysine d) Arginine

1726. Nitric oxide acts through- *(AI2K)*
a) cGMP b) cAMP
c) Diacetyl glycerol d) Inositol triphosphate

1727. In sepectroscopy, necleotides absorb at 260 mm. This absorbence is due to - *(PGI2002)*
a) Purines and Pyrimidines b)Deoxribose
c) Ribose d) Histone
e) Phosphate

1703) c 1704) a 1705)a,b 1706)a 1707)c 1708)b 1709)c 1710)c 1711)c 1712)a 1713)a,b,c 1714)a,b,d,e 1715) c 1716) b,c,d 1717) a 1718) c 1719) b 1720) a,c 1721) a,b,e 1722) a 1723) d,e 1724) a 1725) a 1726) a 1727)a

1728. The characteristic of collagen is presence of -
a) Glycine b) Methionine *(DNB 91)*
c) Hydroxyproline d) None of the above

1729. In Metabolic alkalosis, which is true about excretion in urine- *(PGI97)*
a) More of NH_3
b) Less of aceto acetic acid
c) Betahydroxy butyric acid
d) Less ammonia

1730. Addition of water in C-C bond is by the enzyme-
a) Hydroxylase b) Dehydrogenase *(PGI 98)*
c) Hydrolase d) Hydratase

1731. True about nitric oxide- *(PGI 01)*
a) Free radical b) Vasodilator
c) Oxidizing d) Catalyst
e) Platelet aggregator

1732. Which is common metabolic process in human as well as bacteria - *(PGI 01)*
a) Purine synthesis
b) Nitrogen fixation
c) Mucolipid formation
d) Nonoxidative photophosphorylation

1733. Which of the following require template for it's formation- *(PGI 01)*
a) Carbohydrate b) Protein
c) Lipid d) Nucleicacid
e) Phospholipid

1734. Energy required for maintainenace of bodily functions of a person weighing 40 kgs is-*(PGI 01)*
a) 1000 kilocalories b) 1500 kilocalories
c) 2000 kilocalories d) 2500 kilocalories
e) 3500 kilocalories

1735. Complement fixation is done by - *(PGI02)*
a) IgG b) IgM
c) IgD d) IgA
e) IgE

1736. Bruton X-linKed agammaglobulinemia is characterised by - *(PGI 02)*
a) fed T-cell in circulation
b) Manifests at birth in male child
c) B-cell normal in circulation
d) Mutation of gene coding tyrosine kinase
e) Lymphnode biopsy reveals a depletion of cells of bursa dependent area

1737. Dominant negative inheritance is seen in-*(PGI 02)*
a) Ehler Danlos syndrome
b) Marfan syndrome
c) Hunter syndrome
d) Osteogenesis imperfecta
e) Hereditary retinoblastoma

1738. True about oncogene- *(PGI 02)*
a) Present in normal cell
b) They are of viral origin
c) They are transduced from virus infected cells
d) P53 is most common oncogene mutation causing malignancy
e) V-oncos are identical with in humans cellular on cogenes (C-oncos)

1739. Regarding oncogenesis - *(PGI 02)*
a) Protooncogenes are activated by chromosomal translocation
b) Malignant transformations involves accumulation of mutations in protooncogenes and tumour suppressor genes
c) Point mutation of somatic cells
d) Increase in telomerase activity causes antitumour effects
e) At G_2-M phase there is loss of inhibitors controlling cell cycle

1740. Cell surface molecules involve in peripheral tolerance induction are - *(PGI03)*
a) $B_?$ and CD_{28} b) CD_{40} and CD^
c) CD_{34} and CD_{51} d) $B_?$ and CD_3

1741. Adenosine deaminase deficiency is seen in -
a) Sever combined immunodeficiency *(PGI 03)*
b) Wiskot Aldrich syndrome
c) Agammaglobulinemia

1742. Immunoglobulin that crosses to the fetus from mother- *(PGI03)*
a) IgG b) IgM
c) IgD d)IgE
e) IgA

1743. Cellular bearings of herediatary diseases seen in-
a) DNA b) Ribosome *(PGI 03)*
c) RNA d) Membrane
e) Porteins

1744. Enzyme deficiency seen in genetic diseases like- *(PGI03)*
a) Tay sach's disease b) Gaucher's disease
c) Cystic Fibrosis d) Wilson's disease
e) Familial hypercholesterolemia

1745. Hybridoma technique is used to obtain - (*UPSC 02)*
a) Purified antibodies b) Purified antigens
c) Purified lymphocytes d) Purified macrophages

1746. Molisch's test is positive in all except- (*Jipmer 03)*
a) Mucoproteins b) Glycoproteins
c) Sucrose d) Phospholipids

1747. Brain lipid binding protein is expressed by which one of the following - *(AIIMS 03)*
a) Mature astrocytes b) Oligodendrocytes
c) Purkinje cells d) Pyramidal neurons

1748. A buffer that is most effective at a pH of about 5 is - *(AIIMS03)*
a) Acetate buffer b) Bicarbonate buffer
c) Phosphate buffer d) Tris buffer

1749. Large amount of SER are found in cells storing -
a) Lipoproteins b) Lipids *(Orissa 04)*
c) Glycogen d) Amino acids

1750. The most important source of reducing equivalents for fatty acid synthesis in the liver is- * *(AIIMS 04)*
a) Glycolysis b)TCA cycle
c) Uronic acid pathway d) HMP pathway

1728)c 1729)d 1730)c 1731)a,b,c,d 1732)a 1733)b,d 1734)a 1735)a,b,c,d 1736)d,e 1737)a,b,d 1738)c,d
1739) a,b,e 1740)a 1741)a 1742)a 1743)a 1744)a,b 1745)a 1746)d 1747)a 1748)a 1749)b 1750)d

1751. Biological role of metallothionens is to sequester harmful metal ions. These bind - *(AIIMS 04)*
a) Cd^{++}, Cu^{++} & Zn^{++} b) Al^{+++}, Hg^{++}& NH_4^+
c) Pt^{++}, As^{+++} & $P0_4$ d) Fe^{+++}, Na^+ & K^+

1752. Structure of Antibodies is composed of -*{SGPGI04)*
a) Single peptide chain
b) Two peptide chain
c) Non sulphur aminoacid
d) 2 heavy & 2 light peptidie chain

1753. Tocopherols are the derivatives of - *{Kerala 04)*
a) Isoprenoid ring b) Tocol
c) Sterol d)Ribitol

1754. Radio isotopes are used in the following techniques except- *(AI04)*
a) Mass spectroscopy
b) RIA
c) ELISA
d) Sequencing of nucleic acid

1755. A signal peptide is directed from cytoplasms to -
a) Nucleus b) Golgi bodies *{SGPGI 05)*
c) Lysosomes d) Endoplasmic retinaculum

1756. Mucopolysaccharidoses are caused by -
a) An increased rate of synthesis of proteoglycans
b) Defects in the degradation of proteoglycans
c) The synthesis of polysaccharides with an altered structure
d) An insufficient amount of proteolytic enzymes

1757. Tartrate libile phosphatase is concentrated in the following tissue - *{MAHE 05)*
a) RBC b) Thyroid
c) Prostate d) Bone

1758. Ladder pattern of DNA electrophoresis in apoptosis is caused by the action of the following enzyme -
a) Endonuclease b) Transglutaminase
c) DNAse d) Caspase *{Jipmer 05)*

1759. Hepatic microsomal enzyme induction occurs by-
a) Located in smooth ER *{PGI June 05)*
b) It's action always lead to inactivation of xenobiotics
c) Causes oxidation, reduction and hydrolysis reactions
d) Certain drug inactivates & certain drug enhances its action

1760. Professional antigen presenting cells-(PG7*June 05)*
a) T-cells b)B-cells
c) Dendritic cells d)NKcell
e) Endothelial cells

1761. Nitric Oxide Synthase - *(MAHA 05)*
a) Is inhibited by Ca++
b) Catalyzes a dioxygenase reaction
c) Accepts electrons from NADH
d) Requires NADH, FAD, FMN & Heme iron

1762. Which one of the following has as one of its major effects, the ability to inhibit platelets aggregation -
a) LeukotrieneA4 b) Prostacyclin *(MAHA 05)*
c) Thromboxane A2 d) Prostaglandin H2

1763. Enzyme which is a marker for mitochondria is -
a) Glutamate dehydrogenase *(APPGE05)*
b) Acid phosphatase
c) Alkaline phosphatase
d) Hexokinase

1764. Which of the following is NOT normally excreted inUrine- *(APPGE05)*
a) Sodium b)$HC0_3$
c) Creatinine d) Uric acid

1765. Severe muscular exercise causes - *(Orissa 05)*
a) Lactic acidosis b) Ketoacidosis
c) Hypothermia d) t CPK levels

1766. The predominant isozyme of LDH in cardiac muscle is- *{AI05)*
a) LD-1 b) LD - 2
c) LD-3 d) LD - 5

1767. What is the most acute effect of smoking cessation-
a) Shift of oxyhemoglobin curve to the right
b) Increased ciliary function *{AIIMS May 05)*
c) Decreased mucous production
d) Decreased incidence of post operative pneumonia

1768. The long and short arms of chromosomes are designated respectively as - *(AI06)*
a) p and q arms b) m and q arms
c) q and p arms d) 1 and s arms

1769. Markers of plasma membrane are - *(PGI June 06)*
a) Galactosyl transferase b) 5 - Nucleotidase
c) Adenyl cyclase d) ATP synthase
e) Glucokinase

1770. Brain fingerprinting - *(PGI June 06)*
a) Used lie-detector
b) Used by EEG on lead
c) Used for quantitative measurement of sulci, gyri
d) Used by DNA

1771. Rate limiting step in gluconeogenesis -
a) Fructose 1, 6 bisphosphatase *(PGI June 06)*
b) Glucokinase
c) Fructokinase

1772. Enzymes involved in PUFA synthesis -*(PGI June 06)*
a) Pyruvate carboxylase b) Acyl transferase
c) Acetyl transferase d) Desaturase

1773. All are lysosomal disorders, except - (*PGMCETOfl)*
a) Gaucher's disease b) Tay Sach's disease
c) Neimann Pick disease d) Von Geirke's disease

1774. Which of the following does not contain uronic acid- *{PGMCET 01)*
a) Heparin b) Keratin sulfate
c) Chondroitin sulfate d) Dermatan sulfate

1775. The cofactor required for the activity of Sulfite oxidase is - *{Corned 08)*
a) Copper b) Selenium
c) Molybdenum d)Zinc

1776. Increased copper excretion in urine is seen in all except-
a) Primary sclerosing cholangitis *(Aiims May 07)*
b) Wilson's disease
c) Primary biliary cirrhosis
d) Hepatocellular carcinoma

1751)a 1752)d 1753)b 1754)c 1755)c 1756)b 1757)c 1758)a 1759)a,c,d 1760)c 1761)d 1762)b 1763)a
1764)b 1765) a 1766)a 1767)a 1768)c 1769)b,c 1770)b 1771)a 1772)d 1773)d 1774)b 1775)c 1776)d

1777. All take place in mitochondria except - *(Aiims May 07)*
a) Fatty acid oxidation b) EMP pathway
c) Electron transport chain d) Citric acid cycle

1778. Which one of the enzyme deficiency is correctly paired ? *(MAHE07)*
a) Fabry's - alpha galactosidase
b) Gauchers - beta glucosidase
c) Cystic fibrosis - glucosidase
d) Chronic bronchitis - alpha 1 antitirypsin

1779. Anion gap means - *(MAHE07)*
a) Gap in anion molecule
b) Difference between high and normal anion gap acidosis
c) Unmeasured ions
d) Primary deficit of anions

1780. Muscle is the major biochemical transducer because it - *(UP07)*
a) Converts potential energy into kinetic energy
b) Converts kinetic energy to potential energy
c) Converts thermal energy to kinetic energy
d) Converts thermal energy to potential energy

1781. Nephelometry is based on the principle of -
a) Light attenuated in intensity by scattering
b) Refraction of light *(AIIMS Nov 07)*
c) Reduced transmission of light
d) Filtration of solutes by kidney

1782. Peroxidase enzyme is used in estimating -
a) Haemoglobin b) Ammonia *(AIIMSNov 07)*
c) Creatinine d) Glucose

1783. Molecular change in Lysosomal storage disorder is- *(AIIMS Nov 07)*
a) Defective fusion of lysosomes and phagosomes
b) Increased synthesis of some substrates
c) Mutation of genes encoding lysosomal hydrolases
d) Membrane defect of lysosomes

1784. All are involved in fast axonal transport, except -
a) Kinesin b)Dynein *(AIIMSNov 07)*
c) Lysosomes d) Neurofilaments

1785. Collagen of which type is found in hyaline cartilage-
a) Type I b) Type II *(AIIMS Nov 07)*
c) Type III d) Type IV

1786. In sickle cell anemia, sickle shapes occurs due to polymerization of - *(UP 08)*
a) Oxyhemoglobin b) Deoxyhemoglobin
c) Methoxyglobin d) Cyanohemoglobin

1787. Serum gamma glutamyl transpeptidase increase in (GGT)- ***(UP 08)***
a) Hepatitis b) Alcoholism
c) Muscular dystrophy d) Mycardial infarction

1788. All of the following are trypsin inhibitors, Except -
a) Alpha -1 antitrypsin *(AI08)*
b) Alpha - 1 - antiproteinase
c) Enterokinase
d) Egg - white

1789. Neutral molecules are transported by - *(AI08)*
a) Porin channels b) Ionophores
c) Simple diffusion d) None of the above

1790. Phosphatidyl choline in a lipid monolayer, at pH of 3.5 leads to - *(Aiims May 08)*
a) Decreased surface potential
b) Increased surface potential
c) Decreased dipole moment
d) Zero dipole moment

1791. True about G protein coupled receptors is -
a) G proteins bind to hormones on the cell surface
b) All the three subunits alpha, beta and gamma should bind to each other for G protein to act
c) G proteins act as inhibitory and excitatory because of difference in alpha subunit *(Aiims May 08)*
d) G protein is bound to GTP in resting state

1792. Normal plasma osmolality is - *(Manipal 08)*
a) 275-300 milliosmol/kg b) 310-340milliosmol/kg
c) 200-240 milliosmol/kg d) 160-180 milliosmol/kg

1793. Fireflies produ ce light due to - *(AIIMS Nov 08)*
a) NADH b)GTP
c) ATP d) Phosphocreatinine

1794. Action of a-subunit of G protein is - *(AIIMSNov 08)*
a) Breakdown of GTP to GDP
b) Conversion of GDP to GTP
c) Internalization of receptors
d) Binding of agonist

1795. Which of the following side chains is least polar -
a) Methyl b) Carboxyl *(AI09)*
c) Amino d) Phosphate

1796. After overnight fasting, levels of Glucose transporters are reduced in - *(AI09)*
a) Brain cells b) Hepatocytes
c) Adipocytes d) RBCs

1797. Acetyl CoA can be converted into all of the following Except- *(AI09)*
a) Glucose b) Fatty acids
c) Cholesterol d) Ketone bodies

1798. Sickling in 'HbS^f disease is primarily caused by -
a) Decreased solubility *(AI09)*
b) Decreased stability
c) Altered function
d) Altered 0_2 binding capacity

1799. Energy expenditure in resting state depends on -
a) Lean body mass *(AI 09)*
b) Adipose tissue
c) Resting Heart rate
d) Exercise

1800. Which of the following statements about recommended dietary allowances (RDA) is true -
a) RDA is statistically defined as two standard deviations (SD) above estimated average requirement (EAR) *(AI 09)*
b) RDA is defined as being equal to the estimated average requirement (EAR)
c) RDA is defined as being equal to adequate intake (AI)
d) RDA is defined as the recommended minimum requirement

1777)b 1778) a 1779)c 1780)a 1781)a 1782)d 1783)c 1784)d 1785)b 1786)b 1787)b 1788)c 1789)c 1790)?
1791)c 1792) a 1793)c 1794)a 1795)a 1796)c 1797)a 1798)a 1799)a 1800)a

1801. Monoprotic acid are - *(PGIJune09)*
a) Formic acid b) Carbonic acid
c) Acetic acid d) Citric acid
e) Nitric acid

1802. I-cell disease is associated *vrith-(DELHIPGFeb. 09)*
a) Golgi apparatus b) Lysosomes
c) Peroxisomes d) Mitochondria

1803. The current view regarding self-tolerance is that self antigens are presented along with nonself antigens but are then eliminated in the thymus during early development. This is known as -*(DELHI PG Feb. 09)*
a) Autoimmunity b) Clonal selection
c) Clonal anergy d) Clonal deletion

1804. Base excision repair - *(DELHIPG Feb. 09)*
a) Is used only for bases that have been deaminated
b) Uses enzymes called DNA glycosylases to generate an abasic sugar site
c) Removes about 10-15 nucleotides
d) Requires the action to E. coli DNA polymerase III

1805. Botulinum toxin produces skeletal muscle paralysis by- *(DELHIPGMar. 09)*
a) Enhancing release of norepinephrine
b) Inhibiting release of acetylcholine
c) Direct damage to nerve endings
d) Producing hemolysis

1806. The predominant component of osteoid matrix of bone is - *(DELHIPG Mar 09)*
a) Type I collagen b) Chondroitin sulfate
c) Keratin sulfate d) Dermatan sulfate

1807. Positive benzidine test is/are seen in- *(PGINov 09)*
a) Hemoglobin b) Myoglobin
c) Porphobilinogen d) Glucose
e) Bilirubin

1808. Danaparoid contains - *(PGI Nov 09)*
a) Keratin sulphate b) Chitin
c) Dermatan sulphate d) Heparan sulphate
e) Keratin

1809. Which of the following act as antioxidants -
a) Vit. D b) Vit. C *(PGINov 09)*
c) Selenium d) Glutathione peroxidase
e) VitE

1810. In CRP, the C stands for- *(AIIMSNov 09)*
a) CanavallinA
b) Cellular
c) Chondoitin sulfate
d) C polysaccharide of streptococcus

1811. Which statement is incorrect - *(AIIMSNov 09)*
a) Chemiluminescene: excited electron in higher orbit comes to lower orbit by emitting energy in form of photon
b) Bioluminescence: is a form of chemiluminescence
c) Phosphorescence: is energy emitted following absorption of EM radiation
d) Electrochemiluminescence: is energy emitted by photon

1812. A 40 yr old woman presents with progressive palmoplantar pigmentation. X-ray spine shows calcification of intervertebral discs. On adding Benedict's reagent to urine, it gives greenish brown precipitate and blue-black supernatant fluid. What is the diagnosis? *(AIIMS May 10)*
a) Phenylketonuria
b) Alkaptonuria
c) Tyrosinemia type-2
d) Argininosuccinic aciduria

1813. Method of chromatography in which molecules that are negatively charged are selectively released from stationary phase into the positively charged molecules in mobile phase is termed - *(AI10)*
a) Affinity chromatography
b) Ion - Exchange chromatography
c) Adsorbtion chromatography
d) Size - Exclusion chromatography

1814. Rothera's test used for detection of - *(AI 10)*
a) Proteins b) Glucose
c) Fatty acid d) Ketones

1815. Prenatal diagnosis of hemophilia is best done by -
a) PCR b) Linkage analysis *(AI 10)*
c) Cytometry d) Microarray

1816. Detoxification of drugs is controlled by - *(DPG10)*
a) Cytochrome b) Cytochrome P450
c) Cytochrome C d) Cytochrome A

1817. Maple syrup urine disease is due to deficiency of -
a) Decarboxylation b) Dehydroxylation *(DPG 10)*
c) Transamination d) Deamination

1818. Which of the following is an inhibitor of platelet aggregation? *(DPG 10)*
a) LeukotrieneA4 b) Prostacyclin
c) Thromboxane A2 d) Protaglandin H2

1819. Specific dynamic action is greatest *of-(Mah-stra 10)*
a) Protein b) Carbohydrates
c) Fat d) Vitamins

1820. Sulphur donor in phase II Detoxification is_____
a) FeS b)SAM *(Maharashtra 10)*
c) PAPS d)GSH

1821. Chalones are of cell division - *(Maharashtra 10)*
a) Regulators b) Promoters
c) Inhibitors d) Initiators

1822. **True about location of** Ig **chromosome-**(PG/*Nov 10)*
a) k-2 b) k-6
c) k-14 d) ***X-22***
e) ***X***-10

1823. Correct order of switching of Ig- *(PGINov. 10)*
a) IgMtoIgG b)IgMtoIgG
c) IgM to IgA d) IgM to IgD
e) IgEtoIgG

1824. Correct pair of Ig subclass with their heavy chain-
a) IgM-a (alpha) b) IgM-y (gamma) *(PGINov. 10)*
c) IgM-8 (delta) d)IgE-y (gamma)
e) IgA-y(gamma)

1801) a,c_5e 1802)b 1803)d 1804)b 1805)b 1806)a 1807)a,b 1808)a,c,d 1809) a,b,c,d,e I810)d 1811)d
1812) b 1813) b 1814) d 1815)a 1816)b 1817)a 1818)b 1819)a 1820)c 1821)c 1822)a,d 1823)a,c 1824)None

1825. IVue about IgM - *(PGINov 10)*
a) Fix Complement
b) Increased in primary response
c) Fab region is composed of variable region
d) Fc is antibody - binding portion

1826. TYansportofADPin and ATP out of mitochondria is inhibited by - *(AIIMS Nov 10)*
a) Atractyloside b) Oligomycin
c) Rotenone d) Cyanide

1827. Following modification occurs in Gs subunit which leads to watery diarrhea in cholera-f/IZZMS' *May 11)*
a) ADP ribosylation b) ATP-ADP transfer
c) Phosphorylation d)Dephosphorylation

1828. Which of the following statement is true - *(A111)*
a) Sulfonamides inhibit folate reductase irreversibility
b) Ethanol inhibits aldehyde dehydrogenase when used in methanol poisoning
c) Acetylcholinesterase inhibition by malathion can be reversed by increasing the levels of Acetylcholine
d) Fluoroacetate competitively inhibits Aconitase

1829. Phase-I of xenobiotic reactions include -
a) Acetylation b) Methylation *(Jipmer 10)*
c) Hydroxylation d) Glucorinidation

1830. All the following biochemical changes occur in acute starvation exept- *(Jipmer10)*
a) Increased gluconeogenesis in liver
b) Increased glycogenolysis in liver
c) Increased lipogenesis
d) Ketone bodies utilized by brain for energy

1831. Vital event in MI - *(Jipmer 11)*
a) Increase in ATP synthesis
b) Increased calcium efflux from SR
c) Increase in pH
d) Anaerobic glycolysis

1832. Northern blot is used for - *(Jipmer 11)*
a) RNA b)DNA
c) Protein d) Antigens

1833. Which one of the following is a phase I reaction in xenobiotics- *(Jipmer 11)*
a) Hydroxylationb) Methylation
c) Conjugation d) Acetylation

1834. Which of the following GAG is not sulphated -
a) Chondroitin *(NEET/DNB Pattern)*
b) Dermatan
c) Keratan
d) Hyaluronic acid

1835. Protein glycosylation occurs in - *(NEET/DNB*
a) ER b) Golgi bodies *Pattern)*
c) Mitochondria d) Peroxisomes

1836. Xanthoproteic reaction involves - *(NEETPattern)*
a) Nitric acid b) HCL
c) H_2S0_4 d) Carbolic acid

1837. Calorie provided by 1 gm dictery fibre is -
a) 2 cal b) 10 cal
c) 15 cal d) 20 cal

1838. In a person fasting overnight with carnitine deficiency, following chemicals increase in quantity in blood - *(NEET/DNB Pattern)*
a) Glucose b)Fatty acids
c) Amino acids d)Ketone bodies

1839. Weakest bond is - *(NEET/DNB Pattern)*
a) Covalent b)Hydrogen
c) Electrostatic d)Vander wall

1840. Oxidative deamination occurs *m-(NEET/DNBPattern)*
a) Cytoplasm of all cells
b) Mitochondria of all cells
c) Cytoplasm of hepatocytes
d) Mitochondria of hepatocytes

1841. Retheras test is used for - *(NEET/DNB Pattern)*
a) Bilirubine in urine
b) Sugar in urine
c) Protein in urine
d) Ketone bodies in urine

1842. Organ which can utilize glucose, FA and ketone bodies is - *(NEET/DNB Pattern)*
a) Liver b) Brain
c) Skeletal muscle d)RBC

1843. In FITC the color emitted after blue light absorption ? *(NEET/DNBPattern)*
a) Yellow green b) Orange red
c) Apple green d) Golden brown

1844. Which of the following occurs in mitochondria -
a) Glycolysis b) HMPshunt *(NEET/DNB*
c) TCA cycle d) Glycogenesis *Pattern)*

1845. DNA microarrays allow detection of Gene mutations using - *(NEET/DNB Pattern)*
a) Polymerase chain Reaction b) Cloning
c) Southern Blotting d) Hybridization

1846. Which of the following is based on ionic charge -
a) Filtration b) Dialysis *(NEET/DNB Pattern)*
c) Electrophoresis d) Ultracentrifugation

1847. Brain cannot utilize - *(NEET/DNB Pattern)*
a) Glucose b) Fatty acids
c) Ketone bodies d) None

1848. Chromosomal study is best carried out in -*(NEET/*
a) Prophase b) Metaphase *DNB Pattern)*
c) Telophase d) Anaphase

1849. NO is synthesized by all *except-(NEET/DNB Pattern)*
a) Endothelium b) Platelets
c) Neuron d) Macrophages

1850. Gas-liquid chromatography is used for -*(NEET/DNB*
a) Antigen b) Antibody *Pattern)*
c) Fatty acids d) Harmon receptor

1851. Substance with highest thermogenic effect -*(NEET/*
a) Fat b) Proteins *DNB Pattern)*
c) Carbohydrate d) All are the same

1852. Preteomics is - *(NEET/DNB Pattern)*
a) Study of structure and function of proteins
b) Study of genome
c) Study of structure and function of a cell
d) Study of structure and function of sugar

***

SOCIAL & PREVENTIVE MEDICINE

CONCEPT OF HEALTH AND DISEASE

HEALTH

1. **Definition of health given by WHO includes which of the following dimension -** *(PGIDec 01)*
   a) Social b) Physical
   c) Mental d) Emotional
   e) Economic
2. **Optimal healthy life includes -** *(PGI2002)*
   a) Moderate physical exercise
   b) Athletic involvement
   c) Sufficient nutrition
   d) Mental peace
   e) Blood & urine examination at least twice a year
3. **Which of the following is the current trend in Health Care-** *(AI10)*
   a) Qualitative enquiry
   b) Community participation
   c) Equitable distribution
   d) Primary Health Care

CONCEPT OF WELL BEING

4. **Standard of Living (WHO) includes all except -**
   a) Income *(NEET/DNB Pattern)*
   b) Sanitation & nutrition
   c) Level of provision of health
   d) Human rights
5. **All of the following indicators are included in Physical Quality of Life Index (PQLI) except -**
   a) Infant mortality rate *(AI 06, 07)*
   b) Life expectancy at age one
   c) Literacy rate
   d) Per capita income
6. **PQLI included are -** *(PGI June 08)*
   a) Literacy b) Infant mortality
   c) Income d) Life expectancy at birth
7. **PQLI includes -** *(NEET/DNB Pattern)*
   a) IMR b) Life expectancy at birth
   c) MMR d) Per capita income
8. **Human living standards can be compared in different countries by -** *(NEET/DNB Pattern)*
   a) HDL b) PQLI
   c) HPI d)DALY
9. **Human development index includes A/E -**
   a) Crude death rate *(AIIMS May 01)*
   b) Education
   c) Life expectancy at birth
   d) GDP
10. **Human Development Index (HDI) values range between -**
    a) - 1 to + 1 b) 0 to 1
    c) 0 to 3 d) 1 to 3
11. **The value of Human Development Index in India is -** *(NEET/DNB Pattern, Jipmer 03)*
    a) 0.500 b) 0.545
    c) 0.505 d) 0.540
12. **Human development index includes -** *(PGIDec 0 7, May 11)*
    a) Crude death rate
    b) Life expectancy at one year
    c) Life expectancy at birth
    d) Adult literacy rate
    e) GDP
13. **Human development index is composite of the following except -** *(AI 11)*
    a) Life expectancy at birth
    b) Adult literacy rate and mean year of schooling
    c) CDP
    d) Life expectancy at one year
14. **Age limit for HDI?** *(NEET/DNB Pattern)*
    a) 25 to 85 yrs b) 25 to 50 yrs
    c) 15 to 45 yrs d) 50 to 75 yrs
15. **Poverty index does not include?** *(DNB June 2010)*
    a) Longlife b)Knowledge
    c) Standard of living d) Income

CONCEPT OF DISEASE CAUSATION

16. **All of the following are components of Epidemiological triad except -** *(AI 98)*
    a) Environment b) Agent
    c) Host d) Manpower
17. **The manner in which a disease behaves in a community is determined by -** *(AIIMS 80,AMU 86)*
    a) Infectiousness of disease
    b) Density of aggregation of population
    c) Standard of hygiene
    d) Size of reservoir of infection
    e) All of the above
18. **Web Causation of disease is most appropriate -**
    a) Mostly applicable for common disease
    b) Better for all the related factors associated with causation of disease *(NEET/DNB Pattern)*
    c) Epidemiological ratio
    d) Helps to interrupt the risk of transmission
19. **Epidemiologic Web Of Causation[f]theme by -**
    a) Lui pasture *(NEET/DNB Pattern)*
    b) Robert Koch
    c) McMahon and Pugh
    d) None
20. **Demarcation line in iceberg disease is between -**
    a) Symptomatic and asymptomatic cases *(AI08)*
    b) Diagnosed and undiagnosed cases
    c) Apparent and inapparent cases
    d) Case and carriers

1)a,b,c,e 2)a,c,d 3)b 4)d 5)d 6)a,b 7)a 8)b 9)a 10)b l1) b 12)c>d,e 13)d>b,c
14) None > a 15)d 16)d 17)e 18)b 19)c 20)c

21. According to the concept of iceberge phenomenon of disease, all of the following statements about the submerged portion of the ice berg are true except -
a) It includes sub-clinical cases *(Corned 07)*
b) It includes carriers
c) It constitutes undiagnosed reservoir of infection
d) Diagnosis can be made with available techniques

22. All show iceberg phenomenon except - (JIPMER 98)
a) Influenza b) Polio
c) Hepatitis d) Chicken pox

CONCEPT OF CONTROL

23. The term "Disease Control" describes ongoing operations aimed at reducing the following except the- *(UPSC2006)*
a) Incidence of disease
b) Financial burden to the community
c) Virulence of the disease agent
d) Disease duration

24. A state of disease endemicity in which disease transmission has been stopped but the agent persists is- *(AI12)*
a) Eradicationb) Elimination
c) Control d) Holoendemic

25. The only disease which has been eradicated -
a) Chickenpox b) Smallpox*(A192)*
c) Measles d) Influenza

26. Disease eradicated from India is/are -(PGI June 08)
a) Smallpoxb) Guinea worm disease
c) Yaws d) Measles
e) Polio

27. Disease which is close to be eradicated in India -
a) Diphtheria b) Measles *(MAHE 2001)*
c) Polio d) Guinea worm disease

28. In a population to prevent coronary artery disease changing harmful lifestyles by education is referred to as- *(AIMSMay 01)*
a) High risk strategy
b) Primary prevention
c) Secondary prevention
d) Tertiary prevention

29. A concept directed against prevention of risk factors of coronary artery disease is - *(AIIMS 01)*
a) Primordial prevention b) Secondary prevention
c) Health education d) Primary prevention

30. All of the following are methods of health promotion except - *(AIIMS 98)*
a) Immunization b) Nutritional changes
c) Behavioral changes d) Health education

31. Immunization is - *(NEET/DNB Pattern)*
a) Primary prevention
b) Secondary prevention
c) Tertiary prevention
d) Disability limitation

32. Vitamin A prophylaxis is an example -
a) Primordial prevention *(AIIMS May 10, AI09)*
b) Health promotion
c) Specific protection
d) Disability limitation

33. Iodized salt in iodine deficiency control programme is - *(NEET/DNB Pattern)*
a) Primary prevention
b) Secondary prevention
c) Teriary prevention
d) None

34. Pap smear is an example of - *(AI 88)*
a) Primary level of prevention
b) Secondary level of prevention
c) Teritary level of prevention
d) None of the above

35. Primary prevention in coronary heart diseases -
a) Exercise in high risk area *(PGIDec 07)*
b) BP monitoring
c) Salt restriction
d) Statins
e) TMT

36. Primordial prevention in myocardial infarction are all except - *(A ll India 9 7)*
a) Maintenance of normal body weight
b) Change in life style
c) Change in Nutritional habits
d) Screening for hypertension

37. An example of disability limitation is - *(AIIMSMay 08, 07, Nov 06)*
a) Immunization against tetanus
b) Providing children with polio with calipers
c) Resting the affected limb in neutral position
d) Arranging for schooling for children suffering from PRPP

38. Disability limitation is a part of prevention- *(NEET/DNB Pattern)*
a) Primary b) Secondary
c) Tertiary d) None

39. Any loss or abnormality of psychological physiological or anatomical stuctures or function -
a) Impairmentb) Disability *(AIIMS Nov 06)*
c) Handicap d) Disease

40. Which is the correct order - *(NEET/DNB Pattern)*
a) Disease-impairment-disability-handicap
b) Disease-Diability-impairment-handicap
c) Impairment-Disease-Handicap-Disability
d) None

41. The restoration of body function is known as -
a) Vocational rehabilitation *(AIIMS 81, PGI 84)*
b) Medical rehabilitation
c) Social rehabilitaion
d) None of these

42. Loss of part or function - *(NEET/DNB Pattern)*
a) Impairment b) Disability
c) Handicap d) Disease

21)d 22) d 23) c 24) b 25) b 26) a,b 27)a,b,c 28) b 29) a 30) a 31) a 32) c 33) a 34) b
35) a,b,c,d 36) d 37) c 38) c 39) a 40) a 41) b 42) a

43. Which of the following is primordial prevention for NCD (non communicable disease) - *(PGI June 05)*
a) Salt restriction in high NCD area
b) Smoking cessation in high NCE area
c) Preservation of traditional diet in low NCD area
d) Early diagnosis & treatement
e) Excercise in high NCD area

44. Primordial prevention is done in population -
a) With risk factors *(AI00)*
b) Without risk factors
c) Whole population with low prevalence of disease
d) Population with disease

45. Primary prevention does not include - *(AI 00)*
a) Early diagnosis and treatment
b) Health promotion
c) Specific protection
d) Health education

46. Primary prevention - *(PGI June 0 7)*
a) Marriage counseling
b) Early diagnosis and treatment
c) Pap smear
d) Self breast examination
e) Immunization

47. Primary prevention includes: *(PGINov 10)*
a) Marriage counselling
b) Health education
c) Pap smear
d) Self breast examination
e) Health promotion

48. Sputum examination for AFB is a type of - *(AI95)*
a) Primary prevention
b) Secondary prevention
c) Tertiary prevention
d) Primordial prevention

49. Iron and folic acid supplementation to the children forms - *(PGI June 06)*
a) Health promotion
b) Specific protection
c) Primary prevention
d) Secondary prevention

50. Iron and folic acid supplementation forms - *(AI 02)*
a) Health promotion
b) Specific protection
c) Primordial prevention
d) Primary prevention

51. Analysis of routine measurement is aimed at detecting changes in environment - *(NEET/DNB Pattern)*
a) Monitoring b) Surveillence
c) Isolation d) None

52. About monitoring true is / are - *(PGIDec 07)*
a) Broader concept
b) Analysis of measurements for detecting changes in health status
c) An essential part of surveillance
d) Smaller concept
e) Continues after disease elimination

53. Missing cases are detected by - *(AIIMS 99)*
a) Active surveillance
b) Passive surveillance
c) Sentinel surveillance
d) Prevalence rate

54. The most important function of sentinel surveillance is - *(AI 02)*
a) To find the total amount of disease in a population
b) To plan effective control measures
c) to determine the trend of disease in a population
d) To notify disease

55. Disease under WHO surveillance - *(AI 97)*
a) Rabies b) Mumps
c) Hepatitis d) Tetanus

56. International disease surveillance is for -
a) Hepatitis b) Polio *(NEET/DNB Pattern)*
c) TB d) Leprosy

57. Which disease comes under international surveillance - *(NEET/DNB Pattern)*
a) Typhoid fever b) Salmonellosis
c) Chikungunya fever d) Hepatitis B

58. True morbidity in a population can be calculated by-
a) Sentinel surveillance *(AIIMS 02)*
b) Passive surveillance
c) Active surveillance
d) Monitoring

59. Sentinel surveillance is done to - *(AIIMS 00)*
a) Known the total no. of cases in community
b) Know the hidden cases in community
c) Know natural history of disease
d) Plan intervention

60. HIV prevalence can be assessed by- *(NEET/DNB Pattern)*
a) Sentinel surveillance b) Active
c) Passive d) Register

INDICATORS OF HEALTH

61. All are morbidity indicators execpt - *(AI 91)*
a) Period of stay in hospital
b) Doctor : population ratio
c) Attendance at out patient department
d) Notification rates

62. Which of one of the following is NOT a utilization rate-
a) Population bed ratio *(UPSC-II09)*
b) Bed occupancy rate
c) Bed turnover ratio
d) Average length of stay

63. Sullivan's index indicates - *(MAHE 98)*
a) Life free of disability
b) Pregnancy rate per HWY
c) Hook worm eggs/gm of stool
d) Standard of living

64. Burden of disease is best detected by - *(AIIMS 01)*
a) DALY b) Sullivan's index
c) IMR d) Survival index

43) c,e 44) b 45) a 46) a,e 47)a,b,e 48) b 49)b,c 50) b 51) a 52)b,c,d 53) c 54) a 55) a 56) b
57) b 58) c 59) b 60)a 61)b 62)a 63)a 64)a

65. DALY true is - *(NEET/DNB Pattern)*
a) Indian life expectancy used as standard
b) One DALY means one lost year of life
c) Mortility indicator
d) None

66. DALY measures - *(AI12)*
a) Years lost due to premature death and years lived with disability
b) Years lost due to premature death and years lived without disability
c) Years lost due to disability
d) Years lived without disability

MISCELLANEOUS

67. James lind is known for - *(NEET/DNB Pattern)*
a) Germ theory of disease
b) Multifactorial causation of disease
c) Prevention of scurvy by fruits
d) None

68. Father of surgery - *(NEET/DNB Pattern)*
a) Hippocrates b) Ambroise pare
c) Sushruta d) Aristotle

69. Father of public health - *(NEET/DNB Pattern)*
a) Cholera b) Plague
c) Leptospirosis d)Anthrox

70. Edward Jenner died in - *(NEET/DNB Pattern)*
a) 1749 b) 1775
c) 1823 d) 1920

71. Socialization of medicine leads to all except -
a) Ensures complete utilization of services by all people *(AIIMS Nov 11, Nov 06)*
b) Free medical care supported by state
c) Eliminates the competition among physicians in search of clients
d) Ensures social equity, universal coverage of health services

72. If alternate of medicine were accepted as a modality of therapy, then 'Yoga' would be best described as a form of - *(AI 12)*
a) Physiotherapy b) Preventive Medicine
c) Emergency Medicine d) Caloric usurper

73. Which of the following is the contribution of GERMANY to public health - *(PGI June 05)*
a) Socialization
b) Pasteurization
c) Development of baths, sewers, aqueducts for sanitation
d) Instituting compulsory sickness insurance
e) Quarantine around shipping area

74. ICD 10 - *(NEET/DNB Pattern)*
a) Revised every 5 years
b) Consists of 10 chaptors
c) Arranged in 3 volumes
d) Was produced by UNICEF

75. ICD-10 code in XXI includes all except - *(AI 09)*
a) Lack of exercise b) Alcoholism
c) Poisoning d) Unhealthy found

76. ICD chapter 21 includes all except - *(NEET/DNB Pattern)*
a) Alcohol b) Tobacco
c) Injury d) Drugs

77. One of the following is not true of International Classification of Disease - *(Kerala 2K)*
a) It is revised once in 10 years
b) It was devised by UNICEF
c) The 10th revision consists of 21 major chapters
d) It is accepted for National and International use
e) It provides the basis for use in other health fields

78. Which events occurred before 1900AD- *(PGINov 10)*
a) Establishment of seat of social medicine at Oxford
b) Epidemiological work on cholera by John Snow
c) Work on scurvy by James Lind
d) Use of BCG vaccine
e) Chadwick work on cholera in London

79. 'Secrete of national health lies in the homes of people' statement by - *(NEET/DNB Pattern)*
a) Indira Gandhi b) Abhraham lincon
c) Bhore d) Florence Nightingale

80. Missing cases are detected by? *(DNB Dec 2011)*
a) Active surveillance b) Passive surveillance
c) Sentinel surveillance d) Monitoring

81. Which of the following is not a primary prevention strategy? *(DNB Dec 2011)*
a) Breast self exam b) Control of tobacco
c) Radiation protection d) Cancer education

82. Screening of the diseases is which type of prevention? *(DNB Dec 2011)*
a) Primordial b) Primary
c) Secondary d) Tertiary

83. Small pox vaccine was invented by? *(DNB June 2011)*
a) Louis pasture b) Edward Jenner
c) Paul Eugene d) John snow

84. Physical quality of life index includes - *(DNB June 2011)*
a) IMR, Literacy, Life expectancy at birth
b) IMR, Literacy, Life expectancy at one year
c) MMR, IMR and Life expectancy
d) MMR, intake of calories per capita and IMR

85. One DALY signifies? *(DNB Dec 2010)*
a) 1 year of disease free life
b) 1 lost year of healthy life
c) 1 month of bedridden life
d) None of these

86. Desks provided with table top to prevent neck problems is an example of? *(DNB Dec 2010)*
a) Primordial prevention b) Primary prevention
c) Specific protection d) Disability limitation

87. James Lind is related to the discovery of: *(DNB Dec 2010)*
a) Prevention of scurvy
b) Cause of scurvy
c) Pathogenesis of scurvy
d) All

65) b 66) a 67) c 68) b 69) a 70) c 71) a 72) b 73) d 74) c 75) c 76) c 77) b 78)b,c,e
79) d 80) c 81) a 82) c 83) b 84) b 85) b 86) c>b 87) a

88. **Theory of web of causation was given by?** *(DNB Dec*
a) Me Mohan and Pugh b) Petfenkoffer 10)
c) John snow d) Louis Pasteur

89. **All of the following are Eradicable diseases EXCEPT-** *(DNB June 2010)*
a) Tuberculosis b) Guinea worm
c) Polio d) Measles

90. **DALY is -** *(DNB June 10)*
a) Disease - Adjusted Life year
b) Disability Adjusted Life year
c) Disease Associated Life year
d) Disability Associated Life year

91. **Demarcation line in iceberg disease is between -** *(DNB June 10)*
a) Symptomatic and asymptomatic cases
b) Diagnosed and undiagnosed cases
c) Apparent and inapparent cases
d) Case and carriers

92. **Maximum damage to Napoleon's army during his march to Moscow was done by?** *(DNB June 2010)*
a) Typhus b) Plague
c) Diarrhea d) Typhoid

93. **ICD-10 has how many chapters?** *(DNB Dec 09)*
a) 5 b) 12
c) 22 d)32

94. **Sulllivian index -** *(DNB June 09)*
a) Measures disability
b) Measures life years adjusted with disability
c) Measures life expectancy adjusted without disability or free of disability
d) Measures life expectancy

95. **Missing cases are detected by?** *(DNB June 09)*
a) Active surveillanceb) Passive surveillance
c) Sentinel surveillance d) Monitoring

96. **Purpose of sentinel surveillance is -** *(DNB Dec 08)*
a) To know total number of cases
b) Health planning
c) Prevention of disease
d) To know natural history of disease

9 7. **Sullivan's index measures -** *(DNB Dec 08)*
a) Mortality b) Morbidty
c) Infectivity d) Disability

98. **P.Q.L.I. is -** *(DNB June 08)*
a) IMR, Life expectancy, literacy
b) MMR, Life expectancy, literacy
c) MMR, IMR, Life expectancy
d) IMR, Life expectancy at 1 year of age, SE status

99. **Primordial prevention is the -** *(DNB June 08)*
a) Prevention of diseases among the hill-dwelling and tribal people
b) Prolongation of human life span to the maximum extent
c) Promotion of health, well being and efficiency
d) Prevention of diseases through modification of their risk factors

100. **Emporiatrics deals with the health of -** *(DNB June 08)*
a) Farmers b) Travellers
c) Industrial workers d) Mine workers

101. **Which of the following dieases is under surveillance by WHO for notification by National health Authorities -** *(DNB June 08)*
a) Louse-borne typhus fever b) Relapsing fever
c) Paralytic polio d) All of the above

102. **Prevention of emergence of risk factor is -**
a) Primordial prevention *(DNB Dec 07)*
b) Primary prevention
c) Secondary prevention
d) Tertiary prevention

103. **Which of the following dimensions is not included in the WHO definition of heatlh -** *(DNB Dec 07)*
a) Physical well being
b) Occupational well being
c) Mental well being
d) Social well being

104. **Years of life lost to premature death and years lived with disability is known as -** *(DNB Dec 07)*
a) HALE b) DALY's
c) Suullivan's index d)HDI

105. **'Cource of a disease process without any' intervention is the definition of -** *(DNB Dec 07)*
a) Spectrum of disease
b) Epidemiology of disease
c) Natural history of disease
d) Iceberg phenonenon

106. **Who propounded the germ theory of disease -**
a) Leeuwenhoek *(DNB June 07)*
b) Robert koch
c) Ambroise Parre
d) Louis Pasteur

107. **A good indicator of the availability, utilization and effectiveness of health care services in a country is-**
a) Maternal mortality rate *(DNB June 07)*
b) Hospital bed occupancy rate
c) Infant mortality rate
d) DALY's

108. **The term 'disease control' employs all of the following except -** *(DNB June 07)*
a) Reducing the complications
b) Reducing the risk of further transmission
c) Reducing the incidence of disease
d) Reducing the prevalence of the disease

109. **Which of the following is not tertiary level prevention-** *(DNB June 07)*
a) Total mastectomy for breast cancer
b) Tendon transplant in leprosy
c) Physiotherapy in residual polio myelitis
d) Provision of spectacles for refractive errors

110. **WHO surveillance is done for all, except -** *(DNB*
a) Polio b) Viral encephalitis *June 07)*
c) Malaria d) Relapsing fever

88) a 89) a 90)b 91)c 92)a 93)c 94)c 95)c 96)a 97)d 98)d 99)d 100) b 101)d
102) a 103) b 104) a 105) c 106)d 107)c 108) d 109) a 110)b

111. Chemoprophylaxsis is----------prevention -
a) Primordial b) Primary *(AIIHPH 98)*
c) Secondary d) Tertiary

112. Benzathine Pencillin prophylaxis for rheumatic fever comes under - *(MAHE 07)*
a) Primary prevention b) Primordial prevention
c) Secondary prevention d) Tertiary prevention

113. Prevention of disease by immunization comes under which category - *(MAHE 07)*
a) Primordial prevention b) Primary prevention
c) Secondary prevention d) Tertiary prevention

114. Which one of the following modes of intervention covers the process of advising a patient to change his lifestyle in order to prevent any risk factor for a disease? *(UPSC-IIO?)*
a) Health promotion b) Specific protection
c) Disability limitation d) Rehabilitation

115. Amniocentesis is early pregnancy for genetic disorders is a kind of - *(UPSC-II09)*
a) Primordial prevention b) Primary prevention
c) Secondary prevention d) Tertiary prevention

116. Under which level of prevention should sentinel surveillance be categorised - *(UPSC-II 08)*
a) Primordial prevention b) Primary prevention
c) Secondary prevention d) Tertiary prevention

117. Purpose of sentinel surveillance is - *(COMED 06, DPG 09)*
a) To know total number of cases
b) Health planning
c) Prevention of disease
d) To know natural history of disease

118. Host related biological properties of a disease agent are the following except - *(UPSC - 2006)*
a) Virulence b) Infectivity
c) Pathogenicity d) Communicability

119. Most important component of level of living is -
a) Health b) Education *(Kerala 04)*
c) Occupation d) Housing

120. Living standard of people is best assessed by?
a) Infant mortality rate *(DPG 11)*
b) Maternal mortality
c) Physical quality of life index
d) Death rate

121. Following index measures average achievements in basic dimensions of human development -
a) Human poverty index *(COMEDK05)*
b) Human development index
c) Gender empowerment index
d) Life expectancy at birth

122. Sullivan index is an index for - *(MAHE 07)*
a) Life fiee of disability b) Life expectancy
• c) Earning capacity d) Population index

123. Sullivan's index measures - *(MAHE 2001)*
a) Mortality b) Morbidty
c) Infectivity d) Disability

124. All the following indicators are used to measure disability rates in a community except -
a) Suillivan's index *(Karnataka-PG MEE 2006)*
b) Human poverty index
c) Health adjusted life expectancy
d) Disability adjusted life yeart

125. All the following indicators are used to measure disability rates in a community except? *(DPG 11)*
a) Sullivan's Index
b) Human Poverty Index
c) Health Adjusted Life Expectancy
d) Disability Adjusted Life Year

126. Which one of the following branches of Sociology studies the relationship between organism and environment- *(UPSC 2K)*
a) Ergonomics b) Social physiology
c) Ecology d) Social pathology

127. Following are true about Kerala except- *(MAHA 05)*
a) Birth rate 29/100
b) Per capita annual income Rs. 2594
c) Life expectancy 66.6 years
d) Famale literacy rate 65%

128. Iceberg phenomena is not seen in - *(Orissa 04)*
a) Measles b)AJDS
c) Polio d) Rubella

129. Which of the following countries was the first to institute compulsory sickness insurance? *(UPSC-II09)*
a) USA b) England
c) France d) Germany

130. Provision of free medical care to the people at government expense is known as - *(UPSC 99)*
a) State medicine b) Social theraphy
c) Social medicine d) Preventive medicine

131. Epidemiology of cholera in England was classified by- *(BURDWAN2K)*
a) John Snow b) Winslow
c) Chadwick d) Howard huges

132. The concept of Social medicine was first introduced by- *(Kerala 2K)*
a) Neumann and Virchow b) Robert Grotjahn
c) John Ryle d) Rene sand
e) Crew

133. The term 'Social Medicine' was first introduced by -
a) John Snow b) David Morley *(UPSC 01)*
c) Jules Guerin d) C.E.A. Winslow

134. The pattern of disease in a community described in terms of the important factors which influence its occurrence is known as - *(UPSC 2006)*
a) Epidemiology b) Confounding factors
c) Iceberg of disease d) Community diagnosis

135. In what form is the example of "de-professionalization" of medicine widely seen in India-
a) Quack practitioners *(UPSC 2006)*
b) Primary health care practices
c) Irrational use of antibiotics
d) Non-ethical practices by doctors

111) b 112) c 113) b 114) a 115)c 116)c 117)a 118)d 119)a 120)c 121)b 122)a 123)d 124)b
125) b 126) c 127)? 128)a 129)d 130)a 131)a 132)a 133)c 134)d 135)b

EPIDEMIOLOGY

MEASUREMENT OF MORTALITY AND MORBIDITY

136. Denominator of crude death rate is - *(AIIMS 97)*
a) 1000 live birth
b) Mid year population
c) Total number of deaths in a community
d) Total number of case population in community

137. Burden of disease is given by - *(NEET/DNB Pattern)*
a) Incidence
b) Crude death rate
c) Cause specific death rate
d) Proportional mortality rate

138. Following can be used as a yardstick for the assessment of standards of therapy -
a) Specific death rate
b) Case fatality rate
c) Proportional mortality rate
d) Survival rate

139. Simplest measure of mortality -
a) Crude death rate *(NEET/DNB Pattern)*
b) Case fatality rate
c) Proportional mortality rate
d) Specific death rate

140. Proportional mortality rate is - *(NEET/DNB Pattern)*
a) Number of death due to particular a cause
b) Number of death during that year
c) Number of death in one month
d) None

141. Which one of the following is a good index of the severity of an acute disease ? *(AI05, AIIMS 04, 02,*
a) Cause specific death rate *99, 95)*
b) Case fatality rate
c) Standardized mortality ratio
d) Five year survival

142. All is true regarding case fatality rate except -
a) Represents killing power of disease *(AIIMS 97)*
b) Closely related to viruleance
c) Very useful for chronic diseases
d) May vary in different epidemic for same disease

143. In an outbreak of cholera in a village of 2000 population 20 cases have occurred and 5 have died. Case fatality rate is -
a) 1% b) 0.25%
c) 5% d) 25%

144. Severity of acute diseases can be best analyzed by?
a) Standardized mortality ratio *(AI 11, AIIMS May 04)*
b) Cause specific death rate
c) Case fatality rate
d) Age specific death rate

145. Case fatality rate is - *(NEET/DNB Pattern)*
a) Severity of disease
b) Communicability of disease
c) Burden of disease
d) None

146. Direct standardization is used to compare the mortality rates between two countries. This is done because of the difference in- *(NEET/DNB Pattern, AIIMS Nov 11, May 10, Nov 06, May 06, AI 11, 07)*
a) Causes of death b) Numerators
c) Age distributions d) Denominators

147. About direct standardization all are true except -
a) Age specific death rate is not needed *(AI00, 02)*
b) A standard population is needed
c) Population should be comparable
d) Two populations are compared

148. All the statements are true about standardization -
a) Standardization allows comparison to be made between two different populations *(AI 06)*
b) The national population is always taken as the standard population
c) For direct standardization age specific rates of the study population are applied to that of the standard population
d) For indirect standardization age specific rates of the standard population are applied to the study population

149. The rate adj usted to allow for the age distribution of the population is - *(AIIMS May 05, AIIMS 03)*
a) Perinatal mortality rate
b) Crude mortality rate
c) Fertility rate
d) Age standardized mortality rate

150. All are true of standardised mortality ratio except -
a) Expressed as rate per year *(NEET/DNB Pattern)*
b) Can be adjusted for age
c) Can be used for events other than death
d) Ratio of observed deaths to expected deaths

151. Single best mortality *'md\o.ator-(NEET/DNB Pattern)*
a) CDR b) PMR
c) ASDR d) CFR

152. Best method to compare vital statistics of two populations - *(AI 9 7)*
a) Crude death rate
b) Age specific death rate
c) Age Standardized death rate
d) Multivariatie mortality rate

153. Between 2 countries mortality compared best by -
a) Age adjusted rates *(NEET/DNB Pattern)*
b) Crude rates
c) Proportional rates
d) None

154. Which of the following statistics should be adjusted for age to allow comparisons - *(AI 12)*
a) Age specific fertility rate
b) Crude mortality rate
c) Perinatal mortality rate
d) Infant mortality rate

136) b 137) d 138) d 139)a 140)a 141)b 142)b 143)d 144)c 145)a 146)c 147)a 148)b 149)d 150) a 151) c 152)c 153)a 154)b

155. In the International death certificate one of the following is not true - *(Kerala 2K)*
a) Part I of the certificate deals with the immediate cause only
b) Part I of the certificate deals with the immediate cause and also the underlying cause
c) Part II records significantly associated diseases
d) The certificate has been recommended by the WHO for international news
e) In part I the underlying cause of death is recorded on line C

156. In a community, an increase in new cases denotes -
a) Increase in incidence rate *(AI01)*
b) Increase in prevalence rate
c) Decrease in incidence rate
d) Decrease in prevalence rate

157. Disease rate is - *(JIPMER 98)*
a) Risk of susceptibility
b) Usually expressed a percentage
c) Time period in a calendar year
d) Disease occurrence in a specified time period

158. Which one of the following is not a special incidence rate - *(NEET/DNB Pattern, UPSC 07)*
a) Attack rate
b) Secondary attack rate
c) Hospital admission rate
d) Standardized mortality rate

159. All are true of attack rate except - *(Kerala 04)*
a) It is type of prevalence rate
b) Expressed as percentage
c) Used when population is exposed to risk for a limited period of time
d) Reflects extent of epidemic

160. From 1st Jan 2007 to 30th June 2007,22 new cases of tuberculosis were reported per 1,65,000 population. But during this period 120 suspected cases of TB were registered. What will be incidence rate?
a) 133 Per 10,00,000 population *(AI 10)*
b) 90 Per 10,00,000 population
c) 75 Per 10,00,000 population
d) 270 Per 10,00,000 population

161. For calculation of incidence denominator is taken as - *(NEET/DNB Pattern)*
a) Mid year population
b) Population at risk
c) Total number of cases
d) Total number of deaths

162. In a stable situation - *(NEET/DNB Pattern)*
a) Incidence = prevalence x Duration
b) Prevalence = Incidence x Duration
c) Incidence = Prevalence + Duration
d) Prevalence = Incidence + Duration

163. Prevalence of a disease - *(AIIMS 02)*
a) Is the best measure of disease frequently in etiological studies
b) Can only be determined by a cohort study
c) Is the number of new cases in a definedpopulation
d) Describes the balance between incidence, mortality and recovery

164. If the prevalene is very low as compared to the incidence for a disease, it implies - *(AIIMS 05, 03)*
a) Disease is very fatal and/or easily curable
b) Disease is nonfatal
c) Calculation of prevalence and incidence is wrong
d) Nothing can be said, as they are independent

165. Which of the following can cause an increase in the prevalence of the disease - *(AI 09)*
a) Immigration of healthy persons
b) Increased cure rate of disease
c) Longer duration of illness
d) Decrease in population

166. Which of the following will cause an increase in the prevalence of the disease - *(AIIMSNov 07)*
a) Immigration of healthy persons
b) Increased cure rate of the disease
c) Longer duration of the disease
d) Emigration of diseased persons

167. If a new effective treatment is initiated and all other factors remain the same; when of the following is most likely to happen - *(AIIMS 04)*
a) Incidence will not change
b) Prevalence will not change
c) Neither incidence not prevalence will change
d) Incidence and prevalence will change

168. A disease has 3 time more incidence in females as compared to males, with same prevalence in both males and females. TRUE statement is-*(AIIMS 99)*
a) Increase fatality in women
b) More survival in women
c) Better prognosis in men
d) Less fatality in man

169. In a population of 5000, incidence of disease is 100 in 1 year duration of disease studied for is 2 years calculate Prevalance - ***(UP 96)***
a) 20/1000 b) 40/1000
c) 80/1000 d) 400/1000

170. At the end of the year 1990, the population of primary health centre was 30,000 and there were 120 cases of pulmonary tuberculosis. At the end of the year 1991, the population was 30,600 and 30 new cases were detected and 2 cases had died. Based on this data all of the following rates can be calculated except *(UPSC 96)*
a) Incidence b) Prevalence
c) Case fatality d) Proportional mortality

171. True statement about case fatality rate is - *(AI97)*
a) It is a ratio
b) It is a proportion
c) Numerator is always constant
d) Numerator and denominator are separate entities

155) a 156) a 157)d 158)d 159)a 160)a 161)b 162)b 163)d 164)a 165)c 166)c 167)a 168)a,c 169) b 170) d 171) b

172. All of the following statements regarding 'prevalence' are true except - *(AI98, 96)*
a) It is rate
b) It is ratio
c) Duration of disease effects 'prevalence'
d) Numerator & denominator are separate entities

173. The following is true about prevalence and incidence- *(AIIMS05, 03)*
a) Both are rates
b) Prevalence is a rate but incidence is not
c) Incidence is a rate but prevalence is not
d) Both are not rates

174. In crude death rate the population is taken as on -
a) 1 st March b) 1 st July *(AIMS01)*
c) 1st April d) 15th August

175. Prevalence is a - *(NEET/DNB Pattern)*
a) Rate b) Ratio
c) Propotion d) Mean

EPIDEMIOLOGICAL STUDY

176. The analytical study where population is the unit of study is - *(AIIMS 04)*
a) Cross sectional b) Ecological
c) Case-control d) Cohort

177. All are analytic studies except - *(AI09)*
a) Field trials b)Case-control
c) Cohort d) Ecological

178. Study of time place and person is called as - *(AI99)*
a) Experimental epidemiology
b) Analytical epidemiology
c) Descriptive epidemiology
d) Randomised controlled trial

179. All are true regarding point-source epidemic except-
a) All cases occur abruptly and simultaneously
b) Children are most commonly affected
c) Occurs within a specified period *(AI 00)*
d) No secondary waves

180. False regarding a propagated epidemic is -
a) No secondary waves *(AI 00, AIIMS 98)*
b) Spread depends on herd immunity
c) Person to person transmission occurs
d) Slow rise

181. Bhopal gas tragedy is an example of - *(AI 99)*
a) Point source epidemic
b) Propagated epidemic
c) Continous epidemic
d) Modem epidemics

182. Secular trend means - *(PGI June 06, Dec 05)*
a) Seasonal changes b) Periodical changes
c) Religion changes d) Long term changes
e) Short term changes

183. Which disease does not occur as seasonal variation
a) Measles b) Rubella *(NEET/DNB Pattern)*
c) Gastroenteritis d) Cerebral meningitis

184. Which is not an explanation for cyclic trend of diseases - *(JIPMER 93)*
a) Herd immunity variations
b) Environmental conditions
c) Build up of susceptibles
d) Antigenic variations

185. What do you understand by the term secular trend -
a) Long term changes *(PGIDec 05)*
b) Short long term changes
c) Seasonal changes
d) Periodical changes
e) Religion changes

186. Secular trend is a - *(NEET/DNB Pattern)*
a) Long term b) Short term
c) Both d) None

187. TVue about point source epidemic are all except -
a) The curve has rapid rise and slow decline
b) All cases occur in one incubation period
c) One single peak only *(AIIMS Nov 06)*
d) No secondary curves

188. Regarding point source epidemic, false statement (s) is/are: *(PGINov 10)*
a) Rapid rise & fall
b) Only infectious disease can cause
c) Explosive
d) Cases occur even after incubation period
e) No secondary wave

189. Which of the following is characteristic of a single exposure common vehicle outbreak ? *(AIIMS 05)*
a) Frequent secondary cases
b) Severity increases with increasing age
c) Explosive
d) Cases occur continuously beyond the longest incubation period

190. Regarding point source epidemic tru*e-(PGIDec 07)*
a) Rapid rise and fall b) Only infectious cause
c) Explosive d) T secondary attack rate
e) No secondary wave

191. Which of the following is true about Secular trend - *(AI 94)*
a) Road side accident is a good example
b) Due to environmental factors
c) Is due to normally occuring variation in herd immunity
d) Consistent change in a particular direction over a period of time

192. All of the following are analytical epidemiological studies except - *(AI 99)*
a) Cohort study b) Case-control study
c) Ecological study d) Field trial

193. All of the following features are true about cross sectional study except - *(AI 98, 97)*
a) All cases are seen at one point in time
b) Follow up is not a necessary feature
c) More useful for chronic disease
d) Cause and effect relationship can beestabilished

172) a,d 173) c 174)b 175)c 176)b 177)a 178)c 179)b 180)a 181)a 182)d 183)None 184)b
185) a 186) a 187)a 188)b,d 189)c 190)a,c,e 191)d 192)d 193)d

194. Which of the following is not a feature of a cross sectional study - *(AI96)*
a) Not expensive
b) Observational study
c) Used for chronic diseases
d) Well suited for establishing interrelationships of diseases

195. Residence of three village with three different types of water supply were to participate in a study to identify cholera carrier because several cholera deaths had occurred in the recent past, virtually everyone present at the time submitted to examination. The proportion of residents in each village who were carriers was computed and compared. This study is a - *(AIIMS 03)*
a) Cross - sectional study
b) Case - control study
c) Concurrent cohort study
d) Non - concurrent

196. Prevalance of cataract at one point of time can be determined by - *(AIIMS May 09)*
a) Longitudinal study
b) Cross-sectional study
c) Surveillance
d) Cohort study

197. Natural history of disease is studied with -
a) Longitudinal studies *(NEET/DNB Pattern)*
b) Cross-sectional studies
c) Both
d) None

198. In Longitudinal studies, which of the following is true- *(AI 94)*
a) Easy to conduct
b) Detects only one risk factor
c) Determines incidences of disease
d) Have increased bias

199. A one day census of inpatients in a mental hospital could - *(AIIMS May 05)*
a) Give good information about the patients in that hospital at that time
b) Give reliable estimates of seasonal factors in admissions
c) Enable us to draw conclusions about the mental hospitals of India
d) Enable us to estimate the distribution of different diagnosis in mental illness in the local area

200. All of the following are true about case control study except - *(AI 98)*
a) Rapid and inexpensive
b) No risk to subjects
c) Risk factor can be identified
d) Less prone to bias

201. In a case control study, the most characteristic feature is - *(AI 96)*
a) Odds ratio estimation b) Problem bias
c) Yield incidence rate d) Expensive

202. In case-control study there weve 35 cases of lung cancer and 82 controls (without lung cancer). Among cases 33 had positive history of smoking and among controls 55 had positive history of smoking. Odds ratio in this study is - *(AI 99)*
a) 8 b)20
c) 50 d) 100

203. The association between coronary artery disease and smoking was found to be as follows -

	CAD	No CAD
Smokers	30	20
No smokers	20	30

The odds ratio can be estimated as - *(AI 02)*
a) 0.65 b)0.8
c) 1.3 d) 2.25

204. All the following are advantages of case control studies except - *(AI 02)*
a) Useful in rare disease
b) Relative risk can be calculated
c) Odds ratio can be calculated
d) Cost-effective and inexpensive

205. In a case controlled study. It is found that the disease is more common in the group taking coffee as compared to the control group. The significance of this is - *(AIIMS 98)*
a) Cause and effect relationship established
b) Disease median can be calculated
c) Caffeine is associated with occurrence of disease
d) Controls will not get the disease

206. In case control study of buccal carcinoma -
a) CA is commoner in zarda pan users than non users
b) Zarda pan is a cause of buccal CA *(AIIMS 97)*
c) Zarda pan is associated with buccal CA
d) If use of zarda pan is stopped, number of cases will reduce

207. All of the following are characteristics of case control study except - *(NEET/DNB Pattern)*
a) Quick results are obtained
b) Measures incidence rate
c) Proceeds from effect to cause
d) Inexpensive study

208. Which of the following statement is correct in regards to case control study - *(PGIDec05,June01)*
a) Proceeds from effect to cause
b) Exposure already occured
c) Odd's rad ratio can be determined
d) Incidence rate can be calculated
e) Cases have to be followed for long time

209. True about case control study - *(AIIMS 01)*
a) Less expensive
b) Those with disease and not diseased compared
c) Attributable risk is estimated
d) None of these

194)d 195) a 196)b 197)a 198)c 199)a 200)d 201)a 202)a 203)d 204)b 205)c 206)c 207)b 208) a,b,c 209) a

210. Case control study, All can be measured except -
a) Relative risk b) Incidence *(NEET/DNB Pattern)*
c) Odds ratio d) Cause & effect relation

211. Cohort study is a type of - *(PGI99)*
a) Clinical trial b) Analytic study
c) Descriptive study d) Experimental study

212. Incidence rate is measured by - *(AIIMS 00, AI98)*
a) Case control study
b) Cohort study
c) Cross sectional study
d) Cross over study

213. In a study 400 smokers and 600 non - smokers were followed up over a period of 10 years to find out the incidence of hypertension. The following table summarizes the data at the end of the study -

	Hypertension			
	Yes	**No**	**Total**	
Smoking	**Yes**	120	280	400
	No	30	570	600
	Total	**150**	**850**	**1000**

The risk ratio in this study is - *(DPG11, AIIMS 05)*
a) 0.06 b) 0.60
c) 6.0 d) 60.0

214. In a prospective study comprising 10,000 subjects, 6000 subjects were put on beta carotene and 4000 were not. 3 out of the first 6000 developed lung cancer and 2 out of the second 4000 developed lung cancer. What is the interpretation of the above results ? *(AI 02)*
a) Beta carotene is protective in lung cancer
b) Beta carotene and Lung cancer have no relation to each other
c) The study design is not sufficient to draw any meaningful conclusions
d) Beta carotene is carcinogenic

215. Incidence of disease among exposed minus that of non exposed is equal to - *(AIIMS 97, 96)*
a) Relative risk b) Attributable risk
c) Odd ratio d) None of the above

216. In a village of 1 lakh population, among 2,000 exposed to smoking, 20 developed lung cancer and among 8,000 unexposed people, 8 developed lung cancer. What is attributable risk - *(PGI99)*
a) 10% b) 50%
c) 90% d) 100%

217. A women is exposed to multiple sex partners has 5 times increased risk for - Ca. Cx the attributable risk is - *(AIIMS 01)*
a) 20% b) 50%
c) 80% d) 100%

218. Several studies have shown that 85% of cases of lung cancer are due to cigarette smoking. It is a measure of - *(AI 07, AIIMS 05)*
a) Incidence rate b) Relative risk
c) Attributable risk d) Absolute risk

219. Attributable risk means - *(NEET/DNB Pattern)*
a) Strength of association
b) Temporal relation
c) Causal relation
d) Potential for prevention

220. Incidence rate of lung cancer among smokers is 8 per 1000 and among non-smokers is 1 per 1000. Population attributable risk is - *(PGI 99)*
a) 89% b) 95%
c) 10% d) 100%

221. Community physician takes action based on -
a) Population attributable risk *(AIIMS 98)*
b) Relative risk
c) Attributable risk
d) Odds ratio

222. In a village of 1 lakh population, among 20, 000 exposed to smoking, 200 developed cancer, and among 40,000 people unexposed, 40 developed cancer. The relative risk of smoking in the development of cancer is - *(AIIMS 01)*
a) 20 b) 10
c) 5 d) 15

223. A study began in 1970 with a group of5000 adults in Delhi who were asked about their alcohol consumption. The occurrence of cancer was studied in this group between 1990-1995. This is an example of- ***(AI04)***
a) Cross-sectional study
b) Retrosective cohort study
c) Concurrent cohort study
d) Case-control study

224. Advantage of case control over cohort study -
a) Attributable risk can be calculated *(PGIDec 07)*
b) Odd's ratio can be calculated
c) For rare disease
d) Bias minimum
e) Large sample required

225. Cohort study is better than case control study in all ways except - *(NEET/DNB Pattern)*
a) Greater comparability b) Lesser time spent
c) Prospective analysis d) Less Bias

226. Relative risk is calculated in? (NEET/DNB Pattern)
a) Cross sectional study b) Cohort study
c) Case control study d) None

227. Case-control studies are used for - *(AI95)*
a) Study of common diseases
b) Finding multiple risk factors
c) Finding incidence rates
d) Finding relative risk

228. All of following are advantages of case control study except- *(AI 96)*
a) Cheaper
b) Less time consuming
c) Possible to study many diseases
d) Less chances of bias

210)a,b,d 21 l)b 212)b 213)c 214)b 215)b 216)c 217)c 218)c 219)d 220)a 221)a 222)b 223)c 224) b,c 225) b 226) b 227) b 228) c,d

229. All of the following statements regarding case control and cohort studies are true, Except - *(AI12)*
a) Cohorts are chosen based on history of 'Exposure'
b) Cohort studies require longer time frame than case control studies
c) Cohort studies are suitable to investigate 'rare' disease
d) Cohort studies yield information about more than one disease

230. In a case-control study of a suspected association between breast cancer and the contraceptive pill, all of the following are true statements except - *(AIMS 02)*
a) The control should come from a population that has the same potential for breast cancer as the cases
b) The control should exclude women known to be taking the pill at the time of the survery
c) All the controls need to be healthy
d) The attributable risk of breast cancer resulting from the pill may be directly measured

231. As compared to a routine case control study, nested case control study avoids problems (in study design) related to - *(AIMS Nov 04)*
a) Temporal association b) Confounding bias
c) Need for long follow up d) Randomization

232. Nested case control study is a type of- *(AUMSMay 09)*
a) Retrospective study b) Prospective study
c) Descriptive study d) Cross sectional study

233. A total of 5000 pts of glaucoma are identified and surveyed by pts. inteviews regarding family history of glaucoma. Such a study design is called -
a) Case series report *(AIMS Nov 04)*
b) Case control study
c) Clinical trial
d) Cohort study

234. Incidence is calculated by - *(AIMSMay 11, May 10,*
a) Retrospective study *AI09, AIMS 95, Nov 08)*
b) Prospective study
c) Cross sectional study
d) Random study

235. Incidence of diarrhoea in a community can be calculated by - *(ARMS 99)*
a) Case control study
b) Cohort study
c) Cross sectional study
d) Double blind placebo control study

236. Not true about experimental study - *(PGI Nov 09)*
a) Always prospective
b) Unethical to use in animal
c) Can not be double blinded in animal trials
d) Interim analysis is permitted
e) Blinding is always needed

237. In a randomized controlled trial, the essential purpose of randomization is - *(AIPGME 06)*
a) To produce double blinding
b) To decrease the follow- up period
c) To eliminate the selection bias
d) To decrease the sample size

238. All of the following are features of Cross-Over studies except - *(AI 94)*
a) All patients receive the new therapy
b) Not suitable if drug on interest cures the disease
c) Not suitable if drug is effective only during a cer tain stage of disease
d) Not suitable if disease does not changes radically during the study

239. The major purpose of randomization in a clinical trails is to - *(AI 06)*
a) Facilitate double blinding
b) Help ensure the study subjects are representative of general population
c) Ensure the groups are comparable on base line characteristics
d) Reduce selection bias in allocation to treatment

240. Which of the following is not an accepted method of randomization - *(ARMS May 0 7)*
a) Computer drawn randomization
b) Odd/even day hospital admission
c) Lottery
d) Random number table

241. Randomization means - *(PGI Dec 98)*
a) Mixing of cases and controls
b) Selecting cases
c) Selecting controls
d) Vaccine and Erythromycin
e) Selecting cohorts

242. While analysing a data, allocation into similar groups is done to ensure - *(AI 96)*
a) Comparability b) Accuracy
c) Validity d) Sensitivity

243. For the purpose of Intervention Trials, the preferred randomization unit is an individual for all of the following except - *(AI 12)*
a) Vaccine b)Drug
c) Surgery d) Health Education

244. Which of the following is not true about non randomized trial? *(Kerala 04)*
a) Approach of comparability high
b) Degree of comparability high
c) The experiment can serve as its own control or can utilize a natural control
d) Several trials may be needed before evaluation is considered conclusive

245. Which one of the following statements regarding prepost clinical trial is most appropriate -
a) They cannot be randomized *(AUMSMay 05)*
b) They are useful in studies involving mortality
c) They use the patient as his or her own control
d) They are usually easier to interpret than the comparable parallel clinical trial

229)c 230)d 231)a 232)b 233)a 234)b 235)b 236)b,e 237)c 238)d 239)d>c240)b 241)a 242)a 243) d 244) b 245) c

246. Berkesonian bias is a type of *1 (NEET/DNB Pattern)*
a) Selection bias b) Interviever bias
c) Information bias d) Recell bias

247. When launching a study, many respondents are invited, some of whom fail to come, this is called - *(AI96)*
a) Response bias b) Volunteer bias
c) Selection bias d) Berkesonian bias

24$. It is probable that physician have a higher index of suspicion for tuberculosis in children without BCG scar that those with BCG scar. If this is so and an association is found between Tuberculosis and not having BCG scar, the association may be due to - *(A1IMS Nov 05)*
a) Selection bias b) Interviewer bias
c) Surveillance bias d) Non-response bias

249. Basic types of biases in epidemiological study -
a) Investigation bias *(PGIDec 07)*
b) Subject bias
c) Random error
d) Analyzer bias

250. Which of the following types of bias can be reduced by allowing equal interview time - *(AI08)*
a) Berkesonian bias b) Recall bias
c) Selection bias d) Interviewer bias

251. Recall bias is more common with - *(AlIMSNov 09)*
a) Cohort study
b) Randomized control trial
c) Cross sectional study
d) Case control study

252. Hawthorne effect is seen in - *(NEET/DNB Pattern)*
a) Case-control study
b) Cohort study
c) Cross-sectional study
d) Retrospective cohort study

253. Berkesonian bias refers to - *(AI 96)*
a) Bias arising from different rates of admission to the hospital
b) Bias arising from presence of confounding factors
c) Bias arising from the case not being representative of general population
d) Bias arising from improper selection of cases

254. Factor which is associated both with exposure and disease is called - *(COMEDK 05)*
a) Confounding factor b) Risk factor
c) Proximal risk factor d) Case

255. True about confounding factor - *(AIIMSMay 09)*
a) It is found equally between study and control groups
b) It is itself a risk factor for the disease
c) Confounding can be eliminated by selecting a small group
d) It is associated with either the exposure or the disease

256. An investigator found an association between beta carotene consumption and reduced risk of colon cancer. But it was found that it may be also due to increased fiber in such diets. Such a kind of occurrence is termed-
a) Multifactorial causation *(AIIMS Nov-10, May 12)*
b) Confounding factor
c) Misclassification
d) None of these

257. The systematic distortion of retrospective studies that can be eliminated by a prospective design is -
a) Confounding *(AIIMS May 04)*
b) Effect modification
c) Recall bias
d) Measurement bias

258. Problem of bias is maximum with -
a) Cohort study *(NEET/DNB Pattern)*
b) Case study
c) Case control study
d) Experimental study

259. In a double blind clinical drug trial - *(AlIMSNov 03,*
a) Each patient receives a placebo *AIPGME 06)*
b) Each patient receives both (double) treatments
c) The patients do not know which treatment they are receiving
d) The patients do not know that they are in a drug trial

260. The purpose of double blinding in clinical trials is to-
a) Achieve comparability between study and control groups *(AI 06)*
b) Avoid observer bias
c) Avoid subject bias
d) Avoid observer and subject bias

261. The major purpose of Randomization in clinical trials is to- *(AI07)*
a) Facilitate double blinding
b) Help ensure that the study subjects are representative of general population
c) Ensure that the groups are comparable on baseline characteristics
d) Reduce selection bias in allocation of treatment

262. Matching is done for removal of -
a) Bias
b) Known confounding
c) Unknown confounding
d) Known confounding + Unknown confounding

263. Randomisation is useful to eliminate - *(NEET/DNB Pattern)*
a) Observer bias b) Confounding factors
c) Patient bias d) Sampling bias

264. Confounding factors can be eliminated by all except- *(PGI 93)*
a) Matching b) Randomization
c) Ethical consideration d) Stratification

265. Bias can be eliminated by all *except-(AIIMSNov 10*
a) Matching b) Blinding *(May 12)*
c) Randomization d) Multivariate analysis

246) a 247) a 248) b 249)a,b,d 250) d 251)d 252) b 253) a 254) a 255) b 256) b 257) c 258) c 259) c
260) d 261) d 262)b 263)b 264)c 265) d

266. In a controlled trail to compare two treatments, the main purpose of randomization is to ensure that -
a) The two groups will be similar in prognostic factors *(AIIMS Nov 02)*
b) The clinician does not know which treatment the subjects will receive
c) The sample may be referred to a known population
d) The clinician can predict in advance which treatment the subjects will receive

267. 100 people of viral fever are treated with a medicine. 94 percent were cured in 5-7 days. True statement about efficacy of medicine - *(PGI98)*
a) Medicine is effective
b) Cannot be commented
c) Medicine is ineffective
d) None of the above

268. In a study in UK, an association was found between sale of antiarrythmic drug and an increase in deaths due to asthma. This is an example of-
a) Ecological study *(AIIMS Nov 11, May 08)*
b) Cohort study
c) Case reference study
d) Experimental study

269. A person wants to study a disease 'x' and fat consumption. He obtained data for number of people affected with 'x' from the government and the details of fat consumption from food industry. Type of study is- *(AIIMS Nov 10)*
a) Ecological study b) Cross sectional study
c) Pesiological study d) Experimental study

270. A person found some correlation between dietary factors and a disease; he did this by collecting data from the food manufacturers and hospitals respectively, such a study is? *(AIIMSNov 10, May 12)*
a) Ecological b) Cross sectional
c) Psephological study d) Experimental study

271. Which epidemiological study gives the most accurate result - *(AIIMS Nov 11, Nov 06)*
a) Meta analysis
b) Cross-sectional study
c) Randomized control trial with double blinding
d) Cohort study

272. Of the different epidemiological study designs available to test the association between risk factor and disease, the best design is of - *(AIIMS 05)*
a) Case control study b) Ecological study
c) Cohort study d) Cross sectional study

273. To test the association between risk factor and disease, which of the following is the wakest study design- *(AIIMS 04)*
a) Case-control study b) Ecological study
c) Cohort study d) Cross-sectional study

274. Causal association factors can be revealed by -
a) Case control study *(AIIMS Nov 99)*
b) Cohort study
c) Cross sectional study
d) Experimental study

275. Kaplan meier methods is used for -*(AIIMSNov 08)*
a) Survival b) Prevalance
c) Incidence d) Frequency

276. "Goitre is prevalent at higher altitude", is an example of- *(PGMCET07)*
a) Direct association b) Indirect association
c) Causal association d)Temporal association

277. Which of the following is not a criteria suggesting casuality in non communicable diseases ? *(Al 08)*
a) Strength of association
b) Dose response relationship
c) Specificity of association
d) Lack of temporal association

278. Suspected cause preceding the observed effect is an example for - *(NEET/DNB Pattern)*
a) Temporal association
b) Consistency of association
c) Strength of association
d) Coherence of association

279. Most difficult criterion to establish Causal Association in aetiology of a disease is -
a) Temporality *(AIPGME 2008)*
b) Strength of association
c) Specificity of association
d) Biological plausibility

280. In a cohort study nonsmokers were found to have carcinoma lung. This indicates - *(AI98)*
a) Smoking does not cause lung cancer
b) Etiology for lung Ca is multifactorial
c) Smoking is the only cause of lung cancer
d) Passive smoking also increases lung cancer

281. Presence of infectious agent on clothes or dressings is termed - *(NEET/DNB Pattern)*
a) Infection b) Infestation
c) Contamination d) Contagion

282. 'Endemic Disease' means that a disease - *(AI 05)*
a) Occurs clearly in excess of normal expectancy
b) Is constantly present in a given population group
c) Exhibits seasonal pattern
d) Is prevalent among animals

283. Occurence of disease in excess of expected frequency is known as - *(PGI 99)*
a) Endemic disease b) Epidemic disease
c) Ecdemic disease d) Sporadic

284. Pandemic are caused by - *(PGI Dec 2K)*
a) Hepatitis B b) Influenza-A
c) Influenza-B d) Influenza-C
e) Cholera

285. Diseases which are imported into a country in which they do not otherwise occur is-*(JIPMER 81, PGI 84)*
a) Exotic b) Epizootic *PGMCET 07)*
c) Endemic d) None of the above

266) a 267) b 268) a 269) a 270) a 271) a 272) c 273) b 274) a 275) a 276) b 277) d 278) a 279) c
280) b 281)c 282) b 283) b 284) b,e 285) a

286. Virulence of a biological agent is defined as -
a) Ability of the agent to invade and multiply in host *(UPSC-II09)*
b) Proportion of clinical cases resulting in severe clinical manifestation
c) Ability of the agent to induce a clinically apparent illness
d) Proportion of clinical cases in a virgin population

287. Soil acts as a source as well reservoir for - *(PGI99)*
a) Rabies b) Tetanus
c) Typhoid d) Measles

288. Animal reservoir is seen in all except - *(AJ99)*
a) Rabies b) Yellow fever
c) Influenza d) Measles

289. Subclinical cases are seen in all except - *(AI99)*
a) Measles b) Rubella
c) Polio d) Influenza

290. Which of the following does not have non-human reservoir - *(PGINov-09)*
a) Salmonella typhi b) N. Gonorrhoea
c) Ecoli d) Clostridium tetani
e) Treponema pallidum

291. All have incubatory carriers, except- *(ARMS 99,*
a) Tetanus b) Measles *PGI June 05)*
c) Whooping cough d) Polio

292. Healthy carries are present in all except -
a) Typhoid b) Cholera *(AIIMS 96)*
c) Diphtheria d) Pertussis

293. Chronic carrier state is not seen in all except -
a) Poliomyelitis b) Measles *(NEET/DNB*
c) Malaria d) Tetanus *Pattern)*

294. Carrier stage seen in - *(PGI June 06)*
a) Polio b) Cholera
c) Pertusis d) Plague
e) Tetanus

295. Chronic carrier state is seen in all except-*(AI 11, 07)*
a) Measles b)Diptheria
c) Typhoid d) Gonorrhea

296. Incubatory carrier seen in - *(PGI June 08)*
a) Cholera b) Bubonic plague
c) Mumps d) Measles
e) Influenza

297. Carries are important in all the following except -
a) Polio b) Typhoid *(AI 11, 02)*
c) Measles d) Diphtheria

298. Soil may acts as reservoir for all except - *(AI 08)*
a) Brucellosis b) Anthrax
c) Tetanus d) Coccidiomycosis

299. Following are examples of human "dead end" disease except - *(NEET/DNB Pattern)*
a) Bubonic plague b) Japanies ecephalitis
c) Hydatid disease d) Leishmaniasis

300. In an epidemiological study, the first case which comes to the attention of the investigator is-*(AIIMSNov 07)*
a) Reference case b) Index case
c) Primary case d) Secondary case

301. Time interval between invasion of the infection agent and appearance of first sign or symptom -
a) Serial interval *(NEET/DNB Pattern)*
b) Incubation period
c) Quarantine
d) Period of infectivety

302. All of the following are used as proxy measure for incubation period except - *(AI 04)*
a) Latent period b) Period of communicability
c) Serial interval d) Generation time

303. Incubation period helps in determining all except -
a) Period of isolation *(ARMS 99)*
b) Period of quarantine
c) Identification of source of infection
d) Immunization

304. Application of Incubation period is all except -
a) To differentiate co-primary cases from secondary cases *(ARMS May 12)*
b) To find out time for isolation
c) To find out time for Quarantine
d) To prevent infection to the contacts of the infected person

305. Disease highly transmitted during incubation period is - *(PGI June 08)*
a) Pertussis b) Cholera
c) Measles d) Brucellosis
e) Chickenpox

306. Time interval betwen inoculation of infection to maximum infectivity is - *(ARMS 96)*
a) Lead time b) Median incubation period
c) Generation time d) Serial inverval

307. Serial interval is - *(NEET/DNBPattern, ARMS 02, 2K, 99, AI 02, 00)*
a) Interval between primary and secondary case
b) Interval between first case and last case
c) Interval between primary case and all subsequent cases multiplied by secondary attack rate
d) Interval between incubation period and gestational period

308. Denominator while calculating the secondary attack rate includes - *(AI 03, ARMS 95)*
a) All the people living in next fifty houses
b) All the close contacts
c) All susceptible amongst close contact
d) All susceptible in the whole village

309. A certain commuity has 100 children out of whom 28 are immunuzed against measles; 2 of them acquire measles simultaneously; Subsequently 14 get measles. Assuming the efficacy of vaccine to be 100%. What is the sec. Attack rate - *(AI 01)*
a) 5% b) 10%
c) 20% d)21.5%

286) b 287) b 288) d 289) a 290)a,b,e 291) a 292) a,d 293) c 294)a,b,c 295) a 296)c,d,e 297) c 298) a
299) d 300) b 301) b 302) b 303) a 304) b 305)a,c,e 306) c 307) a 308) c 309) c

310. In a school within an unimmunized cohort of 100 children, 1 child developed measles on January 1st. Following this, 35 children developed measles of which 3 cases occured on January 3rd and the remaining 2-3 weeks later. What is the SAR -
a) 35% b) 33.3% *(AIIMS 02)*
c) 32% d)36.5%

311. In a village of 100 children, 60% are immunized against measles. One child travelled and returned with measles and infected other 26 children. What is the secondary attack rate - *(AIIMS 2K)*
a) 67% b) 27%
c) 50% d) 80%

312. In a 6 membered family, there are two parents and four children all aged between 2-6 years. On eof the children is completely immunized for his age, whereas other 3 siblings are totally unimmunized. One of the unimmunized child developed measles. 6 days later 2 other children developed measles. SAR is-
a) zero b)33%
c) 66% d) 100%

313. Secondary attack rate is a measure of - *(AI99)*
a) Communicability b) Lethality
c) Strength of association d) None

314. Second attack rate is minimum in - *(NEET/DNB*
a) TB b) Diphtheria*Pattern)*
c) Measles d) Whooping cough

315. Vertical transmission is by - *(AMC 88, Delhi 87)*
a) Mosquitoes b) Direct contact
c) Droplet d) Placenta

316. In culex mosquito the type of biological transmission for filarial parasite is- *(AI 2K, AIIMS May 08, nov 08)*
a) Cyclo-developmental b) Cyclo-propagative
c) Propagative d) Cyclical

317. Cyclodevelopmental stage is seen in -
a) Malaria b) Filaria *(NEET/DNB Pattern)*
c) Plague d) Cholera

318. Transovarian transmission is a feature of- *(PGI80)*
a) Scrub fever b) Epidemic typhus
c) Endemic typhus d) Trench fever

319. Transovarian transmission is seen in -
a) Ticks b) Louse *(NEET/DNB Pattern)*
c) Flea d) None

320. Transovarian transmission is seen in- *(NEET/DNB*
a) Rickettesial diseases b) Malaria *Pattern)*
c) Filaria d) None

321. Cyclopropagative? *(NEET/DNB Pattern)*
a) Malaria b) Plague
c) Filaria d) None

322. Propagative? *(NEET/DNB Pattern)*
a) Plague b) Filaria
c) Malaria d) All

323. Transmission of agent by vectors is facilitated by the following ways except one - *(AI 11)*
a) Contamination with body fluids of vectors
b) Scratching-in of infected feces
c) Ingestion of infected material
d) Regurgitation

324. Active and passive immunity should be given together in all except - *(AIIMSNov 97, AIPGME 02, 06)*
a) Tetanus b) Rabies
c) Measles d) Hepatitis B

325. Post exposure active immunization can be done for
a) Rabies b) Measles *(AI 99)*
c) Chloera d) Yellow fever

326. Post-exposure prophylaxis is indicated in -
a) HBV b) Rabies *(PGIDec07)*
c) Diphtheria c) Measles
d) Tetanus

327. Post exposure immunization is given in -
a) Rabies b) Pertussis *(DPGEE 08)*
c) Measles d) Yellow fever

328. Congenital passive immunity is NOT found in -
a) Polio b) Mumps *(UP08)*
c) Rubella d) Measles

329. Live attenuated vaccines are A/E- *(PGIMay 11)*
a) Measles b) Rabies
c) Oral polio d) Yellow fever
e) Influenza

330. Which of the following statements regarding live vaccines is false - *(AI 08)*
a) Two live vaccines cannot be administered simultaneously
b) Booster doses are not required when live vaccines are administered
c) Single dose gives life long immunity
d) Live vaccine contains both major and minor antigens

331. Which of the following is/are subunit vaccines:
a) Typhoid Vi *(PGI Nov 10)*
b) H. influenza vaccine (Hib)
c) Hepatitis B vaccine
d) Diphtheria
e) Pneumococcal

332. Toxoid is prepared from- *(AI2K)*
a) Exotoxin b) Endotoxin
c) Both d)None

333. Live vaccines are - *(PGI June 06, 02, 98 Dec 01)*
a) TT b)BCG
c) DPT d)OPV
e) MMR

334. All are live vaccines except - *(AI 98, 96)*
a) 17-D b) Rubella
c) Salk d) Measles

335. Killed vaccine is - *(NEET/DNB Pattern)*
a) Hepatitis A b) Measles
c) OPV d)BCG

336. Which of the following is a Live vaccine - *(AI94)*
a) Salk polio vaccine b) HDCV
c) Hepatitis B vaccine d) 17-D Vaccine

337. Vaccines - incorrect combination is - ***(PGI 04)***
a) Measles - Jeryll Lyn strain b) Mumps - schwartz
c) Chichenpox - oka d) OPV - sabin
e) Rubella - Copenhagen

---

310)b 311) a 312) d 313)a 314)a 315)d 316)a 317)b 318)a 319)a 320)a 321)a 322)a 323)c

336) d 337) a,b,e

338. Name of mumps vaccine is -*(NEET/DNB Pattern)*
a) Jeryl Lynn b) Edmonshon zagreb
c) Schwatz d) Moraten

339. Strain used for BCG vaccine - *(AIPGME 07)*
a) Edmonston Zagreb strain
b) Oka strain
c) 'Danish' 1331
d) RA 27/3strain

340. Which vaccine is given by subcutaneous route -
a) BOG b) Measles *(HPU05,*
c) Rabies d)DPT *AIIMS95)*

341. Vaccine with highest efficacy - ***(AI****09)*
a) Measles b)DPT
c) Oral typhoid d) Tetanus

342. Vaccine with maximum efficacy is - *(AIIMSMay 10)*
a) OPV b) Measles
c) BOG d) TT

343. All vaccines are given in disaster,except -
a) Cholera b)Influenza *(NEET/DNB Pattern)*
c) Measles d) Tetanus

344. Which vaccine is contra indicated pregnancy-*/^/92)*
a) Cholera vaccine b) Typhoid vaccine
c) Meningococcal vaccine d) Polio vaccine

345. Vaccine, contrainidicated in pregnancy is -
a) Tuberculin b) Typhoid *(AIIMS97)*
c) Influenza d) HBV

346. The vaccine not to be given during pregnancy is -
a) MMR b) Rabies *(AIIMS Nov 09)*
c) Hepatitis B d) Diphtheria

347. A person is on intensive chemotherapy, which vaccine is contraindicated in this circumstance -
a) MMR b) Hepatitis B *(PGIDec 08)*
c) Pneumococcus d)DPT
e) BOG

348. Herd immunity provides protection to - *(AI96)*
a) Immunized persons
b) Non immunized persons
c) Both
d) None

349. About herd immunity, all are true except - *(AI07)*
a) depends on clinical and subclinical cases
b) Influenced by immunization
c) depends on the presence of alternative host
d) Herd immunity is constant

350. A herd immunity of over - % is considered necessary to prevent epidemic spread of diphtheria -
a) 50% b) 55% *(PGI 80, AIIMS 77)*
c) 60% d) 70%

351. Herd immunity is not useful in - *(AIIMS2K, AI95)*
a) Diphtheriab) Polio
c) Measles d) Tetanus

352. All of the following are true about the Herd immunity for infectious diseases except - ***(AI*** *05)*
a) It refers to group protection beyond what is aforded by the protection of immunized individuals
b) It is likely to be more for infections that do not have a sub-clinical phase
c) It is affected by the presence and distribution of alternative animal hosts
d) In the case of tetanus it does not protect the individual

353. Disease elimination is helped *by-(NEET/DNB Pattern)*
a) Herd immunity b) Isolation
c) Quarantine d) None

354. Which vaccine gives herd immunity - *(NEET/DNB*
a) OPV b) Typhoid *Pattern)*
c) Cholera d) None

355. Which of the following vaccine is not included in EPI, schedule- *(AI07)*
a) BOG b) DPT
c) MMR d)OPV

356. In national immunization shedule of India, measles vaccine is given at - *(PGI 99)*
a) Birth b) 6 weeks
c) 9 months d) 5-6 years

357. 9th month immunization given is -
a) Measles b) DPT *(NEET/DNB Pattern)*
c) BOG d) All

358. In one single visit, a 9 month-old, un-immunized child can be given the following vaccination -
a) Only BCG
b) BCQ DPT-1, OPV-1
c) DPT-1, OPV-1, Measles
d) BCQ DPT-1, OPV-1, Measles

359. A 3 yr old completely unimmunised child comes to an immunization clinic at PHC for the first time. He should receive - *(AI 2004)*
a) BCQ Measles, Vitamin-A
b) DT-1, OPV-1, Measles, Vitamin-A
c) BCQ DPT-1, OPV-1, Measles, Vitamin-A
d) DPT-1, OPV-1, Measles, Vitamin-A

360. If a 11-month old child has received two doses of DPT and polio, comes for further immunization after 5 months of the last dose, what should be done ?
a) Repeat the whole course
b) Repeat the 2nd dose and continue rest of the course
c) Give 3rd dose and continue the course
d) Give only booster dose

361. A 37 weeks pregnant woman attends an antenatal clinic at a Primary Health Centre. She has not had any antenatal visit till now. The best approach regarding tetanus immunization in this case would be to - *(AI 04)*
a) Give a dose of Tetanus Toxoid (TT) and explain to her that it will not protect the new bom and she should take the second dose after four weeks even if she delivers in the meantime
b) Don not waste the TT vaccine as it would anyhow be of no use in this pregnancy
c) Give one dose of TT and explain that it will not be useful for this pregnancy
d) Give her anti-tetanus Immunoglobulin along with the TT vaccine

338) a 339) c 340) b 341) a 342) b 343) a 344) None or d 345) a 346) a 347) a,e 348) b 349) d 350) d
351) d 352) b 353)a 354)a 355)c 356)c 357)a 358)d 359)b 360)a 361)a

362. Vaccine in the UPI which aims at preventing blindness is - *(AIIMS 98)*
a) Measles b) Rubella
c) DPT d) Polio

363. In the WHO recommended EPI Cluster sampling for assessing primary immunization coverage, the age group of children to be surveyed is -*(AIIMS Nov 05)*
a) 0-12 months b) 6-12 months
c) 9-12 months d) 12-23 months

364. False about vaccines is - *(AIIMSMay 11, Nov 08)*
a) Thiomersal is preservative in DPT vaccine
b) Kanamycin is preservative in measles
c) Magnesium chloride stabilizer used in OPV
d) Neomycin is a preservative in BCG vaccine

365. Mass immunization is indicated in the following, except- *(AI10)*
a) Leprosy b) Cholera
c) Influenza d) Tuberculosis

366. Mass vaccination is ineffective in -
a) Measles b) Polio *(NEET/DNB Pattern)*
c) Tetanus d) None

367. All of the following vaccines are recommended for elderly travelers, Except - *(AI 12)*
a) Influenza b) Pneumococcal
c) Tetanus d) Measles

368. The peripheral workers in a primary health centre return one day late; after an immunisation session. The primary health centre is locked. The vaccine carrier still contains a few unopened vials of DPT vaccine and sufficient ice. The workers are to -
a) Return the vaccine vials to the refrigerator in the morning of the next day *(UPSC 2K)*
b) Get the health centre opned the same evening and keep the vaccine vials in the refrigerator
c) Discard the vaccine vials
d) Retain the vaccine in the ice box

369. Vaccines at PHC are stored in - *(NEET/DNB Pattern)*
a) Ice box b) ILR
c) Deep freezer d) None

370. Vaccine which requires most stringent condition for storage- *(Kerala 91)*
a) DPT b)OPV
c) BOG d) TT

371. Vaccine which must be stored in the freezer comp artment of a fridge is/are - *(PGI85)*
a) BOG b)OPV
c) Measles d) Small pox
e) All of the above

372. Vaccine (s) not to be frozen is/are - *(PGI June 01)*
a) BOG b)OPV
c) DPT d) Measles
e) TT

373. Reverse Cold Chain is used for - *(AI2K)*
a) Carrying stool samples of polio patiens from a PHC to the lab
b) Transporting outdated vaccines from PHC to district hospital
c) Transporting vaccines to lab. to check its potency
d) Transporting vaccine form camps to sub - centre

374. Isolation period should be - *(NEET/DNB Pattern)*
a) Minimum incubation period
b) Maximum incubation period
c) Period of communicability
d) None

375. Quarantine is related to - *(AIIMS 97)*
a) Minimum incubation period
b) Maximum incubation period
c) Serial interval
d) Generation time

376. All of the statements about quarantine are true except - *(AIIMS Nov 04)*
a) It is synonymous with isolation
b) Absolute quarantine is restriction during the incubation period
c) Exclusion of children from schools is an example of modified quarantine
d) Quarantine should not be longer than the longest incubation period

377. Isolation is strictly recommended for - *(AI 08)*
a) Mumps b) Measles
c) Hepatitis A d) Pneumonic plague

378. Isolation is done in following case/s - *(PGIDec 06,*
a) T.B. b) Cholera *04,02)*
c) Measles d) Typhoid
e) Tetanus

379. True about maximum isolation period of enteric fever is - *(AIIMS Nov 08)*
a) Upto 3 days after starting the treatment
b) Till 3 consequent negative stool cultures are obtained from the patient
c) Till the fever subsides
d) Till widal becomes negative

380. 'Ring vaccination' *is-(AIIMS 80, Delhi 93, MAHE 05)*
a) Given by a ring shaped machine
b) Given to produce a ring lesion
c) Given around 100 yards of a case detected
d) Given around a mile of a case

381. Surveillance is necessary for all recommended by WHO except - *(AI 91)*
a) Relapsing fever b) Malaria
c) Plague d) Tuberculosis

382. Internationally quarantinable disease are -*(BHU88)*
a) Plague b) Cholera
c) Yellow fever d) All of theabove

383. The following disease require isolation to break transmission except - *(AI 94)*
a) Measles b) Mumps
c) Chicken pox d) Tetanus

384. The drug of choice for chemoprophylaxis in contacts of a patient of penumonic plague is - *(AIIMS 02, 95)*
a) Penicillin b) Rifampicin
c) Erythromycin d) Tetracycline

362)a 363)d 364)d 365)a 366)None 367)d 368)d 369)b 370)b 371)b,c 372)c,e 373)a 374)c 375)b
376) a 377) d 378)a,b,c,d 379) b 380) c 381) d 382) d 383) d 384) d

385. No chemoprophylaxis for - *(NEET/DNB Pattern)*
a) Typhoid b) Chicken pox
c) Influenza d) Cholera

386. Chemoprophylaxis is not indicated in which of the following- *(AIIMS2K)*
a) Measles b) Cholera
c) Meningococcemia d) Plague

387. Chemoprophy laxis with tetracycline is useful in which of the following ? *(Af 11)*
a) Cholera b) Brucellosis
c) Meningitis d) Leptospirosis

3 88. Chemoprophylaxis is not required in - *(NEET/DNB Pattern, AIIMS 97)*
a) Typhoid
b) Meningococcal meningitis
c) Bacterial conjunctivitis
d) Malaria

389. Chemoprophylaxis is done for all except - *(AI2002)*
a) Cholera b) Taeniasis
c) Malaria d) Leprosy

390. Chemoprophylaxis can be done for the following except - *(AI 09)*
a) Meningitis b) Typhoid
c) Cholera d) Diphtheria

391. Mass chemoprophylaxis in endemic area is recommended for all of the following, except -
a) Yaws b) Leprosy *(AI10)*
c) Trachoma d) Filaria

392. Mass prophylaxis is given for a/e - *(AIIMSNov 10)*
a) Lymphatic filariasis b) Vitamin A deficiency
c) Scabies d) Worm infestation

393. Which of the following is not a complete sterilization agent- *(AI01)*
a) Glutaraldehyde
b) Absolute alcohol
c) Hydrogen peroxide
d) Sodium hypochlorite

394. Phenol Coefficient indicates - *(JIPMER 91)*
a) Efficacy of a disifectant
b) Dilution of a disinfectant
c) Quantity of a disinfectant
d) Purity of a disinfectant

395. Sharp instruments may be sterilized with -
a) Radiation b) Lysol *(Jipmer 80, Orissa 90)*
c) Hot air d) Any of the above

396. Disinfectants used for blood spills -*(AIIMSNov 07)*
a) Phenol b) Glutaraldehyde
c) Ethanol d) Sodium hypochlorite

397. Best disinfectant of cholera stool is - *(AIIMS 97)*
a) Bleaching powder b) Cresol
c) Phenol d) Lime

398. The amount of bleaching powder necessary to disinfect choleric stools, is - *(NEET/DNB Pattern)*
a) 50 gm/lit b)75gm/lit
c) 90 gm/lit d) 100 gm/lit

399. All of following are false about bleaching powder except- *(AI 96)*
a) Contains 20 % available chlorine
b) 20 % solution used for disinfection of faeces
c) Unstable compound on storage
d) Not used for disinfection of feces & urine

400. Disinfection of sputum is done by - *(PGI Dec 08)*
a) Boiling b) Autoclaving
c) Sunlight d) Burning
e) Airing

401. Sputum can be disinfected by all except-
a) Autoclaving b) Boiling *(AIIMSNov 10)*
c) Cresol d) Chlorhexidine

402. Savlon contains - *(ARMSMay 10)*
a) Cetrimide + Chlorhexidine
b) Cetrimide + Chlorhexidine + butyl alcohol
c) Cetrimide + butyl alcohol
d) Cetrimide + Cetavlon

MISCELLANEOUS

403. Time between infection and maximum infectivity is known as? *(DNB Dec 2011)*
a) Incubation period
b) Serial interval
c) Generation time
d) Communicable period

404. Communicability of disease is assessed by?
a) Secondary attack rate *(DNB Dec 2011)*
b) Generation time
c) Serial interval
d) Incubation period

405. Isolation period of Hepatitis A- *(DNB Dec 2011)*
a) 1 week b) 2 weeks
c) 3 weeks d) 4 weeks

406. Cause to effect progression is seen in all EXCEPT:
a) Case control study *(DNB Dec 2011)*
b) Ecological study
c) Cohort study
d) Randomized control trial

407. Incidence of a disease in a population of30,000 and 300 new cases is? *(DNB Dec 2011)*
a) 0.1 per 1000 b) 10 per 1000
c) 100 per 1000 d) 1 per 1000

408. Selection bias can be eliminated *by!(DNB Dec 2011)*
a) Randomization b) Single blinding
c) Double blinding d) Matching

409. Syringes and glassware are sterilized by?
a) Irradiation *(DNB June 2011)*
b) Autoclave
c) Hot air oven
d) Glutaraldehyde

410. Which is not an analytical study? *(DNB June 2011)*
a) Case control b) Cohort study
c) RCT d) Cross sectional

385) b 3 86) a 387)a 388)a 389)b 390)b 391)b 392)c 393)b 394)a 395)c 396)d 397)b 398)a
399) d 400) a,b,d 401) d 402) a 403) c 404) a 405) c 406) a 407) b 408) a 409) c 410)c

411. Hypothesis is not tested by? *(DNB June 2011)*
a) Descriptive studies b) Analytical studies
c) Case control studies d) Cohort studies

412. True about point source epidemic *is?(DNB June 11)*
a) Occurs in more than 1 incubation period
b) Occurs in one incubation period
c) The exposure is continuous
d) Epidemic curve falls very slowly

413. Interval between primary and secondary case is called as? *(DNB June 2011)*
a) Generation time b) Serial interval
c) Incubation period d) Lead time

414. First case that comes to notice of physician is ? *(DNB June 2011)*
a) Primary case b) Secondary case
c) Index case d) Refer case

415. Confounding can be removed by? *(DNB June 2011)*
a) Assign confounders to both cases and controls
b) Stratification
c) Matching
d) All of the above

416. Cyclopropagative type of life cycle is seen in?
a) Cholera b) Filaria *(DNB June 2011)*
c) Plague d) Malaria

417. Berkesonian bias is due to? *(DNB Dec 2010)*
a) Presence of confounding factors in both cases & controls
b) Questioning the cases more thoroughly as compared to controls
c) Different rates of admission to hospital due to different diseases
d) Better recall by the cases as compared to controls

418. In a study done to establish Smoking as a risk factor for a disease, 30 out of 50 smokers developed the disease while 10 out of 50 non-smokers developed the disease. Odd's ratio is? *(DNB Dec 2010)*
a) 3 b) 6
c) 5 d) 10

419. Sterilization & disinfection of blood spills is done by- *(DNB Dec 2010)*
a) Formaldehyde b) Sodium hypochlorite
c) Tincture iodine d) Phenols

420. Which type of vaccine is MMR? *(DNB Dec 2010)*
a) Live attenuated b) Killed
c) Toxoid d) Subunit

421. Cause to effect progression is seen in all EXCEPT-
a) Case control study *(DNB June 2010)*
b) Ecological study
c) Cohort study
d) Randomized control trial

422. Case-control study is a type of - *(DNB June 2010)*
a) Descriptive epidemiological study
b) Analytical study
c) Longitudinal study
d) Experimental epidemiological study

423. Study time, place, and person of a disease is_____ study - *(DNB June 2010)*
a) Descriptive b) Analytic
c) Association d) Comparison

424. Recall bias is most commonly associated with which study design - *(DNB June 2010)*
a) Case control study
b) Cohort study
c) Cohort case control study
d) Cross-sectional study

425. The gas responsible for Bhopal gas tragedy was?
a) Methyl isocyanate *(DNB June 2010)*
b) Potassium isothiocyanate
c) Sodium isothiocyanate
d) Ethyl isothiocyanate

426. Serial interval is? *(DNB Dec 09)*
a) Time interval between invasion of infection and appearance of first sign or symptom
b) Time between onset of primary case and secondary case
c) Interval of time between receipt of infection by a host and maximum infectivity
d) Time in which infectious agent is transferred from one host to another

427. Point source epidemic tends to - *(DNB Dec 09)*
a) Continue over one incubation period
b) Produce multiple peaks in the epidemic curve
c) Be explosive
d) Tail gradually

428. Calculate the prevalence if incidence is 2 cases per 1000 population per year and mean duration is 4 years - *(DNB Dec 09)*
a) 8 Cases per 1000 population
b) 2 Cases per 1000 population
c) 0.5 Cases per 1000 population
d) 32 Cases per 1000 population

429. In a village with population of5000,50 people have a disease and 10 of them died. What is case fatality rate? *(DNB Dec 09)*
a) 1% b) 2%
c) 0.5% d)20%

430. When an association between two variables is explained by a third variable due to indirect association, it is called as? *(DNB Dec 09)*
a) Cognitive bias b) Confounding bias
c) Berkesonian bias d) Indirect bias

431. Cyclodevelopmental life cycle is seen in -
a) Malaria b) Plague *(DNB Dec 09)*
c) Yellow fever d) Filaria

432. The most heat sensitive vaccine is - *(DNB Dec 09)*
a) Measles b) Hepatitits B
c) DPT d)OPV

433. Secular trends are? *(DNB June 09)*
a) Progressive changes occuring over long period of time
b) Explosion of changes in a limited span of time
c) Periodic changes occuring over a long period
d) Sudden epidemic of a new occurring

411)a 412) b 413)b 414) c 415)d 416)d 417) c 418) b 419) b 420)a 421) a 422)b 423)a 424)a
425) a 426) b 427) c 428) a 429) d 430) b 431)d 432) d 433) a

434. Odds ratio is related-to? *(DNB June 09)*
a) Relative risk b) Incidence
c) Prevalance d) Attributable risk

435. Incidence can be calculated by - *(DNB June 09)*
a) Prospective study b) Retrospective study
c) Case control study d) Cross-sectional study

436. Which of the following vaccine should not be given during pregnancy ? *(DNB June 09)*
a) HBV b) Measles, mumps, rubella
c) Typhoid d) Cholera

437. At PHC level vaccine storage is by? *(DNB June 09)*
a) IRL b) Walk in cold rooms
c) Cold boxes d) Vaccine carriers

438. Standardized mortality rate is - *(DNB Dec 08)*
a) Standardized for age
b) Standardized for disease
c) Standardized for regions
d) Standardized for a particular time period

439. Case fatality rate is a method of measuring -
a) Infectivity b) PathogenecityfZWZ? *Dec 08)*
c) Virulence d) Average duration of disease

440. In a stable situation - *(DNB Dec 08)*
a) Incidence = prevalence * Duration
b) Prevalence = Incidence x Duration
c) Incidence = Prevalence + Duration
d) Prevalence = Incidence + Duration

441. Bhopal gas tragedy is an example of -*(DNB Dec 08)*
a) Point source epidemic
b) Continuous epidemic
c) Propagated epidemic
d) Slow epidemic

442. Storage temperature for vaccine is-*(DNB June 08)*
a) -4°C toO°C b) 0°C to 4°C
c) + 2°C to 8°C d) + 4°C to 12°C

443. The following are live attenuated vaccines, except - *(DNB June 08)*
a) Oral polio b) Yellow fever
c) Measles d) Influenza

444. In epidemic, 1st step is- *(DNB June 08)*
a) Verification of diagnosis
b) Isolation
c) Immunization
d) Notification

445. Randomized controlled trials are -*(DNB June 08)*
a) Clinical trials
b) Preventive trials
c) Before and after comparison studies
d) Evaluation of Health Services

446. Prevalence is a - *(DNB June 08)*
a) Rate b) Ratio
c) Proportion d) Mean

447. Chronic carrier state is not seen in all except - *(DNB June 08)*
a) Poliomyelitis b) Measles
c) Malaria d)Tetanus

448. In a given population, prevalence of a disease can be rapidly determined by - *(DNB Dec 07)*
a) Case control study b) Cross over study
c) Cross sectional study d) Double blind study

449. The analytical study where population is the unit of study is - *(DNB Dec 0 7)*
a) Cross-sectional b) Ecological
c) Case-control d) Cohort

450. Use of one of the following vaccination is absolutely contraindicated in preganacy - *(DNB Dec 07)*
a) Hepatitis-B b) Cholera
c) Rabies d) Yellow fever

451. Zero dose of Polio vaccine in which is give -
a) Before giving DPT *(DNB Dec 07)*
b) At birth
c) When child is having diarrhoea
d) When child is having Polio

452. Prevalence of a disease depends upon the following-
a) Incidence *(DNB June 07)*
b) Duration
c) Both of the above
d) None of the above

453. If a new effective treatment is initiated and all other factors remain the same; when of the following is most likely to happen - *(DNB June 07)*
a) Incidence will not change
b) Prevalence will not change
c) Neither incidence not prevalence will change
d) Incidence and prevalence will change

454. True about confounding factor - *(DNB June 07)*
a) It is found equally between study and the control groups
b) It is itself a risk factor for the disease
c) Confounding can be eliminated by selecting a small group
d) It is associated with etiher the exposure or the disease

455. Cyclodevelopmental stage is seen in -*(DNB June 07)*
a) Malaria b)Filaria
c) Plague d) Cholera

456. Pasteurization is_____disinfection-^*Orissa 05)*
a) Precurrent b) Concurrent
c) Preconcurrent d) Terminal

457. In an epidemic first to be done is- *(TGI81, AMC 92)*
a) Identity the cases
b) Confirm the diagnosis
c) Identify the prone people
d) Identify the causative factors

458. While investigating an epidemic, search for more cases is continued till what period ? *(UPSC-II08)*
a) Twice the incubation period of the disease since occurrence of the last case
b) Thrice the incubation period of the disease since occurrence of the case
c) The longest incubation period for the disease
d) Incubation period for the disease plus two standard deviations

434)a 435)b 436)b 437)a 438)a 439)c 440)b 441)a 442)c,d 443)None 444)a 445)a 446)c 447)c 448) c 449) b 450)bord 451)b 452) c 453) a 454) a,b 455) b 456) a 457) b 458) a

459. Epidemiological studies is carried for a period of -
a) Incubation period *(Jipmer 03)*
b) Twice the incubation period
c) Four times the incubation period
d) Half the incubation period

460. Case fatality rate is a method of measuring -
a) Infectivity *(Karnat 05)*
b) Pathogenecity
c) Virulence
d) Average duration of disease

461. A useful index to measure the lethality of an acute infectious diseases *is-(PGI81, AIIMS88, AIIMS 04,*
a) Attack rate b) Incidence rate *AI05)*
c) Case fatality rate d) None of these

462. Death rates of two countries are best compared by -
a) Crude death rate *(MAHE 05)*
b) Proportional crude death rate
c) Standardized mortality rate
d) Age specific death rate

463. Which of the following is used to compare the death rates of two different populations - *(PGMCET 07)*
a) Crude death rate
b) Age specific death rate
c) Age standardized death rate
d) Proportional mortality rate

464. In a outbreak of cholera in village of 2,000 population, 20 cases have occurred and 5 died. Case fatality rate is - *(Delhi PG Feb. 09)*
a) 1% b) 0.25%
c) 5% d)25%

465. Standardised mortality rate is stadardised for
a) Age b) Disease *(DPG11)*
c) Region d) A particular time period

466. Point prevalence over estimates the disease with- *(Jipmer 11)*
a) High incidence b) Low incidence
c) Low mortality d) High mortality

467. "Incidence" is defined as - *(MAHE 05, AI89)*
a) Number of new cases occurring in a defined population
b) Total cases (new+old) occurring in a defined population
c) Number of exposed developing the disease in a defined population
d) None of the above

468. The number of new cases occurring in a defined population during a specified period of time is called- *(Corned 07)*
a) Period prevalence b) Point prevalence
c) Prevalence d) Incidence

469. Calculate the prevalence if incidence is 2 cases per 1000 population per year and mean duration is 4 years - *(Corned 09)*
a) 8 Cases per 1000 population
b) 2 Cases per 1000 population
c) 0.5 Cases per 1000 population
d) 32 Cases per 1000 population

470. Which of the following estimating the burden of a disease in the community *\s-(UP 07, Karnataka 05)*
a) Disease specific mortality
b) Proportional mortality rate
c) Maternal mortality rate
d) Child mortality rate

471. Case-control study is a type of- *(Corned 08)*
a) Descriptive epidemiological study
b) Analytical study
c) Longidutinal study
d) Experimental epidemiological study

472. What is not true about point source epidemic ?
a) Plateau phase *(APPG 08)*
b) No secondary waves
c) Explosive epidemic
d) Only one peak

473. A disease whose etiology is not known, the first step in the formation of hypothesis will be -
a) Cross sectional study *(PGMCET07)*
b) Descriptive epidemiology
c) Case control study
d) Cohort study

474. Descriptive Epidemiology is study in relation to -
a) Time b) Place *(DPG 03)*
c) Person d)All

475. Which of the following is a characteristic of a point source epidemic ? *(UPSC-II08)*
a) Herd immunity regulates spread of cases
b) Person to person transmission is seen
c) Secondary wave of cases is always seen
d) All cases develop within one incubation period

476. Point source epidemic tends to - *(Corned 09)*
a) Continue over one incubation period
b) Produce multiple peaks in the epidemic curve
c) Be explosive
d) Tail gradually

477. True regarding secular trends - *(MAHE 05)*
a) Changes in disease pattern in terms of months
b) Changes in disease pattern seasonally
c) Changes in disease pattern over a short period of timer
d) Changes in disease patttem over a long period of time

478. Seasonal trends is shown by - *(JIPMER 99)*
a) Varicella b) Polimyelitis
c) Malaria d) Measles

479. Cyclic trends are seen in which of the following -
a) Rabies b) Measles *(MAHE07)*
c) Cholera d) Hepatitis

480. The changes occuring in the disease frequency over many years is called - *(Karnataka 03)*
a) Cyclic trend b) Seasonal trend
c) Secular trend d) None of the above

459) b 460) c 461)c 462)c 463)c 464)a 465)a 466)c 467)a 468)d 469)a 470)b 471) b 472)a
473) b 474) d 475) d 476) a,c 477) d 478)a,b,c,d 479) b 480) c

481. False about longitudinal studies is - *(UP 96)*
a) Identifies risk factor
b) Used to study natural history of disease
c) Incidence can't be measured
d) All

482. John Snow's discovery of cholera is an example of- *(Manipal 08)*
a) Natural experiments b) Spot map study
c) Randomized trial d) Short study

483. In which one of the following does the host factor show bimodal incidence curve ? - *(UPSC2006)*
a) Kaposi's sarcoma b) Osteosarcoma
c) Hodgkin's lymphoma d) Lung cancer

484. True of case control studies - . *(JIPMER 98)*
a) It proceeds from cause to effect
b) Odds ratio can be calculated
c) Incidence can be calculated
d) Needs many patients

485. Case control study is used for study of - *(DPG11)*
a) Common diseases b) Uncommon diseases
c) Rare diseases d) Unkown diseases

486. Case control study is - *(AIIHPH 98)*
a) Prospective b) Retrospective
c) Cross sectional d) None of the above

487. A case control study is not characterized by -
a) Cases with the disease are compared to controls without the disease - *(UPSC04)*
b) Assessment of past exposure may be biased
c) Definition of cases may be difficult
d) Incidence rates may be computed directly

488. Case control study-estimate- *(UP 08)*
a) Only odd's ratio
b) Odds ratio and attributable risk
c) Relative risk, attributable risk, population attributable risk
d) Incidence, Relative risk, and attributable risk

489. The association between disease & risk factor in a case control study is studied by - *(AIIMS96, MP 2K)*
a) Relative role
b) Attributable role
c) Population attributable role
d) Odds ratio

490. Relative Risk can be obtained from -*(AI90,DPG 09)*
a) Case study b) Cohort study
c) Case control study d) Experimental study

491. Which is false about cohort study - *(JIPMER 92)*
a) Incidence can be measured
b) Used to study chronic diseases
c) Expensive
d) Always prospective

492. All are true about cohort studies except - *(AP 96)*
a) Prospective
b) Useful for rare diseases
c) Necessary for incidence
d) Costly

493. The influence of maternal smoking and LBW incidence is studied. Detailed smoking history is taken at first antenatal visit and smoking history and birth weight were studied later. The type of study is - *(Jipmer 11)*
a) Retrospective cohart study
b) Cross sectional study
c) Clinical trial
d) Prospective cohort study

494. Bias is unlikely to invalidate cohort studies used to assess risk of exposure because - *(UPSC 2K)*
a) Data collection is prospective
b) Large number of subjects is usually included
c) Exposure is usually determined prior to disease occurrence
d) Actual relative risk can be determined

495. Relative risk of a disease measures which of the following - *(Karnat 05)*
a) Strength of association between suspected cause and effect
b) Biological plausibility between suspected cause and effect
c) Temporal relationship between suspected cause and effect
d) Specificity of association between suspected cause and effect

496. A total of 3500 patient with thyroid cancer are identified and surveyed by patient interviews with reference to past exposure to radiation. The study design most appropriately illustrates - *(UPSC2K)*
a) Case series report b) Case control study
c) Case report d) Clinical trial

497. Non - Bias study is - *(Jipmer 03)*
a) Case control study
b) Cohort study
c) Randomized controlled trials
d) Unrandomized trials

498. All are example for randomised control trials except - *(Manipal 08)*
a) Natural experiments b) Clinical trials
c) Risk factor trials d) Preventive trials

499. Which one of the following is the correct statement- In a study of relationship between obesity and cardiovascular diseases, increased cholesterol and hyperglycemia are ? - *(UPSC 2006)*
a) Confounders b) Intervening variable
c) Direct causes d) Independent variables

500. Berkesonian bias is a selection bias which occurs in-
a) Community-based studies *(UPSC-II09)*
b) Hospital-based studies
c) Laboratory-based studies
d) Natural exposure studies

501. An epidemiological hypothesis should specify the following except - *(UPSC 07)*
a) Population
b) Time response relationship
c) Geographical trends
d) Expected outcome

481)c 482)b 483)c 484)b 485)c 486)b 487)d 488)a 489) d 490)b 491) d 492)b 493)d 494) c
495) a 496) a 497) c 498) a 499) a 500) b 501) c

502. Bacteria is not shed in - *(MP 98)*
a) Carrier state b) Latent infection
c) Incubation period d) Subclinical infection

503. Reservoir of hookworm - *(AP 97)*
a) Human being b) Soil
c) Faeces d) Monkeys

504. The person, animal, object or substance from which an infectious substance passes or is disseminated by host is called - *(COMEDK 05)*
a) Reservoir b) Source
c) Carrier d) Homologousreservoir

505. No sub - clinical infection exists in - *(Jipmer 03)*
a) Polio b) Mumps
c) Chicken pox d) Hepatitis A

506. First case in an epidemic is called - *(AIIHPH98)*
a) Index case b) Primary case
c) First case d) None of the above

507. Latent infection occurs in the following except- *(UPSC07)*
a) Mumps b) Herpes simplex
c) Brill-zinsser disease d) Ancylostomiasis

508. The following set of words can be used synonymously in epidemiology - *(APPGE 05)*
a) Source and Reservoir
b) Index and primary case
c) Latent infection and subclinical infection
d) Serial interval and incubation period

509. Which of the following carriers recieved source of infection from other carriers is called - *(UP 07)*
a) Incubatory carrier b) Convulescent carrier
c) Healthy carrier d) Chronic carrier

510. The type of trasmission involved in the case of plague in rat flea - *(C. U.P G.E.E. 96, Karnataka 94)*
a) Propagative b) Cyclo propagative
c) Cyclo-Developmental d)None

511. Vertical transmission is seen in - *(UP 07)*
a) Herpes simplex b) Leprosy
c) Tetanus d) Whooping cough

512. The time interval between reception of infection and maximum infectivity of the host is know as -*(MH11)*
a) Generation time b) Serial interval
c) Latent period d) Median incubation period

513. Serial interval measures - *(Kerala 97)*
a) Incubation period of disease
b) Sensitivity
c) Specificity
d) Positive predictive value

514. Generation time in epidemiology is defined as -
a) The interval between marriage and the birth of first child *(Karnataka 04)*
b) The interval of time between the receipt of infection by host and maximal infectivity of the host
c) The interval of time between primary case and secondary cases
d) Interval of time between invasion by infectious agent and appearance of first sign or symptom of the disease in question

515. The gap in time between the onset of the primary case and the secondary case is called *as-(UPSC-II 09)*
a) Latent period b) Generation time
c) Serial interval d) Communicable period

516. Prognosis of a disease can be given by- *(Manipal 08)*
a) Secondary attack rate b) Incubation period
c) Latency d) Serial interval

517. An important measure of the communicability of a disease is - *(UPSC 2K, Corned 09)*
a) Case fatality rate
b) Disease specific mortality rate
c) Infection rate
d) Secondary attack rate

518. A village has a total of 100 under-five children. The coverage with measles vaccine in this age group is 60%. Following the occurrence of a measles case in a child after a visit outside, twenty six children developed measles. The secondary attack rate ofmeasles is -
a) 25% b) 40% *(UPSC2K)*
c) 50% d)65%

519. Isolation is not carried out in one of the folio wing-
a) Plague b) Cholera *(Jipmer 03)*
c) AIDS d) Chicken pox

520. Isolation as a method of a control is infection in which of the following disease ? *(Delhi PG Mar 09)*
a) Diphtheria b) Plague
c) Mumps d) Cholera

521. In control of communicable diseases, the period of quarantine in respect of a disease is determined by- *(Karnat 96)*
a) Incubation period b) Infectivity period
c) Duration of illness d) Carrier state

522. International notification is a must in the following except- *(TN 03)*
a) Plague b) Cholera
c) Yellow d) Paralytic polio

523. The most effective vaccine is - *(JIPMER 91)*
a) TT b)OPV
c) B.C.G d) MEASLES

524. Which vaccine is most effective - *(AI89)*
a) Cholera b) Typhoid
c) Yellow fever d) Chicken pox

525. The following are live attenuated vacciness, except -
a) BCG b) Oral typhoid *(SGPGI05)*
c) Measles d) Pertussis

526. Which of the following is given as live oral vaccine -
a) B.CG b) Measles *(ROHTAK97)*
c) Typhoid d) Rabies
e) Hepatitis

527. During pregnancy, vaccination can be given against all these diseases except - *(UPSC2006)*
a) Hepatitis b) Typhoid
c) Mumps d) Hepatitis B

---

502)b 503)a 504)b 505)c 506)b 507)a 508)c 509)None 510)a 511)a 512)a 513)a 514)b 515)c
516)b 517) d 518)d 519)c 520)a,b,c,d 521)a 522)d 523)d 524)c 525)d 526)c 527)c

528. Which of the following vaccine should not be given during pregnancy ?- *(APPG 2006)*
a) HBV b) Measles, mumps, rubella
c) Typhoid d) Cholera

529. Which of the following vaccine should not be given during pregnancy? *(DPG 11)*
a) HBV b) Measles, mumps, rubella
c) Typhoid d) Cholera

530. Vaccines that can be safely given during pregnancy are the following except - *(UPSC-1109)*
a) Tetanus b) Influenza
c) Rubella d) Pneumococcus

531. The dose of OPV, given at birth, in case of institutional deliveries is - *(AIIHPH2001)*
a) Zero dose OPV b) Initial dose
c) Primary dose d) First dose

532. Vaccine which can be stored at -10°C temperature-
a) Polio b) Measles *(AIIHPH2001)*
c) BCG d)DPT

533. Vaccine which requires most stringent condition for storage - *(Kerala 91, DPG 09)*
a) DPT b)OPV
c) BCG d)TT

534. The most heat sensitive vaccine is - *(Corned 09)*
a) Measles b) Hepatitits B
c) DPT d)OPV

535. Frozen DPT vaccine should be - *(UPSC 04)*
a) Shaken thoroughly before use
b) Allowed to melt before use
c) Discarded
d) Brought to room temperature before use

536. Freeze dried vaccines are all except - *(Jipmer 05)*
a) BCG b) DPT
c) Measles d) Yellow fever

537. Strain used in mumps vaccine? *(MH11)*
a) Edmonsten Zagreb b) Oka
c) Jeryl Lynn d) Danish 1331

538. After administrating live vaccine, immunoglobulins are given after - *(UPSC 2002)*
a) lweek b) 2 weeks
c) 10 weeks d) 12 weeks

539. Herd immunity is not useful in - *(AIIHPH98)*
a) Diphtheria b) Tetanus
c) Smallpox d)Mumps

540. At Primary Health Centre (PHC) level, vaccines are stored in the - *(Karn 11)*
a) Cold box b) Deep freezer
c) Ice lined refrigerator d) Walk in cold room

541. How many fully frozen ice packs should a vaccine carrier contain? *(Karn 11)*
a) 2 b)4
c) 6 d) 8

542. Disinfection by autoclaving is NOT recommended for- *(Delhi pg Mar 09)*
a) Sputum b) Linen
c) Sharp instruments d) Glass syringes

543. Which one of the following disinfectant is not effective in killing spores? *(Jipmer 11)*
a) Alcohol b) Aldehyde
c) Halogen d) Phenol

SCREENING FOR DISEASE

544. Active search for disease in an apparently healthy individual is k/a - *(A1IMS Nov 0 7)*
a) Monitoringb) Case finding
c) Screening d) Sentinel surveillance

545. Time difference between screening test and standard test is known as - *(PGI June 99, Dec 98)*
a) Lead timeb) Generation time
c) CIP d) Lag time
e) Latent period

546. A test has been introduced that will detect a certain disease 1 year earlier than it is usually detected. Which of the following is most likely to happen to the disease within 10 years after the test introduced? (Assumed that 1 year early detection has no effect on the natural history of disease) -
a) It will be a good screening test
b) The period prevelance will decrease
c) The apparent 5 year survival rate will increase
d) The incidence rate will decrease

547. Which is most economical and best screening-
a) Mass screening *(NEET/DNB Pattern)*
b) High risk screening
c) Multiphasic screening
d) Any of the above

548. The screening strategy for prevention of blindness from diabetic retinopathy according to the NPCB involves- *(AI10)*
a) Opportunistic screening
b) High risk screening
c) Mass screening
d) Screening by Primary Care Physician

549. Screening for condition recommended when -
a) Low case fatality rate *(NEET/DNB Pattern)*
b) Diagnostic tools not available
c) No effective treatment available
d) Early diagnosis can change disease course because of effective treatment

550. The criteria for validity of a screening test are -
a) Accuracy *(AIMS 96)*
b) Predictability
c) Sensitivity & Specificity
d) Cost effectiveness

551. Which of the following characteristics is not of much importance in a screening test - *(AIIMSMay 07)*
a) Low cost b) High safety margin
c) High sensitivity d) High specificity

528)b 529)b 530)c 531)a 532)a,b 533)b 534)d 535)c 536)b 537)c 538)b 539)b 540)c 541)b
542) c,d 543) a 544) c 545) a 546) c 547) b 548) b 549) d 550) b 551) d

552. Reliability means - *(AIIMSNov 09)*
a) Number of times the same results on repeated trials
b) Number of times variation is seen
c) Extent of accuracy
d) Level of simplicity

553. Validity of a test is based upon all except -
a) Sensitivity b) Specificity *(AIIMS Nov 95)*
c) Precision d) Accuracy

554. Which one of the following will be affected by inter-observer variation in epidemiological studies -
a) Sensitivity *(UPSC07)*
b) Predictive value of the positive test
c) Specificity
d) Reliability

555. Validity of an indicator means - *(Corned 07)*
a) It should actually measure what it is supposed to measure
b) The answer should be same if measured by different persons in similar circumstances
c) Indicators should reflect changes in the situation concerned
d) Indicators should have ability to obtain data needed

556. If a biochemical test gives the same reading for a sample on repeated testing, it is inferred that the measurement is - *(ARMS Nov 02)*
a) Precise b) Accurate
c) Specific d) Sensitive

557. Using a new technique, Hb was estimated in a blood sample. The test was repeated for 10 times. The reports were : 9.5,9.2,9.4,9.6,9.7,9.9,10.2,10.3, 10.5.12.1. Accurate value of Hb was estimated by standard tests to be 10.2. The new technique has -
a) High validity and high reliability *(ARMS Nov 06*
b) Low validity and low reliability *Nov 11)*
c) High validity and low reliability
d) Low validity and high reliability

558. Using a new technique, Hemoglobin was estimated in a blood sample. The test was repeated for 10 times. The reports were 9.5, 9.2, 9.4, 9.6, 9.7, 9.9,10.5, 12.1. Accurate value of Hb was estimated by standard test to be 10.2. The new technique has -
a) High validity and high reliability *(ARMS Nov 11)*
b) Low validity and low reliability
c) High validity and low reliability
d) Low validity and high reliability

559. L-J chart is used for monitoring - *(ARMSMay 07)*
a) Accuracy b) Precision
c) Sensitivity d) Specificity

560. Specificity of a test refers to its ability to detect -*(NEET/DNB Pattern, ARMS Nov 06, May 09)*
a) True positive b) True negatives
c) False negatives d) False positive

561. Sensitivity means the ability to detect - *(AI97)*
a) True negative b) True positive
c) False negative d) False positive

562. Specificity of a test means, all except - *(AI2K)*
a) Identifies those without disease
b) True positive
c) True negative
d) An ideal screening test should have 100% specificity

563. Diagnostic power of the test is reflected by -*(Al 05)*
a) Sensitivity b) Specificity
c) Predictive value d) Population attributable risk

564. The diagnostic power of a test to correctly exclude the disease is reflected by - *(Al 06)*
a) Sensitivity b) Specificity
c) Positive predictivity d) Negative predictivity

565. For the calculation of positive predictive value of a screening test, the denominator is comprised of -
a) True positives + False negatives *(Al 99, 03)*
b) False positives + True negatives
c) True positives + False positives
d) True positives + True negatives

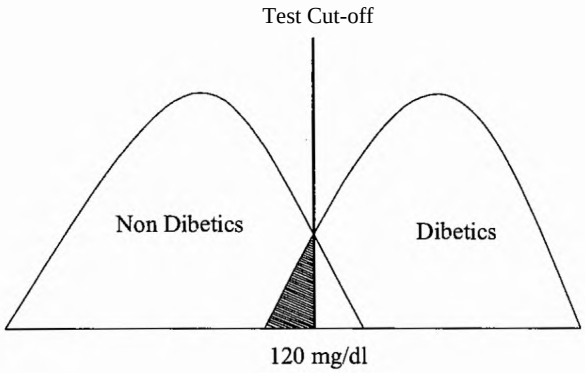
566. Study this formula carefully - *(Al03)*

$$\frac{\text{Total positives}}{\text{True positive + False positives}} \times 100$$

This denotes
a) Sensitivity b) Specificity
c) Positive Predictive value

567. Positive predictive value is most affected by -
a) Prevalence b) Sensitivity
c) Specificity d) Relative risk

568. If prevalence of a disease increases, what is true-
a) PPV increases *(NEET/DNB Pattern)*
b) PPV decreases
c) No effect on PPV
d) PPV may increase or decrease



569. A test is done in community A and B, more false positives were found in community A. The inference is that- *(ARMS99)*
a) Invalid test b) Prevalence less in A
c) Prevalence less B d) Prevalence is more in A

570. A screening test is used in the same way in two similar populations; but the proportion of false positive results among those who test positive in population A is lower than those who test positive in population B. What is the likely explanation -
a) The specificity of the test is lower in population A
b) The prevalence of the disease is lower in population A *(ARMS May 03)*
c) The prevalence of the disease is higher in population A.
d) The specificity of the test is higher in population A

571. Due to an effective prevention program, the prevalence of an infectious disease in a community has been reduced by 90%. A physician continues to use the same diagnostic test for the disease that she has always used. How have the test's characteristics changed ?
a) Its sensitivity has increased
b) Its positive predictive value has increased
c) Its negative predictive value has increased
d) The test's characteristics have not changed

552) a 553) c 554) d 555) a 556) a 557) b 558) b 559) a>b 560) b 561)b 562) b 563) c 564) d 565) c
566) a 567) a 568) a 569) b 570) c 571)c

572. A new test for Diabetes mellitus is performed in a group containing diabetics and non-diabetics. If 120 mg/dl of blood sugar is taken as the cut-off, the area shaded in the graph below represents - *(AI11)*

a) True Positives b) False Positives
c) True Negatives d) False Negatives

573. Too much false positives in a test is due to which of the following - *(AIIMS Nov 2K, 08)*
a) High prevalence
b) Tests with high specificity
c) Tests with high sensitivity
d) High incidence

574. More false positive cases in a community signify that the disease *has-(AIIMSMay 10, Nov 08,AI 01)*
a) High prevalence b) High sensitivity
c) Low prevalence d) Low sensitivity

575. The same screening test is applied to two comunities X and Y;Yshows more false + ve cases as compared to X. The possibility is - *(AI 01)*
a) High sensitivity
b) High specificity
c) Y community has high prevalence
d) Y community has low prevalence

576. Which one of the following relationships shown between different parameters of a performance of a test, is correct - *(AIIMSMay 04)*
a) Sensitivity = 1 - specificity
b) Positive predictive value = 1 - Negative predictive value
c) Sensitivity is inversely proportional to specificity
d) Sensitivity = 1 - Positive predictive value

577. High sensitive - *(NEET/DNB Pattern)*
a) Low false positive b) Low false negative
c) Low true negative d) Low true positive

578. Calculated positive predictive value of ELISA test for HIV with sensitivity 99%, specificity 99% , prevalence of HIV in population 5/1000 -
a) 10 b)70 *(AIIMS 2001)*
c) 33 d)99

579. A diagnostic test for a particular disease has a sensitivity of a 0.90 and a specificity of 0.80. A single test is applied to each subject in the population in which the diseased population is 30%. What is the probability that a person, negative to this test, has no disease - *(AIIMS May 06)*
a) Less than 50% b) 70%
c). 95% d) 72%

580. A diagnostic test for a particular disease has a sensitivity of 0.90 and a specificity of 0.90. A single test is applied to each subject in the population in which the diseased population is 10%. What is the probability that a person positive to this test, has the disease - *(AIIMS Nov 05)*
a) 90% b) 81%
c) 50% d) 91%

581. ELISA test has sensitivity of 95% and specificity of 95%. Prevalence of HIV carriers is 5%. The predictive value of positive test is-
a) 95% b) 50% *(NEET/DNB Pattern)*
c) 100% d) 75%

582. Population is 10,000, of these 20% having disease. The screening test has 95% sensitivity and 80% specificity. PPV is - *(AIIMS Nov 09)*
a) 54.3% b) 98.5%
c) 47.5% d) 20%

583. In a village having population of 1000, we found patients with certain disease and the results of a new diagnostic test on that disease are given below -

	Disease	
Test result	Present	Absent
+	180	400
-	20	400

Which of the following is the positive predictive value of diagnostic test in that population - *(AI 06)*
a) 45 b) 31
c) 95 d) 50

MISCELLANEOUS (SCREENING)

584. Study the following table carefully and answer the questions - *(AIIMS 05)*

	Disease	
Test result	Present	Absent
+ ve	40	225
-ve	10	225

The sensitivity of this study is -
a) 40 b)20
c) 80 d) 50

585. A test was considered for diagnosing a disease. Out of 80 positive cases with this test, 40 actually had no disease. Out of 9920 tested negative cases 9840 actually had no disease. Calculate the sensitivity of the test- *(AI 10)*
a) 13% b) 33%
c) 50% d) 99%

572) d 573) c 574)c 575)d 576)c 577)b 578)c 579)c 580)c 581)b 582)a 583)b 584)c 585)b

586. In a group of patients presenting to a hospital emergency with abdominal pain, 30% of patients have acute appendicitis, 70% of patients with appendicitis have a temperature greater than 37.5°C and 40% of patients without appendicitis have a temperature greater than 37.5°C and 40% of patients without appendicitis have a temperature greater than 37.5°C. Consdidering these findings, which of the following statements is correct - *(AIIMS Nov 04)*

a) The sensitivity of temperature greater than 37.5°C. as a marker for appendicitis is 21/4
b) The specificity of temperature greater than 37.5°C as a marker for appendicitis is 42/70
c) The positive predictive value of temperature greater than *31 SC* as marker for appendicitis is 21/30
d) The specificity of the test will depend upon the prevalence of appendicitis in the population to which it is applied.

587. The usefulness of a 'screening test' in a community depends on its - *(AI04)*

a) Sensitivity b) Specificity
c) Reliability d) Predictive value

588. In a village having population of 1000, we found patients with certain disease. The results of a new diagnostic test on that disease are also follows -

	Disease	
Test result	Present	Absent
+	180	400
-	20	400

What is the percent prevalence of disease - *(AI 05)*

a) 020 b) 2
c) 18 d) 20

589. The table below shows the screening test results of disease Z in relation to the true disease status of the population being tested - *(AI 04)*

Screening Test results	Disease Z		Total
Positive	400	200	600
Negative	100	600	700
Total	500	800	1300

The specificity of the screening test is -

a) 70% b) 75%
c) 79% d) 86%

590. A drug company is developing a new pregnancy-test kit for use on an outpatient basis. The company used the pregnancy test on 100 women who are known to be pregnant. Out of 100 women, 99 showed positive test. Upon using the same test on 100 non-pregnant women, 90 showed negative result. What is the sensitivity of the test - *(AIIMS May 03)*

a) 90%
b) 99%
c) Average of 90 & 99.
d) Cannot be calculated from the given data

591. Mammography has 90% sensitivity and 98% specificity for breast carcinona. What is the probability that a woman with breast carcinoma remains undiagnosed for 2 consecutive years?

a) 1/10 b) 2/10 *(NEET/DNB Pattern)*
c) 1/100 d) 2/100

592. When a diagnostic test is used in series mode then- *(AIIMSNov 02)*

a) Sensitivity increases but the specificity decreases
b) Specificity increases but the sensitivity decreases
c) Both sensitivity and specificity increase
d) Both sensitivity and specificity decrease

593. ELISA is performed on a population with low prevalence. What would be the result of performing double screening ELISA tests - *(AI 01)*

a) Increased sensitivity and positive predictiv value
b) Increased sensitivity and negative predictive value
c) Increased specificity and positive predictive value
d) Increased specificity and negative predictive value

594. In a surveillance centre for Hepatitis B, in a low prevalance area, the method for testing for Hepatitis B was single ELISA. This policy was changed to double testing in series. This would result in the following 2 parameters of the test being affected - *(AI 02)*

a) Specificity and positive predictive value
b) Sensitivity and positive predictive value
c) Sensitivity and negative predictive value
d) Specificity and negative predictive value

595. All comprise inherent properties of a screening test except- *(NEET/DNB Pattern)*

a) Sensitivity b) Specificity
c) Yield d) Predictive accuracy

596. Predictive value of a positive test is defined as -

a) True + ve/true + ve + false - ve x 100 *(AI 99)*
b) True + ve/true + ve + false + ve x 100
c) False + ve/true + ve + false + ve x100
d) False + ve/true + ve + false - ve x 100

597. You have diagnosed a patient clinically as having SLE and ordered 6 tests. Out of which 4 tests have come positive and 2 are negative. To determine the probability of SLE at this point, you need to know - *(AI 12, AIIMS Nov 11, Nov 06)*

a) Prior probability of SLE; sensitivity and specificity of each test
b) Incidence of SLE and predictive value of each test
c) Incidence and prevalence of SLE
d) Relative risk of SLE in this patient

598. Receiver operator characteristic (ROC) curve is usually drawn between - *(AI 06)*

a) Sensitivity and specificity
b) (1-sensitivity) and specificity
c) Sensitivity and (1-specificity)
d) (1-sensitivity) and (1-specificity)

586)b 587) a 588) d 589) b 590)b 591)c 592) b 593) c 594) a>b 595) c 596) b 597) a 598) c

599. In which of the following disease, the overall survival is increased by screening procedure- *(AIIMSMay 07)*
a) Prostate Ca b) Lung Cancer
c) Colon Ca d) Ovarian Ca

600. Which of the following can be prevented by screening - *(PGI June 08)*
a) Ca cervix b) C a breast
c) Ca prostate d) Ca Lung
e) Ca colon

601. Screening procedure is best for Ca of -
a) Prostate b) Colon *(NEET/DNB Pattern)*
c) Gastric d) None

602. Screening for which carcinoma is beneficial -
a) Carcinoma cervix *(NEET/DNB Pattern)*
b) Lung carcinoma
c) Stomach carcinoma
d) None

603. Most number of false positives by a screening test is because of? *(DNB Dec 2011)*
a) High specificity b) High sensitivity
c) High prevalence d) Low prevalence

604. Most important factor for a test to be a good screening test is? *(DNB Dec 2011)*
a) Specificity b) Sensitivity
c) Reliability d) Predictive value

605. Screening of cervical cancer at PHC level is done by?
a) History and clinical examination
b) Colposcopy *(DNB June 2011)*
c) CT scan
d) PAP smear

606. Sensitivity is - *(DNB June 2010)*
a) True positive/true positive + false negative
b) True positive/false positive + true negative
c) True negative/true negative + false positive
d) True negative/false negative + true positive

607. The ability of a test to correctly diagnose the percentage of sick people who are having the condition is called as? *(DNB Dec 09)*
a) Sensitivity
b) Specificity
c) Positive predictive value
d) Negative predictive value

608. Denominator of positive predictive value is -
a) True positve + False positive *(DNB Dec 09)*
b) True positive + False negative
c) False positive + True negative
d) False positive + False negative

609. Specificity measures - *(DNB June 09)*
a) True negative b) False positives
c) True positives d) None of the above

610. True positivity is indicated by - *(DNB Dec 08)*
a) Sensitivity b) Specificity
c) Predictive value d) Validity

611. Positive predictive value is most affected by -
a) Prevalence b) Sensitivity *(DNB Dec 08)*
c) Specificity d) Relative risk

612. Sensitivity is - *(DNB June 08)*
a) True positive/True positive + false negative
b) True positive/False positive + true negvative
c) True negative/True negative + false positive
d) True negative/False negative + true positive

613. The active search for unrecognized disease or defect in apparently health people using rapidly applied tests or procedures is - *(DNB Dec 07)*
a) Case finding b) Monitoring
c) Screening d) Active surveillance

614. The time interval between diagnosis by early detection of screening and diagnosis by other means is - *(DNB Dec 0 7)*
a) Serial interval b) Lead time
c) Time lag d) Latent period

615. All of the following are true for a screeing test except-
a) Less accurate *(DNB June 07)*
b) Forms the basis for treatment
c) Test results are arbitrary
d) Less expensive

616. Multiphasic screening means - *(DNB June 07)*
a) Application of the two or more scrrening tests in combination at one time
b) Application of two or more screening tests in combination at different time
c) Application of two or more screening tests in combination at different geographical areas.
d) Application of separate screening tests for different diseases

617. Criteria for a disease fit for screening including -
a) It should be an important public health problem
b) Facilities should be available for confirmation
c) There should be sufficiently long time available
d) All of the above *(DNB June 07)*

618. 'Lead time'refers to the time between - *(Kamil)*
a) Disease onset & final critical diagnosis
b) Disease onset & first possible point of detection
c) First possible point of detection & final critical diagnosis
d) First possible point of detection & usual time of diagnosis

619. A patient with cervix cancer is missed by a screening test and later diagnosed with advanced disease. This time interval is called ? *(Jipmer 11)*
a) Lead time b) Screening time
c) Serial interval d) Generation time

620. The time interval between diagnosis by early detection and diagnosis by other means is- *(Kerala 04)*
a) Incubation period b) Lead time
c) Serial interval d) Latent period

621. In selecting a screening test for a disease which of the following should not be considered? *(Jipmer 11)*
a) Cost of the test
b) Efficacy of the treatment
c) Knowledge of the physician about the disease
d) Sufferings from disease to the people

599)c 600)a,e 601)b 602)a 603)b,d 604)b 605)d 606)a 607)c 608)b 609)a 610)a 611)a 612)a
613)c 614)b 615)b 616)a 617)d 618)d 619)a 620)b 621) c

622. If biochemical test gives the same reading of r given sample on repeated testing, it is inferred that the measurement is - *(HP 2006)*
a) Precise b) Accurate
c) Specific d) Sensitive

623. Validity of an indicator means - *(Corned 07)*
a) It should actually measure what it is supposed to measure
b) The answer should be same if measured by different persons in similar circumstances
c) Indicators should reflect changes in the situation concerned -
d) Indicators should have ability to obtain data needed

624. True positivity is indicated by - *(MAHA 05)*
a) Sensitivity b) Specificity
c) Predictive value d) Validity

625. True negative means - *(JIPMER 2002)*
a) Sensitivity
b) Specificity
c) Positive predictive value
d) Negative predictive value

626. Specificity measures - *(KERALA 97, MAHE 05)*
a) True negative b) False positives
c) True positives d) None of the above

627. True regarding specificity: *(DPG 11)*
a) Identifies false+ve b) Identifies false -ve
c) Identifies true + ve d) Identifies true -ve

628. For a screening test, 90% specificity means that 90% of non-diseased persons will give a -
a) True negative result *(UPSC-II09)*
b) True positive result
c) False negative result
d) False positive result

629. The ability of a screening test to detect "true positives" is known as - *(UPSC-II 09)*
a) Sensitivity
b) Specificity
c) Positive predictive value
d) Negative predictive value

630. Diagnostic accuracy of a test is determined by -
a) Sensitivity *(MAHE 98, DPG 09)*
b) Specificity
c) Predictive value
d) None

631. Denominator of positive predictive value is -
a) True positve +False positive *(PGMCET07)*
b) True positive + False negative
c) False positive + True negative
d) False positive + False negative

632. If the prevalence of a disease in a population increases, the predictive value of a positive test -
a) Increases *(Karn 11)*
b) Decreases
c) Remains constant
d) Becomes compromised

633. Evaluation of screening test is by - *(MAHE 05)*
a) Sensitivity b) Specificity
c) Predictive value d) All the above

634. High false positive cases in a community signify that disease has - *(UP 08)*
a) High prevalence & Low incidence
b) High incidence & Low prevalence
c) Low prevalence & Low incidence
d) High incidence & High prevalence

635. Which one of the following will be affected by inter-observer variation in epidemiological studies -
a) Sensitivity *(UPSC 07)*
b) Predictive value of the positive test
c) Specificity
d) Reliability

BIOSTATISTICS

636. Central tendency is given by - *(PGIDec 01, 00, June 99)*
a) Mean b) Median
c) Mode d) Variance
e) Range

637. Most commonly used statistical average - *(PGI 99)*
a) Mean b) Median
c) Mode d)None

638. Determination of which statistical parameter requires quantities to be arranged in an ascending or descending order's - *(ARMS 95, 94)*
a) Mean b) Median
c) Mode d)S.D.

639. 10 babies were born in a hospital 5 were less than 2.5 kg. And 5 were greater than 2.5 kg the average is- *(ARMS 97)*
a) Arithmetic average b) Geometric average
c) Median disposal d) Mode average

640. Out of 11 births in a hospital, 5 babies weighed over 2.5 kg and 5 weighed less than 2.5 kg. What value dose 2.5 represent - *(A101)*
a) Geometric average b) Arithmetic average
c) Median average d) Mode

641. The median of values 2,5,7,10,10,13,25 -
a) 10 b) 13 *(ARMS01)*
b) 25 d)5

642. Calculate the median from the following values 1.9, 1.9,1.9,2.1,2.4,2.5,2.5, 2.9 - *(ARMS 00)*
a) *12* b) 1.9
c) 2.25 d)2.5

643. Median value for the given data 5,5,50,150,10,20-
a) 15 b) 10 *(PGI Dec 99)*
c) 20 d)40
e) 50

644. Mode is defined as - *(NEET/DNB Pattern)*
a) Most frequent value b) Middle value
b) Minimum value d) None

622) a 623)a 624)a 625)b 626)a 627)d 628)a 629)a 630)c 631)a 632)a 633)d 634)b 635) a
636) a,b,c 637) a 638) b 639) a,c 640) c 641) a 642) c 643) a 644) a

645. The frequently occurring value in a data is - *(IN 91, NEET/DNB Pattern)*
a) Median b) Mode
c) Standard deviation d) Mean

646. In a bimodal series, if mean is 2 and median is 3, what is the mode -
a) 5 b)2.5
c) 4 d) 3

647. The number of malaria cases reported during the last 10 years in a town is given below, 250,320,190, 300, 5000, 100, 260, 350, 320, and 160. The epidemiologist wants to find out the average number of malaria cases reported in that town during the last 10 years. The most appropriate measure of average for this data will be- *(AIIMSMay 01, Nov 04)*
a) Arithmetic mean b) Mode
c) Median d) Geometricmean

648. Number of cases of malaria detected in lOyrs are 100, 160, 190, 250, 300, 300, 320, 320, 550, 380. How to calculate the average number of cases per year - *(AIMS June 2000)*
a) Arithmetic mean b) Geometricmean
c) Mode d) Median

649. Mean value of weight of a group of 10 boys was found to be 18.2 kg. Later it was found that weight of one of the boys was wrongly recorded as 2.0 kg that should have been 20 kg. The true mean weight of the group is -
a) 18.2 kg b) 20.2 kg
c) 16.4 kg d)20kg

650. All are measures of dispersion around central value except- *(AIMSNov 07)*
a) Mode b) Variance
c) Standard deviation d) Standard error of mean

651. Dispersion of data is measured by - *(PGI May 10*
a) Coefficient of correlation *Nov.11)*
b) Range
c) Standard deviation
d) Coefficient of variation
e) Normal distribution curve

652. Find the value of range for the following data 7,9,6, 8,11,10, 4 - *(Kerala99)*
a) 5 b) 6
c) 7 d) 8

653. Calculate the range from the following distribution-

i) Size ^60-63	63-99	66-69	72-75
ii) Number —>5	18	142	27

a) 10 b) 15
c) 20 d)25

654. Mean deviation is - *(PGI 99)*
a) Measure of dispersion
b) Measure of dispersion
c) A range
d) An average

655. Standard deviation is a measure of - *(AI 08)*
a) Chance
b) Deviation from mean value
c) Central tendency
d) None of the above

656. Square root of deviation is also called as -
a) Standard deviation *(NEET/DNB Pattern)*
b) Standard error
c) Mean deviation
d) Range

657. If each value of a given group of observation is multiplied by 10, the standard deviation of the resulting observation is - *(AI 04)*
a) Original std. Deviation x 10
b) Original std. Deviation/10
c) Original std. Deviation -10
d) Original std. Deviation itself

658. In the birth weight of each of the 10 babies born in a hospital in a day is found to be 2.8 kgs, then the standard deviation of this sample will be -
a) 2.8 b) 0*(AIMS May 06, AI 01)*
c) 1 d) .28

659. Birth weight of all 10 babies born in a nursing home on a day was 2.7 kg. Standard deviation is -
a) 0.00 b) 1.00 *(NEET/DNBPattern)*
c) 0. 27 d) 2.7

660. Best method of variability is - *(AIMS 96)*
a) Mean b) Mode
c) Median d) Standard deviation

661. Most common deviation used in social medicine is- *(NEET/DNB Pattern)*
a) Mean b) Range
c) Variance d) Standarddeviation

662. Correct relation between S = Standard deviation & V = Variance- *(MH 03)*
a) V = square root of S b) S = Square root of V
c) V=2S d) S = 2V

663. Study done on a group of patients showed coefficient of variance for BP and serum creatinine to be 20%& 15% respectively. Inference is that -*(AIMS May 08)*
a) Variation in BP is more than in serum creatinine
b) Variation in serum creatinine is more than in BP
c) Standard deviation of BP is more than of creatinine
d) Standard deviation of creatinine is more than of BP

664. Median weight of 100 children was 12 kgs. The Standard Deviation was 3.Calculate the percentage coefficient of variance - *(AIMS Nov 2000)*
a) 25% b)35%
c) 45% d)55%

665. A non-symmetrical frequency distribution is known as- *(PGI June 06, 2000)*
a) Skewed distribution
b) Normal distribution
c) Cumulative frequency distribution
d) Bimodal distribution
e) J-shaped distribution

645)b 646)a 647)c 648)a 649)d 650)a 651)b,c,d 652)c 653)b 654)b 655)b 656)a 657)a 658)b
659) a 660) d 661)d 662)b 663)a 664)a 665)a,b,e

666. The standard normal distribution - *(AI05, 02)*
a) It skewed to the left
b) Has mean =1.0
c) Has standard deviation = 0.0
d) Has variance = 1.0

667. When do variables follow standard distribution -
a) Mean = median *(AI09)*
b) Median = Variance
c) Mean = 2 Median
d) Standard deviation = 2 variance normal curve

668. A normal distribution curve depends on - *(AI00)*
a) Mean and Sample size
b) Range and Sample Size
c) Mean and Standard deviation
d) Mean and median

669. S.D. is 1.96 the confidence limit is - *(AI 98, 96)*
a) 63.6% b) 66.6%
c) 95% d) 99%

670. Regarding the normal curve, true is/are-fPG*/Dec. 01)*
a) Both limbs of the curve touch the baseline
b) Curve is bilaterally symmetrical
c) There is a skew to the right
d) There is a skew to the left
e) Mean, Median, Mode coincide

671. Normal curve- *(NEET/DNB Pattern)*
a) Distribution of data is symmetrical
b) Mean > Mode
c) Mode > Mean
d) Median > Mean

672. Confidence limit includes - *(AI 99)*
a) Range & standard deviation
b) Median and standard error
c) Mean and standard error
d) Mode and standard deviation

673. A population study showed a mean glucose of 86mg/dl. In a sample of 100 showing normal curve distribution, what percentage of people have glucose above 86% ? *(AI 02)*
a) 65 b)50
c) 75 d)60

674. Systolic BP of a group of persons follows normal distribution curve. The mean BP is 120. The values above 120 are - *(AIIMS 01)*
a) 25% b)75%
c) 50% d) 100%

675. For a 60 kg Indian male, the minimum daily protein requirement has been calculated to be 40 g (mean) and standard deviation is 10. The recommended daily allowance of protein would be - *(AI 02)*
a) 60g/day b) 70g/day
c) 40g/day d) 50g/day

676. If a value is choosen from a community what is the probability that it will be above the median - *(AI97)*
a) 0.25 b) 0.5
c) 0.6 d) 1

677. The PEFR of a group of 11 year old girls follow a normal distrubution with mean 300 1/min and standard deviation 201/min - *(AI 05)*
a) About 95% of the girls have PEFR between 260 and 340 1/min.
b) The girls have healthy lungs
c) About 5% of girls have PEFR below 260 1/min.
d) All the PEFR must be less than 340 1/min.

678. The fasting blood levels of glucose for a group of diabetics is found to be normally distributed with a mean of 105 mg per 100ml of blood and a standard deviation of lOmg per 100ml of blood. From this data is can be inferred that approximately 95% of diabetics will have their fasting blood glucose levels within the limits of - *(AIIMS 03)*
a) 75 and 135 mgs b) 85 and 125 mgs
c) 95 and 115 mgs d) 65 and 145 mgs

679. Systolic BP of a group of200 people follows normal distribution, mean BP is 120 mm Hg and standard deviation 10. Which of the following is true- *(PGI May 10)*
a) 68% of people have BP between 110-130 mm Hg
b) 95% of people have BP between 110-130 mm Hg
c) 95% of people have BP between 100-140 mm Hg
d) 99% of pepole have BP between 100-140 mm Hg

680. If a 95% confidence Interval for prevalence of cancer smokers aged > 65 years is 56% to 76%, the chance that the prevalance could be less than 56% is -
a) Nil b) 44%
c) 2.5% d) 5%

681. What is the probability that confounding factor fall to the right of 95% -
a) 1 in 5 b) 1 in 10
c) 1 in20 d) 1 in 40

682. If the distribution of intra ocular pressure (IOP) seen in 100 glaucoma patients has an average 30 mm with a SD of 10, what is the lower limit of the average that can be expected 95% of times -
a) 28 b) 26 *(AIIMS05)*
c) 32 d)25

683. In a group of 100 children, the weight of a child is 15 kg. The standard error is 1.5 kg. Which one of the following is TRUE - *(AIIMS 01)*
a) 95% of all children weigh between 12 and 18 kg
b) 95% of all children weigh between 13.5 and 16.5 kg
c) 99% of all children weigh between 12 and 18 kg
d) 99% of all children weigh between 13.5 and 16.5kg

684. Fasting Blood Sugar (FBS) of a population is known to be normally distributed, with a mean of 105 mg% and standard deviation of 10 mg%. Thus 95% of the population will have FBS within - *(AI 12)*
a) 104 and 106 b) 95 and 115
c) 85 and 125 d) 75 and 135

666) d 667) a 668) c 669) c 670) b,e 671) a 672) c 673) b 674) c 675) a 676) b 677) a 678) b 679) a,c
680) c 681)d 682) a 683) a 684) c

685. Normal standard deviation true'\s-*(NEET/DNB Pattern)*
a) Mean = Median b) Mean > Medion
c) Median > Mean d) Mode > Mean

686. Standard error of mean indicates - *(AIIMS 99)*
a) Dispersion b) Distribution
c) Variation d) Deviation

687. Standard error of mean is calculated by-
a) SD/n b) SD/mean *(AIIMS May 0 7)*
c) SD *Jn* d) Mean/SD

688. In a population of pregnant female, Hb is estimated on 100 women with standard deviation of lgm%. The standard error is - *(AIIMS 01, May 04, 07)*
a) 1 b)0.1
c) 0.01 d) 10

689. Standard errors of mean, all are true except -
a) Increases with increased number of samples
b) Based on normal distribution curve
c) Measure the confidence limit *(AIIMSNov 09)*
d) Standard deviation

690. While calculating the incubation period for measles in a group of 25 children, deviation is 2 and the mean incubation period is 8 days. Calculate the standard error - *(AIIMS 00)*
a) 0.4 b) 1
c) 0.5 d)2

691. If sample size is bigger in random sampling, which of the following is TRUE - *(AIIMS June 99)*
a) It approaches maximum samples
b) Reduces non sampling errors
c) Increases the precision of the result
d) Decreases standard error

692. Estimated mean Hemoglobin (Hb) of 100 women is 10g%. Standard deviation (a) is lgm%. Standard error of estimate will be - *(AI12)*
a) 0.001 b)1.0
c) 10.0 d)0.1

693. Standard deviation of means measures -
a) Non-samplinr errors b) Sampling error
c) Random errors d) Conceptual errors

694. Z score is for which type of distribution - *(AI95)*
a) Normal b) Binomial
c) t d)Chi-square

695. The Hb level is healthy women has mean 13.5 g/dl and standard deviation 1.5 g/dl, what is the Z score for a woman with Hb level 15.0 g/dl - *(AI 05)*
a) 9.0 b) 10.0
c) 2.0 d) 1.0

696. Z score is used in - *(AI 10)*
a) Nominal data b) Normal distribution curve
c) t test d) Chi square test

697. About test of significance between two large population, one of the following statements is true -
a) Null hypothesis states that 2 means are equal
b) Standard error of difference is the sum of the standard error of 2 means *(AIIMS 98)*
c) Standard error of means are equal
d) Standard error of difference between populations calculated

698. Confidence limits can be calculated using - *(AI 99)*
a) Mean and range
b) Mean and standard error
c) Median and range
d) Median and standard error

699. Confidence limit is calculated *by-(NEET/DNB Pattern)*
a) Mean and standard error
b) Mean and standard deviation
c) Median and standard deviation
d) Median

700. 95% of confidence limit exist between - *(AI 99,*
a) ± 1. S.D. b) ± 2 S.D. *AIIMS 99)*
c) ±3 S.D. d)±4S.D.

701. Area falling under 2 S.D. curve would be around -
a) 66% b) 95% *(NEET/DNB Pattern)*
c) 57% d) 99%

702. Area between one standard deviation on either side of mean in normal distribution curve is -*(AIIMS 95)*
a) 62% b) 68%
c) 90% d) 99%

703. If the systolic blood pressure in a population has a mean of 130mmHg and a median of 140 mmHg, the distribution is said to be - *(AI 04)*
a) Symmetrical
b) Positively skewed
c) Negatively skewed
d) Either positively or negatively skewed depending on the Standard deviation

704. For a negatively skewed data mean will be -
a) Less than median *(AIIMS 05, 02)*
b) More than median
c) Equal to median
d) One

705. In a distribution, if the mean is less median, then the distribution is said to be - *(AIIMSMay 08)*
a) Negative skewed b) Positively skewed
c) Normal distribution d) No correlation

706. The distribution of random blood glucose measurements from 50 first year medical students was found to have a mean of 3.0 mmol/litre with a standard deviation of 3.0 mmol/litre. Which of the following is a correct statement about the shape of the distribution of random blood glucose in these first year medical students - *(AIIMS Nov 05)*
a) Since both mean and standard deviation are equal, it should be a symmetric distribution
b) The distribution is likely to be positively skewed
c) The distribution is likely to be negatively skewed
d) Nothing can be said conclusively

707. Pearsonian measure of skewness - *(AI 11)*
a) Mode - Mean/ SD b) Mean - Mode/ SD
c) SD/Mode - mean d) Mean - Mode/ SD

685) a 686) a,c,d 687) c 688) b 689) a 690) a 691) d 692) d 693) b 694) a 695) d 696) b 697) d 698) d 699)b>a 700)b 701)b 702)b 703)c 704)a 705)b 706)d 707) b

708. A chest physician observed that the distribution of forced expiratory volume (FEV) in 300 smokers had a median value of 2.5 litres with the first and third quartiles being 1.5 and 4.5 litres respectively. Based on this data now many persons in the sample are expected to have a FEV between 1.5 and 4.5 litres-
a) 75 b) 150 *(AIIMSNov 05)*
c) 225 d)300

709. A measure of location which divides the distribution in the ratio of 3:1 is - *(AI03)*
a) Median b) First quartile
c) Third quartile d) Mode

710. First quartile of the following data is - 1,3,4,2
a) 1 b)3
c) 1.5 d)4

711. The value between 1st pentile and 4th pentile includes -
a) 20% b) 40%
c) 60% d) 80%

712. For a group of n = 250 subjects, 40th percentile would be the following value -
a) 7th b)40th
c) 100th d) 140th

713. Meaning of baby has 15th percentile of head circumference is - *(AIIMS Nov 99)*
a) 15% of children will have HC more than that
b) 15% of HC, the child is having
c) 15% of children will have HC less than that

714. Central value of a set of 180 values can be obtained by-
a) 2nd tertile b) 90th percentile
c) 9th decile d) 2nd quartile

715. Chi - square test is used to measure the degree of -
a) Causal relationships between exposure and effect
b) Association between two variables *(AI 03)*
c) Correlation between two variables
d) Agreement between two observations

716. Not true about chi-square test is -
a) Tests the significance of difference between two proportions
b) Tells about presence or absence of an association between two variables
c) Directly measures the strength of association
d) Can be used when more than two groups are two be compared

717. TRUE regarding chi square test is - *(ARMS99)*
a) Null hypothesis is equal
b) Dosen't test the significance
c) Measures the significance of difference between two proportion
d) Tests correlation and regression

718. While applying chi-square test to a contingency table of 4 rows and 4 columns, the degrees of freedom would be - *(ARMSMay 06, AI 95)*
a) 1 b)4
c) 9 d) 8

719. In a 3 x 4 contingency table, the number of degrees of freedom equals to - *(ARMS 04, PGI June 01)*
a) 1 b) 5
c) 6 d) 12

720. In the given data, degree of freedom will be -

Duration of developing AIDS	Blood group			
	A	B	C	D
0-10 years	20	30	48	7
10-20 years	100	15	38	10
20-30 years	12	9	8	3

a) 12 b)6
c) 9 d)20

721. Chi square test 5 rows/4 columns, degree of freedom - *(NEET/DNB Pattern)*
a) 9 b) 12
c) 16 d) 20

722. Yates correction is used in - *(Jipmer 08)*
a) Student't' test b)ANOVA
c) Chi square test d) Wilcoxan test

723. Height to weight is a/an - *(NEET/DNB Pattern)*
a) Association b) Correlation
c) Proportion d) Index

724. NOT true about co-relation is - *(ARMSFeb 97)*
a) Doesn't tell about causation
b) Tells about risk of the disease
c) -1.0 correlation shows linear relationship
d) Tells association between two variables

725. If correlation between weight and heights are very strong what will be the correlation coefficient -
a) +1 b) >1 *(ARMS Nov 2000)*
c) 0 d)-l

726. The correlation between IMR and Socio Economic status is best depicted by - *(ARMSNov 01)*
a) Correlation (+1) b) Correlation (+0.5)
c) Correlation (-1) d) Correlation (-0.8)

727. Mosquitoes decrease as height increases -
a) Positive correlation *(NEET/DNB Pattern)*
b) Negative correlation
c) Bidirectional
d) Zero

728. A cardiologist found a highly significant correlation coefficient (r = 0.090, p = 0.01) between the systolic blood pressure values and serum cholestrol values of the patients attending his clinic. Which of the following statements is a wrong interpretation of the correlation coefficiency observed ? *(AI05)*
a) Since there is a high correlation, the magnitude of both the measurements are likely to be close to each other
b) A patient with a high level of systolic BP is also likely to have a high level of serum cholesterol.
c) A patient with a low level of systolic BP is also likely to have a low level of serum cholesterol.
d) About 80% of the variation in systolic blood pressure among his patients can be explained by their serum cholesterol values and vice aversa

708) b 709) c 710) c 71 l)c 712) c 713)c 714) a 715) b 716)c 717)c 718)c 719)c 720)b 721)b
722) c 723)a 724)b 725)a 726)d 727)b 728) a

729. If coefficient of correlation between height and weight is 2.6, TRUE is - *(AIIMS June 2000)*
a) Positive correlation
b) No association
c) Negative correlation
d) Calculation of coeffecient is wrong

730. Correlation coefficient tends to lie between -
a) Zero to -1.0 b) -1.0 to +1*(AIIMS 97)*
c) +1.0 to zero d) +2.0 to -2.0

731. The correlation between variables A and B in a study was found to be 1.1 this indicates - *(AI02)*
a) Very strong correlation
b) Moderately strong correlation
c) Weak correlation
d) Computational mistake in calculating correlation

732. Association can be measured by all of the following except - *(ARMS May 09)*
a) Coorelation cofficient
b) Cronbach's alpha
c) P value
d) Odds ratio

733. Correlation in height & weight are measured by-
a) Coefficient of variation *(NEET/DNB Pattern)*
b) Range of variation
c) Correlation coefficient
d) None

734. The regression between height and age follows y=a+bx. The curve is - *(ARMS Nov 01)*
a) Hyperbolab) Sigmoid
c) Straight line d) Parabola

735. Total cholesterol level = a+ b (calorie intake) + c (physical activity) + d (body mass index); is an example of - *(AI 05)*
a) Simple linear regression
b) Simple curvilinear regression
c) Multiple linear regression
d) Multiple logistic regression

736. An investigator concluded that presence or absence of five factors determine the disease condition. Which of the following would be most appropriate next study to determine if any of these five factors are independent precursors of the disease? *(AI 11)*
a) Multiple linear regression analysis
b) Multiple logistic regression analysis
c) Analysis of variance (ANOVA)
d) Kruskall-Wallis Analysis of ranks

737. When the height and weight is perfectly correlated, coefficient of correlation is - *(ARMS 2K)*
a) + 1 b) -1
c) 0 d) More than 1

738. Test of association between two variables is done by-
a) X^2 b) Correlation
c) Regression d)None

739. Ifwe know the value of one variable in an individual and wish to know the value of another variable, we calculate - *(NEET/DNB Pattern)*
a) Coefficient of correlation
b) Coefficient of regression
c) SE of mean
d) Geometric mean

740. A cardiologist found a highly significant correlation coefficient (r = 0.90) between systolic BP and serum cholesterol values of the patients attending his clinic. Which of the following statements is a wrong interpretation of the correlation coefficient observed-
a) Since there is a high correlation, the magnitude of both the measurements are likely to be close to each other
b) A patient with a high level of systolic BP is also likely to have a high level of serum cholesterol.
c) A patient with a low level of systolic BP is also likely to have a low level of serum cholesterol
d) About 80% of the variation in systolic BP among his patients can be explained by their serum cholesterol values

741. Study find a correlation coefficient of +0.7 between self reported work satisfaction and expectancy of life in a random sample of5000 corporate workers, (p = 0.01). This means -
a) Work satisfaction improves life expectancy
b) Strong statistically significant (+) association between work satisfaction and life expectancy.
c) 70% people who enjoy work shall live longer
d) 70% association between work satisfaction and life expectancy

742. Weight in Kg is - *(AI 96)*
a) Normal variable
b) Discrete variable
c) Confounding variable
d) Continuous variable

743. Number of family member is a - *(AI 92)*
a) Qualitative variable b) Discrete variable
c) Continuous variable d) Categorial variable

744. Discrete variability are all except - *(AI 91)*
a) Color of skin b) Boys in the class room
c) Obesity weight d) Leukocyte count

745. If the grading of diabetes is classified as "mild", "moderate" and "severe" the scale of measurement used is - *(AI 04)*
a) Interval b) Nominal
c) Ordinal d) Ratio

746. Results of a test were given as very satisfied, satisfied, dissatisfied, it represents - *(ARMSMay 10, AI 07)*
a) Nominal scale b) Ordinal scale
c) Interval scale d) Ratio scale

747. Which of the following variables is measure on ordinal scale - *(NEET/DNB Pattern)*
a) Type of anemia b) Severity of anemia
c) Hemoglobin d) Serum ferritin

729) d 730) b 731)d 732) b 733) c 734) c 735) c 736) b 737) a 738) a 739) b 740) a 741) a 742) d
743) b 744) a,c 745) c 746) b 747) b

748. An investigator into the life expectancy of IV drug abusers divides a sample of patients into HIV positive and HIV negative groups. What type of data does this division constitute -
a) Nominal b) Ordinal
c) Interval d) Portion

749. In statistical literature data is broadly classified as interval scale data, ordinal scale data & categorical data. Blood groups will be an example of -
a) Interval scale data b) Ordinal scale data
c) Categorical data d) None

750. Mean and standard deviation can be worked out only if data is on - *(AIIMS Nov 05)*
a) Interval/Ratio scale b) Dichotomous scale
c) Nominal scale d) Ordinal scale

751. All the following are examples of nominal scale except - *(AI96)*
a) Race b)Sex
c) Iris color d) Blood pressure

752. All of the following are example of nominal scale except - *(NEET/DNB Pattern)*
a) Age b)Sex
c) Body weight d) Socio-economic status

753. Which is the best distribution to study the daily admission of head injury patients in a trauma care centre - *(AIIMSMay OS)*
a) Normal distribution
b) Binomial distribution
c) Uniform distribution
d) Poisson distribution

754. A study was conducted to test if use of herbal tea played any role in prevention of common cold. Data was collected on the number of people who developed cold and those who did not develop cold and data was tabulated in relation to whether they consumed Herbal tea not - *(AI 07)*

	Herbal tea	
	Consumed	Not consumed
Had cold	12	23
Did not have a cold	34	38

The analytical test of choice to test this study is -
a) Student -1 test (unpaired) *(AI 07)*
b) Student -1 test (paired)
c) Chi square test
d) 'Z' test

755. Appropirate statistical method to compare two means is - *(NEET/DNB Pattern)*
a) Chi-square test b) Student t-test
c) Odds ratio d) Correlation coefficient

756. Appropriate statistical test to compare two proportions is-
a) Chi-square test b) Student's t-test
c) Odds ratio d) Correlation coefficient

757. A chi-sqaure test would be most appropriate for testing which one of the following hypotheses?
a) That the mean AIPGE score of Delhi students is greater than that of mumbai students
b) That a smaller proportion of poeple who were immunized against chicken pox subsequently develop zoster than those who were not immunized
c) That the mean blood pressure of black and white male-hypertensive patients taking ACE inhibitors is the same as that of black and white female-hypertensive patients taking ACE inhibitors and that of black and white males and females taking diuretics and placebos
d) That the mean cost of treating a patient with coronary artery disease with angioplasty is greater than the mean cost of providing medical treatment

758. A group tested for a drug shows 60% improvement as against a standard group showing 40% improvement. The best test to test the significance of result is - *(AIIMS Nov 01)*
a) Student T test b) Chi square test
c) Paired T test d) Test for variance

759. In a particular trial, the association of lung cancer with smokin is found to be 40% in one sample and 60% in another. What is the best test to compare the results - *(NEET/DNB Pattern)*
a) Chi square test b) Fischer test
c) Paired t test d) ANOVA

760. Height of group of 20 boys aged 10 years was 140 ± 13 cm and 20 girls of same age was 135 cm ± 7 cm. To test the statistical significance of difference in height, test applicable is -
a) X^2 b)Z
c) t d)F

761. A study was undertaken to assess the effect of a drug in lowering serum cholesterol levels. 15 obese women and 10 non-obese women formed two limbs of study. Which test would be useful to correlate the results obtained -
a) ANOVA b) Student t-test
c) Chi-square test d) Fischer test

762. For testing the statistical significance of the difference in heights of school children -
a) Student's t test b) chi-square test
c) Paired 't' test d) ANOVA

763. Not required for chi-square test - *(NEET/DNBPattern)*
a) Mean & SD of the groups
b) Each expected cell frequency ≥ 5
c) large sample
d) Contingency table

764. All are true regarding students t-test, except -
a) Standard Error of Mean is not estimated *(AI2K)*
b) Standard population is selected
c) Two samples are compared
d) Student's t-test map is required for calculation

748) a 749) c 750)a 751)d 752)c 753)d 754)c 755)b 756)a 757)b 758)b 759)a>b760)c 761)b 762) d 763) a 764) a

765. While testing a hypolipidemic drug, serum lipid levels were tested both before and after its use. Which test is best suited for the statistical analysis of the result - *(AI01)*
a) Paired T test b) Student's test
c) Chi squre test d) None of the above

766. Amount of Alcohol consumption amongst a group of Alcoholics, before and after intervention was recorded. The most appropriate statistical test to assess 'significant change[9] from the intervention programme would be - *(AI 12)*
a) Paired t test b) Unpaired t test
c) Chisquare Test d) McNemar Test

767. Mean bone density amongst two groups of 50 people each is compared with each other. The test of significance used would be - *(AIIMS May 08)*
a) Paired-t-test b) Student t-test
c) Analysis of variance d) Chi-Square test

768. For testing the statistical significance of the difference in heights of school children among three socio-economic groups, the most appropriate statistical test is - *(AIIMS May 03)*
a) Student's 't' test
b) Chi-square test
c) Paired't' test
d) One way analysis of variance (one way ANOVA)

769. An investigator wants to study the association between maternal intake of iron supplements (Yes/ No) and birth weights (in gms) of newborn babies. He collects relevant data from 100 pregnant women and their newborns. What statistical test of hypothesis would you advise for the investigator in this situation - *(ARMSMay 03)*
a) Chi-Square test
b) Unpaired or independent t-test
c) Analysis of Variance
d) Paired t-test

770. An investigator wants to study the association between maternal intake of iron supplements (Yes or No) and incidence of low birth weight (< 2500 or ≥ 2500 gms). He collects relevant data form 100 pregnant women as to the status of usage of iron supplements and the status of low birth weight in their newborns. The appropriate statistical test of hypothesis advised in this situation is -
a) Paired-t-test *(ARMS Nov 03)*
b) Unpaired or independent t-test
c) Analysis of variance
d) Chi-Square test

771. A cardiologist wants to study the effect of an antihypertensive drug. He notes down the initial systolic blood pressure (mmHg) of 50 patients and then administers the drug on them. After a week's tretment, he measures the systolic blood pressure again. Which of the following is the most aproprate statistical test of significance to test the statistical significance of the change in blood pressure -
a) Paired t-test *(ARMS 04, 00; PGIDec 01; AI 97)*
b) Unpaired or independent t-test
c) Analysis of variance
d) Chi-square test

772. In a study, variation in cholesterol was seen before and after giving a drug. The test which would give its singificance is - *(AI 02)*
a) Unpaired test b) Paired t test
c) Chi square test d) Fisher test

773. Ten readings of BP taken before and after treatment is studied by - *(ARMS 97)*
a) Paired't' test b) 'Z' test
c) Students 't' test d) Correlation test

774. ANOVA is - *(NEET/DNB Pattern)*
a) Parametric test b) Non-parametric test
c) Qualitative test d) None

775. After applying a statistical test, an investigator gets the 'p value[9] as 0.01. It means that -
a) The probability of finding a significant difference is 1 % *(ARMS May 08, 05)*
b) The probability of declaring a significant difference, when there is truly no difference, is 1%
c) The difference is not significant 1% times and significant 99% times
d) The power of the test used is 99%

776. In assessing the association between maternal nutritional status and the birth weight of the newborns, two investigators A and B studied separately and found significant results with p values 0.02 and 0.04 respectively. From this information, what can you infer about the magnitudes of association found by the two investigators - *(ARMS Nov 04)*
a) The magnitude of association found by Investigator A is more than found by B
b) The magnitude of association found by Investigator B is more than found by A
c) The estimates of association obtained by A and B will be equal, since both are significant
d) Nothing can be concluded as the information given is inadequate

777. The 'P[9] value of a randomized controlled trial comparing operation A (new procedure) & operation B (Gold standard) is 0.04. From this, we conclude that - *(AI 03)*
a) Type II error is small & we can accept the findings of the study
b) The probability of false negative conclusion that operation A is better than operation B, when in truth it is not, is 4%.
c) The power of study to detect a difference between operation A & B is 96%
d) The probability of a false positive conclusion that operation A is better than operation B, when in truth it is not, is 4%

765)a 766)a 767)b 768)d 769)b 770)d 771)a 772)b 773)a 774)a 775)c,d 776)d 777)c

778. P value indicates - *(NEET/DNB Pattern)*
a) Probability of the significance is < 0.05
b) Probability null hypothesis is correct
c) Probability null hypothesis is false
d) To find out meaning of regression

779.tp? $_{va}i_{ue}$ stands for - *(AI12)*
a) Probability to achieve a correct result
b) Probability to achieve an incorrect result
c) Probability of concluding that a difference exist while in reality such a difference dose not exist
d) Probability of concluding that a difference dose not exist while in reality such a difference dose exist

780. In a test of significance, p value is 0.023 the observed difference in study can be considered as - *(MH 05)*
a) Null hypothesis accepted and the study is rejected
b) Null hypothesis rejected and the study accepted
c) Null hypothesis accepted and the study is accepted
d) Null hypothesis rejected and the sutdy is also rejected.

781. The events A and B are mutually exclusive, so -
a) Prob (A or B) = Prob A) + Prob B) *(AI 05)*
b) Prob (A or B) = Prob A). Prob B)
c) Prob A) = Prob B)
d) Prob A) + Prob B) = 1

782. If prevalence of diabetes is 10%, the probability that three people selected at random from the population will have diabetes is - *(AI 04)*
a) 0.01 b) 0.03
c) 0.001 d) 0.003

783. Chance of passing a genetic disease 'y ' trait by the affected parents to children is 0.16. They plan to have two children. Probability of both the children having 'y'trait is-
a) zero b)0.16
c) 0.32 d) 0.0256

784. If a life time probability to develop a lung cancer is 25% than what are odds of deeveloping lung cancer in life time is - *(NEET/DNB Pattern)*
a) 3 :1 b) 1: 3
c) 2:2 d)4 : 1

785. On a given day, a hospital had 50 admissions with about 20 girls and 30 boys, out of which 10 girls and 20 boys needed surgery. What is the possibility of picking up a person requiring surgery - *(AI 09)*
a) 2/6 b) 3/5
c) 1/2 d) 6/25

786. If we reject null hypothesis, when actually it is true it is known as - *(AIIMS 04)*
a) Type I error b) Type IIerror
c) Power d) Specificity

787. P-value is the probability of -
a) Not rejecting a null hypothesis when true
b) Rejecting a null hypothesis when true
c) Not rejecting a null hypothesis when false
d) Rejecting a null hypothesis when false

788. All are true about P-value except -
a) It is the probability of commiting type I error
b) Is equal to 1-p
c) Is the chance that the presence of difference is concluded when actually there is none
d) when p-value is less than a, the result is statistically significant.

789. A radomized trial comparing the efficiancy of two drugs showed a difference between the two with a p value of < 0.005. In reality, however drugs do not differ. This is an example of -
a) Type I error (alpha error)
b) Type III error (Beta error)
c) 1-a
d) 1-P

790. A randomized trial comparing efficacy of two regimens showed that difference is satisfically significant with p < 0.001 but in reality the two drugs do not differ in their efficacy. This is an example of -
a) Type -1 error (a error) *(AIIMS May 06, AIIMS 02)*
b) Type-II error (II error)
c) I-a
d) I-P

791. Power of a study can be increased by -
a) Increasing a error b) Decreasing p-error
c) Decreasing a error d) Increasing p-error

792. Random error - *(PGI98)*
a) Systemic error b) Bias
c) Confounding factor d) Reduces precision

793. Bias is - *(AI99)*
a) Systemic error
b) Random error
c) Both
d) Can be statistically correctable

794. Low birth weight statistics of a hospital is best shown by- *(AIIMS 95)*
a) Bar charts b) Histogram
c) Pictogram d) Frequencypolygon

795. The best method to show the association between height and weight of children in a class is *by-(AI 02)*
a) Barchart b) Line diagram
c) Scatter diagram d) Histogram

796. The best method to show the association between height and weight of children in a class is by -
a) Barchart b) Line diagram *(AI02)*
c) Scatter diagram d) Histogram

797. Trends can be represented by - *(NEET/DNB Pattern)*
a) Line diagram b) Bar diagram
c) Scatter diagram d) None

778)a>b 779)c 780)b 781)a 782)c 783)d 784)b 785)b 786)a 787)b 788)b 789)a 790)a 791)b 792) d 793) a 794)a,b,d 795) c 796) c 797) a

798. Best way to plot the change of incidence of disease overtime- *(NEET/DNB Pattern)*
a) Line diagram b) Bar chart
c) Histogram d) Pie chart

799. Two variables can be plotted together in -
a) Pie chart *(NEET/DNB Pattern)*
b) Histogram
c) Frequency polygon
d) Scatter diagram

800. Histogram is used to describe - *(AIIMSMay 06)*
a) Quantitative data of a group of patients
b) Qualitative data of a group of patients
c) Data collected on nominal scale
d) Data collected on ordinal scale

801. The best graphic representation of frequency distribution of data gathered of a continuous variable is- *(AIIMSMay 10)*
a) Simple bar graph b) Multiple bar
c) Line diagram d) Histogram

802. Frequency distribution is studied by - *(A109)*
a) Histogram b) Line diagram
c) Pie diagram d) Ski diagram

803. Ogive is - *(UPSC 09)*
a) Barchart
b) Histogram
c) Cumulative frequency curve
d) Frequency polygon

804. All of the following are random sampling methods except - *(AIIMS Nov 2000)*
a) Simple random b) Cluster sampling
c) Stratified random d) Quota sampling

805. In random sampling chance of being picked up is -
a) Same and known *(AIIMS Nov 99)*
b) Not same and not known
c) Same and not known
d) Not same but known

806. Which of the following statements about "Simple Random Sampling" is true - *(AI09)*
a) Every element in the population has an equal probability of being included
b) Sampling is based on similar characteristics
c) Suitable for large heterogenous population
d) Complete list of items within the sampling frame is not required

807. For a survey a village is divided into 5 lanes then each lane is sampled randomly is an example is -
a) Simple random sampling *(AIIMS 96)*
b) Stratified random sampling
c) Systemic random sampling
d) All of the above

808. All of the following are true about cluster sampling except- *(AI07)*
a) Samples are similar to those in simple Random sampling
b) Is a Rapid and simple method
c) The sample size may vary according to study design
d) It is a type of probability sample

809. A population is divided into relevant subgroups and random sample selection is done from each of the subgroups. This is which type of sampling method?
a) Systematic random sampling *(AI 11)*
b) Stratified random sampling
c) Simple random sampling
d) Cluster sampling

810. A region is divided into 50 villages for the purpose of a survey. 10 villages are then selected randomly for the purpose of a study. This type of sampling is termed as- *(AI 11)*
a) Simple Random sampling
b) Stratified sampling
c) Cluster Sampling
d) Systematic Sampling

811. All are true about cluster sampling except ?
a) Sample size is same as that of simple random sampling *(AIIMSMay 11, Nov 08)*
b) It is a two stage sampling
c) It is cheapter than other methods of sampling
d) It has a disadvantage of higher sampling error

812. Sampling method used in assessing immunization status of children under immunization programme is -
a) Systemic sampleing b) Stratified sampling
c) Group sampling d) Cluster sampling

813. Which of the following is/are non-random sampling methods- *(PGIMaylO)*
a) Quota sampling
b) Stratified random sampling
c) Convenience Sampling
d) Cluster Sampling

814. True statements with regard to sampling-
a) Snowball sampling is used for hidden population
b) More sample in systemic random sampling
c) In stratified random sampling population is divided into strata *(PGIMay 11)*
d) Cluster sampling is less cost-effective

815. For calculation of sample size for a prevalence study all of the following are necessary except - *(AI 03)*
a) Prevalence of the disease in pupulation
b) Power of the study
c) Significance level
d) Desired precision

816. The number of patients required in a clinical trial to treat a specific disease increases as - *(AIIMS 02)*
a) The incidence of the decreases
b) The significance level increases
c) The size of the expected treatment effect increased
d) The drop out rate increases

798) a 799) d 800)a 801) d 802)a 803)c 804)d 805)a 806)a 807)c 808)a 809)b 810) c 811)a 812)d 813)a,c 814)a,c 815)b 816)b

817. All the following are true in a randomized control trial (RCT) except - *(AI06, AIIMS May 11, Nov 08)*
a) Baseline characteristics of intervention and control groups should be similar
b) Investigator's bias is minimized by double blinding
c) The sample size required depends on the hypothesis
d) The drop-outs from the trial should be excluded from the analysis

818. Sampling error is classified as - *(AI01)*
a) Alpha error b) Beta error
c) Gamma error d) Delta error

819. IVue about simple randomization is- *(AIIMS 01, AI08)*
a) Every person has an equal chance of selection
b) Less number of samples are obtained
c) Also known as systemic randomization
d) Groups are not distributed

820. 'Design Effect' is associated with which of the following sampling techniques - *(AI 12)*
a) Stratified sampling
b) Systemic sampling
c) Cluster sampling
d) Simple Random Sampling

MISCELLANEOUS

821. The parameters of sensitivity and specificity are used for assessing - *(AI 03)*
a) Criterion validity b) Construct validity
c) Discriminant validity d) Content validity

822. The response which is graded by an observer on an agree or disagree continuum is based on - *(AI03)*
a) Visual analog scale b) Guttman scale
c) Likert scale d) Adjective scale

823. Limits of confidence of a hypothesis determined by-
a) Power factor *(AIIMS 98)*
b) Level of significance
c) 1-power factor
d) 1-level of significance

824. When the confidence level of a test is increased which of the following will happen - *(AIIMSMay 0 7)*
a) No effect on significance
b) Previously insignificant value becomessignificant
c) Previously significant value becomesinsigniflcant
d) No change in hypothesis

825. Which of the following statements about confidence limits / interval is true - *(AI 10)*
a) Smaller the confidence level larger will be the confidence interval
b) Less variable the data, wider will be the confidence interval
c) Sample size does not affect the confidence interval
d) 95% confidence interval will cover 2 standard errors around the mean

826. The risk factor association of pancreatic cancer was studied in a case control study. The values of the odds ratio and the confidence interval for various risk factors are as below - *(AIIMS Nov 09)*

Risk factors	Odds ratio	95% Confidence limit
A	2.5	1-3
B	1.4	1.1-1.7
C	1.6	0.9-1.7

Which is true:
a) Risk A has strongest association with pancreatic cancer
b) Risk B has the strongest association
c) Risk C has the strongest association
d) All three are equally associated

827. When an intervention is applied to community to evaluate its usefulness, it is termed as a trial for -
a) Efficacy *(AIIMS Nov 04)*
b) Effectiveness
c) Efficiency
d) Effect modification

828. When a drug is evaluated for its usefulness in controlled conditions, it is termed as a trial signifying - *(AI 06, AIIMS Nov 05)*
a) Efficacy b) Effectiveness
c) Efficiency d) Effect modification

829. Drugs A & B are both used for treating a particular skin infection. After one standard application. Drug A eradicates the infection in 95% of both adults and children. Drug B eradicates the infection in 47% of adults & 90% of children. There are otherwise no significant pharmacological differences between the two drugs and there are no significant side effects. However, the cost of Drug A is twice that of Drug B.Dr. Ram, a general practitioner, always uses drug B for the first treatment, and resorts to Drug A if the infection persists. Dr. yogesh, another general practitioner, always uses Drug A for adults and drug B for children.Ignoring indirect costs, which of the following statement is incorrect - *(AI 02)*
a) Drug A is more effective than B for treating children
b) Drug A is more cost - effective than drug B for treating children
c) Drug A is more cost - effective than Drug B for treating children
d) Dr. Yogesh's regime achieves a higher level of cost-effectiveness than Dr. Ram's

830. Best method to compare new test and gold standard test - *(AIIMSNov 11, May 07)*
a) Correlation study
b) Regressive study
c) Bland and altman analysis
d) Kolmogorov smimov test

817)d 818)a 819)a 820)c 821)a 822)c 823)d 824)b 825)d 826)b 827)a 828)a 829)b 830)c

831. Which of the following is the national level system that provides annual national as well as state level reliable estimation of fertility and mortality -
a) Civil registration system *(AIIMS May 05, 03, 96)*
b) Census
c) Adhoc survey
d) Sample registration system

832. Registration of birth & death with a 6 monthly survey is done in - *(AIIMS 96)*
a) National sample survey
b) Vital statistical system
c) Census
d) Sample registration system

833. Under the registration act of 1969 Death is to be registered with in - *(AI99)*
a) 7 days b) 14 days
c) 21 days d) 28 days

834. Under the registration Act of 1969, Birth should be registered within - *(AI94)*
a) 7 days after birth b) 20 days after birth
c) 14 days after birth d) 21 days after birth

835. Sample registration system is done once in -
a) 6 months b) 1 year *(PGI95)*
c) 2 years d) 5 years

836. Best method for collecting vital Statistics in India- *(AIIMS97)*
a) Active surveillance b) Passive surveillance
c) Sentinel surveillance d) Contact tracing

837. Evidence based medicine, which of the following is not useful - *(PGIDec 08)*
a) Personal exposure b) RCT
c) Case report d) Meta-analysis
e) Systemic review

838. Strong correlation is signified by a correlation coefficient of? *(DNB June 2011)*
a) Zero b) 1
c) Less than 1 d) More than 1

839. In a Left skewed curve, true statement is?
a) Mean = Median *(DNB June 2011)*
b) Mean < Mode
c) Mean>Mode
d) Mean = Mode

840. Likert scale is? *(DNB June 2011)*
a) Ordinal scale b) Nominal scale
c) Variance scale d) Categorical scale

841. Degree of freedom for 2/2 contingency table is?
a) 1 b) Zero *(DNB June 2011)*
c) 2 d)4

842. Children surveyed in cluster sampling for coverage of national immunization programme in?
a) 30 cluster of 5 children *(DNB June 2011)*
b) 20 cluster of 5 children
c) 30 cluster of 10 children
d) 30 cluster of 7 children

843. Best method to show trend of events with passage of time is? *(DNB Dec 2010)*
a) Line diagram b) Bar diagram
c) Histogram d) Pie chart

844. Secular trend is best demonstrated by? *(DNB Dec 2010)*
a) Line diagram b) Bar graph
c) Stem-leaf plot d) Box and whisker plots

845. Chi-square test is for? *(DNBDec 2010)*
a) Standard error of Mean
b) Standard error of Proportion
c) Standard error of difference between 2 Means
d) Standard error of difference between Proportions

846. Simple random sampling is ideal for?
a) Vaccinated people *(DNB Dec 2010)*
b) Heterogenous population
c) Homogenous population
d) All of the above

847. Rejecting a null hypothesis when it is true is called as? *(DNB Dec 2010)*
a) Type 1 error b) Type 2 error
b) Type 3 error d) Type 4 error

848. Degree of freedom of a chi square test in contingency table of 2 by 2 is? *(DNB Dec 09)*
a) 1.0 b)Zero
c) 2 d)4

849. Graph to compare two quantitative data is?
a) Histogram *(DNB June 09)*
b) Scatter.diagram
c) Line Diagram
d) Frequency curve

850. Results of a test were given as very satisfied, satisfied, dissatisfied, it represents - *(DNB June 09)*
a) Nominal scale b) Ordinal scale
c) Interval scale d) Ratio scale

851. When the variables follow standard distribution -
a) Mean = median *(DNB Dec 08)*
b) Median = variance
c) Mean = 2 median
d) Standard deviation = 2 variance

852. On a given day, a hospital had 50 admissions with about 20 girls and 30 boys, out of which 10 girls and 20 boys needed surgery. What is the possibility of picking up a person requiring surgery- (DNB Dec 08)
a) 2/6 b) 3/5
c) 1/2 d) 6/25

853. Which one of the following is not a measure of dispersion - *(DNB June 08)*
a) Mean b) Range
c) Mean deviation d) Standard deviation

854. Birth is to be registered within - *(DNB Dec 07)*
a) 7 days b) 14 days
c) 21 days d) 30 days

855. In a normal curve, the area of one standard deviation around the mean includes which of the following percent of values in a distribution- *(DNB Dec 07)*
a) 48.6% b) 68.3%
c) 95.4% d) 99.7%

831)d 832)d 833)a 834)c 835)a 836)a 837)a,c 838)b 839)b 840)a 841)a 842)d 843)a 844)a
845) d 846)c 847)a 848)a 849)b 850)b 851)a 852)b 853)a 854)c 855) b

856. **All are non-parametric tests except -** *(DNB June 07)*
a) Chi-square test b) Sign test
c) Fisher exact test d) Student t-test

857. **9 families surveyed have 1,2,2,2,3,4,4,6,7 children respectively. The mean, median, mode respectively are-** *(Jipmer 11)*
a) 3.4., 2,3 b) 3,2,3
c) 3,3,3 d) 3.4,3,2

858. **In a normal curve, the area of one standard deviation around the mean includes which of the following per cent of values in a distribution -** *(UPSC-II09)*
a) 48.6% b) 68.3%
c) 95.4% d) 99.7%

859. **A non-sysmmetrical frequency distribution is known as-** *(Orissa 99)*
a) Normal distribution
b) Skewed distribution
c) Cumulative frequency distribution
d) None of the above

860. **In the estimation of statistical probability, Z score is applicable to -** *(UPSC 2001)*
a) Normal distribution b) Skewed distribution
c) Binomial distribution d) Poisson distribution

861. **Standard error of mean is called as -** *(RJ-01)*
a) Standard deviation b) Mode
c) Median d) Variable

862. **Standard deviation does not depend on -** *(RJ-01)*
a) Mean b) Median
c) Range d) Sample size

863. **Test used to study the ordinal data of two independent groups which are not normally distributed?** *(Jipmer 11)*
a) Student t test
b) z test
c) Single line analysis of variance
d) Wilcoxan signed rank test

864. **Best for studying the decline in percentage of syphilis in men and women in last 10 years -** *(Jipmer 11)*
a) Pie chart b) Histogram
c) Frequency polygon d) Line diagram

865. **If one wants to compare in two characteristics with variable difference, which measurement should be used?** *(MH11)*
a) Standard deviation
b) Percentile
c) Variance
d) Co-efficient of variation

866. **The following statistic is used to measure the linear association between two characteristics in the same individuals-** *(Karnat 96)*
a) Coefficient of variation
b) Coefficient of correlation
c) Chi square
d) Standard error

867. **Which of the following is a pre-requisite for the Chi square test to compare -** *(UPSC 2K)*
a) Both sample should be mutually exclusive
b) Both sample need not be mutually exclusive
c) Normal distribution
d) All of the above

868. **Birth is to be registered within -** *(PGMCET07)*
a) 7 days b) 14 days
c) 21 days d) 30 days

869. **In a community of 3000 people, 80 % are Hindus** 10 % **Muslims, 5 % Sikh, 4 % Christians and** 1 **% Jains To select a sample of300 people to analyses food habits, ideal sample would be -** *(MAHE 98)*
a) Simple random b) Stratified random
c) Systematic random d) Inverse sampling

870. **Simple random sampling-** *(AP-06)*
a) Provides least number of possible samples
b) Haphazard collection of certain number for a sample
c) Picking every 5th or 10th at regular intervals
d) Sample represent, a corresponding strata of universe

871. **What is the method of sampling in which the units are picked up at regular intervals from the universe-**
a) Simple random sampling *(UPSC 07)*
b) Systematic random sampling
c) Stratified random sampling
d) Snow-ball sampling

872. **The relationship of mean height of two groups of children is best studied by -** *(ICS 05)*
a) Student's t-test b) Linear regression
c) Chi-square test d) Test of proportions

873. **Census is conducted in every----------years in India-** *(Karnataka - PGE MEE 2006, Jipmer 81, UPSC 85)*
a) 25 b) 15
c) 10 d)20

874. **In which system, continuous enumeration of births and deaths by enumerator and an independent survey by investigator supervisor is done ?** *(UPSC-II 09)*
a) Decadal Census Enumeration
b) Sample Registration System
c) Model Registration System
d) National Family Health Survey

COMMUNICABLE DISEASES

GENERAL

875. **Incubation period of influenza -** *(AI98)*
a) 18 - 72 hrs b) 1 - 6 hrs
c) 5-10 days d) < 1 hrs

876. **Which of the following diseases have incubation period < 10 days -** *(PGIDec 06)*
a) Cholera b)Influenza
c) Plague d) Measles
e) Rubella

856) d 857) d 858)b 859)b 860)a 861)a 862)b 863)d 864)d 865)d 866)b 867)a 868)c 869)b
870) b 871) b 872) a 873) c 874) b 875) a 876)a,b,c

877. Incubation period of measles - *(NEET/DNB Pattern)*
a) 14 days b) 1 Month
c) 3 Month d) 5 Month

878. Measles is infectious during - *(PGIDec 98)*
a) After 4 days of rash
b) 4 days before and 5 days after rash
c) Throughout disease
d) Only in incubation period

879. Shortest incubation period is seen in-
a) Influenza b) Hepatitis B *(AIIMS Nov 08)*
c) Hepatitis A d) Rubella

CHICKEN POX

880. The infectivity of chicken pox lasts for - *(AJ 02)*
a) Till the last scab falls off
b) 6 days after onset of rash
c) 3 days after onset of rash
d) Till the fever subsides

881. Secondary attack rate of chicken pox is -
a) 60 b) 50 *(NEET/DNB Pattern)*
c) 90 d) 40

882. Which is not a complication of chicken pox - *(AIIMS 86, UPSC 85)*
a) Pancreatitis b) Pneumonia
c) Encephalitis d) Thrombocytopenia

883. Not true about varicella infection - *(AIIMSNov 10)*
a) Secondary attack rate is 90%
b) Lesions occur on flexor surfaces
c) Only single stage of lesion is present at a time
d) Reactivation occur in 10-30% cases

884. Which of the following is true of chicken pox -
a) Virus not found in scab *(AI89)*
b) Vims can be grown on the chick embryo
c) Caused by RNA vims
d) Does not cross the placental barrier

885. Chicken pox vaccine is - *(NEET/DNB Pattern)*
a) Live vaccine b) Killed vaccine
c) Conjugated vaccine d) None

MEASLES

886. All of the following statement regarding measles are true except - *(PGIDec 05)*
a) Rash appears first on leg
b) Koplik spot are seen on retina
c) Long term complication may be seen in form of SSPE
d) Caused by RNA virus
e) I-P is 2-3 days

887. Which of the following statements is true about the epidemological determinants of measles -
a) Measles vims survives outside the human body for 5 days *(AIIMS 05, 98)*
b) Carriers are important sources of infection
c) Secondary attack is less than that of rubella
d) Incidence of measles is more in males than females

888. Which of the following is not true about measles?
a) High secondary attack rate *(AI 08)*
b) Only one strain causes infection
c) Not infectious in prodromal phase
d) Infection confers lifelong immunity

889. Which of the following is the "Least common" complication of measles - *(AI 0 7)*
a) Diarrhoea b) Pneumonia
c) Otitis media d)SSPE

890. In the UIP blindness can be prevented by the administration of - *(AIIMS 98)*
a) Measles vaccines b) Rubella vaccines
c) BCG vaccines d) Diphtheria vaccines

891. Keratomalacia is seen in which of the following infections - *(PGI Dec 03, 02, 00)*
a) Chicken pox b) Mumps
c) Diarrhoea d) Measles
e) Rubella

892. Reconstituted measles vaccine should be used with in - *(AI99)*
a) 1 hour b) 3 hour
c) 6 hour d) 12 hour

893. The following vaccine, if contaminated can cause Toxic Shock Syndrome (TSS) - *(AI09)*
a) Measles vaccine b) DPT
c) Hepatitis B d) Typhoral

894. Measles vaccine given to contact of measles case exerts protective effect within - *(Delhi 96)*
a) 1 day b) 3 days
c) 7 days d) 10 days

895. All are true about measles except - *(AI 98, 96)*
a) Incubation period is 10-14 days
b) Secondary attack rate is 30-40%
c) Sub cutaneous vaccine is available
d) Vaccine is live attenuated

896. Definition of measles elimination - *(NEET/DNB Pattern)*
a) < 1/1000 b)< 1/10000
c) <1/100000 d)< 1/100

897. True about measles - *(PGI June 04)*
a) Koplik spot appears in prodromal stage
b) Fever stops after onset of rash
c) Vaccine given at 9 months
d) It is not diagnosed when coryza and rhinitis is absent
e) In India cyclical peaks occurs every 5 yrs

898. Subacute sclerosing pan-encephalitis is associated with - *(PGI June 02)*
a) Mumps b) Measles
c) Rubella d) Typhoid
e) Diphtheria

899. All of following are true about measles except -
a) Maximum incidence in 6m-3 year age group
b) Best age for immunization is 9-12 months *(AI96)*
c) Secondary attack rate is 30%
d) I.P. = 7-14 days

877) a 878) b 879) a 880) b 881) c 882) a 883) c 884) a 885) a 886)a,b,e 887) c 888) c 889) d 890) a
891)c,d 892)a 893)a 894)c 895)b 896)c 897)a,b,c 898)b 899)c

900. **Measles vaccination is given** *at-(NEET/DNB Pattern)*
a) 9 months b) At birth
c) 4 weeks d) 8 weeks

901. **In measeles vaccine can be given within-** *(NEET/*
a) 3 months b) 5 months *DNB Pattern)*
c) 7 months d) 6 months

RUBELLA

902. **Incubation period of rubella is -** *(AI- 93)*
a) 18-72 hours b) 2-3 weeks
c) 1-3 months d)>lyear

903. **All of the following statements are true about congenital rubella except -** *(AI 05)*
a) It is diagnosed when the infant has IgM antibodies at birth
b) It is diagnosed when Ig G antibodies persist for more than 6 months
c) M.C. congenital defects are deafness, cardiac malformation and cataract
d) Infection after 16 weeks of gestation results in major congenital defects

904. **Under eradication of congenital rubella syndrome programme the first priority group for rubella vaccination is -** *(AI 07)*
a) All non pregnant women of age 15 to 34
b) All adolescent non pregnant girls 15 to 24 years of age
c) All female children at one year
d) All non pregnant women

905. **Rubella vaccine is given in which age -**
a) 1-14 yrsb) <5 yrs *(NEET/DNB Pattern)*
c) > 50 yrs d) None

906. **Risk of the damage of fetus by maternal rubella is maximum if mother gets infected m-***(AIIMSNov 05)*
a) 6-12 weeks of pregnancy
b) 20-24 weeks of pregnancy
c) 21 -25 weeks of pregnancy
d) 32-36 weeks of pregnancy

INFLUENZA

907. **Influenza pandemic is mainly caused by -** *(AI 99,*
a) Type A b) TypeB *PGI June 05)*
c) TypeC d) All

908. **False about antigenic drift -** *(AIIMS 94)*
a) Occur under pressure for immunity
b) Responsible for epidemics of influenza
c) Occurs only in influenza-A
d) Occur every 10-12 years

909. **Antigenic variation seen in which of the following-** *(PGIDec 04)*
a) Influenza virus b) Hepatitis virus
c) Yellow fever virus d) Leptospira

910. **Not true regarding influenza virus is -** *(AIIMS 99)*
a) All types exhibit antigenic shift
b) Only type A shows antigenic drift
c) Drift is accumulation of point mutations
d) None of the above

911. **Newer Influenza vaccine -** *(PGI June 08)*
a) Split-virus vaccine
b) Neuraminidase
c) Live attennuated vaccine
d) Killed vaccine

912. **True about epidemology of influenza-** *(PGI June 05)*
a) Asymptomatic seen rarely
b) Incubation period 10-12 hrs
c) Pandemic rare
d) Extra human reserviour not seen
e) All ages sex are equally affected

913. **Incubation period of swine flu -***(NEET/DNB Pattern)*
a) 1-3 days b) 2-3 weeks
c) 10-15 days d) 5 weeks

DIPHTHERIA

914. **Commonest age group for diptheria is -** *(PGI86)*
a) 1 -2 Years b) 2-5 Years
c) 2-7 Years d) 2-9 Years

915. **The infectivity of a patient with diphtheria is -**
a) Till cough subsides *(AIIMS 91)*
b) Till patient is febrile
c) Lifelong
d) For 15 days after infection

916. **A herd immunity of over - % is considered necessary to prevent epidemic spread of diphtheria -** *(NEET/DNB*
a) 50% b)55% *Pattern)*
c) 60% d)70%

917. **The type of Diphtheria with highest mortality is-**
a) Pharyngeal b) Nasal *(JIPMER 2K)*
c) Laryngeal d) Conjuntival

918. **Positive schick's test indicates that the person is -**
a) Immune to diphtheria *(AIIMS Nov 07)*
b) Hypersensitive to diphtheria
c) Susceptible to diphtheria
d) Susceptible and hypersensitive to diphtheria

919. **Regarding schick's test which of the following is false-** *(AUMS00)*
a) Erythematous reaction in both arms indicates
b) Positive test means that person is immune to hypersensitivity diphtheria
c) Diphtheria antitoxin is given intradermal

920. **Regarding Diphtheria -Assertion A)- carriers to be given diphtheria toxoid. Reason (R)- immunization does not prevent carrier stage -**
a) A and R both are true *(AIIMS June 99)*
b) R is correct explanation
c) A and R both are true but R is not a correctexplanation
d) R is true and A is false

900)a 901)d 902)b 903)d 904)a 905)a 906)a 907)a 908)c,d 909)a 910)a,b 911)a,b 912)e 913)a
914)b 915)d 916) d 917)c 918) c 919)b 920) c

921. Which of the following is not a part of control measures for diphtheria ? *(UPSC-II08)*
a) Treatment of cases with erythromycin
b) Treatment of carriers with antitoxin
c) Isolation of cases
d) Regular immunization of under-fives

922. Management of non Immunised diphtheria contacts include all except - *(AIIMS 92)*
a) Prophylactic pencillin
b) Single dose of Toxoid
c) Daily throat examinations
d) Throat swab culture

923. The following statements are true about DPT vaccine except - *(AI04)*
a) Aluminium salt has an adjuvant effect
b) Whole killed bacteria of Bordetella pertusis has an adjuvant effect
c) Presence of acellular pertusis component
d) Presence of H. influenzae type B component increases its immunogenecity increase its immunolgenecity

924. Ideal temperature for DPT storage - *(Jipmer 91)*
a) Room temperature b) 4 to 8°C
c) 0to-20°C d)None

925. Which vaccine should not be given to a child suffering from convulsions ? *(AIIMSNov 07)*
a) Measles b)BCG
c) DPT d)OPV

926. All of the followng statements are true about DPT vaccine except- *(AIIMS02)*
a) It should be stored in deep freezer
b) Exposure to direct sunlight, when in use should be avoided
c) Store stocks are needed for three months at PHC level
d) Half - used vials should not be put back into the cold chain after the session

927. Preservative added in DPT vaccine is - *(AIIMS 98)*
a) Zinc phosphate b) Aluminium phosphate
c)$MgS0_4$ d)$ZnS0_4$

928. The adjuvant used in DPT vaccine is -
a) Al b) Mg *(AIIMS May 08)*
c) Zn d) Formaldehyde

WHOOPING COUGH (PERTUSSIS)

929. Which of the following is false about whooping cough - *(AI 95)*
a) Affects children 1 years of age
b) Contagious in the catarrhal stage
c) Carriers are the most important source ofinfection
d) Secondary attack rate is high

930. What is false about pertussis - *(AIIMS 95)*
a) Maternal antibody provides protection in infants
b) Fomites play a small role in spread of disease
c) Commonly seen in infants
d) Males and females both are equally affected

931. The usual incubation period of pertusis is -
a) 7-14 days b) 3-5 days *(AIIMS 05)*
c) 21-25 days d) Less than 3 days

932. True regarding pertusis is all, except - *(AIIMS 97)*
a) Infectivity is highest in paroxysmal state
b) Cross immunity is not seen with B. parapertusis
c) Chronic carrier state is not seen
d) Secondary attack rate is 90%

933. In control of pertussis, the drug of choice for cases-
a) Erythromycin b) Ciprofloxacin *(AI94)*
c) Tetracycline d) Penicillin

934. Which of the following statements is true regarding pertussis ? *(AI02)*
a) Neurological complication rate of DPT is I in 50000
b) Vaccine efficacy is more than 95%
c) Erythromycin prevents spread of disease between children
d) The degree of polymorphonuclear Leukocytosis correlates with the severity of cough

MENINGOCOCCAL MENINGITIS

935. The following statements about meningococcal meningitis are true except - *(AI 03, AIIMS 98)*
a) The source of infection is mainly clinical cases
b) The disease is more common in dry and cold months of the year
c) Chemoprophylaxis of close contacts of cases is recommended
d) The vaccines is not affective in children below 2 year of age

936. Which of the following is true about meningococcal Meningitis - *(AI 91)*
a) Case fatality less than 10% in untreated cases
b) Cases are the main source of infection
c) Rifampicin is the drug of choice
d) Treatment in the first 2 days can save the life of 95% cases

937. Drug of choice for chemoprophylaxis in meningococcal meningitis is - *(UP 10)*
a) Tetracycline b) Rifampicin
c) Streptomycin d) Erythromycin

938. Xavier and yogender stay in the same hostel of same university. Xavier develops infection due to group B meningococcus. After few days yogender develops infection due to Group C meningococcus. All of the following are true statements except - *(AI 02)*
a) Educate students about meningococcal transmission and take preventive measures
b) Chemoprophylaxis to all against both group B and group C
c) Vaccine prophylaxis of contacts of xavier
d) Vaccine prophylaxis of contacts of yogendra

939. Meningococcal vaccine - *(NEET/DNB Pattern)*
a) ACW135Y b) ABCW135
c) CYW135B d)ABCY

921)b 922) b,c,d 923) d 924) b 925) c 926) a 927) None 928) a 929) c 930) a,d 931) a 932) a 933) a 934) c 935) a 936)d 937)b 938)c 939) a

PNEUMONIA

940. Fast breathing in a 2 year old child is - *(PGI89)*
a) ≥ 60 breath per minute
b) ≥ 50 breaths per minute
c) ≥ 40 breaths per minute
d) ≥ 30 breath per minute

941. According to IMNCI, fast breathing in 5 mth child is defined as - *(NEET/DNB Pattern)*
a) >30/min b) 40
c) 50 d) 60

942. A 2 year old female child was brought to a PHC with a history of cough and fever for 4 days with inability to drink for last 12 hours. On examination, the child was having weight of 5 kg and respiratory rate of 45/minute with fever. The child will be classified as suffering from - *(AI05, AIIMS 02)*
a) Very severe disease b) Severe pneumonia
c) Pneumonia d) No pneumonia

943. A child aged 24 months was brought to the Primary Health Centre with complaints of cough and fever for the past 2 days. On examination, the child weighed 11kg, respiratory rate was 38 per minute, chest indrawing was present. The most appropriate line of management for this patient is ? *(AI 03)*
a) Classify as pneumonia and refer urgently to secondary level hospital
b) Classify as pneumonia, start antibiotics and advise to report after 2 days
c) Classify as severe pneumonia, start antibiotics and refer urgently
d) Classify as severe pneumonia and refer urgently

944. Ramu a 2 year old boy, presented with cough, fever and difficulty in breathing. His RR 50/min. There was no chest indrawing. Auscultation of chest reveals bilateral crepitations. The most probable diagnosis is - *(AI 02)*
a) V. severe pneumonia b) Severe Pneumonia
c) Pneumonia d) No pneumonia

945. A child aged 4 months was brought to a health worker in the sub center with complaints of cough and fever. On examination, there was chest indrawing and respiratory rate was 45 per minute. Which of the following is best way to manage the child ? *(AI 04)*
a) The child should be classified as a case of pneumonia
b) Give an antibiotic and advise mother to give home care
c) Reasess the child within 2 days or earlier if the condition worsens
d) Refer urgently to hospital after giving the first dose of an antibiotic

946. A10-day old neonate is brought by her mother to the OPD with complaints of sneezing. On examination, the respiratory rate is 40/minute and conducted sounds are heard on auscultation. There are no intercoastal retraction. The neonate should be treated with - *(UPSC 98)*
a) Normal saline nose drops
b) Oral antihistamines
c) Oral antibiotics
d) Parenteral antibiotics

947. Not a indication for admission in pneumonia -
a) Fever of 39° c b) Cyanosis *(AI 97)*
c) Chest retracion d) Not feeding well

948. Most important feature to diagnose severe pneumonia- *(NEET/DNBPattern)*
a) Cyanosis b) Chest indrawing
c) Nasal flaring d) Fast breathing

949. In IMNCI, pneumonia is classified by- *(NEET/DNB*
a) Fast breathing b) Wheezing*Pattern)*
c) Fever d) Chest indrawing

TUBERCULOSIS

950. Mycobacterium tuberculosis infection in humans is most commonly because of - *(NEET/DNB Pattern)*
a) Contact b) Inhalation
c) Infiltration d) Inoculation

951. One TB infected person can infect how many people in lyr - *(NEET/DNBPattern)*
a) 20 b) 30
c) 10 d) 5

952. The most appropriate test to assess the prevalence of tuberculosis infection in a community is - *(AI04)*
a) Mass miniature radiotherapy
b) Sputum examination
c) Tuberculin test
d) Clinical examination

953. Which of the following is not true about Annual Infection rate of tuberculosis? *(AI 10)*
a) 1% increase in AIR is equivalent to 70 new cases ofTB
b) It is one of the best indicator for evaluating tuberculosis problem and its trend
c) It expresses attacking force of Tuberculosis in community
d) It is 1.7 % in India

954. If the objective of the investigator is to assess the incidence of tuberculosis infection in a community, the most appropriate methodology would be to- *(AIIMSNov 05)*
a) Identify all individuals with positive tuberculin test
b) Perform sputum examination of chest symtomatics
c) Identify new converters to Tuberculin test
d) Screen all under-five children with Tuberculin test

955. Prevalance of tuberculosis infection is determined by- *(AIIMS 91)*
a) Sputum examination b) Mantoux
c) Clinical examination d)MMR

940) c 941) c 942) a 943)c 944)c 945)d 946)a 947)a 948)b 949)a 950)b 951)c 952)c 953)a 954)c 955)b

956. Best method to find out cases of TB in a community is- *(AIMS 95)*
a) Chest X-ray
b) Mantoux test
c) Sputum smear examination
d) Sputum culture sensitivity

957. Case finding in RNTCP is based on - *(AJ07)*
a) Sputum culture b) Sputum microscopy
c) X -ray chest d) Mantoux test / PCR

958. Tuberculin test denotes *(AI00)*
a) Previous or present sensitivity to tubercle proteins
b) Patient is resistant to tuberculosis
c) Person is susceptible to tuberculosis
d) Protective immune status of individual against tuberculosis

959. True statement regarding 'tuberculine test' is -
a) Used for diagnosis of TB *(A198)*
b) Measures incidence of disease
c) More than 10mm induration in 72 hrs. indicates positive test
d) Measure immunity status

960. For Montoux test, the standard dose of tuberculin used in India is - *(UPSC 96)*
a) 0.5 TU b) 1.0 TU
c) 5.0 TU d) 10.0 TU

961. False negative mantoux test is seen in A/E - *(AI92)*
a) Immunocompromised b) Chicken pox
c) Malnourished d) Measles

962. True about Mantoux test- *(PGIJune03)*
a) < 5 cm always +ve
b) Usually -ve after treatment
c) Positive reaction in children < 2 yrs is not important than adult
d) Usually read after 48-72 hours
e) False +ve in post measles state

963. Which of the following is not true about the Tuberculin Test - *(AI 95)*
a) It is the only tool available for estimating the prevalence of TB in a community
b) Induration of 10 mm indicates a positive test
c) It is a specific test
d) New cases occur more commonly in patients who are tuberculin reactors

964. The following statement stands true for Mantoux test - *(AI 96)*
a) Test is read before 48 hrs
b) 6-9 mm induration shows maximum chances of developing TB
c) A positive test does not indicate that the person is suffering from disease
d) New cases are more likely to occur in tuberculin negative person than those who already are tuberculin reactors

965. A patient of tuberculosis was put on ATT for 5 months. Sputum examination is positive for AFB. The likely cause is - *(AIMS 99)*
a) Drug resistant b) Drug resistant
c) Relapse of disease d) Treatment failure

966. A 'case' in TB is defined as - *(DPG Feb 09, AP 96)*
a) X-ray positive b) Culture positive
c) Sputum AFB positive d)Tuberculosis positive

967. A patient with sputum positive pulmonary tuberculosis is on ATT for the last 5 months but the patient is still positive for AFB in the sputum. This case refers to - *(AIMS 01)*
a) New case b) Failure case
c) Relapse case d) Drug defaulter

968. The diluent used for BCG is - *(AI 99)*
a) Distilled water b) Normal saline
c) Dextrose solution d) Ringer - lactate

969. BCG is - *(NEET/DNB Pattern)*
a) Live vaccine b) Killedvaccine
c) Toxoid d) None

970. Which of the following statements is true about BCG vaccination - *(AIMS May 11, May 05, Nov 08; AI07)*
a) Distilled water is used as diluent for BCG vaccine
b) The site for injection should be cleaned thoroughly with spirit
c) Mantoux test becomes positive after 48 hours of vaccination
d) WHO recommends Danish 1331 strain for vaccine production

971. All the following are correct regarding BCG vaccination reactions except - *(AIIMS 92)*
a) Ulceration with crust
b) Heals within 6-12 weeks
c) Maximum size of papule is reached at 5 weeks
d) Suppurative lymphadenitis

972. BCG is not given to p atient with - *(AIMS 85)*
a) Generalised Eczema
b) Infective dermatosis
c) Hypogammaglobulinaemia
d) All of the above

973. DOTS chemotherapy is given for - *(Kerela 02)*
a) TB b) Leprosy
c) AIDS d) Tetanus

974. Why a TB patient is recommend a regimen of 4 drugs on 1st visit - *(NEET/DNB Pattern)*
a) To avoid emergence of persistors
b) To avoid side effects
c) To cure early
d) None

975. TB multidrug regimen is given *to-(NEET/DNB Pattern)*
a) Prevent resistance b) Broad spectrum
c) Prevent side effects d) None

976. 4 drugs in AKT used because - *(NEET/DNB Pattern)*
a) Decrease in resistance by mutation
b) Decrease in resistance by conjugation
c) To cure disease early
d) None

956) c 957) b 958) a 959) c 960) b 961)b 962) d 963) c 964) c 965) d 966) c 967) b 968) b 969) a
970) d 971)d 972)d 973)a 974)a 975)a 976) a

977. A 25-year-old female has been diagnosed to be suffering from tuberculosis categorized as Category II (Sputum+ve relapse). The treatment regimen recommended under DOTS is - *(AIIMSMay 04)*
a) 2 $(HRZE)_3$ + 5 $(HR)_3$
b) 2 $(HRSZE)_3$ + $(HRZE)_3$ + 5 $(HR)_3$
c) 3 $(HRZE)_3$+2 $(HRE)_3$ + 4 $(HR)_3$
d) 3 $(HRSZE)_3$ +1 $(HRZE)_3$ + 6 $(HRE)_3$

978. In RNTCP what is the schedule for sputum examination after beginning the chemotherapy, in category I p atients - *(AIIMS 02)*
a) 2,4 and 6 months b) 1,2 and 3 months
c) 3, 5 and 6 months d) 1, 3 and 5 months

979. According to RNTCP, a case of tubercular pericarditis should be treated under which category of anti-tubercular regimen? *(MH11)*
a) Category I b) Category II
c) Category III d) Category IV

980. An adult male patient presented in the OPD with complaints of cough and fever for 3 months and haemoptysis off and on, His sputum was positive for AFB. On probing it was found that he had already received treatment with RHZE for 3 weeks from a nearby hospital and discontinued. How will you categorize and manage the patient - *(AIIMS 03)*
a) Category III, start 2 $(RHZ)_3$
b) Category II, start 2 $(RHZ)_3$
c) Category I, start 2 $(RHZ)_3$
d) Category II, start 2 $(RHZ)_3$

981. Cat 1 TB treatment - *(NEET/DNB Pattern)*
a) HRZE b) HRE
c) ZRE d) HRZES

982. Category n treatment - *(NEET/DNB Pattern)*
a) 2HRZES b) 1 HRZE
c) 5 HRZ d) None

983. As per RNTCP Cat-1, should recei\e-*(PGI June 04)*
a) 4 drugs for 2 months and two drugs for 4 months
b) 3 drugs for two months and 2 drugs for four months
c) Includes Retreatment cases
d) Rx is given daily
e) Directly observed

984. Which is the right number of doses of ATT for a category H patient under DOTS -
a) IP-24, CP-54 b) IP-36, CP-66
c) IP-24, CP-48 d) IP-36, CP-54

985. Dose of rifampicin in RNTCP *is-(NEET/DNB Pattern)*
a) 600 mg b) 450 mg
c) 300 mg d) 100 mg

986. Most common drug resistance in TB in India -
a) INH b) Rifampin *(PGIJuneOO)*
c) Streptomycin d)Ethamutol
e) Pyrazinamide

987. Treatment of choice for sputum positive pulmonary tuberculosis detected in 1st trimester of pregnancy-
a) Defer till second trimester *(AIIMS May 09)*
b) Start cat. I immediately *j*
c) Start cat. II immediately
d) Start cat. Ill immediately

988. Which of the following is / are 1st line antitubercular drugs in children - *(PGI June 05)*
a) Isoniazid b) Rifampicin
c) Pyrazinamide d)Ethambutol
e) Streptomycin

989. Treatment of choice for sputum positive pulmonary tuberculosis detected in 1st trimester of pregnancy -
a) Defer till second trimester *(AIIMS May 10)*
b) Start cat. I immediately
c) Start cat. II immediately
d) Start cat. in immediately

990. A 30 yrs old female has sputum positive TB. Her child is 3 yrs old. What is the recommended chemoprophylaxis - *(AIIMS May 11)*
a) INH 3mg/kg for 3 months
b) INH 5mg/kg for 3 months
c) INH 3mg/kg for 6 months
d) INH 5 mg/kg for 6 months

991. Basanti a 29 years female from Bihar present with active tuberculosis; she delivers baby all of the following are indicated except - *(AI01)*
a) Administer INH to the baby
b) Withhold breast feeding
c) Give ATT to mother for 2 year
d) Ask mother to ensure proper disposal of sputum

992. Most crucial part of tuberculosis control programme is - *(AIIMS Feb 97)*
a) Contact tracing
b) BCG vaccination
c) Treatment of sputum positive cases
d) Treatment of X-ray positive cases

993. The sputum examination under DTP is done when the patient present with- *(PGI June 02)*
a) Cough of 1 -2 weeks duration
b) Persistent cough of 1 -2 weeks duration
c) Hemoptysis
d) Chest pain
e) Intermittent fever

994. Prevalence of open cases of TB in India - *(AIIMS 98)*
a) 0.4% b)0.01 %
c) 0.5% d) 1 %

995. The direct BCG vaccination in India is given upto age of- *(AIIMS 81, DNB 92)*
a) 10 year b) 15 year
c) 20 year d) 25 year

996. Me Keon, in nineteenth century studied the decline in the incidence of the infectious diseases like tuberculosis and he explained the co-relation between the decline in the incidence of infectious disease and told that the relation is better understood in terms of- *(AI 11)*
a) Increased awareness and knowledge
b) Social and economic factors
c) Behavioral interventions
d) Medical interventions

977) b 978) a 979) a 980) c 981) a 982) a 983) a,e 984) b 985) b 986) a 987) b 988)AH 989) b 990) d 991)b 992)c 993)c,d 994)None 995)None 996)b

997. Persistent diarrhea in infants - *(NEET/DNB Pattern)*
a) 7 days b) 14 days
c) 21 days d) l month

POLIOMYELITIS

998. The most predominant type of polio virus during epidemics is- *(Orissa 98)*
a) Type I b) Type II
c) Type III d) Combined infection ofII& III

999. For every clinical case of poliomyelitis subclinical cases are - *(NEET/DNB PATTERN)*
a) 500 in children and 75 in adults
b) 500 in children and 25 in adults
c) 250 in children and 25 in adults
d) 1000 in children and 75 in adults

1000. Polio virus is shed in stool *upto-(NEET/DNB Pattern)*
a) 6 weeks b) 8 weeks
c) 10 weeks d) 12 weeks

1001. Death in poliomyelitis is usually due to - *(A192)*
a) Hypertension b) Repiratory Paralysis
c) Aspiration d) Arrythmias

1002. True about polioviruses is - *(ARMS Nov 07)*
a) Most cases are symptomatic
b) Spastic paralysis
c) Injectables and severe exercise increases chance of paralysis
d) Inactivated polio vaccine are given to child less than 3 years of age

1003. Salk vaccine is a - *(PGI88)*
a) Live vaccine b) Live attenuated vaccine
c) Killed vaccine d) Toxoid

1004. NOT true about IPV is - *(AIIMSFeb 97)*
a) Given in 4 doses
b) Can't be given in AIDS patient
c) Is a killed vaccine
d) Also known as salk vaccine

1005. All are true regarding killed polio vaccine except -
a) Produces circulatory antibody *(AI90)*
b) Does not require stringent refrigeration
c) Immunity against paralytic and wild strains
d) Not effective in an epidemic

1006. All are true about SALK vaccine except- *(AT 91)*
a) It prevents paralysis
b) Oral polio can be given as booster
c) It is contraindicated in immunocompromised patients
d) Easily transported

1007. All are true about SALK vaccine *except-(Manipal 08)*
a) OPV cannot be given as booster dose
b) Injections during epidemic can cause paralysis
c) Induces circulating antibody but no local immunity
d) Does not prevent multiplication of wild virus in gut

1008. Trivalent oral polio vaccine contains, type 3 virus - *(NEET/DNB Pattern)*
a) 100,000 TCID 50 b) 200,000 TCID 50
c) 300,000 TCID 50 d) 400,000 TCID 50

1009. OPV bivalent vaccine contains - *(NEET/DNB Pattern)*
a) Polio virus 1 & 3 b) Polio virus 1 & 2
c) Polio virus 2 & 3 d) None

1010. True about oral polio vaccine - *(PGI June 03)*
a) Poliomyelitis in recipients
b) Poliomyelitis in contact of recipient
c) Guillein Bare syndrome
d) Vomiting and fever
e) Heat stable

1011. The characteristics of polio vaccine are all except-
a) Maintenance of cold chain *(PGI 86)*
b) 100% immunisation
c) Killed vaccine is effective in India
d) 5 doses of OPV given

1012. All are true about OPV except - *(AIIMSNov 09)*
a) It is a killed vaccine
b) Stored at Sub-zero temprature
c) Intestinal & humoral immunity
d) Main problem is residual neuro-virulence

1013. True about OPV strain - *(Jipmer 11)*
a) Grows well at 40° C
b) Grows well at decreaase concentration of bicarbonate
c) Nucleotide sequencing does not distinguish between wild strain and vaccine strain
d) Poor growth in stable cell line of monkey kidney

1014. Pulse Polio immunization was introduced in -
a) 1995 b) 2000 *(MAHE07)*
c) 1999 d)2001

1015. False about Pulse polio immunization is -
a) Mop up immunization is done in restricted geographical areas *(AIIMS Nov 07)*
b) It is carried out in all children less than 5 yrs of age
c) Mopping up is done in areas where wild polio virus is found
d) AFP surveillance is done in all children < 5 years of age

1016. Acute flaccid paralysis is reported in a child aged -
a) 0-3 years b)0-5 years *(AI 02)*
c) 0-15 d)0-25 years

1017. Prevalence of all clinical cases of polio can be estimated by multiplying the no. of residual paralytic cases by - *(AI2000)*
a) 1.33 b) 1.25
c) 3.00 d)1.99

1018. The efficiency of cold chain system for oral polio vaccine as monitored by Vaccine Vial Monitor (WM) depends on - *(AIPGME 04)*
a) Change in the colour of vaccine
b) Temperature indicator of the system
c) Viral potency test
d) Change in colour of monitor

997) b 998) a 999)d 1000)d 1001)b 1002)c 1003)c 1004)b 1005)c 1006)c 1007)a 1008)c 1009)a 1010)a,b 1011)b 1012)a 1013) d 1014)a 1015)d 1016)c 1017)a 1018)d

1019. Vaccine Vial Monitors (WM) have been extensively used in the Pulse Polio Programme to assess the effectiveness of cold chain. According to the guidelines, the following changes in the WM is an indication for discarding the vaccines - *(Kam 03)*
a) Inner square is higher than outer circle
b) Outer square is higher than inner circle
c) Inner square is same colour as that of outer circle
d) Inner square is darker than outer circle

1020. Under the National Polio Eradication Programme, a case of Acute Flaccid Paralysis is confirmed as Polio, under the following circumstances except -
a) If a case is lost to follow up *(AIIMS Nov 2000)*
b) If a case could not be confirmed because the patient died before that
c) If a wild strain of polio virus is isolated from stool
d) If a patient develops paralysis 30 days after diagnosis of AFP

1021. A case of acute flaccid paralysis must be observed for how many days for residual weakness - *(A110, AIIMS May 12)*
a) 30 days b) 42 days
c) 60 days d) 90 days

1022. Definite case of Polio is considered if -*(AIIMS June 99)*
a) Paralysis is for more than 6 weeks
b) Antibody titre is more than 4 times of normal value
c) Demonstration of Polio virus in stool
d) Acute encephalitis with paralysis

1023. All of the following are true regarding acute attack of Polio, except - *(AIIMS June 99)*
a) Fecal sample is carried in cold box
b) Three consecutive stool samples are positive
c) Investigation done in 48 hours
d) Throat swab is taken for diagnosis

1024. Criteria for defining polio epidemic are all except -
a) 2 or more cases *(Kerala 04)*
b) Cases should occur in same locality
c) Caused by same virus type
d) Cases occurring during 6 month period

1025. In a epidemic of poliomyelitis, the best way to stop spread is by - *(AI94)*
a) Injection of killed vaccine
b) OPV drops to all children
c) Isolation of cases
d) Chlorination of all wells

CHOLERA

1026. Commonest strain of cholera in India is -
a) Ogawa b) Inaba *(AIIHPH01)*
c) Hikojima d) NAG

1027. ElTor vibrio may be differentiated from classical vibrio by fact that ElTor vibrio - *(CMC 86)*
a) Agglutinate chicken and sheep erythrocytess
b) Resistant to classical phage IV
c) Resistant to polymyxin B-5 unit disc
d) VP reaction and hemolytic test positive
e) All of the above

1028. Cholera transmission by - *(PGIDec06)*
a) Food transmits
b) Vaccination gives 90% efficiency
c) Healthy carrier
d) Chlorination is not effective

1029. The mechanisms by which cholera might be maintained during the intervals between peak cholera seasons is - *(AIIMSMay 06)*
a) Carrier status in animals
b) Carrier status in man
c) An environmental reservoir
d) Continuous transmission in man

1030. For controlling an outbreak of cholera, all of the following measures are recommended except -
a) Mass chemoprophylaxis *(AI 03)*
b) Proper disposal of excreta
c) Chlorination of water
d) Early detection and management of cases

1031. Which is cholera vaccine - *(NEET/DNB Pattern)*
a) Ty21 A b)HGD-103
c) WC-rBS d) None

1032. Antibiotic treatment of choice for treating cholera in an adult is a single dose of - *(AI 05)*
a) Tetracyclineb) Cotrimoxazole
c) Doxycycline d) Furazolidone

1033. The drug of choice for treating cholera in pregnant women is - *(AIIMS05)*
a) Tetracyclineb) Doxycycline
c) Furazolidone d) Cotrimoxazole

1034. Which of the following is the drug of choice for chemoprophylaxis of cholera - *(AIIMS05)*
a) Tetracyclineb) Doxycycline
c) Furazolidone d) Cotrimoxazole

1035. Chemoprophylaxis in cholera - *(NEET/DNB Pattern)*
a) Tetracyclineb) Ciprofloxacin
c) Erytromycin d) None

1036. Best emergency sanitary measure to control cholera is - *(AIIMS96)*
a) Desinfection of stool
b) Mass vaccination
c) Provision of chlorinated water
d) Chemoprophylaxis

1037. ORS contains 75 m mol/litre-(7V££T/DA® *Pattern)*
a) Sodium b) Potassium
c) Glucose d) Chloride

1038. ORS new osmolarity is - *(NEET/DNB Pattern)*
a) 270 b) 245
c) 290 d) 310

1039. The function of glucose in ORS - *(PGI96)*
a) Increase Na^+ absorption by Co-transport
b) Gives sweet taste to ORS
c) Increase osmolality of ORS
d) Increase Na^+- K^+ pump activity

1019) c 1020)d 1021) c 1022)c 1023)b 1024)d 1025)b 1026)a 1027)e 1028)a,c 1029)d 1030)a 103 l)c 1032)c 1033)c 1034)a 1035)a 1036)c 1037)a 1038)b 1039)a

1040. WHO ORS has - *(PGIDec 06)*
a) K+ —> 20 mmol/L
b) Na+ —> 90 mmol/L
c) HC03- —> 10 mmol/L
d) Osmolality—> 150mmol/L

1041. WHO ORS contain - *(PGIJune 02)*
a) Sodium chloride 2-5 gm
b) Potassium chloride 1.5 gm
c) Sucrose 10 gm
d) Glucose 20 gm
e) Potassium bicarbonate 2.5 gm

1042. Cholera prophylaxis is by - *(PGIDec 98)*
a) Doxycycline 300 mg OD b) Cephalosporin
c) Streptomycin d) Cotrimexazole
e) Erythromycin

1043. Dehydration in a child with diarrhea thirst present -
a) Mild b) Moderate *(NEET/DNB Pattern)*
c) Sever d) None

1044. What amount of WHO ORS is required for a 1 year old child in first 4 hours of diarrhea? *(NEET/DNB*
a) 200400 ml b) 400-600 ml *Pattern)*
c) 600-800ml d)800-1200ml

1045. A 12 kg child with diarrhoea, fluid to be replaced in first 4 hours - *(NEET/DNB Pattern)*
a) 0400ml b)400-800ml
c) 800-1200ml d) 12004600ml

TYPHOID FEVER

1046. All are true about Typhoid except - *(Jipmer04)*
a) Incubation period 10-14 years
b) Most common among males
c) Carrier are treated by ampicillin
d) Highest incidence occur in 30 - 40 years age group

1047. Incubation period of typhoid - *(PGI June 05)*
a) 3-20 days b) 14-45 days
c) 5-10 days d) 15-60 days
e) 10-14 days

1048. In typhoid a permanent carrier is one who excretes bacilli for more than - *(Delhi 96)*
a) 3 months b) 6 months
c) 1 year d) 3 years

1049. Typhoid oral vaccine is given - *(UP 08)*
a) 1, 3, 5 days b) 1,2, 3 days
c) 1,2, 4 days d) 1,7,14 days

1050. True statement about Vi polysaccharide vaccine is-
a) Has many serious systemic adverse reactions
b) Has many serious local side effects
c) Has many contraindications *(AIIMSNov 10)*
d) Can be administered with yellow fever and hepatitis A vaccine

1051. For a typhoid endemic country like India, the immunization of choice is - *(AIIMS 01)*
a) TAB vaccine
b) Typhoral 21A oral vaccine
c) Monovalent vaccine
d) Any of these

FOOD POISONING

1052. The following are characteristic features of staphylococcus food poisoning except - *(AIIMS 04)*
a) Optimum temperature for toxin production is 37° C
b) Intradietic toxin is responsible for intestinal symptoms
c) Toxin can be destroyed by boiling for 30 minutes
d) Incubation period is 1 -6 hours

1053. Kalhij a 22 year old male had an outing with his friends and developed fever of 38.5 degree C, diarrhoea and vomiting following eating chicken salad. 24 hours back. Two of his friends developed the same symptoms. The diagnosis is - *(AIIMS 01)*
a) Salmonella enteritis poisoning
b) Bacillus cereus
c) Staphylococcus aureus
d) Vibrio cholera

1054. True regarding Staphylococcal food poisoning is -
a) Caused by eating of dairy products
b) Caused by endotoxins *(AIIMS Feb 97)*
c) Caused by fishes
d) Associated with abnormal movements

1055. True about Dracunculiasis except - *(PGI June 05)*
a) No animal Reservoir
b) Man is intermediate host
c) India has eradicate the disease
d) Limited to tropical and subrtopical region
e) Niridazole does not prevent transmission of disease effectivity

1056. How many guinea worm cases were identified in the year 1999 - *(AIIMS 2K)*
a) 0 b)9
c) 2000 d)4000

1057. Dracunculosis is most common *in-(AIIMS95,AI96)*
a) Gujarat b) Rajasthan
c) Madhya Pradesh d) Orissa

1058. All of the following statements regarding Dracunculiasis are true except - *(AIIMS 04)*
a) India has eradicated this disease
b) Niridazole prevents transmission of the disease
c) The disease is limited to tropical and subtropical regions
d) No animal reservoir has been proved

1059. In Guinea worm prophylaxis, all are true, except -
a) Acute search of new cases *(AIIMS May 94)*
b) Identification of carriers
c) Mass treatment with Mebendazole
d) Health education to people to use a sieve for straining drinking water

1040) a 1041)a,b 1042)a 1043)a 1044)c 1045)c 1046)d 1047)a,e 1048)c 1049)a 1050)d 1051)b 1052)c 1053)a 1054) a 1055) b 1056)a 1057)None>b 1058)b 1059)c

MALARIA

1060. True about epidemiology of malaria - *(PGIDEC 04)*
a) Extrinsic incubation period 0-14 days
b) In India common during January to June
c) Man act as definitive host
d) Rare in urban
e) Mosquito acts as definitive host

1061. Types of malaria not seen in India - *(PGI88)*
a) Ovale b) Falciparum
c) Vivax d)Malariae

1062. Case of plasmodium ovale in India is/are reported in-
a) Orissa b)Gujrat *(PGIMay 11)*
c) Maharastra d) Delhi
e) Karnataka

1063. Incubation period of plasmodium vivax is- *(Delhi 85,*
a) 5-7 days b) 7-10 days *UPSC 86)*
c) 10-14 days d) 15-30 days

1064. In urban which Anopheles species is seen-(NEET/
a) Stephnsi b) Culicifacies **DNB Pattern)**
c) Fluvitalis d) None

1065. Malaria is transmitted by- *(PGI Dec 04)*
a) Anopheles stephensi
b) Anopheles culicifacies
c) Culex
d) Phlebotomus

1066. All are true about communicability of Malaria, except - *(AIIMS Nov 06)*
a) The number of gametocytes in blood increases with time
b) Gametocytes appear in blood 4-5 days after the appearance of the asexual parasite, in vivax infection.
c) Gametocytes appear in blood 10-12 days after the appearance of asexual parasite, in falciparum infection
d) In the early stage of infection, their density may exceed 1000 per cmm of blood.

1067. In Sickle cell trait patients, there is reduced risk of which of the following disease? *(AI10)*
a) Typhoid b) Malaria
c) G-6PD deficiency d)Filaria

1068. The most sensitive index of recent transmission of malaria in a community is - *(AIIMSNov 03, 97)*
a) Spleen rate
b) Infant parasite rate
c) Annual parasite incidence
d) Slide positivity rate

1069. A malarial survey is conducted in 50 villages having a population of one lakh. Out of 20000 slides examined, 500 turned out to be malaria positive. The annual parasite incidence is - *(ARMSMay 01)*
a) 20% b) 5%
c) 0.5% d) 0.4%

1070. Burden of malaria is best estimated by -
a) Mosquito rate b) API *(NEET/DNB Pattern)*
c) Parasite rate d) SPR

1071. All are true regarding malaria except - *(ARMS 99)*
a) Infant parasite rate is a poor indicator of malaria occurrence in a community
b) ABER is used for operational approach
c) Spleen rate is an important indicator of endemicity of malaria
d) Usually caused by Plasmodium vivax

1072. All is true about malaria, except - *(ARMS 97)*
a) Infant parasite index is a poor index for assessment for transmission of malaria in thecommunity
b) Vector for transmission is Anapheles mosquito
c) Newborns are resistant to P. falciparum infection
d) A. culicifacies is common in rural area

1073. Treatment of P.vivax malaria - *(PGIDec 2K)*
a) Chlorquine
b) Primaquine
c) Chloraquine + Primaquine
d) None

1074. Dose of chloroquine at 4-8 year - *(AI 89)*
a) 150 mg. b) 300 mg.
c) 450 mg. d) 600 mg.

1075. Treatment of choice for chloroquine resistant malaria is - *(ARMS 2K, 99)*
a) Mefloquine
b) Sulfadoxine + Pyrimethamine
c) Primaquine + Chloroquine
d) Chloroquine + Pyrimethamine

1076. A person wants to visit a malaria endemic area of low level chloroquine resistant falciparum malaria. The best chemoprophylaxis is - *(ARMS 01)*
a) Chloroquine
b) Proguanil + Pyrimethamine
c) Sulfadoxine + Pyrimethamine
d) Mefloquine

1077. Prophaylaxis for malaria not *used-(NEET/DNBPattern)*
a) Doxycycline b) Artesunate
c) Chloroquine d) Mefloquine

1078. Chemoprohylaxis of chloroquine includes -
a) 300mgBD/week *(NEET/DNB Pattern)*
b) 600 mg OD/week
c) 600 mg/week
d) 300 mg OD/week

1079. Patient was given chloroquine & doxycycline for 7 days. Patient's fever decreases in 4 days but, peripheral smear showed occasional gametocytes of plasmodium falciparum. This type of drug resistance is - *(DPG 11)*
a) R1 type b) R_2 type
c) R3 type d) R_4 type

1080. The current Global strategy for malaria control is called - *(KARNATAKA 2001)*
a) Modified plan of operation
b) Malaria Eradication Programme
c) Malaria Control Programme
d) Roll back Malaria

1060)e 1061)a 1062)a,b,d 1063)c 1064)a 1065)a,b 1066)a 1067)b 1068)b 1069)c 1070)b 1071)a 1072)a 1073)c 1074)b 1075)b 1076)d 1077)b 1078)d 1079)b 1080)d

1081. Roll back Malaria program is- *(Jipmer04)*
a) Encourage the development of more effective and new anti malarial drugs and vaccines
b) Encourage the proper and expanded use of insecticide treated mosquito nets
c) Training of village health workers and mother on early and appropriate treatment of malaria
d) All of the above

1082. Which one of the following is not a strategy under Roll Back Malaria - *(UPSC 07)*
a) Strengthening of health system
b) Use of insecticide treated bed nets
c) Anti-larval measures
d) Development of new antimalaria drugs

1083. A patient develops red eye, 2 two days after an episode of malaria Probable cause is - *(AIIMS 99)*
a) Conjunctivitis b) Anterior uvelitis
c) Viral keratitis d) Endophthalmitis

1084. All of the following factors contribute to Resurgence of malaria, Except- *(AI11, 10)*
a) Drug resistance in host
b) Drug resistance in parasite
c) Insecticide resistance in vectors
d) Antigenic variations in parasite

1085. All of the following factors are responsible for resurgence of malaria, Except - *(AI 11)*
a) Drug Resistance in Parasite
b) Insecticide Resistance in vectors
c) Antigenic mutations in parasite
d) Use of bed nets

FILARIASIS

1086. Human filariasis is caused by - *(PGIDec08)*
a) Loa-loa b) Onchocerca Volvulus
c) W. bancrafti d) B. Malayi

1087. All are TRUE regarding filariasis except-
a) Man is an intermediate host. *(AIIMSFeb 97)*
b) Caused by wuchereria bancrofti
c) Involves lymphatic system
d) DEC is used in treatment

1088. The organism most commonly causing genital filariasis in most part of Bihar and easteran U.P. is- *(AI 03)*
a) Wuchereria bancroftib) Brugia malayi
c) Onchocerca volvulus d) Dirofilaria

1089. Maximum density of microfilariasis in blood is reported to be between - *(UPSC 85, AI 88)*
a) 9 pm to 11pm b) 11 pm to 2 am
c) 8 pm to 10 pm d) 2 am to 5 am

1090. Trepatent period[1] in lymphatic filariasis is defined as the time interval between inoculation of infective larvae and - *(UPSC-II08)*
a) Blockage of lymphatics
b) First appearance of detectable microfilaria
c) Development of lymphoedema
d) Development of adult worm

1091. All are true statement about filaria except -
a) Extrinsic incubation period of 10-14 days
b) Man is the intermediate host *(AIIMS 97)*
c) Adults live in the lymphatics of host
d) No multiplication in the mosquito

1092. Microfilaria endemicity index is - *(AI 91)*
a) % of persons showing MF in blood and diseased individual
b) % of persons showing MF in blood only
c) Number of MF in the blood
d) Average no. persons with positive slides

1093. All of the following are commonly used Filarial indices except - *(AI 94)*
a) Microfilaria rate
b) Filarial disease rate
c) Filarial epidemicity rate
d) Mosquito infection rate

1094. All of the following are helpful for elimination of Filariasis, except - *(AIIMS May 12)*
a) Microfilarias do not multiply in vectors
b) They do not multiply in humans
c) Larvae are deposited on skin surface where they can't survive
d) None

1095. Antropo-Zoonoses are all except - *(AI 95)*
a) Guinea worm infestation b) Rabies
c) Plague d) Hydatid cyst

1096. Direct zoonose is - *(PGIDec 04)*
a) Rabies b) Brucellosis
c) Taeniasis d) Flydatid disease

1097. Which of the following is a zoonotic disease - *(NEET/ DNB Pattern)*
a) Hydatid cyst b) Malaria
c) Filariasis d) dengue fever

1098. All of the following are zoonosis Except - *(AI 08)*
a) Plague b) Japanese Encephalitis (JE)
c) HIV d) Tuberculosis (TB)

1099. Zoonosis is/are - *(PGI June 08)*
a) Anthrax b) Brucella
c) Leptospirosis d) Chaga's disease
e) Tularemia

1100. Animal to man transmission (zoonosis) is seen in - *(PGI Dec 05, June 99)*
a) Rabies b) Japanese encephalitis
c) HIV d) Plague
e) Measles

RABIES

1101. In India, "Rabies free" zone is - *(AIIMS 79, DELHI93)*
a) Goa b) Lakshadeep
c) Sikkim d) Nagaland

1081) d 1082)c 1083)c 1084)a 1085)d 1086)A11 1087)a 1088)a 1089)b 1090)b 1091)b 1092)a 1093)b 1094) c 1095) a 1096)a,b 1097)a 1098)c 1099)all 1100)a,b,d 1101)b

1102. Regarding Rabies, true is - *(AI00)*
a) Incubation period depends on the site of bite
b) Diagnosis is by eosinophilic intranuclear inclusion
c) It is a RNA virus
d) Caused only by dogs

1103. Rabies can be transmitted by all the following routes except - *(A194)*
a) Aerosol b) Bites
c) Ingestion d) Licks

1104. Neurological complications following Rabies vaccine is common with - *(JIPMER 91)*
a) HDCS Vaccine b) Chick embryo Vaccine
c) Semple Vaccine d) Duck Egg Vaccine

1105. All of the following rabies vaccines are commercially available except - *(A199)*
a) Killed sheep brain vaccine
b) Human diploid cell vaccine
c) Vero continous cell vaccine
d) Recombinant glycoprotein

1106. Which virus is used to produe rabies vaccine -
a) Wild b) Street *(NEET/DNB Pattern)*
c) Fixed d) Live Attenuated

1107. For the treatment of case of class HI dog bite, all of the following are correct except - *(A105)*
a) Give Ig for passive immunity
b) GiveARV
c) Immediately stitch wound under antibiotic coverage
d) Immediately wash wound with soap and water

1108. Class II exposure in animal bites includes the following - *(AI03)*
a) Scratches without oozing of blood
b) Licks on a fresh wound
c) Scratch with oozing of blood on palm
d) Bites from wild animals

1109. Active immunisation following exposure is given most commonly for - *(AI99)*
a) Rabies b) Polio
c) Plague d) Measles

1110. The schedule of HDCV in rabies is- *(AI96)*
a) 0,3,7,10,14,28 b) 0,3,10,30
c) 3,7,14,16,18 d)0,7,14,16,18

1111. In rabies, human diploid cell culture vaccine for post-exposure vaccination is given on the following days-
a) 0, 7,28 then booster dose 90 days *(AI 98)*
b) 0, 7, 28 then booster dos in 2 years
c) 0, 3,7, 14,30 then booster dose 90 days
d) 0, 3, 7 and booster dose 90 days

1112. Number of doses of HDCV vaccine required for preexposure prophylaxis - *(NEET/DNB PATTERN)*
a) 7 b) 5
c) 3 d) 1

1113. What is the correct recommended schedule (on days) for post - exposure treatment of person who have been vaccinated for rabies previously with HDC -
a) 0, 3 and 7 b) 0,3,7 and 14
c) 0,3,7,14 and 28 d) 0 and 3

1114. Post exposure prophylaxis of rabies in immunized person - *(NEET/DNB Pattern)*
a) 0 b) 3
c) 7 days d) None

ARBOVRAL DISEASES

1115. Disease caused by arboviruses included - *(PGI June 02, Dec 2K)*
a) Yellow fever b) Japanese encephalitis
c) Trench fever d) Epidemic typhus
e) Dengue

1116. Which one of the following arbovirus diseases has not been reported in India - *(AIIMS 04)*
a) Japanese Encephalitis
b) Yellow fever
c) Chikungunya fever
d) Kyasanur forest disease

1117. True about Arboviruses is - *(AIIMS May 10)*
a) Yellow fever is endemic in India
b) Dengue has only one serotype
c) KFD was first identified in West Bengal
d) Chikungunya is transmitted by Aedes aegypti

1118. Following is absent in India - *(NEET/DNB Pattern)*
a) JE b) Yellow fever
c) Malaria d) Dengue

1119. All of the following arobiviral infections are prevalent in India except - *(AI 9 7)*
a) Dengue fever b) Western fever
c) Yellow fever d) Chikungunya

1120. Arboviral diseases common in India are the following except- *(AI 11)*
a) Dengue fever b) Sandfly fever
c) West Nile fever d) Yellow fever

1121. Which of the following is exotic disease in India-
a) Yellow fever b) KFD *(NEET/DNB Pattern)*
c) JE d) Dengue

YELLOW FEVER

1122. Yellow fever is caused by - *(UPSC 88)*
a) Flavivirus b) Alpha virus
c) Sindbis d) Chikungunaya virus

1123. The incubation period of yellow fever is - *(AIIMS 04)*
a) 3 to 5 days b) 3-4 weeks
c) 1 to 2 weeks d) 8-10 weeks

1124. True about yellow fever - *(PGI June 04)*
a) I.P. is 10-14 days
b) Transmittd by Aedes
c) It is found in Asia
d) Incidence is increased by humidity
e) It is a flavivirus

1125. According to international Health Regulation, there is no risk of spread of yellow fever if the Aedes aegypti index remains below - *(AI 04)*
a) 1% b)5%
c) 8% d) 10%

1102)a 1103)c 1104)c 1105)d 1106)c 1107)c 1108)b 1109)a 1110)a llll)c 1112)c 1113)d 1114)a>b
1115) a,b,e 1116)b 1117)d 1118)b 1119)c 1120)d 1121)a 1122)a 1123)a 1124)b,d,e 1125)a

1126. Yellow fever aedes agypti index should be -
a) <1% b) < 5% *(NEET/DNB Pattern)*
c) <10% d) < 20%

1127. Yellow fever is absent in India because - *(Corned 08)*
a) Climatic conditions are not favourable
b) Virus is not present
c) Vector mosquito is absent
d) Population is immune

1128. International certificate for travelling is required for- *(AIIMS99)*
a) Pertussis b) Yellow fever
c) Cholera d) Plague

1129. Vector control for yellow fever around an airport is done upto a distance of - *(AI2K)*
a) 400m b)200m
c) 500m d)100m

1130. The distance from airport or seaport which has to be free from mosquitoes is -*(NEET/DNB Pattern)*
a) 400m b) 500m
c) 1 km d) 100m

1131. The international quarantine period for yellow fever as approved by the Government of India is -
a) 6 days b) 9 days *(UPSC 97)*
c) 10 days d) 12 days

JAPANESE ENCEPHALITIS

1132. Japanese encephalitis is caused by - *(NEET/DNB*
a) Culex b) Flavivirus *Pattern)*
c) Pigs d) None

1133. Amplifier for Japanese encephalitis -
a) Horse b) Pigs *(NEET/DNB Pattern)*
c) Dogs d) Monkey

1134. Japanese B encephalitis virus is transmitted by- *(Jipmer 86, Nimhans 87)*
a) Aedes aegypti
b) Culex fatigans
c) Culex tritaeniorhynchus
d) Hard tick
e) Soft tick

1135. Epidemiological features are for japanese encephalitis include all of the following except -
a) The virus infects extra-human hosts *(AI97;*
b) Man is an incidental host *AIIMS95;*
c) Infected pigs manifestation *PGI Dec 99)*
d) Epidemics have been reported in Karnataka

1136. All the following are true about japanese Encephalitis except - *(AI 96)*
a) Man to man transmission is not reported
b) Culex mosquito is the vector
c) 90%-100% mortality rate
d) There is no rash or local lesion

1137. True regarding japanese encephalitis is except -
a) Man to man transmission is not reported
b) Culicine mosquito s zoophilic *(AIIMS 97)*
c) Mortality is 80-90%
d) Cases show up of iceberg

1138. Which of the following is not true about Japanese encephalitis? *(AI II)*
a) About 80% of the patients are children below 5 years of age.
b) In epidemics, cases scatter with no more than 1-2 per village
c) Overt disease to unapparent cases ratio is 1:100.
d) Bite from infected mosquito always leads to the disease

1139. After vaccination against Japanese encephalitis immunity developes in - *(AIIMS 9 7; PGI June 98)*
a) 30 days b) 7 days
c) 10 days d) 21 days

1140. SA-14-14-2 - *(NEET/DNB Pattern)*
a) Diploid cell inactivated
b) Killed vaccine
c) Life long immunity
d) Primary immunization 2 doses

1141. False about Japanese encephalitis *\s-(AIIMSNov 09)*
a) Transmitted by Culex mosquitoes
b) Overhead tanks serve as breeding site
c) Pigs are amplifiers
d) Primary dose of vaccine consists of two doses

1142. The vector of Japanese Encephalitis in India is -
a) Culex tritaeniorhychus *(AIIMS 96)*
b) Culex vishnui
c) Aedes aegypti
d) Anopheles

1143. In India, the vector of Japanese encephalitis is -*(AI94)*
a) Aedes, aegypti b) Aedes culcifaciens
c) Culex vishnui d) Mansonoides

KFD

1144. Following are true of kyasanur forest disease except-
a) Transmitted by Soft tick *(AI 94)*
b) Caused by retrovirus
c) Incubation Period is 3-8 days
d) Killed vaccine available

1145. Kyanasur forest disease is transmitted by - *(IN 02)*
a) Haema physalis spinigera b) Culex vishnui
c) Aedes d) Anopheles

1146. To prevent KFD which of the following is not used -
a) Self protection against ticks *(AIIMS 01)*
b) Vaccination
c) Deforestation
d) Control of cattle roaming in the forest

PLAGUE

1147. The following rodent is the natural reservoir of plague - *(KARN 94)*
a) Mus musculus b) Tatera indica
c) Rattus Rattus d) Rattus norvegicus

1148. Plague is transmitted by - *(NEET/DNB Pattern)*
a) Mite b) Flea
c) Sand fly d) None

1126) a 1127) b 1128)b 1129)a 1130)a 1131)a 1132)b 1133)b 1134)c 1135)c 1136)c 1137)c 1138)d 1139)a
1140) c 1141) b 1142) a 1143)c 1144)b 1145)a 1146)c 1147)b 1148)b

1149. Which is most dangerous for transmitting plague - *(Orissa R)*
a) Blocked flea b) Partial blocked flea
c) Both d) Unblocked flea

1150. What is the best indicator for a potential explosiveness of plague outbreak ? - *(UPSC 2006)*
a) Total flea index
b) Cheopis index
c) Specific percentage of fleas
d) Burrrow index

1151. Index for estimating explosion of plague?
a) Cheopis index *(NEET/DNB Pattern)*
b) Total flea index
c) Burrow index
d) None

1152. All of the following statement about plague are wrong except- *(A1IMS04)*
a) Domestic rat is main reservoir
b) Bubonic is the most common variety
c) The causative bacillus can survive upto 10 years in the soil of rodent burrows
d) Incubation period for pneumonic plague is one to two weeks

1153. In a plague epidemic all of the following are done to control it, except - *(AIIMS May 02)*
a) Isolation of contacts
b) Vaccination of the susceptibles
c) Surveillance
d) Chemoprophylaxis with tetracycline

1154. True statement about plague is - *(AI97)*
a) Vaccine is not used to control epidemic of pneumonic plague
b) Most important measure to control epidemic rodent control
c) Septicemic plague is highly infectious
d) Live attenuated vaccines are used

1155. After two doses of vaccination against plague, the immunity will last for - *(UPSC 96)*
a) Six months b) One year
c) Eighteen months d) Twenty-four months

1156. Prophylaxis for health personnel working in a plague ward is - *(PGIDec 98)*
a) Vaccine
b) Tetracycline throughout the duty
c) A cource of tetracycline
d) Vaccine and Erythromycin
e) Observation

LEPTOSPIROSIS

1157. Which of the following statements about Leptospirosis is true - *(AI 11)*
a) Rats are prime reservoirs
b) Fluoroquinolones are the drug of choice
c) Person to person Transmission is common
d) Hepatorenal syndrome may occur in upto 50% of patients

1158. The following statements are true regarding leptospirosis, except - *(AIIMS May 06)*
a) It is zoonosis
b) Man is the dead end host
c) Man is an accidental host
d) Lice act as reservoirs of infection

1159. A sewage worker presents to the Emergency department with fever and jaundice. Laboratory findings reveal an elevated BUN and serum creatinine suggestive of renal failure. Which of the following antiboitics is recommended? *(AI 11)*
a) Cotrimaxozole b) Erythromycin
c) Ciprofloxacin d) Penicillin G

KALAAZAR

1160. Mucocutaneous leishmaniasis is caused by -
a) L-braziliensis b) L. tropica *(PGI97)*
c) L. donovani d) L-orientalis

1161. Reservoir of Indian Kalaazar is- *(AIIMS 03)*
a) Man b) Rodent
c) Canine d) Equine

1162. True about kala-azar- *(PGI June 09)*
a) More common in female than male
b) Eliminated from India
c) Non-human reservoirs are present
d) Incubation period is 1 -3 month
e) Rarely found in hilly areas

1163. Kala-azar in India is caused by - *(AP 96)*
a) P. papatasi b) P. serpenti
c) P. argentipes d) Oncocercus

1164. Drug(s) included in the treatment of visceral leismaniasis is/are all except - *(PGI June 09)*
a) Sodium stibogluconate
b) Pentamidine
c) Miltefosine
d) Liposomal amphtericine B
e) Ketoconazole

RICKETTSIAL DISEASES

1165. Epidemic typhus cause & *\edor-(NEET/DNB Pattern)*
a) Rickettessiae prowazki & Louse
b) R. typhi & mite
c) R. conorii & tick
d) R. akari & mite

1166. A patient complained of chills and fever following a louse bite 2 weks before. He had rashes all over the body and was delirious at the time of presentation to the hospital and subsequently went into coma. A provisional diagnosis of vasculitis due to Rickettsial infection was made. Which one of the following can be causative agent. - *(AI 06, AI 96)*
a) Rickettsia typhi b) Rickettsia rickettsiae
c) Rickettsia prowazekii d) Rickettsia akari

1149) b 1150) b 1151) a 1152)b 1153)b 1154)b 1155)a 1156)a,b 1157) a 1158) d 1159)d 1160)a 1161)a 1162) c,d,e 1163) c 1164) None 1165) a 1166)c

1167. Which of the following statements is true about endemic typhus - *(AI03)*
a) Is caused by R.rickettsii
b) Is transmitted by the bite of fleas
c) Has no mammalian reservoir
d) Can be cultured in chemically defined culture medium

1168. It is true regarding Endemic typhus that -
a) Man is the only reservoir of infection
b) Flea is a vector of the disease *(AIIMS May 06)*
c) The rash developing into eschar is a characteristic presentation
d) Culture of the etiological agent in tissue culture is a diagnostic modality.

1169. Which of the following is incorrect about Scrub typhus? *(AI 10)*
a) Causative agent is R. tsutsugamushi
b) Important reservoir is trombiculoid mite
c) The adult mite feeds on vertebrate host
d) Tertacycline is drug of choice

1170. Vector of scrub typhus in man - *(NEET/DNB Pattern)*
a) O.tsutsugamushi
b) Leptotrombidium deliense
c) Lice
d) Pediculous humanus

1171. Scrub typus - *(NEET/DNB Pattern)*
a) R. tsutsugamushi b) R.typhi
c) R. akari d) R.conorii

1172. Mode of transmission of Q fever is - *(AIIMS 04)*
a) Bite of infected louse b) Bite of infected tick
c) Inhalation of aerosol d) Bite of infected mile

1173. Which of the following statements about Q fever is false- *(AI96)*
a) Highly infectious zoonotic disease
b) The mode of transmission is by inhalation
c) Arthropods are involved in its transmission to man
d) There is no rash or local lesion

1174. Q fever is transmitted by - *(AI 09)*
a) Ticks b) Mites
c) Louse d)Flea

1175. All of the following statement are true regarding Q fever except - *(AI 03)*
a) It is zoonotic disease
b) Human disease is characterized by an interstitial pneumonia
c) No rash is seen
d) Weil-felix reaction is very useful for diagnosis

1176. True about Q fever- *(AI 09)*
a) Rash on palms and soles, headache and fever are common symptoms
b) Transmitted by human body louse
c) Inhaled aerosols spread the infection
d) Mosquito bite prevention is important in prevention

1177. A man presents with fever and childs 2 weeks after a louse bite. There was maculo-papular rash on the trunk which spread peripherally, the cause of this infection can be - *(AIIMS 03)*
a) Scrub typhus b) Endemic typhus
c) Rickettsialpox d) Epidemic typhus

1178. Transovarian transmission is a feature *oi-(PGI 80)*
a) Scrub fever b) Epidemic typhus
c) Endemic typhus d) Trench fever

TETANUS

1179. All are true regarding tetanus except-(AHMS Nov 10)
a) Transmission through contaminated wounds and injuries
b) More common in winters and dry weather
c) Reservoir in soil and intestines of humans and animals
d) No herd immunity or life long immunity

1180. To achieve neonatal tetanus elimination, incidence of neonatal tetanus per 1000 live births should be reduced to less than - *(UPSC 96)*
a) 0.1 b) 0.2
c) 0.5 d) 1.0

1181. Strategies for prevention of Neonatal Tetanus include all of the following except - *(AI 0 7)*
a) 5 clean practices
b) Giving penicillin to all the new boms
c) 2 doses of TT to all pregnant women
d) Immunizing all married women

1182. "Five clean practices" under strategies for elimination of neonatal tetanus include all except -
a) Clean surface for delivery *(AI 04)*
b) Clean hand of the attendant
c) New blade for cutting the cord
d) Clean airway

1183. In child survival and safe motherhood programme which is not advised as a provision in conduct of delivery - *(AIIMS 94)*
a) Clean room b) Clean tie
c) Clean perineum d) Clean cord

1184. True regarding tetanus toxoid is/are -*(PGI June 09)*
a) Plain toxoid have long duration
b) Adsorbed toxoid are more beneficial
c) Should never freeze
d) Stored at 0°C
e) Both active & passive immunization can be given together

1185. A full course of immunization against, Tetanus with 3 doses of Tetanus toxoid, confers immunity for how many years - *(Corned 08)*
a) 5 b) 10
c) 15 d)20

1167) b 1168) b 1169)c 1170)b 1171)a 1172)c 1173)c 1174)a 1175)d 1176)c 1177)d 1178)a 1179)b 1180)a 1181)b 1182) d 1183) c 1184)b,c,e 1185)a

1186. A person has received complete immunization against tetanus 10 years ago. Now he presents with a clean wound without any lacerations from an injury sustained 2.5 hours ago. He should now be given -
a) Full course of tetanus toxoid *(AI01)*
b) Single dose of tetanus toxoid
c) Human tet globulin
d) Human tet globulin and single dose of toxoid

1187. A10 year old boy following a road traffic accident presents to the casuality with contaminated wound over the left leg. He has received his complete primary immunization before preschool age and received a booster of DT at school entry age. All of the following can be done except - *(AIMS 01)*
a) Injection of TT
b) Injection of human antiserum
c) Broad spectrum antibiotics
d) Wound debridement and cleaning

1188. The most effective way of preventing tetanus is -
a) Surgical debridement and toilet *(AIMS 01)*
b) Hyperbaric oxygen
c) Antibiotics
d) Tetanus toxoid

1189. The active immunity offered by tetanus toxoid is effective in nearly - *(AIMS Nov 02)*
a) 25% of the patients b) 50% of the patients
c) 75% of the patients d) 100% of the patients

1190. The true statement regarding tetanus is - *(AI 01)*
a) Five dose immunisation provides life long immunity
b) TT affords no protection in the present injury
c) TT serves no use once 12 hours have elapsed following injury.
d) TT and Ig may both be given in suspected tetanus

LEPROSY

1191. All of the following organs may be involved in Leprosy except - *(AIMS May 10, AI0 7)*
a) Uterus b) Ovary
c) Testes d) Eye

1192. True about leprosy in India - " *(PGIJune07)*
a) Prevalence decreasing in past decade
b) Incidence highest in 1-5 yrs age group
c) Highly pathogenic
d) Highly communicable

1193. True about epidemiology of leprosy - *(PGI June 09)*
a) If high prevalence of cases seen in childhood, it means disease is under control
b) Lepra bacilli cannot survive outside hman body
c) Bacterial load is high in tuberculoid variety
d) Insect can transmit the disease
e) Relapse rate is indicator of efficacy of the drug regimen

1194. All of the following are the mode of transmission of leprosy except - *(AI 04)*
a) Breast milk b) Insect bite
c) Transplacental spread d) Droplet infection

1195. "Multibacillary" is a spectrum of disease, seen in-
a) Leprosy b) TB *(NEET/DNB Pattern)*
c) Tetanus d) Trachoma

1196. Exacerbation of lesions in patients of borderline leprosy is seen in - *(PGI June 01)*
a) ENL (erythema nodosum leprosum)
b) Lepra reaction type 1
c) Jarisch-Herxheimer reaction
d) Resolving leprosy

1197. The characteristic finding in a case of leprosy is- *(AIMS Dec 98)*
a) Culture test is positive in 2-3 months in LJ media
b) Long contact with tuberculoid leprosy can transmit the disease.
c) CMI is seen in Lepromatous leprosy
d) Macule lesion heals spontaneously

1198. Slit smear negative leprosy is - *(AI97)*
a) Neuritic type b) Tuberculoid type
c) Indeterminate type d) Leprometous type

1199. Not true about lepromine test is - *(AI 07, AIMS 06)*
a) Helps in classification of leprosy
b) Negative in most of the child in 1st 6 month of life
c) It is a diagnostic test
d) BCG vaccination converts lepra reaction from negative to positive

1200. In the management of leprosy, Lepromin test is most useful for - *(AI 03, AIMS Nov 08)*
a) Herd immunity
b) Prognosis
c) Treatment
d) Epidemiological investigations

1201. Which of the following statements about lepromin test is not true -
a) It is negative in most children in first 6 months of life *(AIMSMay 10, June 08, May 07, Nov 06)*
b) It is a diagnostic test
c) It is an important aid to classify type of leprosy disease
d) BCG vaccination may convert lepra reaction from negative to positive

1202. The following test is not used for diagnosis of leprosy - *(AIMS 06)*
a) Lepromin test
b) Slit skin smear
c) Fine needle aspiration cytology
d) Skin biopsy

1203. Duration of treatment in multibacillary leprosy according to WHO is - *(PGI June 02)*
a) 6 months b) 1 year
c) 2 years d) 5 years
e) Lifelong

1186) b 1187)b 1188)d 1189) d 1190)d 1191)a 1192)a,d 1193)d,e 1194)c 1195)a 1196)b 1197)b 1198)a,b,c 1199)c 1200)b 1201)b 1202)a 1203)b

1204. Under leprosy eradication programme the managment of single lesion is - *(AIIMS 02; PGI June 00)*
a) Single dose of Rifampicin and Dapsone
b) Rifampicin and Dapsone for 6 months
c) Rifampicin, ofloxacin and minocycline single dose
d) Rifampicin and minocycline for 6 months

1205. A patient with leprosy had slightly erythematous, anesthetic plaques on the trunk and upper limbs. He was treated with paucibacillary multidrug therapy (PB-MDT) for 6 months. At the end of 6 months, he had persistent erythema and induration in the plaque. The next step of action recommended by the World Health Organization (WHO) in such a patient is - *(AIIMS Nov 04)*
a) Stop antileprosy treatment
b) Continue PB-MDT till erythema subsides
c) Biopsy the lesion to document acitivity
d) Continue dapsoen alone for another 6 months

1206. Treatment of severe ulnar neuritis in borderline tuberculoid leprosy is - *(AI0 7)*
a) MDT only b) MDT + steroid
c) Wait and watch d) MDT + thalidomide

1207. The most rapidly bactericidal drug for M-Leprae is-
a) Dapsone b) Clofazimine *(PGI 78)*
c) Ethionamide d) Rifampicin

1208. For treatment of paucibacillary leprosy drugs used are - *(NEET/DNB Pattern)*
a) Rifampicin & dapsone
b) Rifampicin, dapsone, steroids
c) Rifampicin, clofazimine, dapsone
d) None

1209. According to WHO latest treatment of leprosy is-
a) 2 yrs. or negative slit smear negative which ever is longer for multibacillary *(PGI 96)*
b) Life long treatment
c) Six months treatment for paucibacillary
d) Not specified

1210. In multibacillary leprosy the follow up examination after adequate treatment should be done yearly for -
a) 3 years b) 3 years *(Delhi 96)*
c) 5 years d) 10 years

1211. 2 yrs duration in terms of leprosy is with regard to - *(NEET/DNB Pattern)*
a) Rx of paucibacillary leprosy
b) Rx of multibacillary leprosy
c) Post Rx surveillance of paucibacillary leprosy
d) Post Rx surveillance of multibacillary leprosy

1212. Multibacillary leprosy follow up for - *(NEET/DNB Pattern)*
a) 12-18 months b) 2 years
c) 5 years d) 10 years

1213. A boy from Bihar comes with an erythematous anaesthetized patch on dorsum of left hand and a tender enlarged ulnar nerve. Next line of management-
a) Split sking smear Biopsy from the lesion
b) Start MDT-for 6 month *(PGI Nov 09)*
c) Give thalidomide
d) Swab for AFB
e) Lepromin test

1214. Immunoprophylaxis of leprosy includes-fPG*/Nov 10)*
a) BOG b) MMR
c) ICRC bacillus d) Anthrax vaccine
e) Mw

1215. All of the following statements about leprosy are true except - *(AI 04)*
a) Multibacillary leprosy is diagnosed when there are more than 5 skin patches
b) New case detection rate is an indicator for incidence of leprosy
c) A defaulter is defined as a patient who has not taken treatment for 6 months or more
d) The target for elimination of leprosy is to reduce the prevalence to less than 1 per 10,000 population

1216. The screening method of choice in an area where the prevalence of leprosy is 1/1000 is - *(AI 95)*
a) Contact survey b) Group survey
c) Mass survey d) Any of the above

1217. Best mode to control leprosy eradication programme is- *(AIIMS 96)*
a) Mass chemotherapy
b) Early diagnosis and treatment
c) High risk chemotherapy
d) Health education

1218. Most sensitive index of transmission in leprosy is -
a) Incidence b) Detection rate *(AIIMS 92)*
c) Disability rate d) Prevalence

1219. All are true about leprosy except - *(PGIDec 98)*
a) +2 mean 2 bacilli in 2 smear
b) At least 7 smear examined
c) Paucibacillary bacterial index < 2
d) Multi bacillary bacterial index > **2**
e) Negative smear denote - no bacilli in 100 fields

1220. Which is true regarding leprosy in India? *(PGI04)*
a) Estimated 10 million cases
b) Prevalence = 3.7/1000
c) MDT - 99% coverage
d) Eradicated in Orissa
e) Vaccine being developed in Bihar

1221. Elimination of leprosy is defined as prevalance -
a) < 1 per 1000 *(NEET/DNB Pattern)*
b) < 1 per 10000
c) < 1 per 1 lakh
d) < 1 per 100

1222. Dharmendra's index and Jopling's classification deals with - *(AI 08)*
a) TB b) Leprosy
c) Syphilis d) Polio

1223. If a claw hand develops in a patient with Leprosy, the deformity is - *(Karn 11)*
a) Grade 0 b) Grade I
c) Grade II d) Grade III

1224. Leprosy is not yet eradicated because -
a) No effective vaccine *(AIIMS May 12)*
b) Highly Infectious but low pathogenicity
c) Only humans are reservoir
d) Long incubation period

1204)c 1205) a 1206)b 1207)d 1208)a 1209)c 1210)c 1211)c 1212)c 1213)b 1214) a,c 1215) c 1216)b 1217)b 1218)a 1219) a 1220) None 1221)b 1222)b 1223)c 1224)a

STDs

1225. Which of the following is not a STD - *(AP 85, UPSC 86)*
a) Hepatitis B b) Amoebiasis
c) Scabies d) Herpes simplex type 1

1226. Second most common STD after gonococcus -
a) Chylamydia b) HSV *(NEET/DNB Pattern)*
c) HIV d) Syphilis

1227. All of the following statements about 'yaws' are true, except - *(AI11)*
a) Caused by Treponema pertenue
b) Transmitted non venerally
c) Secondary yaws can involve bone
d) Late stages of yaws involve heart and nerves

1228. Regarding yaws, all are true except - *(AI 08)*
a) Caused by T. pertenue
b) Sexually transmitted
c) Cross reactive antibodies with syphilis
d) Drug of choice is penicillin.

1229. The following are the signs and symptoms included in the syndromic approach of sexually transmitted diseases except - *(Karnataka - PG MEE 06)*
a) Genital ulcers
b) Urethral discharge in males
c) Dysuria in women
d) Vaginal discharge

1230. Syndromic management for genital ulcer disease in India, includes following - *(AIIMS Nov 11)*
a) Chancroid chancre
b) primary chanere, herpes genitalis
c) Chancroid, primary chancre, herpes genitalis
d) Herpes genitalis only

1231. A sexually active, long distance truck driver's wife comes with vaginal discharge. Under Syndromic Approach, which drug should be given?
a) Metronidazole, Azithromycin, Fluconazole
b) Metronidazole *(AIIMS May 12)*
c) Azithromycin
d) Metronidazole and Fluconazole

AIDS

1232. MC type of HIV in india - *(NEET/DNB Pattern)*
a) HIV-A b) HIV-B
c) HIV-C d) None

1233. True about HTV epidemiology - *(PGIDec 08)*
a) Children rarely affected
b) < 10% of HIV infected person progress to AIDS
c) Southern affica have 72% of total global burden
d) Seminal secretion is more infectious than vaginal secretion
e) HIV cases can infect in the window period

1234. Which of the following exposure carries the maximum risk of transmission of HIV - *(AI 09)*
a) Sexual intercourse b) Blood transfusion
c) Trans-placental d) Needle prick

1235. In which of the Indian states the maximum number of AIDS cases have been reported till now -
a) Delhi b) Kerala *(AIIMS 04)*
c) Tamil Nadu d) Bihar

1236. In HIV window period indicates - *(AIIMSNov 07)*
a) Time period between infection and onset of first symptoms
b) Time period between infection and detection of antibodies against HIV
c) Time period between infection and minimum multiplication of the organism
d) Time period between infection and maximum multiplication of the organism

1237. In diagnosis of AIDS, criteria include the following except- *(PGIDec 01)*
a) CD4<200
b) CD8 < 500
c) CD 4 : CD 8 = 1
d) Presence of any of the opportunistic infections tuberculosis, pneumosystic carinii, cytomegalovirus
e) Western blot is positive

1238. Which of the following is an AIDS defining criteria according WHO - *(PGI Dec 01)*
a) Generalised lymphadenopathy
b) fever, weight loss and fatigue
c) Pneumosystic carinii Pneumonia
d) Mycobacterium avium infection
e) Persistent diarrhoea

1239. WHO AIDS defining illnesses are all except -
a) Persistant generilized lymphadenopathy
b) Oropharyngeal candidiasis *(PGI Nov 09)*
c) CMV retinitis
d) P Carinii pneumonia
e) Primary brain lymphoma

1240. Persistent diarrhoea in AIDS is caused by A/E -
a) Microspora b) Cryptococcus *(PGI 01)*
c) Cryptosporidia d) Isospora belli
e) Giardia lamblia

1241. Major signs for AIDS case definition according to WHO are- *(PGIIune03)*
a) Generalized lymphadenopathy
b) Prolong fever more than 1 month
c) Prolong cough for > 1 month
d) Chronic diarrhoea > 1 month
e) Weight loss > 10%

1242. WHO stage IV HTV includes all, except -
a) Toxoplasmosis *(AIIMS May 09)*
b) Pneumocystis carinii
c) HIV wasting syndrome
d) Oral thrush

1243. HIV post exposure prophylaxis should be started within - *(NEET/DNB Pattern)*
a) 1 -2 hrs b) 14 hrs
c) 18 hrs d) 72 hrs

1225) None 1226)a 1227)d 1228)b 1229)None 1230)c 1231)a 1232)c 1233)a,c,d,e 1234)b 1235)c 1236)b 1237)b,c,e 1238)a,b,c,e 1239)c,e 1240)c,e 1241)b,d,e 1242)d 1243)a

MISCELLANEOUS

1244. A mother is HBsAg positive at 32 weeks of pregnancy. What should be given to the newborn to prevent neonatal infection - *(NEET/DNB Pattern)*
a) Hepatitis B vaccine + immunoglobulins
b) Immunoglobulins
c) Hepatitis B vaccine only
d) Immunoglobulin followed by vaccine 1 month later

1245. True about HPV vaccination *(PGI Nov 10, Nov 09)*
a) Given in woman age group 20-40 years
b) Primary dose consists of 2 dose
c) Efficacy > 70% for cervical cancer
d) Two typese are available in the market
e) Protect against HPV 16 & 18

1246. 1955 Hepatitis outbreak in Delhi -
a) A b) B *(NEET/DNB Pattern)*
c) C d) E

1247. There is an outbreak of MRS A infection in a ward. What is the best way to control the infection -
a) Vancomycin given empirically to all patients
b) Fumigation of ward frequently *(AIIMS Nov 10)*
c) Washing hand before and after attending patients
d) Wearing masks before any invasive procedure in ICU

1248. True regarding Dengue fever is all, EXCEPT -
a) Haemorrhagic tendency *(AIIMS Nov 93)*
b) Spontaneous remission
c) Transmitted by Anopheles mosquito
d) Fever is saddle back type

1249. All of the following are true about Classical dengue fever except - *(AI94)*
a) Case fatality is low
b) Break bone fever
c) Positive tourniquet test
d) It is a self limiting disease

1250. Which of the following statement (s) is/are true about dengue fever - *(PGI June 09)*
a) T Hematocrit
b) *i* Platelet
c) Positive tourniquet test
d) Vector (Aedes aegypticus) usually bites in day time

1251. Which is the main vector of Dengue -*(NEET/DNB Pattern)*
a) A.aegypti b) A schleri
c) Culex d) Anopheles

1252. True statements regarding dengue fever-
a) It is both endemic & epidemic *(PGIMay 11)*
b) MC arboviral disease
c) Unaffected by ambient temperature
d) Decreased incidence in last 30 yr in India
e) Selflimiting

1253. Chandler's index is- *(AIIMS 98)*
a) No. of eggs / gm of stool
b) No. of larvae / lOOg of stool
c) No. of larvae / gm of stool
d) No. of eggs / 100 g of stool

1254. Chandlers index for Hookworm, when it is health problem - *(NEET/DNB Pattern)*
a) > 300 b) > 200
c) > 100 d) > 50

1255. Chandlers index is used for - *(NEET/DNB Pattern)*
a) Hookworm infestation b) Roundworm
c) Malaria d) Filaria

1256. Chandler index is used for- *(AI94)*
a) Anchylostoma duodenale b) Ascariasis
c) Guinea worm infestations d)Filariasis

1257. Brucellosis can be transmitted by all of the following modes, except - *(AIIMS May 06)*
a) Contact with infected placenta
b) Ingestion of raw vegetables from infected farms
c) Person to person tranmission
d) Inhalation of infected dust or aerosol

1258. Epidemiologic study of Hepatitis B is -*(AIIMS May 95)*
a) HBeAg b)HBcAg
c) HBs Ag is used d) Anti HBc

1259. Emergency or reemergence seen in which of the following organisms - *(PGI Dec 04)*
a) Polio virus b) Measles virus
c) Nipah virus d) West Nile virus
e) Hepatitis B virus

1260. In the grading of trachoma, trachomatous inflammation - follicular is defined as the presence of- *(AIIMS Nov 02)*
a) 5 or more follicles in the lower tarsal conjunctiva
b) 3 or more follicles in the lower tarsal conjunctiva
c) 5 or more follicles in the upper tarsalconjunctiva
d) 3 or more follicles in the upper tarsal conjunctiva

1261. For the field diagnosis of trachoma, the WHO recommends that follicular and intense trachoma inflammation should be assessed in -*(AIIMS May 03)*
a) Women aged 15-45 yrs
b) Population of 10 to 28 years range
c) Children aged 0-10 years
d) Population above 25 years of age irrespective of sex

1262. In a trachoma survey of a community, the incidence of inflammatory trachoma was 2% and incidence of cicatricial trachoma was 3% which of the following statement is true - *(AIIMS June 99)*
a) Problem is still there in the community
b) Problem was prevalent in part but now under control
c) Problem was not prevalent but now prevalent problem was prevalent
d) Problem was prevalent in pat & still prevalent

1263. Azithromyan prophylaxis in trachoma is given when prevalence is above? *(AIIMSNov 11)*
a) 8% b) 6%
c) 4% d) 10%

1264. Disease to be eradicated by the year 2000 A.D. is- *(AIIMS May 94)*
a) Typhoid b) Tetanus neonatorum
c) Filaria d) Malaria

1244) a 1245)c,d,e 1246)d 1247)c 1248)c 1249)c 1250)A11 1251)a 1252)a,b,e 1253)a 1254)a 1255)a 1256) a 1257) c 1258)d 1259)c,d,e 1260)c 1261)c 1262)b 1263)d 1264)b

1265. Reservoir of Bartonella angiomatosis-(PG7 *June 08)*
a) Cats b) Dogs
c) Cattle d) Pigs

1266. What is/are true about rat bite - *(PGIDec 08)*
a) Vaccinate with antirabies vaccine
b) Give tetanus toxoid
c) Rarely need rabies immunoglobulin
d) Wash with soap
e) Use antiseptic cream

1267. The last case of small pox was reported in the world
a) 1977 b) 1978 *(PGI84)*
c) 1979 d) 1982

1268. Small pox eradication was successful because of all except - *(AIIMS Nov 10)*
a) Subclinical cases don't transmit disease
b) Highly effective vaccine
c) Lifelong immunity
d) Cross resistance with animal pox

1269. Which amongst the following biological agents has the least potential for use as a biological weapon for microbial bioterrorism? *(AJ11)*
a) Plague (YersininaPestis)
b) Small Pox (Variola Major)
c) Botulism (Cl. Botulinum)
d) Brucellosis (Brucella sp)

1270. Which amongst the following biological agents carries the highest potential for use as a biological weapon for microbial bioterrorism? *(AJ 11)*
a) Plague (Yersinia Pestis)
b) Small Pox (Variola Major)
c) Botulism(Cl.Botulinum)
d) Brucellosis (Brucella sp)

1271. Zoonotic disease is/are transmitted by-*(PGIMay 10)*
a) Ticks b) Rat flea
c) Sandfly d) Mosquito
e) Mite

1272. Black death - *(NEET/DNB Pattern)*
a) Plague b) Dengue
c) TB d) Cholera

1273. Concentration of sodium in mMol/L in low osmolar ORSis? *(DNB Dec 2011)*
a) 45 b) 75
c) 90 d) 60

1274. ORS should be discarded after? *(DNB Dec 2011)*
a) 54 hours b) 6 hours
c) 12 hours d) 24 hours

1275. Generation time for leprosy bacillus is? *(DNB Dec 2011)*
a) 8-10 days b) 10-12 days
c) 12-15 days d) 15-20 days

1276. Japanese encephalitis is caused by?*(DNB June 2011)*
a) Culex b) Aedes
c) Mansonia d) Anopheles

1277. Prevalence of leprosy in India per 10,000 is?
a) >1 b) 0.88 *(DNB June 2011)*
c) 0.71 d) 0.69

1278. Who is regarded as father of public health?
a) Louis pasture b) Cholera *(DNB June 2011)*
c) John snow d) Robert Koch

1279. Eight site rabies vaccine schedule is? *(DNB June 2011)*
a) 0,3,7,14,28 b) 8-0-0-4-1-1
c) 8-0-4-0-1-1 d)8-0-4-0-l-l

1280. Tuberculin positive means? *(DNB June 2011)*
a) Immunodeficient patient
b) Resistance to tuberculin protein
c) Patient is infected with mycobacterium
d) Patient is suffering from disease

1281. To prevent Yellow Fever Aedes aegypti index should be less than? *(DNB Dec 2010)*
a) 0.5% b) 1%
c) 2% d) 5 %

1282. Yellow Fever certificate of vaccination is valid for? *(DNB Dec 2010)*
a) 6 years, starting from 6 days after vaccination
b) 10 years, starting from 10 days after vaccination
c) 10 years, starting from 6 days after vaccination
d) 6 years, starting from 10 days after vaccination

1283. In a town with population of100,000, the number of slides examined is 5000. Out of these, 100 slides were positive for malaria. The API *is?(DNB Dec 2010)*
a) 2 b)5
c) 1 d)0.5

1284. Japanese encephalitis is transmitted by?
a) Culex b) Aedes *(DNB Dec 2010)*
c) Anopheles d) Hard tick

1285. Pig in H1N1 influenza acts as? *(DNB Dec 2010)*
a) Carrier b) Amplifying host
c) Reservoir d) Vector

1286. Which of the folloiwng statements is false regarding Japanese Encephalitis - *(DNB June 2010)*
a) Transmitted by culex mosquitoes
b) Water tanks serve as breeding sites
c) Pigs are amplifers
d) Two dose of vaccine

1287. Rat is associated with? *(DNB June 2010)*
a) Leptospirosis b) Measels
c) Tetanus d) Influenza

1288. Incubation period of Mumps - *(DNB June 2010)*
a) 4-5 days b) 7-15 days
c) 12-24 days d) 50 days

1289. All are zoonotic disease except- *(DNB June 2010)*
a) Brucellosis b) Leptospirosis
c) Scabies d) Rabies

1290. Which one of the following ricketsial diseases is transmmited by mite - *(DNB June 2010)*
a) Murine typhus
b) Rockey mountain spotted fever
c) Q-fever
d) Endemic typhus

1265) a 1266)c,d,e 1267)a 1268)d 1269)d 1270)a 1271)A11 1272)a 1273)b 1274)d 1275)c 1276)a 1277)c

1291. Regarding poliovirus responsible for poliomyelitis all are true EXCEPT - *(DNB June 2010)*
a) Type 3 is most common in India
b) Type 1 is most common in India
c) Type 1 is responsible for most epidemics
d) Type 2 is eradicated worldwide

1292. Tonsillectomy and EM injections should be avoided during polio epidemic because - *(DNB June 2010)*
a) It is painful
b) It may lead to high grade fever
c) Risk of paralytic poliomyelitis increases
d) Risk of septicaemia

1293. True about polio vaccination is all EXCEPT -
a) Follow up of AFP for 3 0 days *(DNB June 2010)*
b) Salk contains three types of polio virus
c) Pulse polio doses are extra and supplemental
d) Oral polio vaccine provides intestinal immunity also

1294. Rabies vaccine for pre exposure prophylaxis is given at? *(DNB June 2010)*
a) 0, 3, 7 days b) 0,3,7,14 days
c) 0,3,7,14,30 days d)0,7,28 days

1295. Chandler's index is used for- *(DNB June 2010)*
a) Ankylostoma duodenale
b) Ascaris lumbricoides
c) Strongyloides
d) Trichuris trichiura

1296. Rickettsial pox is caused by? *(DNB Dec 09)*
a) Rickettsia ricketsiae b) Rickettsia akari
c) R. typhi d) Rickettsia coonri

1297. Endemic typhus is transmitted by? *(DNB Dec 09)*
a) Flea b)Tick
c) Mite d) Mosquito

1298. With reference to lepromin test, which one of the following statements is correct ? *(DNB Dec 09)*
a) Lepromin test is strongly positive in tuberculoid leprosy
b) It is not affected by BCG vaccine
c) It can be used as a diagnostic test
d) Its interpretation is done within 24 hours

1299. Which of the following factors helped in smallpox eradication ? *(DNB Dec 09)*
a) Short incubation period of disease
b) Slow evolution of rashes over body
c) Long-term carrier stages in patients
d) Life-long immunity after disease

1300. Infective diarrhea is caused by all except -
a) Rotavirus b)Calcivirus *(DNB Dec 09)*
c) Flavivirus d) Eterovirus

1301. In the case of dogbite the biting animal should be observed for at least - *(DNB Dec 09)*
a) 5 days b) 10 days
c) 15 days d) 3 weeks

1302. Prophylaxis of meningococcal meningitis is?
a) Ciprofloxacin b) Rifampicin *(DNB Dec 09)*
c) Penicillin d)Gentamycin

1303. All are zoonoses except - *(DNBDec 09)*
a) Typhoid b) Brucellosis
c) Q fever d) Plague

1304. A case of acute flaccid paralysis must be observed for how many days for residual weakness -
a) 30 days b) 42 days *(DNB Dec 09)*
c) 60 days d) 90 days

1305. Sputum positive TB is? *(DNB June 09)*
a) 1 out of 2 sputum sample +ve
b) 2 out of 3 sputum sample +ve
c) BECTEC+ve
d) None

1306. Under the revised National Tuberculosis Control Programme, schedule of treatment for category I patients is - *(DNB June 09)*
a) 2 $(HRZE)_3$ + 4 $(HR)_3$
b) 2 $(HRZE)_3$ + 4 $(HRE)_3$
c) 2 $(HRZES)_3$ + 1 $(HRZE)_3$ + 5 $(HRE)_3$
d) 2$(HRZ)_3$ + 4$(HR)_3$

1307. Which of the following about the composition of new ORS is wrong? *(DNB June 09)*
a) NaCl-2.6 grams/litre
b) KC1 -1.5 grams/litre
c) Glucose -13.5 grams/litre
d) Total osmolarity - 300 mmol/1

1308. Pulse Polio immunization was introduced in -
a) 1995 b) 2000 *(DNB June09)*
c) 1999 d)2001

1309. In multibacillary leprosy, the follow-up examination after adquate Rx should be done early for -
a) 3 years b) 5 years *(DNB Dec 08)*
c) 10 years d) 2 years

1310. Afull course of immunization against, Tetanus with 3 doses of Tetanus toxoid, confers immunity for how many years - *(DNB Dec 08)*
a) 5 b) 10
c) 15 d)20

1311. To achieve neonatal tetanus elimination, incidence of neonatal tetanus per 1000 live births should be reduced to less than - *(DNB Dec 08)*
a) 0.1 b)0.2
c) 0.5 d) 1.0

1312. Which is true of typhoid - *(DNB Dec 08)*
a) Female carriers axe less common
b) Male carriers though less are more dangerous
c) Gall bladder usually not involved in carrier state
d) Tetracycline is the DOC for carriers

1313. Chandler's index is used for - *(DNBDec 08)*
a) Ankylostoma duodenale
b) Ascaris lumbricoides
c) Strongyloides
d) Trichuris trichiura

1291)a 1292) c 1293)a 1294)d 1295)a 1296)b 1297)a 1298)a 1299)d 1300)c 1301)b 1302)b 1303)a 1304)c
1305) a 1306) a 1307)d 1308)a 1309)b 1310)a 1311)a 1312)b 1313)a

1314. As per WHO, leprosy is a public health problem if prevalence is - *(DNB Dec 08)*
a) 0.1% b)0.01%
c) 0.5% d) 1%

1315. Incubation period of plasmodium vivax is-
a) 5-7 days b) 7-10 days *(DNB June 08)*
c) 10-14 days d) 15-30 days

1316. Leprosy commonly spreads by - *(DNB June 08)*
a) Milk b) Droplet
c) Water d) Mosquitoes

1317. Rabies free country is - *(DNB June 08)*
a) USA b) Russia
c) Australia d) France

1318. Yellow fever is absent in India because -
a) Climatic conditions are not favourable
b) Virus is not present *(DNB June 08)*
c) Vector mosquito is absent
d) Population is immune

1319. To eradicate measles the percentage of population to be caccinated is at least_____ %-
a) 70 b) 80 *(DNB June08)*
c) 85 d) 95

1320. Scrub typhus is transmitted by- *(DNB June 08)*
a) Flea b) Mite
c) Tick d) Mosquito

1321. Targeted intervention for HIV is done for all except- *(DNB June 08)*
a) Commercial sex worker
b) Migrant laborers
c) Street children
d) Industrial worker

1322. All of the following are characteristics of the chicken pox rash except - *(DNB Dec 07)*
a) Rash occurs in crops
b) Pleomorphism is present
c) Is centripetal in distribution
d) Scab are infectious

1323. Measles epidemic can be anticipated when proportion of suceptible children in a community reaches - *(DNB Dec 07)*
a) 20% b) 40%
c) 60% d) 80%

1324. Which is not a zoonotic disease - *(DNB Dec 07)*
a) Giardia b) Leptospirosis
c) Brucellosis d) Rabies

1325. Example for "AMPLIFIER HOST" - *(DNB Dec 07)*
a) PiginJE
b) Dog in hydatid disease
c) Cattle in mad cow disease
d) Rat in plague

1326. Yellow fever vaccination starts protection after how many days of injection - *(DNB Dec 07)*
a) 5 days b) 10 days
c) 15 days d) 20 days

1327. Which one of the following diseases has the shortest incubation period - *(DNB Dec 07)*
a) Salmonella food poisoning
b) Staphylococcus food poisoning
c) Cholera
d) Diphtheria

1328. The most appropriate test to assess the prevalence of tuberculosis infection in a community is -
a) Mass miniature radiotherapy *(DNB June 07)*
b) Sputum examination
c) Tuberculin test
d) Clinical examination

1329. The most predominant type of polio virus during epidemics is - *(DNB June 0 7)*
a) Type I b) Type II
c) Type III d) Combined infection of II & III

1330. Last case of small pox came from - *(AIIHPH2001)*
a) Somalia b) Ethiopia
c) India d) Bangladesh

1331. Which of the following factors helped in smallpox eradication ? *(Delhi PG Mar. 09)*
a) Short incubation period of disease
b) Slow evolution of rashes over body
c) Long-term carrier stages in patients
d) Life-long immunity after disease

1332. If a mother has had measles, her newborn baby is immune to this disease for - *(Delhi PG Feb. 09)*
a) 4 to 6 months b) 6 to 12 months
c) 1 to 3 years d) 3 to 6 years

1333. Infective diarrhoea is caused by- *(TN 97)*
a) Rotavirus b)Calcivirus
c) Flavivirus d) Enterovirus

1334. The drug used by health workers in the management of acute respiratory infection - *(KARN 99)*
a) Cotrimoxazole b) Chloramphenicol
c) Benzyl penicillin d)Gentamycin

1335. Isolation is not needed for measles due to -
a) There are healthy carriers *(Jipmer 95)*
b) Carriers are convalascents
c) The infectivity in diseased is low
d) There are incubatory carriers

1336. Incubation period of measles is - *(MAHE 07)*
a) 1 -2 months b) 10-14 days
c) 20-22 days d) 1-2 days

1337. What is the period of infectivity in measles ? *(UPSC-I08)*
a) From 7 days before to 7 days after the rash
b) From 3 days before to 5 days after the rash
c) From 9 days before to 12 days after the rash
d) From 5 days before to 9 days after the rash

1338. Koplik spots is a feature of - *(Corned 07)*
a) Rubella b) Meseals
c) Tetanus d) Mumps

1314) b 1315) c 1316) b 1317)c 1318)b 1319)d 1320)b 1321)d 1322)d 1323)b 1324)a 1325)a 1326)b 1327)b
1328) c 1329) a 1330)a 1331)d 1332)a 1333)a,b,d 1334)a 1335)d 1336)b 1337)b 1338)b

1339. In an area not covered by measles immunization, the attack rate of measles is - *(UPSC 04)*
a) 70% b) 80%
c) 90% d) 100%

1340. A child was immunized at 6 months of age because of epidemic of measles. Now next step would be -
a) Administer vaccine as soon as he completes 9 months *(PGMCET07)*
b) Administer vaccine after 4 weeks
c) Administer along with DPT
d) Nothing to be done

1341. Measles vaccine at a primary health centre should be stored at which temperature ? *(UPSC-108,2K)*
a) -20°C
b) 0°C
c) +2°C to 8°C
d) Any temperature not exceeding room temperature

1342. Effficiency of measles vaccine - *(Jipmer 02)*
a) 55% b) 75%
c) 85% d) 100%

1343. True about measles vaccine is that it is - *(Amu 95)*
a) Thermolabile b) Thermostable
c) Both d)None

1344. If rubella occurs in 9-10 weeks of pregnancy what is the chance of transmission to the fetus-
a) 10% b) 20% *(JIPMER 99)*
c) 30% d)40%

1345. Rubella vaccination is contraindicated in all except-
a) Patient on immunosuppressant *(JIPMER 02)*
b) Girl with Leukemia
c) Girls between 11-14 years
d) Pregnancy

1346. The most infectious variety of diptheria is -
a) Anterior nasal diptheria *(UPSC2K)*
b) Posterior nasal diptheria
c) Faucial diptheria
d) Laryngeal dipiheria

1347. Which of the following statements is true regarding pertussis - *(MAHE05)*
a) Neurological complication rate of DPT is 1 in 50000
b) Vaccine efficacy is more than 95%
c) Erythromycin prevents spread of disease between children
d) The degree of polymorphonuclear leukocytosis correlates with the severity of cough

1348. Maternal antibodies do not occur for? *(DPG 11)*
a) Polio b) Diphtheria
c) Whooping cough d) Tetanus

1349. 3 year old sister of a neonate is suffering from pertussis, which has been documented by isolation and culture of the organism. Most appropriate statement regarding this clinical situation is -
a) If mother received pertussis vaccine, the neonate is protected *(MAHE 98)*
b) Hyperimmune globulin is indicated for the neonate
c) Erythromycin prophylaxis is indicated in the neonate
d) DPT vaccine is recommended for the elder child

1350. With reference to meningococcal meningitis, which one of the following statement is not correct- *(UPSC 07)*
a) Fatality in untreated cases is 60 percent
b) Disease spreads mainly by droplet infection
c) Treatment of cases has no significant effect on epidemiological pattern of disease
d) Mass chemoprophylaxis causes immediate drop in the incidence rate of cases

1351. Most indicative sign of pneumonia in one year old child with cough and fever is - *(JIPMER 95)*
a) Intercostal retracion and fever
b) Grunting and resp. rate more than 60
c) Temperature 39.5° and 60 resp. rate
d) None of the above

1352. A 2-years old female was brought to PHC with a history of cough & fever for 4 days with inability to drink for last 12 hours. On examination, the child was having weight of 5 kg and respiratory rate of 45/ minutes with fever. The child will be classified as suffering from - *(MH11)*
a) Very severe disease b) Severe Pneunonia
c) Pneumonia d) No Pneumonia

1353. A 'Case' in TB is defined as - *(DelhiPGFeb. 09)*
a) X-ray positive
b) Culture positive
c) SputumAFB positive
d) Tuberculosis positive

1354. Under the revised National Tuberculosis Control Programme, schedule of treatment for category I patients is - *(UPSC 04)*
a) 2 $(HRZE)_3$+4 $(HR)_3$
b) 2 $(HRZE)_3$ + 4 $(HRE)_3$
c) 2 $(HRZES)_3$ + 1 $(HRZE)_3$ + 5 $(HRE)_3$
d) 2 $(HRZ)_3$ + 4 $(HR)_3$

1355. Minimum TB Resistance is seen with which drug- *(Jharkand 03)*
a) Isoniazid b)Rifampicin
c) Streptomycin d)None

1356. In India, maximum cases ofTuberculosis in AIDS patient are due to- *(Bihar 03)*
a) M. tuberculosis b) M. avium Intracellular
c) M. Serofulaceum d) M. akari

1357. If after 2 months of conventional antituberculous therapy, sputum smear examination is negative but culture is positive, it indicates - *(APPGE 05)*
a) Treatment failure
b) Transitional resistance
c) Resistant tuberculosis
d) Category-II failure

1339) c 1340) a 1341)c 1342)None 1343)c 1344)None 1345)c 1346)a 1347)c 1348)c 1349)c 1350)a 1351)c 1352) a 1353) c 1354)a 1355)c 1356)a 1357)b

1358. Sputum positivity in T.B. is - *(Jipmer 05)*
a) More sensitive than specific
b) More specific than sensitive
c) More sensitive as well as specific
d) Non sensitive or specific

1359. "DOTS indicates - *(Karnataka - PG MEE 2006)*
a) Short term treatment under supervision
b) Short term treatment without
c) Long term treatment with supervision
d) Long term treatment without supervision

1360. TB pericarditis would be included in which category ofRNTCP- *(PGMCET07)*
a) Category I b) Category II
c) Category III d) Category IV

1361. A patient with tubercular pleural effusion falls under category of WHO grading of TB -
a) I b) II *(Corned07)*
c) m d)IV

1362. If a new sputum smear positive patient of tuberculosis continues to he smear positive at the end of intensive phase of category I treatment under DOTS, further management of this patient would be to- *(UPSC 07)*
a) Start category I treatment again
b) Treathim as failure and start category II treatment under DOTS
c) Continue the intensive phase or treatment for one more month
d) Start continuation phase under category I

1363. A person with tuberculosis on domiciliary treatment is expected to do all, except? *(DPG11)*
a) Dispose sputum safely
b) Use separate vessels
c) Collect drugs regularly
d) Report to PHC if new symptoms arise

1364. Under DOTS chemotherapy, which one of the following is not a correct dose for an adult weighing up to 60 kg - *(UPSC 07)*
a) Rifampicin 600 mg b) Isoniazid 600 mg
c) Pyrazinamide 1500 mg d) Ethambutol 1200 mg

1365. What is the standard dose of PPD for Mantoux test- *(Corned 07)*
a) 5TU b) 10TU
c) 15TU d)20TU

1366. Tonsillectomy and IM injections should be avoided during polio epidemic because - *(UPSC 2002)*
a) It is painful
b) It may lead to high grade fever
c) Risk of paralytic poliomyelitis increases
d) Risk of septicaemia

1367. Pulse polio in India is given - *(CUPGEE99)*
a) Below5yrs. b)Below4yrs.
c) Below 1 yrs. d) None

1368. Pulse polio immunisation is done in India in Dec-Jan because of - *(AMC 99)*
a) Administrative convenience
b) Easiness of maintaining cold chain
c) As a tradition
d) All of the above
e) None of the above

1369. The Pulse Polio Immunization (PPI) was first launched in India in the year - *(Corned 09)*
a) 1995 b) 1996
c) 1999 d) 2000

1370. The most predominant type of polio virus during epidemics is- *(Orissa 98)*
a) Type I b) TypeII
c) Type III d) Combined infection of II & III

1371. Which of the following is a characteristic of poliomyelitis- *(ICS 05)*
a) Initial febrile illness followed by development of asymmetrical paralysis
b) Symmetrical muscle weakness with frequent paraesthesia but normal reflexes
c) Ascending motor paralysis with preservation of reflexes and sensation
d) Pain in the affected limb with sensorimotor deficit

1372. A country is certified for Polio eradication, if there is no virologically confirmed diagnosed case of polio for the last-------years - *(MAHE 05)*
a) 1 b)2
c) 3 d)5

1373. Which one of the following statements is incorrect with regards to pulse polio immunization programme?
a) PPI aims at eradication of poliomyemilitis in India
b) Wild virus is replaced by vaccine virus
c) PPI aims at single dose administration of OIPV on a single day *(Karnataka - PG MEE 06)*
d) It can be extended to even previously fully immunized children of 0-5 years of age group

1374. Which of the following is not true about sabin vaccine? *(MH11)*
a) Three doses are given in primary immunization
b) The doses are given at 4-6 weeks interval
c) Given intramuscularly
d) Contains all the 3 strains

1375. All are true regarding Acute flaccid paralysis in National polio Eradication programme except- *(UP 08)*
a) Acute flaccid paralysis in a child < 15 years ofage
b) All cases of AFP should be reported irrespective of diagnosis within 6 months of onset stool
c) T Two specimens collected within 14 days of paralysis onset and at least 24 hours apart
d) 30 days follow up examination

1376. Most common cause of epidemic of infective hepatitis is- *(Orissa R)*
a) HAV b)HBV
c) HCV d)HEV

1358) b 1359) a 1360)a 1361)a,c 1362)c 1363)b 1364)a 1365)a 1366)c 1367)a 1368)a 1369)a 1370)a 1371)a 1372)d 1373) c 1374)c 1375)d 1376)d

1377. A contact carrier in cholera has the following characteristic - *(Karnataka 02)*
a) Gall bladder is infected
b) Stools are not positive for cholera vibrio
c) Does not play any role in spread of infection
d) Duration of carrier state is less than 10 days

1378. ORS contains how much potassium - *(SGPGI05, A192)*
a) 20 b)30
c) 40 d) 10

1379. A freshly prepared oral rehydration solution should not be used after - *(COMEDK 05)*
a) 4hrs b)6hrs
c) 12hrs d)24hrs

1380. Amount of ORS to be given in the first 4 hours to a child with some dehydration is - *(Corned 09)*
a) 50 ml/kg body wt b) 75 ml/kg body wt
c) 100 ml/kg body wt d) 200 ml/kg body wt

1381. Which of the following carriers recieved source of infection from other carriers is called - *(UP 07)*
a) Incubatory carrier b) Convulescent carrier
c) Healthy carrier d) Chronic carrier

1382. Duration of immunity after typhoid vaccination is for - *(St. Johns 02)*
a) 3 years b) 5 years
c) 7 years d) 6 months

1383. Typhoid vaccine efficacy is- *(CMC-Vellore)*
a) 85% b) 50%
c) 95% d) 100%

1384. Case fatality rate of typhoid is - *(AIIHPH 2K)*
a) 10% b)20%
c) 30% d) 40%

1385. The most practical way of treating typoid carrier is - *(St **Johns** 02)*
a) Cholecystectomy b) Chemotherapy
c) Vaccination d) Isolation

1386. Time required for development of parasite from the gametocyte to sporozite stage in mosquito is called as- *(Corned08, UPSC09)*
a) Extrinsic incubation period
b) Intrinsic incubation period
c) Generation time
d) Median incubation period

1387. Urban malaria is spread by - *(AIIMS 97, KARN 94)*
a) Anopheles stephensi
b) Anopheles culcifacies
c) Culex fatigans
d) Mansonides

1388. Annual blood smear examination rate is an indicator of- *(JIPMER 98)*
a) Disease rate (Prevalence)
b) Operational efficiency
c) % of transmission of malaria
d) Infectivity rate

1389. Which one of the following is an indicator of operational efficiency for Malaria Control Programme in India - *(UPSC-II08; UPSC 07)*
a) API (Annual Parasite Incidence)
b) ABER (Annual Blood Examination Rate)
c) AFI (Annual Falciparum Incidence)
d) SPR (Slide Positively Rate)

1390. Most sensitive indicator of recent transmission of malaria of- *(MH11)*
a) Infant parasite rate b) ABER
c) Spleen rate d) Annual parasite index

1391. Which of the following is not monitored in malaria surveillence now - *(JIPMER 2K)*
a) ABER
b) Infant parasite rate
c) Annual parasite incidence
d) Slide positivity rate

1392. In a community with one lakh population, 20,000 slides were examined in a particular year. Out of these, 100 were positive for malarial parasite. What is the Annual Parasite Incidence (API) in this community ? *(UPSC-II 09)*
a) 5 b)2
c) 1 d)0.5

1393. For radical treatment of malaria, primaquine is given in dosage of - *(DPGEE 08)*
a) 15 mg per day for 3 days
b) 10 mg per day for 7 days
c) 15 mg per day for 5 days
d) 5 mg per day for 10 days

1394. Incubation period for filariasis is - *(TN03)*
a) 1 - 8 months b) 8 -16 months
c) 16-24 months d)> 24 months

1395. Which is not a zoonotic diseage - *(U.P 96)*
a) Giardia b)Leptospirosis
c) Brucellosis d) Rabies

1396. In human dioploid cells rabies vaccine the schedule of immunisation is - *(AI98, 96, UPSC 07)*
a) 0,3,4,14,30,0b) 0,5,14,30,900
c) 0,3,7,14,30,90 d) 0,37,14,30,70

1397. In the Rabies vaccine schedule of 0,3,7,14,30,90, 0 means- *(ALLHPH 2001)*
a) Day of dog bite
b) Day of first injection
c) Day of symptom onset
d) Day of dog death

1398. Which ARV has been recommended by WHO as the most effective - *(TN 95)*
a) Duck cell vaccine
b) Chick fibroblast vaccine
c) HDCV
d) Sheep brain vaccine

1399. In the case of dogbite the biting animal should be observed for at least - *(KARN. 96)*
a) 5 days b) 10 days
c) 15 days d) 3 weeks

1377) d 1378) a 1379)d 1380)b 1381)None 1382)a 1383)a 1384)None 1385)b 1386)a 1387)b 1388)b 1389)b 1390) a 1391) b 1392)c 1393)c 1394)b 1395)a 1396)c 1397)b 1398)b 1399)b

1400. Usual time for symptoms to appear in Rabid animal-
a) 2 days b) 7 days *(Manipal 04)*
c) 10 days d) 1 month

1401. Anti rabies vaccine is prepared from - *(COMED 06, UPSC 01)*
a) Wild vims b) Live attenuated vims
c) Street vims d) Fixed vims

1402. A patients present with dogs bite in the palm, fingers and oozing of blood on the neck regions, belongs to which class of the exposures - *(UP 08)*
a) Class I b) Class II
c) Class III d)None

1403. 17 D vaccine is used for the prevention and control of- *(Corned 09)*
a) Yellow fever
b) Japanese encephalitis
c) Haemorrhagic fever
d) Dengue

1404. The breeding ground for the vectors of Japanese B virus is - *(UPSC 04)*
a) Paddy field b) Mixed garbage
c) Cooler water d) Stale food

1405. All are true about J.E. except - *(MP 97)*
a) Transmitted by culex mosquito
b) Death occur in 9 days
c) Mortality 80 to 90%
d) Prodromal symptoms at 9th day

1406. Agent in KFD - *(MAHE 05; Kerala 94)*
a) Soft tick b) Hard tick
c) Louse d) Bug

1407. Dengue haemorrhagic fever is diagnosed by- *(Delhi PG Feb. 09)*
a) Acute onset of high fever, presence of petechiae, epistaxis and platelet count > 2 lakh
b) Acute onset of high fever, positive toumiquest test, epistaxis or malena and malena and platelet count >1.5 lakh
c) Acute onset of high fever 2 to 7 days, associated with hemorrhagic manifestation e.g. hemoptysis and platelet count less than 1.5 lakh
d) Acute onset of high fever, positive tourniquet test, bleeding gum and platelet count less than 1.0 lakh

1408. In an epidemic of plague, within 48 hours of application of insecticides by spraying the 'X' cheopis index should fall to - *(Delhi 96)*
a) 1 b)0
c) 2 d)5

1409. In total flea index true is - *(MP 98)*
a) Average all Xenopsella cheopis per rat
b) Average number of all fleas of all species per rat
c) Average number of all fleas in a burrow
d) Average number of all fleas in all species of rats to per burrow

1410. What is the average number of fleas of each species per rodent called - *(UPSC 0 7)*
a) General Flea index
b) Specific Flea index
c) Incidence of Flea Species
d) Flea infestation Rate

1411. Most contagious plague is - *(TN 03)*
a) Bubonic plague b) Septicemic plague
c) Pneumonic plague d) Wild plague

1412. Which one of the following ricketsial diseases is transmmited by louse - *(KERALA 95)*
a) Murine typhus
b) Rockey mountain spotted fever
c) Q- fever
d) Endemic typhus

1413. Which of the following is not transmitted by Arthropod- *(PGMCET07)*
a) Q fever
b) Rickettsial pox
c) Rocky mountain spotted fever
d) Relapsing fever

1414. Best preventive measure against tetanus neonatorum - *(Jipmer 95)*
a) Active immunization of mother
b) Passive immunization of child
c) Active immunization of child
d) Passive immunization of mother

1415. The active immunity offered by Tetanus toxoid is effective in nearly - *(HP 2006)*
a) 25% b) 50%
c) 75% d) 100% of the patients

1416. Booster dose of Tetanus toxoid should be given every?
a) 1 year b) 5 year *(MH11)*
c) 10 year d) 15 year

1417. Which one of the following is/are used as operational indicators in antileprosy activity -
a) Incidence *(UPSC 02)*
b) Incidence and prevalence
c) Relapse rate and case detection ratio
d) Incidence case detection ratio

1418. The multidrug regimen under the National Leprosy Eradication Programme for the treatment of all multibacillary leprosy would include - *(UPSC97)*
a) Clofazimine, thiacetazone and dapsone
b) Clofazimine, rifampicin and dapsone
c) Ethionamide, rifampicin and dapsone
d) Propionamide, rifampicin and dapsone

1419. True about "ROM therapy" is - *(MAHE 05)*
a) For single lesion b) Minocycline is used
c) Single dose is given d) All the above

1420. Adequate treatment for multibacillary leprosy is for-
a) 2 years b) 5 years *(MAHE 05)*
c) 10 years d) 7 years

1400) c 1401) d1402) c 1403)a 1404)a 1405)c 1406)b>a 1407)d 1408)b 1409)b 1410)b 1411)c 1412)None
1413) a 1414) a 1415)d 1416) b 1417)c 1418)b 1419) d 1420)None

1421. WHO recommended modern single drug therapy in paucibacillary leprosy is - *(UP 07)*
a) Rifampicin, clofazimine, Dapsone
b) Rifampicin, Dapsone
c) Rifampicin, clofazimine
d) Clofazimine, Dapsone

1422. In lepromatous leprosy the single drug dapsone is continue for - *(UP 08)*
a) 9 days b) 90 days
c) 1 years d) 10 years

1423. Which one of the following statements about leprosy is true? *(UPSC 04)*
a) Group surveys for case detection are carried out when prevalence of leprosy is less than 1 per 1000
b) For determining the bacteriological index, ++ in a smear indicates 2 bacilli in every field
c) Minimum duration of treatment for paucibacillary cases is for 9 months
d) Minimum duration of treatment for multibacillary case is for 12 months

1424. Earliest sensation to be lost in Hansens disease is -
a) Pain b) Touch *(DPG03)*
c) Vibration d) Temperature

1425. Which is a noveneral form of treponemal infection-
a) Yaws b)Pinta *(IN95)*
c) Syphilis d)GV

1426. Which of the following is an example of a non venereal disease - *(CUPGEE 96)*
a) Endemic syphilis b) Gonorrhoea
c) Chancroid d)LGV

1427. Commonest trophozoite infection by sexual intercourse - *(Orissa 99)*
a) Entamoeba histolytica
b) Trichomonas vaginalis
c) Trepanomapalidium
d) Giardia intestinales

1428. The highest number of AIDS cases in India have occurred in the age group of - *(Karnat 05)*
a) 0.14 years b) 15-29 years
c) 30-44 years d) Above 45 years

1429. In the heterosexual transmission (from infective to non infective partner) of Human Immuno-deficiency Virus infection (HIV) - *(Karnataka 03, NIMS 96)*
a) There is a greater risk of transmission from man to a woman
b) There is greater risk of transmission from woman to man
c) Risk is equal either ways
d) HIV infection is not transmission by heterosexual act

1430. All are major criteria for AIDS except - *(AP 96)*
a) 10% weight loss b) Diarrhoea for 1 month
c) Cough for 1 month d) Fever for 1 month

1431. Mortality for AIDS - *(Orissa R)*
a) 50% b) 90%
c) 90% d) 100%

1432. In STD cases, a patient is asked to name other persons is his socio sexual group, then they are investigated. This is a example of - *(PGMCET 0 7)*
a) Screening b) Contact tracing
c) Mass screening d) High risk screening

1433. Chandlers index is 225. What is the interpretation-
a) Potential danger to community *(UPSC 02)*
b) No danger
c) Minor public health problem
d) Major public health problem

1434. The most important reservoir of Leishmaniasis in India is - *(JIPMER 2002)*
a) Dogs
b) Rodents
c) Case of acute visceral leishmaniasis
d) Case of postkalazar dermal leishmaniasis

1435. Not true about Kala-Azar is-*(UPSC 91, Delhi 89, 86)*
a) Sandfly is the vector
b) Man is the only reservoir in India
c) Aldehyde test is diagnostic
d) Man has flagellar stage of organism

1436. Which one of the following is a characeristic of epidemiology of leishmaniasis in India - *(DPG 03)*
a) It does no occur at high altitudes
b) Incubation period is 3-8 days
c) Females are more affected
d) It is not a fatal disease

1437. Which viral infection always causes clinical disease in human beingss - *(Kerala 96)*
a) Rubella b) Poliomyelitis
c) Measles d) Chicken pox
e) Rabies

1438. The main vector of Dengue fever is - *(Karn 11)*
a) Aedes aegypti b) Aedes albopictus
c) Aedes polynesiensis d) Aedes scutellaris

1439. Dengue virus appears to have a direct man-mosquito-man cycle in India. The mechanism of dengue virus survival in the inter-epidemic period is - *(DPG 11)*
a) Non-human reservoir
b) Dormant or latent phase in man
c) Transovarian transmission of the virus
d) Poor housekeeping by the public

1440. The mass treatment of trachoma is undertaken if the prevalence in community is - *(DELHI96)*
a) 3% b) 10%
c) 5% d) 6%

1441. Maternal antibodies do not occur for -*(ALLHBH 01)*
a) Polio b)Diptheria
c) Whooping cough d) Tetanus

1442. Mass treatment strategy is for treating-*(Jipmer 03)*
a) Plague b)Filariasis
c) Cholera d) Diphtheria

1443. White disease is synonymous with - *(PGI88)*
a) T.B. b)AIDS
c) Syphilis d) Herpes

1421)b 1422) c 1423)d 1424)b 1425)a,b 1426) a 1427) b 1428)c 1429)a 1430)c 1431)d 1432)b 1433)a 1434)c 1435) c,d 1436) a 1437) c 1438)a 1439)c 1440)c 1441)c 1442)b 1443)b

1444. AIDS was first detected in India in the year -
a) 1975 b) 1981 *(Kamat99)*
c) 1986 d) 1991

1445. The earliest case of severe acute respiratory syndrome (SARS) was reported in - *(Corned 07)*
a) China b) Singapore
c) Vietnam d) Toronto

1446. With statement to the epidemiology of severe Acute Respiratory syndrome (SARS), which one of the following statements is not correct -
a) Patient is most infectious during the first five days of illness *(UPSC 07)*
b) No evidence of mother to child transmission is observed
c) Children are rarely affected
d) No evidence of child to child transmission is observed

1447. Which of the following actions can help in the prevention of HIV transmission ? *(Delhi PG Mar. 09)*
a) Use of copper T by sex workers
b) Using safe injection techniques
c) Avoidance of smoking by drivers
d) Prohibiting voluntary blood donation

NON-COMMUNICABLE DISEASES

1448. The preferred public health approach to control non-communicable diseases is - *(AIIMS Nov 02)*
a) Shift the population curve of risk factors by a population based approach.
b) Focus on high risk individuals for reduction of risk
c) Early diagnosis and treatment of identified cases.
d) Individual disease based vertical programmes

1449. Recommended interventions to reduce the incidence of Coronary artery disease include the following except- *(AI11)*
a) Dietary cholesterol < 100/mg/1000 kcal/day
b) Salt intake < 5 gm
c) No alcohol
d) Fat intake < 10% of total energy

1450. The commonest cause of death in the sophisticated world- *(IN 98)*
a) Ischemic heart disease b) Accidents
c) Infectious disease d) None of the above

1451. Following facts true stand for coronary heart disease in India, except - *(AI 99)*
a) CHD presents a decade later than in western countries
b) Diabetes mellitus is the commonest cause
c) More common in males than females
d) Heavy smoking is an etiological factor

1452. All of the following are the well established modifiable risk factors of coronary heart disease except- *(UPSC)*
a) Cigarette smoking
b) Drinking beverages
c) High blood pressure
d) Elevated serum cholesterol

1453. Which one of the following statements about influence of smoking on risk of coronary heart disease (CHD) is not true ? *(AI 05)*
a) Influence of smoking is independent of the risk factors for CHD
b) Influence of smoking is only additive to other risk factors for CHD
c) Influence of smoking is synergistic to other risk factors for CHD
d) Influence of smoking is directly related to number of cigarettes smoked per day.

1454. Which one of the following sets of components of cigarette smoke is a casual agent of coronary artery disease - *(UPSC 99)*
a) Tar and nicotine
b) Nicotine and carbon monoxide and tar
c) Corbon monooxide and Tar
d) Carbon dioxide

1455. Which of the following is most strongly associated with coronary heart disease ? *(AI 06)*
a) Apolipoproteins b)VLDL
c) HDL d) Totallipoproteins

1456. Which of the following is maximally associated with heart disease - *(AIIMS Nov -10)*
a) HDL b)VLDL
c) LDL d) Chylomicrons

1457. Dietary changes advocated by WHO for prevention of heart diseases include all of the following except-
a) A decrease in complex carbohydrateconsumption
b) Reduction in fat intake to 20-30 precent of caloric intake *(AI 04)*
c) Consumption of saturated fats be limited to less than 10% of total energ y intake
d) Reduction of cholesterol to below lOOmg per 1000 kcl per day

1458. Primary prevention in coronary heart diseases -
a) Exercise in high risk area *(PGIDec 07)*
b) BP monitoring
c) Salt restriction
d) Statins
e) TMT

1459. Primordial prevention in myocardial infarction are all except- *(All India 97)*
a) Maintenance of normal body weight
b) Change in life style
c) Change in Nutritional habits
d) Screening for hypertension

1460. TVue about Cardiovascular diseases (CVD) -
a) Urban and rural areas have equal incidence
b) RHD is an important cause of CVD *(PGI May 10)*
c) Primordial prevention is best strategy
d) Coronary heart disease cause 25% of total death

1444)c 1445) a 1446)a 1447)b 1448)a 1449)d 1450)a 1451)a,b,c 1452)b 1453)b 1454)b 1455)a 1456)c 1457) a 1458) a,b,c,d 1459) d 1460) c_5d

1461. CAD primodial prevention is *by-(NEET/DNB Pattern)*
a) Lifestyle change b) Coronary bypass
c) Treatment of CAD d) None

1462. Which one of the following intervention studies on coronary artery disease did not observe significient changes in mortality or risk factors sine the control group was not properly chosen - *(UPSC 07)*
a) Stanford - Three Community Study
b) The North Kerelia Project
c) Multiple Risk Factor intervention Trial
d) Lipid Research Clinic Study

1463. Which of the following study was conducted to determine that community health education contributes to reduced risk of cardiovascular disease? *(MH11)*
a) Stanford study
b) North Kerelia study
c) Framingham heart study
d) All of the above

1464. Which of the following studies have given coronary risk factor - *(NEET/DNB Pattern)*
a) Framingham b) Stanford study
c) North Kerala d) MONICA

1465. The non-modifiable risk factor for hypertension is -
a) Obesity b) Age *(Corned 07)*
c) Salt intake d) Environment stress

1466. Measure of primary prevention of hypertension include all of the following except - *(AI97)*
a) Weight reduction
b) Exercise promotion
c) Reduction of salt intake
d) Early diagnosis of hypertension

1467. All are measures of primordial prevention of hypertension, except - *(AIIMS May 94)*
a) Dietary changes
b) Restrain smoking
c) Identification of hypertensive
d) Regular physical exercise

1468. Desired parameter for control of HT -*(PGIJune 00)*
a) Cholesterol/HDL<3.5
b) HDL / cholesterol ration <3.5
c) LDL / cholesterol > 10mg%
d) HDL < 30 mg%
e) Cholesterol level < 200 mg/dl

1469. The term "Tracking'' of blood pressure refers to -
a) 24 hr BP monitoring *(Kerala 04)*
b) Identifying children at risk of developing hypertension at future date
c) Pictorial representation of BP
d) BP control with nifedipine

1470. A person is obese if he is overweight by...% above the accepted standards - *(UPSC 85,86 JIPMER 80,86)*
a) 5% b) 10%
c) 15% d) 20%

1471. Which one of the following is the correct statement. The body mass index is used as an indicator of obesity and is calculated as a ratio of the body weight to ? - *(UPSC 06)*
a) Height b) Square root of height
c) Square of height d) Cube of height

1472. What will be the BMI of a male whose weight is 89 kg and height is 172 cm - *(AI 05)*
a) 27 b)30
c) 33 d)36

1473. For obesity BMI should be - *(AI 07)*
a) > = 20 b) > = 50
c) >=40 d) > = 30

1474. BMI for normal weight - *(NEET/DNB Pattern)*
a) 18.5-22.99 b) 23.0-24.99
c) ≥25 d) ≥ 30

1475. Overweight BMI?? *(NEET/DNB Pattern)*
a) 25 to 29.99 b) 15-18
c) 18-20 d) None

1476. BMI cut off for obesity is -*(NEET/DNB Pattern)*
a) 28 b) 30
c) 32 d) 40

1477. The chosen method for measurement of obesity is -
a) Skinfold thickness *(PGI 80, AIIMS 83)*
b) Body electrolyte count
c) Height - weight- sex charts
d) Basal oxygen consumption

1478. Obesity indices are - *(PGI Dec 04, 98)*
a) Broca's index b) Ponderal index
c) Quetelet index d) Corpulence index
e) Lorentz's formula

1479. Morbid obesity causes death due to - *(PGI 88)*
a) CVS complication
b) Pickwickian syndrome
c) Hypothyroid crisis
d) Cushing syndrome

1480. Primary prevention of obesity - *(PGI Dec 07)*
a) Low fiber diet
b) High fiber diet
c) High cholesterol diet
d) High intake of protein

1481. Which of the following is height independent index - *(NEET/DNB Pattern)*
a) Ponderal b)Brocas
c) Corpulence d)Lorenfz

1482. A women with Body Mass index of 20 is -*(UPSC 07)*
a) Undernourished b)Normal
c) Overweight d)Obese

1483. One of the following is not true of Ponderal index -
a) It is measure of obesity *(Kerala 2K)*
b) Is height & weight independent
c) Is height & weight dependent
d) Age independent
e) Used for measumment of body weight in adults

1484. Body mass index is also known as - *(UP 07)*
a) Borca's index b) Corpulence inded
c) Quetelet's index d) Lorentz's formula

1461) a 1462) c 1463) a 1464) a 1465)b 1466) d 1467) c 1468) a 1469)b 1470) None 1471) c 1472) b 1473) d
1474) a 1475) a 1476)b 1477)a 1478)A11 1479) a 1480) b 1481)c 1482)b 1483)b 1484)c

1485. What is the health indicator obtained by dividing body height (in centimetres) by cube root of body weight (in kilograms) - *(UPSC-II08)*
a) Quetelet's Index b) Broca Index
c) Ponderal Index d) Corpulence Index

1486. Commonest carcinoma in men in tropical countries-
a) Ca rectum b) Ca oral cavity *(AI97)*
c) Ca testis d) Ca bladder

1487. The most common cancer, affecting both male and females of the world, is - *(AIIMS May 05,*
a) Cancer of the pancreas *Delhi 89, UPSC 87)*
b) Buccal mucosa cancer
c) Lung cancer
d) Colo-rectal cancer

1488. Most common cancer world *wid&-(NEET/DNB Pattern)*
a) Lung b) Prostate
c) Liver d) Kidney

1489. The most common cancer affecting Indian urban women in Delhi, Mumbai and Chennai is - *(A1PGME*
a) Cervical cancer b) Ovarian cancer *05)*
c) Breast cancer d) Uterine cancer

1490. Most common cancer reported in India is- *(AIIMS Dec 94)*
a) Cancer cervix b) Cancer breast
c) Cancer oral cavity d) Cancer lung

1491. Incidence of cancer of breast in males in India -
a) 3% b) 5% *(NEET/DNB Pattern)*
c) 0 d) None

1492. Beer consumption is associated with - *(AUHPH2K)*
a) Carcinoma cervix b) Carcinoma liver
c) Carcinoma rectum d) Carcinoma colon

1493. Occupational cancer involve following organs except-
a) Lung b) Breast *(AIIMS May 08)*
c) Bladder d) Liver

1494. Most common occupational cancer in India-(147*08)*
a) Skin cancer b) Lung cancer
c) Bladder cancer d) Brain cancer

1495. Nicotine responsible for oral cancer is - *(NEET7*
a) 10% b) 40% *DNBPattern)*
c) 90% d) 60%

1496. In which of the following disease, the overall survival is increased by screening procedure - *(AIIMSMay*
a) ProstateCa b) Lung Cancer *08)*
c) Colon Ca d) Ovarian Ca

1497. All of the following statements relating to lung carcinoma and occupation are true except - *(AI98)*
a) Risk is increased
b) Takes long time to develop
c) It takes less time to develop as compare to general population.
d) It takes more time develop as compare to general population

1498. Screening in general population done in cancers of-
a) Breast b) Colon *(PGIDec04)*
c) Cervix d) Ovarian
e) Pancreatic

1499. Which one of the following is the most sensitive and specific screening test to detect breast cancer-
a) Regular X-ray *(UPSC 2K*
b) Self breast examination *Kerala 01, 91)*
c) Mammography
d) Regular biopsy

1500. The commonest cancer of adult man in India is -
a) Ca lung b) Ca colon *(AI 91)*
c) Ca stomach d)Aerodigestive Ca

1501. According to WHO, blindness is defined as a visual acuity of the better eye, less than-*(NEET/DNB Pattern*
a) 6/60 b) 5/60 *AIIMS Nov 05, AI 91)*
c) 4/60 d) 3/60

1502. According to the world Health Organization, the definition of blindness is- *(AI 06)*
a) Visual acuity < 6/60 in the better eye with available correction
b) Visual acuity < 3/60 in the better eye with available correction
c) Visual acuity < 6/60 in the better eye with best correction
d) Visual acuity < 3/60 in the better eye with best correction

1503. 46 years old female in Eye OPD presents with right eye vision 6/60 and left eye vision as 3/60- *(HP 2006)*
a) Socially blind b) Low vision
c) Economically blind d) Normal vision

1504. The most common cause of blindness in India is - *(AIIMSNOV05)*
a) Cataract b) Trachoma
c) Refractive errors d) Vitamin A deficiency

1505. Taking the definition of blindness as visual activity less than 3/60 in the better eye, the number of blind persons per 100, 000 population in India is estimated to be - *(AIIMS 03)*
a) 500 b) 700
c) 1000 d) 1500

1506. The most common cause of ocular morbidity in India is- *(AI06)*
a) Cataract b) Conjunctivitis
c) Refractive error d) Trachoma

1507. All are common cause of blindness in children in India except - *(AI 07)*
a) Malnutritionb) Ophthalmia neonatorum
c) Glaucoma d)Congenital dacryocystitis

1508. For every 1,00,000 population, the highest prevalence of blindness in the world is seen in- *(AIIMS May 04)*
a) Sub-Saharan Africa b) South Asia
c) Eastern Europe d) Latin America

1509. The visual acuity needed as cut-off for differentiating normal from abnormal children in the school vision screening programme in India is - *(HP 2006)*
a) 6/6 b)6/9
c) 6/12 d) 6/90

1485) c 1486) b 1487)c 1488)a 1489)c 1490)c 1491)c 1492)c 1493)b 1494)a 1495)c 1496)c 1497)d
1498) a,b,c,d 1499)c 1500)d 1501)d 1502)d 1503)b 1504)a 1505)b 1506)c 1507)d 1508)a 1509)b

1510. Under NPCB, screening of school children is first done by - *(AIIMS Nov 0 7)*
a) School teachers
b) Village health guide
c) Ophthalmologic assistant
d) Medical officer

1511. Under the National Programme for Control of Blindness, the goal is to reduce the prevalence of blindness to a level of-*(Corned 08,MAHE 98, TN 98)*
a) 0.1% b) 0.3%
c) 0.5% d) 1%

1512. All of the following is true regarding blindness except- *(Manipal 2006)*
a) There is estimated 45 million people blind world-wide
b) 20% of cases blindness in India is due to cataract
c) Most common cause of blindness in India is cataract
d) Visual acuity less than 3/60 is blindness

1513. Percentage of blindness due to cataract in India -
a) 55 b)60 *(PGIDEC96)*
c) 75 d)80

1514. The WHO definition for blindness is the inability of counting fingers in daylight at a minimum distance of- *(UPSC07)*
a) 3 feet b) 6 feet
c) 3 metres d) 6 metres

1515. Other than cataract, which one among the following is the highest prevalent cause of blindness in the world- *(UPSC-II09)*
a) Corneal opacity b) Diabetic retinopathy
c) Glaucoma d) Trachoma

1516. All of the following statements about rheumatic fever/heart disease epidemiology in India are true except- *(AIIMSNov 02)*
a) Its prevalence varies between 2 to 11 per 1000 children aged 5-16 years
b) Mitral regurgitation is the commonest cardiac lesion seen
c) It occurs equally in females and males.
d) Rheumatic fever occurs in about 2% of streptococcal sore throats

1517. NOT a feature of Rheumatic heart disease in India is - *(AIIMS Dec 94)*
a) CHF and cardiomegaly in most of the cases
b) Affects younger age group
c) Aortic valve is most commonly affected
d) School going population is most affected

1518. Which is the least common cause of heart disease in India - *(PGI79, AMC 87)*
a) Rheumatic b) Hypertensive
c) Ischaemic d) Congenital

1519. The commonest heart disease In India is - *(UPSC 84, 86, AMC 84,87, Kerala 94)*
a) Congenital b) Rheumatic
c) Hypertensive d) None of the above

1520. Prevalence of RHD in children in India-
a) 3/1000 b) 6/1000*(BURDWAN2K)*
c) 8/1000 d) 10/100

MISCELLANEOUS

1521. India causing maximum death -*(NEET/DNB Pattern)*
a) Drowning b) Road traffic accident
c) Bums d) Poisoning

1522. Commonest cause of stroke in our country-
a) Thrombosis b) Embolism
c) Haemorrhage d) Infarction

1523. The prevelance of diabetes mellitus in India is-
a) 2-5% b) 5 % *(TN95)*
c) 5-10% d) 10-15%

1524. Giving Benzathine penicillin in RHD is a type of -
a) Primary prevention *(AIIMS Dec 95)*
b) Secondary prevention
c) Tertiary prevention
d) Primordial prevention

1525. WHO criteria for diagnosis of diabetes is -*(MP 98)*
a) Venous blood fasting sugar 140 to 200 mg/ 100ml
b) Venous blood fasting sugar 120 to 180 mg/100ml
c) Venous blood fasting sugar 120 to 200 mg/100ml
d) Venous blood fasting sugar 140 to 180 mg/100 **ni**

1526. STEPS is the WHO recommended tool for -
a) Surveillance of non-communicable diseases and their risk factors *(AI09, AIIMS May 10, 09)*
b) Surveillance of communicable diseases and their risk factors
c) Surveillance of socio-economic status of the community
d) Changes of trends of mortality in non-communicable diseases

1527. Rural and Urban difference in prevalence is seen in all of the following, Except - *(AI 10)*
a) Lung cancer b) Tuberculosis
c) Mental illness d) Chronic bronchitis

1528. Height in centimeters by cube root of body weight is also known as? *(DNB Dec 2011)*
a) Quetlet index b) Broca index
c) Ponderal's index d) Corpulence index

1529. Least common asociation with Morbid Obesity is?
a) Rheumatoid Arthritis *(DNB Dec 2010)*
b) Diabetes Mellitius type II
c) Essential Hypertension
d) Large bowel cancers

1530. Type of surveillance included in integrated disease control program for non-communicable disease is?
a) Sentinel surveillance *(DNB Dec 2010)*
b) Regular Surveillance
c) Periodic regular survey
d) Additional state priority

1531. Normal range of BMI Asian Individual is? *(DNB Dec 2010)*
a) 18.5 to 24.99 b) 22.5 to 24.99
c) 18.5 to 22.5 d) 18.5 to 22.99

1510)a 1511) b 1512)b 1513)b 1514)c 1515)c 1516)b 1517)c 1518)d 1519)b 1520)b 1521)b 1522)a 1523)c 1524)b 1525)b 1526)a 1527)b 1528)c 1529)a 1530)c 1531)a

1532. Which index of obesity does not include height? *(DNB June 2010)*
a) BMI b) Ponderal's index
c) Broca's index d) Corpulence index

1533. Calculate BMI if weight in kilograms is 98 and hight in centimeters is 175 - *(DNB Dec 09)*
a) 28 b)32
c) 36 d)40

1534. Corpulence index means - *(DNBDec 08)*
a) Measurement of obesity
b) Measurement of copper level in serum
c) Measurement of iron losses in faeces
d) Pressure difference b/w chambers of heart

1535. The most common cancer, affecting Indian urban women in Delhi, Mumbai and Chennai is -
a) Cervical cancer *(DNB Dec 07)*
b) Ovarian cancer
c) Breast cancer
d) Uterine cancer

1536. What will be the BMI of a male whose weight is 89 kg and height is 182 cm - *(DNB Dec 07)*
a) 26 b) 30
c) 33 d) 36

DEMOGRAPHY AND FAMILY PLANNING

1537. Population count is taken on - *(PGI89)*
a) 1st January b) 1st March
c) 1st July d) 1st August

1538. India belongs to which stage of the demographic cycle - *(NEET/DNB Pattern)*
a) Slow stationary b) High stationary
c) Early stationary d) Late expanding

1539. Which countries have a higher growth rate than India - *(PGI June 0 7)*
a) Myanmar b) Nepal
c) Sri lanka d) Bangladesh

1540. A community survey shows crude birth rate 23, and crude death rate 6. The demographic stage of population is - *(AIIMSNov 99, AI01)*
a) High stationary b) Early expanding
c) Late expanding d) Low stationary

1541. India is having crude birth rate from 93 to 80 and death rate from 21 to 10, the country is in which stage of demographic cycle - *(AIIMS Dec 9 7)*
a) Late expandingb) Early expanding
c) High stationary d) Low stationary

1542. Demographic transition is - *(PGIDec 98)*
a) No gap between birth rate and death rate
b) High difference between CBR and CDR
c) Gap in sex percentage
d) Gap is extreme ages

1543. The growth rate of India is - *(PGI 85)*
a) 55% b) 3%
c) 2.4% d) 2.2%
e) 2%

1544. In a demographic cycle, Late expanding stage indicates - *(NEET/DNB Pattern)*
a) High birth and death rates
b) Decreasing DR and stationary BR
c) Decreasing BR and decreasing DR
d) Low DR and BR

1545. Which of the following statements about 'Late expanding phase' of Demographic cycle is true -
a) Birth rate is lower than death rate
b) Death rate begins to decline while birth rate remains unchanged *(AI 09, AIIMS May 11)*
c) Death rate declines more than birth rate
d) High death rate and high birth rate

1546. 3rd stage of demography indicates - *(PGIDec 04)*
a) High birth rate and high death rate
b) Death rate begins to decline
c) While the birth rate remains unchange
d) Birth rate tends to fall and death rate declines still further
e) Low death rate and low birth rate
(f) Birth rate lower than death rate

1547. The growth pattern of a population with an annual growth rate of 1.5% to 2.0% is - *(AI 95)*
a) Stow growth b) Moderate growth
c) Rapid growth d) Very rapid growth

1548. If annual growth rate of a population is 1.5-2%, what number of years will be required to double the population? *(MH11)*
a) 70-47 years b) 47-35 years
c) 35-28 years d) 28-23

1549. Annual growth rate is - *(AI97)*
a) Crude birth rate-crude death rates
b) Crude death-crude birth rates
c) Cmde birth rate-crude death rate x 100/crude birth rate
d) Crude birth rate-crude death rate x 100/Mid year population

1550. States, where crude birth rate is higher than the national level: *(PGIMay 10)*
a) West Bengal b) Maharashtra
c) Rajasthan d) Madhya pradesh
e) Himanchal pradesh

1551. Big divide in India - *(NEET/DNB Pattern)*
a) 1915 b) 1921
c) 1947 d) 1983

1552. People living in developing countries-(Mzm/?a/ *04)*
a) 90% b) 80%
c) 70% d) 60%

1553. The proportion of school age children in India's population is approximately - *(Karnat 96)*
a) 15% b) 25%
c) 40% d) 50%

1554. The percentage of women in the reproductive age group is - *(AI 89)*
a) 15% b) 22%
c) 30% d) 40%

1532) d 1533) b 1534)a 1535)c 1536)b 1537)c 1538)d 1539)b,d 1540)c 1541)a 1542)a 1543)None 1544)c
1545) c 1546) d 1547)d 1548)b 1549)a 1550)c,d 1551)bl552)b 1553)b 1554)b

1555. What is the percentage of population is below 5 yrs of age in India - *(NEET/DNB Pattern)*
a) 5% b) 10%
c) 15% d) 20%

1556. The age and sex structure of a population may be best described by a - *(AIIMSNov 03, May 05)*
a) Life table b) Correlation coefficient
c) Population pyramid d) Bar chart

1557. India population pyramid - *(NEET/DNB Pattern)*
a) Narrow apex b) Broad apex
c) Narrow base d) None

1558. Sex ratio is- *(PGIDec02)*
a) 1 male per 1000 female
b) 1000 female for 1000 male
c) No. of female for 1000 male
d) 1000 female per 100000 male
e) One lakh female per one lakh

1559. Sex ratio of children population in the age group of 0-6 years according to the 2011 census is -*(AI12)*
a) 940 b)914
c) 944 d)933

1560. In calculating Dependency Ratio, the numerator is expressed as - *(AIIMS May 03)*
a) Population under 10 years and 60 and above
b) Population under 15 years and 60 and above
c) Population under 10 years and 65 and above
d) Population under 15 years and 65 and above

1561. Dependency ratio includes - *(PGIJune05)*
a) 0 - 5 yrs age b) 6 - 14 yrs age
c) 15 - 45 yrs age d) > 65 yrs

1562. Dependency ratio is includes - *(NEET/DNB Pattern)*
a) Less than 15 years b) Less than 85 years
c) 30-50 years d) None

1563. Demographic divided is due to - *(Kerala 08)*
a) Increase fertility b) Decrease fertility
c) Decrease in death rate d) None

1564. In latest Indian census, population density is —per sq.km- *(Delhi 93)*
a) 152 b) 204
c) 267 d)31

1565. Family size is - *(AIIMS Sep 96)*
a) Total number of family members in the family
b) Total number of female children bom in the family
c) Total number of children in the family
d) Total number of female children in the family considering the mortality

1566. According to 1991 census family size is - *(AI 98)*
a) 2.4 b)3.9
c) 4.4 d)5.6

1567. The literacy rate of Indian Population as per Census 2001 is- *(AIIMS Nov 04)*
a) 54.5% b) 65.4%
c) 85.8% d) 75.5%

1568. Life expectancy at per 91 census is -*(AIIMSDec 98)*
a) 60.1 year b) 62.3 year
c) 58.1 year d) 55 year

1569. Birth rate is - *(PGIDec 02)*
a) Live birth/1000 mid yr. population
b) Birth/1000 mid yr population
c) Live birth/10000 mid yr. population
d) Live birth/10,000 population of reproductive age group (15-45)
e) Live birth/1000 population

1570. General fertility rate is a better measure of fertility than the crude birth rate because the denominator includes - *(AIIMS May 01)*
a) 15-45 years of age female
b) Midyear population
c) Total woman population
d) Married woman population

1571. Regarding crude birth rate all are true except -
a) Unaffected by age distribution *(AI 09,*
b) Indicator of fertility *AIIMS May 10)*
c) Excludes the still births
d) Better measure of fertility than general fertility rate

1572. True about crude birth rate is all except - *(AI 09)*
a) Ratio
b) Fertility indicator
c) Stillborn excluded
d) Not affected by age distribution of the population

1573. Denominator in general fertility rate *is-(NEET/DNB*
a) All women between 15-45 year age *Pattern)*
b) All married women between 15-45 year age
c) Total number of live births
d) Total number of all births

1574. General fertility rate - *(NEET/DNB Pattern)*
a) Indicator of complete family size
b) Measure of fertility
c) Not bether than cmde birth rate
d) All

1575. Most significant indicator of fertility is -
a) Net reproductive rate *(AIIMS Sep 96)*
b) Family size
c) Gross reproduction rate
d) General fertility rate

1576. Population growth is said to be less than adequate requirement when NRR is - *(PGI June 03)*
a) < 1 b)= 1
c) > 1 d) = 0

1577. Mortality statics are taken into account while calculating - *(PGI Dec 98, 99; AIIMS Dec 94)*
a) GER b)NRR
c) TFR d) GMFR

1578. In family welfare programme, score of 1 is given to-
a) Birth rate *(AIIMS May 95)*
b) Net reproduction rate
c) Achievement of goal
d) Total implementation of programme

1555)b 1556) c 1557)a 1558)c 1559)b 1560)d 1561)a,b,d 1562)a 1563)b 1564)None 1565)c 1566)b 1567)b
1568) a 1569) a 1570)a 1571)d 1572)a 1573)a 1574)b 1575)a 1576)a 1577)b 1578)b

1579. True statement about 'total fertility rate' is - *(AT98)*
a) Indicates approximate magnitude of completed family size
b) Numerator is 'woman of child bearing age'
c) Numerator is 'all live births'
d) Numerator is 'married woman of child bearing age'

1580. The completed family size may be estimated by -
a) Birth rate b) Death rate *(A108)*
c) Total fertility rate d) Age specific fertility rate

1581. Children borne by female at the end of reproductive period is - *(NEET/DNB Pattern)*
a) TFR b) NRR
c) BR d) None

1582. True about total fertility rate - *(PGINov 09)*
a) Average number of children bom to a women during reproductive period
b) Average number of daughters bom to a mother
c) Magnitude of completed family size.
d) Average number of live birth in year per 100 women
e) Sum of age specific fertility rates

1583. Total fertility rate - *(PGIDec07)*
a) Total no. of children bom to a woman in a given year
b) Measure of completed family size
c) Sum of fertility of all age
d) No. of female child bom to mother
e) Total no. of child bom to mother

1584. Which of the following is true about the child-women ratio - *(A196)*
a) 0-4 years of children and 15-45 years of unmarried women
b) 0-5 years of children and 15-49 years of age of married women
c) 0-4 year of children and 15-44 years of all women
d) 0-4 years of children and 20-30 years of married women

1585. Which of the following indicators involve reproductive woman - *(PGI June 04)*
a) Birth Rate b) GF.R
c) T.F.R d) Maternal mortality rate

1586. The number of abortions performed divided by the number of live births in the same period is known as- *(ICS 05)*
a) Abortion rate b) Abortion incidence
c) Abortion prevalence d) abortion ratio

1587. In defining General Fertility Rate, the denominator is- *(AIIMS Nov 03)*
a) Population between 15 and 49 years of age
b) Women between 15 and 49 years of age
c) Mid year population
d) Live births

1588. Denominator for GFR is - *(NEET/DNB Pattern)*
a) Mid year population b) Females 15-44 years
c) Married female d) None

1589. Correct denominators of fertility indicators-
a) General fertility rate is calculated per 1000 women in the reproductive age group (15-44 or 49 year) in a given year *(PGINov 11)*
b) Age specific fertility rate is per 1000 population in any specified age-group
c) Child-Woman ratio is per 1000 women of child-bearing age
d) Cmde Marriage rate is per 1000 population
e) General Marriage rate is per 1000 person age 1549

1590. In calculating crude birth rate which of the following is used as denominator - *(AIIMS Nov 2000)*
a) Women in 15-49 yrs age group
b) All persons in 15-49 yrs age group
c) Mid year population
d) All live births

1591. The demographic data of India as per 2001 census is/are - *(PGI Nov 09)*
a) Deathrate8.9
b) Birth rate 25.9
c) Female / male sex ratio 933 per 1000
d) Life expectancy at birth 58 years
e) Literacy rate-51%

1592. Present "General fertility rates" - *(MAHE05)*
a) 108 b) 118
c) 128 d) 138

1593. Scope of family planning services include all of the following except - *(AI03)*
a) Screening for cervical cancer
b) Providing services for unmarried mothers
c) Screening for HIV infection
d) Providing adoption services

1594. All of the following statements are true, except - *(AIIMS Nov 93)*
a) Population of women between 15-45 years is 22%
b) Eligible couples are 150/1000 population
c) 20% eligible couples are in 15-24 year age group
d) Every year 1 million eligible couples are added to the population

1595. The couple protection rate at present in India is -
a) 38.1 b) 43.5 *(Kerala97)*
c) 45.1 d)55.1

1596. Most widely practised method of family planning by eligible couples in India is - *(MAHE98)*
a) IUCD b) OC Pill
c) Sterilization d) Nirodh

1597. Most common method of sterilisation practised in India - *(NEET/DNB Pattern)*
a) Female sterilization b) Male sterilization
c) Both d) None

1598. The Incorrect Statement regarding couple protection rate is - *(AllIndia 93)*
a) 50-60% of births per year are birth order 3 ormore
b) To achieve NRR of 1, CPR should be 60%
c) CPR was 37% in 1987
d) CPR of 60% is equivalent to 3 children per couple

1579) a 1580)c 1581)a 1582)a,c,e 1583)b,c 1584)c 1585)b,c 1586)d 1587)b 1588)b 1589)a,c,d 1590)c 1591) a,c 1592) None 1593) c 1594) d 1595) c 1596) d 1597) a 1598) d

1599. Spacing methods used by family welfare programmes are: *(PGI Nov 10)*
a) IUCD b) OCP
c) Vasectomy d) Condom
e) Tubectomy

1600. Conventional contraceptives are - *(MAHE07)*
a) IUCD's b) Coitus iterruptus
c) Condom

1601. Safe period is calculated by - *(UPSC-II09)*
a) Length of menstrual cycle
b) DurationDate of ovulation
c) Length of ovulation
d) Length of luteal phase

1602. In calendar method of contraception, first day of fertile period is? *(MH11)*
a) 10th day of shortest menstural cycle
b) 18th day of shortest menstural cycle
c) 10th day of longest menstural cycle
d) 18th day of longest menstural cycle

1603. Barrier method - *(PGI99)*
a) Hormonal contraceptive b)IUD
c) Condom d) Diaphragm

1604. On an average failure rate in the couples using condom is about - *(PGI80, AIIMS 86)*
a) 0-5 percent b) 10-20 percent
c) 30-40 percent d) 50 percent or more

1605. Dutch cap is- *(PGI89)*
a) Diaphragm b) Condom
c) Vaginal sponge d) None

1606. Chemical use in vaginal sponge is - *(AIIMSDec 95)*
a) Ethynil estradiol b) Progesterone
c) Mifepristone d) Nonoxynol-9

1607. Spermicide acts by- *(AIIMS 98)*
a) Release of acrosomal enzymes
b) Lysis of cell membrane
c) Glucose uptake inhibition
d) Vaginal enzyme alteration

1608. Which IUCD acts for 10 yrs - *(AIIMSMay 07)*
a) Cu-T200B b)Nova-T
c) Cu-T380A d) Multi load-250

1609. Life span of cut380a - *(NEET/DNB Pattern)*
a) 10 yrs b) 20 yrs
c) 1 yrs d) None

1610. The following statements are true about Intrauterine devices (IUD) except - *(AI04)*
a) Multiload Cu-375 is a third generation IUD
b) The pregnancy rate of lippes loop and Cu-T 200 are similar
c) IUD can be used for Emergency Contraception within 5 days
d) Levonorgestrel releasing IUD has an effective life of 5 years

1611. Following statements are correct about levonorgestrel containing intrauterine contraceptive device (Mirena) except - *(UPSC-II09)*
a) It releases 20 pg/day of levonorgestrel
b) It increases the risk of ectopic pregnancy
c) It increases the risk of ovarian cyst formation
d) It reduces the risk of pelvic inflammatory disease

1612. Cu T 200 is so called - *(PGIDec 97)*
a) 200 sqmm of Cu2+ over loop
b) 200 mm of Cu over loop
c) For 200 days, Cu concentration does not changes
d) 200 sqcm of Cu over loop

1613. In Cu T-200, the number denotes-(PG7 *Dec 08, Nov 11)*
a) Surface area b) Weight in microgram
c) Weight in miligram d) Effective half life in week
e) Volume of device

1614. Mechanism of action of IUCD is A/E - *(PGI Dec 97)*
a) Chronic endometrial inflammation
b) Anovulation
c) Tubal motility alteration
d) Endometrial atrophy

1615. Copper T is ideally inserted at - *(AIIMS 86)*
a) Just before menstruation b) Menstruation
c) Just after menstruation d) On the 14^{th} day

1616. Absolute contra indication for IUD are all except -
a) Pregnancy *(AI97)*
b) Undiagnosed vaginal bleeding
c) Pelvic infalmmatory disease
d) Uterine malformation

1617. Most common complication of IUCD is - *(AI 95;*
a) Bleeding b) Pain *(AIIMS Sep96)*
c) PID d) Abortion

1618. The most common side effect of IUD insertion, which requires its removal is - *(AIIMS Nov 1996)*
a) Bleeding b)Pain
c) Pelvic infection d) Ectopic pregnancy

1619. IUD, associatiate most commonly with explusion -
a) Lippes loop b) T Cu - 200 *(PGI June 07)*
c) TCu-380 d)LNG-IUD

1620. Copper-T with threads is visible in a case of early pregnancy. Treatment of choice is - *(DPG11)*
a) Remove CuT only
b) Suction evacuation with Copper-T removal
c) Reassurance and continue pregnancy
d) Laparotomy

1621. Mala - N contains - *(AIIMS 92)*
a) Ethinyl estradiol 30 meg
b) Norgesterol 50 meg
c) Ethinyl estradiol 50 meg
d) Progesterone 10 mg

1622. In Emergency contraception which progesteron is used- *(AIIMS Nov 09)*
a) Norethisterone
b) Modroxy-progesterone
c) Desogestrel
d) Levonorgestrol

1599)a,b,d 1600) c 1601) a 1602) a 1603) c,d 1604)b 1605) a 1606) d 1607) None 1608) c 1609) a 1610) a 1611) c,d 1612)a 1613) a 1614)b 1615)b,c 1616)d 1617)a 1618)b 1619)a 1620)a 1621)a 1622)d

1623. Which one of the following is not a third generation progestrogen used in combined oral contraceptive pills ? *(UPSC-II09)*
a) Levonorgestrel b) Desogestrel
c) Gestodene d) Norgestimate

1624. Mechanism of action of an oral contraceptive containing a combination of oestrogen-progestin is the following except- *(PGI2K)*
a) Inhibition of ovulation
b) A change in the cervical mucus
c) Inhibition of motility of the uterine tubes
d) Inhibition of motility of sperms
e) Changes in the uterine endometrium

1625. S/E of OC pills is - *(PGIDec 98)*
a) Dysmenorrhoea b) Prolactin level
c) Carbohydrate intolerance d) Endometriosis

1626. Contraindication of O.C.P - *(PGI June 04)*
a) Liver disease b)PED
c) Renal disease d) Epilepsy

1627. Combined oral pills protect the woman against all EXCEPT- *(UPSC-II 09)*
a) Menorrhagia
b) Benign breast disease
c) Pelvic inflammatory disease
d) Venous thromboembolism

1628. On prescription of oral pills to the user, the health worker will ask about the following except -
a) Number of live children *(AIIMS May 01)*
b) Calf tenderness
c) Headache
d) Swelling of the feet

1629. With the use of DMPA contraceptive, the side effects are all of the following except - *(AIIMS May 02)*
a) Change in quantity and quality of breast milk
b) Weight gain
c) Irregular bleeding
d) Increased reproductive tract inflection

1630. Hormonal contraceptive of choice in a lactating woman is - *(UPSC-II 09)*
a) Combined pill b) Multiphastic pill
c) Mini-pill d) Centchroman

1631. Best contraceptive for newly married healthy couple-
a) Barrier method *(AIIMS May 09)*
b) IUCD
b) Oral contraceptive pill
d) Natural methods

1632. Best contraceptive for newly married couples-
a) IUCD *(NEET/DNB Pattern)*
b) Hormonal pills
c) Rythem method
d) Condom

1633. Contraception of choice in diabetic patient-
a) OCP *(PGIDec 97)*
b) Barrier method
c) Permanent sterilization
d) Cu - T

1634. In a heart patient, contraceptive of choice is -
a) Sterilization b)IUCD *(PGI June 97)*
c) OCP d) Norplant

1635. "Persna" is a method of - *(Orissa 05)*
a) Natural contraceptive b) Hormonal contraceptive
c) Barrier contraceptive d)IUCD

1636. "Implanon" contains - *(Orissa 05)*
a) Desonorgestrol b) Ethinyl estradiol
c) L-norgestrol d)None

1637. The goal of NRR=1 can be best achieved by use of following contraceptive methods - *(AI9 7)*
a) Condom 72/year b) IUCD
b) Vasectomy d) Oralpills

1638. Failure rate of contraceptive method is determined by- *(AIIMSDec 95)*
a) Pearl index
b) Half life
c) Number of accidental pregnancies
d) Period of contraceptive practice continued

1639. Which of the foil owing is important in calculaton of pearl index - *(PGI Dec 05)*
a) Number of abortions
b) Total accidental pregnancy
c) Socioeconomic status
d) Total gestational period

1640. Pearls index? *(NEET/DNB Pattern)*
a) Per 100 woman years b) Per 10 woman years
c) Per 1000 woman years d) Per 50 woman years

1641. Best index of contraceptive efficacy *is-(AUMS Nov 08)*
a) Pearl index b) Chandelers index
c) Quetlet index d) Broca index

1642. The MTP act defines the following - *(Jipmer 90)*
a) Who should do termination of pregnancy
b) Where it should be done
c) When it should be done
d) All of the above

1643. Consent from guardian/husband for MTP is required if - *(JIPMER 79, UPSC 93)*
a) Female is below 28 years of age
b) Female is below 23 years of age
c) Female is below 17 years of age

1644. MTP Act of 1971 provides for termination of pregnancy till how many weeks of pregnancy -
a) 12 weeks b) 16 weeks *(NEET/DNB*
c) 20 weeks d) 24 weeks *Pattern)*

1645. MTP can be done upto - *(AIIMSDec 97)*
a) 12 weeks b) 16 weeks
c) 20 weeks d) 10 weeks

1646. Medical termination of pregnancy can be done by a registered medical practitioner if the gestation period is less than - *(Corned 09)*
a) 8 weeks b) 12 weeks
c) 20 weeks d) 24 weeks

1623) a 1624) c,d 1625)c 1626)a 1627)d 1628)a 1629)a 1630)c 1631)c 1632)b 1633)b 1634)a 1635)a 1636)a

1647. The National Population Policy 2001 aims to achieve net reproduction rate of 1 by the year -
a) 2005 b) 2010 *(ARMS Nov 02)*
c) 2015 d)2050

1648. The National Population Policy of India has set the following goals except - *(AI04, A1IMSNov 08)*
a) To bring down Total Fertility Rate (TFR) to replacement levels by 2015
b) To reduce the infant Mortality Rate to 30 per 1000 live births
c) To reduce the maternal Mortality Rate to 100 per 100000 live births
d) 100 percent registration of births deaths marriages and pregnancies

MISCELLANEOUS

1649. National Family Health Survey has successfully completed - *(AIIMSMay 05)*
a) One round b) Two rounds
c) Three rounds d) Four rounds

1650 . NFHS-3 - *(NEET/DNB Pattern)*
a) 1995 b) 2000
c) 2005 d) 2010

1651. In India, family planning is managed by -
a) 100% sponsored by Central government only
b) 100% by state government only *(AIIMSDec 97)*
c) 50% state and 50% central government
d) Fully sponsored by central government with planning of state government

1652. The carrying capacity of any given population is determined by its - *(AIIMS May 05)*
a) Population growth rate b) Birth rate
c) Death rate d) Limiting resource

1653. KAP studies in India were first used to study-(^4/*08*,
a) HIV b) Malaria *(AIIMS Nov 08)*
c) Family planning d) Cancer cervix

1654. For NRR to be 1, Couple protection rate should be?
a) 20% b) 40% *(DNB Dec 2011)*
c) 60% d) 80 %

1655. Pearl index is? *(DNB Dec 2011)*
a) Failures per 1000 women-years of exposure
b) Failures per 100 women-years of exposure
c) Failures per 10 women-years of exposure
d) Failures per women-years of exposure

1656. According to 2006 Government of India guidelines for sterilization all are true EXCEPT -
a) Should be married *(DNB Dec 2011)*
b) Female clients should be below the age of 45 years and above the age of 20 years
c) The couple should have at least one child whose age is above one year unless the sterilizationis medically indicated.
d) Clients or their spouses/partners must not have undergone sterilization in the past

1657. In a community of5000 people, the crude birth rate is 30 per 1000 people. The number of pregnant females is? *(DNB Dec 2010)*
a) 150 b)65
c) 175 d)200

1658. National Family Health Survey is done every?
a) 6 months b) 1 year *(DNB Dec 2010)*
c) 5 years d) 10 years

1659. The most common side effect of HID insertion is -
a) Bleeding b) Pain *(DNB June 2010)*
c) Pelvic d) Ectopic pregnancy

1660. Cu T with 10 years life is? *(DNB June 2010)*
a) Cu380A b)Progestasert
c) CuT200 d) Nova T

1661. According to NFHS 3, percentage of wasting in India is ? *(DNB June 2010)*
a) 23% b) 35%
c) 40% d) 50 %

1662. Denominator in General fertility rate is?
a) Married women in reproductive age group in a given year *(DNB Dec 09)*
b) Women in reproductive age group in a given year
c) Married women in any specified age group
d) Women in any specified age group

1663. Indicators of health in india are all EXCEPT -
a) Crude birth rate - 22.5 *(DNB June 09)*
b) IMR 60/1000 live births
c) Crude death rate 7.5
d) Total fertility rate - 2.6

1664. Which of the following is not a goal for 2010 as per national health policy 2002? *(DNB June 09)*
a) Reduce mortality by TB by 50%
b) Eliminate kala azar
c) Reduce IMR
d) Eradicate polio

1665. Second National Family Health Survey was done in the year? *(DNB June 09)*
a) 992-93 b) 1998-99
c) 2005-2006 d) 2008-2009

1666. CuT 380AIUCD should be replaced once in -
a) 4 yrs b) 6 yrs *(DNB Dec 08)*
c) 8 yrs d) 10 yrs

1667. Best index for measuring contraceptive efficacy is - *(DNB June 08)*
a) Pearl index b) Life-table analysis
c) Chandler's index d) Quetlet index

1668. The most common side effect of IUD insertion is-
a) Bleeding b) Pain *(DNB Dec 07)*
c) Pelvic infection d) Ectopic pregnancy

1669. In what stage of demographic cycle is India today -
a) Low stationary *(DNB June 07)*
b) High stationary
c) Early expanding
d) Late expanding

1647)b 1648) a 1649)c 1650) c 1651)a 1652)d 1653)c 1654)c 1655)b 1656)c 1657)a 1658)b 1659)a 1660)a
1661) a 1662)b 1663)b 1664)d 1665)b 1666)d 1667)b 1668)a 1669)d

1670. In the demographic study of population, a country with low birth rate & a low death rate is in following phase - *(Delhi 96)*
a) 1st phase b) 2nd phase
c) 3rd phase d) 4th phase

1671. Pepulation growth is said to be explosive when growth rate is - *(PGMCET07, MAHE 01)*
a) <0.5 b) 0.5-1
c) 1-1.5 d)>2

1672. The proportion of children in the age group of 0 - 6 years, (who are the beneficiaries of integrated Child Development Services Scheme), in the population is about - *(Karnat 99)*
a) 6% b) 13%
c) 20% d) 27%

1673. Male to Female ratio is - *(AP 96)*
a) Males for 1000 population
b) Females for 1000 males
c) Males for 1000 females
d) None

1674. In census literacy rate is assessed by - *(Jipmer2K)*
a) Attended literacy classes for one year
b) Ability to write signature
c) Ability to read and write
d) Ability to read newspapers

1675. In 2001 census, which one of the following denominators was used for calculating the literacy rate- *(UPSC2006, AI93)*
a) Population 5 years of age and above
b) Population 7 years of age and above
c) Population 10 years of age and above
d) People who can read and write irrespective of age

1676. With a birthrate of 30 per thousand, in a subcentre of 5000 population, what would be the number of pregnant women- *(UPSC 07)*
a) 150 b) 155
c) 160 d) 165

1677. Crude death rate is an indicator that shows relationship between - *(Jipmer 05)*
a) Population & total mortality
b) Population & proportional mortality
c) Population & age-specific mortality
d) None of the above

1678. Crude birth rate denominator is - *(SGPGI05)*
a) Total no of live births in that year
b) 1000 live births
c) Total numbers of births
d) Mid year population

1679. Declining death rate in India is attributed to -
a) Absence of natural checks *(Manipal 2006)*
b) Mass control of disease e.g. small pox, plague, cholera
c) Extensive use of chemotherapeutic, antibiotics and insecticides
d) All the above

1680. As per the National Population Policy 2000, the medium-term objective is to bring the total Fertility rate to replacement level by which year ?
a) 2008 b) 2010 *(UPSC-108;*
c) 2012 d)2014 *COMED 08)*

1681. Demographers are of the view that the demographic goal of NRR=1 can be achieved only if the couple protection rate exceeds - *(Karri 11)*
a) 40% b) 50%
c) 60% d)70%

1682. What is thelUCD of choice in women with menorrhagia? *(UPSC-II09)*
a) Lippe'sloop b) Copper-T 200
c) Copper-T 380A d) Progesterone containing IUCD

1683. What is the content of ethinyl estradiol in very low dose oral contraceptives ? *(UPSC-II 09)*
a) 30 pg b) 25 pg
c) 20 pg d) 15 pg

1684. Best method of contraception in a commercial sex worker- *(JIPMER 98)*
a) IUCD
b) OCP
c) Permanent sterilization
d) Barrier methods

1685. Minipill containing 75 pg of desogestrel is used for contraception. Which of the following is its schedule of administration ? *(UPSC-II 09)*
a) Taken once a day pill for 3 months 7 days pill free interval
b) Taken once a day pill for 2 months 7 days pill free interval
c) Taken for 21 days with 7 days pill free interval
d) Taken for 28 days with no pill free interval

1686. Calender method was described by - *(AIIHPH98)*
a) Bitings b)Ogino
c) Wallace d) Ogive

1687. The Pearl index indicates the number of accidental pregnancies per - *(UPSC 99)*
a) 1000 population
b) 100 live births
c) 100 women in the age group of 15 to 44 years
d) 100 women years

1688. Contraceptive efficacy expressed as - *(Jipmer 04)*
a) 100 women months b) 1000 women years
c) 100 women years d) 10 women years

1689. 100 women, followed up for 20 months, with OCPs, 5 became pregnant, Calculate the Pearl Index -
a) 100 b) 200 *(Bihar 03)*
c) 300 d)400

1690. Which one of the following is a rare complication of the use of hormonal contraceptives - *(Kerala 2K)*
a) Contraceptive failure b) Cardiovascular effects
c) Carcinogenesis d) Metabolic effects
e) Liver disorders

1670)d 1671) d 1672)b 1673)b 1674)c 1675)b 1676)a 1677)a 1678)d 1679)d 1680)b 1681)c 1682)d 1683)c
1684)d 1685)d 1686)b 1687)d 1688)c 1689)c 1690) a

1691. DMPA is an injectible contraceptive given every -
a) Three weeks b) Two months *(UPSC 2K)*
c) Three months d) Two years

1692. Among the following, which one is the absolute contraindication for combined oral contraceptive pills- *(UPSC 07)*
a) Diabetes meilitus
b) Migraine
c) Previous history of thrombo-embolism
d) Heart dsease

1693. Use of combined pill is contraindicated in women with any of the following conditions except - *(UPSC-*
a) Lactation b) Diabetes *II08)*
c) Thromboembolism d) Tuberculosis

1694. Which of the following is not a barrier method ?
a) Centchroman b) Today *(APPG08)*
c) Barrier d)None

1695. A case of vasectomy is said to have failed as the vasectomised person's wife gives birth to a child ten months after the operation. Which one of the following is the most probable cause? *(DPG II)*
a) Failure of the husband to use condom after vasectomy
b) Surgical failure
c) Recannalisation
d) Wife had extramarital contact

1696. First 5 year plan in India started at - *(Burdwan 2K)*
a) 1950 b) 1951
c) 1952 d) 1953

1697. As per our National Population Policy 2000, the long-term objective is to achieve the population stability by which one of the following years?
a) 2025 b)2035 *(UPSC-109)*
c) 2045 d) 2055

OBSTETRICS, PAEDIATRICS AND GERIATRICS

1698. The most effective step in MCH is - *(AMC 99)*
a) Maternal health promotion
b) Child health promotion
c) School health promotion
d) Non formal education of the mother

1699. Minimum antenatal visit as per MCH is -
a) 1 b)2 *(PGI Dec 03)*
c) 3 d)4
e) 5

1700. High risk pregnancy - *(PGI Dec 08)*
a) Elderly primi b) Short stature primi
c) Vertex presentation d) Diabetes

1701. Comprehensive emergency obstetric care does not include - *(AIMSMay 07)*
a) Manual removal of placenta
b) Hysterectomy
c) Blood transfusion
d) Ceasarean section

1702. All of the following features contribute to high risk babies except - *(AI97)*
a) Babies with working mothers
b) Spacing of less than 1 year
c) Artifical fed babies
d) Weight between 70-80% of reference wt.

1703. As per WHO low birth weight is defined as -
a) Birth weight less than 2.5 kg *(PGIDec 03)*
b) Birth weight < 10th percentile
c) Gestational age < 34 weeks
d) Gestational age <28 weeks

1704. LBW is birth wt below - *(NEET/DNB Pattern)*
a) 1.5 kg b) 2.5 kg
c) 3.0 kg d) 3.5 kg

1705. According to Indian Scientists, the cut off for low birth weight in India is - *(PGMCET 07)*
a) 2.2 kg b) 2.5 kg
c) 2.7 kg d)2kg

1706. Small for date baby is - *(PGI June 2000)*
a) < 10 percentile for that gestational age
b) < 50 percentile for that gestational age
c) <2000gm
d) <2500gm

1707. Preterm infant is defined as - *(AI 01)*
a) Bom between 37-42 weeks
b) Bom > 42 weeks
c) Bom <37 weeks
d) Bom < 25 weeks

1708. Extremely low birth weight baby is less than -
a) 1 kg b) 1.5kg *(NEET/DNB Pattern)*
c) 2 kg d) 2.5kg

1709. L.BW. Baby - *(NEET/DNB Pattern)*
a) 2.9- 2.6 kg b) 2.7-2.9 kg
c) 3.2-3.5kg d) 1.5-2.5 kg

1710. Most common cause of IUGRis- *(AIIMSDec98)*
a) Idiopathic b) Intra uterine infection
c) PIH d) Smoking

1711. Road-to health chart was given by- *(NEET/DNB*
a) John Snow b) David Morley *Pattern)*
c) Koch d) Henrey Ducant

1712. 'Road to health card' top line is - *(DNB 2001)*
a) 3rd percentile b) 50th percentile
c) 80th percentile d) 97th percentile

1713. Road to health card has 2 reference points, which are- *(AIMS May 12)*
a) 30th percentile for boys and 3rd percentile for girls
b) 50th percentile for boys and 3rd percentile for girls
c) 50th percentile for boys and 5th percentile for girls
d) 80th percentile for boys and 10th percentile for girls

1714. A mother comes with her 3 year old female child with complain of that child is not eating anything. Her weight is 11 kg (50th percentile) and height is 88 cm. (75th percentile). What should be done next-
a) Vitamin rich tonic to be given *(AIMS Nov 99)*
b) Forceful eating
c) Nothing should be done actively and assure the parent
d) Complete investigation for UTI

1691) c 1692)c 1693) d 1694)a 1695)b 1696)b 1697)c 1698)a,b,c 1699)d 1700)a,b,d 1701)b 1702)d 1703)a 1704)b 1705) d 1706)a 1707)c 1708)a 1709)d 1710)None 1711)b 1712)b 1713)b 1714) c

1715. Deficit in weight for height in a 3 year old child indicates - *(AIIMS Nov 05)*
a) Acute malnutrition
b) Chronic malnutrition
c) Concomittant acute and chronic
d) Under weight

1716. Best indicator for growth measurement is-*(NEET/*
a) Height b) Weight *DNB Pattern)*
c) Arm circumference d) None

1717. Best indicator for nutritional status for a child is -
a) Mid arm circumference *(AIIMS Nov 06)*
b) Head circumference
c) Rate of increase of height and weight
d) Chest circumference

1718. Acute malnutrition is manifested by -*(PGIJune 05)*
a) Weight for age b) Weight for height
c) Age for height d) Brocas index
c) Ponderal index

1719. Deficit in weight for height in a 3 years old child indicates - *(AIIMSMay 05)*
a) Acute malnutrition
b) Chronic malnutrition
c) Concomittant acute and chronic
d) Under weight

1720. Which of the following is the best indicator of long term nutritional status - *(AI07)*
a) Mid arm circumference b) Height for age -
c) Weight for age d) Weight for height

1721. Common to both acute and chronic malnutrition is - *(AIIMSMay 07, May 12)*
a) Weight for age b) Weight for height
c) Height for age d) BMI

1722. MCH care is assessed by - *(NEET/DNB Pattern)*
a) Death rate b) Birth rate
c) Maternal mortality rate d) Anemia in mother

1723. Denominator of maternal mortality rate is - *(AI 98, 96, AIIMS June 97, Feb 97; PGIDec 06, Dec 99)*
a) 1000 total births b) Mid year population
c) 1000 live births d) Total live births

1724. About Maternal mortality rate which of the following is true? *(AI 10)*
a) It is rate, not ratio.
b) Numerator includes complications related deaths up to 42 days after pregnancy
c) Denominator includes still birth and abortions
d) Expressed as rate per 1000 live births

1725. A community has apopulation of10,000 and abirth rate of 36 per 1000.5 maternal deaths were reported in the current year the MMR is - *(AI01)*
a) 14.5 b) 13.8
c) 20 d)5

1726. Maternal mortality is reduced to -
a) 100 b) 200 *(NEET/DNB Pattern)*
c) 300 d) 400

1727. In India all are direct causes of maternal mortality except - *(AIIMS May 01)*
a) Cardiac disease b) Eclampsia
c) Hemorrhage d) Abortion

1728. The most common cause of maternal mortality in India is-*(AIIMSMay 11, May 08, May 05,May 04, AI*
a) Toxaemias b) Puerperal sepsis *08, 98)*
c) Hemorrhage d) Abortion

1729. Maternal mortality is maximum in which period -
a) Antepartum b) Peripartum
c) Postpartum d) None *(NEET/DNB Pattern)*

1730. Maternal mortality rate is - *(AIIMSNov 07)*
a) Maternal death/100 births
b) Maternal death/100 live births
c) Maternal death/1000 births
d) Maternal death/1000 live births

1731. Denominator in maternal mortality ratio? *(AI11)*
a) Mid Year Population
b) Live births
c) Total births
d) Total number of pregnancies

1732. Most rare cause of maternal mortality is -
a) Abortion b) Anaemia *(AIIMS 98)*
c) Toxaemia d) Hemorrhage

1733. Neonatal period is- *(AI 99)*
a) Upto 1 year of life
b) Upto 28 days of life
c) 28 days to 1 year of life
d) First 7-days of life

1734. Infant mortality does not include - *(AT 05)*
a) Early neonatal mortality
b) Perinatal mortality
c) Post neonatal mortality
d) Late neonatal mortality

1735. In IMR, age of infants is considered - *(AIIMS Dec 97,*
a) Below 1 month b) Below 1 year *Nov 00)*
c) Upto 1 year d) 28 days

1736. Calculate IMR if in a population of 100000 there are 3000 live births in a year and 150 infant deaths in the same year - *(AIIMSNov 01)*
a) 75 b) 18
c) 5 d)50

1737. According to ICMR the most common cause of infant mortalilty is - *(AI 97, 99)*
a) Prematurity
b) Diarrhoeal diseases
c) Congenital anomalies
d) Acute repiratory infection

1738. Which is the least common cause among these of infant mortality in India - *(NEET/DNB Pattern)*
a) Infections b) Prematurity
c) Birth injuries d) Congenital malformations

1715)a 1716) b 1717)c 1718)b 1719)a 1720)b 1721)c 1722)c 1723)None 1724)b 1725)b 1726)b 1727)a 1728) c 1729)b 1730)None 1731)b 1732)c 1733)b 1734)b 1735)b 1736)d 1737)a 1738)c

1739> The socioeconomic status of community is best indicated by - *(AIIMS Nov 01, Dec 94)*
a) IMR
b) Under 5 mortality rate
c) Maternal mortality rate
d) Perinatal mortality rate

1740. Best indicator of availability,utilisation & effectiveness of health *services-(NEET/DNB Pattern)*
a) IMR b) MMR
c) Hospital bed OCR d) DALY

1741. Commonest cause of neonatal mortality in India is -
a) Diarrheal diseases *(AIIMS May 03)*
b) Birth injuries
c) Low birth weight
d) Congenital anomalies

1742. Most common cause of infant mortality?
a) LBW b) Injury *(NEET/DNB Pattern)*
c) ART d) Tetanus

1743. Which of the following is the least likely cause of neonatal death in India - *(AIIMS Nov 10)*
a) Prematurity b) Infection
c) Birth Asphixia d) Congenital anomalies

1744. The least common cause of neonatal mortality in india is - *(NEET/DNB Pattern)*
a) Prematurity b) Congenital malformations
c) Birth asphyxia d) LBW

1745. All of the following are common cause of post neonatal infant mortality in India, Except - *(AI02)*
a) Tetanus
b) Malnutrition
c) Diarrhoeal diseases
d) Acute respiratory infection

1746. In a certain population, there were 4050 births in last one year. There were 50 still births. 50 infants died within 7 da^s where as 150 died within 28 days. What is the neonatal mortality *Y2itt-(AIIMSNov 10, May 12)*
a) 50 b)6.5
c) 12.5 d) 49.4

1747. The perinatal rate in India is - *(AI 96)*
a) Late fetal death (still-birth) + early neonatal death (under 1 week)
b) Late fetal death (stillbirth) + early neonatal deaths (under 4 weeks)
c) Late fetal and early death of neonates weighing over 1 OOOg at birth
d) Late fetal and early death of neonates weighing over 1500g at birth

1748. All of the following statements hold true for perinatal mortality rate except - *(AI 98)*
a) Deaths of neonate within one weak are included
b) Late still births and deaths beyond 28 weeks are included
c) Deaths of children weighing more than 1000 gm is are included
d) 'Total number of birth' forms the denominator

1749. Most common cause of perinatal mortality in India is-
a) Birth defect b) Prematurity *(AIIMSMay 95)*
c) GI Infection d) Asphyxia

1750. Still birth rate includes babies dead after - *(AI 94)*
a) 20 weeks b) 24 weeks
c) 28weeks d) 32 weeks

1751. Perinatal mortality rate include which of the following? *(AI 10)*
a). Abortions + Still birth + early neonatal deaths
b) Still birth + early neonatal deaths
c) Abortions + early neonatal deaths
d) Deaths up to 42 dys after birth

1752. In child death rate, which of the following is included - *(PGI June 07)*
a) Children < 5 years b) Children < 10 years
c) Children 1 -4 years age d) Children 10.-15 years

1753. In a population of 1 lakh, with 4000 live birth per annum and under 5 population is 15000 with infant death per annum is 280, so the under 5 mortality rate is - *(AIIMS June 2000)*
a) 40% b) 100%
c) 26.5% ,- d)69% ,u/:.

1754. The health status of children between 0 and 4 years in a community will be adversely affected by all except- *(AI94)*
a) Malnutrition
b) Birth weight of less than 2.5 Kg
c) Maternal hemoglobin 12 gm/dL ,
d) Infections

1755. Health status of a child under 5 years of age will be adversely affected by all of the following except-^4/*10)*
a) Malnutrition b) Low birth weight
c) Maternal Hb of 11gm% d) Infections

1756. Most common cause of death in children <5 yrs age-
a) Respiratory infection b) Diarrhoea *(PGI2K)*
c) Prematurity d) Accidents

1757. Mainly included in child survival index -
a) MMR *(PGIJune 01)*
b) IMR
c) Mortality between 1 to 4 yr. age
d) Under 5 mortality

1758. Current indicators of MCH - *(PGIDec 04)*
a) MMR3-4/1,00,000
b) IMR 39/10,000
c) Delivery by trained personal 42%

1759. The current neonatal mortality is -
a) 28 b) 30 *(NEET/DNB Pattern)*
c) 33 d) None

1760. All of the following statements are true about the childhood mortality rates in India except -
a) Almost 375th of infant mortality rate (IMR) occurs in neonatal period *(AIIMS Nov 05)*
b) Almost 374th of the under-five mortality occurs in the first year
c) About one in ten children die before they reach the age of five years.
d) Neonatal mortality is higher among female children as compared to males

1739) a 1740) a 1741)c 1742)a 1743)d 1744)b 1745)a 1746)a 1747)a 1748)d 1749)b 1750)c 1751)b 1752)c

1761. Benifits of breast milk are- *(PGIJune08)*
a) Better nutrition b) Less infection
c) More diarrhea d) Less allergy
e) High sodium contents

1762. Fatty acid characterstically present in breast milk and essential for baby growth - *(AIIMSNov 11)*
a) Linoliecacid b) Palmitic acid
b) Arachidonic acid d) Docosahexaenoic acid

1763. The following statements about breast milk are true except - *(AIIMS May 11, AI04)*
a) The maximum milk output is seen at 12 months
b) The coefficient of uptake of iron in breast milk is 70%
c) Calcium absorption of human milk is better that that of cow's milk
d) It provides about 65 k cals per 100 ml

1764. Not true about breast milk is ? *(AIIMSNov 08)*
a) Maximum output is seen at 12 month
b) Breast milk protein is a reference protein
c) Calcium utilization from breast milk is more than cow's milk
d) Coefficient of absorption of iron is 70%

1765. Calcium in human milk in mg/dl - *(PGIDec 97)*
a) 28 b) 45
c) 35 d)55

1766. Compared with cow's milk, mother's milk has more-
a) Lactose b) Vitamin D *(AI07)*
c) Proteins d) Fat

1767. Human milk with respect to cow milk has-*(PGIMay 11)*
a) Less fat b) Less protein
c) Less carbohydrate d) Less Calcium
e) Less Sodium

1768. What is deficient in exclusively breast fed baby-
a) Vitamin B b) Vitamin A *(AIIMS Feb 97)*
c) Vitamin C d) Proteins

1769. Exclusive milk ingestion can manifest as -
a) Scurvy b)Beri-Beri *(AIIMS97)*
c) Phryenoderma d) Night blindness

1770. What is absent in breast *mUk? (NEET/DNB Pattern)*
a) VitK b) Vit C
c) Lactose d) Vit A

1771. Colostrum is rich in the following constituents as compared to breast milk - *(AI 99)*
a) Minerals b) Proteins
c) Fats d)Carbohydrates

1772. Colostrums has in compared to normal milk -
a) Decreased K *(NEET/DNB Pattern)*
b) Decreased Na
c) Increased proteins
d) Increased calories

1773. The guidelines according to Baby Friendly Hospital Initiative includes all except-*(AI09, AIIMS May 01)*
a) Mothers and infant to be together for 24 hours a day
b) Mother to initiate breast feeding within 4 hours of normal delivery
c) Giving newborn infants no food or drink other than breast milk
d) Encouraging breast feeding on demand

1774. According to WHO, exclusive breast milk is gjven upto- *(NEET/DNB Pattern)*
a) 6 months b) 4 months
c) 8 months d) 10 months

1775. In normal delivery, breast feeding should be started-
a) *Vi* hour after delivary *(NEET/DNB Pattern)*
b) 2 hour after delivary
c) 4 hour after delivary
d) 6 hour after delivary

1776. The current recommendation for breast feeding is that- *(AI 04)*
a) Exclusive breast feeding should be continued till 6 month of age followed by supplementation with additional foods
b) Exclusive breast feeding should be continued till 4 month of age followed by supplementation with additional foods
c) Colostorum is the most suitable food for a new bom baby but it is best avoided in first two days
d) The baby should be allowed to breast feed till one year of age

1777. Who are NOT benificiaries of ICDS scheme -
a) Adolescent females *(AIIMS Feb 97)*
b) School going children
c) Pregnant females
d) Lactating females

1778. Nutritional supplement for two year old child under ICDS scheme is - *(AIIMS June 2000)*
a) 200 Calorie b) 300 Calorie
c) 400 Calorie d) 500 Calorie

1779. In ICDS the requirement in pregnant females is -
a) 300 cal, 15 gm protein *(AIIMS Nov 01)*
b) 300 cal, 25 gm protein
c) 500 cal, 15 gm protein
d) 500 cal, 25 gm protein

1780. Wrong about Mother and Child Health programme is- *(AIIMS May 94)*
a) Useful for children upto 12 years of age
b) It's objective is to prevent against chronic diseases
c) 100% immunization to be done by 200 A.D. against six vaccine preventable diseases
d) To decrease acute respiratory infections

1781. All of the following are included in "Five cleans" of CSSM programme, except - *(AIIMSDec 94)*
a) Clean cord b) Clean tie
c) Clean perineum d) Clean room

1782. The child survival and safe mother hood (CSSM) programme includes all except- *(AI 99)*
a) Essential newborn care
b) Acute respiratory disease control
c) Nutrition supplementation
d) Universal immunization

1761)a,b,d 1762)d 1763)a 1764)a 1765)c 1766)a 1767)a,b,d,e 1768)a 1769)None 1770)a 1771)b 1772)c

1783. In "safe motherhood schemes", (CSSM) major thrust area is - *(Karn 95)*
a) Promotion of reproductive health
b) Elimination of maternal morbidity
c) Fertility regulation
d) To provide essential prenatal, Natal and postnatal services

MISCELLANEOUS

1784. Direct cash transfer scheme to adolescent girls is covered under - *(NEET/DNB Pattern)*
a) Indira Gandhi scheme b) Rajiv Gandhi scheme
c) CSSM d) RCH

1785. Child rights are guaranteed in which article of the constitution - *(PGI Dec 01)*
a) Article 24 b) Article 28
c) Article 35 d) Article 42
e) Article 45

1786. The Children Act, 1960 (Amended 1977) provides for care, maintenance, welfare, training, education and rehabilitation of - *(UPSC 06)*
a) Physically handicapped children
b) Delinquent children
c) Children below 6 years of age
d) Malnourished children needing nutrition and preschool services

1787. WHO defines adolescent age between - *(A105)*
a) 10-19 years of age b) 10-14 years of age
c) 10-25 years of age d) 9*14 years of age

1788. Homes where children are placed under the care of doctors and psychiatrists are called - *(UPSC 04)*
a) Foster homes b) Borstals
c) Remand homes d) Child guidance clinics

1789. Boys over 16 years who are too difficult to be handled in a certified school or have misbehaved there are sent to a: - *(AIIMS 81, UPSC 83)*
a) Remand home b) Borstal
c) Foster home d) Any of the above

1790. Ujjwala is for - *(NEET/DNB Pattern)*
a) Child abuse b) Child trafficking
c) Child labour d) None

1791. In school health services the most important functionary should be - *(PGI 79, AIIMS 86)*
a) School teacher b) Health worker
c) Medical officer d) Health assistant

1792. According to school health services recommendations, a school should have - *(J&K01)*
a) 1 urinal/60 children and 1 privy for 100 children
b) 1 urinal/80 children and 1 privy for 150 children
c) 1 urinal/100 children and 1 privy for 100 children
d) 1 urinal/100 children and 1 privy for 200 children

1793. Ideal desk recommended for a shool child is - *(UP 07, 01, PGI 80, UPSC 93)*
a) 'Plus'desk b) 'Minus' desk
c) Zero desk d) None of the above

1794. Per capita space for students is a class room should not be less than-------- sq. feet - *(PGI 80, AMU 92)*
a) 5 b) 10
c) 20 d) 50

1795. The school health programme came into vogue in -
a) 1946 b) 1948 *(PGI83)*
c) 1950 d) 1960

1796. Which country had introduced school health services for the first time - *(Karn 94)*
a) France b) Russia
c) United States of America d) India

1797. With reference to healthful school environment, which one of the following statements is not correct- *(UPSC 2006)*
a) In the class room, desks should be of minus type
b) Per capita space per student should be 6 sq feet
c) Combined window and door area should be 25% of the floor space
d) One urinal should be provided for 60 students

1798. Perinatal mortality includes deaths-(DM? *June 2010)*
a) After 28 weeks of gestation
b) First 7 days after birth
c) Both
d) From period of viability

1799. Extended definition of perinatal mortality includes crown heel length of? *(DNB June 2010)*
a) > 15 cm at birth b) > 25 cm at birth
c) >35 cm at birth d) > 45 cm at birth

1800. Perinatal mortality is expressed in terms of-
a) Deaths/1000 total births *(DNB Dec 09)*
b) Deaths/1000 live births
c) Deaths/10000 total births
d) Deaths/10000 live births

1801. Desk for student is? *(DNB June 09)*
a) Minus desk b) Plus desk
c) Zero desk d) All the desks

1802. Maternal mortility rate is - *(DNB Dec 08)*
a) Maternal death/100 births
b) Maternal death/100 live births
c) Maternal death/1000 births
d) Maternal death/1000 live births

1803. Perinatal mortality is expressed in terms of -
a) Deaths/1000 total births *(DNB June 08)*
b) Deaths/1000 live births
c) Deaths/10000 total births
d) Deaths/10000 live births

1804. The best parameter for assessment of chronic malnutrition is - *(DNB Dec 07)*
a) Weight for age b) Weight for height
c) Height for age d) Any of the above

1805. Infant mortality does not include - *(DNB Dec 07)*
a) Early neonatal mortality
b) Perinatal mortality
c) Post neonatal mortality
d) Late neonatal mortality

1783)d 1784) b 1785)a,e 1786)b 1787) a 1788) c 1789)b 1790)b 1791)a 1792)a 1793)b 1794)b 1795)d 1796)d 1797)b 1798)c 1799)c 1800)b 1801)a 1802)None 1803)b 1804)c 1805)b

1806. Major cause of infant mortality rate in India is -
a) Immaturity *(DNB June 07)*
b) Respiratory infections
c) GIT infection
d) Kwashiorkor

1807. Homes where children are placed under the care of doctors and psychiatrist are called - *(DNB June 07)*
a) Foster homes b) Borstals
c) Remand homes d) Child guidance clinics

1808. The maximum number of death in children occur in following age group - *(Delhi 96)*
a) 2-5 years b) 1 -2 years
c) first 7 days d) 6 months - 12 months

1809. Infants constitute what % of population?
a) 2 b)3 *(Orissa04)*
c) 4 d) 5

1810. A14 year old boy having lost his father a year ago, is caught shoplifting. The boy will be sent to -
a) An orphanage b) An anganwari *(UPSC 02)*
c) A prison d) A remand home

1811. The ICDS scheme includes children upto..... years of age - *(AMC 99)*
a) 6 b) 10
c) 4 d) 8

1812. ICDS package does not include - *(AMC 99)*
a) Nutrition b) Immunisation
c) Health check up d) Formal education

1813. The growth monitoring of a child at Anganwadi is meant for- *(Karn 95)*
a) Detection of healthy babies
b) Diagnosis of growth retardation
c) Providing appropriate nutritional supplement
d) Estimation of malnutriton problem

1814. Under the National Maternity Benefit scheme, what is the financial assistance given per birth for the first two births to all pregnant women who attain 19 years of age and belong to BPL households ?
a) Rs. 500 b) Rs. 1,000 *(UPSC-108)*
c) Rs. 1,500 d)Rs. 2,000

1815. Low birth - weight babies are at a higher risk of dying in the first week because - *(UPSC 99)*
a) Congenital anomaly, birth injury and infections
b) Birth injury, convulsions and asphyxia
c) Convulsions, congenital anomaly and hypothermia
d) Hypothermia, asphyxia and infections

1816. Which one of the following is categorised as a high risk pregnancy ? *(UPSC-II08)*
a) Birth order 3
b) Maternal height 150 cm
c) Twins pregnancy
d) Blood group AB +ve

1817. The criteria for 'at risk' infant include the following except- *(UPSC 07)*
a) Artificial feeding b) Grade II malnutrition
c) Working mother d) Birth order 4 and more

1818. Maternal mortality refers to maternal deaths from causes related to or aggravated by pregnancy and its management during - *(UPSC)*
a) Pregnancy, child birth or first seven days after delivery
b) Child birth or first fourteen days after delivery
c) First 28 days after delivery
d) Pregnancy, child birth or first 42 days after delivery

1819. All of the following are included as causes of maternal death except - *(MAHE 07)*
a) Following abortion
b) During lactation 1 st month (Puerperal)
c) During lactation 8th month
d) During the last trimester due to APH

1820. 15-50% of maternal deaths in India can be averted by- *(JIPMER 95)*
a) Appropriate Saging of delivery
b) Correction of anemia
c) Anti malarial and tetanus prophylaxis
d) Preventing puerperal haemorrhage

1821. Among the cause of maternal mortality, which one of the following is the correct descending order due to which the maternal deaths occur in India? *(UPSC-II08)*
a) Haemorrhage, obstructed labour, abortion, sepsis
b) Obstructed labour, haemorrhage, abortion, sepsis
c) Sepsis, obstructed labour, abortion, haemorrhage
d) Haemorrhage, sepsis, abortion, obstructed labour

1822. A village with a population of 10,000 has a birth-rate of 36/1000 population. In one year there has been 5 maternal deaths. The MMR in this village is-
a) 0.5 b)5 *(J&K05)*
c) 7.2 d) 13.8

1823. Perinatal mortality is expressed in terms of -
a) Deaths/1000 total births *(Corned 09)*
b) Deaths/1000 live births
c) Deaths/10000 total births
d) Deaths/10000 live births

1824. You were posted at a PHC catering to a population of 1,20,000. In the year 2006, a total number of 2500 liver born babies were delivered. Number of children dying under one year of age during 2006 was 150. What is the infant mortality rate of this population ?
a) 60 b) 70 *(UPSC-108)*
c) 80 d)90

1825. Most common causes of perinatal mortality ?
a) Birth injury *(APPG08)*
b) Intra uterine infection
c) Birth asphyxia
d) LBW

1826. According to international standards, still birth is defined as weight of fetus over? *(MH11)*
a) 500 gm b)850gm
c) 1000 gm d)2000gm

1806) a 1807)c 1808)c 1809)b 1810) d 1811)a 1812)d 1813)c 1814)a 1815)a 1816)c 1817)b 1818)d 1819)c 1820) b,d 1821) d 1822)None 1823)b 1824)a 1825)c 1826)c

1827. The following does not suggest deficiency in under five care in the community - *(APPGE 05)*
a) Infant mortality rate
b) 1-4 year mortality
c) Neonatal tetanus
d) Deaths due to diarrheal disease between 1-5 years

1828. The milk of which of the following contains the least amount of calcium ? *(UPSC-II09)*
a) Human b) Cow
c) Buffalo d)Goat

1829. Which one is wrong about human milk-
a) Gives energy of 67 K cal/1 *(JIPMER98)*
b) Carbohydrate forms 40% of total energy
c) Fats forms > 50% of total energy
d) Proteins form 3 3 % of total energy

1830. Cow's milk contains what % proteins - *(Orissa 05)*
a) 1.1 **b)3.2**
c) 3.5 d) 4.1

1831. Which one of the following nutrient is more in the human milk as compared to cow's milk - *(UPSC 06, Corned 09)*
a) Protein b) Calcium
c) Cabohydrate d)Fat

1832. Among the following milk sources, which one is the correct sequence with decreasing fat content -
a) Buffalo, Cow, Goat, Human *(UPSC-II08)*
b) Buffalo, Goat, Cow, Human
c) Buffalo, Human, Cow, Goat
d) Buffalo, Goat, Human, Cow

1833. Milk is a poor source of which of the following ?
a) Essential fatty acids *(UPSC-II08)*
b) Iron
c) Vitamin C
d) Vitamin A

1834.In which one of the following is the calcium content of milk lowest - *,(UPSC 06)*
a) Human milk b) Goat milk
c) Cow milk d) Buffalo milk

1835. ICDS scheme does not include - *(UPSC-II 09)*
a) Children in the age group of 0-6 years
b) Primary school children
c) Pregnant women
d) Lactating women

1836. In MCH programme the sampling is done by which method - *(MH-00)*
a) Systemic b) Stratified
c) Group d) Cluster-30

NUTRITION AND HEALTH

GENERAL

1837. Weight of an Indian reference woman is *
a) 45 kg b) 50 kg *(AIIMSNov 04)*
c) 55 kg d) 60 kg

1838. All are criteria for normal Indian Reference male except- *(AIIMSMay08)*
a) 60 kg b) 2200 Kcal/day
c) 8 hrs in bed d) 20-39 age

1839. False about Indian reference female is -
a) Weighs 55 kg *(AIIMS Nov 08)*
b) Age 20-39 yrs
c) 8 hours of moderate work
d) Walking or recreational work for 2 hours daily

1840. For Indian reference male is *true-(NEET/DNB Pattern)*
a) Weight 60 kg b) Works for 15 hours
c) Age 20-3 5yrs d) Daily exercise

1841. True about Indian Reference Male *is-(AIIMSMay 12)*
a) Age 18-29 yrs b) Weight 65 kg
c) Work is mainly sedentary d) Works for 10 hrs

1842. Indian reference man is - *(AI09, AIIMSMay 10)*
a) 55 kg b) 60 kg
c) 65 kg d) 70 kg

1843. Energy requirement in late *pregmncy-(NEET/DNB Pattern)*
a) 2500 cal b) 1400 cal
c) 1000 cal d) 500 cal

1844. Extra calories in lactating mothers in first six months- *(NEET/DNB Pattern)*
a) 300 b) 500
c) 600 d) 1000

1845. The recommended daily energy intake of an adult woman with heavy work is - *(AI 05)*
a) 1800 b)2100
c) 2300 d) 2900

1846. Calorie requirement at 1 year of age is - *(ai 96)*
a) 800 b)1000
c) 1200 d) 1500

1847. A 24 years old primigravida wt = 57 kg, Hb 11.0 gm% visits an antenatal clinic during 2nd trimester of pregnancy seeking advice on dietary intake. She should be advised - *(AIIMSNov 05, Feb 97; AI 06)*
a) Additional intake of 300 K.cal
b) Additional intake of 500 K.cal
c) Additional intake of650 K.cal
d) No extra K.cal

1848. Additional daily energy requirement during the first six months for a lactating woman is -
a) 350 K calories *(AIIMSNov 03, Dec 97, Nov 93;*
b) 450 K calories *AI 99, 97)*
c) 550 K calories
d) 650 K calories

1849. Recommended Dietary allowance in pregnancy are -
a) +100-300 cal b) 30 mg Iron *(PGI Nov 10)*
c) 4 mg folic acid d) 2500 mg Mg
e) 220 pg Iodine

1850. Which is NOT a micro nutrient - *(AIIMSSep 96)*
a) Iodine b) Vitamin A
c) Iron d) Vitamin C

1851. Which of the following trace element cannot be completely supplemented by diet in pregnancy -
a) Fe **b) Ga**** *(AI 99)*
c) Zn d) Manganese

1827)c 1828) a , 1829)a,d 1830)b 1831)c 1832)b 18=33) c 1834) a 1835)b 1836) d 1837) c 1838)b 1839)b 1840) a 1841) a 1842)b 1843) a 1844)c 1845)d 1846)b 1847) None 1848) None 1849)b,e 1850)None 1851) a

PROTEINS

1852. Protein is assessed by - *(PGI June 02)*
a) Protein energy ratio b) BUN
c) Per gm calories given d) Amino acid score

1853. Protein quality assessment is best done by -
a) NPU *(PGMCET 07, Kerala 94)*
b) Biological value
c) Digestibility coefficient
d) Amino acid score

1854. Amino acid score of animal foods - *(PGI92)*
a) 40-50 b) 50-60
c) 70-80 d) 90-100

1855. Biological value is used for assessment of - *(AI93)*
a) Fat quality b) Protein quality
c) Carbohydrate quality d) None

1856. All are TRUE regarding Net Protein Utilisation, except-
a) It is the increase in weight per unit weight of protein consumed *(AI2000)*
b) NPU of cow - milk is 81%
c) NPU of average Indian foods is 50 - 80%
d) If NPU is low, more protein is required

1857. Which of the following statements is true about net protein utilization - *(AIIMS May 11, Nov 08)*
a) It is the ratio of total nitrogen retained by total N2 intake multiplied by 100
b) If net protein utilization is high, the amount of protein required in diet is high
c) It is the ration of energy from protein to total energy in diet.
d) It is the amount of one amino acid per gram of a protein divided by the amount of same amino acid per gram of egg protein.

1858. Protein efficiency ratio is - *(AI 94, 03)*
a) Gain in weight per unit of protein consumed
b) Product of digestibility coefficient and biological value divided by 100
c) Percentage of nitrogen retained out of the nitrogen absorbed
d) Percentage of protein absorbed after digestion

1859. How is the protein Energy Ratio (PER) in diet expressed as- *(UPSC07)*
a) $\frac{\text{Energy in diet}}{\text{Protein in diet}} \times 100$
b) $\frac{\text{Protein energy in diet}}{\text{Total energy in diet}} \times 100$
c) $\frac{\text{Total protein in diet}}{\text{Total energy in diet}} \times 100$
d) $\frac{\text{Total energy consumed}}{\text{Total protein consumed}} \times 100$

1860. Essential amino acids are A/E - *(AI 99)*
a) Leucine b) Proline
c) Lysine d) Methionine

1861. Semi essential amino acids *are-(NEET/DNBPattern)*
a) Arginine b) Lysine
c) Leucine d) Histidine

1862. Highest amount of protein is seen in - *(AP85,PGI 86, Kerala 87, UPSC 88)*
a) Soyabeans b) Groundnut
c) Bengal gram d) Mysore dhal

1863. The reference protein is - *(AIIMSSep 96)*
a) Fish b) Egg
c) Rice d) Lemon

1864. Highest biological value of protein is seen in -
a) Eggs b)Fish *(AI 94)*
c) Soyabean d) Gram

1865. Egg is ideal protein because it has - *(PGIDec 99)*
a) High cholesterol
b) High protein per 100 gm
c) High biological efficiency and NPU
d) No limiting amino acid

1866. Cereals and pulses are considered complementary since - *(A102; PGI Dec 05)*
a) Cereals are deficient in methionine
b) Cereals are deficient in methionine and pulse are deficient in lysine
c) Cereals are deficient in lysine and pulses are deficient in methionine
d) Cereal proteins contain non - essential amino-acids, while pulse proteins contain

1867. Pulse proteins are deficient in-*(NEET/DNB Pattern)*
a) Methionine b) Lysine
c) Threonine d)All

1868. Cereal protein is deficient in which amino acid -
a) Leucine b) Lysine *(PGI June 97)*
c) Phenylalanine d) Tryptophan

1869. What is the percent of total energy ratio supplied by fish protein (PE % Kcal) - *(UPSC 07)*
a) 20 b) 40
c) 60 d)80

1870. Best quality proteins are found in highest quantities in - *(UPSC 85)*
a) Rice b) Wheat
c) Ragi d)Bajra

1871. What is the average protein requirement of a reference Indian man - *(AIIMS Nov 2000)*
a) 50gms b)60gms
c) 80gms d)40gms

1872. In 13-15 year female child, Recommended Daily Protein Intake is - *(AIIMS May 12)*
a) 0.68 b) 0.95
c) 1 d) 1.33

1873. For a 60 Kg Indian male, the minimum daily protein requirement has been calculated to be 40g (mean) & allowance of protein would be - **(AI 02)**
a) 60g/dayb) 70g/day
c) 40g/dayd) 50g/day

1852) a,d 1853) a 1854)c 1855)b 1856)a 1857)a 1858)a 1859)b 1860)b 1861) a,d 1862) a 1863)b 1864)a 1865)c 1866)c 1867) a 1868)b 1869)d 1870)a 1871)b 1872)c 1873)a

1874. Daily additional requirement of protein in lactation is- *(AIIMS Dec 95)*
a) 25 gm b) 15 gm
c) 35 gm d)50gm

1875. Highest amount of saturated fatty acid is seen in -
a) Soyabean oil b) Groundnut oil *(AI08)*
c) Palm oil d) Sunflower oil

1876. n-3PUFA is present in all except- *(AIIMS Nov 07)*
a) Mustard oil b) Com oil
c) Fish oil d) Groundnut oil

1877. Which of the following is an essential fatty acid -
a) Oleic acid b) Stearic acid *(AI 02)*
c) Linoleicacid d) Palmitic acid

1878. PUFA consumption is associated with- *(AIIMSNov 06)*
a) Lowering of serum cholesterol, rise in LDL cholesterol
b) Lowering of semm cholesterol, lowering of LDL cholesterol
c) Rise in serum cholesterol, rise in LDL cholesterol
d) Rise in serum cholesterol, lowering of LDL cholesterol

1879. Vegetable fat differs from animal oil in being -
a) More saturated *(AIIMS June 2000)*
b) More stable
c) More atherosclerotic
d) Contains less fat soluble vitamin

1880. The highest percentages of polyunsaturated fatty acids are present in - *(AIIMSMay 06, AI 07, 08)*
a) Groundnut oil b) Soyabean oil
c) Margarine d) Palm oil

1881. Eichosapentaenoic acid is present in- *(AIIMSNov*
a) Soyabean oil b) Com oil *06)*
c) Safflower oil d) Fish oil

1882. >50% PUFA is/are seen in - *(PGI Nov 10)*
a) Mustard oil b) Soyabean oil
c) Safflower oil d) Com oil
e) Palm oil

1883. Food with maximum Cholesterol *oontmt-(AIIMS May 12)*
a) Egg b) Coconut Oil
c) Hydrogenated Fats d) Ghee (Hydrogenated)

VITAMINS

1884. Carotene is not found in high amounts in -
a) Tomato b) Cabbage *(AIIMS 94)*
c) Potato d) Spinach

1885. The highest concentrations of Vitamin A is seen in - *(PGI 88)*
a) Polar bear liver b) Cod liver oil
c) Shark liver oil d) Papaya

1886. Vitamin A requirement in infant is -
a) 350 g b) 600 g *(NEET/DNB Pattern)*
c) 800 g d) 1000 g

1887. Vit. A deficiency is characterized by - (PGI Dec 04)
a) Bitot's spot b) Xerophthalmia
c) Night blindness d) Tranta's spot

1888. Vitamin A deficiency is considered a public health problem if prevalence rate of night blindness in children between 6 months to 6 years is more than -
a) 0.01% b) 0.05% *(AIIMS May 06)*
c) 0.1% d) 1.0%

1889. Bitot's spot prevalence as public health problem -
a) > **1%** b) > 2% *(NEET/DNB Pattern)*
c) > 0.5% d) None

1890. RDA in infant of Vit A is - *(NEET/DNB Pattern)*
a) 350 g b) 450 g
c) 600 g d) 1000 g

1891. Under National Programme for Prevention of Nutritional Blindness, a child in the age group of 6-11 months is given a mega dose of vitamin A equal to-
a) 50,000 IU b) 1 Lakh IU *(AIIMS Nov 05)*
c) 1.5 Lakh IU d)2LakhIU

1892. The vitamin A supplement administered in "Prevention of nutritional blindness in children programme" contain - *(AI 03)*
a) 25,000 i.u./ml b) 1 lakh i.u./ml
c) 3 lakh i.u./ml d) 5 lakh i.u./ml

1893. Medium term intervention for Vitamin A prophylaxis is- *(AIIMS June 2000)*
a) Measles immunization
b) Vit A supplementation
c) Fortification of food
d) Green leafy vegetables

1894. A10 month old child weighing 8kg has Bitot spots in both eyes. Which of the following is the most appropriate schedule to prescribe vitamin A to this child - *(AI 04)*
a) 2 lakh units intramuscular (IM) on day 0,14
b) 1 lakh units IM on day 0,14
c) 2 lakh units IM on day 0, 1 and 14
d) 1 lakh units IM on day 0, 1 and 14

1895. Dose of Vitamin A (I.U) and Vitamin D (I.U) in Daldais- *(MAHE98)*
a) 1000 & 100 b) 1500 & 125
c) 2000 & 150 d) 2500 & 175

1896. The recommended daily requirement of vitamin A for pregnant woman is - *(AMC 99)*
a) 750 meg b) 900 mg
c) 1200 meg d) 1500 mg

1897. Vitamin D is absent in - *(AIIMS June 98)*
a) Egg b) Milk
c) Fish fat d) Cod liver oil

1898. Vitamin D is maximum in - *(NEET/DNB Pattern)*
a) Milk b) Fish fat
c) Eggs d) Cod liver oil

1899. Richest source of vitamin D is - *(AIIMSMay 07)*
a) Milk b)Egg
c) Green leafy vegetables d) Fish oil

1900. Dose of Vit D in children with malnutrition -
a) 100 IU b) 200 IU *(NEET/DNB Pattern)*
c) 60,000 IU d) 10,000 IU

1874) a 1875)c 1876)d 1877)c 1878)b 1879)d 1880)b 1881)d 1882)b,c,d 1883)a 1884)c 1885)b 1886)a

1899)d 1900)c

190U Niacin is synthesised from- *(Kerala 94)*
.... a) Tryptophan b) Tyrosine •
c)Methionine d) Phenylalanine

1902. One mg. of Niacin is produced by .....w..«. mg. of Tryptophan- *(PGI85, 84)*
a) 22 b) 37
c) 55 d) 60

1903. In Niacin deficiency, all of the following are seen except- *(4196)*
a) Deafness b) Diarrhea
c) Dementia d) Dermatitis

1904. Niacin deficiency cause - *(NEET/DNB Pattern)*
a) Pellagra b) Scurvy
c) Rickets d) Lathyrism

1905. Niacin deficiency in a maize-eating population is due to- *(AI 95)*
a) High Tryptophan b) High Isoleucine
c) High leucine d) High Phenylalanine

1906. Jowar is Pellogerogenic due to excess of-
a) Leucine b) Lysine *(NEET/DNB Pattern)*
c) Tryptophan d) Methionine

1907. Beri-Beri is caused by - *(AI99)*
a) Thiarpine b) Folic acid
c) Riboflavin d) Niacin

1908. Thiamine deficiency is seen in all except -
a) Chronic diarrhoea *(AIIMS May 0 7)*
b) Chronic alcoholism
c) Homocystinemia
d) Food faddist

1909. For every 100 kilocalories, vitamin B_x required is - *(AIIMS 81, AMC 87)*
a) 0.05 mg b) 0.5 mg
c) 5.0mg d) l.Ogm

1910. TRUE about folic acid and vitamin B12 is all, except - *(AIIMS June 99)*
a) Both are required for DNA synthesis
b) Recommended daily allowances for Folic acid is 1000 micro grams
c) Vegetarians have vitamin B12 deficit
d) Deficiency of both causes megaloblastic anaemia

1911. Vitamin B_{12} is not found in - *(AI 97)*
a) Soyabean b)Milk
c) Meat d) Fish

1912. Which of the following drugs is supposed to prevent congenital neural tube defects - *(AI 95)*
a) Thiamine b) Riboflavin
c) Folic acid d)Pyridoxine

1913. On exposure to sunlight which Vitamin is lost -
a) Vitamin A b) VitaminB_1 *(AMC 2K)*
c) VitaminB_6 d)VitaminC

1914. The highest quantities of vitamin C is found in- *(AP 85, PGI 86, Kerala 87, UP SC 88)*
a) Orange b) Lemon
c) Indian gooseberry d) Grapes

1915. The daily requirement of Vitamin C is - *(AP 85)*
a) 40 mg. b) 100 mg.
c) 200mg. d) 500 mg.

1916. Zinc supplement given in 12 month baby *A(NEET/*
a) lgm/day b) 10 mg/day *DNB Pattern)*
c) 5 mg/day d) 15 mg/day

1917. Among the following, which one is not a good dietary source of iron - : *(UPSC 07)*
a) Liver b) Jaggery
c) Fish d)Milk

1918. Highest amount of iron is seen in r *(PGI 86)*
a) Milk b) Meat
c) Spinach d) Jaggery

1919. Iron is maximum in r *(NEET/DNB? Pattern)*
a) Pista b) Cashewnut
c) Meat d) Milk

1920. Nutrient rich in iron - *(NEET/DNB Pattern)*
a) Almond b) Pistachio
c) Ground nut d) Cashew nut .

1921. Iron absorption from intestine is regulated by -
a) Acid secretion in stomach *(KERALA 94)*
b) Reducing substances in food
c) Mucosal block in the intestinal cells in according to iron requirement
d) Alkaline medium in small intestine

1922. Iron requirement in pregnancy-(7VE£77DJVZ? *Pattern)*
a) 1000 mg b) 35 mg
c) 500 mg d) 800 mg

1923. Extra iron requirement for pregnant women in India- *(NEET/mB Pattern)*
a) 15 mg b) 25 mg
c) 30 mg d) 35 mg

1924. Daily iron requirement in healthy Indian male is-
a) 35 mg b) 17 mg *(NEET/DNB*
c) 10 mg d) 5 mg *Pattern)*

1925. According to the WHO criteria, anaemia in infants of 6 months age is defined as Hb less than -
a) 100 gm/litre b) 105 gm/litre *(AIIMS Nov 01)*
c) 110 gm/litre d) 115 gm/litre

1926. Best test to detect iron deficiency in community is -
a) Transferrin b) Serum ferritin *(AJ 01)*
c) Serum iron d) Hemoglobin

1927. First indices to change in iron deficiency anemia is- **(AI 97,94)**
a) S. iron b) Total iron binding capacity
c) S. ferritin d) S. haemoglobin concentration

1928. Tablets supplied by Govt, of India contain the following amdunt of iron and folic acid - *(AIIMS May 04, AI 03, PGI June 2K)*
a) 60 mg elemental iron+ 500 gFA
b) 100 mg elemental iron+500 g FA
c) 200 mg elemental iron + 1 gFA
d) 100 mg elemental iron + 5 g FA

1929. Elemental iron and folic acid contents of pediatric iron folic acid tablets supplied under Rural Child Health (RCH) programme are- *(AI03)*
a) 20 mg iron & 100 microgram folic acid
b) 40 mg iron & 100 microgram folic acid
c) 40 mg iron & 50 microgram folic acid
d) 60 mg iron & 100 microgram folic acid

1901) a 1902) d 1903) a 19G4)a 1905) c 1906) a 1907) a 1908) c 1909)a 191G)b 1911) a 1912)c 1913)d 1914)c 1915)a 1916)c 1917)d 1918)b 1919)c 1920)d 1921)c 1922)b 1923)a ;1924)b 1925)c 1926)b 1927)c 1928)b 1929)a

1930. Total body iodine is about - *(PGI85, PGI83)*
a) 20 mg b)30mg
c) 40 mg d)50mg

1931. Richest source of iodine - *(PGJ 99)*
a) Sea food b) Milk
c) Meat d) Butter

1932. Iodine RDA is - *(NEET/DNB Pattern)*
a) 300 microgram b) 500 microgram
c) 150 microgram d). 50 microgram

1933. The recommended content of Iodine in salt at the consumer level is - *(Corned 08)*
a) 10 ppm b) 15 ppm
c) 20 ppm d) 30 ppm

1934. Iodine deficiency control programme -
a) Health education *(NEET/DNB Pattern)*
b) Water testing
c) Fortification of salt
d) None

1935. Spectrum of IDD does NOT include - *(APPGE 05)*
a) Stillbirths b)Hyperactivity
c) Deafness d) Delayed development

1936. Efficiency of the goiter control program can be assessed by - *(AIIMS Nov 06)*
a) Neonatal thyroxine levels
b) Goitre in pregnancy
c) Goitre in the age group of 12 to 18 yr
d) Soil iodine levels

1937. Best method to measure goitre prevalence rate in community is - *(AIIMS Sep 96, AI05)*
a) Neonatal hypothyroidism
b) Iodine level in salt
c) Adult hypothyroidism
d) Thyroid function test screening

1938. As per the World Health Organisation guidelines, iodine deficiency disorders are endemic in a community if the prevalence of goiter in school age children in more than - *(AIIMSNov 02)*
a) 1% b)5%
c) 10% d) 15%

1939. Iodine comes in iodine salt Requirement in humans -
a) 5 PPM b) 15 PPM *(NEET/DNB Pattern)*
c) 25 PPM d) 35 PPM

1940. Rice contains - *(AP 96)*
a) 20% protein b) 12% of protein
c) 14% of protein d) 0.6% ofpotein
e) 6.8% of protein

1941. Par boiling of paddy helps in retaining - *(Karn94)*
a) Vitamin C b) Vitamin A
c) Niacin d) 'Thiamine

1942. Lysine is not present in - *(AI 88)*
a) Wheat b) Rice
c) Bengal gram d) red gram
e) Red gram dhall

1943. Maize are deficient in- *(AI 97)*
a) Typtophan b) Threonine
c) Methionine d) Leucine

1944. Ragi is richest source of - **(AI 95)**
a) Carbohydrates b)Iron
c) Calcium d) Proteins

1945. What is known as doorman's meat'- *(NEET/DNB Pattern)*
a) Milk b) Pulses
c) Fish d) egg

1946. About Soyabean true - *(AIIMSMay 93)*
a) Protein 40%
b) Minerals 8%
c) Digestibility coefficient 75%
d) Highest quality protein amongst vegetarian food

1947. Which one of the following pulses has the highest content of iron - *(AIIMS May 05)*
a) Bengal gram b) Black gram
c) Red gram d) Soyabean

EGG

1948. Egg has all vitamins except - *(NEET/DNB Pattern)*
a) B1 b)B6
c) C d)E

1949. Egg lacks the following - *(APPGE 05)*
a) Protein b) Cholesterol
c) Carbohydrate d) Vitamins

1950. Egg yields about..... K cal of energy -
a) 50 b) 60 *(UPSC97)*
c) 70 d)80

1951. Fat content is highest in..... - *(AI 98)*
a) Beef b) Mutton
c) Chicken d)Fish

1952. Fish is deficient in which of the following nutrients?
a) Iron b) Iodine*(AIIMS May 11, Nov 08)*
c) Vitamin A d) Phosphorous

1953. Keshan cardiomegaly - *(NEET/DNB Pattern)*
a) Se b)Cu
c) Zn d)Fe

1954. Malnutrition in India is mainly attributed to -
a) Protein deficiency *(JIPMER8I, KERALA 90)*
b) Vitamin A deficiency
c) Iron deficiency
d) All of these

1955. Commonest malnutrition in India - *(PGI96)*
a) Protein deficiency b) Calorie deficiency
c) Vitamin A deficiency d) Iron deficiency

1956. Classification of grades of protein energy malnutrition given by Indian academy of peadiatrics as adopted- *(UPSC2K)*
a) ICMR standards
b) Standards developed by national institute of nutrition, Hyderabad
c) Local standards
d) NCHS standards

1957. Index of duration of malnutrition is - *(PGI83)*
a) Weight for height b) Height for age
c) Weight for age d) None

1930)d 1931) a 1932)c 1933)b 1934)c 1935)b 1936)a 1937)a 1938)b 1939)b 1940)e 1941) c,d 1942)a 1943)a
1944)c 1945) b 1946)a 1947)d 1948)c 1949)c 1950)c 1951)a 1952)a 1953)a 1954)d 1955)d 1956)a 1957)b

1958. Index of severity of malnutrition is - *(PGI83)*
a) Weight for height b) Height for age
c) Weight for age d) None

1959. Grade HI malnurtition according to IAP is -
a) 50% b) 51-60% *(PGIJune 99)*
c) 61-80% d) 81-100%

1960. A 2 year old child has a weight of 6.4 kg. and has vitamin A deficiency.What is the grade of malnutrition in this child - *(AIIMS 87)*
a) First degree b) Second degree
c) Third degree d) Fourth degree

1961. The following statement about Gomez classification is false - *(AI08)*
a) Based on height retardation
b) Based on 50th centile Boston standards
c) Between 75 and 89% implies mild malnutrition
d) This classification has prognostic value for hospitalization of children

1962. Village Health Guide measures the state of malnutrition in an under 5 child by using - (AI 2000)
a) Mid arm circumference b) Weight for age
c) Skin fold thickness d) Height for age

1963. Assessment of Malnutrition is/are done by all except:
a) Creatinine-height index *(PGIMay 10)*
b) Transferrin
c) Total lymphocyte count
d) Albumin concentration
e) Folate concentration

1964. Double edged sword is - *(AMC 84,85,89, PGI82)*
a) Chlorine b) Fluorine
c) Lead d) Selenium

1965. True regarding fluorosis are all except -
a) Fluorosis is the most common cause of dental caries in children *(AIIMS Nov 0 7)*
b) Fluorosis can cause fluoride deposition in bones
c) Defluoridation is done by Nalgonda technique
d) Fluorosis can cause genu valgum

1966. 'NALGONDA technique'is used in - *(AI 99)*
a) Endemic-fluorosis b) Epidemic-dropsy
c) Endemic-ascites d)Neurolathyrism

1967. Process of deflouridation of water is -
a) Nalgonda technique *(NEET/DNB Pattern)*
b) NINH
c) Sand filter
d) Parboiling

1968. Lathryism is due to - *(NEET/DNB Pattern)*
a) Khesari dal b) Aflatoxins
c) Aspergillus d) Fluoride

1969. BOAA is - *(AI 96)*
a) Beta-oxalyl amino alanine
b) Beta-oxalo acetoacetate
c) Beta-oxalyl aminoacetate
d) Beta-oxalyl acetylacetate

1970. Which of the following statements is/are true about lathyrism - *(PGI Dec 08)*
a) Vitamin C prophylaxis
b) Banning of crop
c) Flaccid paralysis
d) Parboiling detoxicates pulses
e) BOAA is causative toxin.

1971. Active principal of Lathyrus sativa is - *(ARMS*
a) Pyrrolizidine b) Sanguinarine *June 97)*
c) BOAA d) Jhunjhunia

1972. Milk borne diseases are- *(PGIMay 11)*
a) Salmonellosis b) E. coli
c) Streptococcus d) Tuberculosis
e) Q fever

1973. True about Pasteurization of milk is all except -
a) Does not kill thermoduric bacteria *(AI 2000)*
b) Does not kill spores
c) Cause >95% decrease in bacterial count
d) Kills tubercle bacillus

1974. The following tests are used to check the efficiency of pasteurization of mild except - *(AI 05)*
a) Phosphatase test
b) Standard plate count
c) Coli form count
d) Methylene blue reduction test

1975. Which is not used in pasteurization -
a) Phosphatase test *(NEET/DNB Pattern)*
b) Methylene blue test
c) Coliform count
d) Standard plate count

1976. Efficiency of pasteurization can be best assessed by? *(NEET/DNB Pattern, AI 11, ARMS Nov 08)*
a) Oxidase test b) Phosphatase test
c) Catalase test d) Indole test

1977. Post pasteurized milk's qualiy is tested by- *(ARMS Nov 08)*
a) Phosphatase test b) Methylene blue test
c) Catalase test d) Oxidase test

1978. Pasteurization of milk is achieved by boiling at - *(NEET/DNB Pattern, PGI June 97)*
a) 65° C for 3 0 min b) 72° for 10 sec
c) 100° for 20 sec d) 136° for 3 0 sec

1979. Hepatotoxic carcinogen is produced by -
a) Aspergillus flavus *(PGI June 98)*
b) Claviceps fusiformis
c) Aspergillus fumigatus
d) Argemone mexianna

1980. Aflatoxin is produced by - *(PGI June 99)*
a) Aspergillus flavus
b) Aspergillus famigatus
c) Calviceps purpura
d) Argemone mexicana

1981. Aflatoxin is produced by? *(AI 11)*
a) Aspergillus niger b) Aspergilus flavus
c) Candida albicans d) Actinomycetes

1958) a 1959)b 1960)c 1961)a 1962)a 1963)None 1964)b 1965)a 1966)a 1967)a 1968)a 1969)a
1970)a,b,d,e 1971)c 1972)A11 1973)c 1974)d 1975)b 1976)b 1977)a 1978)a 1979)a 1980)b 1981)b

1981. Sanguinarine is derived from - (AI97)
a) Fusorium incamatum b) Argemone oil
c) Jhumjhujia seeds d) Khesari-dhal

1982. Epidemic dropsy is due to- *(NEET/DNB Pattern)*
a) BOAA b) Aflatoxin
c) Mustard oil d) None

1983. All are features of epidemic dropsy, except -
a) Glaucoma b) Diarrhoea *(AIIMS Sep 96)*
c) Convulsion d) Heart failure

1984. Manifestations of epidemic Dropsy are all except -
a) Gastrointestinal bleed *(PGI May 11)*
b) Cutaneous hemangiomas
c) Breathlessness
d) CHF
e) Glaucoma

1985. Responsible for epidemic dropsy is- *(NEET/DNB*
a) Sanguinarine *Pattern,PGI Dec 99, AIIMS Nov 07)*
b) Ergot alkaloids
c) Pyrazolidine alkaloids
d) Aflatoxin

1986. Most sensitive & specific test for sanguinane -
a) Fe C13 b) NO *(NEET/DNB Pattern)*
c) HQ d) Nitric Acid

1987. Endemic ascitis is associated with the following -
a) Pyrrolizidine *(AIIMS May 08, Nov 06)*
b) Aflatoxin
c) Sanguinarine
d) Beta oxalylamino alanine (BOAA)

MISCELLANEOUS

1988. One of the following is not reported to be a clinical manifestation of Zinc deficiency in children -
a) Dwarfism and hypogonadism *(DPG11)*
b) Liver and spleen enlargement
c) Impaired cell-mediated immunity
d) Macrocytic anaemia

1989. True about dietary fibres *(PGI Nov 10)*
a) Increase stool transit time
b) Decrease post prandial glucose
c) Decrease bile salt reabsorption
d) Decrease LDL cholestrol
e) t Bulk of stool

1990. Which of the following statements about Nutritional surveillance is not true - *(AI08)*
a) It is a diagnostic approach
b) Assessment involves precise measurements of weight and height
c) Assessment is done by trained persons
d) Done in all children <5 years

1991. What is/are components of Nutrition surveillance ?
a) Policy maker *(PGI Dec 05)*
b) Nutritional survey

1992. All are indicators for the assessment of the nutritional programm except - (AIIMS May 01)
a) Weight and height of the preschool child
b) Prevalence of low Birth weight (less than 2.5 kg) in community
c) Nutritional assessment of the preschool child
d) Prevalence of pregnant mothers having Hb < 11.5 g % in the 3rd trimester

1993. Regarding nutritional status assessment, not true is- *(AI09)*
a) 1 - 4 years mortality b) Babies < 2.5 kg
c) Mother's Hb < 11.5 d) None of the above

1994. Mid-day meals provided in schools provide - *(AI97)*
a) 1/2 of total calories & 1/2 of protein
b) 1/3 of total calories & 1/2 of protein
c) 1/2 of total calories & 1/3 of protein
d) 1/3 of total calories & 1/4 of protein

1995. Students receive how much cereal /day in mid day meal prog - *(NEET/DNB Pattern)*
a) 50 gm b) 100 gm
c) 150 gm d) 75 gm

1996. Suggestions to improve nutritious value of Mid-day meal - *(PGI Nov 11)*
a) Sprouted pulse should be added as it has more nutrient
b) Cereals-pulse ratio of 1:3
c) Rice water left after cooking should be mixed with dal
d) Fermentation 1 nutritive value
e) Food grain should be stored away from moist area

1997. Which of the following is the nodal ministry for Integrated Child Development Services (ICDS) Programme Centre - *(AIIMS May 04)*
a) Ministry for Human Resource Development
b) Ministry for Rural Development
c) Ministry for Health and Family Welfare
d) Social Justice

1998. Mid day meal programme comes under -
a) Ministry of Social Welfare *(NEET/DNB Pattern)*
b) Ministry of education
c) Ministry of Human Resources Developments
d) None

1999. The daily requirement of fat is..... % of total energy - *(PGI 2K)*
a) 10 b) 15
c) 20 d)25
e) 30

2000. A man weighing 68 kg, consumes 325 gm carbohydrate, 65 gm protein and 35 gms fat in his diet: the most applicable statement here *\s-(AI 01)*
a) His total calorie intake is 3000 kcal
b) The proportion of proteins, fats and carbohydrates is correct and in accordance with a balanced diet
c) He has a negative nitrogen balance
d) 30 % of his total energy intake is derived from fat

1982)c 1983) c 1984)a 1985)a 1986)d 1987)a 1988)d 1989)b,c,d,e 1990)d 1991)a,b 1992)d 1993)c 1994)b 1995)d 1996) a,c,e 1997)a 1998)b 1999)b,c,d,e 2000)b

2001. Calcium requirement above the normal during the first six month of lactation is - *(AI92)*
a) 400mg/day b) 550mg/day
c) 600mg/day d)750mg/day

2002. Adult non-pregnant female requires, calcium per day- *(NEET/DNB Pattern)*
a) 400 mg b) 600 mg
c) 800 mg d) 1000 mg

2003. RDA cover of nutrient requirement of - *(Kerala 08)*
a) 50% of individuals
b) 75% of individuals
c) 98% of individuals
d) Same as adequate intake

2004. Dietary Reference Intake recommendations include all except - *(AIIMSNov 07)*
a) Recommended Dietary Allowances
b) Adequate Intake
c) Upper tolerable level
d) Food based dietary advice

2005. Which of the following statements about recommended daily allowance is false - *(AI 08)*
a) The RDA is decided by a panel of experts and is based on scientific research
b) The RDA caters to the dietry requirement of all people
c) The RDA is often higher than the recommended minimum requirement
d) The RDA is based on the estimated average requirement (EAR)

2006. All are food fortification except - *(KERALA 94)*
a) Addition of colour to saccharin
b) Addition of Vit A to food stuff
c) Addition of extra nutrients to food stuff
d) Iodisation of salt

2007. High potassium diets are - *(PGIDec 08)*
a) Green leafy vegetables b)Milk
c) Banana d) Iodised salt
e) Fish

2008. Cereals are deficient in? *(DNB Dec 2011)*
a) Alanine b) Lysine
c) Methionine d) Cysteine

2009. Endemic cretinism is seen when Iodine uptake is less than? *(DNB Dec 2011)*
a) 5 micro gram/day b) 20 micro gram/day
c) 50 micro gram/day d) 75 micro gram/day

2010. The toxic agent in epidemic dropsy includes - *(DNB Dec 2011)*
a) BOAA b) Ergot alkaloids
c) Sanguinarine d) None of the above

2011. Milk pasteurization can be tested by -
a) Orthotolidine test *(DNB Dec 2011)*
b) Phosphatase test
c) Nitric acid test
d) Acid chromatin test

2012. Cause of epidemic dropsy is? *(DNB June 2011)*
a) Pyrolizidine b) Sanguinarine
c) Fusarium toxin d)BQAA

2013. RDA of calcium in normal adult male is?
a) 800 mg b) 400 mg *(DNB June 2011)*
c) 1200mg d)100mg

2014. All of the following are sources of vitamin A except:
a) Egg b) Milk *(DNB June 2011)*
c) Sunflower seeds d) Tomato

2015. Minimal level of iodine at consumer level should be .....ppm: *(DNB June 2011)*
a) 5 b) 10
• c) 15 d)30

2016. Reference weight of Indian men and women is?
a) 60 and 50 kg *(DNB Dec 09)*
b) 55 and 50 kg
c) 65 and 55 kg
d) 45 and 50 kg

2017. Which of the following is the richest source of Vitamin C ? *(DNB Dec 09)*
a) Orange b) Guava
c) Cabbage d) Amla

2018. Which of the following fats has the highest concentration of saturated fatty acids -
a) Butter b) Palm oil *(DNB Dec 09)*
c) Coconut oil d) Margarine

2019. Pulse proteins are poor in? *(DNB June 09)*
a) Methionine b) Lysine
c) Threonine d) Alanine

2020. Poor man's iron source is? *(DNB June 09)*
a) Almond b) Grapes
c) Soya d) Jaggery

2021. Age independent anthropometric measure of malnutrition is? *(DNB June 09)*
a) Weight/height
b) Mid arm circumference
c) Head circumference
d) Mid arm circumference/height

2022. Among the pulses, the highest quantity of protein is present in - *(DNB June 09)*
a) Green gram b) Red gram
c) Soyabean d) Black gram

2023. Indian reference man - *(DNB Dec 08)*
a) 55 kg b)60kg
c) 65 kg d)70kg

2024. Among the pulses, the highest quantity of protein is present in - *(DNB Dec 08)*
a) Green gram b) Red gram
c) Soyabean d) Black gram

2025. "Maldon Teeth" is due to - *(DNB Dec 08)*
a) Lead b) Fluoride
c) Calcicum d) Phosphorus

2026. Lathyrism results due to - *(DNB June 08)*
a) Aflatoxin b) BOAA
c) Pyruvic acid d) Sanguinarine

2027. n-3 PUFA is present in all except - *(DNB June 08)*
a) Mustard oil b) Corn oil
c) Fish oil d) Groundnut oil

2001)c 2002)b 2003)c 2004)d 2005)b 2006)a 2007)a,b,c,e 2008)b 2009)b 2010)c 201 l)c 2012)b 2013)None 2014)c 2015)c 2016)None>a 2017)d 2018)c 2019)a 2020)d 2021)a,b 2022)c 2023)b 2024)c 2025)b 2026)b 2027)d

2028. Fish is deficient in which of the following nutrients? *(DNB June 08)*
a) Iron b) Iodine
c) Vitamin A d) Phosphorous

2029. True about mide-day meal given in school is -
Calories Proteins *(DNB June 08)*
a) 1/3 1/2
b) 1/3 1/3
c) 1/2 1/2
d) 1/2 1/3

2030. Reference protein is - *(DNB Dec 07)*
a) Egg b) Fish
c) Milk d) Meat

2031. Lysine is deficient in - *(DNB Dec 07)*
a) Pulse b) Wheat
c) Both of the above d) None of the above

2032. The best indicator for monitoring the impact of the Iodine Deficiency Disorders Control Programme is - *(DNB Dec 07)*
a) Prevalence of goiter among school children
b) Urinary iodine levels among pregnant woemn.
c) Neonatal hypothyroidism
d) Iodine level in soil

2033. Phosphatase test in milk is done to know -
a) Quality of pasteurizatrion *(DNB Dec 07)*
b) Contamination of milk
c) Nutritive value
d) Coliform count

2034. The daily extra calorie requirement in first trimester of pregnancy is - *(DNB June 07)*
a) 50 b) 150
c) 350 d)450

2035. Daily requirment of iron in pregnancy is -
a) 1 mg b) 2 mg *(DNB June07)*
c) 3 mg d) 3.5 mg

2036. Net Protein utilization of fish is - *(DNB June 07)*
a) 57% b)67%
c) 77% d) 87%

2037. The value of proteins in Soyabean is about -
a) 43% b) 50% *(DNB June07)*
c) 58% d)64%

2038. Which of the following method of assessment of quality of proteins gives complete assessment of protein quality? *(MH11)*
a) Biological value
b) Net protein utilization
c) Digestibility coefficient
d) Amino acid score

2039. Wrong statement is - *(SGPGI 05)*
a) Pulses are diffident in methionine
b) Cerels are deficient in lysine
c) Wheat deficient in threonine
d) Maize is deficient in tryptophan & leucine

2040. The reference protein is - *(UPSC 85, 86,*
a) Cow's milk b) Hens Egg *Jipmer 88, 86,*
c) Meat d) Fish *ALLHPH 01)*

2041. Which of the following has the highest protein content per 100 gm ? *(Delhi PG Mar. 09)*
a) Egg b) Groundnut
c) Soyabean d) Meat

2042. Protein requirement of 4 kg new born (daily) -
a) 3 gm b) 7 gm *(AIIHPH 98)*
c) 9 gm d) 11 gm

2043. Limiting amino acid in soyabean is - *(PGI78, AIIMS*
a) Threonine b) Lysine *85, ALLHPH 01)*
c) Methionine d) Tryptophan

2044. Among the pulses, the highest quantity of protein is present in - *(Corned 08)*
a) Green gram b) Red gram
c) Soyabean d) Black gram

2045. Which of the following is least in protein quality ?
a) Gelatin b) Lactalbumin *(APPG08)*
c) Albumin d) Cashewnut protein

2046. Saturated fatty acid is present in high quantity -
a) Coconut oil b) Sunflower oil *(Assam 95)*
c) Safflower oil d) Soyabeen

2047. The highest percentage of essential fatty acid is found in - *(Orissa 99)*
a) Butter fat (ghee) b) Sunflower seed oil
c) Comoil d) Ground nut oil

2048. Maximum amount of PUFAis in- *(UPSC2002)*
a) Palmitic acid b) Stearic acid
c) Oleic acid d) Linoleic acid

2049. Which one of the following cooking oils contains highest percentage of linoleic acid ?- *(UPSC 2006)*
a) Safflower oil b) Sunflower oil *MP 98)*
c) Comoil d) Groundnut oil

2050. Which one of the following edible oil yields highest quantity of Polyunsaturated Fatty Acids ?
a) Coconul oil b) Com oil *(UPSC 04)*
c) Groundnut oil d) Sunflower oil

2051. Among the following which has the highest quantity of retinol per 100 g of fruit ? *(UPSC-II09)*
a) Papaya b) Orange
c) Ripe mango d) Tomato

2052. The earliest clinical sign of Vitamin A deficiency is - *(Corned 08)*
a) Conjunctival xerosis b) Comeal xerosis
c) Bitots spots d) Keratomalacia

2053. Dose of vitamin A prophytaxis given in age group 1-6 years - *(PGMCET 07)*
a) 2000 iu b) 20000 iu
c) 200000 iu d)l 00000 iu

2054. Daily regularment of Vit Ain children is -
a) 40 b)400 *(SGPGI05)*
c) 1500 d) 5000

2028)a 2029)a 2030)a 2031)b 2032)a 2033)a 2034)c 2035)d 2036)c 2037)a 2038)b 2039)d 2040)b 2041)c 2042)None 2043)c 2044)c 2045)a 2046)a 2047)c 2048)d 2049)a 2050)b 2051)c 2052)a 2053)c 2054)b

2055. Absorption of vitamin A can be enhanced by giving the child a diet rich in - *(UPSC 07)*
a) Fat b) Protein
c) Minerals d) Carbohydrates

2056. In South India pellagra is reported in population eating- *(KARNAT98)*
a) Ragi b)Jowar
c) Bajra d) Minor millets

2057. As per nutritional surveys, the diet of an average Indian of lower socioeconomic strata is highly deficient in - *(UPSC 99)*
a) Thiamine b) Riboflavin
c) Nicotinic acid d) Vitamin C

205$. Folic acid supplementation during lactation period is- *(UP 07)*
a) 100 g/d b) 150 g/d
c) 400 g/d d)450 g/d

2059. For which one of the following has the cytotoxic effect of vitamin on human lymphocytes in vitro at high concentration been reported - *(UPSC 2006)*
a) Vitamin A b) Vitamin D
c) Vitamin E d) Vitamin K

2060. Which of the following is the richest source of Vitamin C ? *(Delhi PG Mar 09)*
a) Orange b) Guava
c) Cabbage d)Amla

2061. The haemoglobin cut-off level for determining prevalence of anemia among pregnant women is - *(KARN.99, Aiims 97, MAHE 05)*
a) Less than 15g/dL b) Less than 13 g/dL
c) Less than 11 g/dL d) Less than 19 g/dL

2062. Elemental iron supplementation in Iron deficiency anemia is - *(UP 08)*
a) 300 - 400 mg b) 150 - 200 mg
c) 100-150mg d)<100mg

2063. In Iron deficiency anemia, after haemoglobin level has returned to normal so that iron stores are replenished. The Iron tablets should be recommended for - *(UP 08)*
a) 0 - 3 months b) 3 - 6 months
c) 6 - 12 months d) 12 - 24 months

2064. Under the Prevention of Food Adulteration (PFA) Act, the expected level of iodine in iodized salt at production level is NOT less than - *(Karn 11)*
a) 30 ppm b) 25 ppm
c) 20 ppm d) 15 ppm

2065. Iodised salt was first started in which country?
a) India b)UK *(Jharkand 03)*
c) Switzerland d) Germany

2066. As per WHO guidelines, iodine deficiency disorders are endemic in the community when prevalence of goitre in school age children is more than -
a) 1% b) 5% *(HP2006)*
c) 10% d) 15%

2067. The net protein utilization of rice is - *(MP 98)*
a) 20% b) 40%
c) 63% d) 81%

2068. The genetically engineered 'golden rice' is rich in -
a) P-carotene and magnesium *(UPSC-I 08)*
b) Folic acid and iron
c) p-carotene and iron
d) Folic acid and magnesium

2069. The distinct golden colour in transgenic Golden rice is due to the presence of - *(UPSC-I 09)*
a) Riboflavin b) p-carotene
c) Vitamin B_{12} d) Xanthophyll

2070. Soya bean is rich in - *(J&K 2001)*
a) Lysine b) Aspartic acid
c) Glycine d) Alanine

2071. Dates are rich source of - *(APPGE 04)*
a) Calcium b)Iron
c) VitC d) Carotene

2072. All of the following are used to assess the nutritional status of an individual, except - *(UP 97)*
a) Urinary nitrogen excretion
b) Mid arm circumference
c) Serum immunoglobulin
d) Serum transferrin

2073. Second degree of under nutrition means- *(Orissa 99)*
a) Weight below 50% of the harvard standard
b) Weight below 60% of the harvard standard
c) Weight between 60% & 81% of the harvard standard
d) Weight between 60 % & 71 % of the harvard standard

2074. Severe wasting is - *(ORISSA R)*
a) **<60%** b) **< 70%**
c) <80% d) < 90%

2075. The defluoridations process of drinking water developed by the NEERI is popularly known as-
a) Activated sludge process *(KARN 95)*
b) Recarbonation process
c) Nalgonda process
d) Double pot method

2076. Nalgonda technique is related to ? *(MH11)*
a) Fluorine b)Chlorine
c) Nitrate d) Nitrites

2077. Methylene blue reduction test is done for estimating-
a) Fat content of milk *(KARN 94, UPSC 88)*
b) Sugar content of milk
c) Protein content of milk
d) Bacterial activity in milk

2078. Pasteruisation of milk does not kills -
a) Anthrax *(Rajasthan 97, TN90)*
b) Brucella
c) Mycobacterium tuberculosis
d) Streptococcus

2079. Test for detecting argemone oil Contamination does not include - *(AMC 99)*
a) Nitric acid test b) Paper chromatography test
c) Aldehyde test d)None

2055)a 2056)b 2057)a 2058) None 2059)c 2060)d 2061)c 2062)c 2063)a 2064)a 2065)a 2066)b 2067) c 2068)c 2069)b 2070)a 2071)a 2072)c 2073)d 2074)b 2075)c 2076)a 2077)d 2078)a 2079)c

2080. Which is first and commonest clinical manifestation of Epidemic dropsy - *(Orissa 99)*
a) Bilateral swelling of legs
b) Gastrointestinal upsets
c) Cardiac decomposition
d) Sarcoid

2081. The ICDS scheme is sponsored by - *(ALLHPH01)*
a) Ministry of health & family welfare
b) Ministry of Social welfare
c) Ministry of education
d) None

2082. Which one of the following Union Ministers administers the "Nutritional Programme for Adolescent Girls" ? *(UPSC-109)*
a) Ministry of Health and Family Welfare
b) Ministry of Social Justice and Empowerment
c) Ministry of Women and Child Development
d) Ministry of Housing and Urban Poverty Alleviation

2083. Which one of the following describes the flavouring substance asafoetida (Hing) ? *(UPSC-108)*
a) Dried leaf extract
b) Exudate from chopped roots
c) Pith of stem boiled and dried
d) Dried and hardened paste of fruit

ENVIRONMENT AND HEALTH

WATER

2084. Daily per capita water consumption is - *(AIIHPH2K Delhi 92, UPSC 87)*
a) 50-100 litres
b) 100-150 litres
c) 150-200 litres
d) 200-250 litres

2085. Safe yield of water source - *(PGI91)*
a) Adequate supply for 50% of the year
b) Adequate supply for 60% of the year
c) Adequate supply for 80% of the year
d) None

2086. Ground water has the following advantages except -
a) Likely to be free from pathogenic organisms
b) Usually requires no treatment *(Kerala 04)*
c) Supply is likely to be certain even during dry season
d) Likely to be hard

2087. All are water borne disease, except- *(AIIMSDec97)*
a) Leptospirosis b) Schistosomiasis
b) Fish tape worm d) Brucellosis

2088. Which of the following is water related disease -
a) Yellow fever b) Scabies *(AI89)*
c) Cholera d) Dysentery

2089. Which of the following is purification of water at large scale - *(PGI June 08)*
a) Disinfection of well b) Rapid sand filter
c) Slow sand filter d) Household purification

2090. Vital layer in slow sand filter is seen in- *(APPGE 04)*
a) Top of water b) On the sand bed
c) Near filter d)None

2091. Most important layer of a slow sand filter is -
a) Vital layer b) Sand bed *(Kerala 08)*
c) Filter system d) Raw water

2092. Slow sand filter is differentiated from rapid sand filter by - *(PGI June 08)*
a) Bacteria are removed more effectively
b) Skilled person is needed
c) Cost construction is cheaper
d) Sand particles are of smaller size
e) Longer duration is needed

2093. Feature of slow filter (w.r.t. fast filter) is/are:
a) Occupies less space *(PGIMay 10)*
b) Highly skilled operation
c) Poor bacterial quality
d) Takes more time for purification
e) Size of sand is smaller

2094. TVue about slow sand filter is - *(NEET/DNB Pattern)*
a) Occupies less space
b) More expensive
c) Requires longer duration
d) Sand size 0.4 - 0.7 mm

2095. What is the size of particle is rapid sand filter ?
a) 0.1mm b)0.2 *(APPG 08)*
c) 0.5 d) 0.4 to 0.7 mm

2096. Which part of chlorine disinfection is most effective?- *(NEET/DNB Pattern)*
a) Hypochlorous acid b) Hypochlorous ion
c) Hypochlorite ion d) None

2097. All of the following are true about break point chlorination, except - *(AIIMS May 04)*
a) Free chlorine is released in water after break point chlorination
b) Chlorine demand is the amount needed to kill bacteria, oxidize organic matter and neutralize ammonia
c) 1 ppm free chlorine should be present in water after break point has reached
d) Contact period of 1 hour is necessary

2098. Which one of the following is the level of residual free chlorine recommended for swimming pool water disinfection ? *(UPSC-II08)*
a) 0.5 mg/litre b) 0.8 mg/litre
c) 1 mg/litre d) 5 mg/litre

2099. Following are true regarding chlorination except -
a) Residual chlorine is 0.5 mg/lit. *(AI 93)*
b) Contact period - 30 minute
c) Water should not be turbid
d) Chlorine demand should be estimated

2100. Orthotolidine test is used to determine -
a) Nitrates in water *(AIIMS Nov 04, PGI June 06,*
b) Nitrites chlorine in water *AT 11)*
c) Free and combined chlorine in water
d) Ammonia content in water

2080) a 208l)b 2082) c 2083)b 2084) c 2085)None 2086) d 2087) d 2088) a 2089)b,c 2090)b 2091) a
2092) a,c,d,e 2093) d,e, 2094) c 2095) d 2096) a 2097) c 2098) c 2099) b 2100) c

2101. Orthotoluidine Arsenite test determines - *(PGI06)*
a) Free residual chlorine
b) Combined chlorine
c) Free and combined chlorine separately
d) Free and combined chlorine together

2102. Residual chlorine is detected by - *(AIIMSDec 95)*
a) Horrock's test b) Ortho-toluidine test
c) Chromatography d) Polarimeter

2103. Which one of the following method is used for the estimation of the chlorine demand of water -
a) Chlorometer *(ARMSMay 10, 07, 06)*
b) Horrock's apparatus
c) Berkfeld filter
d) Double pot method

2104. The amount of good quality bleaching powder required for chlorinating a round well measuring 4 mtrs diameter and depth of water column 6 mts, to get PPM of residual chlorine when the Horrok'stest gives definite blue colour in the 3rd cup onwards, is -
a) 993.8 grams b) 99.38 grams *(UPSC96)*
c) 9.938 grams d) 0.9938 grams

2105. All are true regarding bleaching powder, except -
a) Contains about 33% of available chlorine
b) It is a stable compound *(ARMS Dec 94, AI98)*
c) White amorphous compound
d) Strong bleaching agent

2106. All of the following statements are true about bleaching powder except - *(AI 96)*
a) It is a stable compound
b) Available chlorine is 33%
c) Has a Rapid and brief action
d) Recommended concentration of free chlorine is 0.5 mg at the end of 1 hour

2107. During water analysis in a hostel, amoebic cysts were seen. The best step to manage it is -
a) Iodine b) Boiling *(ARMS Nov 99)*
c) U.VRays d) Chlorination

2108. Horrok's apparatus determines Chloride which has to have a holding level of - *(NEET/DNB Pattern)*
a) 0.1 mg/L b) 1 mg/L
c) O.Olmg/L d) 0.5 mg/L

2109. All of the following are acceptable criteria for water quality except - *(AI 9 7)*
a) Dissloved 0_2 of 5mg/L
b) Nitrates of 1 mg/L
c) Nitrites of 1-2 mg/L
d) Free & saline NH_3 of 0.05 mg/L

2110. Past contamination of water is indicated by -
a) Free and saline ammonia
b) Dissolved H_2S
c) Nitrites
d) Nitrates

2111. The safe limit of Fluorine in drinking water is -
a) 0.2-0.5 mg/L b) 0.5-0.8 mg/L *(AI94)*
c) 0.8-1.2mg/L d) 1.2-2.0mg/L

2112. Fluoride to be present in water (mg/L) to prevent caries - *(PGIDec 97)*
a) 0.2 b)0.4
c) 0.3 d)0.5

2113. Indication of Fecal contamination of water is due to presence of - *(PGI Dec 03)*
a) E.coli b)Coliform
c) Enterococci d) Clostridium difficile
e) Streptococcus pyogene

2114. Not seen in faecal pollution - *(ARMSMay 10)*
a) Staphylococcus b) Streptococcus
c) E.coli d)Clostridiumperfringens

2115. According to the WHO, what is the minimum bacteriological standard for drinking water -
a) All the samples should not contain coliform organisms *(ARMS Nov 2000)*
b) 3 consecutive samples of water should not contain any coliforms
c) 3 coliforms in a 100 ml water
d) 1 coliform in a 100 ml water

2116. Which of the following is not true about water quality estimation - *(ARMS May 10, AI 09)*
a) Clostridium spores indicate recent contamination
b) Not more than 5% samples should have coliforms
c) Sodium thiosulfate added to neutralize chlorine
d) Coliforms must not be detectable in 100 ml sample

2117. Presumptive count includes -*(PGI 81, UPSC 91,92)*
a) No E. Coli
b) Coliform but not only E. Coli
c) Gram negative bacilli
d) Any bacteria

2118. All of the following statements about purification of water are true except - *(ARMS May 11)*
a) Presence of Clostridial spores indicate recent contamination of water
b) Coliforms must not be detectable in any 100 ml sample of drinking water
c) Sodium thiosulphate is used to neutralize chlorine
d) Coliforms may be detected by multiple tube method & indole production

2119. Test for coliform count ? *(NEET/DNB Pattern)*
a) Eijkman test b) Casoni's test
c) Nitrate test d) Urease test

2120. Coliform test is for - *(NEET/DNB Pattern)*
a) Air pollution b) Water contamination
c) Sound pollution d) None

2121. Hardness of water is expressed as milli-equivalent per litre (m Eq/L), one unit of which is equivalent to which one of the following - *(UPSC 2006)*
a) 20 mg $CaC0_3$ (20 ppm)
b) 30 mg $CaC0_3$ (30 ppm)
c) 40 mg $CaC0_3$ (40 ppm)
d) 50 mg $CaC0_3$ (50 ppm)

2101)c 2102)b 2103)b 2104)a 2105)b 2106)a 2107)a 2108)d 2109)None 2110)d 2111)b 2112)d 2113)a,b,c 2114)a 2115)a 2116)a 2117)b 2118)a 2119)a 2120)b 2121)d

2122. Soft water has hardness levels of - *(PGMCET 07)*
a) 50 b) 100
c) 150 d)200

2123. Temporary and permanent hardness of water is removed by- *(AIIHPH2K)*
a) Boiling b) Addition of lime
c) Permutit method d)All

2124. Hardness of water has a beneficial effect against which one of the following - *(UPSC 2006)*
a) Renal diseases
b) Metabolic diseases
c) Cerebrovascular diseases
d) Cardiovascular diseases

AIR

2125. Not a constituent of air- *(AIIPHP 98)*
a) H, b)N_2
c) 0_2 d)$C0_2$

2126. The acceptable level for physical comfort is-
a) Ambient temperature of 36°F *(Karn 95)*
b) Corrected effective temperature upto 80°F
c) Effective temperature upto 120°F
d) Ambient temperature of 40°F

2127. An hour sweat rate should be MCARDLE's maximum allowable sweat rate - *(Jipmer 04)*
a) 3.5 ltr b)211trs
c) 2.5 ltrs d)4.51trs

2128. In severe heat strain the heat stress index (HIS) is -
a) 10-30 b) 40-60 *(Corned09)*
c) 70-90 d) 100

2129. Above which level of heat stress index it is not possible to work comfortably -*(NEET/DNB Pattern)*
a) 20 - 40 b) 40 - 60
c) 60 - 80 d) 80 - 100

2130. A person working in hot environment who consumes more water without salt is likely to develop a condition called - *(UPSC 02)*
a) Heat stroke b) Heat exhaustion
c) Heat cramps d) Heat hyperpyrexia

2131. The number of times the air in a living room should be recycled is - *(NEET/DNB Pattern)*
a) 2-3 times b) More than 6 times
c) 4 times d) None

2132. Not a primary air pollutant -*(Chandigarh Dec 96)*
a) Smoke and dust b) $S0_2$
c) NO_z d) Ozone

2133. The maximum ozone concentration in polluted atmosphere is dependent on the concentration and ratio of nitrogen oxides and which one of the following - *(UPSC 2006)*
a) Carbon monoxide
b) Lead
c) Volate organic compounds
d) Sulphur dioxide

2134. In Indoor air pollution, carbon monoxide is produced by- *(UP 07)*
a) Combustion equipment
b) Stove
c) Gas heaters
d) All of the above

2135. Which of the following is not a indoor air pollutant?
a) Carbon monoxide b) Nitrous oxide *(AI11)*
c) Radon d) Mercury

2136. Air pollution may cause - *(Kerala 90)*
a) Dermatitis b) Carcinoma bronchus
c) Bronchiectasis d) Pneumonia

2137. Soiling index is measure for - *(PGI June 98, 99)*
a) Air pollution
b) Water pollution
c) Faecal contamination
d) Milk contamination

2138. Smoke index is used for - *(NEET/DNB Pattern)*
a) Air pollution b) Sound pollution
c) Excreta d) None

2139. All are indicators for air pollution, except -
a) $C0_2$ b) $S0_2$ *(AIMS Dec95)*
c) Soiling Index d) Smoke index

2140. Which agency monitors air quality in India -
a) Central pollution control board
b) Central air quality board *(NEET/DNB Pattern)*
c) Central public works dept
d) None

2141. The electrostatic precipitator are used in the prevention of - *(Karn 95)*
a) Radiation risks
b) Air pollution emissions
c) Mosquito nuisance
d) Diffuse vibrations

2142. Which gas is NOT responsible for green house affect - *(AIMS Dec 94)*
a) Carbon monoxide b) Ozone
c) Nitrous oxide d) Nitrogen

2143. Among the following, which of the following is/are the greatest contributor/contributors to global warming as a consequence of human activities and lifestyle? *(UPSC-108)*
a) Carbon dioxide b) Chlorofluorocarbons
c) Methane d) Ozone

2144. True about global warming is - *(AIIMSMay 10)*
a) $C0_2$ is the major greenhouse gas
b) Stratosphere ozone layer is harmful
c) CFC increases stratosphere ozone layer
d) Kyoto protocol called for 20% reduction in green house effect

LIGHT

2145. What is the basic minimum illumination required for satisfactory vision ?- *(UPSC 2006)*
a) 10-15 foot candles b) 15-20 foot candies
c) 20-25 foot candles d) 25-30 foot candles

2122)a 2123)c 2124)d 2125)a 2126)b 2127)d 2128)b 2129)b 2130)c 2131)a 2132)d 2133)c 2134)d 2135)d 2136)b 2137)a 2138)a 2139)a 2140)a 2141)b 2142)a,d 2143)a2144)a 2145)b

2146. Recommended reflection factors include each of the following, except - *(AIIMS 81, AMC83)*
a) Ceilings 80% b) Roofs 40%
c) Walls 50 to 60% d) Furnitures 30 to 40%

2147. Light index in living room is - *(NEET/DNB Pattern)*
a) 8 b) 15
c) 20 d) 25

2148. Light requirement in watch manufacturing company is- *(PGI80, AMC 85, 86)*
a) 2000-3000 Lux b) 5000-10000 Lux
c) 10000-20000 Lux d) 50000 Lux

SOUND

2149. Normal voice heard from 1 meter, intensity of sound reaching ear is *(Jipmer 11)*
a) 20 dB b) 40 dB
c) 60 dB d) 80 dB

2150. The acceptable noise level is - *(DPGEE 08)*
a) 95 dB b) 100 dB
c) 90 dB d) 85 dB

2151. Sound that can be tolerated - *(NEET/DNB Pattern)*
a) < 200 db b) 200-250 db
c) 250-300 db d) 80 db

2152. Auditory fatigue occurs at------- Hz - *(AIIMS 80, DNB91)*
a) 2000 b) 3000
c) 4000 d)8000

2153. Prolonged exposure to noise levels greater than the following can impair hearing permanently -
a) 40 decibels b) 85 decibels *(Karnat 96)*
c) 100 decibels d) 140 decibels

2154. Exposure to noise above- causes permanent hearing loss - *(Jipmer 93)*
a) 90 dB b) 100 dB
c) 125 dB d) 160 dB

RADIATION

2155. The source of endogenous radiation is -*(APPGE 05)*
a) Radon b) Potassium
c) Thorium d) Uranium

2156. Terrestrial radiation is maximum in -*(ARMS Feb 97)*
a) Karnataka b) Orissa
c) West Bengal d) Kerala

2157. What is the approximate penetrating ability of alpha particle radiation at tissue level - *(UPSC 07)*
a) 0.05mm b) 0.10mm
c) 1.50 mm d) 2.00 mm

2158. Curie is the unit for - *(ARMS 78, 80 Delhi 93)*
a) Radiation emitted b) Radiation absorbed
c) Radiaoactivity d) All of the above

2159. Unit of one of radiation absorbed \s-*(NEET/DNB Pattern)*
a) Grey b) Roengten
c) Curie d)Bequerrel

2160. The maximum permissible level of occupational exposure to radiation is...per year - *(ARMS 85)*
a) 5 rad. b)2rad.
c) 10 rad. d) 50 rad.

2161. Radiation protection shields are made up of -
a) Copper b) Silver
c) Lead d)Tin

2162. Thickness of lead apron to prevent radiation -
a) 1mm b)3mm *(NEET/DNB Pattern)*
c) 0.5mm d) 7mm

2163. Psychrometer is used to measure - *(AI08)*
a) Humidity b) Air velocity
c) Room temperature d) Radiant temperature

2164. Kata Thermometer is used to measure -
a) Maximum temperature *(NEET/DNB Pattern)*
b) Minimum temperature
c) Radiant heat
d) Cooling power of air

2165. Wind velocity is normally recorded at a height of -
a) 1 mt. b) lOmts. *(A11HPH98)*
c) 15mts. d)20mts.

2166. Which one of the following is the standard prescribed for setback (open space around the house) in rural areas ? *(UPSC-1108)*
a) Built up area 1/3 and open space 2/3
b) Built up area 2/5 and open space 3/5
c) Built up area !4 and open space *Vi*
d) Built up area *lA* and open space %

2167. Floor space of 2 persons- *(ARHPH2K)*
a) 70-90 sq.ft b) 90-100 sq.ft
c) 50-70 sq.ft d) 110-120 sq.ft

2168. Controlled tipping is method of disposal of -
a) Sullage *(ARMS May 93, 97, AI 94)*
b) Sewage
c) Human excreta
d) Refuse

2169. Not safe disposal but good for soil building -
a) Incineration *(NEET/DNB Pattern)*
b) Controlled tipping
c) Composting
d) None

2170. If land is available the best method of sewage disposal is - *(AMC 2K)*
a) Dumping b) Composting
c) Trickling filter d) Activated sludge process

2171. The disposal of night soil and refuse is by-
a) Chemical sterilization *(UPSCI87,AMC 198Y, 88)*
b) Burning
c) Composting
d) Any of the above

2172. Sullage is - *(NEET/DNB Pattern)*
a) Liquid excreta
b) By product of chemical industry
c) Waste water from kitchen
d) Waste water from an industry

2146)b 2147)a 2148)a 2149)c 2150)d 2151)d 2152)c 2153)c 2154)d 2155)b 2156)d 2157)a 2158)c 2159)a
2160)a 2161)c 2162)c 2163)a 2164)d 2165)b 2166)a 2167)d 2168)d 2169)c 2170)b 2171)c 2172)c

2173. 'Sanitation barrier'implies - *(AI 99)*
a) Segregation of faeces
b) Personal hygiene
c) Elemination of flies
d) Water pollution

2174. Trickling filter is used in - *(AIIMSDec 97)*
a) Primary treatment of sewage
b) Scondary treatment of sewage
c) Oxygen ponds
d) Sewage farming

2175. A type of tertiary waste water treatment process is - *(Jipmer 81, UP SC 83)*
a) Reverse osmosis b) Sedimentation
c) Both d) Neither

2176. Aerobic digestion of sludge takes place *in-(UPSC 2K)*
a) Trickling filter b) Broad irrigation
c) Activated sludge d) Septic tank

2177. The heart to the activated sludge process is -
a) Primary sedimentation tank *(NEET/DNB Pattern)*
b) Sludge digestor
c) Aeration tank
d) Final settling tank

2178. Biochemical oxygen demand is determined by -
a) Oranic matter and bacteria *(AIIMS June 2000)*
b) Oxygen content
c) Alage content in water
d) Agriculture fertiliser content in water.

2179. The biological oxygen demand indicates - *(AI 02)*
a) Organic matter b) Bacterial content
c) Anaerobic bacteria d) Chemicals

ENTOMOLOGY

2180. Definitive host is one in which the following lives -
a) Larvae b) Asexual form *(PGI June 98)*
c) Adult form d) A or D

2181. Transovarian transmission of infection occurs in -
a) Fleas b) Ticks *(UPSC 96)*
c) Mosquitoes d) Sandfly

2182. Transovarian transmission is seen in which infection - *(NEET/DNB Pattern)*
a) Plague b) Filarial
c) Guinea d) Yellow fever

2183. Man is intermediate host of - *(PGI June 97)*
a) Kalaazar b)Filariasis
c) Hydatid cyst d) All of the above

2184. Lice are not the vectors of - *(AIIMSMay 06, 07, 09,*
a) Relapsing fever b) Q fever *Nov 06, AI 07)*
c) Trench fever d) Epidemic typhus

2185. Mosquito borne infection is - *(PGI June 97)*
a) HIV b) Leprosy
c) Japanese encephalitis d) Plague

2186. Given three genera of mosquitoes (Culex, Anopheles and Aedes) act as vectors for which of the following diseases world wide - *(AI 12)*
a) Malaria b) Dengue
c) Filariasis d) Yellow Fever

2187. Spread by mosquitoes: *(PGI Nov 10)*
a) Dengue b) Kala azar
c) Trypanosomiasis d) Listeriosis
e) Trench fever

2188. Aedes aegypti transmits following diseases -
a) Yellow fever *(PGI Dec 05, June 04)*
b) Dengue
c) Japanese encephalitis
d) Filariasis

2189. Chikungunya is transmitted by - *(AIIMSMay 10)*
a) Aedes b) Culex
c) Mansonoides d) Anopheles

2190. Culex tritaenorrhyncus transmits - *(AIIMSMay 01)*
a) Dengue fever b) Yellow fever
c) KFD d) Japanese encephalitis

2191. Which of the following is NOT transmitted by Aedesaegypti- *(AIIMS Dec 94)*
a) Filariasis
b) Yellow fever
c) Dengue fever
d) Chikungunya Hemorrhagic fever

2192. Which of the following is not spread by Aedes mosquito - *(AIIMS Nov 2000)*
a) Dengue fever b) Chickungunya
c) Japanese encephalitis d) Yellow fever

2193. All of the following statements about mosquito are true except - *(AIIMS Nov 04)*
a) It is a definitive host in malaria
b) It is a difmitive host in filaria
c) Its life cycle is completed in 3 weeks
d) The female can travel upto 3 kilometers

2194. Soft tick transmits - *(AI08)*
a) Relapsing fever b) KFD
c) Tularemia d) Indian tick typhus

2195. Hard Tick causes a/e- *(AIIMS Nov 10)*
a) Relapsing fever b) KFD
c) Indian tick typhus d) Tularemia

2196. Lyme disease is transmitted by -*(NEET/DNB Pattern)*
a) Rat flea b) Tick
c) Mite d) None

2197. Mites are the vectors of the following diseases except - *(AIIMS Nov 03)*
a) Scabies b) Scrub typhus
c) Rickettsial pox d) Ky asanur forest disease

2198. Disease caused by mite is - *(AI 95, AI96)*
a) Scrub typhus b) Fever
c) Trench fever d) Endemic typhus

2199. Diseases transmitted by louse - *(PGI June 06)*
a) Epidemic typhus b) Scrub Typhus
c) Trench fever d) Q fever
e) Rocky mountain spotted fever

2200. Vagabond disease - *(NEET/DNB Pattern)*
a) Louse b) Mite
c) Tick d) Black Fly

2173)a 2174)b 2175)d 2176)a,c2177)c 2178)a 2179)a 2180)c 2181)b,c 2182)d 2183)c2184)b 2185)c 2186)c 2187)a 2188)a,b,d 2189)a 2190)d 2191)a 2192)c 2193)b 2194)a 2195)a 2196)b 2197)d 2198)a 2199)a,c 2200)a

2201. Disease not transmitted by Lice is - *(AIIMSMay 10)*
a) Relapsing fever b) Trench fever
c) Q-fever d) Epidemic typhus

2202. Kala-azar is transmitted by - *(AIIMSNov07)*
a) Reduvid bug b) Sandfly
c) Tsetse fly d) Mosquito

2203. Sandfly transmits - *(PGIDec08)*
a) Kala-azar b) Oriental sore
c) Relapsing fever d) Oraya fever
e) Sleeping sickness

2204. Rat flea transmits all the following except - *(AI95)*
a) Plague b) Salmonellosis
c) Hymenolopsis d) Endemic typhus

2205. Mites are known to transmit- *(AI97)*
a) Scabies b) Relapsing fever
c) KFD d) Human babesiosis

2206. Vector borne diseases are - *(PGI June 04)*
a) Syphilis b) Typhus
c) Dengue d) J.E.

2207. Which of the following viral infections is transmitted by tick ? *(AI 05)*
a) Japanese encephalitis
b) Dengue fever
c) kyasanur forest disease (KFD)
d) Yellow fever

2208. All are caused by common vectors, except -
a) Dengue fever *(AIIMS Dec 95)*
b) Yellow fever
c) KFD
d) Japanese encephalitis

2209. Vector born diseases are - *(PGIDec 05)*
a) Epidemic typhus b) Japanese encephalitis
c) Tetanus d) Hangra virus disease
e) KFD

2210. All of the following are true about anopheles type of mosquito Except - *(Jipmer 80, UPSC 86)*
a) Eggs are boat shaped and provided with lateral floats
b) Larvae rest parallel to water surface
c) Larvae have siphon tube
d) Pupae have broad and short siphon
e) Wings of adults are spotted

2211. Anopheles mosquito lays eggs in - *(AIIMS87)*
a) Clearwater b) Chlorinated water
c) Running water d) Water logged dirty pools

2212. Which is true of pathogenic mosquitoes - *(AI 93)*
a) Anopheles has spotted abdomen
b) Mansoni lays egges singly
c) Culex cause yellow fever
d) Aedes has stripped yellow scales

2213. "Nuisance mosquito" is - *(AIIMS 80, AMC 84)*
a) Anopheles b) Culex
c) Ades d) Tsetse fly

2214. Which mosquito can fly the greatest distance -
a) Mansoni a b) Aedes *(Karn PGmee 06)*
c) Anopheles d) Culex

2215. Aedes agypti can fly - *(NEET/DNB Pattern)*
a) 100 m b) 200m
c) 1000 m d) 3-5 km

2216. The anopheles species most commonly found in coastal regions is - *(Corned 08)*
a) Anopheles philippinensis
b) Anopheles stephensi
c) Anopheles fluviatilis
d) Anopheles minimus

2217. Not true about aedes mosquito-^/ZMSMzy *10, AI09)*
a) Are recurrent day time biters
b) Eggs cannot survive more than 1 week without water
c) Transmits dengue fever
d) Prefer breeding in stagnant water

2218. Mosquito net hole diameter is - *(NEET/DNB Pattern)*
a) 0.02 inch b) 0.0475 inch
c) 0.5 inch d) 0.1 inch

2219. Sandfly can fly upto - *(NEET/DNB Pattern)*
a) 50 yards b) 100 yards
c) 200 yards d) 300 yards

2220. "Porters of Infection" are- *(Orissa 05)*
a) Anopheles b) Housefly
c) Aedes d) Cockroaches

2221. Best way to control houseflies - *(NEET/DNB Pattern)*
a) Eliminate breeding places
b) Insectiside spray
c) Net use
d) None

2222. The average life of a cyclops is about - *(PGI 79, 89)*
a) 1 month b) 2 months Bihar
c) 3 months d) 4 months

2223. Drinking water is best made free of cyclops by -
a) Filtration b) Boiling *(UPSC 88)*
c) Chlorination d) None of the above

2224. Drinking water is best made free of cyclops by -
a) Filtration b) Boiling *(UPSC 88)*
c) Chlorination d) None of the above

2225. The concentration of abate recommended for killing cyclops is- *(AIIMS94)*
a) 2 mg/L b) 1 mg/L
c) 5 mg/L d) 0 mg/L

2226. True about sand flea - *(MP2K)*
a) Not found in India b) Causes ulcer in foot
c) Caused bubo d) Causes plague

INSECTICIDES

2227. All are organophosphorus poison, except -
a) Abate b) Dibenanone
c) Propoxur d) Malathione

2228. Not a pyrethram derivative? *(AI10)*
a) Cypermethrin b)Permethrin
c) DDT d)Resmethrin

2201)c 2202)b 2203)a,b,d 2204)b 2205)a 2206)b,c,d 2207)c 2208)c 2209)a,b,e 2210)c 2211)a 2212)d
2213)b 2214)d 2215)a 2216)b 2217)b 2218)b 2219)a 2220)b 2221)a 2222)c 2223)c 2224)d 2225)b 2226)a,b
2227)c 2228)c

2229. The essential ingredient in the space sprays for vector control is - *(Karn 95)*
a) Malathion b)Fenithion
c) Pyrethrum d) BHC

2230. Which one of the following insecticides is commonly used for ultra low volume fogging - *(UPSC)*
a) Abate b)DDT
c) Paris green d) Malathion

2231. Fenthion is - *(NEET/DNB Pattern)*
a) Space spray b) Residual spray
c) Stomach poison d) Fumgant

2232. Malathion is used once every - *(A197)*
a) 3 months b) 6 months
c) 9 months d) 12 months

2233. All of the following methods are antilarval measures except - *(AI05)*
a) Intermittent irrigation b) Paris green
c) Gambusia affinis d) Malathion

2234. Recommended Larvicides for control of Malaria includes all of the following except - *(AI 12)*
a) Abate b) Pyrethrum
c) Fenthian d) Copper Acetoarsenite

2235. Which of the following represents a non deliberate cultural practice leading to anti-mosquito effect -
a) Use of alkaline detergent *(AI 11)*
b) Use of larvicidal agents
c) Use of bed nets
d) Use of repellents

2236. Mineral oils are used in mosquito control measure as - *(NEET/DNB Pattern)*
a) A personal protection method
b) Larvicide
c) Adulticide
d) Space spray

2237. All of the following are larva control measures except- *(AIIMSMayll, Nov08)*
a) Gambusia b) Intermittent irrigation
c) DDT d) paris green

2238. Which of the following statement about DDT is false-
a) It is contact poison *(AIIMSMay 11, Nov 08)*
b) Residual effect lasts for 18 months
c) Immediately kills the prey
d) Permethrin has synergistic action

2239. DDT is a - *(AIIMSFeb 97)*
a) CNS poison b) Stomach poison
c) Contact poison d) None of the above

2240. Organophosphate insecticides are all except -
a) Dieldrin b) Fenthion *(PGI June 03)*
c) Diazinon d)Propoxur
e) Lindane

2241. The following are DDT resistant except - *(AI 11)*
a) Phlebotomus b) Culex fatigans
c) Anopheles stephenci d) Musca domestica

2242. Insecticide of choice for sandfly ?
a) DDT b) HCH *(NEET/DNB Pattern)*
c) Malathione d) Paris green

2243. Phlebotomous argentipes is killed by -
a) Malathion b) DDT *(NEET/DNB Pattern)*
c) BHC d) Pyrethium

MISCELLANEOUS

2244. Hardness of drinking water should be?
a) >3 b) <1 *(DNB Dec 2011)*
c) 1-3 d) >6

2245. Which of the following is used as an indicator for recent fecal contamination of water?
a) E coli *(DNB Dec 2011)*
b) Comybacterium diptheriae
c) Pseudomonas
d) Streptococci

2246. Disinfecting action of chlorine is due to?
a) Hypochlorous acid *(DNB Dec 2011)*
b) Hypochlorite ion
c) Hydrochloric acid
d) Both Hypochlorous acid and Hypochlorite ion

2247. Minimum chlorine content of water after chlorination should be? *(DNB Dec 2011)*
a) 0.5mg/L b) 5 mg/L
c) 0.05 mg/L d) 50 mg/L

2248. Which is not caused by Aedes aegypti?
a) Yellow fever *(DNB June2011)*
b) Dengue
c) Japanese encephalitis
d) Filaria

2249. The vital layer in a slow sand filter is?
a) Sand bed *(DNB June2011)*
b) Under drainage
c) Zoological layer
d) Supernatant

2250. Which of the following disease is transmitted by rat flea? *(DNB Dec2010)*
a) Trench fever b) Chages disease
c) Oriental sore d) Endemic typhus

2251. Regarding Anopheles mosquito true is all except -
a) Eggs are laid singly on water *(DNB June 2010)*
b) Larva don't have siphon
c) Wings are spotted
d) Pupa don't have siphon

2252. Which is not caused by Aedes aegypti -
a) yellow fever *(DNB June 2010)*
b) Dengue
c) Japanese encephalitis
d) Filaria

2253. Marker of fecal contaminatin is - *(DNB June 2010)*
a) Ascaris b)E. coli
c) guinea worm presence d) Balantidium coli

2254. The best parameter to measure air pollution is -
a) $S0_2$ b)$C0_2$ *(DNB June 2010)*
c) GO d)N_20

2255. Number of holes in mosquito net (per sq. inch) -
a) 50 b) 150 *(DNB Dec 09)*
c) 100 d)200

2229)c 2230)d 2231)a 2232)a 2233)d 2234)b 2235)a 2236)b 2237)c 2238)a 2239)c 2240)a,d,e 2241)a 2242)a 2243)b 2244)c 2245)d 2246)d 2247)a 2248)c 2249)c 2250)d 2251)d 2252)c 2253)b 2254)a 2255)b

2256. Kala azar is spread by - *(DNBDec09)*
a) House-fly b) Black-fly
c) Sand-fly d) Tse tse-fly

2257. Which of the following chemicals is used for purification of water in India ? *(DNB Dec 09)*
a) Zinc sulphate
b) Iodine in oil form
c) Potassium permanganate
d) Bleaching powder

2258. Day light factor in living room should be?
a) 8 % b) 6% *(DNB June 09)*
c) 10% d) 15%

2259. Which one of the following is not a greenhouse gas?
a) Carbon monoxide *(DNB June 09)*
b) Methane
c) Nitrous oxide
d) Water vapour

2260. Acceptable level for physical compfort-/DM?*Dec 08)*
a) Corrected effective temperature 79°F
b) Corrected effective temperature 70-76°F
c) Corrected effective temperature 80-81°F
d) Corrected effective temperature > 82°F

2261. A person working in hot environment who consumes more water without salt is likely to develop a condition called - *(DNB Dec 08)*
a) Heat stroke b) Heat exhaustion
c) Heat cramps d) Heat hyperpyrexia

2262. Residual chlorine in chlorination of water should be- *(DNBDec 08)*
a) 1 mg/1 after 1 hr b) 0.5 mg/1 after 1 hr
c) 1 mg/1 after 3 0 mins d) 0.5 mg/1 after 30 mins

2263. Percentage of para-para isomer in DDT is -
a) 20-30% b) 40-50% *(DNB Dec 08)*
c) 60-70% d) 70-80%

2264. Which of the following is considered an adequate water supply/head/day - *(DNB June 08)*
a) 50-150 L b) 150-200L
c) 200-250L d) 100-150L

2265. Hardness of water is contributed by following salts except - *(DNB June 08)*
a) Calcium gluconate
b) Magnesium chloride
c) Calcium sulfate
d) Magnisum bicarbonate

2266. Which of the following viral infections is transmitted by tick - *(DNB Dec 07)*
a) Japanese encephalitis
b) Dengue fever
c) Kyasanur forest disease (KFD)
d) Yellow fever

2267. The biological oxygen demand indicates -
a) Organic matter *(DNB Dec 07)*
b) Bacterial content
c) Anaerobic bacteria
d) Chemicals

2268. Chlorine demand of water determined by -
a) Horrocks apparatus *(DNB June 07)*
b) Chloronometre
c) Berkefield filter
d) Doble Pot

2269. Not seen in faecal pollution - *(DNB June 07)*
a) Staphylococcus b) Streptococcus
c) E. coli d) Clostridium perffingens

2270. Which of the following is not transmitted by lice -
a) Trench fever *(DNB June 07)*
b) Relapsing fever
c) Q-fever
d) Epidemic typus

2271. Following is a contact poison - *(DNB June 07)*
a) BHC b)$BaS0_4$
c) A + B of above d) Paris green

2272. Among the following, which one is not a major contributor to acid rains - *(UPSC-I 09)*
a) Carbon dioxide b) Carbon monoxide
c) Nitric oxide d) Sulphur dioxide

2273. A mixture of rain and snow is called - *(UPSC-I 08)*
a) Glaze b) Frost
c) Shower d) Sleet

2274. Disinfection of water is not required if the source is from- *(COMEDK05)*
a) Tube well b) Step well
c) Draw well d) River

2275. In a slow sand filter, the element responsible for yielding bacteria-free water is the - *(Karn 11)*
a) Valve
b) Vital layer
c) Supernatant water
d) Under-drainage system

2276. Venturi meter is used for - *(UPSC 2002)*
a) Measuring amount required for chlorination
b) Measuring air velocity
c) Measuring bed strength in slow sand filter
d) Measuring dissolving capacity of gas

2277. Effect of environment on genes is *cstUed-(Orissa 05)*
a) Positive Eugenics b) Negative Eugenics
c) Euthenics d) Enthenics

2278. Contact period of chlorination *?(APPG 08, PGI86)*
a) 1 hour b) 30 minutes
c) 1 1/2 hour d) 2 hours

2279. The minimum recommended concentration of free chlorine in drinking water at the end of one hour (mg/L)is - *(Corned 09)*
a) 0.1 b)0.5
c) 1.0 d) 1.5

2280. During the process of chlorination of water, the disinfecting action of chlorine is due to the formation of- *(UPSC-I109)*
a) Hydrochloric acid only
b) Hypochlorous acid only
c) Hydrochloric acid and hypochlorite ions
d) Hypochlorous acid and hypochlorite ions

2256)c 2257)d 2258)a 2259)a 2260)b 226l)c 2262)b 2263)d 2264)b 2265)a 2266)c 2267)a 2268)a 2269)a
2270)c 2271)a 2272)b 2273)d 2274)a 2275)b 2276)c 2277)c 2278)a 2279)b 2280)d

2281. When orthotoludine reagent is added to water and if free cholrine is present, what colour will be produced?
a) Pink b) Yellow *(MH11)*
c) Green d)Red

2282. To find out whether the water has been properly chlorinated, the test used is - *(Corned 07)*
a) Horrock's test
b) Ortho-toludine test
c) Presumptive coliform test
d) Total bacterial count

2283. What is the reagent used in Horrock's apparatus for determining chlorine demand of water -
a) Orthotoluidine *(UPSC-II08)*
b) Methylene blue
c) Starch iodide indicator
d) Sodium bicarbonate

2284. Which of the following is not true regarding bleaching powder - *(SGPGI05)*
a) Contact period is one hour
b) Volume of water is estimated
c) Immediatly dissolved in water
d) Chlorine demand is estimated

2285. The following statements are true for bleaching powder, except- *(SGPGI 05)*
a) Its action is slow and long acting
b) A fresh sample contains 33% of available chlorine
c) A strenghth of 1.3% will kill most organisms
d) It is used for disinfection of faeces

2286. Maximum permissible chloride level is - *(UP 08)*
a) 200 mg/litre b) 300 mg/litre
c) 500 mg/litre d) 600 mg/litre

2287. Which one of the following pairs for water quality standards is correctly matched ? *(UPSC-II 08)*

Parameter	Maximum tolerable limit
a) Chlorides	50 mg/litre
b) Nitrates	50 mg/litre
c) Hardness	50 mg/litre
d) Total dissolved solids	50 mg/litre

2288. In doubtful cases, the presence of which organism confirms the fecal contamination of water -
a) Protozoa b) *Yeast(Cosmed06)*
c) Clostridium perfringesd) Fungi

2289. The following organism because of its easy culture methods is widely used as bacteriology indicator of water polution - *(Karnat. 96, Jharkhand 03)*
a) Foecal streptococci
b) Escherichia coli
c) Clostridium perfringens
d) Salmonella Typhi

2290. Old contamination of water is indicated by -
a) Nitrites b) Nitrates *(MAHE 98,*
c) Ammonia d) Chlorides *KARN 94)*

2291. Water sample which is likely to contain chlorine, will affect the results of bacteriological analysis of water. Which one of the following, if added in small amount in the test tube will help overcome it -
a) Potassium nitrate
b) Copper sulphate
c) Calcium hydrochloride
d) Sodium thiosulphate

2292. Other than nitrogen and oxygen, which one of the following is the next most abundant gas in the dry air of lower atmosphere ? *(UPSC-108)*
a) Argon b) Carbon dioxide
c) Helium d) Hydrogen

2293. Kata thermometer is used for recording -
a) Maximum and minimum temperature *(UPSC-II 09)*
b) Low air velocities
c) Relative humidity of the air
d) Mean radiant temperature

2294. To feel comfortable and cool in a factory the corrected effective temperature (in degree Farenheit) should be - *(UPSC 99)*
a) Less than 69 b) Between 69 and 76
c) Between 77 and 80 d) Between 81 and 82

2295. Corrected effective temperature is labelled as comfortable if it is (in degree F) - *(UPSC96)*
a) Between 70 and 76 b) Between 77 and 80
c) Between 81 and 82 d) Above 83

2296. The air- quality standards proposed by the Indian Central Pollution Control Board are based on limits of concentration of - *(UPSC 2002)*
a) Suspended particulate matter and sulphur dioxide
b) Suspended particulate matter, sulphur dioxide and oxides of nitrogen
c) Suspended particulate matter, sulphur dioxide and oxides of nitrogen and oxidants
d) Suspended particulate matter, sulphur dioxide and oxides of nitrogen and carbon monoxide

2297. In the composition of normal dry air of the atmosphere at ground level in an unpolluted area, which one among the following is found in highest concentration ? *(UPSC-I 09)*
a) Carbon dioxide b) Hydrogen
c) Methane d) Nitrous oxide

2298. What is the main constituent gas in CNG ?
a) Acetylene b) Butane *(UPSC-I08)*
c) Ethane d) Methane

2299. Centre of air pollution control by WHO -
a) Hyderabad b) Bombay*(AIIPHP 98)*
c) Nagpur d) Kanpur

2300. Which one of the following is not a greenhouse gas? *(UPSC-I 09)*
a) Carbon monoxide b) Methane
c) Nitrous oxide d) Water vapour

2301. For satisfactory vision the minimum illumination accepted is - *(AIIMS 80, AMC 84, UPSC 06)*
a) 15 to 20 foot candlesb) 30 to 40 candles
c) 40 to 50 candles e) 70 to 90 candles

2281)b 2282)b 2283)c 2284)c 2285)a 2286)d 2287)b 2288)c 2289)b 2290)b 2291)d 2292)b 2293)d 2294)b 2295)b 2296)b 2297)a 2298)d 2299)c 2300)a 2301)a

2302. The limit of loudness expressed as decibels that people can tolerate without substantial damage to their hearing is - *(Corned 08, Jipmer 92)*
a) 55 b) 65
c) 75 d)85

2303. Exposure to 90 db AND 4000 Hz noise results in -
a) Auditory fatigue *(UPSC 07)*
b) Temporary hearing loss
c) Permanent hearing loss
d) Rupture of tympanic membrane

2304. Which of the following is a naturally occurring radioactive substance in the body in small quantities?
a) Radium 226 b) Bismuth 60 *(JIPMER 02)*
c) Iodine 131 d) Potassium 40

2305. One gray of radiation is equal to - *(Orissa 99)*
a) 1 rad b) 10 rad
c) 100 rad d) 1000 rad

2306. Which of the following kinds of radiations is/are emitted by Uranium - 238 ? *(UPSC-108)*
a) Alpha rays only
b) Alpha and Beta rays only
c) Gamma rays only
d) Alpha, Beta and Gamma rays

2307. Sling psychrometer is used for measuring -
a) Air velocity *(Corned 08)*
b) Rain fall
c) Median radiant temperature
d) Relative humidity

2308. Biological oxygen demand is calculated to know- wastes - *(AMC 2K)*
a) Organic b) Inorganic
c) Total solid d) None

2309. Pit latrine has depth of———— feet - *(UPSC 87,*
a) 24 b)4-6 *AMC 92)*
c) 6-10 d) 10-12

2310. Oxidation pond is used in----------treatment -
a) Sewage b) Effluent *(DPG03)*
c) Night soil d) Sullage

2311. An inexpensive and efficient method of sewage disposal for a small community is - *(UPSC 96)*
a) River outfall b) Oxidation pond
c) Trickling filter d) Activated sludge

2312. All are transmitted by Soft Tick, except-f*PGMCET07)*
a) KFD b) Tularemia
c) Q fever d) Relapsing fever

2313. Soft tick transmits *(MH11)*
a) KFD b)Q fever
c) Relapsing fever d) All

2314. Which of the fllowing mosquitoes is involved in the spread of Japanese encephalitis ? *(Delhi PG Mar. 09)*
a) Aedes b) Anopheles
c) Culex d) Mansonoides

2315. Which of the following disease is transmitted by phlebotomus argentipes - *(DPGEE 08)*
a) Epidemic typhus b) Kala-Azar
c) Relapsing fever d) Trench fever

2316. What is the size of ideal mosquito net ? -
a) 0.575 mm in one dimension *(PUNJAB 2006)*
b) 0.0475 mm in any dimension
c) 0.475 mm in one dimension and 0.575 in other dimension
d) 0.575 in both dimensions

2317. Dose of DDT for effective control of mosquitoes is -
a) 1 -2g/m2 b) 1 -2g/m2 *(AP 85,*
c) 2 - 4 g/m2 d) 2 - 4 g/m2 *Orris a 04)*

2318. Which one of the following insecticides is not used as a larvicides ? *(UPSC 2006)*
a) Abate b) Paris green
c) Fenthion d)Dichloros

2319. Effect of Pyrethrum on mosquitoes is described as -
a) Residual b) Repellent *(UPSC02)*
c) Knock down d) Contact

2320. Paris green is a - *(KERALA 97, Jipmer 90, 04)*
a) Stomach poison b) Contact poison
c) Repellent d) Rodenticide

2321. Which of the following insecticides is a natural product ? *(Delhi PG Mar. 09)*
a) Dieldrin b) Pyrethrum
c) Parathion d)Carbaryl

2322. The following are all residual insecticides EXCEPT-
a) Pyrethrum b) DDT *(UPSC-II09)*
c) Gamma BHC d) Malathion

2323. Least toxic organiophosphorus compound is:
a) DDT b) Paris green *(DPG11)*
c) Malathion d) Parathion

2324. Ovicidal drug for scabies is - *(Orissa 05)*
a) BHC b) DDT
c) HHC d)Permethrin

2325. In the bioaccumulation of DDT in the aquatic food chain of Plakton —> Clams —» Fish-eating birds, which group of organisms exhibits highest concentration of DDT (in their bodies) ?
a) Plankton b) Clams *(UPSC-109)*
c) Fish d) Fish-eating birds

2326. Commonly used Rodenticide is - *(HPU05)*
a) Zinc sulphate b) Copper sulphate
c) Zinc oxide d) Ferrous sulphate

2327. Zinc phosphide is - *(AMC2K)*
a) Rodenticide b) Insecticide
c) Larvicide d)All

SOCIAL SCIENCE, MENTAL HEALTH & GENETICS

SOCIAL SCIENCE

2328. Society is defined as - *(AIIMS June 97)*
a) A conglomeration people
b) A group people bound with social norms
c) An association with regulated membership
d) An association patterned the norms of interaction

2302)d 2303)a 2304)d 2305)c 2306)a 2307)d 2308)a 2309)d 2310)a 2311)b 2312)b 2313)d 2314)c 2315)b 2316)b 2317)a 2318)d 2319)d 2320)a 2321)b 2322)a 2323)c 2324)d 2325)d 2326)None 2327)a 2328)b

2329. What is the definition of society ^ *(AI89)*
a) System of social relationship between individuals
b) Social relationship between families
c) Interaction of individuals and people
d) Relationship of individual family and the country

2330. Study of physical, social and cultural history of man is known as? *(NEET/DNB Pattern)*
a) Social science b) Anthropology
c) Acculturation d) Sociology

2331. The Behavioural Science used extensively in PSM is-
a) Anthropology b) Economics. *(AI2000)*
c) Politics d)Law

2332. Social psychology is - *(NEET/DNB Pattern)*
a) Human relationships & behaviour r- , r'• ••" ''.
b) Psychology of individuals in society
c) Cultural history of man
d) None

2333. Sociology- :' =■ *(NEET/DNB Pattern)*
a) Study of human relationship
b) Study of behavior - •;
c) Both
d) None

2334. All are components of Behaviour sciences except- ¹ *(AIIMS Dec 98)*
a) Political Science b) Anthropology
c) Sociology d) Psychology

2335. Acculturation is defined as - *(PGIJune98)*
a) Loss of culture sense
b) Isolation of two cultures
c) Fading away of culture
d) Mixing of two cultures when coming in contact

2336. What is Acculturation - *(NEET/DNB Pattern)*
a) Uncultured
b) Culture contact
c) Change from one culture to another
d) None

2337. In a social group a social act which is considered natural and right is referred to as - *(UPSC 96)*
a) Taboo b) Ritual
c) Custom d) Tradition

2338. Process by which an individual gradually aquires cultureand becomes a member of a social group is called? *(APPG08)*
a) Socialization b) Accultration
c) Socialism d) Custom

2339. Social Mobility is - *(NEET/DNB Pattern)*
a) From rural to urban areas for work
b) Industrialization
c) Interaction between cultures
d) Movement in socio-economic stratas

2340. Movement across socioeconomic levels is termed as- *(AI10)*
a) Social equality b) Social upliftment
c) Social mobility d) Social insurance

2341. Which of the following is best suited for the role of social worker - *(AIIMSMay 12)*
a) Health professional involved in physiotherapy
b) Health professional involved in coping strategies, interpersonal skills, adjustment with family
c) A person involved in finding jobs and economic support for disabled
d) Health professional

2342. KuppuswamPs classification is based on all except-
a) Income b) Occupation ***(AI 94, AIIMS***
c) Education d) Type of house ***Nov 99)***

2343. Inner subjective thought of a person towards an individual or situation is best termed as -
a) Attitude b) Value *(AIIMS May 09)*
c) Belief d) Opinion

2344. A temporary, provisional view held by the people on a point of view is - *(AIIMS May 09)*
a) Opinion b) Practice
c) Attitude d) Belief

2345. Which of the following is associated with emotional valence and is most likely to be influenced by motivation - *(AI 10)*
a) Attitude b) Belief
c) Practice d) Knowledge

2346. A learned behaviour which is permanent and consis tent hut liable to change - . *(AIIMS Nov 09)*
a) Attitude b) Knowledge
c) Practice d) Cultural belief

2347. An unstable and emotional temporary social group with a leader is known as - *{Kam il)*
a) A band b) A crowd
c): A herd d) Arnob

2348. Nuclear family consists of - *(NEET/DNB Pattern)*
a) Husband, wife and son
b) Husband, wife and dependent children
c) Husband and wife only
d) Father mother husband and wife

2349. The following is true about the term 'New Families'-
a) It is a variant 6f the 3-generation family
b) It is applied to all nuclear families of less then 10 years duration *(AIIMS May 03)*
c) It i s a variant of the j oint family.
d) It is applied to all nuclear families of less then 2 years duration.

2350. The poverty line limit for rural areas is the purchasing capacity for a daily intake of 2400 calories per person. Which one of the following calorie limits is for urban areas? *(UPSC02)*
a) 1900 b)2100
c) 2400 d) 2800

2351. In "poverty lines" the expenditure required for a daily calorie intake of----------in rura areas - *(UP 08)*
a) 2200 b) 2400
c) 2100 d) 2300

2329)b 2330)b 2331)a 2332)b 2333)c 2334)a 2335)d 2336)b 2337)c. 2338)a 2339)d. 2340)c. 2341)b 2342)d 2343) a 2344) a 2345) c: 2346) c 2347) d 2348) b 2349)b . 2350) b 2351) b

2352. According to the World Health Report 2000, India's health expenditure is - *(AI06)*
a) 4.8% ofGD.P. b) 5.2% ofGD.P.
c) 6.8% of GD.P. d) 7% of GD.P.

2353. Indian (economic) real GDP growth for the year 2003 is - *(AI 06)*
a) 6.0 b)6.5
c) 7.8 d) 10.5

2354. Most important epidemiological tool used for assessing disability in children is - *(AI 03)*
a) Activities of Daily Living (ADL) scale.
b) Wing's Handicaps, Behaviour and Skills (HBS) Schedule
c) Binet and Simon IQ tests
d) Physical Quality of Life Index (PQL 1)

2355. Inventory of material means which one of the following- *(UPSC-II08)*
a) List of items procured
b) Stock distributed during a period
c) The quantum of material ordered for
d) Stock on hand at any given time

2356. Thanatology is the science which deals with -
a) Death in its aspects *(HP 2006)*
b) Identification of the living
c) Solving paternity of the child
d) Detection of life

2357. Putting profit ahead of health as a cause of disease is provided by which theory of Sociology -
a) Feminist b) Parsonian *(AIIMS May 09)*
c) Marxist d) Foucauldian

MENTAL HEALTH

2358. A male child of 15 years with a mental age of 9 years has an IQ of- *(AI 03)*
a) 50 b) 60
c) 70 d)80

2359, An IQ between 50 & 70 would be classified as what kind mental retardation - *(AI 95)*
a) Mild b) Moderate
c) Severe d) Borderline

2360. IQ= 51 - *(NEET/DNB Pattern)*
a) Mild MR b) Moderate MR
c) Severe MR d) Profound MR

2361. Which of the following is not true regarding imbecility - *(DPGEE 08)*
a) Better than idiot
b) Has feeble memory
c) Has moral standards
d) Can be roused to passion

2362. Chronological age lOyrs, mental age 4yrs. What that person called as? *(NEET/DNB Pattern)*
a) Idiot b) Imbecile
c) Normal d) Genius

2363. IQ =20-34 - *(NEET/DNB Pattern)*
a) Severe MR b) Profound MR
c) Moderate MR d) Mild MR

2364. The most commonly abused drug causing addiction among Indian is - *(UPSC 97)*
a) Amphetamine b) Cocaine
c) Cannaine d) Cannabis
e) LSD

2365. Which one of the following is an environmental factor associated with mental illness? *(UPSC 02)*
a) Emotional stress b)Frustration
c) Broken home d) Anxiety

2366. The incidence of mental illness is the maximum if the causal factors affect a particular period -*(UPSC)*
a) Perinatal period b) First five years of life
c) School age d) Adolescence

2367. Major psychosis is - *(Kerala 95)*
a) Neurosis
b) Dementia
c) Reactive depression
d) Endogenous depression

2368. Components of IDEAS include all of the following except- *(AI09)*
a) Self care
b) Communication and understanding
c) Economic condition
d) Performing in work

2369. Mental health programme was started in-
a) 1982 b) 1987 *(NEET/DNB Pattern)*
c) 1990 d) 1995

GENETICS

2370. Effect of environment on genes is called-
a) Positive Eugenics *(NEET/DNB Pattern)*
b) Negative Eugenics
c) Euthenics
d) Enthenics

2371. Which of the following does not affect the Hardy Weinberg principle? *(AIIMSNov 11)*
a) Small population b) Random mating
c) Mutations d) Gene outflow migration

2372. Hardy Weingberg law is violated in - *(AIIMSNov 11)*
a) Random mating b) Mutation
c) Small population d) Gene flow

2373. Hardly-weinberg law is related *to-(NEET/DNBPattern)*
a) Population genetics b) Health economics
c) Social medicine d) None of the above

2374. The law stating that ''the relative frequency of each gene allele tend to remain constant from generation to generation" is known as - *(UPSC-II09)*
a) Mendel's law b) Hardy- Weinberg law
c) David-Morgan's law d) Lamarck's law

2375. Commonest among diseases with Mendelian inheritance is - *(AI99)*
a) Autosomal dominant b) Autosomal recessive
c) X-linked recessive d)X-dominant

2352)b 2353)c 2354)b 2355)d 2356)a 2357)c 2358)b 2359)a 2360)a 2361)c 2362)b 2363)a 2364)d

2376. Polygenic inheritance seen in - *(PGIDec04)*
a) Hypertension
b) HOCM
c) Manic depressive psychosis
d) Familial hyperlipidemia

2377. Punett square is used to- *(AT11)*
a) Predict genotype of offspring
b) Statistical analysis
c) Test a hypothesis
d) Track family history and inheritance

2378. What is the incidence of chromosomal abnormality per 1000 live births - *(UPSC 0 7)*
a) 1.6 b)3.6
c) 5.6 d)7.6

2379. Which one of the following is a correct combination regarding Indian population ? *(UPSC-II09)*
a) Blood group AB 20% Rh negative 15%
b) Blood group A 40% Rh negative 80%
c) Blood group O 40% Rh negative 7%
d) Blood group B 33% Rh negative 99%

MISCELLANEOUS

2380. All of the following are taken into consideration in Kuppuswamy scale EXCEPT - *(DNB Dec 2011)*
a) Education status
b) Occupational status
c) Living/Housing conditions
d) Per capita Income

2381. The Socio-Economic/Housing Scale developed for rural setup is? *(DNB Dec 09)*
a) Pareek b)Kuppuswami
c) Bhore d) Adson's scale

2382. Acculturation is? *(DNB June 09)*
a) Traige
b) Cultural changes due to socialisation
c) Attitude
d) Belief

2383. Extension phase of a nuclear family begins with-
a) Marriage *(DNB June 08)*
b) Birth of the first child
c) Birth of second child
d) Spouse death

2384. Mental retardation is defined if IQ is below -
a) 90 b) 80 *(DNB Dec 07)*
c) 70 d) 60

2385. Scales used for assessing socio-economic status of populations are the following except -
a) Modified udai Pareek scale *(DNB June 07)*
b) Modiefied Kuppuswamy scale
c) Likert scale
d) BG Prasad scale

HOSPITAL WASTE & DISASTER MANAGEMENT, OCCUPATIONAL HEALTH

HOSPITAL WASTE MANAGEMENT

2386. Hospital waste product accounts - *(PGI June 04)*
a) Paper 40% b) Plastic 10%
c) Infectious waste 30% d) Rage 30%
e) Glass 4%

2387. Amount of waste infectious produced in hospitals-
a) 45% b) 65% *(NEET/DNB Pattern)*
c) 80% d) 100%

2388. True about composition of hospital waste - *(PGI June 09)*
a) Metal 1% b) Paper 15%
c) Glass 5% d) Infectious waste3%
e) Plastica3%

2389. What is the color-coding of bag in hospitals to dispose off human anatomical wastes such as body parts -
a) Yellow b) Black *(AI05)*
c) Red d)Blue

2390. Discarded medicine - *(NEET/DNB Pattern)*
a) Blue bag b) Black
c) Yellow d) Red

2391. Disposal of expired & cytotoxic drugs is by -
a) Separate land fill disposal *(AIIMSNov09)*
b) Municipal waste
c) Autoclave
d) Preserve for 10 years & land fill

2392. A known HIV positive patient is admitted in an isolation ward after an abdominal surgery following an accident. The resident docter who changed his dressing the next day found it to be soaked in blood. Which of the following would be the right method of choice of descarding the dressing - (AIIMS Nov 05)
a) Pour 1% hypochloric on the dressing material and send it for incineration in a appropriate bag
b) Pour 5% hypochlorite on the dressing material and send it for incineration in a appropriate bag
c) Put the dressing material directly in an appropriate bag and send for incineration
d) Pour 2% Lysol on the dressing material and send it for incineration in a appropriate bag

2393. In PHC how to dispose *p\acenta-(NEET/DNB Pattern)*
a) Incineration b) Microwaving
c) Autoclaving d) Chemical treatment

2394. Animal waste is disposed off by- *(NEET/DNB Pattern)*
a) Incineration b) Autoclave
c) Microwave d) None

2395. For the disposal of hospital refuse, the bag made with cadmium is not used because incineration of the bag causes poisonous toxic fumes evolution. The colour of the bag is - *(AIIMSMay 01)*
a) Black b)Red
c) Blue d) Yellow

2376)a,c2377)a 2378)c 2379)c 2380)c 2381)a 2382)b 2383)b 2384)c 2385)c 2386)b,e2387)a 2388) a,b 2389) a 2390)b 2391) a 2392)c 2393)a 2394)a 2395)b

2396; All of the following statements regarding disposal ofbiomedical waste are true, except -?>' :.f • *(AI11)*
a) Human Anatomical Waste is disposed in a Yellow bag
b) Contents from a Red bag may be a source of contamination
c) Black bags are used for disposal of ash from incineration
d) Blue bags contents are disposed in secured landfill

2397. Plastic wrapper of surgical syringe should be discarded in ? *(AIIMSNov08)*
a) Blue bag b) Black bag
c) Yellow bag d) Red bag

2398. All can be incinerated except-^4/*07; AIIMSNov 08, AIIMSMay11)*
a) Cytotoxic waste
b) Sharps
c) Anatomical waste ... .
d) Infectious waste

2399. All of the following are incinerated except:
a) Mercury *(PGIMay10)*
b) Radiological waste
c) Halogen containing plastics
d) Human anatomical waste
e) Animal waste

2400. Incineration is done for - *(NEET/DNB Pattern)*
a) Waste sharps
b) Human anatomic waste
c) Radiographic waste
d) Used batteries

2401. Safe disposal of mercury is- *(AIIMSMay 10,09)*
a) Collect carefully and recycle
b) Controlled combustion
c) Treatment with chemicals
d) Deep burial

2402. Natural disaster causing maximum deaths:
a) Hydrological *(AIIMSMay 12)*
b) Meterological
c) Geological
d) Fires

2403. Which is the calamity with most amount of damage r *(NEET/DNB Pattern)*
a) Flood b) Earthquake
c) Landslides d) Volcanoes

2404. Which of the following is the nodal centre for disaster management - *(NEET/DNB Pattern)*
a) PHC b) CHC ^ .
c) Control room d) None

2405. Which of the following is not a fundamental aspect of Disaster management ? *(MH11)*
a) Disaster response
b) Disaster mitigation
c) Disaster awakening
d) Disaster preparedness

2406. Triageis- . ***(AI99)***
a) Treating the most serious cases
b) Categorisation of the patients and treating them according to the available resource
c) Cautery bums
d) Treating mentally ill patients

2407. Black colour code is used in four colour code system of triage management in disaster for - *(DPGEE 08)*
a) Ambulatory patients b) Low priority patients
c) Dead patients d) High priority patients

2408. True about triage - *(NEET/DNB Pattern)*
a) Yellow-least priority b) Red -morbidity
c) Green-ambulatory d) Blue-ambulatory

2409. Black color in triage - *(NEET/DNB Pattern)*
a) Death b) Transfer r *
c) High priority d) Low priority ? i

2410. High priority in triage is for - *(NEET/DNB Pattern)*
a) Red color b) Yellow color
c) Green color d) Black color

OCCUPATIONAL HEALTH

2411. Ergonomics- *(NEET/DNB Pattern)*
a) Adjusting the Worker to his job
b) Study of human behavior
c) Study of social mobility
d) None

2412. The size of Respirable dust is - *(All India 93, AI 2K)*
a) 1-5 microns b) 5-10 microns
c) 15 microns d) 20 microns

2413. Bagassosis is most likely caused due to the inhalation of the dust of - *(AIIMS Nov 03)*
a) Free silica b) Coal
c) Sugar cane d) Cotton fibre

2414. Cause of Farmer's lung - *(NEET/DNB Pattern)*
a) Cotton dust b) Grain dust
c) Sugarcane dust d) Iron

2415. Minimum duration of developing coal minor pneumoconiasis is - *(AI 98)*
a) 2-4 years b) 4-6 years
c) 8-10 years d) Morethan 10 years

2416. Mesothelioma is caused by - *(AI 99)*
a) Asbestosis b) Silicosis
b) Baggasois d) Anthracosis

2417. All of the following features are suggestive of asbestosis except - *(AIIMS May 03)*
a) Occurs within five years of exposure
b) The disease progresses even after removal ofcontact
c) Can lead to pleural mesothelioma.
d) Sputum contains asbestos bodies, .

2418. Acute silicosis clinical manifestation is - *(NEET/*
a) Pulmonary alveolar proteinosis *DNB Pattern)*
b) Hypersensitivity penumonitis
c) Hypersensitivity pneumonia
d) Forms nodules and causes pneumoconiosis

2396) d 2397) b 2398) b 2399)a,b,c 2400) b 2401) a 2402) a 2403) a 2404) c 2405) c 2406) b 2407) c 2408) c 2409)a 2410)a 2411)a 2412)a 2413)c 2414)b 2415)d 2416)a 2417)a 2418)a

2419. Thermophilus sachari causes ? *(NEET/DNB Pattern)*
a) Bagassosis b) Siderosis>-
c) Byssinosis . d) Anthracosis

2420. Which fungicide is used as a spray for the control of bagassosis - *(Jipmer 92)*
a) 2% acetic acid . ; .
b) ***2%*** formic acid
c) 2% propionic acid
d) 25% phenyl mercury.

2421. M/C Heavy Metal poisoning in The World- *(NEET/DNB Pattern)*
a) Lead b) Arsenic
c) Mercury d) Cadmium

2422. All of the following are true for occupational lead poisoning except - *(AIIMS Nov 02)*
a) Inhalation is the most common mode of absorption.
b) Lead in blood and urine provide quantitative indicators of exposure.
c) Average blood is more important than number of subjects with blood levels above threshold.
d) Basophilic stippling is a sensitive parameter of hematological response

2423. Most common mode of lead poisoning -
a) Ingestion b) Dermally *(AIIMS May 09)*
c) Inhalation c) Through conjuctiva

2424. All the following form part of occupational health history except - *(AI90)*
a) History of previous occupation
b) Exposure to dust
c) Childhood immunisations
d) Safety

2425. Preplacement examination in dye industry includes all of the following except- *(A198)*
a) Anemia b) Asthma
c) Precancerous lession d) Dermatitis

2426. Which of the following diseases needs not to be screened for, in workers to be employed in a dye industry in gujarat ? *(AI01)*
a) Anemia b) Bronchial asthma
c) Bladder cancer d) Precancerous lesion

2427. The industry, with the highest accidental death rate and long held to be the most dangerous occupation is- *(AIIMS80, PGI81)*
a) Agriculture b) Construction
c) Mining and quarrying d) Trade
e) Service

2428. All of the following statements relating to lung carcinoma and occupation are true except - ***(AI98)***
a) Risk is increased
b) Takes long time to develop
c) It takes less time to develop as compare to general population.
d) It takes more time develop as compare to general population

2429. Diffuse mesothelioma is seen with - *(PGINov 09)*
a) Asbestos b) Arsenic
c) Tobacoo use d)TB
e) Histoplasmosis

2430. Which occupational exposure may cause sterility in females - *(NEET/DNB Pattern)*
a) Lead b) Carbon monoxide
c) Mercury d) Agricultural insecticides

2431. Socio-security measures that are provided to the workers by which of the following Act/Acts -
a) Factory Act *(PGIDec 03)*
b) Central Maternity Benefit Act
c) Workman compensation Acts
d) Disablement benefit Act
e) Personal Benefit Act

2432. All the following are Standards laid down by the Factories Act except- *(AI 94)*
a) Minimum 500 cubic feet space per worker
b) Maximum working hours including overtime per week: 60 hours
c) Defmes any factory that employs 10 or more work ers where power is not used -
d) Prohibition of employment of children below 14 years of age

2433. ESI act was made in - *(Kerala 98, PGI 84)*
a) 1946 b) 1948
c) 1952 d) 1954

2434. ESI act is not applicable for - *(AI 2000)*
a) Educational institutions
b) Power working factory employing 10 people or more
c) Non power working factory employing 20 people or more
d) Newspaper establishments

2435. In ESI progamme central, state, Govt, employee contribute to the fund. Employer's contribution is-
a) 5.75% b) 4.75 % *(OrissaR)*
c) 3.75% d)2.75 ***%***

2436. Benefits under the Employees State Insurance scheme include all the following except- *(UPSC 02)*
a) Dependent's benefit
b) Funeral benefit
c) Dearness allowance
d) Rehabilitation Allowance

2437. Which of the following disease is NOT liable for extended sickness benefit for 309 days -
a) Leprosy *(AIIMS Dec 94)*
b) Aplastic anemia
c) Immature cataract with vision 6/60 or less
d) Mental disease

2438. Duration of maternal benefit under ESI acts is -
a) 4wks b)8wks *(Jipmer91)*
c) 12wks d)24wks

2439. Sickness benefit under ESI is available for a period of- *(AI 99)*
a) 30 days b) 46 days
c) 56 days d) 86 days

2419) a 2420) c 2421) a 2422) c. 2423) c 2424) c 2425) a 2426) a 2427) c 2428) d 2429) a 2430) d 2431)a,b,c,d

MISCELLANEOUS

2440. Plastic cover of syringes is disposed in?
a) Red bag b) Yellow bag *(DNB Dec 2011)*
c) Black bag d) Blue bag

2441. Baggasosis is caused by dust of? *(DNB June 2011)*
a) Jute b) Cotton
c) Sugarcane d) Textiles

2442. Discarded cytotoxic medicines should be disposed in? *(DNB Dec 2010)*
a) Blue bag b) Black bag
c) Red bag d) Yellow bag

2443. Waste Sharps should be disposed *ini (DNB Dec 2010)*
a) Black bag b) Yellow bag
c) Blue bag d) None of these

2444. Which bag among the following shouldn't be incinerated as it contains cadmium?
a) Blue b)Red *(DNB Dec 2010)*
c) Black d) Yellow

2445. Best way to dispose e-waste is? *(DNB Dec 2010)*
a) Burning b) Incineration
c) In a landfill d) Recycling

2446. The maximum hours of work per week prescribed under the Factories Act is - *(DNB June 2010)*
a) 42 b)48
c) 54 d)60

2447. Plastic cover of syringes are disposed in -
a) Red bag b) Yellow bag *(DNB Dec 09)*
c) Black bag d) Blue bag

2448. Study of designing equipment and devices that fit the human body, its movements, and its cognitive abilities is? *(DNB Dec 09)*
a) Economics b) Ergonomics
c) Bionomics d) Socionomics

2449. In ESI progamme central, state, Govt, employee contribute to the fund. Employer's contribution is -
a) 5.75% b) 4.75 *%* *(DNB Dec 08)*
c) 3.75% d)2.75 %

2450. Which one of the following is the category 1 of biomedical waste in India - *(DNB Dec 08)*
a) Human anatomical waste
b) Microbiological and biotechnological waste
c) Discarded medicines and cytotoxic drugs
d) Animal waste

2451. The majority of the waste produced by health-care providers is- *(Kamil)*
a) Chemical waste b) Infectious waste
c) General waste d) Sharps waste

2452. Sharp instruments like needles, syringes, scalpels hospital waste products are thrown in - *(SGPGI05, Jipmer 05, DPG09)*
a) Yellow bag b) Red bag
c) Blue bag d) Black bag

2453. Biodegradable waste products, disposing in which of the colour code of the bags - *(UP 08)*
a) Blue b) Black
c) Green d) Yellow

2454. Cytotoxic drugs and medicines which are discarded are disposed in - *(PGMCET 07)*
a) Black bag b) Red bag
c) Yellow bag d) Blue container

2455. Which one of the following is the category 1 of biomedical waste in India - *(UPSC 07)*
a) Human anatomical waste
b) Microbiological and biotechnological waste
c) Discarded medicines and cytotoxic drugs
d) Animal waste

2456. According to the Bio-medical waste (Management and Handling) Rules, 1998 of India, the yellow colour code is for- *(MH11)*
a) Human anatomical waste
b) Chemical waste
c) Waste sharps
d) Incineration ash

2457. "3-D" means in hospital waste management is -
a) Disinfection, Disposal, Drainage *(UP 08)*
b) Discard, Disinfection, Drainage
c) Destruction, Deep burial, Drainage
d) Destruction, Deep burial, Disposal

2458. Commonest occupational disease in developing countries is - *(Kerala 96)*
a) Pneumoconiosis b) Asbemstosis
c) Lung cancer d) Byssinosis
e) Occupational poisoning

2459. "Farmer's Lung" is due to inhalation of-*(MAHE 05)*
a) Cotton fiber b) Sugarcane fiber
c) Hay dust d) Coal dust

2460. What is the proportion of daily rate wages payable as periodic cash payment under sickness Benefit of ESI Act- *(UPSC 07)*
a) 5-12 of the average monthly wages
b) 7/12 of the basic monthly wages
c) 8/12 of the averate daily wages
d) 10/12 of the average daily wages

2461. The factories Act (1976) prohibits employment of a person below - *(DPGEE 08)*
a) 10 years b) 14 years
c) 18 years d) 21 years

2462. Extended ESI benefit are all except ? *(APPG 08)*
a) News paper establishments
b) Non power 18 employees
c) Non power < 18 employees
d) Small power 10 to 18 employees

2463. In the statement"..... benefit under the ESI act to an insured person in the case of sickness is payable for a continuous maximum period of X days the daily rate being Y of the average daily wages", X and Y stand respectively for - *(UPSC 96)*
a) 9land5/12 b)91 and7/12
c) 181 and 7/12 d)181and5/12

2464. Lung cancer is an industrial hazard in/ for- *(UPSC 06)*
a) Chimneysweepers b) Aniline industry
c) Gas industry d) Benzol industry

a) 7th April b) 21st May
c) 2nd August d) 31st December

2588. The WHO was set up in - *(PGI 84)*
a) 1929 b) 1946
c) 1948 d)1952

2570)a 2571)a,b,c,e 2572)a 2573)c 2574)a 2575)a,c,d 2576)b,c 2577)b 2578)b 2579)b 2580)b,d,e 2581)d 2582) a 2583) a 2584) b 2585) e 2586) c,e 2587) a 2588) c

2589. WHO constitution was made in - *(PGI79, ESI89.90)*
a) 1947 b) 1950
c) 1952 d)1956

2590. WHO formation day is - *(NEET/DNB Pattern)*
a) 5 May b) 7 April
c) 10 June d) 10 July

2591. The slogan for WHO 2005 - *(Manipal 2006)*
a) Road safety b) Maternal and child health
c) Aging d) Physical activity

2592. Intermediate health agencies excluding WHO are -
a) UNICEF b) FAO *(AMC 84, AIIMS82,*
c) UNESCO d) ILO *UPSC 83, 86)*

2593. All of the following 'Reforms' have been proposed by the World Health Report (2008), except - *(AI11)*
a) Service Reforms b) Leadership Reforms
c) Policy Reforms d) Economic Reforms

2594. UNICEF provides all service except- *(UP2K)*
a) Immunization b) Child
c) Nutrition d) Family planning
e) Child education

2595. Head quarters of FAO is at - *(A1IHPH2K)*
a) New york b) Geneva
c) Rome d) San ffancisco

2596. Latest WHO classification and measurement of disability is - *(AI 09)*
a) IDEAS b) ICF
c)ICIDH-n d) WHO DAS I

2597. Which of the following is False about Red Cross emblem- *(AI 10)*
a) It came into existence in 1863 in Geneva meet
b) The vertical and horizontal lines are of equal lengths
c) It is used by members of UNO
d) Use of red cross symbol without permission of government of India is a punishable offence in India

2598. World health day - *(NEET/DNB Pattern)*
a) 7th april b) 7th July
c) 7th Dec. d) 7th Feb.

2599. World " No tobacco" day is - *(Kerala 97)*
a) May 31st b) April 5th
c) December 11th d) November 14th

2600. One village health guide is for population of -
a) 1000 b) 5000 *(DNB Dec 11)*
c) 10000 d) 50000

2601. Not under millennium development goals? *(DNB June 11)*
a) Reduction of cardiovascular health hazards
b) Eradication of extreme poverty
c) Global partnership for development
d) Sustainability of the environment

2602. Millennium development goals aim to reduce MMR by? *(DNB June 11)*
a) 3/4 b) 2/3
c) 1/4 d) 1/2

2603. World health day is celebrated on? *(DNB June 11)*
a) 1st December b) 31st may
c) 7th April d) 8th may

2604. Which of the following is true about female health worker? *(DNB June 11)*
a) Acts at PHC level
b) Covers a population of 5000 population
c) Chlorinates well at regular intervals
d) Makes at least 3 post natal visits for each delivery

2605. All are principles of primary health care EXCEPT-
a) Intersectoral coordination *(DNB June 09)*
b) Community participation
c) Appropriate technology
d) Decentralised approach

2606. A suggested norm for health manpower in India is?
a) 1 health worker for 3500 population
b) 1 doctor per 5000 population *(DNB June 09)*
c) 1 nurse per 5000 population
d) 1 pharmacist for 5000 population

2607. Population covered by anganwadi in tribal area is?
a) 1000 b)700 *(DNB June09)*
c) 400 d)100

2608. Highest level of integration in health service is?
a) PHC b) Sub centre *(DNB June 09)*
c) CHC d) District hospital

2609. Suggested doctor-population ratio as per Government of India- *(DNB June 08)*
a) 1 per 3000 b) 1 per 3500
c) 1 per 5000 d) 1 per 30,000

2610. Population covered by a community health centre-
a) 5000 b) 30,000 *(DNB June 08)*
c) 1000 d) 100,000

2611. Health care made universally accessible to individuals and acceptable to them is called -
a) Primary health care *(DNB Dec 07)*
b) Essential health care
c) Community health care
d) Social Medicine

2612. An ideal subcenter for a rural population should cater a population of - *(DNB June 07)*
a) 1000 b) 2000
c) 5000 d)10000

2613. One Village health guide is for population of -
a) 1000 b) 5000 *(DNB June07)*
c) 10000 d) 50000

2614. Health care made universally accessible to individuals and acceptable to them is called -
a) Primary health care *(AIIHPH 98)*
b) Essential health care
c) Community health care
d) Social Medicine

2615. All of the following are the principles of primary health care except - *(UPSC 9 7)*
a) Social equity
b) Intersectoral coordination
c) Specialty services
d) Community participation

2589)a 2590)b 2591)b 2592)A11 2593)d 2594)None 2595)c 2596)b>c 2597)c 2598)a 2599)a 2600)a 2601)a 2602)a 2603)c 2604)b 2605)d 2606)c 2607)b 2608)a 2609)b 2610)d 261 l)a 2612)c 2613)a 2614)a 2615)c

2616. Among the principles of Primary Health Care, the one which is NOT included is - *(Corned 09)*
a) Intersectoral coordination
b) Appropriate technology
c) Equitable distribution
d) Information, Education and Communication

2617. Principles of primary health care include all of the following except - *(Karn 03)*
a) Political commiment to health for all
b) Rosources allocation
c) Disability prevalence
d) Community involvement

2618. In Millennium Development Goals (MDGs), how many goals are health related? *(MH11)*
a) 1 out of 8 b) 2 out of 8
c) 3 out of 8 d) 4 out of 8

2619. Village health guide scheme was started in -
a) 1974 b) 1977 *(MAHE05)*
c) 1986 d) 1989

2620. An anganwadi worker is trained for- *(A1IHPH2001)*
a) 3 months b) 4 months
c) 5 months d) 6 months

2621. Peripheral level health workers are all except -
a) Anganwadi workers b)DAIS ***(TN03)***
c) GramSevak d)VHNS

2622. Antenatal support is NOT delivered by -
a) Anganwadi worker *(APPGE 05)*
b) Female Health worker
c) Health supervisor female
d) Traditional birth Attendant

2623. Community health centres covering a population of-
a) 40-60,000 b) 60-80,000 *(UP07)*
c) 80-1.20,000 d) More than 1.20,000

2624. A sub-centre caters the needs of—population -
a) 30000 b) 15000 *(MAHE 05)*
c) 5000 d)10000

2625. Which of the following is a voluntary organization-
a) TB Association of India *(JIPMER95)*
b) Directrate of Health Service
c) Indian Medical Council
d) Council of Medical Research

2626. Disbursement of old age pension by the Government is - *(Corned 0 7)*
a) Social assistance b) Social welfare
c) Social insurance d) Social defense

2627. In India, what is the approximate percentage of total land area which is categorised as nationally protected?
a) 3% b) 5% *(UPSC-108)*
c) 7% d)9%

2628. Health for all by the World Health Organization was announced at- *(Manipal 04)*
a) USA b) USSR
c) Canada d)Geneva

2629. Alma ata Confrernce was held in - *(JIPMER95)*
a) 1978 b) 1956
c) 1977 d) 1948

2630. The headquarters of UNESCO is in- *(UPSC99)*
a) Geneva b) Paris
c) Newdelhi d)Newyork

2631. The WHO announced, immunisation is a primary responsibility of - *(KERALA 96)*
a) States
b) International community
c) Voluntary agencies
d) An individual

2632. UNDP is an international agency which works for-
a) Development of children *(UPSC96)*
b) Development of human & natural resources in a country
c) Economic development of the country
d) Research and technological deveplopment of the country

2633. World Bank gives loan for - ***(AMU 05)***
a) Economic growth
b) Microbiological culture TB control
c) Accident problems
d) All

2634. The organization concerned with improving the working and living conditions of the working population all over the world is - *(MAHE 0 7)*
a) ILO b)FAO
c) WHO d)UNDP

2635. CARE is associated with - *(Manipal 08)*
a) ICDS b)CRY
c) Ford Foundation d) RCH sheme

2636. For inventing which one of the following is Marc Koska best known ? *(UPSC-108)*
a) Artificial blood
b) Disposable K1-syringe
c) Vaccine against Polio
d) ELISA test

2637. In which year did the Kyoto Protocol come into force?
a) 2001 b) 2003 *(UPSC-108)*
c) 2005 d)2007

2638. Which one of the following was the major outcome of the famous Earth summit in Rio de Janeiro in 1992 - *(UPSC-108)*
a) Setting up of bio-safety standards
b) Global strategy for control of pandemics
c) Framework convention on climate change
d) Framework on strategies for sustainable development

2639. All of the following activities of Junior Red cross except- *(UP 07)*
a) Military hospital worker
b) Village uplift
c) Prevent epidemic work
d) Any of the above

HEALTH PROGRAMMES IN INDIA

2640. NVBDCP includes all except? *(NEET/DNB Pattern)*
a) Malaria b) Filarial
c) Kala azar d) Chikungunya

2641. According to the World Health Report 2000, India's health expenditure is - *(AI06)*
a) 4.8% ofGD.P. b) 5.2% ofG.D.P.
c) 6.8% of GD.P d) 7% of G.D.P.

2642. In which of the following year the Transplantation of Human Organs Act was passed by Government of India? *(AI06,05)*
a) 1994 b) 1996
c) 2000 d) 2002

2643. License to blood bank is given by - *(AIIMS May 09)*
a) Drugs controller general of India
b) Director general of health services
c) Director general, Indian council of medical research
d) Director general of blood bank services

2644. Which is not true of malaria Eradication programme
a) Started in 1953 *(All India 93)*
b) Modified plan started in 1970
c) Incidence was 2 million cases in 1958
d) Incidence decreased to 50,000 in 1961

2645. In NMEP, the recommendation for an area with API2 are all except- *(AI 95)*
a) Presumptive treatment
b) DDT spraying regularly throughout the year
c) Epidemiological investigation of all cases
d) Follow-up of every case for one year and monthly blood smears

2646. WHO Malaria Mass Drug Administration -
a) API >5 b) > 2 *(NEET/DNB Pattern)*
c) 15 d) 25

2647. Under NMEP, the function of fever depot treatment is- *(AI94)*
a) Diagnosis of cases + spraying
b) Collection of slides + treatment of fever
c) Treatment of fever cases only
d) Treatment + slide collection + spraying

2648. Under the NMEP, the minimum annual blood examination rate should be - *(AI 94)*
a) 10% b) 12%
c) 14% d) 18%

2649. In an area having annual parasite index of less than 2, the following is to be done - *(PGI89)*
a) Passive surveillance only
b) 2 rounds of DDT yearly
c) Entomological surveillance
d) All positive cases blood smear to be done monthly

2650. Antimalarial month is - *(AMU05)*
a) April b) May
c) September d) June

2651. Strategies in National Leprosy Control programme-
a) Early detection of cases *(AIIMS 79, PGI 90)*
b) Short course multi drug therapy
c) Rehabilitation
d) Chemoprophylaxis with dapsone
e) All of the above

2652. FALSE about Leprosy eradication programme is-
a) Early detection of cases *(AIIMS June 98)*
b) Disability limitation
c) Long term multi drug therapy
d) Health education

2653. Effective leprosy control programme may be indicated by all of the following except -
a) Increasing number of children affected
b) Decreased grade 2 disability *(AIIMS Nov 09)*
c) Low MDR resistant, multibacillary cases
d) High new case detection rate

2654. Elimination of leprosy is defined as prevalance -
a) < 1 per 1000 *(NEET/DNB Pattern)*
b) < 1 per 10000
c) < 1 per 1 lakh
d) < 1 per 100

2655. As per WHO, leprosy is a public health problem if prevalence is - *(AIIMS 98)*
a) 0.1% b) 0.01 %
c) 0.5% d)l%

2656. SET centres are established if prevalence % leprosy is - *(MAHE 98, UPSC 88, PGI 81)*
a) 0.5-1/1000 b) 1 -5
c) 5-10 d)10

2657. Best mode to control leprosy eradication-programme is - *(AIIMS Sep 96)*
a) Mass chemotherapy
b) Early diagnosis and treatment
c) High risk chemotherapy
d) Health education

2658. National Leprosy Eradication Programme was started in - *(NEET/DNB Pattern)*
a) 1949 b) 1955
c) 1973 d) 1983

2659. Which one of the following statements is not correct regarding National Leprosy Eradication Programme (NLEP) - *(UPSC 07)*
a) Multibacillary leprosy treatment is recommended for one year
b) Skin smear examination is done for classification into paucibacillary and multibacillary
c) Special Action Project for Elimination of leprosy is for rural areas
d) Surveillance for two years for a treated case of paucibacillary leprosy to be carried out

2660. Under National Leprosy Elimination Programme, Maharashtra state comes under which category?
a) Category I b) Category II *(MH11)*
c) Category III c) Category IV

2640) d 2641) b 2642) a 2643) a 2644) a,b 2645) d 2646) b 2647) b 2648) a 2649) d 2650) d 2651)a,b,c 2652) c 2653)a 2654)b 2655)b 2656)b 2657)b 2658)d 2659)b 2660)b

2661. Goal of National turberculosis control programme is- *(Kerala 96)*
a) To eradicate TB
b) To decrease the transmission of TB
c) To treat all sputum +ve patients
d) To decrease the incidence of TB to such a low level that is no longer a major public health problem
e) BCG vaccination of all infants

2662. Which of the following is a novel feature of RNTCP (Revised National Tuberculosis Control Programme) - *(UPSC-II08)*
a) Achieving 80% BCG coverage
b) Achieving 85% detection rate
c) Achieving 70% cure rate
d) Involvement of NGOs

2663. In Revised National Tuberculosis Control programme the silent features are to achieve -
a) Cure rate 85% & diagnosis 85% *(Jipmer 05)*
b) Cure rate 85% & diagnosis rate 80%
c) Cure rate 80% & diagnosis 85%
d) Cure rate 80% & diagnosis rate 80%

2664. Features of RNTCP A/E - *(PGl June 06)*
a) Active case findings
b) Involvement of NGO
c) Sputum - 3 times

2665. District TB Control programme is mainly concerned with - *(UPSC 86, 88 AMC 87)*
a) Finding out new cases
b) Finding out resistant cases
c) Detecting cases and treatment
d) All of the above

2666. Under the national TB programme, for a PHC to be called a PHC-R, requisite is - *(AI01)*
a) Microscopy b) Microscopy plus radiology
c) Radiology d) None of the above

2667. Which is not included in RNTCP - *(PGl June 04)*
a) Active case finding b) Directly observed
c) X-ray is diagnostic d) Drugs given daily

2668. Diagnosis of TB acc to DOTS ? *(NEET/DNB Pattern)*
a) 1 out of 2 samples positive
b) 2 out of 3 samples positive
c) 3 out of 3 samples positive
d) None

2669. True about revised National Tuberculosis programme (NTP) - *(PGl June 03)*
a) Active case finding
b) DOTS applied
c) Treatment is given only in smear positive cases
d) General practitioners are restricted to give the treatment
e) It has replaced NTP

2670. RNTCP case finding is - *(NEET/DNB Pattern)*
a) Active b) Passive
c) Both d) None

2671. Features of RNTCP A/E: *(PGlMay 10)*
a) Active case findings is not done
b) Included in NRHM in 2005
c) Teachers act as DOTS agent
d) Microscopy centre is established/1 Lac
e) Achievement of atleast 85% cure rate

2672. Most crucial part of tuberculosis control programme is - *(AIIMSFeb 97)*
a) Contact tracing
b) BCG vaccination
c) Treatment of sputum positive cases
d) Treatment of X-ray positive cases

2673. Case finding in RNTCP is based on-*(AlIMSNov 06)*
a) Sputum culture b) Sputum microscopy
c) X-ray chest d) PCR antibody detection

2674. The sputum examination under DTP is done when the patient present with - *(PGl June 02)*
a) Cough of 1 -2 wks duration
b) Persistent cough of 1-2 wks duration
c) Hemoptysis
d) Chest pain
e) Intermittent fever

2675. Important step in national TB control programme are all except - *(A1IMS 97)*
a) Treatment of sputum positive cases
b) Treatment of contacts
c) BCG vaccination
d) Isolation of sputum positive cases

2676. True about DOTS - *(PGl Dec 02, Dec 06)*
a) Drugs are given on supervision
b) Streptomycin always given in first two months
c) Intermittent regimen are used
d) Same regimen is given in all patient
e) In catagory - 1. new sputum positive cases sputum examined in 2.5 and 6 months

2677. A peripheral Health institution under the distric TB centre is termed as PH 1-T if it has - *(AI 89)*
a) Radiology facility
b) Microscopyfacility
c) Radiology and microscopy facility
d) Referral facility

2678. Under the National Programme for Control of Blindness in India, medical colleges are classified as eye care centers of - *(AIIMS Nov 03)*
a) Primary level b) Secondary level
c) Tertiary level d) Intermediate level

2679. About NPCB, all are true except - *(AIIMSMay 09)*
a) Increase cataract surgery rate to 450 operations per lakh population
b) Intra-ocular lens implantation in more than 80% cataract surgery cases
c) 100% coverage of vitamin A prophylaxis doses from 9 months to 3 years of age
d) Development of 50 pediatric ophthalmic units

2661)d 2662)d 2663)None 2664)c 2665)a,c 2666)b 2667)a,d 2668)a 2669)b,e 2670)b2671)b 2672)c 2673)b 2674) c,d 2675) b,d 2676) a,c,e 2677) c 2678) c 2679) c

2680. Revised strategy for NPCB includes all except -
a) Fixed facility surgery *(AIIMSNov06)*
b) IOL implantation for cataract
c) Mobile surgical camps
d) Uniform distribution

2681. The eye condition for which the World Bank assistance was provided to the National Programme for Control of Blindness (1994-2001) is -
a) Cataract *(AIIMS May 03)*
b) Refractive errors
c) Trachoma
d) Vitamin A deficiency

2682. Vision 2020 "The right to sight" includes all except - *(AIIMS May 10, 07)*
a) Trachoma b) Epidemic conjunctivitis
c) Cataract d) Onchocerciasis

2683. All of the following are given global prominence in the VISION 2020 goals, except - *(ARMSMay 03)*
a) Refractive errors b) Cataract
c) Trachoma d) Glaucoma

2684. Vision 2020 include all of the following, Except -
a) Cataract *(AI12)*
b) Refractory Errors
c) Vitamin A Deficiency
d) Diabetic Retinopathy

2685. In Vision 2020, the target for Secondary Sevice centre is for how much population - *(ARMS May 12)*
a) 10000 b)50000
c) 1 lac d) 5 lac

2686. In Vision 2020, Ophthalmic personnel per population ratio is - *(ARMSMay 12)*
a) 5000 b)10000
c) 50000 d) 1 lac

2687. Under the WHO 'Vision 2020' programme, the 'SAFE' strategy ȷ adopted for which of the following diseases - *(AI 05, ARMS 0 7)*
a) Trachoma b) Glaucoma
c) Diabetic retinopathy d) Onchocerciasis

2688. All of the following are founding members of vision 2020 except *(ARMS Nov 11)*
a) WHO
b) UNICEF
c) ORBIS
d) International Agency For Prevention Blindness

2689. On SAFE strategy false is -
a) Screening *(AI 07, ARMS Nov 06,Nov 08)*
b) Antibiotics
c) Facial hygiene
d) Environmental modification

2690. Which one of the following is not a target disease under 'Vision 2020: The Right to *Sight'-(UPSC 07)*
a) Refractive error b) Trachoma
c) Corneal blindness d) Diabetic retinopathy

2691. The vitamin A supplement administered in "Prevention of nutritional blindness in children programme" contain - *(AI 03)*
a) 25,000 i.u./ml b) 1 lakh i.u./ml
c) 3 lakh i.u./ml d) 5 lakh i.u./ml

2692. Assessment and aiding for development of funds for the National Blindness control Programme is done by? *(MH11)*
a) **UNICEF** b) World Bank
c) DANIDA d) WHO

2693. 4 components of RCH elaborated -
a) Prevention of STD *(NEET/DNB Pattern)*
b) Family planning
c) Child survival
d) All

2694. Essential component of RCH Programme in India include all of the following except - *(AI 04)*
a) Prevention and management of unwanted pregnancies
b) Maternal care including antenatal delivery & post-natal services
c) Reduces the under five mortality to half
d) Management of reproductive tract infections & sexually transmitted infections

2695. In Community Needs Assessment approach as part of the Reproductive & Child Health programme, the targets for various health activities are set at the level of - *(ARMS Nov 02)*
a) Community b) Sub-centre
c) Primary health-centre d) District

2696. Under RCH programme, intervention done in selected districts - *(NEET/DNBPattern)*
a) Immunization b) Treatment of STD
c) ORS therapy d) Vitamin A supplementation

2697. In reproductive and child health programme, districts are divided on the basis of - *(AI 99)*
a) Crude birth rate & infant mortality rate
b) Crude birth rate & female literacy rate
c) Crude death rate & crude birth rate
d) Couple protection rate & infant mortality rate

2698. Quality indicators of RCH programme-/PG/*Dec 08)*
a) Number of high risk women referred
b) Number of children immunized
c) Number of women died.
d) Number of new bom with birth weight recorded.
e) Number of neonatal deaths

2699. As per RCH, the community health centre is a -
a) First referral unit *(AI 08)*
b) Secondary referral unit
c) Teritary referral unit
d) Not a referral unit

2700. Elemental iron and folic acid contents of pediatric ironfolic acid tablets supplied under Rural Child Health (RCH) programme are - (AI 03)
a) 20 mg iron & 100 microgram folic acid
b) 40 mg iron & 100 microgram folic acid
c) 40 mg iron & 50 microgram folic acid
d) 60 mg iron & 100 microgram folic acid

2680) c 2681) a 2682) b 2683) d 2684) None ore 2685) d 2686) c 2687) a 2688) b 2689) a 2690) d 269 l)b 2692) b

2701. A total number of.....tablets of iron with folic acid is given to a pregnant women by the Health worker-
a) 70 b) 90 *(Jipmer 88)*
c) 100 d) 150
e) 200

2702. JSY stands for - *(AI 10)*
a) Janani social yojana
b) Jan suchil yojana
c) Janani suraksha yojana
d) Jun sulab - sauchalay yojana

2703. RCH programme includes - *(NEET/DNB Pattern)*
a) CSSM plus school health
b) CSSM plus family planning
c) CSSM plus ORS
d) None

2704. Integrated management of childhood illness (IMCI) intiati ve was taken to prevent morbidity and mortality from all of the following except - *(AI08)*
a) Malaria b) Malnutrition
c) Otitis Media d) Neonatal tetanus

2705. IMNCI differs from IMCI in all of the following, Except- *(AI10)*
a) Malaria and anmeia are included
b) 0-7 days neonates are included
c) Emphasis on management of sick neonates over sick older children
d) Treatment is aimed at more than one disease at a time

2706. Integrated Management of Neonatal and Childhood Illness (IMNCI) includes all except - *(AIPGME 09)*
a) Malaria b) Respiratory infections
c) Diarrhoea d) Tuberculosis

2707. Differences between IMNCI and IMCI include the following *(MH11)*
a) Identification and classification of common illnesses like malaria, diarrhoea, malnutrition
b) Incorporated guidelines on immunization
c) Training time devoted to sick young infant is more than for a child
d) IMNCI includes 0-7 days age programme

2708. IMNCI target group - *(NEET/DNB Pattern)*
a) Up to 5yrs b) Upto 10yrs
c) Upto 15yrs d) Upto 20yrs

2709. National AIDS control Programme was started on -
a) 1977 b) 1980 *(PG193)*
c) 1987 d) 1990

2710. Which of the following is not true about National AIDS Control Programme - *(Kerala 04)*
a) Sentinel surveillance methodology has been adopted
b) Community based screening for prevalence of HIV taken up
c) Early diagnosis and treatment of STD is one of major strategy to control spread of HIV
d) Formulating guidelines for blood banks, blood donors & dialysis units

2711. Target strategies in preventing the HIV transmission include the following except - *(AI 09)*
a) Education
b) Treatment of STD
c) Anti-retroviral treatment
d) Condoms

2712. Targeted intervention for HIV is done for all except- *(AIIMSMay09)*
a) Commercial sex worker
b) Migrant laborers
c) Street children
d) Industrial worker

2713. According to CDC recommendations, HIV screening of pregnant women is - *(AIIMSMay 09)*
a) Opt in testing b) Opt out testing
c) Compulsory d) Symptomatic

2714. Which one of the following strategies is aimed at AIDS control in India - *(UPSC 99)*
a) Detection and treatment of AIDS cases in the community
b) Detection and isolation of HIV infected persons in the community
c) Immunoprophylaxis of the risk groups
d) Community education behavioral change

2715. "3 by 5" initiative in AIDS control programme is -
a) Providing 3 million people treatment by end of 2005 *(PGMCET07)*
b) Providing treatment to 3 out of 5 patients
c) Reducing incidence of AIDS by *3%* by 2005
d) All of the above

2716. Which of the following drugs are supplied free of cost to the government Hospital by NACO -
a) Nevaripine *(PGI Dec 08)*
b) Zidovudine
c) Nevaripine + Zidovudine
d) Zidovudine + Lamivudine
e) Zidovudine + Lamivudine + Nevaripine

2717. In National Water Supply & Sanitation programme a problem village is defined as all except - *(AIIMS Nov 06; May 08)*
a) Distance of safe water is greater than 1.6 km
b) Water is exposed to the risk of cholera
c) Water source has excess iron & heavy metals
d) Water infested with Guniea worm

2718. Problem village is all except - *(Jipmer98)*
a) Where no water source in a distance of 1.6 km from community
b) Water is more than depth of 15m
c) There is excess of Na^+, K^+, F^+ salts
d) Risk of Guinea worm infection

2719. NRHM was started in - *(NEET/DNB Pattern)*
a) 2005 b) 2006
c) 2007 d) 2009

2701)c 2702)c 2703)b 2704)d 2705)d 2706)d 2707)d 2708)a 2709)c 2710)b 271 l)c 2712)d 2713)b 2714)d 2715)a 2716)e 2717)d 2718)d 2719)a

2720. True about National Rural Health Mission-
a) Provision of adequate Nurse & paramedical staff
b) Inclusion of Indian system of medicine
c) Posting of anesthetist in first referral unit/CHC
d) Posting of specialist of various field at CHC
e) Supply of generic drugs *(PGINov 11)*

2721. All are true regarding National Rural Health Mission (NRHM) except - *(AIIMSNov 09)*
a) Increasing the number of institutional deliveries
b) Vertical Family welfare and health service
c) Increase in number of ASHA
d) Constitutes state & district health mission

2722. NRHM goal for IMR is to reduce it by -
a) 10 b) 30 *(NEET/DNB Pattern)*
c) 40 d) None

2723. True about ASHA are all except- *(AIIMSMay07)*
a) One per 1000 rural population
b) Mobiliser of antenatal care
c) Female voluntary worker
d) Skilled birth attendant

2724. Resource person for Training of ASHA are -*(AI12)*
a) AWW and MPW b) AWW and ANM
c) MPW and ANM d) ANM and MO

2725. ASHA (Accredited social health activist) work at -
a) Community level b) Village level *(AI 10)*
c) PHC level d) District level

2726. TVue about ASHA (accredited social health activist) is- *(AIIMSNov 06)*
a) Mental health worker
b) Involved in minimum need program
c) Deployed 1/1000 population
d) To replace Anganwadi worker in ICDS program.

2727. Which is the best indicator to assess the impact of ASHA- *(AIIMS Nov 09)*
a) Number of ASHA trained
b) Infant mortality rate
c) % of institutional deliveries
d) Number of ASHA's attending meeting after one year

2728. Full form of ASHA - *(NEET/DNB Pattern)*
a) Associate social health activist
b) Accredited social health activist
c) Advanced social health activist
d) Assistant social health activist

2729. Asha scheme is associated with - *(Manipal 08)*
a) ICDS
b) Rural health mission
c) 20 points programme
d) Minimum needs programme

2730. Basic need programme includes all, except -
a) Education of adult & child *(AIIMS May 93)*
b) Doctor & nurse ratio
c) Water supply
d) Sanitation

2731. The objectives of minimum needs programme does not include - *(AI 93)*
a) Integration of health, water and sanitation
b) Urban area given priority
c) 1 PHC for 30,000 population
d) Link mid-day meal programme to Sanitation

MISCELLANEOUS

2732. Rashtriya Swasthya Bima Yojna is:
a) Government run insurance scheme for its employees *(AIIMS May 12)*
b) Government run insurance scheme for all citizens
c) Government run insurance scheme for all poor
d) Private insurance company run scheme for all poor

2733. The National Diabetes Control Programme in India includes all the following activities except -
a) Primary prevention of diabetes through genetic testing and genetic counselling *(UPSC 2K)*
b) Identification of high risk subject at an early stage, and imparting appropriate health education
c) Early diagnosis and management of cases
d) Prevention arrest or slowing of metabolic and cardiovascular complications of the disease

2734. True statement regarding objectives of Sterilisation beds programme is - *(All India 93, PGI 79)*
a) To have 2000 beds by 1987
b) To provide Rs. 1000/-per bed
c) To provide Sterillisation facilities to hospitals where they are not available
d) Voluntary agencies not included in the provision of facilities

2735. Which of the following conditions does not have a National Screening/Control Programme? *(AI 11)*
a) Diabetes Mellitus b) Dental caries
c) Refractive errors d) Carcinoma cervix

2736. Cancer control programme was launched in -
a) 1976 b) 1986 *(OrissaR)*
c) 1970 d) 1992

2737. Under National Cancer control Programme, oncology wings were sanctioned to - *(UPSC 07)*
a) Regional Cancer institutes
b) District Hospitals
c) Medical college Hospitals
d) Voluntary Agenecies treating cancer patients

2738. National Guinea worm Eradication Programme was launched in - *(Kerala 04)*
a) 1972-73 b) 1975-76
c) 1980-81 d) 1983-84

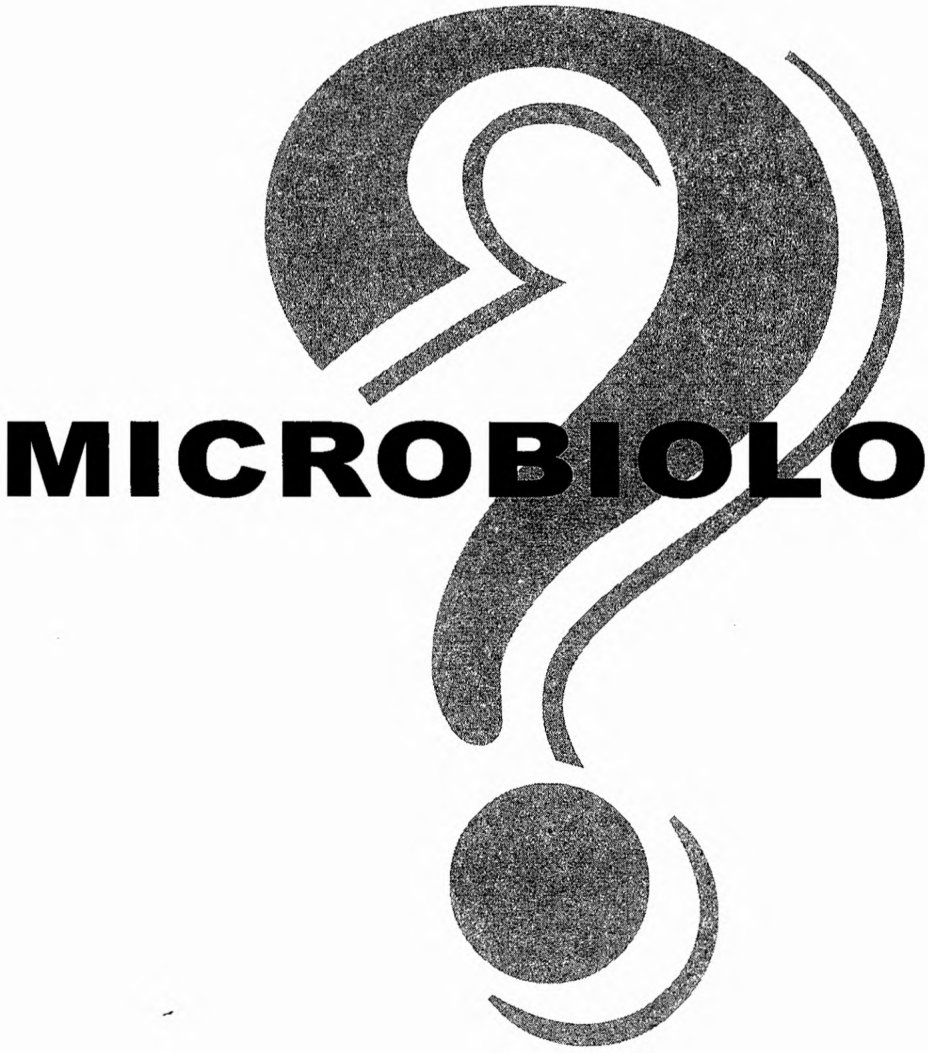
2739. Which one of the following is the correct chronological sequence in which the national programs were launched in India for the given diseases ?
a) Anemia, filaria, TB, malaria *(UPSC-I109)*
b) Anemia, TB, malaria, filaria
c) Malaria, filaria, TB, anemia
d) Malaria, anemia, filaria, TB

2720)All 2721)b 2722)b 2723)d 2724)b 2725)b 2726)c 2727)b 2728)b 2729)b 2730)b 2731)b 2732)c 2733)a 2734)c 2735)b 2736)a 2737)c 2738)d 2739)c

2740. National health policy which started before 1960 is/are - *(PGI Nov 11)*
a) National Filaria Control Programme
b) National Malaria Control Programme
c) National Leprosy Control Programme
d) National Tuberculosis Programme
e) Goitre Control Programme

2741. Janani suraksha yojana includes? *(DNB Dec 11)*
a) Tetanus immunization
b) Institutional deliveries
c) Iron supplementation
d) Abortions

2742. Disease not under integrated disease surveillance project is? *(DNB Dec 11)*
a) TB b) Meningoencephalitis
c) Cholera d) Herpes Zoster



2743. First disability census was done in the year?
a) 1881 b) 1951 *(DNB June 11)*
c) 1981 d)2001

2744. Patient treated at home is allotted what color code according to IMNCI color coding - *(DNB Dec 10)*
a) Pink b)Red
c) Green d) Yellow

2745. If in a locality API is more than 2, the folloiwng is done - *(DNB June 0 7)*
a) 2 round of DDT per year with active surveillance
b) 2 rounds of DDT per year with active and passive surveillance
c) Only active and passive surveillance
d) 2 rounds of DDT per year only

MICROBIOLOGY

MICROBIOLOGY

GENERAL

MORPHOLOGY AND PHYSIOLOGY OF BACTERIA

1. Eukaryotes are different in causing infection because - *(NEET/DNB Pattern)*
a) Divide by biniary fission
b) Highly structured cell with organized cell organelles
c) Dont have all organelles
d) Evolutionally ancient

2. Prokaryote is - *(PGIMaylO)*
a) Bacteria b) Mycoplasma
c) Fungi d) Blue green algae
e) Protozoa

3. Which is a eukaryote - *(PGI Dec 08, PGIMay 10)*
i) Mycoplasma b) Bacteria
c) Fungus d) Chlymydia

4. Prokaryotes are characterised by- *(AI 99)*
a) Absence of nuclear membrane
b) Presence of microvilli on its surface
c) Presence of smooth endoplasmic reticulum
d) All of the above

5. True about bacteria - *(PGI Dec 2000)*
a) Mitochondria always absent
b) Sterols always present in cell wall
c) Divide by binary fission
d) Can be seen only under electron microscope

6. Which of the following is a bacteria taxonomically -
a) Chlamydia b) Rickettsia *(PGIDec*
c) Mycoplasma d) Prion *09)*
e) Bacteriophage

7. All the following pathogenic bacteria fulfill Koch's postulates, except - *(J & K 05)*
a) Treponema pallidum
b) Yersinia pestis
c) Bacillus anthracis
d) Helicobacter pylori

8. To see the bacteria methods used are - *(PGI97)*
a) Microscopy b) Stained preparations
c) Both d)None

9. Microscope used in microbiology - *(PGI 98)*
a) Light microscope
b) Phase contrast microscope
c) Fluoroscent microscope
d) All

10. Light microscopy resolution - *(PGI Dec 05)*
a) 200 nm b)20nm
c) 0.2 nm d)300nm

11. Dark ground microscopy is used to see - *(AI 95,*
a) Retractile organisms b) Flagella*AI 01)*
c) Capsule d) Fimbriae

12. Dark ground microscopy is used for detection of -
a) Spirochetes b) Chlamydia *(AI99)*
c) Fungi d) Virus

13. Dark ground microscopy is used for - *(PGI98)*
a) TPI b) FTA-ABS
c) Kahn's test d)VDRL

14. Dye used in fluorescent microscopy - *(PGIDec 04)*
a) Thioflavin T b) Congo red
c) Brilliant blue d)Eosin
e) Auramine

15. One of the following staining method is an example of negative staining - *(PGI 99)*
a) Gram's staining
b) Fontana's staining
c) India ink preparation
d) Ziehl-Neelsen staining

16. In negative staining - *(AI 95)*
a) The structure to be demonstrated is stained
- b) The structure to be demonstrated is not stained
c) The background is not stained
d) The background and structure are stained

17. Wet india ink preparation is used for demonstration of- *(PGI May 10)*
a) Flagella b) Capsule
c) Slender organism d) Spirochetes
e) Fimbriae

18. Safety pin appearance is shown by- *(AI 89)*
a) Hemophilus ducreyi b) Chlamydia
c) Donovani granulomatis d) Mycoplasma

19. Correct order of gram staining *\s-(NEET/DNB Pattern)*
a) Gention violet —> Iodine —» Carbol fuchsin
b) Iodine -> Gention violet -> Carbol fuchsin
c) Carbol fuchsin —> Iodine —> Gention violet
d) Carbol fuchsin —> Gention violet —»Iodine

20. Not a component of Gram stain -*('NEET/DNB Pattern)*
a) Methylene blue b) Ethanol
c) Iodine d) Gentian violet

21. The difference between gram + ve and gram -ve organism is that Gram +ve org. contains - *(PGI 98)*
a) Teichoicacid
b) Muramic acid
c) N-acetyl neuraminic acid
d) Aromatic amino acids

22. Which of the following are AFB positive with 5% sulphuric acid - *(PGI June 01)*
a) M. avium b) M. leprae
c) M. tuberculosis d)Nocardia
e) Rhodopus

23. Acid fast organisms are - *(PGI June 08)*
a) Spores b)Nocardia
c) Legionella d) Rodococcus
e) Staphylococcus

24. Louis pasteur is not associated with - *(JIPMER 91)*
a) Introduction of Complex media
b) Discovery of Rabies vaccine
c) Discovery of M.tuberculosis
d) Disproved spontaneous generation theory

25. Wet India ink preparation is used to demonstrate -
a) Flagella b) Capsule *(Maharashtra 10)*
c) Spore d) Fibriae

---

l)b 2)a,b,d 3)c 4)a 5)a,c 6)a,b,c 7)a 8)c 9)d 10)d ll)b 12)a 13)a 14)e
15)c 16) b 17)b,c,d 18)a,c 19) a 20)a 21)a 22)b 23)a,b,c,d 24)c 25)b

26. Electron microscopy is used for foOowing except -
a) To differentiate T and B lymphocytes
b) IgG deposits in kidney *(UP 09)*
c) TPI
d) Flagella

27. Peptidoglycans are present in - *(AI96)*
a) Gram negative bacteria
b) Gram positive bacteria
c) Fungi
d) Protozoa

28. Bacterial cell wall is composed of all except-
a) Muramicacid b) Teichoic acid
c) Glucosamine d) Mucopeptide

29. Mesosomes in bacteria are functional unit for -
a) Lipid storage b) Protein synthesis
c) Respiratory enzymes d) None

30. Capsulated organism - *(PGI June 03)*
a) Candida b) Klebsiella
c) Proteus d) Cryptococcus
e) Histoplasma

31. Stain is not taken by capsule in gram negative organisms because the capsule consist of -*(PGI 98)*
a) Polysaccharides b)Lipopolysaccharides
c) Lipids d) Protein

32. Metachromatic granules are found in - *(PGI2000)*
a) Diphtheria b) Mycoplasma
c) Gardenella vaginalis d) Staphylococcus

33. Metachromatic granules are stained by-
a) Ponder's stain b) Negative stain
c) Gram's stain d) Leishman stain

34. Bacteria with tuft of flagellae at one end are called - *(PGI 95)*
a) Monotrichate b) Peritrichate
c) Bipolar d) Lophotrichate

35. Non motile organism - *(NEET/DNB Pattern)*
a) E. coli b) Vibrio cholera
c) Proteus mirabilis d) Shigella dysentery

36. Microorganism adhere to host cell by -*(PGIDec 08)*
a) Lipoicacid b) Lectin
c) Fimbriae d) Capsule
e) Viral capsid

37. Organ of adhesion of bacteria is - *(AI 98)*
a) Capsule b) Slime
c) Flagella d) Fimbriae

38. Adhesin is useful in- *(PGI 98)*
a) Motility b) Bacterial attachment
c) Toxigenicity d) Bacterial division

39. Flagella not true - *(NEET/DNB Pattern)*
a) Locomotion b) Attachment
c) Protein in nature d) Antigenic

40. Peptidoglycans are present in - *(UP 07, 06)*
a) Gram'-ve'bacteria b) Gram'+ve'bacteria
c) Fungi d) Protozoa

41. The cytoplasmic membrane of bacteria is responsible for- *(Kama 09)*
a) Selective permeability b) Motility
c) Cell division d) Conjugation

42. True about bacterial capsule is following except -
a) Prevents phagocytosis *(MH11)*
b) Stains by Gram stain
c) Protects bacteria from lytic enzymes
d) Lost by repeated subcultures

43. All are capsulated bacteria except - *(UP 07)*
a) Neisseria
b) Corynebacterium diphtheriae
c) Haemophillus
d) Streptococcus saliverius

44. All are capsulated Bacteria except - *(AP 09)*
a) Strep Pneumoniaeb) Kleb Pneumoniae
c) Vibrio cholerae d) H.Influenzae

45. The endotoxin which leads toendotoxic shock is actually- *(AIIMS2K)*
a) Lipoprotein b)Lipopolysacchar
c) Polysaccharide d) Polyamide

46. Endotoxin from gram negative organism is-
a) Polysaccharide *(AIIMS June 2000)*
b) Glycoprotein
c) Lipoprotein
d) Lipopolysaccharide

47. Exotoxins are - *(AIIMS Dec 95)*
a) Lipopolysaccharide in nature
b) Produced by gram -ve bacilli
c) Highly antigenic
d) Very stable and resistant to chemical agents

48. True about exotoxins - *(NEET/DNB Pattern)*
a) Lipopolysaccharide b) Not antigenic
c) Can be toxoided d) Heat stable

49. Streptolysin O functionally & structurally related to- *(PGI June 10)*
a) Tetanolysin
b) Pneumolysin
c) Streptolysin S
d) Clostridium perffinges 0 toxin
e) Listeriolysin

50. Lipopolysaccharide structure is characteristic of -
a) Exotoxin b) Endotoxin *(CUPGEE95)*
c) Both d) None

51. Exaltation is - *(Orissa 02)*
a) Decreased virulence b) Increased virulence
c) No change d)None

52. Obligatory anaerobes cannot withstand oxygen because of absence - *(APPGE 05)*
a) Superoxide dismutase b) Catalase
c) Peroxidase d) Cytochrome oxidase

53. Hot cold phenomenon is seen due to which toxin -
a) Alpha lysin b) Beta lysin *(MP 09)*
c) Gamma lysin d) Theta lysin

54. Following grows in the cell free medium except -
a) Rickettsia b) M leprae *(PGI 99)*
c) Bartonella d) Syphilis

26) c 27)a,b 28) b 29) c 30) b,d 31)a,d 32) a,c 33) a 34) d 35) d 36) AH 37) d 38) b 39) b
40) a,b 41) a 42) b 43) b 44) c 45) b 46) d 47) c 48) c 49) a,b,d,e 50) b 51) b 52) a,b,c
53) b 54) a,b,d

55. The term viable not cultivable is used for - *(PGI May 10, Dec 07,00)*
a) M. leprae b) M.tuberclosis
c) Treponema pallidum d) Salmonella
e) Staphylococcus

56. All of the following organisms are known to survive intracellularly except - *(AI05)*
a) Neisseria meningitides
b) Salmonella typhi.
c) Streptococcus pyogenes
d) Legionella pneumophila

57. Which of the following are intracellular - *(PG12K)*
a) Virus b) Chlamydia
c) Mycoplasma d) Rickettsia

58. Obligatory intracellular organism is - *(NEET/DNB Pattern)*
a) Mycoplasmab)Chlamydae
c) Cryptococcus d)H.pylori

59. Which one of the following bacteria is classified as facultative anaerobe ? *(UPSC 07)*
a) Pseudomonasb) Bacteroides
c) Escherichia d)Clostridium

60. The following pathogen does not satisfy "Koch's postulates" - *(AI97, 94)*
a) Bacillus anthrax
b) Mycobacterium tuberculosis
c) Clostridium tetani
d) Lepra bacilli

61. Correct sequence of bacterial growth curve -
a) Log phase - Lag Phase - Stationary phase - Decline phase *(PGIDec07)*
b) Lag Phase - Log phase - Stationary phase - Decline phase
c) Stationary phase - Lag Phase - Log phase - Decline phase
d) Lag Phase - Exponential phase - Log phase - Death phase
e) Exponential phase - Lag phase - Death phase - Stationary

62. Sporulation occurs in - *(AI98)*
a) Lag phase b) Log phase
c) Stationary phase d) Decline phase

63. Mesophilic organisms are those that grow best at temperature of - *(PG198)*
a) -20°C to - 7°C b) -7°C to + 20°C
c) 25°C to 40°C d) 55°C to 80°C
e) 90°C to 20°C

64. Which one of the following bacteria is classified as facultative anaerobe ? *(AI 97)*
a) Pseudomonas b) Bacteroides
c) Escherichia d) Clostridia

65. Which of the following is microaerophilic -
a) Campylobacter b) Vibrio *(AIIMSMay09)*
c) Bacteroides d) Pseudomonas

66. Cell wall deficient organisms are - *(PGI99)*
a) Chlamydia b) Mycoplasma
c) Streptococcus d) Anaerobes

67. Cell wall structure is found in all except -
a) Staph aureus *(UP 07, 06)*
b) Pseudomonas aeruginosa
c) Mycoplasma pneumoniae
d) Corynebacterium diphtherae

STERILIZATION AND DISINFECTION

68. 'Disinfectant' kills the following - *(ARMS 95)*
a) All microorganisms
b) Pathogenic microorganisms
c) Viruses and fungi
d) Non - pathogenic microorganisms

69. Sterilising agents include - *(PGIMay 10, June 02)*
a) Dry heat b) Ethylene oxide
c) Ether d) Alcohol
e) Chlorhexidine

70. Agent used for sterilization - *(PGI Nov 10)*
a) Ethylene oxide
b) Ionizing radiation
c) 2% gluteraldehyde
d) Formaldehyde with low pressure steam
e) Percholic acid

71. An 'Antiseptic' means - *(AI 96)*
a) An agent applied on skin to eradicate pathogenic microbes
b) Used to sterilise inanimate objects
c) An agent which kills only bacteria but not spores
d) Kills all microorganism

72. The best skin disinfectant is - *(ARMS 78)*
a) Alcohol b) Savlon
c) Betadine d) Phenol

7 3. Which of the following can be reliably used for hand washing - *(PGI Dec 2000, June 01)*
a) Chlorhexidine b) Isopropyl alcohol
c) Lysol d) Cresol
e) Glutaraldehyde

74. Steriliation of culture media containing serum is by- *(NEET/DNB Pattern)*
a) Autoclaving b) Micropore filter
c) Gamma radiation d) Centrifugation

75. Best method of skin disinfectant is - *(IN 08)*
a) Spirit b) 100% alcohol
c) Tincture iodine d)Cetrimide

76. Phenol Coefficient indicates - *(J1PMER09)*
a) Efficacy of a disifectant
b) Dilution of a disinfectant
c) Quantity of a disinfectant
d) Purity of a disinfectant

77. Rideal-Walker coefficient is related with -
a) Disinfecting power *(Orissa 98)*
b) Parasitic clearance
c) Dietary requirement
d) Statistical correlation

55) a,c 56) c 57)a,b,d 58) b 59) c 60) d 61)b,d 62) c 63) c 64) c 65) a 66) b 67) c 68) b
69) a,b 70) a,b,c,d 71) a 72) c 73) a,b 74) b 75) c 76) a 77) a

78. Heating and subsequent plating is a method used for isolating - *(PGI83)*
a) Corynebacterium b) Vibrio
c) Salmonella d) Clostridia

79. All are methods of sterilization by dry heat except-
a) Flaming b) IncinerationfPG/*90)*
c) Hot air oven d) Autoclaving

80. Which of the following is true about pasteurization
a) It kills all bacteria and spores *(AI2K)*
b) It kills all bacteria except thermoduric bacteria
c) It kills 95% of microorganisms
d) All bacteria are destroyed

81. Moist heat kills of the following except- *(PGI 78,83)*
a) Brucella b) Mycobacteria
c) Salmonella d)Coxiellabumetti

82. Tyndallisation is a type of - *(NEET/DNB Pattern)*
a) Intermittent sterilization b) Pasteurisation
c) Boiling d) Autoclaving

83. The best method of sterilizaion of dusting powder is-
a) Autoclaving b) Hot air oven *(PGI 95)*
c) Inspissation d) Tyndallisation

84. Bacterial spores are best destroyed by- *(PGI98)*
a) UVrays
b) Autoclaving at 121°C for 20 mints.
c) Hot air Oven
d) Infrared rays

85. Autoclaving is done in- *(Koltata 08)*
a) Dry air at 121°C and 151 B pressure
b) Steam at 100°C for 30 minutes
c) Steam at 121 °C for 15 minutes
d) Dry air at 160°C for 30 minutes

86. Out of the following the true statement regarding sterilization is - *(AI 97)*
a) Dry heat is the best method of sterilization of liquid paraffin
b) All glass wares are best sterilized by boiling at 100°C
c) Bacterial vaccines are best sterilized by ethylene oxide
d) Pasteurization of milk by flash method is done by heating at 63°C for 30 minutes

87. Glass vessels and syringes are best sterilised by -
a) Hot air Oven b) Autoclaving *(AIIMS86)*
c) Irradiation d) Ethylene dioxide
e) Simple boiling

88. Hot air oven is used for sterilization of all except- *(MP 98)*
a) Glasswares b) Dusting powder
c) Sharpinstruments d) Liquid paraffin

89. In 'Hotair oven' for holding period of one hour, temperature required is - *(MH11)*
a) 100°C b) 120°C
c) 140°C d) 160°C

90. Vaccines are sterilised by - *(AI 89)*
a) Seitz filtration b) Hot air oven
c) Autoclaving d) Heat inactivation

91. Hospital dressing is best disposed off by - *(TN 08)*
a) Incineration b) Dumping
c) Autoclaving d) Burying

92. Tyndallisation is a method of - *(Kam 94)*
a) Growing bacteria in pure culture
b) Sterilization
c) Inoculation of media
d) Preserving cultures

93. 40 % formalin is used to sterilize - *(AI 94)*
a) Plastic syringes b) All microbes + spores
c) Clothes d) Stitches

94. A chest physician performs bronchoscopy in the procedure room of the out patient department. To make the instrument safe for use in the next patient waiting outside, the most appropriate method to disinfect the endoscope is by - *{AI 03)*
a) 70% alcohol for 5 min
b) 2% glutaraldehyde for 20 min
c) 2% formaldehyde for 10 min
d) 1% sodium hypochlorite for 15 min

95. Endoscope tube is sterilized by- *(NEET/DNB*
a) Glutaraldehyde b) Formalin *Pattern)*
c) Autoclaving d) Boiling

96. The operating temperature in an ethylene oxide sterilization during a warm cycle is- *{AIIMSNov 04)*
a) 20-35°C b)49-63°C
c) 68-88°C d)92-110°C

97. False about alcohol in disinfection is-*(PGIDec 07)*
a) Ethanol is used
b) Isopropyl alcohol is used
c) Has sporicidal activity
d) Has bactericidal activity

98. Which of the following is an important disinfectant on account of effectively destroying gram positive and gram negative bacteria, viruses and even spores at low pH levels - *(AIIMS 96)*
a) Phenol b) Alcohol
c) Chlorine d) Hexachlorophene

99. Heat labile instruments for use in surgical procedures can be best sterilized by - *{AI 03)*
a) Absolute alcohol
b) Ultraviolet rays
c) Chlorine releasing compounds
d) Ethylene oxide gas

100. The sterilization method for the instruments which are damaged by dry heat is - *(AIIMSMay 95)*
a) Steam b) Radiation
c) Boiling d) Burning

101. Which is a form of cold sterilization - *(Jipmer 03)*
a) Gamma rays b) Beta rays
c) Infrared rays d) Autoclave

102. Irradiation can be used to sterilize A/E -
a) Bone graft b) Suture *(AIIMS May 10)*
c) Artificial tissue graft d) Bronchoscope

78) d 79) d 80)b 81) d 82) a 83)b 84)b 85) c 86) a 87) a 88)None 89) d 90) d 91) a
92) b 93) b 94) b 95)a 96)b 97)c 98)c 99)d 100) b 101) a,b 102) d

103. Best method of sterilising disposable syringes is - *(USPSC 89, AIMS 86)*
a) Hot air oven b)UVrays
c) Boiling d) Gamma rays

104. The disposable plastic syringes are best sterilized by- *(Delhi 08)*
a) Formaldehyde b) Ethylene oxide
c) Hexachloride d) UV radiation

105. Operation theatres are sterilized by - *(DPG 10)*
a) Carbolic acid spraying
b) Washing with soap and water
c) Formaldehyde
d) ETOgas

106. Gamma radiations are used for sterilizing -*(UP 09)*
a) Syringes b) Cystoscopes
c) Dressing aprons d) Metal instruments

107. Sporicidal agents are - *(PGI June 09,06)*
a) Gluteraldehyde b) Ethylene oxide
c) Formaldehyde d) Benzaalkonium chloride
e) Chlorine

108. All are sporicidal except - **(***PGI 99)*
a) Lysol b) Glutaraldehyde
c) Ethylene oxide d) Formaldehyde

109. Sporicidal disinfectant is following except -*(PGI 98)*
a) Glutaraldehydeb) Formaldehyde
c) Ethylene oxide d) Benzalkonium chloride

110. According Spaulding classification system of sterilization, following is true except -
a) "Non-critical devices" come into contact with intact skin *(AIMS Nov 10)*
b) Semicritical equipment need low-level sterilization
c) "Semi-critical devices" come into contact with non-sterile mucous membranes or non-intact skin
d) Cardiac catheter is critical equipment

111. Indicator used in autoclave is - *(AIMSNov 11)*
a) Clostridium tetani
b) Bacillus stereothermophilus
c) Bacillus pumilis
d) Bacillus subtilis Var Niger

112. Browne's tube is used for - *(NEET/DNB Pattern)*
a) Steam sterilization
b) Radiation
c) Chemical sterilization
d) Filtration

113. Plasma sterilization acuracy is assessed by using -
a) Bacillus subtilis *(AIMS Nov 10)*
b) Bacillus stereothermophilus
c) Staphylococcus aureus
d) Clostrtidium tetani

114. Phenolic disinfectant are - *(PGI 05)*
a) Dettol b)Cresol
c) Lysol d) Carbolic acid
e) Savlon

115. Disinfection of sputum is done by - *(PGI Dec 08)*
a) Boiling b) Autoclaving
c) Sunlight d) Burning
e) Airing

116. Sputum can be disinfected by all except -
a) Autoclaving b) Boiling *(AIMS May 12,*
c) Cresol d) Chlorhexidine *Nov 10)*

117. Choose the correct ones for the decreasing order of resistance to sterilization - *(PGI Dec 07)*
a) Prions, Bacterial spores, Bacteria
b) Bacterial spore, Bacteria, Prions
c) Bacteria,Prions, Bacterial spores
d) Prions, Bacteria, Bacterial spores
e) Bacterial spores, Prions, Bacteria,

118. Which of the following is most resistant to sterilization? *(AI12, 08)*
a) Cysts b) Prions
c) Spores d) Viruses

119. Which of the following statements regarding disinfectants is not true - *(AI 09)*
a) Hypochlorites are bactericidal and inactivated by organic matter
b) Gluteraldehyde is sporicidal and not inactivated by organic matter
c) Formaldehyde is bactericidal, sporicidal and virucidal
d) Phenol is bactericidal and readily inactivated by organic matter

120. All are true regarding disinfectants except -
a) Gluteraldehyde is sporicidal *(AIMS May 11)*
b) Hypochlorites are virucidal
c) Ethylene oxide is intermediate disinfectant
d) Phenol usually requires oganic matter to act

121. Agent which on addition to a colony inhibits its growth and on removal the colony regrows is -
a) Bacteriostatic b) Bactericidal *(AI93,*
c) Antibiotic d) Antiseptic *96)*

CULTURE MEDIA AND CULTURE METHODS

122. Which is enrichment media - *(NEET/DNB Pattern)*
a) Selenite F broth b) Chocolate media
c) Meat extract media d) Egg media

123. Selenite F broth is an enrichment media for -
a) Salmonella b) Shigella *(AIMS 93)*
c) E.coil d) Campylobactor

124. Which one of the following is true - *(AIMSNov 06,*
a) Agar has nutrient properties *AI 07)*
b) Chocolate medium is selective medHHium
c) Addition of selective substances in a solid medium is called enrichment media
d) Nutrient broth is basal medium

125. In nutrient agar cone, of agar is -*(NEET/DNB Pattern)*
a) 1% b) 2%
c) 3% d) 4%

126. Blood agar is an example of -*(NEET/DNB Pattern)*
a) Enriched media b) Indicator media
c) Enrichment media d) Selective media

\103) d 104)b 105) c 106)a 107)a,b,c,e 108)a 109)d 110)b lll) b 112)a 113)b 114)b,c,d 115)a,b,d
116) d 117) a 118)b 119)d 120)c,d 121)a 122)a 123)a,b 124)d 125)b 126)a

127. Robert Koch assistant advised him to use agar instead of gelatine for solidifying culture media for cultivation of bacteria as - *(NEET/DNB Pattern)*
a) Agar has more nutrition
b) Gelatin melts at 37°C
c) Gelatin is not easily available
d) Agar is cheaper

128. Medium for growth of anaerobic bacteria -
a) SN medium *(NEET/DNB Pattern)*
b) LJ medium
c) Blood agar

129. Organisms that has not been cultured successfully so far is - *(J & K 2001)*
a) Leptospira b) Treponema pallidum
c) Bordetella d) Staphylococcus

130. Growth on a cell-free artificial solid medium is possible for following except - *(TN 09)*
a) Ureaplasma urealyticum
b) Mycoplasma Pneumoniae
c) C and L form of proteus vulgaris
d) Chlamydia

131. MacConkey'sAgaris- *(UP 07, 05)*
a) Enriched medium b) Enrichment medium
c) Differential medium d) Synthetic medium

132. Loffler's medium is - *(MH 11)*
a) Indicator medium b) Selective medium
c) Enrichment medium d) Enriched medium

133. Smith Noguchi's media is used for - *(AIMS 79, 85)*
a) Salmonella b) Klebsiella
c) Spirochetes d) Bacillus

134. Noguchi's medium is used for - *(JIPMER 81,*
a) Bordetella b) Brucella *AMU 86)*
c) Borrellia d) Corynebacterium

135. In blood culture the ratio of blood to reagent is -
a) 1:5 b) 1:20 *(Jipmer03)*
c) 1:10 d) 1:100

136. pH of sabourauds dextrose agar is adjusted to-
a) 4-6 b) 1-2 *(MP09)*
c) 6-8 d)8-10

137. In a patient with UTI, CLED (Cystine, Lactose Electrolyte Deficient) Media is preferred over Mac Conkeys media because - *(AIIMSNov 01, AI01)*
a) It is a differential medium
b) In inhibits swarming of Proteus
c) Promotes growth of Pseudomonas
d) Promotes growth of staph aureus and Candida

138. Swarming growth on culture is characteristic of which Gram-negative organism- *(NEET/DNB Pattern, AI95)*
a) Clostridium welchii b) Clostridium tetani
c) Bacillus cereus d) Proteus mirabiiis

BACTERIAL GENETICS

139. Jumping gene is - *(PGI98)*
a) Transposon b) Episome
c) Cosmid d) Plasmid

140. The segment of DNA between chromosomal and extrachromosomal DNA molecules within the cells are- *(UP 06, 07, 09)*
a) Transposons b) Cosmid
c) Plasmid d) Episomes

141. Bacteria may acquire characteristics by all of the following except - **(***Kerla 09)*
a) Taking up soluble DNA fragments across their cell wall from other species
b) Incorporating part of host DNA
c) Through bacteriophages
d) Through conjugation

142. Natural method of horizontal gene transfer among bacteria includes - *(PGI Nov 09)*
a) Electroporation b) Transduction
c) Transformation d) Conjugation
e) Mutation

143. Virus mediated transfer of host DNA from one cell to another is known as - *(AI 05,AIIMS 93)*
a) Transduction b) Transformation
c) Transcription d) Integration

144. Mechanism of direct transfer of free DNA-
a) Transformation *(NEET/DNB Pattern)*
b) Conjugation
c) Transduction
d) None

145. Plasmid- *(PGI 98)*
a) Involved in multidrug resistace transfer
b) Involved in conjugation
c) Imparts capsule formation
d) Imparts pili formation

146. F factor integrates with bacterial chromosome to form- *(PGI93)*
a) HFr b) RTF+r
c) F- d)RTF

147. Drug resistance is not transmitted by- *(PGI98)*
a) HFr b) Transposons
c) Plasmids d) Chromosomes

148. Transfer of some chromosomal material from one bacteria uses - *(NEET/DNB Pattern)*
a) F factor b) R factor
c) Transfer factor

149. Multiple drug resistance is spread by - *(TN 08)*
a) Transformation b) Transduction
c) Mutation d) Conjugation

150. Property of acquiring antibiotic resistance from viral colony is by - *(PGI 96)*
a) Transferance b) Conjugation
c) Transduction d) Mutation

151. Conjugation does not involve - *(PGI 98)*
a) Bacteriophages b) HFr
c) Fr d) Plasmids

152. Griffith demonstrated transformation with -
a) H. influenzae b) E. coli *(UP 03, 09)*
c) Proteus d) Pneumococcus

127)b 128) a 129) b 130) d 131)c 132) d 133)c 134) c 135)c,d 136) a 137) d 138)d 139) a 140) a
141)b 142)b,c,d 143) a 144) a 145)a,b,d 146) a 147) a 148)a>c>b 149) d 150) c 151)a 152)d

153. The mechanism of genetic transfer where a phage serves as a vehicle is - *(Delhi 08)*
a) Transformationb) Translation
c) Conjugation d) Lysogeny

154. Drug resistance transfer by bacteriophage involves-
a) Transduction b) Conjugation *(MAHE07)*
c) Transformation d) Convocation

155. Multidrug resistance is transfered among bacteria through plasmids by - *(Jipmer 11)*
a) Transductionb) Transversion
c) Conjugation d) Transformation

156. Transfer of a portion of DNA from one bacterium to another by the bacteriophage is known as - *(MH11)*
a) Transformationb) Transduction
c) Transcription d) Lysogenic conversion

157. The mechanism by which specific information encoded in a nucleic acid chain in a virus transferred to mRNA in known as - *(Karnat 09)*
a) Transcriptionb) Translation
c) Transformation d) Transduction

158. Horizontal transmission of 'R' factor is by -
a) Transduction b) Transformation *(Jipmer*
c) Conjugation d) Fusion*09)*

159. F plasmid of high frequency recombination is a -
a) Extrachromosomal b) Chromosomal *(APPG 09)*
c) Mesosomes d) Ribosomes

160. False regarding bacterial plasmids is ?
a) Extrachromosomal *(Manipal 06, 09)*
b) Eliminated by treating with radiation
c) Transmission of different species
d) Can cause lysogenic conversion

MISCELLANEOUS

161. The following phenomenon is responsible for antibiotic resistance in bacteria due to slime production - *(AIIMS Nov 03)*
a) Co-aggregation
b) Biofilm formation
c) Mutation evolving in altered target site for antibiotics
d) Mutation evolving a target bypass mechanism

162. Intraspecies competition is the competition among -
a) Species *(AIIMS May 05)*
b) Individuals of a population
c) Individuals of a community
d) Populations and their regulatory factors

163. The role of plasmids in conjugation was first described by Lederberg and Tatum(46) in - *(AIIMS*
a) H. influenzae b) Corynebacterium *02)*
c) Pseudomonas d)Esch.Coli

164. The discovery of "gene transformation" came from the study of one of the following bacteria -
a) Bacillus subtilis *(PGI95)*
b) Streptococcus pyogenes
c) Streptococcus pneumoniae
d) Escherichia coli

IMMUNOLOGY

STRUCTURE AND FUNCTION OF IMMUNE SYSTEM

165. Lymphoreticular system includes - *(PGI June 08)*
a) T-cells b)B-cells
c) Platelets d) Macropahges
e) Neutrophils

166. All are peripheral lymphoid organs except -
a) Lymph nodes *(PGI May 10)*
b) Spleen
c) Mucosa associated lymphoid tissue
d) Thymus

167. Common between B and T cells - *(PGI June 0 7)*
a) Origin from same cell lineage
b) Site differentiation
c) Antigenic marker
d) Both humoral and cellular immunity
e) Further differentiation seen

168. Neonatal thymectomy leads to - *(AI 02)*
a) Decreased size of germinal center
b) Decreased size of paracortical areas
c) Increased antibody production by B cells
d) Increased bone marrow production of lymphocytes

169. B cell maturation takes place in - *(PGI98)*
a) Thymus b) Lymph node
c) Bone marrow d) Spleen

170. T cell dependent region is - *(NEET/DNB Pattern)*
a) Cortical follicles of lymph node
b) Medullary cords
c) Mantle layer
d) paracortical area

171. T-cell mature in - *(Kerala 91)*
a) Peyers patch b) lymph node
c) Thymus d) Bursa of fabricius

172. The following are true for T lymphocytes except -
a) Constitute 70 to 80% of circulating pool of lymphocytes. *(Karnat 96)*
b) Release macrophage inhibition factor
c) Secrete specific antibodies
d) Release lymphotoxin

173. Normal % of CD4 cells in a newborn - *(Jipmer 11)*
a) 35% ofT cells b) 45% ofT cells
c) 55% ofT cells d) 65% ofT cells

174. Function of T-lymphocyte is/are - *(TN 90)*
a) Production of interferon
b) Lymphokine production
c) Rosette formation
d) All of the above

175. Rosette formation with sheep RBC's indicate functioning of - *(Delhi 93)*
a) T-cells b)B-cells
c) Neutrophils d) Monocytes

153) None 154)a 155)c 156)b 157)a 158)c 159)a 160)d 161)b 162)b 163)d 164)c 165)a,b,e
166) d 167) a,e 168)b 169)c 170)d 171)c 172)b,c 173)None 174)d 175)a

176. T-cell are identified by - *(Kerala 94)*
a) Rosette formation with sheep RBC
b) Immunoglobulins on their surface
c) EAC Rosette with sheep erythrocytes
d) Have filamentous projections on their surface

177. Humoral immunity arises from - *(Jharkand 08)*
a) T cells b) B cells
c) Null cell d) K cell

178. T4/T8 ratio reversal is seen in - *(JIPMER 91, DPG 09)*
a) T-cell lymphoma
b) Hairy cell leukemia
c) AIDS
d) Infectious mononucleosis

179. T cell functions are assessed by - *(Delhi 09)*
a) Phagocyte index
b) T cell count
c) Migration inhibition test
d) Immunoglobin index

180. Apart from T & B lymphocytes, the other class of lymphocytes is - *(PGI 2002)*
a) Macrophages b) Astrocytes
c) NK cells d) Langerhans cells

181. Helper cells belong to - *(AI96, 93)*
a) T cells b) Macrophages
c) B cells d) Monocytes

182. All of the following are functions of CD 4 helper cells, except - *(AI 09)*
a) Immunogenic memory
b) Produce immnoglobulins
c) Activate macrophages
d) Activate cytotoxic cells

183. Plasma cells are derived from - *(AI 99)*
a) T cells b) B cells
c) Macrophages d) Neutrophils

184. Which one of the following immunoglobulins constitutes the antigen binding component of B-cell receptor - *(ICS 05)*
a) IgA b) IgD
c) IgM d)IgG

185. Regarding NK cells, false statement is - *(AI 01)*
a) It is activated by IL -2
b) Expresses CD 3 receptor
c) It is a variant of large lymphocyte
d) There is antibody induced proliferation of NK cells

186. All are true regarding NK cells - *(PGI Novi 0)*
a) CD 16 positive
b) CD 56 positive
c) Secrete complement like substance
d) Important role in viral infected cell

187. Innate immunity active against viral cells - *(AI07)*
a) NK cells b) Cytotoxic T cells
c) Bcell d) Memory B cell

188. Killer cells & helper cells are part of - *(PGI 97)*
a) B cells b) T cells
c) Monocytes d) Macrophage

189. In an inflammatory response, macrophages are usually derived from - *(AI 94)*
a) Monocytes b) Reticuloendothelialcells
c) Neutrophils d) Lymphocytes

190. Which is not a macrophage - *(AIIMS Feb 97)*
a) Monocyte b) Microglia
c) Kupffer cells d) Lymphocytes

191. All of these are antigen presenting cells (APC's) except- *(PGI 02)*
a) T cells b) B cells
c) Fibroblasts d) Dendritic cells
e) Langerhans cells

192. Most potent stimulator of naive Tcells-
a) Mature dendritic cells *(AI 11, AIIMS Nov 08,05)*
b) Follicular dendritic cells
c) Macrophages
d) Bcell

193. Langerhans cells in skin are - *(AI 96)*
a) Antigen presenting cells
b) Pigment producing cells
c) Keratin synthesising cells
d) Sensory neurons

194. The function common to neutrophils, monocyte & macrophages is - *(UP 97)*
a) Immune response
b) Phagocytosis
c) Liberation of histamine
d) Destruction of old erythrocytes

195. IgE is secreted by - *(PGI 02)*
a) Mast cell b) Basophils
c) Eosinophils d) Plasma cells
e) Neutrophils

196. Possible source of "second signal" to a B-cell bound by specific antigen include - *(PGI 81, Delhi 91)*
a) EB virus b) Endotoxin
c) Antigen-specific T-cells d) Plasma cells

197. Which cells cause rosette formation with sheep RBCs- *(NEET/DNB Pattern)*
a) T cells b) NK cells
c) Monocytes d) B cells

198. What enhances multiplication of T cells in culture - *(AI 96, 93)*
a) Phytohemagglutinin b) Chemotactic factor
c) Leukotrienes d) Prostaglandins

199. Cellular immunity is induced by- *(NEET/DNB Pattern)*
a) NK-cells b) Dendritic-cells
c) TH1 -cells d) TH2-cells

200. Mononuclear phagocytes are produced by -
a) Thymus b) Spleen *(IN 89)*
c) Bone marrow d) Liver

201. NK cells are - *(DNB 91)*
a) Activated macrophages
b) Antibody-activated T cells
c) Null cells activated by complement
d) Derived form plasma cells
e) Independent of antibody

176) a 177)b 178)c 179)c 180)c 181)a 182)b 183)b 184)b,c 185)d 186)None 187)a 188)b
189) a 190) d 191)a,c 192)a 193)a 194)b 195)d 196)c 197)a>d 198)a 199)c 200)c 201)e

202. N.K. cell and cytotoxic cells are differentiated by -
a) Interferons reduce N.K. cell activity
b) Antibody specificity *(JIPMER 92)*
c) Receptor for IgG
d) Presence in spleen

203. Difference between natural killer and cytotoxic cells is - *(Kar 08)*
a) Interferon decreases natural killer activity
b) NK cell has CD4
c) Cytotoxic cell lyse IgG coated target cells
d) NK cell contain azurophilic granules

204. N.K. Cell provides immunity against-*(JIPMER 93)*
a) Virus b) Bacteria
c) Fungus d) Chlamydia

205. Which of the following cells is known as large granular lymphocyte (LGL) - *(Karanataka 2001)*
a) Plasma cells b)NK cells
c) T cells d)K cells

206. Most efficient antigen presenting cell in the skin -
a) Dendritic cell b) Macrophages*(Jipmer 11)*
c) Langerhans cell d) Kupffer cells

207. Virus infected cells are killed by - *(MP 02)*
a) Macrophages
b) Complement system
c) MHC II related cells
d) NK cells

208. Virus infected cell is killed by - *(Kerala 96)*
a) Interferons b) Macrophages
c) Neutrophils d) Autolysis
e) None of the above

209. The type of receptors present on T cells are -
a) IgG b) IgD *(AI96, 93)*
c) CD_4 d) Prostaglandins

210. Which one of the following is a pan T lymphocyte marker- *(AI 03)*
a) CD2 b)CD3
c) CD 19 d) CD 25

211. Memory T cells can be identified by using the following marker - *(AI 03)*
a) CD45RA b) CD45 RB
c) CD45RC d) CD45 RO

212. Immunoglobulin found in B lymphocyte - *(UP 08)*
a) IgA b)IgE
c) IgG d)IgD

213. B lymphocytes are associated with - *(UP 2K)*
a) CD 19 b) CD 27
c) CD4 d) CD 35

214. CD 4 are associated with - *(Delhi 08)*
a) Helper T cell b) Supressor T cell
c) NK cells d) T cell antigen receptor complex

215. MHC class HI genes encode - *(AI 03)*
a) Complement component C_3
b) Tumor necrosis factor
c) Interleukin 2
d) Beta 2 microglobulin

216. Gene components of HLA class I includes -
a) A, B, C b) DR *(NEET/DNB*
c) DQ d)DP *Pattern)*

217. Cell type which lacks HLA antigen is -*(AIIMSMay 05)*
a) Monocyte b) Thrombocytes
c) Neutrophil d) Red blood cell

218. MHC H are presented by - *(PGI Nov 10)*
a) Macrophage b) Dendritic cells
c) Lymphocytes d) Eosinophils
e) Platelets

219. Peptide binding site on class I MHC molecules for presenting processed antigens to CD8 T cells is formed by- *(AI 10)*
a) Proximal domain of a subunits
b) Distal domain of *a* subunit
c) Proximal domains of a and p subunit
d) Distal domains of a and p subunit

220. T helper cells recognises - *(PGI 2002)*
a) MHC class I b) MHC class II
c) Processed peptides d) Surface Ig

221. HLA complex is on chromosome -
a) 6 b) 7 *(NEET/DNB Pattern)*
c) 8 d)9

222. HLA HI gene codes for - *(Jipmer 03)*
a) Immunological reaction in graft rejection
b) Complement
c) Graft versus host reaction
d) Immunoglobulins

223. True about cytokines is - *(AIIMS 97)*
a) It is always a polypeptide
b) It acts on protein targets
c) It takes part in intrinsic enzymatic reactions
d) Chemotactic

224. Which of the following chemical mediators of inflammation is an example of a C-X-C or alpha chemokine - *(AIIMS 03)*
a) LipoxinLXA-4
b) Interleukin EL-8
c) Interleukin EL-6
d) Monocyte chemoattractant protein MCP-1

225. IL-1 produces- *(AI 02)*
a) T lymphocyte activation
b) Delayed wound healing
c) Increased pain perception
d) Decreased PMN release from bone marrow

226. Interleukin I primarily acts on - *(AIIMS 95)*
a) T-lymphocytes b) B-lymphocytes
c) Neutrophils d) Macrophages

227. IL-1 is produced by - *(PGI 2000)*
a) Macrophage b) Helper T lymphocytes
c) B cells d) Cytotoxic T-cells

228. IL-2 is secreted by - *(AIIMSFeb 9 7, AI 2000, 97)*
a) CD4 lymphocytes b) CD8 cells
c) Macrophages d) Neutrophils

229. Cachectin is produced by- *(NEET/DNB Pattern)*
a) Neutrophils b) Eosinophils
c) Macrophages d) Basophils

202)b 203)c 204)a 205)b,c 206)c 207)d>a 208)b 209)c 210)b 211)d 212)d 213)a 214)a 215)b
216)a 217)d 218)a,b,c 219)b 220)b 221)a 222)b 223)a 224)b 225)a 226)a 227)a,e 228)a 229)c

230. Perforins are produced by - *(PGI01)*
a) Cytotoxic T cells b) Suppressor T cells
c) Memory helper T cells d) Plasma cells
e) NK cells

231. Leukotrienes are secreted by all except -
a) Macrophagesb) T4 cells
c) T8 cells d) Platelets

232. Interleukin - 7 is produced by which one of the following- *(Kerala 2K)*
a) Macrophage b) B cells
c) T cells d) Dentritic cells
e) Stromal cells

233. Pro inflammatory cytokines include all of the following except- *(Delhi 08)*
a) Interleukin 1 b) Interleukin 2
c) Interleukin 6 d) TNF-Alpha

234. Most important inflammatory mediator-(Xo/Aata *08)*
a) TNF b)IL-2
c) Interferon d) PAF

235. Which is not pyrogenic - *(Kolkata 05)*
a) EL-1 b)TNF-a
c) IL-4 d)IL-6

236. True about interferon - *(PGI June 05)*
a) It is virus specific
b) It is Bacteria specific
c) Produced from Bacteria
d) Effective against viral infection
e) It is species specific

237. Fibroblasts in tissue culture form interferon of type-
a) Alpha b) Beta *(AIIMS 98)*
c) Gamma d) All of the above

238. About interferon true is - *(PGI 98)*
a) It is a synthetic antiviral agent
b) Inhibits viral replication in cells
c) Is specific for a particular virus
d) None

239. Interferon is...in nature - *(Delhi 84)*
a) Protein b) Lipid
c) Polysaccharides d) All of the above

240. True about interferon is - *(NEET/DNB Pattern)*
a) Host protein b) Viral protein
c) Inactivated by nucleases d) Virus specific

ANTIBODY

241. A single immunoglobulin molecule contains -
a) 1 light chain, 1 heavy chain *(AI 95)*
b) 2 heavy chains, 1 light
c) 2 light chains, 2 heavy chains
d) 2 light chains, 1 heavy chain

242. Which of the following statements is true about isotypic variation ? *(AIIMS Nov 08)*
a) These result due to subtle amino acid changes resulting from allelic differences
b) These result due to changes in amino acid in heavy and light chain at variable region
c) Changes in heavy and light chain in constant region is responsible for class and subclass of immunoglobulins
d) These are areas in antigen that bind specifically to antibody

243. Which of the following class specific antigenic determinants of an immunoglobulin is associated with? *(AIIMSMay 04)*
a) L-chain b) H-chain
c) J-chain d) Variable region

244. Variable portion of antibody molecule is - *(NEET/*
a) C-Terminal b)N-Terminal *DNB Pattern)*
c) CHO moiety d)None

245. Antigen binding site on antibody is - *(PGI June 02)*
a) Hinge region b) Constant region
c) Variable region d) Hypervariable region
e) Idiotype region

246. Antigen idiotype is related to - *(NEET/DNB Pattern)*
a) Fc fragment b) Hinge region
c) C-terminal d)N-terminal

247. Idiotypic class of antibody is determined by - *(NEET/*
a) Fc region b) Hinge region *DNB Pattern)*
c) Carboxy end d) Amino end

248. Antibody diversity is due to - *(PGI Dec 08)*
a) Gene rearrangement b) Gene translocation
c) Antigenic variation d) CD40 molecules
e) Mutation

249. Which of the following statements is true regarding kappa, lambda and heavy chain immunogloblins -
a) Coded in the same site of a chromosome *(PGI 01)*
b) Coded in different sites of same chromosome
c) The chains are formed by genetic rearrangement after maturation
d) Different chains of same immunoglobulins are coded by different chromosomes
e) Different chains of same immunoglobulins are coded by same chromosomes

250. Immunoglobulin isotype class switching is determined by - *(NEET/DNB Pattern)*
a) Constant region of light chain
b) Constant region of heavy chain
c) Variable region of light chain
d) Variable region of heavy chain

251. Immunoglobulin changes in variable region -
a) Idiotype b) Isotype *(NEET/DNB Pattern)*
c) Allotype d) Epitope

252. Portion of immunoglobulin molecule with molecular weight of 50,000 - *(JIPMER 01)*
a) Secretory piece b) H Chain
c) L Chain d) J piece

253. Structure of antibodies is composed of - *(UP 08)*
a) Single peptide chain
b) Two peptide chain
c) Non sulphur amino acid
d) 2 long and 2 short peptide chains

230) a,e 231)d 232) e 233) b 234) a 235) c 236) d,e 237) b 238) b 239) a 240) a 241) c 242) c 243) b
244) b 245) d,e 246) d 247) d 248)a,c,e 249) c,d 250) b 251) a 252) b 253) d

254. Variable portion of antibody molecule is - *(MP 09)*
a) C- terminal b) N- terminal
c) Intermediate region d) Carbohydrate moiety

255. Antigen binding site in immunoglobulin is -*(DPG10)*
a) Variable region b) Hypervariable region
c) Constant region d) Idiotope

256. Which immunoglobulin is scarce in human serum -
a) Ig A b) IgG *(PGI June 05)*
c) IgM d)IgD
e) IgE

257. True about immunoglobulins - *(NEET/DNB Pattern)*
a) IgE has maximum concentration
b) IgG has maximum concentration
c) IgA has minimum concentration
d) IgM has minimum concentration

258. True of the following is/are - *(PGI June 01)*
a) IgA crosses placenta
b) Half life of IgG is 23 days
c) IgD is heat stable
d) IgE has highest carbohydrate content
e) IgG induces leukotrienes release during inflammation

259. Pentavalent immunoglobin is - *(NEET/DNB Pattern)*
a) IgA b) IgG
c) IgM d) IgE

260. Which of the following immunoglobulins can cross placenta - *(NEET/DNB Pattern, PGI June 01, AI99)*
a) IgA b) IgM
c) IgG d)IgD

261. The serum concentration of which of the following human IgG subclass is maximum ? *(AI05)*
a) IgGl b) IgG 2
c)IgG3 d) IgG 4

262. The commonest Ig G with maximum individual variation is - *(PGI 96)*
a) IgGl b) IgG 2
c) IgG 3 d) IgG 4

263. Maximum half life - *(NEET/DNB Pattern)*
a) IgG b) IgA
c) Ig M d) Ig E

264. The following constitutes approximately 75% of total immunoglobin in humans - *(Karnataka 02)*
a) IgG b) IgM
c) IgE d) IgA

265. Antibody transfer mother to fetus - *(Bihar 08)*
a) IgG b) IgM
c) IgD d) IgA

266. The earliest immunoglobulin to be synthesized by the fetus is - *(AI 03)*
a) IgA b)IgG
c) IgE d) IgM

267. The most avidly complement fixing antibody is -
a) IgA b) IgG *(AIIMS May 02)*
c) IgM d)IgE

268. Which of the following immunoglobulin is responsible for opsonisation - *(NEET/DNB Pattern)*
a) IgA b) Ig G
c) Ig M d) Ig E

269. Activation of classical complement pathway -
a) IgA b) IgG *(NEET/DNB Pattern)*
c) IgM d)IgD

270. TRUE about immunoglobulins is - *(AIIMSFeb 97)*
a) IgE fixes complement
b) IgM fixes complement
c) IgG is found in minimum concentration.
d) IgG is elevated in primary immune response

271. The Fc piece of which immunoglobulin fixes Cl-
a) IgA b)IgG *(MH11)*
c) IgM d)IgE

272. First immunoglobulin to appear following infection-
a) IgG b) IgM *(SGPGI09)*
c) IgA d) IgE

273. Complement binding immunoglobulin via the classical pathway is - *(PGI89)*
a) IgG & IgM b) IgG & IgA
c) IgG & IgD d) IgD & IgE

274. Hemagglutinin (Anti A and Anti B) are which type of antibodies - *(MH 11)*
a) IgG b) Ig M
c) IgA d) IgE

275. When an antigen is administered for the first time to an animal or a human being who has never been exposed to it, the first antibody to develop-*(Kerala 08)*
a) IgG type b) IgM type
c) IgA type d) IgE type

276. Predominant class of immunoglobulin during primary immune response is- *(Korn11)*
a) IgA b)IgE
c) IgM d)IgG

277. First antibody response is mediated by -
a) IgE b) IgM *(Jharkand 08)*
c) IgA d) IgD

278. In respiratory and GIT infections, which is the most affected immunoglobulin - *(AI 94)*
a) IgA b) IgG
c) IgM d) IgD

279. The secretory component of immunoglobulin molecule is - *(PGI 01)*
a) Formed by epithelial cells of lining mucosa
b) Formed by plasma cell
c) Formed by epithelial cell and plasma cell
d) Secreted by bone marrow

280. Function of IgA is- *(Kerala 01)*
a) Acts as a mucosal barrier for infection
b) Circulating antibody
c) Kills virus infected cells
d) Activates macrophages
e) Causes delayed hypersensitivity reaction

281. Bronchial secretion secretes - *(UP 07, 05)*
a) IgA b)IgE
c) IgM d) IgG

282. IgA secretion is seen in - *(MP 08)*
a) Tears and saliva b) CSF
c) Hairs d) Vaginal fluid

254) b 255) b,d 256) e 257) b 258)b,c,d 259) c 260) c 261) a 262) a 263) a 264) a 265) a 266) d 267) c 268)c>b 269)c 270)b 271)c>b 272)b 273)a 274)b 275)b 276)c 277)b 278)a 279)a 280)a 281)a 282) a

283. PK reaction detects - *(NEET/DNB Pattern)*
a) IgG b) IgA
c) IgE d) IgM

284. Which of the following statements concerning immunoglobulins is wrong - *(AI9 7)*
a) IgM does not cross placenta
b) IgE is T ed in parasitic infection
c) IgM increased in primary response
d) Fetal infection is characterised by increase in IgG

285. Antibody elevated in parasitic infection -
a) IgA b)IgE *(NEET/DNB*
c) IgG d)IgM *Pattern)*

286. Which of Immunoglobulins is associated with allergic disorders ? **(***Corned 08)*
a) IgG b) IgM
c) IgA d)IgE

287. Which of the following immunoglobulins shows homocytotropism - *(Maharashtra 10)*
a) IgG b) IgA
c) IgE d)Igd

288. Atopy is mediated by-
a) IgE b) IgD
c) IgM d) IgA

289. Pentameric structure - *(NEET/DNB Pattern,PGI99)*
a) IgM b) IgG
c) IgA d)IgD

290. Which precipitates at 50°C-60°C but disappears on heating - *(AI 96)*
a) Heavy chain b) Light chain
c) Both d) None of the above

291. Bence jones proteins are best described as - *(AI96)*
a) chains b) y chains
c) Kappa & Lambda chains d) Fibrin split products

292. Synthesis of an immunoglobulin in membrane bound or secretory form is determined by - *(A1IMS*
a) One turn to two turn joining rule *May 12)*
b) Class switching
c) Differential RNA processing
d) Allelic exclusion

ANTIGEN

293. Hapten is- *(AI 98)*
a) Same as epitope
b) Small molecular weight protein
c) Requires carrier for specific antibody production
d) Simple haptens are precipitate

294. Which of the following statements is true about hapten - *(NEET/DNB Pattern, AI 04)*
a) It induces brisk immune response
b) It needs carrier to induce immune response
c) It is a T-independent Antigen
d) It has no association with MHC

295. The exact part of the antigen that reacts with the immune system is called as -
a) Clone b) Epitope
c) Idiotope d) Effector

296. Which of the following is very difficult to induce antibody - *(PGI 9 7)*
a) Polysaccharide b) Protein
c) Antigen d) Repeated infections

297. All of the following statements about carbohydrate antigen are true except - *(AI 11; AIIMS Nov 08)*
a) It has lower immunogenicity
b) Memory response is seen
c) Cause polyclonal B cell stimulation
d) Does not require stimulation by T cells

298. Which of the following T cell independent Antigen acts through - *(NEET/DNB Pattern)*
a) T-cell b) B-cell
c) Macrophages d) CD8+ T cells

299. Which part of bacteria is most antigenic -
a) Protein coat *(NEET/DNB Pattern)*
b) Lipopolysaccharide
c) Nucleic acid
d) Lipids

300. Antigen combining site of the antibody - *(TN 08)*
a) Idiotype b) Paratope
c) Epitope d) Hapten

301. Which one of the following chemical nature makes a better antigen? *(Karn 11)*
a) Lipids b) Nucleic acids
c) Polysachharides d) Proteins

302. A superantigen is a bacterial product that - *(AI 08)*
a) Binds to B7 and CD28 costimulatory molecules
b) Binds to the beta chain of TCR and MHC class II molecules of APC stimulating T cell activation
c) Binds to the CD4 + molecule causing T cell activation
d) Is presented by mactrophages to a larger-than-normal number of T helper CD4 + lymphocytes.

303. Superantigens true is - *(AIIMSMay 10)*
a) They bind to the cleft of the MHC
b) Needs to proccessed before presentation
c) They are presented by APC'S to T cells
d) Directly attached to lateral aspect of TCR p chain

304. Superantigen causes - *(NEET/DNB Pattern)*
a) Polyclonal activation of T-cells
b) Stimulation of B cells
c) Enhancement of phagocytosis
d) Activation of complement

305. Superantigens are - *(PGI June 05)*
a) Erythrotoxin of staph. Aureus
b) Cl. Difficile toxin
c) Staphyloccocal toxic shock syndrome toxin
d) Cholera toxin

306. Autoantigen is -
a) Blood group antigen b) Forssman antigen
c) Both d)None

307. The main aim of an adjuvant is to increase -
a) Distribution b) Absorption
c) Antigenicity d) Metabolism

283) c 284) d 285)b 286)d 287)c 288)a 289)a 290)b 291)c 292)c 293)c 294)b 295)b 296)a
297) b 298) b 299) d 300) a,b 301) d 302) b 303) d 304) a 305) a,c 306) d 307) c

ANTIGEN ANTIBODY REACTION

308. All of the following forces are involved in Antigen antibody reaction except - *(AI98, AIIMS Sept 96)*
a) Vander Waal's forces b) Electrostatic bond
c) Hydrogen bond d) Covalent bond

309. Which of the following statement is true - *(AIIMS Dec 94)*
a) Paul Bunnell test is used to diagnose measles
b) Rose Waaler test is a complement fixation test
c) Indirect hemagglutination test is less sensitive than gel diffusion test
d) Antigen antibody reaction cannot occur in the absence of electrolytes

310. The reaction between antibody and soluble antigen is demonstrated by - *(AI 94)*
a) Agglutination
b) Precipitation
c) Complement fixation test
d) Hemagglutination test

311. Skin test based on neutralization reaction is/are - *(PGI June 04)*
a) Casoni test b) Lepromin test
c) Tuberculin test d) Schick test

312. Nagler reaction is type of- *(NEET/DNB Pattern)*
a) Neutralization reaction b) CFT
c) Precipitation d) Agglutination

313. Coombs test is - *(NEET/DNB Pattern)*
a) Precipitation test b) Agglutination test
c) CFT d)Neutrilizationtest

314. Prozone phenomenon is seen with-
a) Same concentration of antibody and antigen
b) In antigen excess to antibody *(NEET/DNB*
c) Antibody excess to antigen *Pattern)*
d) Hyperimmune reaction

315. Prozone phenomenon is due to-*(AI 96, PGI June 03)*
a) Excess antigen
b) Excess antibody
c) Hyperimmune reaction
d) Disproportionate antigen-antibody levels

316. Prozone phenomenon is a feature is- *(PGI 01)*
a) Tularemia b)Legionnaire's disease
c) Plague d) Brucellosis

317. Antigen antibody precipitation is maximally seen in which of the following? *(AIIMS May 10)*
a) Excess of antibody
b) Excess of antigen
c) Equivalence of antibody and antigen
d) Antigen Hapten interaction

318. The following methods of diagnosis utilize labelled antibodies except - *(AIIMS May 05)*
a) ELISA (Enzyme Linked Immunosorbent Assay)
b) Hemagglutination inhibition test
c) Radioimmunoassay
d) Immunofluorescence

319. Which is not a heterophile agglutination test -
a) Weil Felix test b) Widal test *(PGI 99)*
c) Paul Bunnell test d) Streptococcus MG

320. Heterophile antibody is found in - *(NEET/DNB*
a) Weil Felix test b) Widal test *Pattern)*
c) VDRL d)All

321. Which of the following is agglutination test -
a) Widal test *(NEET/DNB Pattern)*
b) VDRL
c) Ascoli's test
d) Kahn test

322. Paul bunnel reaction is a type of- *(NEET/DNB*
a) Agglutination b) CF *Pattern)*
c) Precipitation d) Flocculation test

323. Which of the following is a flocculation test -
a) Widal test b) Weil- felix test *(Kar 08)*
c) VDRL d) Paul- Bunnel test

324. Reaction of soluble antigen with antibody is known as- *(TN 09)*
a) Agglutination b) Precipitation
c) Flocculation d) Complement fixation

325. Agglutination test is -
a) ABO incompatibility b)VDRL
c) Weil- felix test d) FTA-ABS

326. Rapid serological diagnostic tests include all except-
a) Latex agglutination *(Delhi 09)*
b) Spectrophotometry
c) Gel electrophoresis
d) Radioimmunoassay

327. VDRL is a- *(TN95)*
a) Slide flocculation test
b) Tube flocculation test
c) Gel precipitation test
d) Indirect haemagglutination test

328. Isoantigens are - *(Delhi 08)*
a) Found in some but all members of species
b) Found in some but not all members of species
c) Occurs in different biological species, class and kingdoms
d) All individuals in a particular species

329. Antibodies are most responsive to - *(SGPGI05)*
a) Recipientstissue b) Donor tissue
c) Isografts d) Autograft

330. Phagocytosis enhanced by coating the surface of antigen is called - *(Kerala 96)*
a) Opsonisation b) Chemotaxis
c) Decoding d) CFT

331. All statements are correct about immunologic techniques, except - *(PGI 97)*
a) ELISA can detect both antigens and antibodies
b) Immunofluorescence test uses fluorescein and rhodamine
c) Radioimmunoassay is used to quantitate antigens and haptens
d) Immunoblotting is also called northern blotting

332. DNA is detected by - *(NEET/DNB Pattern)*
a) Southern blot b) Northern blot
c) Western blot d) Eastern blot

308)d 309)d 310)b 311)d 312)a 313)b 314)c 315)b,d 316)d 317)c 318)b 319)b 320)a 321)a
322) a 323) c 324) b 325) c 326) b 327) a 328) b 329) b 330) a 331)d 332) a

333. Most sensitive test for antigen detection is -
a) RIA *(PGI97)*
b) ELISA
c) Immunofluorescence
d) Passive hemagglutination

334. Hormones are best assessed by - *(PGI98)*
a) Flowcytometry b) Electrophoresis
c) ELISA d)RIA

IMMUNITY

335. All of the following are a part of the innate immunity except- *(AIIMSMay 05)*
a) Complement b)NK cells
c) Macrophages d) T cells

336. All are ture about innate immunity except -
a) Non-specific *(NEET/DNB Pattern)*
b) First line of defence
c) Not affected by genetic affected
d) Includes complement

337. Components of innate immunity are - *(PGI Nov 10)*
a) T lymphocytes b) Complement proteins
c) B lymphocytes d) NK cells
e) Integrins

338. Which is conerned with cell mediated immunity -
a) B-Lymphocytes b) T-Lymphocytes *(AI98)*
c) Eosinophils d) Monocytes

339. Active immunity is not acquired by -
a) Infection
b) Vaccination
c) Immunoglobulin transfer
d) Sub-clinical infection

340. True about active immunity - *(AI 93)*
a) Less effective
b) Can be given in immunodeficient state
c) Immunological memory present
d) No lag period

341. Adoptive immunity is by - *(PGI May 10)*
a) Infection
b) Injection of antibodies
c) Injection of lymphocytes
d) Immunization

342. When transfer factor is given as treatment results in - *(NEET/DNB Pattern)*
a) Natural active immunity
b) Artificial active immunity
c) Artificial passive immunity
d) Adoptive immunity

343. Lysozyme is present in the following secretions of the body except - *(PGI 94)*
a) Lacrimal secretions
b) CSF
c) Saliva
d) Respiratory tract secretions

344. Type of immunity conferred on an individual by vaccination is - *(Kam 11)*
a) Artificial active b) Artificial passive
c) Natural active d) Natural passive

345. Immunity acquired due to the injection of immunologically competent lymphocytes is termed as - *(Corned 07)*
a) Innate immunity b) Adoptive immunity
c) Active immunity d) Local immunity

346. The following is NOT a component of innate immunity- *(COMED06)*
a) Epithelial surfaces b) Antibody
c) Lysozyme d) Sebum

347. Primary immune response is mediated by - *(PGI 94)*
a) IgE b) IgM
c) IgA d) IgD

348. Binary (secondary) exposure to an antigen results in sudden increase in -
a) IgA b) IgD
c) IgG d) IgM

349. True about secondary immune response is -
a) Long latent period *(PGI98)*
b) Usually of low titre
c) Antibodies appear in short time
d) Persist for long

HYPERSENSITIVITY

350. Type I hypersensitivity is mediated by which of the following immunoglobulins ? *(NEET/DNB Pattern,*
a) IgA b)IgG *AI05)*
c) IgM d)IgE

351. The most important cells in type I hypersensitivity -
a) Macrophages b) Mast cells *(AI92)*
c) Neutrophils d) Lymphocytes

352. Mast cell synthesize and/or secrete - *(PGI June 03)*
a) Adrenaline b)Ach
c) Histamine d) Heparin
e) Neutrophilic chemotactic factor

353. Type 1 hypersensitivity includes all of the following except- *(PGI 2000)*
a) Autoimmune hemolytic anemia
b) Anaphylaxis
c) Extrinsic asthma
d) Hay fever

354. Graves disease is an example of which type..... immunologic response- *(PGI 91)*
a) Type I b) Type II
c) Type III d) Type IV
e) TypeV

355. Killer cells are associated with type ..... immunologic response - *(AI 89)*
a) Type I b) Type II
c) Type III d) Type IV
e) Type VI

333) a 334) d 335) d 336) c 337) b,d 338) b 339) c 340) c 341) c 342) d 343) b 344) a 345) b 346) b
347) b 348) d 349) c,d 350) d 351)b 352)c,d,e 353) a 354) b,e 355) None

356. IVpe in reaction is - *(Al 93)*
a) Antibody mediated
b) Immune complex mediated
c) Cell mediated
d) None

357. Delayed hypersensitivity involves - *(AIIMS 92)*
a) Neutrophils b) Monocytes
c) Eosinophils d) Lymphocytes

358. Which of the following is an example of Type IV hypersensitivity - *(NEET/DNB Pattern)*
a) Arthrus reaction b) Serum sickness
c) Shwartzman reaction d) Granulomatous reaction

359. Type I hypersensitivity, the mediator is -*(UP 07, 05)*
a) IgE b)IgD
c) IgM d)IgC

360. Which of the following responses is found in atopic individuals- **(***Corned 07)*
a) IgM production
b) IgE production
c) IgA production
d) Hypogammaglobulinemia

361. Which one of the following is False- *(A I 95)*
a) Theobald - smith phenomenon is a type 1 hypersensitivity reaction
b) Serum sickness is a type II hypersensitivity reaction
c) Allograft rejection is a type IV hypersensitivity reaction
d) Transfusion reaction is a type II hypersensitivity reaction

362. Examples of type 1 hypersensitivity is - *(Al 98)*
a) Lepromin test b) Tuberculin
c) Casoni's test d) Arthus reaction

363. The hypersensitivity reaction involved in the hyper acute rejection of renal transplant is - *(AIIMS*
a) Type I b) Type II *May 05)*
c)Type III d) Type IV

364. Contact dermatitis is - *(Al 94)*
a) Type-I hypersensitivity
b) Type-II hypersensitivity
c) Type-Ill hypersensitivity
d) Type-IV hypersensitivity

365. In contact dermatitis which cells play major role -
a) T- cells b) B-cells *(PGI June 08)*
c) Langhans cells d) Macrophage

366. Note a delayed type of hypersensitive reactions- *(PGIJune 05)*
a) Arthus reaction b) Bronchialasthma
c) Hemolytic anemia d) Multiple sclerosis

367. Wheal & flare reaction is what type of hypersensitivity reaction? *(NEET/DNB Pattern)*
a) Type I b) Type II
c) Type III d) Type IV

368. Spring catarrh is which type of hypersensitivity reaction - *(PGI June 05)*
a) type I b) type II
c) type II & III d) type IV
e) type V

369. Skin tests are used for which hypersensitivity reactions? *(PGIJune 07)*
a) I b)fl
c) m d)IV
e) V

370. The prototype of type-II hypersensitivity reaction is-
a) Arthus reaction *(Kerala 91)*
b) SLE
c) Autoimmune hemolytic anemia
d) Contact dermatitis

371. Which is an example of type-III hypersensitivity
a) Contact dermatitis *(JIPMER91)*
b) Hemolytic anemia
c) Serum sickness
d) Good pasture syndrome

372. Arthus phenomenon is an example of which hypersensitivity- *{Corned07)*
a) Type I b) Type II
c) Type III d) Type IV

373. All are type-II hypersensitivity reaction except -
a) Hemorrhagic disease of newborn *(Delhi 08)*
b) Graves disease
c) Autoimmune disease
d) Hemolytic anemia

374. Thberclin test is reaction of - *(UP 08)*
a) Anaphylaxis mediated
b) Cell mediated
c) Antibody mediated
d) Immune complex mediated

375. Blood transfusion mismatch in erythroblastosis fetalis is a type of - *(NIMS 96)*
a) Atopic hypersensitivity
b) Cell mediated cytotoxicity
c) Arthus phenomenon
d) Delayed hypersensitivity

376. All of the following are immune complex disease except- *(CUPGEE 08)*
a) Serum sickness b) Farmer's lung
c) SLE d) Graft rejection

377. Erythroblastosis fetalis is an example of which type of hypersensitivity reaction- *(UP 07, 05)*
a) Type I b) Type II
c) Type m d) Type IV

378. All the following types of hypersensitivity reactions can be demonstrated by skin test except -
a) Type I b) Type II
c) Type III d) Type IV

379. Animal used to demonstrate anaphylaxis in the lab is- *(JIPMER 98)*
a) Rabbit b) Adult mice
c) Monkey d) Guinea Pig

380. Delayed tuberculin test response is due to- *(IN01)*
a) B lymphocytes b) T lymphocytes
c) Monocytes d) Histiocytes

381. Delayed hypersensitivity reaction is mediated by -
a) B lymphocyte b)NKcell *(Kar09)*
c) Mast cell d) T lymphocyte

356)b 357) d 358) d 359) a 360) b 361) b 362) c 363) c 364) d 365) a 366)a,b,c 367) a 368) a,d
369) a,b 370) c 371) c 372) c 373) a 374) b 375) None 376) d 377)b 378) b 379) d 380) b 381) d

382. AB blood group antigen are known as__factor -
a) Duffy b) Landsteiner
c) Rhesus d) Lutheran
e) Kidd

383. 45 Year old homeless man has chronic cough and cavitatory lesion of lungs. His sputum is positive for acid fast bacilli which of the following is the peripheral form of defense by which his body fights this infection - *(HP 2006)*
a) Antibody
b) Cell mediated hypersensitivity
c) Ig A mediated hypersensitivity
d) Ig E mediated hypersensitivity

384. Autoimmunity can be caused due to all of the following except - *(ARMS May 05)*
a) The pressure of forbidden clones
b) Expression of cryptic antigens
c) Negative selection of T-cells in the thymus
d) Inappropriate expression of the MHC proteins

385. All are true about Autoimmune disease except -
a) T cells recognise self antigen *(PGIMay 10)*
b) Hashimoto's thyroiditis is an example
c) Higher incidence among males
d) Polyclonal B cell activation
e) Co-stimulatory molecules involvement

386. Epstein Barr virus causes autoimmunity by -*(AI12)*
a) Molecular Mimicry
b) Release of Sequestrated Antigen
c) Inappropriate Expression of MHC Class II Molecules
d) Polyclonal B cell Activation

IMMUNODEFICIENCY

387. Adenosine deaminase deficiency is seen in the following - *(AI 01, 05)*
a) Common variable immunodeficiency.
b) Severe combined immunodeficiency
c) Chronic granulomatous disease
d) Nezelof syndrome

388. SCID which is true - *(NEET/DNB Pattern)*
a) Adenosine deaminase deficiency
b) Decreased circulating lymphocytes
c) NADPH oxidase deficiency
d) Cl esterase dificiency

389. Which one of the following statements is correct regarding chronic granulomatous disease - *(ARMS*
a) It is an autosomal dominant disease *Nov 04)*
b) It is characterized by abnormal bacterial phagocytosis
c) Recurrent streptococcal infections are usual in this disease
d) Nitroblue tetrazolium test is useful for screening

390. Chronic granulomatous disorder is due to defect in - *(NEET/DNB Pattern)*
a) B-cell b) NADPH oxidase
c) IgA d) T-cell

391. Most common cause of chronic granulomatous disease in children is - *(AI 98)*
a) Myeloperoxidase deficiency
b) Defective phagocytosis
c) Defective H_20_2 production
d) Job's disease

392. The NBT (nitroblue tetrazolium) reduction assay is used to - *(ARMS 81, 85)*
a) Evaluate granulocyte function
b) Evaluate T-cell function
c) Determine whether polymorphonuclear leucocytes can produce superoxide
d) Stain B-lymphocytes

393. The commonest Primary immunodeficiency is -
a) Common variable immunodeficiency *(A194,*
b) Isolated IgA immunodeficiency *PGI June 05)*
c) Wiskott-Aldrich syndrome
d) AIDS

394. A child present with recurrent episodes of sinopulmonary infection by bacteria with polysacharide rich capsule. Deficiency of which of the following immunoglobulin subclasses should be specifically investigated - *(AI 12, ARMS May 12)*
a) IgA b)IgGl
c)IgG2 d) IgA + IgG2

395. Wiskott Aldrich not true is - *(ARMS 97)*
a) Raised IgE b) Raised IgM
c) Reduced IgA d) CD4 and CD8 defect

396. A patient presents with thrombocytopenia, eczema and recurrent infection - *(NEET/DNB Pattern)*
a) Wiskott - Aldrich syndrome
b) Digeorge syndrome
c) Agammaglobulinemia
d) SOD

397. All are true regarding agammaglobulinemia except- *(PGI 01)*
a) Loss of germinal centre in lymph node
b) Normal cortical lymphocytes
c) Normal cortical lymphocytes in paracortex and medulla
d) Decreased red pulp in spleen
e) Immunodeficiency (cell mediated)

398. Which is found in DiGeorge's syndrome - *(PGI 01)*
a) Tetany
b) Eczema
c) Mucocutaneous candidiasis
d) Absent B and T cells
e) Total absence of T cells

399. Chediak higashi syndrome, defect is *'(NEET/DNB*
a) Fusion of lysosome b) T-cells *Pattern)*
c) B-cells d) Complement

400. Chediak-Higashi syndrome, true is- *(NEET/DNB Pattern)*
a) Defect in phagocytosis b) Neutropenia
c) Agammaglobulinemia d) IgA deficiency

382)b 383)b 384)c 385)c 386)d 387)b 388)a 389)d 390)b 391)c 392)c 393)b 394)d 395)b,c 396) a 397) b,c,d 398) a,c 399) a 400) a

401. TVue about Bloom Syndrome- *(Jipmer 11)*
a) Decreased IgGb) Decreased IgM
c) IgA absent d) Increased IgE

402. Which fungal infection is commonest to occur in neutropenia - *(AIIMS June 99)*
a) Candida b) Histoplasma
c) Aspergillus nigerd) Aspergillus fumigatus

403. Nucleotidase deficiency - *(NEET/DNB Pattern)*
a) Humoral immunity deficiency
b) Acquired immunity deficiency
c) SCIDs
d) Cell mediated immunity deficiency

404. Phagocytic function is assessed by - *(MP 09)*
a) Proloiferative response to mitogen
b) Reduction of NBT(Nitroblue tetrazolium test)
c) Serum immunoglobulin assay
d) Skin test with purified protein derivative

405. Candida infections are seen in - *(Jipmer 11)*
a) Chronic granulomatous disease
b) Chediak-Higashi syndrome
c) Myeloperoxidase deficieny
d) Lazy leucocyte syndrome

406. Digeorge syndrome is characterized by all except -
a) Congenital thymic hypoplasia *(SGPGI08)*
b) Abnormal development of third and fourth pouches
c) Hypothyroidism
d) Hypocalcemic tetany

407. Which of the following about severe combined immunodeficiency is not true - *(Jipmer 11)*
a) Due to deficiency of adenylate kinase
b) Toxicity to leucocytes due to accumulation of dAMP
c) Both cellular and humoral immunity affected
d) Bone marrow transplantation is the treatment

408. Which of the following about SCID is false -
a) Failure of descent of thymus *(Jipmer 11)*
b) Peyer's patches are present and normal
c) X-linked type is the most common
d) Gene therapy can be used

IMMUNOLOGY OF TRANSPLANTATION

409. A woman with infertility receives an ovary transplant from her sister who is an identical twin. What type of graft it is ? *(AI05)*
a) Xenograft b) Autograft
c) Allograft d) Isograft

410. Graft versus Host reaction is caused by -*(PGI86)*
a) B-lymphocytes b) T-lymphocytes
c) Macrophages d) Complement

411. Type of T-lymphocyte responsible for histocompatibility reaction is - *(AIIMS89)*
a) Suppressor T-cell b) Activator T-cell
c) Effector T-cell d) Helper T-cell

412. Transplantation of the hosts own tissue is known as- *(DNB91)*
a) Isograft b) Allograft
c) Xenograft d) Autograft

413. Runt disease is - *(TN 2002)*
a) Graft rejection
b) Graft versus host reaction
c) Deficient T cell function
d) Complement deficiency

COMPLEMENT SYSTEM

414. Complement formed in liver - *(NEET/DNB Pattern)*
a) C2,C4 b) C3,C6, C9
c) C5,C8 d)Cl

415. Which of the following best denotes classical complement pathway activation in immunoinflammatory condition - *(AIIMS 04)*
a) C2, C4, C3 decreased
b) C2 and C4 normal, C3 is decreased
c) C3 normal and C2 C4 decreased
d) C2, C4, C3 all are elevated

416. C3 convertase acts on - *(Manipal 06)*
a) C4b2b b)C4b2B3a
c) C4b d)C3

417. Which complement component is involved in both classical and alternative pathways - *(AI 11)*
a) Cl b)C2
c) C3 d)C4

418. Center of complement pathway -*(NEET/DNB Pattern)*
a) C3 b)Cl
c) C5 d)C2

419. C-3 convertase in alternate complement pathway -
a) C4b2a b) C3b *(NEET/DNB*
c) C3bBb d)C3a *Pattern)*

420. Chemoattractant is - *(PGI 89)*
a) C5a b)Cl
c) C3 d)C2

421. Opsoninsare- *(AI 93)*
a)C3a b) C3b
c) C5a d)C5-C9

422. In cell lysis by compliments - *(NEET/DNB Pattern)*
a) They activate cyclise
b) Inhibits elongation factor p
c) Destruction of cell wall
d) Increased permeability of cell membrane

423. Recurrent Neisseria infections are predisposed by -
a) Early complement component deficiency *(PGI 93)*
b) Late complement component deficiency
c) C1 esterase deficiency
d) Properdin deficiency

424. Complement necessary for neisseria infection is/ are - *(PGI Nov 09)*
a) C5 b)C6
c) C7 d)C8
e) C9

425. Hereditary angioneurotic edena is due to -
a) Deficiency of Ci inhibitor *(NEET/DNB*
b) Deficiency of NADPH oxidase *Pattern)*
c) Deficiency of MPO
d) Deficiency of properdin

401)b 402)a 403)a 404)b 405)c 406)c 407)a 408)b 409)d 410)b 411)d 412)d 413)b 414)b
415)a 416) d 417)c 418)a 419)c 420)a 421)b 422)d 423)b,d 424)A11 425)a

MISCELLANEOUS

426. Which of the following features is not shared between ^{6}T cells' and ^{6}B cells' - *(AI12)*
a) Positive Selection During Development
b) Class IMHC Expression
c) Antigen Specific Receptros
d) All of the above

427. Vaccination is based on the principle of - *(AI 12)*
a) Agglutination
b) Phagocytosis
c) Immunologic Memory
d) Clonal Detection

428. Ovalbumin was injected into a rabbit Which of the following classes of antibodies are likely to be produced initially - *(AI 11)*
a) IgG b) IgM
c) IgE d)IgD

429. All of the following statements about hybridoma technology are true except - *(AIIMS Nov 08)*
a) Specific antibody producing cells are integrated with myeloma cells
b) Myeloma cells with mutation salvage pathway grows well in HAT medium.
c) Aminopterin, a folate antagonist, inhibits denovo pathway
d) HGPRT ase and thymidylate synthetase are required for salvage pathway

430. The process increasing the ability for phagocytosis of foreign bodies by body is called -
a) Cross reactivity b) Opsonisation
c) Immune Tolerance d) Immune Surveillance

431. Opsonisation is by - *(PGI94)*
a) IgA b) IgE
c) IgG d) IgM

432. Opsonization occurs due to all except - *(PGI 99)*
a) Endotoxin b) Complement
c) IgM d) IgD

433. Bacteria coated with complement and Ig; phagocytosis is enhanced by- *(AIIMS Nov 11)*
a) Receptor mediated endocytosis
b) Pseudopod formation
c) Myeloperoxidase mediated destruction
d) C3b - Fc mediated destruction

434. Opsonization takes place through - *(NEET/DNB*
a) C3a b)C3b Pattern)
c) C5a d)C5b

435. Firstchemical barrier encountered by microorganism for common exposed sites -
a) Lysozyme b) Acidic pH *(AIIMS Nov11)*
c) Skin d) Lactose

436. Specific immunological unresponsiveness is called tolerance. Which one of the following statements best describes immunological tolerance-
a) Immunologic maturity of the host does not play a major role
b) It occurs only with polysaccharide antigens
c) It is related to the concentration of antibody
d) It is prolonged by administration of immunosuppressive drugs

437. The protection against small pox by previous infection with cowpox represents - *(AIIMS May 04)*
a) Antigenic cross-reactivity
b) Antigenic specificity
c) Passive immunity
d) Innate immunity

438. Acute phase reaction in acute inflammation are -
a) Albumin b) Fibrinogen *(PGIJune 03)*
c) Haptoglobulin d) Gammaglobulin

439. C-reactive protein is - *(AI 94)*
a) An antibody produced as a result of pneumococ cal infection
b) Derived from pneumoconiosis
c) Detected by precipitation reaction
d) Increased in pneumococcal infection

440. C-Reactive Protein is - *(AIIMS 91)*
a) Produced by pneumococcus
b) A marker of Septicemia
c) Raised in acute inflammation
d) Low in Rheumatoid arthritis

441. Following is true about C reactive protein - *(AIIMS*
a) Detected by precipitation with carbohydrate *95)*
b) Raised in acute pneumococcal infection
c) It is an antibody
d) Detected by agglutination test.

442. C-reactive proteins are - *(PGI Dec 2000)*
a) Alpha-1 globulin
b) Beta-1 globulin
c) Alpha-2 globulin
d) Non-specific inflammatory protein

443. ^{6}C' in C reactive protein stands for - *(AI 11)*
a) Capsular polysaccharide in pneumococcus
b) Concanavalin-a
c) Calretinin
d) Cellular

BACTERIA

444. Staphylococcus is - *(AI 96)*
a) Gram - positive cocci b) Gram - negative cocci
c) Gram - positive bacillus d) Gram-negativebacillus

445. Gram negative cocci is/are - *(PGI may 10)*
a) Neisseria gonorrhoeae b) Bacillus
c) Staphylococci d) Streptococci
e) Neisseria meningitidis

STAPHYLOCOCCI

1. STAPH AUREUS

446. Staphyloccocal pathogenicity is indicated by-
a) Coagulase positivity b) Hemolysis*(PGI 98)*
c) Lipoteichoic acid d) Endotoxin

426) a 427) c 428) c 429)b 430)b 431)c,d 432) a 433) d 434)b 435)b 436) d 437) a 438)a,b,c
439)d 440)c 441)b,d 442)b,d 443)a 444)a 445)a,e 446)a

447. Staph aureus virulence is due to - *(PGI98)*
a) Pathogenicity correlated with coagulase
b) Endotoxin
c) Hemolysis
d) Pigmented colonies

448. All are true regarding staphylococcal toxin except -
a) Beta haemolysin shows hot cold phenomenon
b) Mainly endotoxin *(AIIMS Dec 9 7)*
c) Enterotoxin causes food poisoning
d) Exfoliative toxin causes Reiter's syndrome

449. Synergohymenotroic toxins of Staphylococcal consists- *(PGI May 11)*
a) a toxin b) p toxin
c) y toxin d) 6 toxin
e) Panton-Valentine toxin

450. Staphylococcal scalded skin syndrome is caused by- *(NEET/DNB Pattern)*
a) Hemolysin b) Coagulase
c) Enterotoxin d) Epidermolytic toxin

451. Toxin of staphylococcus - *(Bihar 09)*
a) Hemolysin b) Leucocidin
c) Enterotoxin d)All

452. Staphylococcus secrete all except - *(Bihar 08)*
a) Lipase b) Cellulose
c) Coagulase d) Lecithinase

453. Staphylococcus aureus remains in the skin for longer period because of - *(MAHE 01)*
a) Catalase b) Coagulase
c) Hyaluronidase d) None

454. Staphylococcal toxic syndrome is due to- *(Orrisa 2K)*
a) Enterotoxin A b) Enterotoxin B
c) Enterotoxin C d) Enterotoxin D

455. Toxic shock syndrome is Staphylococcus infection is due to- *(Jipmer 11)*
a) Superantigen b) Alpha-hemolysis
c) Coagulase d) Penton Valentine factor

456. Staphylococcal food poisoning includes the following feature - *(AIIMS 01)*
a) Incubation period of 24 hrs.
b) Requires immediate antibiotics
c) Common with dairy products
d) Heat labile enterotoxin

457. The following are characteristic features of staphylococcus food poisoning except - *(AIIMS 04)*
a) Optimum temperature for toxin production is 37° C
b) Intradietic toxin is responsible for intestinal symptoms
c) Toxin can be destroyed by boiling for 30 minutes
d) Incubation period is 1-6 hours

458. A child after consuming food in a party complains of diarrhea within 1-5 hours. The diagnosis is -
a) S. aureus *(AIIMS 01, 96, 95)*
b) Streptococcus
c) Clostridium perfringens
d) Clostridium botulinum

459. Incubation period of staphylococcal food poisoning is- *(PGI 95)*
a) 4-6 hrs b) 6-12 hrs
c) 12-18 hrs d) 18-24 hrs

460. Staph, aureus causes vomiting in 16-18 hours. The mechanism of action is - *(AIIMS May 02)*
a) Stimulation of cy AMP
b) Vagal stimulation
c) Stimulation of CyGMP
d) Acts through ganglioside GM receptor

461. In carriers, staphylococci are found in the following sites except - *(AIIMS 94)*
a) Throat b)Nose
c) Skin d) Anal canal

462. Common source of staph in hospital - *(PGI June 01)*
a) IV fluids
b) Infective wounds
c) Hands of hospital personnel
d) Bed linen
e) Instruments

463. All of the following statements about staphylococcus aureus are true, Except - *(AI10)*
a) Most common source of infection is cross infection from infected people
b) About 30% of general population is healthy nasal carriers
c) Epidermolysin and TSS toxin are superantigens
d) Methicillin resistance is chromosomally mediated

464. Staphylococcus can cause - *(PGI June 01)*
a) Ecthyma b) Erythrasma
c) Furuncle d) Impetigo contagiosa
e) Sycosis barbae

465. Staph aureus causes - *(NEET/DNB Pattern)*
a) Erythrasma b) Chancroid
c) Acne vulgaris d) Bullous impetigo

466. Which of the following organism is implicated in the causation of botryomycosis - *{PGI 01)*
a) Staphylococcus aureus
b) Staphylococcus albus
c) Pseudomonas aeruginosa
d) Streptococcus pneumoniae
e) Streptococcus pyogenes

467. Toxic shock syndrome is caused by - *(PGIMay 10, PGI Dec 07)*
a) Streptococcus pyogenes
b) Staphylococcus aureus
c) Strept albicans
d) E.durans

468. True about TSS - *(PGI Nov 10)*
a) Most commonly due to TSST-1
b) Mensturation is a risk factor
c) Anti- staph antibodies are contraindicated
d) Most common cause is S. aureus
e) TSST-1 acts like superantigen

469. Toxic shock syndrome was first discovered in- *(JIPMER 91)*
a) Tampoon users b) Diabetic septicemia
c) Drug addicts d) None

447) a 448) b 449) c,e 450) d 451)d 452) b 453) c 454) b,c 455) a 456) c 457) c 458) a 459) a 460)b 461) d 462) b,c 463) a 464)a,c,d,e 465) d 466) a 467) a,b 468)a,d,e 469) d>a

470. Toxic shock syndrome is due to - (*Corned 07)*
a) Septic abortion b) Forgotten tampons
c) IUCD d) Pelvic examination

471. Staphylococcus in stool occurs in - *(PGI Dec 01)*
a) Staphylococcal food poisoning
b) Ischiorectal abscess
c) Toxic shock syndrome
d) May be a normal finding
e) pseudomembranous colitis

472. Blood culture is positive in which infection of staph, aureus- *(NEET/DNB Pattern)*
a) TSS b) SSSS
c) Infective endocarditis d) Impetigo

473. True about methicillin-resistance staphylococcus aureus (MRSA) - *(PGI June 09)*
a) Isoxazolyl penicillin is highly effective
b) All MRSA are multidrug resistance
c) Vancomyin is effective
d) MRSA are more virulent then sensitive strains
e) Resistance develop due to altered binding protein

474. All of the following statements are true regarding Staphylococci except - *(AIIMS Nov 04)*
a) A majority of infections caused by coagulase-negative Staphylococci are due to Staphylococcus epidermidis
b) (i-lactamase production in Staphylococci is under plasmid control
c) Expression of methicillin resistance in Staphylococcus aureus increases when it is incubated at 37°C on blood agar.
d) Methicillin resistance in Staphylococcus aureus is independent of p-lactamase production

475. Which of the following is not a mechanism for resistance to MRSA - *(AI10)*
a) Resistance is chromosomally mediated
b) Produced mainly by alteration in PBP's
c) MRSA resistance is absolutely beta lactamase dependent
d) Intrinsic resistance is known

476. All of the following are true about Methicillin resistance in MRSA, except- *(AI 11)*
a) Resistance is produced as a result of altered PBP 's
b) Resistance may be produced by hyperproduction of beta lactamase
c) Resistance is primarily mediated/transmitted via plasmids
d) Resistance may be missed at incubation temperature of 37°C during susceptibility testing

477. Which of the following statements is most correct regarding resistance to methicillin in MRSA -
a) Resistance is produced as a result of alteration in Penicillin Binding Proteins (PBP) *(AI 11)*
b) Resistance is produced by production of beta lactamase
c) Resistance is mediated by plasmids
d) Expression of resistance is enhanced by incubating at 37°C during susceptibility testing

478. Transfer of drug resistance in staphylococcus is by-
a) Transduction b) Transformation*(PGI 97)*
c) Conjugation d) Transfection

479. A diabetic patient developed cellulitis due to S. aureus, which was found to be methicillin resistant on the antibiotic sensitivity testing. All of the following antibiotics will be appropriate except -
a) Vancomycin b) Imipenem *(AI06)*
c) Teicoplanin d)Linezolid

480. The most common mechanism of drug resistance in staphylococci -
a) Conjugation b) Plasmids
c) Transduction d) Translation

481. Coagulase negative staphylococci includes all of the following except- *(UP 08)*
a) Staph epidermidis b) Staph haemolyticus
c) Staph intermedius d) Staph saprophyticus

482. Novobiocin susceptible staph is - *(UP 08)*
a) Staph aureus b) Staph epidermidis
c) Staph hemolyticus d) Staph saprophyticus

483. Which of the following is the most useful to differentiate micrococci from Staphylococci-(M//*11)*
a) Catalase test b) Hugh Leifsontest
c) Oxidase test d) All of the above

2. COAGULASE NEGATIVE STAPHYLOCOCCI

484. Apatientin an ICU ison a CVP line. His blood culture shows growth of gram positive cocci which are catalase positive and coagulase negative. The most likely etiological agent is - *(AIIMSMay 03)*
a) Staplylococcus aureus
b) Staplylococcus epidermidis
c) Streptococcus pyogenes
d) Enterococcus faecalis

485. Staphylococcus differes from streptococcus by -
a) Coagulase test b) Catalase test
c) Phasphatase d) Gram negative

486. Catalase positive, beta-hemolytic staphylococcus -
a) S. aureus *(NEET/DNB Pattern)*
b) S. epidermidis
c) S. saprophyticus
d) None

487. Catalase positive coagulase negative beta hemolytic bacteria - *(NEET/DNB Pattern)*
a) Strep pyogens b) Staph aureus
c) Coagulase negative staph d) Enterococci

488. True statement regarding non-coagulase staphylococci is - *(AI 99)*
a) They are non-pathogenic
b) They commonly infect indwelling prosthesis
c) They may cause scarlet fever
d) They are seperated by gram staining

470) b 471) a 472)c 473)b,c,d,e 474)c 475)c 476)c 477)a 478)a>c 479)b 480)c 481)c 482)b,c
483) b 484) b 485) b 486) a 487) c 488) b

489. Which one of the following gram positive organism is most common cause of UTI among sexually active women- *(PGI99)*
a) Staphylococcus epidermidis
b) Staphylococcus aureus
c) Staphylococcus saprophyticus
d) Enterococcus

490. A 30 year old female is on antibiotics with prolonged IV Cannulation, has spike of fever, the likely cause is-
a) Pseudomonas aeruginosa *(AIIMS Nov 99)*
b) Coagulase negative Staphylococci
c) Streptococcus agalactiae
d) E. Coli

491. Staphylococcus aureus differs from staphylococcus epidermidis by - *(AI02)*
a) Is coagulase positive
b) Forms white colonies
c) A common cause of UTI
d) Causes endocarditis in drug addicts

492. A 25 year old man with 3 weeks fever presented with tricuspid valve vegetation. Patient is intravenous drug abuser. Most common cause of endocarditis in this patient is - *(AIIMS Nov 09)*
a) Staph, aureus b) Candida albicans
c) Pseudomonas d) Strep, viridans

493. A patient has prosthetic valve replacement and he develops endocarditis 8 months later. Organism responsible is - *(AIIMS Nov 10)*
a) Staph, aureus b) Strept. viridans
c) Staph, epidermidis d) HACEK

494. Causes of community acquired native valve endocarditis are- *(PGI Nov 10)*
a) Streptococcus viridians
b) Staphylococcus aureus
c) Diphtheriods
d) Staphyloccous epidermidis
e) Enterococci

STREPTOCOCCI

495. All are medically important streptococci except -
a) Strep, pyogenes b) Strep, agalactiae *(AI 93)*
c) Strep, equisimilus d) Strep, salivarius

496. C-carbohydrate in Streptococcus hemolyticus is important for - *(AIIMS June 98)*
a) Lancefield classification b) Phagocytic inhibition
c) Toxin production d) Haemolysis

497. Lancefield grouping of streptococci is done by using-
a) M Protein *(AIIMS Nov 07)*
b) Group C peptidoglycan cell wall
c) Group C carbohydrate antigen
d) Staining properties

498. A child presents with sepsis. Bacteria isolated showed beta hemolysis on blood agar, resistance to bacitracin, and a positive CAMP test. The most probable organism causing infection is - *(AI 10)*
a) S. Pyogenes b) S. Agalacitae
c) Enterococcus d) S. Pneumoniae

499. Catalase negative beta hemolytic streptacocci is - *(NEET/DNB Pattern)*
a) Str. pneumoniae b) Str. pyogenes
c) Str. aglactiae d) Enterococcus

500. Classification of pathogenic streptococci into group A, B, C, D and G is based on - *(Karnataka 08)*
a) Color of colonies on blood agar
b) Antigenicity of cell wall carbohydrate
c) Presence or absence of capsule
d) Presence or absence of M protein

501. Streptococcus is classified based on - *(Kerala 94)*
a) M protein b) Cultural characteristics
c) Bile solubility d) Cell wall carbohydrate

502. Streptococcus pyogenes is - *(PGI 99)*
a) Gram positive cocci b) Gram negative cocci
c) Gram positive bacilli d) Gram negative bacilli

503. Which of the following factor is mainly responsible for virulence in Streptococcus - *(AIIMSDec 94, 95)*
a) Carbohydrate b) Streptokinase
c) Streptodomase d)M protein

504. All are true about streptococcus except - *(AI 01)*
a) M protein is responsible for production of mucoid colonies.
b) M protein is responsible for virulence
c) Mucoid colonies are virulent
d) No resistance to penicillin has been reported

505. Streptococcal Toxic shock syndrome is due to the following virulence factor - *(AIIMSMay 03, Dec 98)*
a) M protein b) Pyrogenic exotoxin
c) Streptolysin O d) Carbohydrate cell wall.

506. Toxin involved in the streptococcal toxic shock syndrome is - *(AI 01)*
a) Pyrogenic toxin b) Erythrogenic toxin
c) Hemolysin d) Neurotoxin

507. Which of the following streptococcal antigen cross reacts with synovial fluid ? *(AI 08)*
a) Carbohydrate (group A)
b) Cell wall protein
c) Capsular hyaluronic acid
d) Peptidoglycan

508. Which toxin of streptococcus causes hemolysis -
a) Streptolysin O b) Streptolysin S *(PGI 97)*
c) Streptodomanse d) Hyaluronidase

509. Streptolysin O functionally & structurally related to- *(PGINov 09)*
a) Tetanolysinb) Pneumolysin
c) StreptolysinS d) Clostridium perffingesO toxin
e) Listeriolysin

510. Streptococcus all are true *exc&pt-(AIIMSMay 11,10)*
a) Streptodomase cleaves DNA
b) Streptolysis O is active in reduced state
c) Streptokinase is produced from serotype A,C,K
d) Pyrogenic toxin A is plasmid mediated

511. Virulence factor of group. A beta hemolytic streptococci- *(NEET/DNB Pattern)*
a) Prt. M b) Prt. T
c) Prt. R d) Lipotechoic acid

489) c 490) b 491) a 492) a 493) c 494)a,b,d,e 495) d 496) a 497) c 498) b 499) b 500) b 501) d 502) a
503)d 504)a 505)b 506)a,b 507)c 508)a,b 509)a,b,d,e 510)d 511)a

512. The commonest organism causing cellulitis is -
a) Streptococcus pyogenes *(AIIMS Nov 02)*
b) Streptococcus faecalis.
c) Streptococcus viridans.
d) Microaerophilic streptococci

513. A child presents with infective skin lesion of the leg culture was done which showed gram+ve cocci in chains which where hemolytic colonies. The test to confirm the organism is - *(ARMSNov 11, May 07, Nov 06, AI07)*
a) Bile solubility
b) Optochin sensitivity
c) Bacitracin sensitivity
d) Catalase positive

514. A farmer presents with pustules showing gram positive cocci, beta hemolysis, catalase negative. To show it is group A streptococci, which of the following test is done - *(AI 0 7)*
a) Bacitracin b) Optochin
c) Novobiocin d) Bile solubility

515. In a school child had abscess on lower leg. Swab taken revealed gram positive beta-hemolytic streptococci, and these were bacitracin sensitive. School physian observed that similar organism was isolated from throats of many other children. Which of the following is true statement with ragards to this patient - *(ARMS Nov 10)*
a) Difference in surface protein can differentiate the pathogenic bacteria from the pharyngeal culture bacteria.
b) Component C carbohydrate can differentiate the pathogenic bacteria from the throat culture bacteria.
c) MEG 3 positive are throat culture streptococci.
d) Depending on M protein the cutaneous pathogenic bacteria can be differentiated from the pharyngeal culture bacteria

516. A boy with skin ulcer on leg, culture reveals beta hemolysis. Cultures from school children with sore throat some days back also revealed beta hemolysis. What is the similarity between *both-(AIIMS Nov 10)*
a) Mec A gene is related to it
b) M protein is same
c) C carbohydrate antigen is same
d) Strains causing both are same

517. False regarding streptococcus pyogenes -
a) Causes necrotizing fascitis *(NEET/DNB Pattern)*
b) Beta hemolytic
c) M. protein is virulece factor
d) Resistant to bacitracin

518. Impetigo contagiosa is caused by - *(Jharkhand 08)*
a) Group A beta hemolytic streptococci
b) Staphylococcus
c) H.influenzae
d) Pseudomonas

519. Virulence determinant implicated in pathogenesis of scarlet fever is - *(Karn 11)*
a) Hyaluronidase b) M protein
c) Pyrogenic exotoxin d) Streptokinase

520. Streptococcus causing rheumatic heart disease is -
a) Streptococcus milleri *(MP09)*
b) Streptococcus mutans
c) Streptococcus pyogenes
d) Streptococcus equisimilis

521. Group A streptococcus causes all except -*(Bihar 08)*
a) Scarlet fever b) Erysipelas
c) Impetigo d) Epidermolysis bullae

522. True about streptococcus are all except - *(MP 08)*
a) Group C causes no human infection
b) Classification by lancefield based on carbohydrate antigen
c) Group B causes neonatal meningitis
d) Group B lives in female genital tract

523. An outbreak of streptococcal pharyngitis has occured in a remote village. In order to carry out the epidemiological investigations of the outbreak it is necessary to perform the culture of the throat swab of the patients suffering from the disease. The transport media of choice would be - *(AIIMSNov 04)*
a) Salt mannitol media b) Pike's media
c) Stuart's media d) Cary Blair media

524. Regarding ASO titre all are seen except -
a) ASO can be increased in school children
b) May be negative in post streptococcal glomerulonephritis *(ARMS Nov 09)*
c)ASO titre included in major criteria in Jones criteria
d) May not be elevated in 20% cases of carditis

525. True statement about Antistreptolysin^{6}O' titre is -
a) In normal people the titre is < 200 *(AI 97)*
b) In acute glomerulonephritis the titre is low
c) ASO titre > 200 indicate rheumatic fever
d) Streptozyme test is an active haemagglutination test

526. Streptococcal GN is best diagnosed by - *(PGI99)*
a) ASO titre b)AntiDNAse
c) Antihyaluronidase d) Culture

527. 11 Year old child presented with sore throat since 3 days, which medium is used to culture the throat swab - *(NEET/DNB Pattern)*
a) Blood agar b) L. J. medium
c) Stewart medium d) Chocolate agar

528. Treatment for streptococcal necrotizing fascitis -
a) Surgical debridement b) Penicillin *(PGI June 08)*
c) Clindamycin d) Metronidazole
e) Vancomycin

529. Anti streptolysin O test is diagnostic in - *(AI 89)*
a) Acute rheumatic fever
b) SLE
c) SBE
d) Rhematoid arthritis

530. Streptococcal toxic shock syndrome is due to liberation of- *(Kerala 08)*
a) TSS -1 b) Enterotoxin
c) Pyrogenic exotoxin d) Endotoxin

512) a 513)c 514)a 515)d 516)c 517)d 518)a 519)c 520)c 521)d 522)a 523)b 524)c 525)b 526) b,c 527) a 528)a,b,c 529) a 530) c

531. True about streptococcus - *(PGI Dec 03)*
a) Lancefield classification is based on M protein.
b) Group 'G' not found in human
c) Group 'B' causes neonatal meningitis
d) Group 'C' can be isolated from vaginal flora
e) Group 'D' causes urinary tract infection

532. A patient admitted to an ICU is on central venous line for the last one week. He is on ceftazidime and amikacin. After 7 days of antibiotics he develops a spike of fever and his blood culture is positive for gram positive cocci in chains, which are catalase negative. Following this, vancomycin was started but the culture remained positive for the same organism even after 2 weeks of therapy. The most likely organism causing infection is- *(AIIMSNov 11, May 06, Nov 06, AI07)*
a) Staphylococcus aureus
b) Viridans streptococci
c) Enterococcus faecalis
d) Coagulase negative Staphylococcus

533. 45 yrs old Ramlal has intraabdominal sepsis. The causative organism was found to be vancomycin, gentamycin and ampicillin resistant. It grows well in presence of 6.5% NaCl and arginine. Bile esculin hydrolysis is positive. Which of the following is this organism? - *(AIIMSNov 01)*
a) Streptococcus agalactae
b) Enterococcus fecalis
c) Streptococcus bovis
d) Streptococcus pneumoniae

534. A beta hemolytic bacteria is resistant to vancomycin shows growth in 6.5% NaCl, is non bile sensitive. It is likely to be - *(AI 01)*
a) Strep agalactiae b) Strep pneumoniae
c) Enterococcus d) Strep bovis

535. Which group of streptococcus grow at > 60°C -
a) A b) B *(NEET/DNB Pattern)*
c) C d)D

536. Which of the following organisms, when isolated in the blood, requires the synergistic activity of penicillin plus an aminoglycoside for appropriate therapy - *(AIIMS Nov 04)*
a) Enterococcus faecalis
b) Staphylococcus aureus
c) Str. pneumoniae
d) Bacteroides ffagilis

537. A patient of RHD developed infective endocarditis after dental extraction. Most likely organism causing this is - *(AIIMS Nov 01)*
a) Streptococcus viridans
b) Streptococcus pneumoniae
c) Streptococcus pyogenes
d) Staphylococcus aureus

538. Causative organism of late prosthetic valve endocarditis is - *(AIIMS 97)*
a) Str. viridans
b) Proteus mirabilis
c) Beta hemolytic streptococci
d) Staphylococci

539. Bacteria implicated in dental caries -
a) Streptococcus mutans *(AIIMSMay 94)*
b) Pneumococci
c) Streptococcus pyogenes
d) Staphylococcus aureus

540. False about gram positive cocci is - *(AI 08)*
a) Staph, saprophyticus causes UTI in females
b) Most enterococci are sensitive to penicillin
c) Non pathogenic strains are coagulase negative
d) Neonatal meningitis causing streptococci hydrolyses hippurate

541. TVue statement about streptococcus faecalis -
a) Growns in 6.5% Nacl solution *(Kolkata 08)*
b) Are lactose fermenter
c) Easily destroyed at 60°C for 30 minutes
d) Classified on the basis of teichoic acid of cell wall

542. Culture of streptococcus viridans resemble-(77V*89)*
a) Staphylococcusb) Strept. pyogenes
c) Pneumococcus d) Strept. fecalis

PNEUMOCOCCI

543. The following are features of pneumococcus except- *(PGI 97)*
a) Bile insolubility b) Optochin sensitivity
c) Gram positive d) Encapsulated

544. In a patient of orbital cellulitis, micro organism on culture show greenish colonies and optochin sensitivity. The most likely organism is - *(AI2000)*
a) Strep, viridans b) Staphylococcus
c) Pseudomonas d) Pneumococcus

545. A infant had high grade fever and respiratory distress at the time of presentation to the emergency room. The sample collected for blood culture was subsequently positive showing growth of a haemolytic colonies. On Gram staining these were gram positive cocci. In the screening test for identification, the suspected pathogen is likely to be susceptible to the following agent - *(AIIMSMay 06)*
a) Bacitracin b) Novobiocin
c) Optochin d) Oxacillin

546. A 65 years old man presenting with complaints of chest pain, fever, cough with sputum. O/E of sputm pus cells with gram positive cocci present. Blood agar showed positive result. How will you differentiate this from other gram positive cocci? *(AIIMS Nov 09)*
a) Bacitracin b) Optochin sensitivity
c) Bile solubility d) Coagulase positive

531)c,e 532)c 533)b 534)c 535)d 536)a 537)a 538)a 539)a 540)b 541)a 542)c 543)a 544)d 545) c 546) b,c

547. The sputum specimen of a 70 year old male was cultured on a 5% sheep blood agar. The culture showed the presence of a-haemolytic colonies next day. The further processing of this organism is most likely to yield - *(AIIMS Nov 05)*
a) Gram positive cocci in short chains, catalase negative and bile resistant
b) Gram positive cocci in pairs, catalase negative and bile soluble
c) Gram positive cocci in clusters, catalase positive and coagulase positive
d) Gram negative coccobacilli catalase positive and oxidase positive

548. A patient presents with signs of pneumonia. The bacterium obtained from sputum was a Gram positive cocci which showed alpha hemolysis on sheep agar. Which of the following test will help to confirm the diagnosis ? *(AI11)*
a) Bile solubilityb) Coagulase test
c) Bacitracin testd) CAMP test

549. A person presents wth pneumonia. His sputum was sent for culture. The bacterium obtained was gram positive cocci in chains and alpha hemolytic colonies on sheep agar. Which of the following will help in confirming the diagnosis - *(AIIMS May 12)*
a) Novobiocin b) Optochin
c) Bacitracin d) Oxacillin

550. Pnemococcus producing mucoid colonies most often is type - *(PGI82)*
a) I b)n
c) m d)rv

551. Which of the following is not true of Diplococcus pneumoniae- *(Karnataka 2001)*
a) Bile solubility b) Optochin resistance
c) CausesMeningitis d) Possesses capsule

552. TVue statements about Pneumococcus are all except-
a) Pneumolysin a thiolactivated toxin, exerts a variety of effect on ciliary & PMN 's *(AI 98)*
b) Autolysin may contribute to the pathogenesis of pneumococcal disease by lysing the bacteria
c) Anticapsular antibodies are serotype specific
d) The virulence of pneumococci is dependent only on the production of the capsular polysaccharide

553. True statement regarding Pneumococcus is -
a) Virulence is due to polysaccharide capsule^/ *99)*
b) Capsule is protein in nature
c) Antibodies against capsule are not protective
d) Resistance to antibiotics has not yet been reported

554. Risk of pneumococcal meningitis is seen in -
a) Post splenectomy patient *(AIIMS 99)*
b) Patient undergone neurosurgical intervention
c) Patient following cardiac surgery
d) Patient with hypoplasia of lung

555. After splenectomy, most common infection -
a) Pneumococcal b) E. coli *(NEET/DNB Pattern)*
c) Klebsiella d) Streptococcus

556. Post-splenectomy patient is in need of *_____ ' vaccination - *(NEET/DNB Pattern)*
a) Pneumococcal b) Rota virus
c) BOG d) MMR

557. Diplococcus pneumoniae shows the following characters except - *(PGI 94)*
a) Capsulate
b) Bile solubility test positive
c) Causes meningitis
d) Not pathogenic to mice

558. Which of the following statements about pneumococcus is false - *(AI 11)*
a) Capsule aids in virulence
b) Commonest cause of otitis media
c) Causes mild form of meningitis
d) Respiratory tract of carriers is the most important source of infection

559. Most common causative organism for lobar pneumonia is - *(AIIMS 04)*
a) Staphylococcus aureus
b) Streptococcus pyogenes
c) Streptococcus pneumoniae
d) Haemophilus influenzae

560. The 23 valent pneumococci vaccine is recommended in all except - *(DPG 09)*
a) CSFleak
b) Chronic cardiac disease
c) Chidren less than 2 years
d) Nephrotic syndrome

561. Polysaccharide capsule resistance to phagocytosis is seen in - *(NIMHANS 01, JIPMER90)*
a) N. meningitis
b) K. pneumoniae
c) Streptococcus pneumoniae
d) Yeast

562. Virulence or pathogenicity of pneumococcus depends upon - *(Kolkata09)*
a) Capsular polysaccharide
b) Cell wall antigen
c) Flagellar antigen
d) Fimbrial antigen

563. Quellung reaction is associated with - *(Delhi 87, Orissa91)*
a) Capsular degeneration
b) Capsular delineation
c) Capsular absence
d) Lecithinase production

564. Quellung reaction is due to - *(Kerala09)*
a) Capsular swelling b) Mitochondrial swelling
c) RBC swelling d) Ribosomal swelling

565. Pneumococcus can be differentiated from streptococcus by - *(PGI 98)*
a) Type of hemolysis b) Gram staining
c) Growth characteristics d) Bile solubility

566. Streptococcus and pneumococcus are differentiated by- *(PGI 97)*
a) Bile salt solubility b) Growth characteristic
c) Gram staining d) Inulin fermentation

547) b 548) a 549) b 550) c 551)b 552) d 553) a 554) a 555) a 556) a 557) d 558) c 559) c 560) c
561) c 562) a 563) b 564) a 565) d 566) a,d

NEISSERIA

1. GONOCOCCUS

567. Gonococcus is - *(NEET/DNB Pattern)*
a) Extracellular gram positive
b) Intracytoplasmic gram positive
c) Intracytoplasmic gram negative
d) Intranuclear gram positive

568. Differentiation of N. gonorrhea and N. meningitides can be done by - *(AI96)*
a) Glucose fermentation b) V. P. Reaction
c) Maltose fermentation d) Indole test

569. Meningococci differ from gonococci in that they-
a) Are intra-cellular *(NEET/DNB Pattern)*
b) Possess a capsule
c) Cause fermentation of glucose
d) Are oxidase positive

570. The virulence factor of Nisseria gonorrhoeae includes all of the following except -*(AIIMS May 03)*
a) Outer membrane proteins b) IgA protease
c) M proteins d) Pili

571. Virulence of gonococci is due to - *(NEET/DNB*
a) Pili b) Endotoxin *Pattern)*
c) Exotoxin d)None

572. Gonococcus does not involve - *(A1IMS Dec 1994)*
a) Epididymis b) Testis
c) Prostate d) Anterior urethra

573. N. gonorrhea causes - *(PG1 Dec 06)*
a) Urethritis b) Salpingitis
c) Cervicitis d) Vaginitis
e) Conjunctivitis

574. Where does gonococci initially infect -
a) Vagina b) Cervix *(NEET/DNB*
c) Uterus d) Fallopian tubes *Pattern)*

575. Which is not a metastatic complication of gonococci - *(PGI96)*
a) Endocarditis b) Meningitis
c) Nephritis d) Arthritis

576. All are true about Neisseria gonorrhoeae except -
a) Gram positive cocci *(AIIMS 01)*
b) Cause stricture of urethra
c) Involves seminal vesicles and spreads to epididymis
d) Drug of choice is ceftriaxone

577. Which is the true statement regarding gonococcal urethritis - *(PGI Dec 01)*
a) Symptoms are more severe in females than in males
b) Rectum and prostate are resistant to gonococci
c) Most patients present with symptoms of dysuria
d) Single dose of ciprofloxacin is effective in treatment
e) Commonly leads to arthritis

578. Incubation period of gonorrhoea is - *(JIPMER 92)*
a) Less than 24 hrs. b) 1 to 2 days
c) 2 to 15 days d) 12 to 25 days

579. Which of the following is most resistant to gonococcal infection - *(Kerala 08)*
a) Prostate b) Epididymis
c) Testis d) Urethra

580. 'Watercan' perineum is caused by- *(MP 09)*
a) E.coli
b) Enterococcus fecalis
c) Neiserria gonorrhoea
d) Treponemia palladium

581. Gonococcus ferments - *(AP 97)*
a) Glucose b) Maltose
c) Sucrose d) Fructose

582. Neisseria infection are associated with -
a) Deficiency of early complements *(CUPGEE95)*
b) Deficiency of late complements
c) There is no such association
d) Any deficiency can be associated

583. The best site to obtain a swab in asymptomatic gonorrhea is - *(AI 95)*
a) Endocervix b) Urethra
c) Lateral vaginal wall d) Posterior fornix

584. Selective medium for Gonococci - *(PGI 95)*
a) Thayer - martin medium
b) LJ medium
c) DCA medium
d) MacConkey's medium

585. Organism showing marked resistance to multidrug therapy - *(AIIMS May 93)*
a) Haemophilus ducreyi
b) Calymmobacterium granulomatosis
c) Gonococci
d) Treponema pallidum

586. Which of the following is not true about Neisseria gonorrhoea - *{AIIMS Nov 09)*
a) It is an exclusive human pathogen
b) Some strains may cause disseminated disease
c) Acute urethritis is the most common manifestation in males
d) All strains are highly sensitive to penicillin

587. Selective media for N. gonorrhoeae -
a) Thayer martin media *(Maharashtra 10)*
b) Smith noguchi media
c) Proskaur and Bech media
d) Bordet gongue, media

588. A pus culture on chocolate agar shows gram negative cocci most likely organism is - *(UP 04)*
a) H. ducreyi b) Neisseria gonorrhoeae
c) Str. pyogenes d) Str. pneumoniae

589. Gonococci in gram stained smears are seen inside the - *(Kerala 94)*
a) Lymphocytes b) Neutrophils
c) Mast cells d) Macrophages

2. MENINGOCOCCUS

590. CSF in meningococcal meningitis shows -*(PGI 98)*
a) Gm '+ve* Diplococci, in pus cells
b) Gm '-ve' Diplococci in pus cells
c) Gm'-ve'bacilli
d) Gram '+ve' bacilli

567) c 568) c 569) b 570) c 571) a 572) b 573)All 574) b 575) c 576) a 577) c,d 578) c 579) c 580) c
581) a 582) b 583) a 584) a 585) c 586) d 587) a 588) b 589) b 590) b

591. Virulence factors for meningococci - *(PGIDec 07)*
a) Capsule b) Pili
c) Endotoxin d) Coagulase
e) M. Protein

592. Skin lesion in meningococcal meningitidis is due to-
a) Exotoxin b) Endotoxin *(Kerala 94)*
c) Allergic reaction d) Direct vascular Damage

593. Waterhouse-Friderichsen syndrome is seen in -
a) Pneumococcib) N. Meningitidis *(NEET/DNB*
c) Pseudomonas d) Yersinia *Pattern)*

594. Meningitis with rash is seen in - *(NEET/DNB Pattern)*
a) Neisseria meningitidis b) H. influenzae
c) Strepto. agalactae d)Pneumococcus

595. The most important source of infection for meningococci - *(AI96)*
a) Case b) Subclinical case
c) Carriers d) Latent case

596. The following statements about meningococcal meningitis are true except - *(AI 03)*
a) The source of infection is mainly clinical cases
b) The disease is more common in dry and cold months of the year
c) Chemoprophylaxis of close contacts of cases is recommended
d) The vaccines is not effective in children below 2 yrs of age

597. Xavier and yogender stay in the same hostel of same university. Xavier develops infection due to group B meningococcus. After few days yogender develops infection due to Group C meningococcus. All of the folio win g are true statements except - *(AI 02)*
a) Educate students about meningococcal transmission and take preventive measures
b) Chemoprophylaxis to all against both group B and group C
c) Vaccine prophylaxis of contacts of xavier
d) Vaccine prophylaxis of contacts of yogendra

598. The vaccine against N-meningitides contains -
a) Whole bacteria *(ICS2K)*
b) Capsular polysaccharide
c) Somatic 'O' antigen
d) Lipopolysaccharide - protein complex

599. Vaccine is available against which type of meningococcus - *(AIIMS86)*
a) Type A b) Type B
c) Type A and C d) Type B and D

600. Conjugate vaccines are available for the prevention of invasive disease caused by all of the following except- *(AIIMS04)*
a) H influenzae
b) Strep pneumoniae
c) N. meningitidis (group C)
d) N. meningitidis (group B)

601. Selective medium for meningococcal infection is -
a) DCA b) Blood agar *(PG 99)*
c) LJ medium d) Thayer - martin medium

602. Treatment of choice of meningococcal infection is -
a) Tetracycline b) Clindamycin *(AI 99)*
c) Gentamycin d) Cephalosporin

CORYNEBACTERIUM

603. C. diphtheriae is also called as - *(NEET/DNB Pattern)*
a) Koch's bacillus b) Roux bacillus
c) Klebs-loeffler bacillus d) Yersin bacillus

604. Leather term is used for - *(UP 09)*
a) Anthrax b) Proteus
c) Diphtheria d) Neisseria

605. KLB another name is - *(Jharkhand 09)*
a) Corynebacterium diphtheriae
b) Corynebacterium pseudodiphtheriae
c) Clostridium tetani
d) Anthrax

606. Incubation period of Diptheria is- *(Manipal 06)*
a) 2 - 6 days b) 2 - 6 hrs
c) 2 - 6 weeks d) 2 - 6 months

607. The type of Diphtheria with highest mortality is -
a) Pharyngeal b) Nasal *(Jipmer09)*
c) Laryngeal d) Conjuctival

608. Which of the following is known as Preiz Nocard bacillus - *(PGI 79, ARMS 82)*
a) Corynebacterium diphtheriae
b) Corynebacterium pseudotuberculosis
c) Influenza bacillus
d) Salmonella

609. The bacteria frequently used as an immuno modulator is - *(COMEDK 05)*
a) Corynebacterium parvum
b) Mycobacterium marinum
c) Chromobacterium violasium
d) Flavobacterium meningosepticum

610. About diphtheria true is - *(ARMSMay 95)*
a) Capsulated bacteria causes infection
b) Ratio of carriers and clinical cases is one
c) Gram positive and motile
d) Lysogenic phase causes disease

611. One of the following about corynebacterium diphtheriae is wrong - *(PGI 91)*
a) Gram negative
b) Ernest babes granules seen
c) Chinese letter pattern
d) Prevented by immunisation

612. True about diptheria is - *(PGI 98)*
a) Loffer's serum is highly selective medium for C. diptheria
b) Elek's Gel is a precipitation test
c) Metachromatic granules is produced on stain only by one strain of C. diphtheria
d) Gm-ve bacilli, non motile, non capsulated

613. Daisy head colonies are seen with -
a) Staph. Aureus
b) Corynebacterium diphtheriae
c) Staph. Pyogenes
d) Anthrax

591)a,b,c 592)b 593)b 594)a 595)c 596)a 597)c 598)b 599)c 600)d 601)d 602)d 603)c 604)c 605) a 606) a 607)c 608)b 609)a 610)d 61 l)a 612)b 613)b

614. True statement about diptheria toxin is - *(AI 99)*
a) Toxin is phage mediated
b) Toxin is required for local infection
c) Endotoxaemia causes systemic manifestation
d) Toxin acts by inhibiting synthesis of capsule

615. Diphtheria toxin acts by - *(NEET/DNB Pattern)*
a) Inhibiting acetyl choline release
b) Inhibiting glucose transport
c) Increasing levels of cyclic AMP
d) Inhibiting protein systhesis

616. All are true regarding diphtheria toxin except - *(AIMS June 97, AIMS Sept 96, AI98)*
a) Toxin blocks elongation of protein
b) Beta lysogenic strain produces toxin
c) Iron is critical for toxin production
d) Toxin is necessary for local wound production

617. Which of the following statements about C. diphtheria is false - *(AI 11)*
a) Toxin production is mediated by native chromosome
b) Organism may be identified by tests for toxigenicity
c) Toxin acts by inhibiting protein synthesis
d) Toxin may affect the heart and nerves

618. True about comebacterium diphtheriae is all except-
a) Deep invasion is not seen *(AIMSMay 07*
b) Eleks test is done for toxigenicity *Nov 0 7)*
c) Metachromatic granules are seen
d) Toxigenicity is mediated by chromosomal change

619. True about corynebacterium diptheriae -
a) All types produce toxin *(NEET/DNB Pattern)*
b) Toxin production is dependent upon critical concentration of iron
c) Heat stable toxin
d) Inhibit cAMP

620. Which of the following is true about Diphtheria except- **(.***PGIDec05***)**
a) Faucial diphtheria is more dangerous than laryngeal diphtheria
b) Laryngeal diphtheria mandates tracheotomy
c) Child is more toxic with faucial diphtheria
d) Myocarditis may be a complication
e) Palatal paralysis is irreversible

621. Clinical diphtheria is caused by - *(PGI June 09)*
a) Corynebacterium diphtheriae
b) Corynebacterium parvum
c) C. ulcerans
d) Streptococcus pyogenes
e) C. Pseudodiphthericum

622. Lysogenic conversion is seen in - *(NEET/DNB Pattern)*
a) Diphtheria b) Salmonella
c) Staphylococcus b)E. coli

623. One unit of diphtheria antitoxin was defined as the smallest amount of antitoxin required to neutralise -
a) 100 MLD of toxin *(SGPGI09)*
b) 200 MLD of toxin
c) 300 MLD of toxin
d) 400 MLD of toxin

624. Toxigenicity of C. diphtheria is determined by- *(Bihar 09)*
a) Elek's gel ppt test b) Aselole's reaction
c) Nagler's reaction d)All

625. A 12-year-old child presents with fever and cervical lymphadenopathy. Oral examination shows a grey membrane on the right tonsil extending to the anterior pillar. Which of the following medium will be ideal for the culture of the throat swab for a rapid identification of the pathogen - *(AIMS Nov 02)*
a) Nutrient agar
b) Bloodagar
c) Loffier's serum slope
d) Lowenstein Jensen medium

626. In a completely and adequately immunized child against Diphtheria, the throat swab was collected. It showed the presence of Corynaebacterium diphtheriae like organisms on Albert staining. These orgainisms can have one of the following properties on further laboratory processing - *(AIMS Nov 04)*
a) It can grow on Potassium tellurite medium
b) It would show a positive Elek's gel precipitation test
c) It can be pathogenic to experimental guinea pigs
d) It can produce cytotoxicity in tissue cultures

627. A child presents with a white patch over the tonsils, diagnosis is best made by culture in - *(AI 01)*
a) Loeffler medium b) LJ medium
c) Blood agar d) Tellurite medium

628. A child has respiratory infection with membrane over Peritonsillar area. Swab was taken from the local area. The appropriate media for culture is -
a) L. J. media *(AIMS Nov 99)*
b) Blood tellurite media
c) Cary media
d) Loeffler serum slope

629. A child come with fever, cold, cough, membrane over tonsils; nasal swab is taken, culture should be done on which medium for earliest diagnosis -
a) Loffelers serum slop *(NEET/DNB Pattern)*
b) L. J. media
c) MC Conkey's Agar
d) Citrate media

630. Corynebacterium diphtheriae can be grown within 6-8 hour on- *(PGI98)*
a) Potassium tellurite media with iron
b) McConkey's agar
c) Dorset egg medium
d) Loeffler's serum slope

631. Investigation of choice of diphtheria carrier is -
a) Throat Swab Culture *(AIMS June 97)*
b) Gram's stain
c) Albert's stain
d) Zeil Nelson's stain

632. Confirmatory tests for C. diphtheriae -
a) Serological tests *(NEET/DNB Pattern)*
b) Isolation in selective media
c) Tests for toxin

614)a 615)d 616)d 617)a 618)d 619)b 620)a,b,e 621)a 622)a 623)a 624)a 625)c 626)a 627)d 628) a 629)a 630)d 631)a 632) b

633. Tellurite stimulates growth of - *(Kerala 91)*
a) E.coil
b) Cl. tetani
c) Corynebacterium diptheriae
d) Salmonella

634. Culture mediam for corynebacterium diphtheria-
a) Loefflers serum slope *(J1PMER 01)*
b) McConkey
c) Saburauds agar
d) Lowenstein Jensen medium

635. Elek's gel precipitation test is for - *(Kerala 94)*
a) Gonococcus b) Diphtheria
c) H. influenza d) Anthrax

636. *True* about diphtheria is - *(SGPGI08)*
a) Cause cranial nerve palsies in 2nd & 3rd week
b) Treatment with erythromycin
c) It is gram negative organism
d) Passive immunization is harmful and should not be tried

637. Drug of choice for carriers of diphtheria is -
a) Penicillin b)Septran *(PGI91)*
c) Tetracycline d) Erythromycin

638. True statement regarding diptheria is - *(AI97)*
a) It can be diagnosed by demonstration of antibodies by ELISA
b) Immunisation prevents carriers state
c) Treatment of contacts is not indicated
d) Iron has critical value in the production of toxin

639. TYue about Diptheria - *(PGI May 10)*
a) Caused by Gram negative bacilli
b) Incubation period 2-5 days
c) Chemoprophylaxis is done with rifampicin
d) Previously immunized asymptomatic household contact should receive booster dose
e) Child recovered from illness- give active immunization

640. Ehrlich phenomenon is seen in - *(PGI May 11)*
a) Myobacterium T.B.b) Proteus
c) Staphylococcus d) Comebacterium
e) Mycoplasma

641. Positive shick's test indicates that person is -
a) Immune to diptheria *(AI 02, AIIMS Nov 0 7)*
b) Hypersensitive to diptheria
c) Susceptible to diptheria
d) Carrier of diptheria

642. Regarding shick's test which of the following is false-
a) Erythematous reaction in both arm indicate hypersenstivity *(AIIMS 2000)*
b) Positive test means that person is immune to diphtheria
c) Diphtheria antitoxin is given intradermally
d) Test done to find out immune status against diphtheria

643. Schick test is for - *(NEET/DNB Pattern)*
a) Susceptibility to diphteria
b) Susceptibility to tetanus
c) Susceptibility to scarlet fever
d) Susceptibility to RE

644. Toxin is/ are produced by all except-
a) Corynebacterium diptheriae
b) Corynebacterium hofmannii
c) Corynebacterium xerosis
d) Corynebacterium ulcerans
e) Corynebacterium pseudotuberculosis

645. Erythrasma is caused by - *(NEET/DNB Pattern)*
a) Corynebacterium minutissimum
b) Diphtheriae
c) C. ulcerans
d) C. Vaginale

BACILLUS

1. BACILLUS ANTHRACIS

646. A man, after skinning a dead animal, developed a pustule on his hand. A smear prepared from the lesion showed the presence of Gram positive bacilli in long chains which were positive for McFadyean's reaction. The most likely aetiological agent is -
a) Clostridium tetani *(AI 04)*
b) Listeria monocytogenes
c) Bacillus anthracis
d) Actinomyces sp

647. The "String of pearl" colonies on Nutrient agar is produced by - *(PGI 95)*
a) Klebsiella b) Proteus
c) Bacillus d) Salmonella

648. Which of the following is true regarding anthrax -
a) M' Fadyean reaction shows capsule *(PGIDec 01)*
b) Humans are usually resistant to infection
c) Less than 100 spores can cause pulmonary infection
d) Gram stain shows organism with bulging spores
e) Sputum microscopy helps in diagnosis

649. True about anthrax - *(PGI june 09)*
a) Cause by Gram positive bacilli
b) Soil reservoir
c) Spore formation takes place
d) More common in carnivorous than herbivores
e) penicillin is drug of choice

650. Inverted fir tree appearance is characteristic -
a) Bacillus anthrax *(Jipmer 04)*
b) Hemophilus influenzae
c) Yersinia pestis
d) Brucella

651. Medusa head colonies on nutrient agar is seen in -
a) Pneumococcus b) Legionella *(PGI 81)*
c) Brucella d) Anthrax

652. All of the following are true about bacillus anthrax except- *(AI 98)*
a) Plasmid is responsible for toxin production
b) Cutaneous anthrax generally resolve spontaneously
c) Capsular polypeptide aids virulence by inhibiting phagocytosis
d) Toxin is a complex of two fractions

633)c 634)a 635)b 636)b 637)d 638)d 639)b,d 640)d 641)c 642)b 643)a 644)b,c 645)a 646)c 647) c 648) a,b,c,e 649)a,b,e 650) a 651)d 652) d

653. True regarding anthrax is all except -
a) Caused by insect bite *(AIIMSDec 97)*
b) Caused by rubbing of skin
c) Cutaneous type is rare nowadays
d) Pulmonary infection occurs by inhalation

654. A person working in an abattoir presented with pustule on hand which turned into ulcer, which will best help in diagnosis - *(AIIMS Nov 06, AI07,*
a) Trichrome methylene Blue *AIIMS May 12)*
b) Carbol fuschin
c) Acid fast stain
d) Calcoflour white

655. 'Malignant pustule' is -*(PGINov-11, AIIMS Nov 10)*
a) Anthrax ulcer
b) Proliferating rodent ulcer
c) Malignant melanoma
d) Marjolin's ulcer

656. True about Bacillus anthracis - *(PGIDec 04)*
a) Zoonotic disease
b) Man to man transmission possible
c) Agent for bioterrorism
d) Antibiotic has no role
e) Me Fadydean's reaction seen

657. All are true about cutaneous anthrax except -
a) Extremely painful *(UP 09)*
b) The whole area is congested and edematous
c) Central crustation with black eschar
d) Satellite nodule around inguinal region

658. Woolsorter's disease is - *(AIIMS 86)*
a) Pneumonic form of anthrax
b) Pneumonic plague
c) Hydatid disease of the lung
d) Caused by psittacosis

659. Charbon is a term used for - *(PGI 85)*
a) Leptospirosis b) Cutaneous tuberculosis
c) Bubo of plague d) Malignant pustule

660. Malignant pustule is seen in infection with -
a) Versinia pestis *(Maharashtra 10,*
b) Bacillus cereus *Jharkhand 08)*
c) Clostridium welchii
d) Bacillus anthracis

2. BACILLUS CEREUS

661. Anthrax bacilli differs from anthracoid bacilli by being- *(PGMEE06)*
a) Non-capsulated
b) Strict aerobe
c) Non-motile
d) Haemolytic colonies on blood agar

662. Food poisoning has occured due to ingestion of contaminated fried rice, most likely organism - *(PGI 97)*
a) Staph aureus b) Bacillus cereus
c) Vibrio parahemolyticus d) Yersinia

663. Incubation period for B. cereus - *(PGI June 08)*
a) 1-6 hrs b)8-16hrs
c) 24 hrs d)>24hrs
e) weeks

664. Characteristic of Bacillus cereus food poisoning is-
a) Presence of fever *(AIIMS Nov 10)*
b) Presence of pain in abdomen
c) Absence of vomiting
d) Absence of diarrhoea

665. A person after 6 hr. of consuming rice pudding in restaurant develops vomiting. True statements regarding food poisoning- *(PGI Nov 11)*
a) Caused by staphylococcus aureus
b) Preformed toxin
c) Caused by vibrio parahaemolyticus
d) Heat labile toxin
e) Culture of food is more useful than stool

CLOSTRIDIUM

666. Following Clostridia are saccharolytic except -
a) Welchii b) Sporogenes *(AIIMS 84)*
c) Septicum d) Oedematiens

667. Drumstick appearence is seen in -
a) Cl. tetani b) Cl. Tetanomorphum
c) Cl. Sphenoids d)All

668. Subterminal spores are found in - *(PGIDec 08)*
a) Clostridium sordelli
b) Clostridium sporogenes
c) Clostridium difficile
d) Clostridium tertium
e) Clostridium botulinum

669. True about Clostridium tertium - *(PGI June 08)*
a) Gram variable
b) Terminal spore
c) Produces exotoxin
d) Causes septicemic orchitis

670. Oval bulging terminal spores seen in - *(MP08)*
a) Cl. tertium b) Cl. welchii
c) Cl. perfringens d) Cl. histolyticum

671. Non motile Clostridia is - *(Delhi 09)*
a) Cl. perfringens b) Cl. novyi
c) Cl. botulism d) Cl. difficle

1. CLOSTRIDIUM PERFRINGENS (WELCHII)

672. Regarding gas gangrene one of the following is correct - *(AI 04)*
a) It is due to Clostridium botulinum infection
b) Clostridial species are gram-negative spore forming anerobes
c) The clinical features are due to the release of protein endotoxin
d) Gas is invariably present in the muscle compartments

653)c 654)a 655)a 656)a,c,e 657)a 658)a 659)d 660)d 66l)c 662)b 663)a,b 664)b 665)b,e 666)b
667) a 668)a,b,c,e 669)a,b,d 670) a 671) a 672) d

673. The following statements are true regarding Clostridium perfringens except - *(AI 05)*
a) It is the commonest cause of gas gangrene
b) It is normally present in human faeces
c) The principal toxin of C. perfringens is the alpha toxin
d) Gas gangrene producing strains of C. perfringens produce heat resistant spores.

674. Most common organism responsible for gas gangrene is- *(AI 99)*
a) Clostridium perfringens
b) Clostridium difficile
c) Clostridium tetani
d) Clostridium septicum

675. Gas gangrene is due to - *(PGI June 08)*
a) Alpha toxin b) Theta toxin
c) Beta toxin d) Delta toxin
e) Epsilon toxin

676. Opacity around colonies of Clostridium perfringens is due to- *(PGI 94)*
a) Theta toxin b) Lecithinase
c) Desmolase d)Cytokinin

677. Each of the following statements concerning Clostridium perfringes is correct except -
a) It causes gas gangrene
b) It causes food poisoning
c) It produces exotoxin
d) It is a gram negative rod that does not ferment lactose

678. Gasterointestinal enteritis necroticans is caused by- *(PGIDec 07)*
a) Clostridium difficale b) Clostridium perfringens
c) Botulinum d)C. Jejuni
e) Pseudomonas

679. Regarding Clostridium perfringens gas gangrene, false is - *(AIIMS Nov 10, 09)*
a) Common cause of gas gangrene
b) Nagler reaction positive
c) Most common toxin is hyaluronidase
d) Food poisoning strain of Cl. perfringens produces heat resistant spores

680. Incubation period of gas gangrene is - *(PGI 94)*
a) 1-3 days b) 4-6 days
c) 7-10 days d) 10-15 days

681. Gas gangrene is caused by all except-
a) Cl. histolyticum b) Cl. novyi *(AIIMS May 09)*
c) Cl. septicum d) Cl. sporogenes

682. Gas gangrene is/are caused by- *(PGI May 11)*
a) C. novyi b) C. septicum
c) C. histolyticum d) C. perfringens
e) C. tetani

683. "Citron bodies" boat or leaf shaped pleomorphic organism in an exudate is - *(PGI 94)*
a) Cl. welchii b) Cl. edematiens
c) Cl. septicum d) Cl. tetani

684. Nagler reaction detects- *(PGI86)*
a) Coagulase b) Hyaluronidase
c) Lecithinase d) None of the above

685. Naglers reaction is shown by - *(Maharashtra 10, Kerla 2000)*
a) Cl. tetani b) Cl. botulinum
c) Cl. perfringens d) Cl. septicum

2. CLOSTRIDIUM TETANI

686. Clostridium tetani is - *(PGI 94)*
a) Gram positive bacilli b) Gram negative bacilli
c) Gram positive cocci d) Gram negative cocci

687. True about Clostridium tetani - *(PGIDec 03)*
a) Itisgram+ve
b) Drum stick appearance
c) Grows in aerobic environment
d) It is gram -ve

688. Swarming growth on culture is characteristic of which Gram positive organism - *(AI 95)*
a) Clostridium welchii b) Clostridium tetani
c) Bacillus cereus d) Proteus mirabilis

689. All are true regarding tetanus except -
a) Transmission through contaminated wounds and injuries *(AIIMS Nov 10)*
b) More common in winters and dry weather
c) Reservoir in soil and intestines of humans and animals
d) No herd immunity or life long immunity

690. Tetanus affects trimarily - *(NEET/DNB Pattern)*
a) Presynaptic terminal of spinal cord
b) Post synaptic terminal of spinal cord
c) Neuromuscular junction
d) Muscle fibres

691. TVue about tetanus - *(PGI Dec 04)*
a) Gram -ve spore forming organism
b) Produces tetanolysin and tetanospasmin
c) Trismus and neck stiffness are early sign
d) Generalized tonic-clonic seizure occurs on hyperstimulation
e) Wound debridement is necessary

692. Mechanism of action of tetanospasmin -
a) Inhibition of GABA *release (NEET/DNB Pattern)*
b) Inhibition cAMP
c) Inactivation of Ach receptors
d) Inhibition of cGMP

693. Which of the following are true about tetanus -
a) Gram -ve spore forming aerobe *(PGI Nov 09)*
b) Because of tetanospasmin
c) Muscle enzymes are normal
d) Vegetative cell will die with tetracycline
e) Muscle spasms seen

694. A person has received complete immunization against tetanus 10 years ago. Now he presents with a clean wound without any lacerations from an injury sustained 2.5 hours ago. He should now be given -
a) Full course of tetanus toxoid *(AI 01)*
b) Single dose of tetanus toxoid
c) Human tet globulin
d) Human tet globulin and single dose of toxoid

673) d 674) a 675) a,b 676) b 677) d 678) b 679) c 680) a,b 681) d 682)a,b,c,d 683) c 684) c 685) c
686) a 687) a,b 688) b 689) b 690) a 691)b,c,e 692) a 693) b,e 694) b

695. A10 year old boy following a ro ad traffic accident presents to the casuality with contaminated wound over the left leg. He has received his complete primary immunization before preschool age and received a booster of DT at school entry age. All of the following can be done except - *(AIIMS 01)*
a) Injection of TT
b) Injection of human antiserum
c) Broad spectrum antibiotics
d) Wound debridement and cleaning

696. The most effective way of preventing tetanus is -
a) Surgical debridement and toilet *(AIIMS 01)*
b) Hyperbaric oxygen
c) Antibiotics
d) Tetanus toxoid

697. The following statements are true about DPT vaccine except- *(AI04)*
a) Aluminium salt has an adjuvant effect
b) Whole killed bacteria of Bordetella pertussis has an adjuvant effect
c) Presence of acellular pertussis component increases its immunogenecity
d) Presence of H. influenza type B component increases its immunogenicity

698. All of the following statements rearding Clostridium tetani are true, except - *(AI 11)*
a) Spores are resistant to heat
b) Primary immunization consists of three doses
c) Incubation period is 6-10 days
d) Person to person transmission does not occur

3. CLOSTRIDIUM BOTULINUM

699. Among the toxin produced by Clostridium botulinum, the non neurotoxic one is - *(Kerala 2K)*
a) A b)B
c) Cl d)C2
e) D

700. Botulinum toxin acts on - *(AI 92)*
a) Sympathetic system
b) Parasympathetic system
c) Amygdala
d) Motor cortex

701. Botulinum affects all except - *(AI 07)*
a) Neuromuscular junction
b) Preganglionic junction
c) Post ganglionic nerves
d) CNS

702. The following statements are true regarding botulism except - *(AIIMS May 03)*
a) Infant botulism is caused by ingestion of preformed toxin
b) Clostridium botulinum A, B, C and F cause human disease
c) The gene for botulinum toxin is encoded by a bacteriophage.
d) Clostridium baratti may cause botulism

703. Botulism is most commonly due to -*(NEET/DNB*
a) Egg b) Milk *Pattern)*
c) Meat d) Pulses

704. All occurs in botulism except - *(AIIMS Dec 97)*
a) Diplopia b) Diarrhoea
c) Dysphagia d) Dysarthria

705. An 18 year old male presented with acute onset descending paralysis of 3 days duration. There is also history of blurring of vision for the same duration. On examination, the patient has quadriparesis with areflexia. Both the pupils are non-reactive. The most probably diagnosis is -
a) Poliomyelitis b) Botulism *(AIIMS 06)*
c) Diphtheria d) Porphyria

706. All of the following statements about Botulism are true except - *(AI 9 7)*
a) Botulism is caused by endotoxin
b) Honey ingestion causes infant botulism
c) Constipation is seen
d) Detection of antitoxin in the serum can aid in diagnosis

707. Botulisim causes - *(NEET/DNB Pattern)*
a) Descending flaccid paralysis
b) Descending spastic paralysis
c) Ascending paralysis
d) Ascending spastic paralysis

708. Not true about botulinum toxin - *(PGIDec 07)*
a) Short life span
b) Increased acetylcholine release
c) Used for the treatment of Blepherospasm, static and dynamic wrinkles
d) Irreversibly decreases acetylcholine in neuromuscular junction

709. Botulinum toxin acts on - *(NEET/DNB Pattern)*
a) Parasympathetic system b) Sympathetic system
c) Brain d) Sensory nerves

4. CLOSTRIDIUM DIFFICILE

710. Most common organism responsible for pseudo membranous colitis is - *(AI 91, 99)*
a) Clostridium difficile
b) Clostridium botulism
c) Clostridium histolyticum
d) Clostridium butyricum

711. Clostridium difficale infection occurs after -
a) After prolong antibiotic therapy *(PGI June 08)*
b) Pantoprazole increases the risk
c) Associated with use of rectal thermometer
d) Increased with proportion of hospital stay

712. A patient of Acute lymphocytic leukemia with fever and neutropenia develops diarrhoea after administration of amoxicillin therapy, which of the following organism is most likely to be the causative agent - *(AIIMS Nov 05)*
a) Salmonella typhi b) Clostridium difficile
c) Clostridium perfringens d) Shigella flexneri

695) b 696) d 697) d 698) None 699) d 700) b 701) d 702) a 703) c 704) b 705) b 706) a 707) a 708) a,b 709)a 710)a 711)All 712)b

713. Cause of Clostridium difficle associated diarrhea -
a) Trauma *(NEET/DNB Pattern)*
b) Dairy products
c) Fried rice
d) Antibiotic use

714. True regarding pseudomembranous colitis are all except- *(AI2000)*
a) It is caused by Clostridium difficile
b) The organism is a normal commensal of gut
c) It is due to production of phospholipase A
d) It is treated by vancomycin

715. Pseudomembranous colitis, all are true except - *(AIIIMS May 0 7)*
a) Toxin A is responsible for clinical manifestation
b) Toxin B is responsible for clinical manifestation
c) Blood in stools is a common feature
d) Summit lesions is early histopathological finding

NONSPORING ANAEROBES

716. One of the following infections is caused by anaerobic gram-positive cocci - *(AI 95)*
a) Puerperal infection b) Food poisoning
c) Endocarditis d) Septicemia

717. All are used for anaerobic streptococci except -
a) Penicillin ***b)*** *CaibQmci\\m(AUMSDec 97)*
c) Clindamycin d) Vancomycin

718. With reference to Bacteroides fragilis the following statements are true, except -
(AIIMSNov 11, May 06,Nov 06, May 03, AI 07)
a) B. fragilis is the same frequent anaerobe isolated from clinical samples.
b) B. fragilis is not uniformaly sensitive to metronidazole
c) The lipopolysaccharide formed by B. fragilis is structurally and functionally different from the conventional endotoxin
d) Shock and disseminated intravascular coagulation are common in Bacteroides bacteremia

719. A patient present with frontal abscess. Foul smelling pus is aspirated. Pus shows red fluorescence on ultraviolet examination.The most likely organism causing the frontal abscess is - *(AIIMS May 02)*
a) Bacteroides b) Peptostreptococcus
c) Pseudomonas d) Acanthamoeba

720. Which of the following statement is true about Bacteroides- *(Oris a 02, MAH A 05)*
a) It is gram positive bacilli
b) It is strictly aerobic
c) It may cause peritonitis
d) Presence in stool culture indicates need for treatment

721. Which of the following are non-spore forming anaerobic bacteria that assume major significance in disease processes - *(Delhi 93)*
a) Bacteroides fragilis
b) Fusobacterium nucleatum
c) Peptostreptococcus anaerobius
d) Actinomyces israeli
e) All

722. Effective for common gram-negative anaerobes -
a) Aztreonam b) Doxycycline *(Corned 07)*
c) Vancomycin d) Tobramycin

ENTEROBACTERIACEAE

723. EnterobacteriaceaeareA/E- *(PGIDec06)*
a) Pseudomonas b) Klebsiella
c) V. cholera d) Proteus
e) E.coli

724. Which is true of Entero bacteriacae - *(AI96, 93)*
a) All are oxidase negative
b) Nitrate reduction negative
c) Glucose not fermented by all
d) Motility by polar flagellum

725. E. coli gives pink colour with - *(PGI99)*
a) Chocolate agar b) L.J. medium
c) MacConkey's medium d) Saline broth

1. E.COLI

726. A 20 year old male had pain in abdomen and mild fever followed by gastroenteritis. The stool examination showed presence of pus cells and RBCs on microscopy. The etiological agent responsible is most likely to be - *(AIIMS May 03)*
a) Enteroinvasive E. coli.
b) Enterotoxigenic E. coli.
c) EnteropathogenicE. coli.
d) Enteroaggregative E. coli.

727. Watery diarrhea in children is caused by -
a) ETEC b) EPEC *(NEET/DNB Pattern)*
c) EEC d)EAEC

728. Regarding ETEC, true is - *(AIIMS Nov 10)*
a) Invades submucosa
b) Most common in children of developing countries
c) Fomite borne and person to person
d) Not a common cause of traveller's diarrhea

729. MC cause of diarrhea in children of developing country is - *(NEET/DNB Pattern)*
a) EHEC b)ETEC
c) EAEC

730. All are true about enterohemorrhagie E.coli Except-
a) Sereny test positive *(AIIMS June 99)*
b) May cause diarrhoea
c) Can cause hemolytic uremic syndrome
d) Verocytotoxin is produced

731. Which of these are true of E.coli- *(PGI June 02)*
a) The L.T (labile toxin) in ETEC acts via cAMP
b) In types causing UTI the organism attaches via pili
c) The ST (stable-toxin) of ETEC is responsible for causing hemolytic-uremic syndrome (HUS)
d) EIEC invasiveness is under plasmid control
e) In EPEC the toxin helps in invasion by the bacteria

713)d 714)c 715)c 716)a 717)b 718)d 719)a 720)c 721)e 722)a 723)a,c 724)a 725)c 726)a 727) b 728) b 729)b 730)a 731)a,b,d

732. With reference to infections with *Escherichia* coli the following are true except - *(AI05)*
a) Enteroaggregative E. coli is associated with Persistent diarrhoea.
b) Enterohemorrhagic E. coli can cause haemolytic uraemic syndrome
c) Enteroinvasive E. coli produces a disease similar to salmonellosis.
d) Enterotoxigenic E. coli is a common cause of travelers' diarrhoea

733. A 20 year old man presented with hemorrhagic colitis. The stool sample grew Escherichia coli in pure culture. The following serotype of E.coli is likely to be causative agent - *(AI 04)*
a) 0157:H7 b)0159:H7
c)O107:H7 d)0 55:H7

734. All are true aboutEHEC except- *(AI 01)*
a) Sereny test is positive
b) Ferments sorbitol
c) Causes HUS
d) Elaborates shiga like exotoxin

735. Culture media used for diagnosis of EHEC 0157: H7 is- *(AI09)*
a) 0_7 culture b) Sorbitol MacConkey media
c) XLDagar d) Deoxycholate media

736. In E. coli true is - *(NEET/DNB Pattern)*
a) ETEC is invasive
b) EPEC acts via cAMP
c) Pilli present in uropathogenic type
d) ETEC causes HUC

737. Labile toxin of E.coli can be detected by the following methods of incubation except -
a) Into infant rabbit bowel
b) Into adult rabbit skin
c) Intra gastrically into infant Mouse
d) Into Tissue Culture of Chinese Hamster ovary cells
e) Into Y1 Mouse adrenal cells

738. Which toxin is not mediated by *cAMP-(AUMSJme 98)*
a) V. cholera 01
b) Heat stable E.coli toxin
c) Heat labile E.coli toxin
d) V.cholera0137

739. CGMP is activated by - *(AIIMS 98)*
a) E. coli stable toxin b) E. coli labile toxin
c) Cholera toxin d) EL tor toxin

740. E.coli gets attached to a surface with the help of -
a) Fucose b) Concavatin *(AI 2K)*
c) Phytohaemagglutinin d) Lactin

741. Verocytotoxin of E. coli acts by - *(BHU 09)*
a) Increasing cAMP
b) Decreasing cAMP
c) Decreasing protein synthesis
d) Decreasing cGMP

742. In vitro test for enterotoxin - *(Manipal 04)*
a) Mac Conckey's culture
b) Blood agar culture
c) Rabbit ileal loop culture
d) None

743. The mechanism of action of Enteropathogenic E.coli is - *(Kerala 97)*
a) Adherance to enterocytes
b) Stimulates adenyl cyclase
c) Produces secretory diarrohea
d) None of the above

744. Enteropathogenic E.coli- *(AIIMS 90)*
a) Causes acute gastroenteritis in infants
b) Invades intestinal epithilium
c) Produces cholera like toxin
d) It is Non-motile

745. Which of the following is true about Enteropatho genic E coli - *(AI 96)*
a) Causes diarrhea in infants
b) Acts by invasion of Intestinal epithelial cells
c) Adults are mostly affected
d) Affects immunocompromised host

746. Most common strain of E.coli giving rise to traveller's diarrhea is -
a) Entero-invasive E.coli (EICE)
b) Entero-pathogenic E.coli (EPEC)
c) Entero-toxigenic E.coli (ETEC)
d) Entero-aggregative E.coli (EAEC)

747. Traveller's diarrhoea is caused by -
a) Enteropathogenic E. coli *(NEET/DNB Pattern)*
b) Enterohaemorrhagic E. coli
c) Enterotoxigenic E. coli
d) Enteroinvasive E. coli

748. Hemolytic uremic syndrome is due to -*(JIPMER 95)*
a) Enterotoxigenic E. coli
b) Enterohemorhagic E. coli
c) Shigella
d) Salmonella

749. Persistant diarrhea is caused by - *(Delhi 09)*
a) ETEC b)EPEC
c) EEC d)EAEC

750. A 20 year old man presented with hemorrhagic colitis. The stool sample grew Escherichia coli in pure culture. The following serotype of E. coli is likely to be the causative agent - *(DPG 10)*
a) 0 157:H7 b)0159:H7
c) 0 107:H7 d)055

751. Most common organism causing UTI - *(AI 96)*
a) E. coli b) Proteus
c) Klebsiella d) Staphylococci

752. True about E. coli is - *(AIIMS May 94)*
a) Sereny test is done to diagnose Enterotoxigenic E. coli (ETEC)
b) Enteropathogenic E. coli (EPEC) are also enteroinvasive
c) UTI is caused by single serotype at a time usually
d) E. coli is the most common causative organism to infect bum wounds

732) c 733) a 734)a 735)b 736)c 737)c 738)b 739)a 740)a 741) c 742)d 743)a 744)a 745)a
746) c 747) c 748) b,c 749) d 750) a 751) a 752) c

753. A microbiologist wants to develop a vaccine for preventation of attachment of diarrhoeagenic E.coli to the specific receptors in the gastro-intestinal tract. AD of the foDowing fimbrial adhesions would be appropriate vaccine candidates except - *(AI04)*
a) CFA-1 b) Pl-Pili
c) CS-2 d)K88

2. PROTEUS

754. AD of the foDowing are true except - *(AI 01)*
a) E. coli is an aerobe and facultative anaerobe
b) Proteus forms uric acid stones
c) E. coli is motile by peritrichate flagella
d) Proteus causes deamination of phenylalanine to phenylpyruvic acid

755. Dienes'phenomena is seen with - *(PGI 02)*
a) Proteus mirabilis b) Klebsiella
c) Proteus vulgaris d) Providentia
e) Morganella

3. KLEBSIELLA

756. Friedlander's baciDus is - *(PGI 97)*
a) E.coli
b) Pseudomonas aeruginosa
c) Klebsiella pneumoniae
d) Vibrio parahemolyticus

757. Which of the foDowing is associated with extremely foul-smeDing infection - *(Maharashtra 10)*
a) Klebsiella rhinoscleromatis
b) Klebsiella seeberi
c) Klebsiella zygomaticus
d) Klebsiella ozaenae

4- SHIGELLA

758. ShigeDa can be differenciated from E.CoD by aD of the foDowing features except - *(AI 99)*
a) Shigella does not produce gas from glucose
b) Shigella does not ferment lactose
c) Shigella does not ferment mannitol
d) Shigella has no flagella is non motile

759. ShigeDa are be divided into subgroup on the basis of abibty to ferment - *(AI 9 7)*
a) Lactose b) Maltose
c) Fructose d) Mannitol

760. Most virulent variety of shigeDosis is caused by -
a) S. Dysenteriae b) S. Sonnei
c) S. Flexneri d) S. Boydii

761. Lactose nonfermenting are aD except - *(MP 09)*
a) Shigella sonnei b) Shigella dysenteriae
c) Shigella flexneri d) Shigella boydii

762. Which of the foDowing produces enterotoxin-^4/ *95)*
a) Sh. dysenteriae b) Sh. sonnei
c) Sh. flexneri d) Sh. boydii

763. Which of the foDowing toxins acts by inhibiting protein synthesis - *(AI 04)*
a) Cholera toxin b) Shiga toxin
c) Pertussis toxin d) LT of enterotoxigenic E.coli

764. AD are true about ShigeDa except - *(A1IMSNov 99)*
a) Large dose is required for infection
b) Associated with hemolytic uremic Syndrome
c) Causes bloody diarrhea with mucus
d) Gut pathology is due to toxin.

765. Which of the foDowing statement regarding shigeDa dysentriae type I is true - *(AI 99)*
a) It can lead to haemolytic uremic syndrome
b) It produces an invasive enterotoxin
c) It is an facultative aerobe
d) It is MR negative

766. True about shigeDa dysentriae except - *(Delhi 08)*
a) It invades colonic mucosa
b) It can cause HUS
c) Produces verocytotoxin
d) Produces mildest form of dysentry

767. ShigeDosis is best diagnosed by - *(A1IMS 86, 89)*
a) Stool examination b) Stool culture
c) Sigmoidoscopy d) Enzyme

768. A person returns to Delhi from Bangladesh after 2 days and has diarrhoea. Stool examination shows RBCs in Stool. The Hkely organism causing is -
a) Enteropathogenic E. Coli *(A1IMS Nov 99)*
b) Enterotoxigenic E. Coli
c) Salmonella typhi
d) Shigella dysentriae

769. Invasive test for shigeDa is - *(Orissa 2K)*
a) Dick's test b) Sereny's test
c) Schick's test d) Rabbit ileal loop

5. SALMONELLA

770. The following are gas producing salmonella except - *(AI 92)*
a) S. typhi b) S. enteritidis
c) S. cholera d) S. typhimurium

771. Agglutination with 'O' antigen of S. typhi is inhibited by - *(AIIMS 92, AI 95)*
a) Vi antigen b) Pili antigen
c) Flagellar antigen d) All of the above

772. There has been an outbreak of food bom salmoneDa gastroenteritis in the community and the stool samples have been received in the laboratory. Which is the enrichment medium of choic*e-(AIIMSMay 03)*
a) Cary Blair medium
b) VR medium
c) Selenite "F" medium
d) Thioglycholate medium

773. AD of the foDowing SalmoneDae are motfle except-
a) S. typhi *(SGPGI09)*
b) S. enteridis
c) S. gallinarum pullorum
d) S. Chester

753)b 754)b 755)a,c 756)c 757)d 758)c 759)d 760)a 761)a 762)a>b,c,d 763)b 764)a 765)a
766) d 767) b 768) d 769) d 770) a 771) a 772) c 773) c

774. Which of the following organism requires tryptophan for growth - *(JIPMER 78, DNB 98)*
a) H. influenza b) Vibrio
c) Gonococci d) Salmonella typhi

775. Salmonella typhi is the causative agent of typhoid fever. The infective does of S.typhi -*(AI12, A1IMS 06)*
a) One bacillus b) 10^8-10^{10} bacilli
c) 10M0^5 bacilli d) 1-10 bacilli

776. Incubation period of salmonella typhi -*(NEET/DNB*
a) 2-5 days b) 3-21 days *Pattern, PGI June 05)*
c) 14-25 days d) 10-60 days
e) > 60 days

***111*. Pea-soup stool is characteristically seen in -**
a) Cholera b) Typhoid
c) Botolism d) Polio

778. All of the following are true regarding typhoid except-
a) Urinary carriers are more dangerous
b) Vi ab is used for detecting carrier *(AlIMSJune 99)*
c) Vi is seen in normal population
d) Urine carrier is associated with anomalies

779. True about typhoid is - *(UP 08)*
a) Incubation period 3-6 weeks
b) Chronic carrier is 10-15%
c) Widal test is specific
d) Vi polysaccharide of bacterial cell used for vaccination

780. Diagnosis of typhoid in the first week is by - *(NEET/*
a) Widal test b) Stool culture *DNB Pattern)*
c) Urine culture d) Blood culture

781. In a patient with typhoid, diagnosis after 15 days of onset of fever is best done by - *(AI 01, 02)*
a) Blood culture b) Widal
c) Stool culture d) Urine culture

782. A 24 year-old cook in a hostel mess suffered from enteric fever 2 years back. The chronic carrier state in this patient can be diagnosed by - *(AIIMSNov 02)*
a) Vi agglutination test.
b) Blood Culture in Brain Heart infusion broth.
c) Widal test

783. True statement about Widal test in typhoid is-
a) O-antigen titre remains positive for several months & reaction to it is rapid *(AI 99)*
b) H-antigen titre remains positive for several months & reaction to it is rapid
c) Both remain positive for several months & reaction to both is rapid
d) None

784. Which is true about Widal reaction - *(AI93)*
a) Antibody to H Ag appears first and persists
b) Antibody to O Ag appears first and persists
c) Antibodies to H & O Ag appears simultaneously and persists
d) None of the above

785. All are correct regarding widal test, except -
a) Baseline titres differ depending on the endemicity of the disease *(AIIMS Nov 09)*
b) High titre value is a single widal test is not confirmative
c) O antibody last longer and hence is not indicative of recent infection
d) H antibody cannot differentiate between types

786. TVue statement about widal test in typhoid \s-*(AI 99)*
a) Widal test is confirmative in endemic areas
b) Antibiotic treatment does not alter widal test results
c) Previous infection alters widal test
d) Widal test does not alter with prior vaccination

787. Most immunogenic in Typhoid - *(PGI 96)*
a) O antigen b) H antigen
c) Vi antigen d) Somatic antigen

788. Which of the following is true regarding Salmonella infection - *(AI 96)*
a) Urine culture is + ve in 1st week
b) Stool culture is + ve in 1st week
c) Blood culture is + ve in 3-7 days
d) Widal test is +ve in 1st week

789. Microorganisms that enter freshly laid eggs are
a) Salmonella b) Brucella *(Karnataka 03)*
c) Shigella d) Vibrio cholerae

790. Following are true of Widal test except - *(AI 92)*
a) High titre in first sample is diagnostic
b) 'H' antigen is specific for serotyping
c) Highly +ve H titre not diagnostic
d) Maximum titre in third week

791. Correct statement about widal test - *(Kolkata 08)*
a) Only O antigen is used
b) Is a tube agglutination test
c) Any antibody titre is diagnostic
d) Antibody appears after 1-10 days of fever

792. Widal test is an example of - *(DNB 08)*
a) Flocculation b) Agglutination
c) Both d) None

793. Growth factor needed for salmonella - *(Kerala 98)*
a) Tryptophan b) Niacin
c) B-12 d) Citrate

794. Carriers of Salmonella typhi can be detected by -
a) Widal test *(Karnataka pgmee 06)*
b) Blood culture
c) Sputum culture
d) Culture of feces

795. Typhoid carriers are detected by following except -
a) Isolation of bacteria from urine *(Delhi 08)*
b) Isolation of bacteria from bile
c) Vi antigen
d) Widal test

796. Drug commonly used against enteric fever are all except- *(AI 08)*
a) Amikacin b) Ciprofloxacin
c) Ceftriaxone d) Azithromycin

774) d 775) c 776) b 777) b 778) c 779) d 780) d 781) a 782) a 783) b 784) a 785) c,d 786) c 787) b
788) c 789)a 790)a 791)b 792)b 793)a 794)d 795)d 796) a

797. Resistance of Salmonella typhi to the following antibiotics is not reported as yet in India - *(NEET/ DNB Pattern)*
a) Chloramphenicol b)Ampicillin
c) Ciprofloxacin d) Ceftriaxone

798. Vi antigen found in - *(PG1 June 05)*
a) Salmonella paratyphi'A'
b) Salmonella paratyphi ^{4}C'
c) Salmonella dublin
d) Klebsiella pneumoniae
e) Citrobacter ffegalis

799. True about typhoid - *(PGI June 03)*
a) It is caused by food poisoning
b) Water can transmit the disease
c) Ty21 a is an oral vaccine
d) Chronic carrier is called when transmitted up to 6 month
e) Widal test +ve in 1st week

800. All of the following statements about non typhoid salmonella are true, except - *(AI 09)*
a) Humans are the only reservoirs
b) Transmission is most commonly associated with eggs, poultry and undercooked meat
c) Common in immunocompromised individuals
d) Resistance to fluoroqinolones has emerged

801. All are true about non typhoid salmonella except -
a) Poultry is source *(AIIMS May 11)*
b) Can cause invasive disease in neonates
c) Blood culture is more sensitive than stool culture in gastroenteritis in adults
d) Resistance to fluoroquinolone has emerged

802. Salmonella gastroenteritis is - *(PGI 02)*
a) Mainly diagnosed by serology
b) Blood and mucus present in blood
c) Caused by animal products
d) Symptoms appear by 4-48 hr
e) Features are due to exotoxin released

803. Prolonged salmonella septicemia is caused by -
a) S. enteritidis b) S. cholerae-suis
c) S. typhimurium d) S. typhi *(PGI 95)*

804. DT 104 strain is belongs to which of the following bacteria- *(PGI Nov 11)*
a) Salmonella Gallinarum
b) Salmonella Typhi
c) Salmonella Enteritidis
d) Salmonella Paratyphi A
e) Salmonella Typhimurium

VIBRIO

1. V. CHOLERAE

805. Strain of V. cholerae in Bengal -
a) 0:037 b) 0:139
c) 0:17 d) 0:40
e) 0:149

806. Cholera is caused by - *(PGI june 09)*
a) Vibrio cholerae-01 b) Vibrio cholerae-0139
c) Vibrio parahemolyticus d) NAG vibrio

807. The characteristic features of El tor cholera are all except- *(AI 97)*
a) More of subclinical cases
b) Mortality is less
c) Secondary attack rate is high in family
d) El tor vibrio is harder and able to survive longer

808. Not true about Eltor vibrio 01 - *(AI 10)*
a) Animals are the only reservoir
b) Epidemiologically indistinguisible from V. cholera 013G
c) Human acts as vehicle for spread
d) The efficacy of vaccine against E1 tor vibtio is great

809. Vibrio cholera was discovered by - *(Kerala 94)*
a) Koch b) Mekintoff
c) John snow d) Virchow

810. TVue about cholera vibrios is - *(PGI 98)*
a) Can tolerate wide range of alkaline pH
b) Non motile bacilli
c) Can't be grown in media
d) NaCl stimulates growth

811. All the following are true regarding Vibrio cholerae except- *(AI 94)*
a) Transported in acidic medium
b) Gram-negative
c) Aerobic organism
d) Ferments glucose

812. The following are true of vibro cholerae except
a) Produces indole and reduces nitrates *(AI 01)*
b) Synthesises neuraminidase
c) Dies rapidly at low temperature
d) Vaccine confers long immunity

813. V. cholera true is - *(PGI 98)*
a) Very resistant to alkaline pH
b) Nutritionally fastidious
c) Best growth at 24°C
d) Rod shaped bacilli

814. Selective media for vibrio - *(AIIMSMay 08, Nov 07)*
a) TCBS b) Stuart
c) Skirrows d) MYPA

815. All of the following statements about cholera are true except- *(AI 97)*
a) O & H antigens measure carrier state
b) Culture medium is TCBS Agar
c) Produces indole and reduces nitrate
d) Synthesize neuraminidase

816. Which of the following statement is true about vibrio cholerae - *(AI 99)*
a) There is no natural reservoir
b) Transported in alkaline peptone water medium
c) Halophilic
d) Oxidase negative

817. Which organism grows in alkaline pH? *(NEET/ DNB Pattern)*
a) Vibrio b) Klibsiella
c) Pseudomonas d) E.coli

818. Transport medium for cholera - *(NEETDNB Pattern)*
a) LJ medium b) Cary Blair medium
c) MYPA medium d) Stewart medium

797) d 798) a,b,c,e 799)b,c 800)a 801)c 802)c,d 803)b 804)e 805)b 806)a,b 807)c 808)a 809)a
810)a,d 811)a 812)c,d 813)a 814)a 815)a 816)b 817)a 818)b

819. Transport media for cholera - *(Jharkhand 08)*
a) VR medium b) LZ medium
c) Bile salt agar d)TCBS

820. Transport media for cholera - *(Jharkhand 08)*
a) VR medium b)LZ medium
c) Cary - Blair medium d) Stauret medium

821. TRUE regarding cholera is - *(AIIMS Dec 95)*
a) Toxin actsonGMl receptor
b) Toxin action is cAMP mediated
c) Peritrichate flagella
d) Utilises arginine and lysine

822. Cholera toxin is due to - *(NEET/DNB Pattern)*
a) Chromosome b) Plasmid
c) Phage d) Transposons

823. Cholera toxin - *(ARMS May 06)*
a) Increases the levels of intracellular cylic GMP
b) Acts through the receptor the opiates
c) Causes continued activation of adenylate cyclase
d) Inhibits the enzyme phosphodiesterase

824. In the small intestine, cholera toxin acts by- *(AI05)*
a) ADP ribosylation of the G regulatory protein
b) Inhibition of adenyl cyclase
c) Activation of GTP ase
d) Active absorption of NaCl

825. Which of the following bacteria act by increasing c-AMP- *(ARMS Nov 06, AI 07)*
a) Vibrio cholera
b) Staphyloccus aureus
c) E. coli, heat stable toxin
d) Salmonella

826. Cholera toxin effects are mediated by stimulation of which of the following second messengers -*(AI 12)*
a) cAMP b) cGMP
c) Ca^-calmodulim d)IP_3/DAG

827. Cholera toxin acts by - *(Kolkata 08)*
a) Na^+ K^+ ATPase inhibition
b) Adenylate cyclase stimulation
c) Opening of chloride channel
d) Stimulation of Ca^ channel

828. The function of B subunit of cholera toxin is -
a) ADP ribosylation of G protein *(BHU 08)*
b) To bind GM_T ganglioside receptor
c) To stabilize cholera toxin
d) To increase cGMP

829. The endotoxin of the following gram negative bacteria does not play any part in the pathogenesis of the natural disease. *(ARMS 06, AI 12)*
a) E. coli b) Klebsiella
c) Vibrio cholerae d) Pseudomonas

830. V. cholera is able to stay in GIT because of -
a) Acid resistance *(PGI Dec 06)*
b) Bile resistance
c) Motility
d) Binds to specific receptors
e) Anaerobic potential

831. Which of the following is true of cholera-*(PGI 02)*
a) Recent epidemic was due to classical type
b) Causes secretory diarrhoea
c) Caused by endotoxin
d) Vibriocidal antibodies correspond to susceptibility

832. True about V. Cholerae is - *(ARMS May 02)*
a) One attack of V. Cholerae gives live-long immunity
b) Affects adults and children with equal propensity in non epidemic regions.
c) In between epidemics, carrier states maintain the organism
d) Pathogencity of 0-139 vibrio is due to O antigen

833. In a patient presenting with diarrhoea due to vibrio cholera, which of the following will be present -
a) Abdominal pain *(PGI Dec 01)*
b) Presence of leukocytes in stool
c) Fever
d) Neutrophilia
e) Ocurrence of many cases in the same locality

834. True about cholera - *(NEET/DNB Pattern)*
a) Gram negative rod
b) Associated with fever
c) Causes painful watery diarrhea
d) It is an achlorhydria which renders an individual susceptible to disease

835. 7th Pandemic of cholera was caused by - *(Delhi 09)*
a) El Tor
b) 0139 V. cholerae
c) Classical V. cholerae
d) **V.mimicus**

836. True about vibrio cholerae is - *(SGPGI09)*
a) Disease more common in woman
b) Classical vibrio protect against development of 0-139 Tor is milder than classical
c) E1 - Tor is milder than classical
d) Erythromycin is used in treatment

83 7. The cholera vibrio - *(MAHE 05)*
a) Is strongly anaerobic
b) Grows best at 25°C
c) Has marked tolerance of alkaline pH
d) Grows over a wide range but best at a slight acid pH

838. The transport medium for stools samples in cholera is- *(ICS98)*
a) Thioglycolate b)Caiy Blair medium
c) Dubos medium d) Selenite 'F' broth

839. Antibiotic treatment of choice for treating cholera in an adult is a single dose of - *(AI 05)*
a) Tetracyclineb) Cotrimoxazole
c) Doxycycline d) Furazolidone

840. The drug of choice for treating cholera in pregnant women is - *(ARMS05)*
a) Tetracyclineb) Doxycycline
c) Furazolidone d) Cotrimoxazole

841. Which of the following is the drug of choice for chemoprophylaxis of cholera - *(ARMS05)*
a) Tetracyclineb) Doxycycline
c) Furazolidone d) Cotrimoxazole

819) a 820) a 821) b 822)c 823)c 824)a 825)a 826)a 827)b 828)b 829)c 830)c 831)b 832)d
833) d,e 834) a,d 835) a 836) c>d 837)c 838)b 839) c 840) c 841) a

842. Cholera vaccine effectiveness is - *(TN 97)*
a) 20% for 12 months b) 50% for 12 months
c) 20% for 36 months d) 50% for 36 months

843. True about epidemiology of cholera- *(PGI03)*
a) Chemoprophylaxis is not effective
b) Boiling of water cannot destroy the organism
c) food can transmit the disease
d) Vaccination give 90% protection

844. Which is not true about vibrio cholera - **(***A107)*
a) It is non halophilic
b) Grows on simple media
c) Man is the only natural host
d) Cannot survive in extracellular environment

845. True about V cholera 0139 all except - *(AI07, 08)*
a) Clinical manifestations are similar 01 Eltor strain
b) First discovered in Chennai
c) Epidemiologically indistinguishable from 01 Eltor strain
d) Produces 01 Lipopolysaccharide

846. Cholera transmission by - *(PGIDec 06)*
a) Food transmits
b) Vaccination gives 90% efficiency
c) Healthy carrier
d) Chlorination is not effective

847. All of the following statements about El-Tor vibrios are true, Except - *(AI 10)*
a) Humans are the only reservoir
b) Can survive in ice cold water for 2-4 weeks
c) Killed by boiling for 30 seconds
d) Enterotoxin can have direct effects on other tissues besides intestinal epithelial cells

848. Which of the following about cholera is true -
a) Invasive *(AI 90)*
b) Endotoxin is released
c) Recent infections in india are of classical type
d) Vibriocidal antibody titre measures prevalence

849. "Darting motility" is shown by - *(TN 97)*
a) Proteus b)Serratia
c) Vibrio d) E. coli

850. Invasive infection is caused by all except -
a) V. cholerae *(NEET/DNB Pattern)*
b) Neisseria
c) Streptococci
d) H. influenzae

851. In cholera the highest case fatality is observed in case of- *(Orissa 98)*
a) Classical cholera vibrio b) Vibrio E1 to r
c) Vibrio parahemolyticus d) NAG vibrios

2. HALOPHILIC VIBRIOS

852. All of the following Vibrio sp. are halophilic, except- *(AI 05)*
a) V. cholerae b) V. parahaemolyticus
c) V. alginolyticus d) V. fluvialis

853. Halophilic vibrios are - *(PGI Nov 10)*
a) V. chlorae b) V. vulnificus
c) V. parhemolyticus d)V.mimicus
e) V. alginolyticus

854. Which of following 'Vibrios' is most commonly associated with ear infections - *(AI 12)*
a) V. Alginolyticus b) V. Parahemolyticus
c) VVulnifcus d) Vibrio fluvialis

855. A 32 year old male, Kallu, who recently visited a sea coast presented with ulcer over the left leg. The probable cause is - *(AIIMS May 01)*
a) Pasturella multocida
b) Micrococcus halophillus
c) Vibrio vulnificus
d) Neisseria gonorrhea

856. Vibrio parahemolyticus food poisoning is caused by ingestion of - *(AI 96)*
a) Eggs and Poultry products
b) Raw vegetable
c) Catfish, shellfish, seafood
d) Milk products

857. The growth factor required for the growth of vibrio parahemolyticus is -
a) Saline b) Tryptophan
c) Bile d) Citrate

PSEUDOMONAS

858. An organism grown on agar shows green coloured colonies, likely organism is - *(AI 01)*
a) Staphylococcus b) Streptococcus
c) Pseudomonas d)E. coli

859. Which bacteria acts by inhibiting protein synthesis-
a) Pseudomonas b) Staphylococcus *(AI 97)*
c) Streptococcus d) Klebsiella

860. Ecthyma gangrenosum is caused by -
a) Pseudomonas *(NEET/DNB Pattern)*
b) Streptococcus
c) Staphylcoccus
d) H. influenzae

861. Shock with bullous skin lesion is seen in infection with-
a) E.coli b) Pseudomonas
c) Meningococci d) Candida

862. Which one of the following drugs is an antipeudomonal penicillin ? *(AI 06)*
a) Cephalexin b) Cloxacillin
c) Piperacillin d) Dicloxacillin

863. Pseudomonal infection, not cleaned by -
a) Dettol *(NEET/DNB Pattern)*
b) Hypochloritic
c) Chlorine
d) Betadine

842) b 843) c 844) d 845) d 846) a,c 847) d 848) d 849) c 850) a 851) a 852) a 853)b,c,e 854) a 855) c
856) c 857) a 858) c 859) a 860) a 861)b 862) c 863) a

MELIOIDOSIS

864. The following statements are true regarding melioidosis except - *(AI05)*
a) It is caused by Burkholderia mallei
b) The agent is a gram negative aerobic bacteria
c) Bipolar staining of the aetiological agent is seen with methylene blue stain.
d) The most common form of melioidosis is pulmonary infection

865. Glanders disease is caused by -
a) Burkholderia mallei
b) Diphtheria
c) Mumps
d) Burkholderia pseudomallei

866. A 50 year old chronic alcoholic male agricultural worker presented with high grade fever of one week duration with spells of chills and rigor. Examination of the respiratory system revealed bilateral crepitations with scattered rhonchi. Multiple subcutaneous nodules were found on the extensor surface of the left forearm, arm and left leg. Direct microscopy of the pus aspirated from the skin nodule revealed plenty of Gram negative bacilli with bipolar staining. Culture revealed distinct rough corrugated grey-white colonies on Blood agar. The organisms were motile and oxidase positive. The most likely diagnosis is - *(AIIMS Nov 03)*
a) Plague b) Melioidosis
c) Bartonellosis d) Actinomycosis

YERSINIA

867. True about Y. Pestis - *(PGIDec 03, Dec 06)*
a) Gram+ve b)Gram-ve
c) Motile d)Non-motile
e) It is coccobacilli

868. Stalactite growth in ghee broth is due to -
a) H. influenza b) C. diphtheria
c) Y. pestis d) T. pallidium

869. All of the following statement about plague are wrong except- *(AIIMS 04)*
a) Domestic rat is main reservoir
b) Bubonic is the most common variety
c) The causative bacillus can survive upto 10 years in the soil of rodent burrows
d) Incubation period for pneumonic plague is one to two weeks

870. A young boy had a flea bite while working in a wheat grain godown. After 5 days he developed fever and had axillary lymph adenopathy. A smear was sent to the laboratory to perform a specific staining. Which one of the following staining method would help in the identification of the suspected pathogen - *(A106)*
a) Albert staining. b) Ziehl-Neelsen staining
c) McFadyean's staining d) Wayson staining

871. A farmer presents to the emergency department with painful inguinal lymphadenopathy and history of fever and flu like symptom. Clinical examination reveals an ulcer in the leg. Which of the following stains ahould be used to detect suspected bipolar stained organisms - *(AI11, AIIMS Nov 09)*
a) Albert's stain b) Way son's stain
c) Ziehl Nelson stain d) Me Fay den's stain

872. A girl from shimla presented to OPD with fever, hypotension, malaise and axillary and inguinal lymphadenopathy. Culture in glucose broth shows stalactite growth. Most likely causative organism is- *(AIIMS Nov 08)*
a) Yersinia pestis b)Francisellatularensis
c) Brucella abortus d)Coxiellabumetti

873. True statements about Y. Pestis is/are -
a) Gram positive *(PGI June 04)*
b) Non-motile
c) Benzyl penicillin is given in prophylaxis
d) Patients are kept isolated till 48 hours of treatment
e) Repeated blood culture is diagnostic

874. The drug of choice for chemoprophylaxis in contacts of a patient of pneumonic plague is - *(AIIMSNov 02)*
a) Penicillin. b) Rifampicin
c) Erythromycin d) Tetracycline

875. Which of the following drug(s) is/are used in treatment in plague - *(PGI Dec 08)*
a) Streptomycin b) Tetracycline
c) Ciprofloxacin d) Chloramphenicol
e) Cotrimoxazole

876. What is not true about yersiniosis -*(NEET/DNB Pattern)*
a) Zoonosis
b) Caused by Y pestis
c) By yersinia enterocolitica
d) By yersinia pseudotuberculosis

877. Appendicitis like syndrome is caused by all except- *(MAHE 07)*
a) Yersinia enterocolitica
b) Yersinia pseudotuberculosis
c) Pasteurella septica
d) Yersenia pestis

878. Most common mode of transmission of Pasturella multocida is - *(AI09)*
a) Animal bites or scratches b) Aerosols or dust
c) Contaminated tissue d) Human to human

HAEMOPHILUS

879. Which of these need both V and X factors -*(PGI May 11)*
a) Hemophilus influenzae b) H. ducrei
c) H. paraphrophilus d) H. aegyptius
e) H. haemolyticus

880. The major antigenic determinant of H.influenzae is- *(PGI 99)*
a) 'M' protein b) Capsular polysaccharide
c) Catalase d)Coagulase

864)a 865)a 866)b 867)b,d,e 868)c 869)b 870)d 871)b 872)a 873)b,d,e 874)d 875)a,b,d,e 876)b 877) d 878) a 879)a,d,e 880) b

881. About H. Influenza all true except - *(AIIMS Nov 09, Nov 10)*
a) Requires factor X and V for growth
b) Rarely presents as meningitis in children less than 2 months of age
c) Capsular polypeptide protein is responsible for virulence
d) M.C invasive disease of H influenza is meningitis

882. Disease caused by hemophilus - *(PGI June 09)*
a) Chancroid b) Influenza
c) Acute epiglottitis d) Brain abscess
e) Brazilian purpuric fever

883. Satellitism is seen in cultures of - *(NEET/DNB Pattern)*
a) Hemophilus b) Streptococcus
c) Klebsiella d) Proteus

884. A 2 years old child is brought to the emergency with history of fever and vomiting. On examination he has neck rigidity. The CSF examination shows polymorphs more that 2000/ml protein 100 mg/dl and glucose lOmg/dl. The Gram stain shows the presence of Gram negative coccobacilli. The culture shows growth of bacteria only on chocolate agar and not on blood agar. The caustive agent is -
a) Neisseria meningitides *(AIIMSNov 2002)*
b) Haemophilus influenzae
c) Branhamella catarrhalis
d) Legionella pneumophila

885. All of the following are true regarding Haemophilus influenzae except - *(AIIMS Nov 03)*
a) It can be a part of the normal flora in some persons
b) The serotyping is based on the bacterial outer membrane porteins
c) It requires Haemin and NAD for growth in culture medium
d) Type b is responsible for invasive disease

886. True about H influenza - *(NEET/DNB Pattern)*
a) Grown on sheep blood agar & CO2
b) It is not capsulated
c) Invasive strain is most common
d) Gram positive

887. A 20 years old male patient present to the STD clinic with a genital ulcer. The gram stain of the smear from ulcer shows gram negative coccobacilli. The most appropriate media for culture would be -
a) Thayer-Martin Medium *(AI 04)*
b) Blood agar with X & V factors
c) Chocolate agar with isovitate X
d) Tellurite blood agar

888. Chancroid is caused by - *(NEET/DNB Pattern)*
a) H. ducreyi b) T. pallidum
c) Gonococcus d)HSV

BORPETELLA

889. Culture media for pertussis is - *(PGI 94)*
a) L-J medium
b) Chocolate media
c) Wilson blair medium
d) Bordet - Gengou medium

890. Thumb print appearence in culture film smear is seen -
a) Bacillus antracis b) Brucella species
c) Bordetella pertussis d) Clostridum Welchii

891. The usual incubation period of pertusis is -
a) 7-14 days b) 3-5 days *(AIIMS 05)*
c) 21-25 days d) Less than 3 days

892. What is true about Bordetella pertussis - *(PGI 95)*
a) Adheres to normal mucosa
b) Destroys cilia
c) Local tissue destruction
d) All of the above

893. Pertusis toxin acts by all of the following mechanisms except ? *(AIIMS Nov 08)*
a) ADP ribosylation of proteins associated with receptors
b) Increase cyclic AMP
c) Increased calcium release from sarcoplasmic reticulum
d) Acts through G alpha subunit

894. The following are true for Bordetella pertussis except-
a) It is a strict human pathogen *(AI 03)*
b) It can be cultured from the patient during catarrhal stage
c) It leads to invasion of the respiratory mucosa
d) Infection can be prevented by a acellular vaccine

895. True regarding pertussis vaccine is - *(AIIMS June 2000)*
a) 95% of vaccinated are protected
b) Erythromycin should be given to contacts
c) Neuroparalytic Complication is seen in 1 in 15000
d) Leucocytosis is diagnostic

896. Acellular pertusis vaccine contains-*(AIIMSMay 11)*
a) Pertactin, flagillary hemagglutinin, cytotoxin, endotoxin
b) Pertactin, flagillary hemagglutinin, fimbriae, endotoxin
c) Pertactin, cytotoxin, fimbriae, pertusis toxin
d) Flagillary hemagglutinin, pertusis toxin, fimbriae

897. Mouse is used for pathogenicity testing in -
a) M. Tuberculosis *(NEET/DNB Pattern)*
b) C diptheriae
c) Bordetella pertussis
d) Brucella

898. Whooping cough is caused by -*(NEET/DNB Pattern)*
a) B. pertussis b) H. influenzae
c) Pneumococcus d) Meningococcus

BRUCELLA

899. Brucella melitensis is commonly found in (animal)-
a) Pig b) Camel *(PGI May 11)*
c) Sheep d)Goat
e) Reindeer

881)c 882)a,c,d 883)a 884)b 885)b 886)c 887)c 888)a 889)d 890)c 891)a 892)d 893)b 894)d 895) b 896) d 897) c 898) a 899)b,c,d

900. Regarding Brucellosis, all of these are true except-
a) Man to man transmission *(PGI June 02)*
b) A zoonosis
c) Blood cultures used in diagnosis
d) B melitensis is the most common cause
e) Transmitted via animal products

901. Brucellosis can be transmitted by all of the following modes, except - *(ARMSMay 07, Nov 06, AI07)*
a) Contact with infected placenta
b) Ingestion of raw vegetables from infected forms
c) Person to person transmission
d) Inhalation of infected dust or aerosol

902. A farmer rearing sheep, presented with complaints of fever and weakness for the last one month. There is generalised lymphadenopatby. There was also associated hepatomegaly Biopsy of liver showed non caseating granuloma. These are most likely due to infection with - *(AIIMS Nov 2000)*
a) Yersinia pestis b) Brucella Canis
c) Francisella tularensis d) Brucella melitenesis

903. Malta fever is caused by - *(AIIMSMay 08)*
a) Treponema pallidum
b) Borrelia burgdorfri
c) Brucella melitensis
d) Pseudomonas aeroginosa

904. A farmer presenting with fever off-and on for the past 4 years was diagnosed to be suffering from chronic brucellosis. All of the following serological tests would be helpful in the diagnosis at this state except- *(AI04)*
a) Standard Agglutination test
b) 2 Mercapto-ethanol test
c) Complement fixation test
d) Coomb's test

905. All are true about Brucella except - *(AIIMSMay 11)*
a) B. abortus is capnophilic
b) Transmission by aerosol can occur occasionally
c) Paesturisation destroys it
d) 2ME is used to detect IgA

906. Treatment of Brucellosis - *(PGI June 08)*
a) Doxycycline b)Streptomycin
c) Erythromycin d)Penicillin
e) Rifampin

907. Milk ring test is seen in - *(NEET/DNB Pattern)*
a) Brucellosis b) Bacteroides
c) Tuberculosis d)Salmonellosis

908. Undulant fever is caused by - *(JIPMER 91)*
a) Bartonella b) Brucella melitensis
c) Bordetella d) Boreliarecurrentis

MYCOBACTERIA

1. M.TUBERCULOSIS

909. TVue about M. tuberculosis is - *(PGI 94)*
a) Strict aerobes b) Gram negative
c) Thin cell wall d) Curved rod

910. Acid fastness of tubercle bacilli is attributed to -
a) Presence of mycolic acid *(AIIMS 91)*
b) Integrity of cell wall
c) Both of the above
d) None of the above

911. The medium used for Mycobacterium tuberculosis is - *(AI 96)*
a) Sabouraud's medium b)LJ medium
c) Pick's medium d) NTH medium

912. The tuberculous bacilli was discovered by- *(TN04)*
a) Robert Koch b) Edward Jenner
c) Louis pateur d) Jonas Salk

913. Which one of the following bacteria contains mycolic acid in the cell wall? *(Karn 11)*
a) Escherichia b) Mycoplasma
c) Mycobacteria d) Staphylococcus

914. Mycobacterial species differentiated by all except -
a) Catalase test b)Amidase *(Jipmer 04)*
c) Niacin d) Oxidase

915. Niacin is required for growth of- *(Kerela 91)*
a) M. tuberculosis b) M. kansasii
c) M. Scrofuloderma d)M. Avium

916. BCG* TVue about it - *(UP 07)*
a) Killed vaccine
b) Subcutaneously given
c) Given in positive tubercular patients
d) Live vaccine

917. The factor which promotes virulence of M. tuberculosis -
a) WaxD b) Cord factor
c) Muramyl dipeptide d) Mycolic acid

918. Reinfection tuberculosis is almost exclusively a disease of the - *(PGI 94)*
a) Lungs b) Bones
c) Joints d) Brain

919. Reactivation of TB is almost exclusively a disease of-
a) Bone b) Lymph nodes
c) Lung d) Brain

920. The commonest focus of Scrofuloderma \s- *(AI 96)*
a) Lung b) Lymph node
c) Larynx d)Skin

921. In which type of cutaneous tuberculosis caseation is most commonly seen - *(NEET/DNB Pattern)*
a) Papulonecrotic b) Serofuloderma
c) Lupus vulgaris d) Erythema nodusum

922. Collection of urine sample of a patient of TB/kidney is done - *(AIIMS June 2000)*
a) 24 hrs urine b) 12 hrs urine
c) in early morning d) Any time

923. Rapid examination of Thbercle bacilli is possible with-
a) Ziehl-Neelsen stain *(AI 96)*
b) Kin young stain
c) Auramine-Rhodamine stain
d) Giemsa stain

900)a 901)c 902)d 903)c 904)a 905)d 906)a,b,e 907)a 908)b 909)a,d 910)c 911)b 912)a 913)c
914) d 915)a 916)d 917)b 918)a 919)c 920)b 921)c 922)c 923)c

924. Anti-tubercular drug susceptibility can be done by all of the following methods, except -
a) Resistance ratio method *(AIIMSMay04)*
b) Disc diffusion method
c) Molecular method
d) Radiometric broth method

925. Drug resistance in Tuberculosis is due to -
a) Transformation b) Transduction
c) Conjugation d) Mutation

926. Mycobacterium TB can be differentiated from other mycobacterium by - *(Kerala 2001)*
a) Production of niacin
b) arylsulphate test
c) Coagulase test
d) Bile solubility test

927. Rapid diagnosis of tuberculosis is possible with -
a) Auramine-rhodamine stain *(ICS 2K)*
b) Zeil Neelsen stain
c) Geimsa stain
d) Leishman stain

928. The best diagnostic procedure of M.tuberculosis -
a) PCR b) Auramin rhodamin stain
c) Sputum culture d)ESR *(SGPGI08)*

929. Stain for the diagnosis of tuberculosis - *(MP 09)*
a) Auramine-rhadomine b) India-ink
c) Geimsa stain d) Zeihl Neelsen stain

930. Tuberculin test positive is dependent on - *(AI96)*
a) Erythema b) Nodule formation
c) Induration d) Ulcerative change

931. True about montoux is - *(PGI June 01)*
a) False negative in fulminant diseases
b) If once done, next time it is always positive
c) Results are given in terms of positive & negative
d) Indurations given in terms of length & breadth
e) Always indicate active TB infection

932. True about Mantoux test - *(PGI June 03)*
a) < 5 cm always +ve
b) Usually -ve after treatment
c) Positive reaction in children < 2 yrs is not important than adult
d) Usually read after 48 - 72 hours
e) False +ve in post measles state

933. True about tuberculin test are all except -
a) Recent conversion in adult is an indication for ATT *(PGI 98)*
b) . INH prophylaxis is started if the test is positive
c) No risk in negative
d) May be false negative in immunocompromised patients

934. Which of the following statements regarding-Gamma-Release-Assays for diagnosis of Tuberculosis is true - *(AI 12)*
a) First Generation Quanti FERON-TB assay used ESAT-6
b) Second Generation Quanti FERON-TB (Gold) assay used ESAT-6 and CPF-10
c) These tests can distinguish between M. tuberculosis and M. bovis
d) None of the non-tuberculosis mycobacteria give a positive reaction with the test

935. True regarding mycobacterium tuberculosis is -
a) Produces visible colonies in 1 weeks time on Lowenstein-Jensen media *(PGI June 02)*
b) Decolorised by 20% sulfuric acid
c) Facultative aerobe
d) Niacin positive

936. Mycobacterium tuberculosis is diffentiated from other atypical mycobacteria by - *(PGI 95)*
a) Niacin test b) AFB staining
c) PAS staining d) None

937. Commonest mycobacterial infection is patient is tropical contries - *(PGI 02)*
a) M. Leprae b) M. avium intracellulare
c) M. tuberculosis d) M. kansasii

938. All the following are true of Tuberculosis except -
a) For sputum to be positive, bacilli should be > 10^4 / ml *(AI 94)*
b) Niacin test differentiates M. tuberculosis and M. bovis
c) Pathogenicity to rabbits differentiates M. tuberculosis and M. bovis
d) Culture techniques have low sensitivity

939. In TB, immunity is provided by - *(PGI 98)*
a) CD 4+ b) CD 8+
c) IgG d) IgM

2. ATYPICAL MYCOBACTERIA

940. Which one of the following statement is true regarding pathogenicity of Mycobacteria species -
a) M. tuberculosis is more pathogenic than M.bovis to the humans *(AI 06)*
b) M. Kansasii can cause a disease indistinguishable from tuberculosis
c) M.Africanum infection is acquired from the environmental source
d) M.Marinum is responsible for tubercular lymphadenopathy

941. True about mycobacterium other than tuberculosis-
a) Causes disseminated infection
b) Occurs in persons with normal immunity
c) Causes decreased efficacy of BCG due to cross immunity
d) Person to person transmission is seen

942. Which of the following is photochromogenic -
a) M. kansasii *(NEET/DNB Pattern)*
b) M. scrofulorum
c) M. intracellulare
d) M. avium

924)b 925)d 926)a 927)a 928)c 929)a,d 930)c 931)a 932)d 933)c 934)b 935)d 936)a 937)c 938) c,d 939) a 940) b 941) c 942) a

943. Pigment producing atypical mycobacteria -
a) M. fortution and M. chelonae *(NEET/DNB Pattern)*
b) M. xenopi and MAC
c) M. gordonae and M. szulgai
d) M. ulcerans

944. Which of the following are photo-chromogens -
a) M. kansasii b) M. chelonae *(PGINov*
c) M. fortuitum d) M. simiae *09)*
e) M. marinum

945. Battey bacillus or mycobacterium intracellulare is - *(AIMS 84)*
a) Photochromogen b) Scotochromogen
c) Non-photochromogen d) Rapid grower

946. Which of the following is not a pathogenic mycobacteria - *(NEET/DNB Pattern)*
a) M. Kansasii b) M. scrofulaceum
c) M. cheolonei d) M. smegmatis

947. Cutaneous lesions may be produced by the following mycobacteria except- *(DPG-99)*
a) M. intracellulare b) M. Leprae
c) M. marinum d) M. tuberculosis
e) M. ulcerans

948. Fish tank granuloma is seen in - *(NEET/DNB*
a) M fortuitum b) M kansasi *Pattern)*
c) M marinum d) M leprosy

949. Buruli Ulcer is caused by -*(NEET/DNB Pattern)*
a) Streptococcus b) Spirillium minus
c) M. Ulcerans d) Brucella

950. Tuberculosis complex include all except -
a) M. tuberculosis *(NEET/DNB Pattern)*
b) M. bovis
c) M. kansasii
d) M. microti

951. Scotochromogens are - *(PGI Dec 08)*
a) Mycobacterium gordonae
b) Mycobacterium marinum
c) Mycobacterium intracellulare
d) Mycobacterium avium
e) Mycobacterium kansaii

952. Which of the following is scotochromogen- *(JIPMER*
a) M. scrofulaceum b) M. ulcerans *91)*
c) M. Kansasii d) M. fortuitum

953. Mycobacterium scrofulaceum which cause scrofula, belongs to which groups of atypical mycobacteria - *(Kerala 2K)*
a) Photochromogens
b) Scotochromogens
c) Non-photochromogens
d) Rapid growers
e) None of the above

954. All are rapid growers except - *(SG PGI 09)*
a) M. fortuitum
b) M.chelonae
c) M. avium intracellulare
d) M. Smegmatis

955. Mycobacteria non-pathogenic to man - *(Delhi 08)*
a) M. bovis b) M. Kansai
c) M.avium intracellular d)M.phlei

956. Not a pathogenic mycobacterium - *(TN 99)*
a) M. paratuberculosis b) M. kansasii
c) M. ulcerans d) M. intracellulare

957. Mycobacterium tuberculosis can be differentiated from other mycobacteria by - *(Kerala 09)*
a) Production of Niacin b) Aryl sulphatase test
c) Coagulase test d) Bile Solubility test

958. Which does not cause skin involvement - *(PGI 84)*
a) M. tuberculosis b) M. Ulcerans
c) M. Marinum d) M. Kansasii

959. The mycobacteria which grows in culture with in 1-2 weeks are- *(Delhi 96)*
a) M. Kansasii b) M. Leprae
c) M. Chelonei d) M. Avium intracellulare

960. Swimming pool granuloma is caused by- *(AI89)*
a) M. Bovius b) M. Ulcerans
c) M. Kansasii d) M. Balanei

961. Mycobacterium avium is - *(MH11)*
a) Scotochromogen b) Photochromogen
c) Rapid grower d) Nonphotochromogens

3. M. LEPRAE

962. Which of the following is true regarding globi in a patient with lepromatous leprosy - *(AI 02)*
a) Consists of lipid laden macrophages
b) Consists of macrophages filled with AFB
c) Consists of neutrophils filled with bacteria
d) Consists of activated lymphocytes

963. For experimental work, Lepra bacilli are best cultured in - *(AI 96)*
a) Armadillos b) Mouse foot pad
c) Guinea pigs d) Rabbit testes

964. Leprosy spreads by -
a) Skin to skin contact b) Blood transfusion
c) Droplet spread d) Ingestion

965. The animal model frequently used for M. Leprae is - *(Karn 94)*
a) Mice b) Guinea pig
c) Rabbits d) Golden hamsters

966. Culture of lepra bacilli done in- *(Delhi 09)*
a) Nine banded armdillo b) Tail of mouse
c) Foot pads of mice d) Nutrient agar

967. Neurological involvement is pronounced in which type leprosy - *(AI 93)*
a) Tuberculoid b) Lepromatous
c) Borderline d) Lucio leprosy

968. Single skin lesion is seen in which type of leprosy -
a) IL b) TT *(AI93)*
c) BL d)BL

943) c 944) a,d,e 945) c 946) d 947) a 948) c 949) c 950) c 951) a 952) a 953) b 954) c 955) d 956) a 957) a,b 958) d 959) c 960) d 961) d 962) b 963) a 964) a,c 965) a 966) a,c 967) a 968) b

969. The characteristic finding in a case of leprosy is- *(AIIMSDec 98)*
a) Culture test is positive in 2-3 months in LJ media
b) Long contact with tuberculoid leprosy can transmit the disease
c) CMI is seen in Lepromatous leprosy
d) Macule lesion heals spontaneously

970. The following test is not used for diagnosis of leprosy - *(AIIMS 06)*
a) Lepromin test
b) Slit skin smear
c) Fine needle aspiration cytology
d) Skin biopsy

971. Subtype of leprosy with maximum number of TH -1 cells - *(UP 08)*
a) TT b)BB
c) LL d) Borderline leprosy

972. Lepra cells found in lepromatous leprosy are -
a) Neutrophils b)Lymphocytes *(Karn94)*
c) Macrophages d) Plasma cells

973. Lepra cells are - *(JIMPER 79, Delhi 93)*
a) Neutrophils b) Lymphocytes
c) Histiocytes d) Plasma cells

974. Globi is - *(Jharkhand 08)*
a) Histiocyte containing acid fast bacillus
b) Lymphocyte containing acid-fast bacillus
c) Neutrophile containing acid-fast bacillus
d) Large lymphocyte containing acid fast bacillus

975. Generation time of lepra bacilli is- *(Manipal 06)*
a) 12 days b) 5 minutes
c) 10 hours d)24hrs

976. Mitsuda reaction is read after - *(ARMS 93)*
a) 3 days b) 3 hours
c) 3 weeks d) 3 months

977. In the management of leprosy, lepromin test is most useful for - *(AI03)*
a) Herd immunity b) Prognosis
c) Treatment d) Epidemological investigatins

978. Exacerbation of lesions in patients of borderline leprosy is seen in - *(PGI June 01)*
a) ENL (erythema nodosum leprosum)
b) Lepra reaction type 1
c) Jarisch-Herxheimer reaction
d) Resolving leprosy

979. Characteristic of type II lepra reaction -
a) Erythema & edema b) ENL *(PGI Nov 09)*
c) Lymphadenopathy d) Uveitis
e) Trophic ulcer

980. The main cytokine, involved in erythma nodosum leprosum (ENL) reaction is - *(ARMS 06)*
a) Interleukin - 2
b) Interferon - gamma
c) Tumor necrosis factor-alpha
d) Macrophage colony stimulating factor

981. The following drug is used for the treatment of type II lepra reaction, except - *{ARMS 06)*
a) Chloroquineb) Thaliodomide
c) Cyclosporine d) Corticosteroid

982. ENL is seen in - *(NEET/DNB Pattern)*
a) Lepromatous leprosy
b) Tuberculoid leprosy
c) Iderminate leprosy
d) Pure neuritic leprosy

983. Fastest microbiocidal agent against M.leprae -
a) Clofazimine b) Dapsone *(AI04)*
c) Rifampicin d) Minocycline

984. Under leprosy eradication programme the managment of single lesion is - *(ARMS 02)*
a) Single dose of Rifampicin and Dapsone
b) Rifampicin and Dapsone for 6 months
c) Rifampicin, ofloxacin and minocycline single dose
d) Rifampicin and minocycline for 6 months

985. TYue about lepra bacilli is - *(ARMS May 94)*
a) INH inhibits their growth
b) Antileprosy vaccine can give life long protection
c) Mycobacterium leprae can be grown in foot pad of mice
d) Incubation period is 3-4 months

SPIROCHETES

1. TREPONEMA

986. Syphilis was first identified b- *(NEET/DNB Pattern)*
a) Fraenkel b)Nicolaicu
c) Schaudinn & Hoffman d) Ogston

987. Following is true of T. pallidum, except - *(PGI98)*
a) Can be maintained in rabbit testis
b) Motile by peritrichate flagella
c) To visualise, dark ground microscopy is used
d) TPI test is very-useful

988. Stain for treponema - *(NEET/DNB Pattern)*
a) Fontana's b)Acid-facid
c) Methenamine-silver d)PAS

989. True about T. pallidum is - *(ARMS 97)*
a) Sialic acid on surface inhibits activation of alternate complement
b) Hyaluronidase - enhances invasiveness
c) Antibody specific DPG
d) Glycosaminoglycan on outer sheath inhibits antibody mediated killing of organism

990. Incubation period of syphilis -(*NEET/DNB Pattern)*
a) l hour - 5 hour b) 24 hour - 48 hour
c) l days - 10 days d) 10 days - 90 days

991. All are true about secondary syphilis except -
a) Gumma formation *{PGI May 10)*
b) Condyloma lata
c) Palmar erythema
d) Chancre may occur
e) Mucosal patch

969) b 970) a 971) a 972)c 973)c 974)a 975)a 976)c 977)b 978)b 979)a,b,c,d 980)c 981)c
982) a 983) c 984)c 985)c 986)c 987)b 988)a 989)b 990)d 991)a,c

992. In a syphilis patient, site which does not help in isolation of organism - *(NEET/DNB Pattern)*
a) Gumma b) Pr chancre
c) Mucosal patch d) Maculopapular rash

993. TVue about primary chancre - *(PG1 Dec 08)*
a) Painless ulcer
b) Painless lymphadenopathy
c) Covered with exudate
d) Indurated lesion
e) Organism can be cultured from exudative fluid

994. The skin lesions of secondary syphilis include all of the following except - *(AIIMS 9 7)*
a) Macules b) Vesicles & Bullae
c) Nodule d) Papulosquamous

995. A 23year old male had unprotected sexual intercourse with a commercial sex worker. Two weeks later, he developed a painless, indurated ulcer on the glans that exuded clear serum on pressure. Inguinal lymph nodes in both groins were enlarged and not tender. The most appropriate diagnostic test is- *(AIIMSMay 04)*
a) Gram's stain of ulcer discharge
b) Dark field microscopy of ulcer discharge
c) Giemsa stain of lymph node aspirate
d) ELISA for HTV infection

996. TVue about primary chancre - *(PGI Dec 04)*
a) Multiple ulcers
b) Painless solitary ulcer
c) Most infective state
d) Heals automatically in few months without treatment
e) Penicillin is the drug of choice

997. Tabes dorsalis is seen in - *(NEET/DNB Pattern)*
a) Primary syphilis b) Secondary syphilis
c) Tertiary syphilis d) Latent syphilis

998. Which one of the following is the most contagious lesion in syphilis? *(UPSC 97)*
a) Primary sore b) Gumma
c) Condylomata d) Papular skin rash

999. In secondary syphilis, which one of the following features is not found - *(UPSC 04)*
a) Maculopapular rashes
b) Generalised non tender lymphadenopathy
c) Aortitis
d) Follicular syphilides

1000. After giving treatment for Syphilis, the response to treatment can be best assessed by - *(AIIMSNov 99)*
a) FTA-ABS b)VDRL
c) TPHA d) Immobilization test

1001. Diagnostic test of choice for neurosyphilis is -
a) VDRL b) FTA-ABS *(PGI May 10)*
c)TPI d)RPR

1002. Investigation of choice for detection of syphillis in a patient after 2 course of complete therapy -
a) FTAABS b)VDRL *(AI02)*
c) TPI d) Dark ground microscopy

1003. Most sensitive test for Treponema -
a) VDRL b)RPR *(AIIMS May 10)*
c) FTA-ABS d) Kahn

1004. False + ve VDRL, is seen in all except - *(AI2000)*
a) Lepromatous Leprosy
b) Infectious mononucleosis
c) HIV
d) Pregnancy

1005. False +ive VDRL test is/are seen in- *(PGI May 11)*
a) Leprosy b) Malaria
c) Relapsing fever d) I.V. drug user
e) HIV infection

1006. False positive nontreponemal serological test for syphilis are seen in - *(PGI Dec 08)*
a) HIV infection b) Collagen disorders
c) Paediatric age group d) Tuberculosis
e) Chronic liver disease

1007. True about VDRL test - *(AIIMS 2001)*
a) Non - specific
b) Slide flocculation test
c) Best followed for drug therapy
d) All

1008. Regarding syphilis, all are true, except -
a) VDRL titre decreases or even absent after treatment
b) VDRL becomes positive after 10-14 days of infection *(AIIMS Nov 93)*
c) Earliest serological test to become positive in untreated primary syphilis is TPHA
d) Yaws and Pinta cannot be differentiated

1009. All are true about FTA-ABS in Syphilis, except -
a) FTA - ABS becomes negative after treatment
b) Present in secondary syphilis *(AI 2000)*
c) It is a specific test
d) May be positive in Lyme's disease

1010. 25 year old labourer 3 years back presented with penile ulcer not treated. Later he presented with neurological symptoms for which he got treated. Test to monitor response to treatment is -
a) VDRL b) FTA-ABS *(AIIMSNov 09)*
c) TPI d)RPR

1011. Features of congenital syphilis are- *(PGIMay 10)*
a) Snuffles is late manifestation
b) Perforation in cartilaginous part of nose
c) Mulberry molar
d) Saddle nose deformity

1012. Congenital syphilis can be best diagnosed by -
a) IgM FTA- ABS b) IgG FTA-ABS *(AI 01)*
c) VDRL d)TPI

1013. A VDRL reactive mother gave birth to an infant. All of the following would help in determining the risk of transmission to the infanct except - *(AI 06)*
a) TPHA test on the serum sample of the mother
b) TPHA test on the serum sarnie of the infant
c) VDRL on the paired serum sample of the infant and mother
d) Time interval between the treatment of the mother and her delivery

992) a 993) a,b,c,d 994)b 995)b 996)b,d,e 997)c 998)c,d 999)c 1000)b 1001)a 1002)b 1003)c 1004)d 1005) All 1006) a,b 1007)d 1008)b,c 1009)a 1010) a 1011)b,c,d 1012)a 1013)b

1014. Confirmatory test for syphilis - *(NEET/DNB Pattern)*
a) VDRL b) FTA-ABS
c) RPQ d)None

1015. T. pallidum was discovered by - *(Maharashtra 10)*
a) Schaudinn and Hoffmann
b) Ellerman and Bang
c) Twort
d) Robert koch

1016. VDRL is a- *(TN 95)*
a) Slide flocculation test
b) Tube flocculation test
c) Gel precipitation test
d) Indirect hemaglutinatioin test

1017. The following is not true of syphilis- *(AIIMS91)*
a) TPI is most specific
b) VDRL is not specific
c) VDRL is negative in secondary syphilis
d) IgM test is specific for congenital syphilis

1018. Which is false about syphilis - *(AI92)*
a) TPI gives definite diagnosis
b) TPHA is earliest to be+ve
c) VDRL is +ve 1 week after appearance of chancre
d) Serologically not different from yaws

1019. Which of the following is the most specific test to diagnose syphilis - **(***Corned 0 7)*
a) VDRL Test b) WassermannTest
c) RPR Test d) FTA-ABS

1020. The most commonly performed test for serodiagnosis of syphilis is - *(Kar 09)*
a) TPHA b) Waserman
c) TPT d)VDRL

1021. VDRL is most sensitive for diagnosis during which stage of syphilis - *(Jipmer 11)*
a) Primary b) Secondary
c) Tertiary d) Congenital

1022. False positive Fluorescent Treponemal antibody test is seen is - *(Jipmer 11)*
a) HIV b) Lyme disease
c) Infectious mononucleosis d)SLE

1023. Non venereal treponemas *islare-(PGIMayl0June04)*
a) T. Pertenue b) T. Carateum
c) T. Pallidum d) T. Cuniculi

1024. Regarding yaws, all are true except - *(AI 08)*
a) Caused by T. pertenue
b) Sexually transmitted
c) Cross reactive antibodies with syphilis
d) Drug of choice is penicillin.

1025. All of the following statements about 'yaws' are true except- *(AI 11)*
a) Caused by Treponema pertenue
b) Transmitted non venerally
c) Secondary yaws can involve bone
d) Late stages of yaws involve heart and nerves

1026. Bejel is caused by - *(NEET/DNB Pattern)*
a) T. pallidum b) T. endemicum
c) T. pertunae d) T. carateum

1027. Yaws is caused by - *(NEET/DNB Pattern)*
a) Treponema pallidum b) Treponena carateum
c) Treponema refrigens d) Treponema pertenue

2. BORRELIA

1028. Lyme disease caused by - *(PGI June 01)*
a) Leptospira b) Borrelia
c) Treponema d) Bordetella
e) Arbovirus

1029. Spirochetes among following are - *(PGIDec 06)*
a) Syphilis b)Leptospira
c) Mycoplasma d) Brucella
e) Borrelia

1030. Which one of the following microorganisms uses antigenic variation as a major means of evading host-defences - *(AIIMS Nov 04)*
a) Streptococcus pneumoniae
b) Borrelia recurrentis
c) Mycobacterium tuberculosis
d) Listeria monocytogenes

1031. True about B. recurrentis - *(NEET/DNB Pattern)*
a) Causes leptospirosis b)Water borne disease
c) Vector borne disease d) Transmitted by tick

1032. Borrelia recurrentis is transmitted by - *(MH11)*
a) Mite b) Louse
c) Tick d) Mosquito

1033. The following are true regarding Lyme's Disease, except- *(AI 03)*
a) It is transmitted by ixodid tick.
b) Erythema chronicum migraines may be a clinical feature
c) Borrelia recurrentis is the aetiological agent
d) Rodents act as natural hosts

1034. Which of the following is not the manifestation of Borrelia Burgdorferi- *(PGI May 10)*
a) Erythema chronicum migrans
b) Acrodermatitis chronica atrophicans
c) Lymphogranuloma venerum
d) Granuloma fasiale
e) Lichen planus

1035. Kelly's medium is used in the isolation of -
a) Leptospira b) Borrelia *(PGI81)*
c) Bartonella d) Brucella

1036. Lymes disease all are true except -
a) Borellia bourgdorferi replicates locally and invades locally *(AIIMS May 11, 10)*
b) Infection progresses inspite of good humoral immunity
c) Polymorphonuclear lymphocytosis in CSF suggest meningial involvement
d) IgA intrathecally confirms meningitis

1037. All of the following species of borrelia are associated with tick borne relapsing fever, except - *(AI 09)*
a) Borrelia recurrentis b) Borrelia hermsii
c) Borrelia turicatae d) Borrelia duttani

1014) b 1015)a 1016)a 1017)c 1018)b 1019)d 1020)d 1021)b 1022)b 1023)a,b 1024)b 1025)d 1026)b
1027)d 1028) b 1029)a,b,e 1030)b 1031)c 1032)b 1033)c 1034)c,d,e 1035)b 1036)c 1037)a

1038. Tick born relapsing fever is/are caused by -*(PGIDec*
a) Borreliarecurrentis b) Borrelia duttonii *08)*
c) Borrlia burgdorferi d) Borrelia hermsii
e) None of above

1039. Louse borne relapsing fever -*(NEET/DNB Pattern)*
a) B duttoni b) B recurrentis
c) B parkeri d) B burgdorferi

3. LEPTOSPIRA

1040. A bacterial disease that has been associated with the 3 "Rs" i.e. rats, ricefields, and rainfall is-
a) Leptospirosis b) Plague *(AI05)*
c) Melioidosis d) Rodent - bite fever

1041. Reservoir of leptospira - *(NEET/DNB Pattern)*
a) Cat b)Dog
c) Rat d) Monkey

1042. Which of the following is transmitted by rat urine ?
a) Leptospira *(NEET/DNB Pattern, AI02)*
b) Listeria
c) Legionella
d) Mycoplasma

1043. Leptospira icterohemorrhagica infection is transmitted by- *(TN 95)*
a) Bats b) Rats
c) Birds d) Dogs

1044. A 25-year old farmer presented with history of high grade fever for 7 days and altered sensorium for 2 days. On examination, he was comatosed and had conjunctival hemorrhage. Urgent investigations showed a hemoglobin of 11 gm/dl, serum bilirubin 8 mg/dl and urea 78 mg/dl. Peripheral blood smear was negative for malarial parasite. What is the most likely diagnosis - *(ARMS Nov 05)*
a) Brucellosis b) Weil's disease
c) Acute viral hepatitis d) Q fever

1045. Not used in leptospirosis - *(ARMSMay 10)*
a) Microscopic agglutination test
b) Dark field illumination
c) Macroscopic agglutination test
d) Weil felix reaction

1046. A fourteen year old body is admitted with history of fever, icterus, conjunctival suffusion and haematuria for twenty days. Which of the following serological test can be of diagnostic utility - *(ARMSNov 04)*
a) Widal test
b) Microscopic Agglutination Test
c) Paul Bunnell test
d) Weil felix reaction

1047. A labourer involved with repair-work of sewers was admitted with fever, jaundice and renal failure. The most appropriate test to diagnose the infection in this patient is - *(AI 03)*
a) Weil Felix test
b) Paul Bunnell test
c) Microscopic agglutination test
d) Microimmunofluorescence test

1048. Culture media of leptospirosis - *(ARMSMay 09)*
a) Korthof b) Perkin
c) Tinsdale d) Baker's

1049. The following about leptospirosis is true except -
a) High fever with chills *(PGI 02)*
b) Seen in sewage workers
c) Jaundice is present
d) Acute renal failure may occur
e) Tetracycline is the drug of choice

1050. All of the following statements about leptospirosis are true except - *(AI 09)*
a) Infection acquired by direct contact with infected urine
b) Mortality is 5-15% in severe cases
c) Antibodies are usually detectable in the first week
d) Iv penicillin is recommended for treatment of severe cases

1051. Which of the following statements about Leptospirosis is true - *(AI 11)*
a) Rats are prime reservoirs
b) Fluoroquinolones are the drug of choice
c) Person to person transmission is common
d) Hepatorenal syndrome may occur in upto 50% of patients

1052. A sewage worker presents to the emergency department with fever and jaundice. Laboratory findings reveal an elevated BUN and serum creatinine suggestive of renal failure. Which of the following antibiotics is recommended? *(AI 11)*
a) Cotrimaxozole b) Erythromycin
c) Ciprofloxacin d) Penicillin G

1053. Consider the following statements - *(UPSC 07)*
1. In leptospirosis, the incubation period ranges from 2 to 20 days.
2. In leptospirosis, urine may show microscopic haematuria

Which of the statements given above is are correct ?
a) 1 only b) 2 only
c) Both 1 and 2 d) Neither 1 nor 2

1054. Leptospira canicola infection usually present as-
a) Aseptic meningitis *(Karnat 98)*
b) Jaundice
c) Diarrhoea and vomiting
d) Lobar pneumonia

1055. The Leptospira interrogans complex - *(PGI 88)*
a) Causes disease in rodents which is usually fatal
b) Mostly affects the kidney and liver
c) Causes rise in lgM antibodies which disppears after the first week of the disease.
d) Causes primarily vascular changes
e) Can be prevented by an effective vaccine which is used world wide

1038)b,d 1039)b 1040)a 1041)c 1042)a 1043)b 1044)b 1045)d 1046)b 1047)c 1048)a 1049)e 1050)c 1051)a 1052) d 1053)c 1054)a 1055)b,d

MYCOPLASMA

1056. Cell wall deficient organisms are - *(PGI99)*
a) Chlamydia b) Mycoplasma
c) Streptococcus d) Anaerobes

1057. Eaton agent is - *(Jipmer 11)*
a) Chlamydia b) Mycoplasma pneumoniae
c) Klebsiella d) H. influenzae

1058. Eaton agent is - *(Rohtak 86)*
a) Corynebacterium b) Pseudomonas
c) Mycoplasma d) Gonococcus

1059. The following statements are true with reference to Mycoplasma except - *(A1IMS Nov 05)*
a) They are the smallest prokaryotic organisms that can grow in cell free culture media
b) They are obligate intracellular organisms
c) They lack a cell wall
d) They are resistant to Beta-lactam drugs

1060. Diene's method is used for - *(PGI99)*
a) Mycoplasma b) Chlamydiae
c) Plague d) Diphtheria

1061. Fried Egg colony is seen in culture of -
a) Mycoplasma *(NEET/DNB Pattern)*
b) Legionella
c) Trachoma
d) Hemophilus

1062. In reference to the mycoplasmas, the following are true except - *(A1IMS May 05)*
a) They are inhibited by penicillins
b) They can reproduce in cell free media
c) They have an affinity for mammalian cell membranes
d) They can pass through filters of450 nm pore size

1063. True about mycoplasma are all except -
a) They are L forms *(AIIMS May 08)*
b) Sterol enhances growth
c) Can grow in cell free media
d) When grown in liquid medium do not produces turbidity

1064. The following is true for Mycoplasmas except -
a) Multiply by binary fission. *(AIIMS Nov 02)*
b) Are sensitive to beta-lactam group of drugs.
c) Can grow in cell free media.
d) Require sterols for their growth

1065. Ureaplasma is naturally resistant to -
a) Erythromycin *(NEET/DNB Pattern)*
b) Tetracycline
c) Chloramphenicol
d) Cephalosporins

1066. True about mycoplasma - *(NEET/DNB Pattern)*
a) Obligate intracellular organism
b) Penicillin is effective treatment
c) Require cholesterol for growth
d) Have thick cell wall

1067. "L-form" phenomenon is most likely to occur in -
a) Mycobacterium tuberculosis *(DPG 10)*
b) Pseudomonas
c) Proteus
d) Mycoplasma

1068. Which one of the following needs cholesterol and other lipids for growth - *(MH11)*
a) Mycobacterium TB b) Chlamydia
c) Hemophilus d) Mycoplasma

1069. TRUE about mycoplasma is- *(AIIMS Dec 95)*
a) Causes lung infection
b) Penicillin is drug of choice
c) Thick cell wall
d) Thallium acetate inhibits the growth

1070. Mycoplasma pneumonia is characterised by all except-
a) Diagnosed by serum cold antibody
b) Treatment is erythromycin *(AIIMS June 98)*
c) Cannot be cultured from sputum
d) Raised ESR

1071. All are features of Ureaplasma urealyticum except -
a) Non gonococcal urethritis *(AI01)*
b) Salpingitis
c) Epididymitis
d) Bacterial vaginosis

1072. True about mycoplasma - *(NEET/DNB Pattern)*
a) L-form b) Multidrug resistant
c) Cause NGU d) Penicillin effective

1073. *True* about mycoplasma is - *(MP 98)*
a) Not sensitive to antibiotics
b) L. form is commonest
c) Culture in sabouraud's media
d) Most common cause of non gonococcal urethritis

ACTINOMYCETES

1074. True about actinomyces is - *(AIIMSDec 95)*
a) Gram+ve
b) Most common site is brain
c) Tetracycline is drug of choice
d) Portal of entry is inhalation

1075. Which of the following is not true of Actinomycosis-
a) Demonstration of filaments *(AI94)*
b) Caused by actinomyces israelii
c) Organism cannot be cultured
d) Sulphur granules in pus

1076. Which of the following is the most predominant constituent of sulfur granules of Actinomycosis is -
a) Organisms *(AIIMS May 04)*
b) Neutrophils and monocytes
c) Monocytes and lymphocytes
d) Eosinophils

1077. Color of granule of actinomycetes-
a) Black b) Yellow *(NEET/DNB Pattern)*
c) Red d) Brown

1078. Actinomycosis most common site- *(NEET/DNB*
a) Cervicofacial b) Thoracis *Pattern)*
c) Abdomen d) Brain

1056) b 1057)b 1058)c 1059)b 1060)a 1061)a 1062)a 1063)a 1064)b 1065)d 1066)c 1067)d 1068)d 1069)a 1070)c 1071) b 1072)c>a 1073)b 1074)a 1075)c 1076)a 1077)b 1078)a

1079. Actinomycetes is - *(AI88, Bihar 05)*
a) Gram positive bacteria
b) Gram negative bacteria
c) Fungus
d) A yeast like from

1080. A clinical specimen was obtained from the wound of a patient diagnosed as Nocardiosis. For the selective isolation of *Nocardia sp.* which one of the following would be the best method - *(AIIMS May 04)*
a) Paraffin bait technique
b) Castaneda's culture method
c) Craige's tube method
d) Hair bait technique

1081. Nocardia is stained by all except- *(AIIMSMay 08)*
a) Acid fast stain b) Kiram's stain
c) Alcian blue stain d) Mucin stain

1082. Nocardia is differentiated from Actinomyces by -
a) Gram stain *(PGIJune02)*
b) ZN stain
c) Nocardia causes mycetoma, Actinomyces does not
d) Nocardia is faculative anerobe

1083. A patient presents to the emergency department with history of persistent fever & cough. Radiological features are suggestive of pneumonia. Sputum examination cultures reveal aerobic branching Gram positive filaments that are partially acid fast.Which of the following is the most likely etiological agent - *(AI11)*
a) Actinomyces israeli
b) Nocardia asteriodes
c) Aspergillus fumigatus
d) Staphylococcus aureus

1084. A characteristic infection of Nocar diaAsteroides is - *(AI12)*
a) Diarrhea
b) Secondary Dissemination to liver
c) Brain Abscess
d) Colonic Diverticulosis

1085. Nocardia resemble actinomyces morphological but- *(ICS2K)*
a) Are anaerobic b) Are faculative anaerobic
c) Are aerobic d) Require $C0_2$ for growth

LISTERIA MONOCYTOGENES

1086. All of the following are true about Listeria except -
a) Transmitted by contaminated milk *(AI 02)*
b) Gram negative bacteria
c) Cause abortion in pregnancy
d) Causes meningitis in neonates

1087. Microorganism motile at 25°C but not motile at 37°C- *(PGI Nov 09)*
a) Listeria monocytogens
b) Campylobacter
c) Yersinia pestis
d) Streptococcus agalctiae
e) E. coli

1088. Tumbling motility is shown by - *(NEET/DNB Pattern)*
a) Listeria monocytogenes b) Proteus vulgaris
c) Borrelia d) Clostridia

1089. A major step in the pathogenesis of listeriosis is -
a) The formation of antigen-antibody complexes with resultant complement activation and tissue damage *(ARMS Nov 05)*
b) The release of hyaluronidase by L. monocytogenes, which contributes to its dissemination from local sites
c) The antiphagocytic activity of the L. monocytogenes capsule
d) The survival and multiplication of L. monocytogenes within mononuclear phagocytes and host epithelial cells

1090. The Anton test is used in the diagnosis of - *(ARMS 79)*
a) C. diphtheriae b) H. influenzae
c) L. monocytogenes d) S. pneumoniae

1091. Tumbling motility is shown by -
a) Proteus vulgaris b) Proteus mirabilis
c) Vibrio d) Listeria

1092. A 30 year old woman with a bad obstetric history presents with fever. The blood culture from the patient grows gram-positive small to medium coccobacilli that are pleomorphic, occurring in short chains. Direct wet from the culture shows tumbling motility. The most likely organism is - *(AI 04)*
a) Listera monocytogenes
b) Corynebacterium sp.
c) Enterococcus sp.
d) Erysipelothrix rhusiopathiae

1093. A3-week old child presented to the pediatrician with meningitis. A presumptive diagnosis of late onset of a perinatal infection was made. The CSF culture was positive for gram positive bacilli. Which of the following characteristic of this bacteria would be helpful in differentiating it from other bacteria agents - *(ARMS May 05)*
a) Ability to grow on blood agar
b) Ability to produce catalase
c) Fermentative attack on sugars
d) Motility at 25°C

1094. In patient with listeria meningitis who is allergic to penicillin the treatment of choice is - *(PGI 99)*
a) Vancomycin
b) Gentamycin
c) Trimethoprim-sulphamethoxazole
d) Ceftriaxone

COMPYLOBACTOR

1095. Regarding Campylobacter jej uni not true is -
a) Most common cause of Campylobacteriosis
b) Poultry is the cause of the disease
c) Human is the only reservoir *(ARMSNov 09, AI 11)*
d) Causes Gillian barrie syndrome

1079) a 1080) a 1081)b 1082)bl083)b 1084)c 1085)c 1086)b 1087)a 1088)a 1089)d 1090)c 1091)d 1092)a 1093) d 1094) c 1095) c

1096. Campylobacter culture media are - *(PGIDec 08)*
a) Schaedler'sagar b)CVA medium
c) Regan-Lowe medium d) Skirrow medium
e) Campylobacter blood agar

1097. A 35 year old patient complains of abdominal cramps along with profuse diarrhea. The treating physician wants to process the stool specimen for isolation of Campylobacter jejuni. Which of the following is the method of choice for the culture of stool -
a) Culture on TCBS medium incubated at 37°C under aerobic conditions *{AIIMS Nov 04, AI05)*
b) Culture on Skirrow's medium incubated at 42°C under micro-aerophilic conditions.
c) Culture on MacConkey's medium incubated at 42°C under anaerobic contions
d) Culture on Wilson and Blair's medium incubated at 37° under microaerophilic conditions

HELICOBACTER

1098. Bacterial genome has been completely recognised for which one of the following agents - *(AI 98)*
a) H. pylori
b) Yersinia enterocolitis
c) Campylobacter jejuni
d) Streptococcus pneumoniae

1099. What is true about H. pylori - *(PGI Dec 05)*
a) Gram -ve Cocci curved
b) Gram +ve Cocci straight
c) Gram +ve bacilli curved
d) Gram -ve bacilli straight
e) Gram -ve spiral bacteria

1100. True about H. pylori is - *(AIIMS 97)*
a) Vacuolating cytotoxin
b) Antiurease antibody detection specific for type I
c) Found in the jejunum
d) Treatment is $Al(OH)_2$

1101. True about H. Pylori is all except - *(PGI June 2000)*
a) It splits urea & produces ammonia to survive
b) Produces gastric carcinoma
c) Gram -ve curved rods
d) Cag-A gene is not associated with risk of duodenal ulcer

1102. True about H. Pylori - *(PGI June 04)*
a) It is flagellated
b) Involved in causation of peptic ulcer disease
c) Hypergastrinemia caused by it
d) Eradication leads to improved life style
e) It is a gram -ve organism

1103. Seven sheathed flagella is seen in -*(NEET/DNB*
a) V cholera b) H pylori *Pattern)*
c) Ps aeroginosa d) Spirochetes

1104. It is true about H. Pylori that it - *(DPG10)*
a) Is gram -ve spiral organism
b) Is a protozoa
c) Causes chronic gastritis in adults due to reinfection
d) Treatment prevents gastric lymphoma

1105. True about helicobacter pylori are all except -
a) Urea breath test is diagnostic *(AI 98)*
b) Gram negative, flagellate bacilli
c) Risk factor for development of adenocarcinoma of stomach
d) It provides life long immunity

1106. Helicobacter pylori is not associated with -
a) Gastrointestinal lymphoma *(AIIMS Nov 03)*
b) Gastric cancer
c) Gastric leiomyoma
d) Peptic ulcer

1107. All are true regarding H.Pylori except - *(AIIMS Sept*
a) Less prevalent in developing countries *96,*
b) Ulcer is caused by toxigenic strains *Feb 97)*
c) Urea breath+ve test is a rapid method of detection
d) Gram-ve organism

1108. All of the following are true about Helicobacter pylori except - *(AI 98)*
a) About 50% of world population affected
b) 85% of population is affected in some developing contries
c) All childrens in developing countries have immunity by five years of age
d) Infection is common in low socioeconomic status

1109. True about H.pylori- *(PGIDec 2000)*
a) Seen in 85 to 90% cases of gastric ulcer
b) Seen in 20 to 25% cases of duodenal ulcer
c) Transmitted from man to man, feco-orally & by orogastric route
d) Common in adults of developing countries

1110. True about Helicobacter pylori is - *(AI 98)*
a) Culture and gram staining of biopsy is the gold standard investigation
b) Controlled urea breath is negative with massive infection.
c) Anti urease antibody are produced only by invasive strains
d) Urease activity provides protective environment to the bacilli.

1111. Non invasive test for H.pylori - *(PGI June 08)*
a) Rapid urease test
b) Urease breath test
c) Stool antigen assay
d) Stomach aspiration culture
e) Biopsy

1112. Maximum urease +ve is produced by - *(PGI2000)*
a) H. pylori b) P. Mirabilis
c) K. rhinomatis d) Ureaplasma

1113. The most sensitive test for H. pylori is - *(PGI 99)*
a) Breath test
b) Rapid urease test
c) Culture of biopsy
d) Microscopy of biopsy

1096) b,d,e 1097)b 1098)a 1099)e 1100)a 1101)d 1102)A11 1103)b 1104)d 1105)d 1106)c 1107)a 1108)c 1109)c 1110)d 111 1)b,c 1112)a 1113)a

1114. Which of the following is false regarding H pylori -
a) With chronic infection urease breath test become negative *(AIIMS 2000)*
b) H. pylori infection remains life long if untreated
c) Endoscopy is diagnostic
d) Toxigenic strains usually cause ulcer

1115. H. pylori true about - *(PGIJune04)*
a) Gram +ve spiral organism
b) It is a protozoa
c) Causes chronic gastritis in adults due to re-infection
d) Treatment causes regression of gastric lymphoma
e) Duodenal mucosa normal

1116. Regarding H. pylori, all are true except -
a) Gram-negative bacillus *(PGI June 02)*
b) Strongly associated with duodenal ulcer (DU)
c) Associated with lymphoma
d) C-14 urea breath test is used in diagnosis
e) It should be eradicated in all cases whenever detected

1117. Rapid urease positive test is done in - *(PGIDec 05)*
a) H. Pylori b) S. Aureus
c) Klebsiella d) Staphylococcus

LEGIONELLA

1118. All of the following are correct regarding Legionella except - *(AIIMS Nov 04)*
a) Legionella can be grown on complex media
b) Legionella pneumophila serogroup 1 is the most common serogroup isolated from humans
c) Legionella are communicable from infected patients to others
d) Legionella pneumophila is not effectively killed by polymorphonuclear leukocytes

1119. A 60-year old man is diagnosed to be suffering from Legionnaires' disease after the returns home from attending a convention. He could have acquired it -
a) From a person suffering from the infection while travelling in the aeroplane *(AI 2003)*
b) From a chronic carrier in the convention center
c) From inhalation of the aerosol in the air conditioned room at convention center
d) By sharing an infected towel with a fellow delegate at the convention

1120. Legionnaire disease is caused by-
a) Motile gram positive *(NEET/DNB Pattern)*
b) Motile gram negative
c) Non-motile gram positive
d) Non-motile gram negative

1121. Devi, a 28 year female, has diarrhea, confusion high grade fever with bilateral pneumonitis. The diagnosis is- **(***AI2000***)**
a) Legionella
b) Neisseria meningitidis
c) Streptococcus pneumoniae
d) H. influenzae

1122. Pontaic fever is caused by - *(NEET/DNB Pattern, PGI Dec 07, Nov 11)*
a) Legionella b) Listeria
c) Scrub typhus d) Leptospira
e) Rickettsia

1123. Which of the following is a good media to use for diagnosis of Legionnaires disease - *(AIIMS Nov 01)*
a) Thayer Martin Media b)BCYEagar
c) Bordet Gengu media d) Chocolate agar

1124. BCYE medium is used to culture - *(PGI 99)*
a) Mycoplasma b)T. pallidum
c) H.pylori d) Legionella

1125. A elderly male patient presented with fever, chest pain and dry cough, sputum cultured on charcoal yeast medium, the organism is -*(AIIMSNov 11, 06,*
a) H. influenzae b) Moraxella cartarrhalis *AI 07)*
c) Legionella d) Burkholderia cepacia

1126. True about legionella - *(PGI Dec 06)*
a) Epidemics (+)
b) Splenomegaly
c) Easily seen on sputum
d) Scanty neutrophils with fed organisms
e) Purulent sputum common

RICKETTSIACEAE

1127. The following is the etiological agent of Rocky mountain spotted fever - *(AIIMS May 05)*
a) Rickettsia rickettsii
b) Rochalimaea quintana
c) Rickettsia tsutsugamushi
d) Coxiella burnetii

1128. Mite is a vector for - *(PGI June 08)*
a) R.typhi b) R.prowazeki
c) R.rickettsii d) R.tsutsugamushi
e) R.conori

1129. Transovarian transmission is a feature *oi-(PGI98)*
a) Scrub fever b) Epidemic typhus
c) Endemic typhus d) Trench fever

1130. Scrub typhus is transmitted by - *(AIIMSNov 07)*
a) Reduvid bug b)Trombiculidmite
c) Enteric pathogens d) Cyclops

1131. Mite transmits - *(AI 91)*
a) Scrub typhus b) Trench fever
c) Endemic typhus d) Epidemic typhus

1132. Scrub typhus is caused by - *(Maharashtra 10)*
a) R. tsutsugamushi b) R. Prawazekii
c) R. rickettsii d) R. Akari

1133. Q fever is caused by - *(Kerala 94)*
a) Rickettsia tsutsugamushi
b) R.prowozekii
c) R. quintana
d) C. bumetti

1114) a 1115) d 1116) e 1117)a 1118) c 1119)c 1120)b 1121)a 1122)a 1123)b 1124)d 1125)c 1126)a 1127)a
1128) d 1129) a 1130)b 1131)a 1132)a 1133)d

1134. All are true about Rickettsia except -
a) obligate intracellular *(AIIMS June 99)*
b) Gram +ve bacillus
c) Arthropods are vector
d) Weil felix test is diagnostic

1135. Which rickettesiae are able to grow in cell free media -
a) R. Quintana b) R. Rickettsii
c) R. Typhi d) R. Tsutsugamushi

1136. A man with very high fever shows strongly positive agglutination test with OXK antigen. The most likely diagnosis is- *(AI2K)*
a) Tsutsugamushi fever b) Trench fever
c) Undulent fever d) Relapsing fever

1137. All of the following statement are true regarding Q fever except - *(AI 03)*
a) It is zoonotic disease
b) Human disease is characterized by an interstitial pneumonia
c) No rash is seen
d) Weil-felix reaction is very useful for diagnosis

1138. Weil felix reaction for Scrub typhus shows positivity for - *(NEET/DNB Pattern)*
a) OXK b) OXK+ 0X19
c) OX-2 d) OX-19

1139. Tunica reaction is seen in - *(AIIMS 79, 81)*
a) H. influenzae b) Plague
c) R. mooseri * d) B. Anthrax

1140. Neill-Mooser reaction is used to diagnose- *(PGI99)*
a) Rickettsiae b)Chlamydiae
c) Mycoplasma d) Herpes

1141. Weil felix reaction with OXK antigen indicates infection with - *(JIPMER 90)*
a) R. tsutsugamushi b) R. Mooseri
c) R. Quintana d)R.Akari

1142. Weil Felix test is useful in diagnosis of the following except- *(MH11)*
a) Epidemic typhus b) Scrub typhus
c) RMSF d) Trench fever

1143. For all of the following Weil Felix reaction is diagnostic except - *(SGPGI05)*
a) Endemic typhus b) Scrub typhus
c) Epidemic typhus d) Q fever

1144. About rickettsiae, all are true except - *(UPSC 09)*
a) These are transmitted by arthropod vectors
b) Eschar is not seen in RMSF
c) Weil-Felix reaction may be diagnostic
d) Cephalosporins are drugs of choice

1145. The primary site of multiplication of rickettsial organisms is in the -
a) Parenchymal cells of the liver
b) Endothelial cells of small vessels
c) Media of arteries
d) Adventitia of all blood vessels

1146. An army jawan posted in remote forest area had fever and headache. His fever was 104° F and pulse was 70 per min. He had an erythematous lesion of about 1 cm on the leg surrounded by small vesicles, along with generalized lymphadenopathy at the time of presentation to the referral hospital. His blood sample was collected to perform serology for the diagnosis of Rickettsial disease. Which one of the following results in Weil-felix reaction will be diagnostic in this clinical setting - *(AI 05)*
a) High OX - 2 b) High OX -19
c) HighOX-K d) High OX-19 and OX-2

1147. A patient complained of chills and fever following a louse bite 2 weeks before. He had rashes all over the body and was delirious at the time of presentation to the hospital and subsequently went into coma. A provisional diagnosis of vasculitis due to Rickettsial infection was made. Which one of the following can be causative agent - *(AI 06)*
a) Rickettsia typhi b) Rickettsia rickettsiae
c) Rickettsia prowazekii d) Rickettsia akari

1148. All are true about B. Quintana except -
a) Causes trench fever *(NEET/DNB Pattern)*
b) Not detected by weil felix reaction
c) Recurrence is common
d) Tick is the vector

1149. It is true regarding endemic typhus that -
a) Man is the only reservoir of infection *(AIIMS 06)*
b) Flea is a vector for the disease
c) The rash developing into eschar is a characteristic presentation
d) Culture of the etiological agent in tissue culture is a diagnositc

1150. Which of the following statements is true about endemic typhus - *(AI 03)*
a) Is caused by R. rickettsii
b) Is transmitted by bite of fleas
c) Has no mammalian reservoir
d) Can be cultured in chemical defined culture medium

1151. Which is not transmitted by arthopod-
a) Rickettsia prowazakii *(AIIMS Feb 97)*
b) Coxiella burnetii
c) Rickettsia akari
d) Rickettsia rickettsii

1152. Mode of transmission of Q fever - *(AIIMS 04)*
a) Bite of infected louse b) Bite of infected tick
c) Inhalation of aerosal d) Bite of infected mice

1153. Rickettsiae- *(AIIMS94)*
a) Multiply only within living cell
b) Produce typhus fever of epidemic type only
c) Transmitted by athropod vectors
d) Respond to tetracycline therapy

1154. A man present with fever, chills 2 weeks after a louse bite. There was maculopapular rash on the trunk which spread peripherally. The cause of this infection can be - *(AIIMS 03)*
a) Scrub typus b) Endemic typhus
c) Rickettsialpox d) Epidemic typhus

1134) b 1135) a 1136)a 1137)d 1138)a 1139)c 1140)a 1141)a 1142)d 1143) d 1144)d 1145)b 1146)c 1147)c
1148) d 1149) b 1150) b 1151)b 1152)c 1153)a,c,d 1154)d

1155. Which of the following is used for Rickettsia -
a) Weil-Felix reaction *(NEET/DNB Pattern)*
b) Rose-waler test
c) Poul-Bunnel test
d) VDRL

CHLAMYPIAE

1156. Which of the following is an obligate parasi *ter(AI98)*
a) Mycoplasma b) Chlamydia trachomatis
c) Gram-ve bacilli d) Gram+ve cocci

1157. The following statements are true regarding Chlamydia except - *(AlIMS May 05)*
a) Erthromycin is effective for therapy of Chamydial infections
b) Their cell wall lacks apeptidoglycan layer
c) They can grow in cell free culture media
d) They are obligate intracellular bacteria

1158. Chlamydia trachomatis false is -*(AlIMSNov 06, AI10,*
a) Elementary body is metabolically active *07)*
b) It is biphasic
c) Reticulate body divides by binary fission
d) Inside the cell it evades phagolysosome

1159. Inclusion body is seen in - *(NEET/DNB Pattern)*
a) Rickettsiae b) Chlamydia
c) Mycoplasma d)H. Pylori

1160. All of the following are true about Chlamydia except-
a) Gram positive *{NEET/DNB Pattern)*
b) Causes trachoma
c) Causative organism of psittacosis
d) Are also called basophilic viruses

1161. Which one of the following statements is true regarding Chlamydia pneumoniae - *(AI 05)*
a) Fifteen serovars have been identified as human pathogens.
b) Mode of transmission is by the airborne bird excreta
c) The Cytoplasmic inclusions present in the sputum specimen are rich in glycogen
d) The group specific antigen is responsible for the production of complement fixing antibodies

1162. Chlamydiaeare- *(Kerala 94)*
a) Viruses b) Fungi
c) Protozoa d) Bacteria

1163. Chlamydia trachomatis true is - *(Kar 09)*
a) Is a yeast
b) Is an intracellular organism
c) Forms extracellular bodies which are diagnostic
d) Is never demonstrable in conjuctival scrapping

1164. Lymphogranuloma venerum is caused by - *(MH11)*
a) Chlamydia trachomatis
b) Calymmatobacter granulomatis
c) Haemophilus ducreyii
d) Treponema pallidum

1165. Infectious part of chlamydia is - *(Jharkhand 08)*
a) Elementary body b)KPbody
c) Reticulate body d) None

1166. Chlamydia trachomatis serovars D-K cause -
a) Arteriosclerosis *(AI98)*
b) Trachoma
c) Lymphogranuloma venereum
d) Urethritis

1167. Which of the following regarding chlamydia trachomatis is true - *(AI89)*
a) Gram negative b) Susceptible to pencillins
c) Cause infertility d) Transmitted parenterally

1168. Chlamydia causes all the following diseases except-
a) Non-gonococcal urethritis *(AI95)*
b) Pneumonia
c) Trachoma
d) Parotitis

1169. Chlamydia trachomatis is associated with the following except - *(AI 2005)*
a) Endemic trachoma
b) Inclusion conjunctivitis
c) Lymphogranuloma venereum
d) Community acquired pneumonia

1170. Chlamydia trachomatis does not cause -
a) Salpingitis b) Vulvitis *(AIIMSDec94)*
c) Cervicitis d) Urethritis

1171. Chlamydia causes - *(PGIDec 2000)*
a) Infertility
b) Pneumothorax
c) Pelvic inflamatory disease
d) Cong, malformation in fetus

1172. Chlamydia does not cause - *(AI 2000)*
a) Q fever b) Non gonococcal urethritis
c) Trachoma d) Salpingitis

1173. Chlamydial infection is a/w - *(PGI Dec 05)*
a) Coronary heart disease
b) LGV
c) Ophthalmia neonatorum
d) Atypical pneumonia
e) Atypical endocarditis

1174. Chlamydia trachomatis infection commonly causes- **(***MP98)*
a) Infertility b) Post coital bleeding
c) Amenorhoea d) Malignancy

1175. Chlamydia trachomatis infection causes the following exept - *{Corned 0 7)*
a) Pneumonitis b) Rhinitis
c) Conjunctivitis d) Urethritis

1176. The following is not a method of isolation of chlamydia from clinical specimens -*(AIIMS Nov 05)*
a) Yolk sac inoculation
b) Enzyme immunoassay
c) Tissue culture using irradiated McCoy cells
d) Tissue culture using irradiated BHK cells

1177. Which of the following is used for isolation fo chlamydia- *(AI 10)*
a) Microimmunofluoroscence
b) Yolk sac ioculation
c) ELISA
d) Immunofluroscence

1155) a 1156) b 1157)c 1158)a 1159)b 1160)a 1161)d 1162)d 1163)b 1164)a 1165)a 1166)d 1167)a,cll68)d 1169) d 1170)b 1171)a,c 1172) a 1173) All 1174) a 1175)b 1176)b 1177)b

1178. Chlaymydia in asymptomatic carriers, the most sensitive test is - *(AIIMS Nov 09)*
a) Tissue culture b) Nucleic acid amplification test
c) Serology d) Serum electrophoresis

1179. The most sensitive method for detecting cervical Chlamydia trachomatis infection is - *(AI 04)*
a) Direct fluorescent antibody test
b) Enzyme immunoassay
c) Polymerase chain reaction
d) Culture on irradiated McConkey cells

1180. Most common diagnostic test in LGV is - *(PGI93)*
a) Fluorescent Antibody
b) Complement fixation test
c) Cell culture
d) Frei's test

1181. Chlamydia grows in which of the following cell lines-
a) HeLa *(PGI Dec 01)*
b) HeP2
c) McCoy
d) Human diploid fibroblast series
e) Vero cells

1182. All of the following statements about Chlamydia trachomatis are true except - *(AI 09)*
a) Genital chlamydial infections are often asymptomatic
b) Can be cultured
c) Inclusion conjuctivitis is caused by C. trachomatis serotypes D-K
d) Penicillin is the treatment of choice

1183. Chlamydia psittacosis all are true except - *(AI07)*
a) Acquired from bird's droppings
b) Causes urethreitis
c) Causes pneumonia
d) Treatment is tetracycline

1184. Levinthal Coles Lillie bodies are seen in -
a) IGV b) Psittacosis *(AIIMS 85)*
c) KalaAzar d) Chicken pox

MISCELLANEOUS

1185. Ehrlichia chaffeensis is causative agent of -
a) HME b) HGE *(NEET/DNB Pattern)*
c) Glandular fever d)None

1186. All cause fournier gangrene *except-(NEET/DNB*
a) Staphylococcus b) Streptococcus *Pattern)*
c) Clostridium d) Bacteroides

1187. Necrotizing fascitis is caused by - *(NEET/DNB*
a) Staphylococcus aureus *Pattern)*
b) Beta hemolytic streptococci
c) Clostridium perfringens
d) Pneumococcus

1188. Which of the following regarding bacterial drug resistance is not true - *(AIIMSMay 12, Nov 11,*
a) Most bacterial drug resistance is due *AI 12)*
to production of penicillin degrading enzymes
b) Plasmid mediated resistance is always transmitted vertically
c) Complete elimination of target produces resistance to vancomycin
d) Alteration in target protein leads to pneumococcal resistannce

1189. All of the following agents have polysaccharide capsule related antigen antibody responses except- *(AI 11)*
a) Pneumococcus b) Meningococcus
c) Haemophilus influenza d) Bordetella pertussis

1190. Which of the following is not true about transmission - *(AI09)*
a) Legionella may be transmitted through water aerosols
b) Listeria may be transmitted through refrigerated food
c) Leptospirosis may be transmitted through water contaminated with rat urine
d) Tetanus may be transmitted through dust and droplets

1191. Septicemia is -
a) Bacteria in blood
b) Toxin in blood
c) Pus in blood
d) Multiplication of bacteria and toxins in blood

1192. Which of the following organisms does not enters through abrasions in the skin - *(NEET/DNB Pattern)*
a) E rhusiopathiae b) E corrodens
c) C hominis d) C violaceum

1193. HACEK group includes all except - *(AIIMSNov 07*
a) Hemophilus aprophillus *May 08)*
b) Acinetobacter baumanni
c) Eikenella carrodens
d) Cardiobacterium hominis

1194. Cat scratch disease is- *(PGI 98)*
a) Associated with positive Frei skin test
b) Caused by a DNA virus
c) Associated with a pathognomonic histological picture
d) Associated with regional lymphadenopathy
e) Associated with a positive Hangar-Rose test

1195. Bartonella henselae causes all except -
a) Oroya fever *(NEET/DNB Pattern)*
b) Cat scratch disease
c) Bacillary angiomatosis
d) SABE

1196. Rat bite fever may be caused by - *(PGI 85)*
a) Leptospira canicola
b) Streptobacillus moniliformis
c) Borreliarecurrentis
d) Spirillum minus

1197. An 8 year old child with history of pain & discharge from right ear presents with fever, neck rigidity & a positive Kerning's sign. Discharge was stained with Gram stain which revealed Gram positive cocci. Which of the following is the most likely organism?
a) H. influenzae b) Staphylococcus *(AI 11)*
c) Pneumococcus d) Pseudomonas

1178)b 1179)c 1180)c 1181) a,cl 182) d 1183)b 1184)b 1185)a 1186)c 1187)b 1188)b 1189)d 1190)d 1191)d 1192)c 1193)b 1194)c,d 1195) a 1196)b,d 1197)c

1198. A female presents with symptoms and signs suggestive of meningitis. MR1 reveals a ring enhancing lesion in the frontotemporal region while CSF grows Gram positive bacilli. Other findings are minimally abnormal. Which of the following organisms is the most likely etiological agent -
a) Listeria monocytogenes *(AI11)*
b) Hemophilus influenza
c) Pneumococcus
d) Staphylococcal aureus

1199. Atypical pneumonia can be caused by the following microbial agents except - *(AI 05)*
a) Mycoplasma
b) Legionella pneumophila
c) Human corona virus
d) Klebsiella pneumoniae

1200. Enterotoxins are produced by all except - *(AI 89)*
a) Clostridium perfringens
b) Staphylococcus aureus
c) Streptococcus pyogenes
d) Bacillus cereus

1201. Man is the terminal end for - *(AIIMS 79)*
a) Gonococcus b) Treponema
c) Tetanus d) Ankylostomiasis

1202. Chancre redux is a clinical feature of -
a) Early relapsing syphilis
b) Late syphilis
c) Chancroid
d) Recurrent herpes simplex infection

1203. Most common organism causing meningitis in patients with CSF leak - *(AI 10)*
a) Pneumococcus b) H. influenzae
c) Staphylococcus d) E.coli

1204. Darting motility which occur in V.cholerae, also found in - *(PGI Dec 08)*
a) Shigella b) Campylobacter jejuni
c) Pneumococcus d) Bacillus anthrax
e) Aeronomas

1205. Which toxin acts by ADP ribosylation- *(PGI June 07)*
a) Botulinum toxin b) Shiga toxin
c) V.cholerae toxin d) Diphtheria toxin
e) Pertussis toxin

1206. Urease negative is - *(AI 99)*
a) E. coli b) Proteus
c) Klebsiella d)Staphylococci

1207. Most common agents responsible for human bite infections are - *(AI 98)*
a) Gram - ve bacilli b) Gram + ve bacilli
c) Spirochaete d) Anaerobic streptococci

1208. Ascending UTI caused by - *(PGI June 05)*
a) Salmonella b)T.B.
c) E.coli d) Chlamydia
e) Klebsiella

1209. In a splenectomized patient there is increase of infection by all the organisma except - *(SGPGI05)*
a) Pneumococci b) Klebsiella
c) H.influnzae d) Staph.aureus

1210. Red leg disease is caused by- *(PGI 01)*
a) Pseudomonas b) Moudly sugar cane fibre
c) Coniosporium d)Aeromonas

1211. Serological diagosis is made in - *(PGI Nov 10)*
a) Actinomycosis b) T.B.
c) Syphilis d) Gonorrhoea
e) Q fever

1212. Endotoxin causes - *(NEET/DNB Pattern)*
a) Diarrhea b) Muscle damage
c) Septic shock d) None

1213. Which is the most common micro-organism known to cause tropical pyomisitis ? *(UPSC 07)*
a) Streptococcus viridans
b) Staphylococcus albus
c) Klebsiella pneumoniae
d) Staphylococcus aureus

1214. Post operative parotitis is caused by - *(Delhi 09)*
a) Staph aureus b) Streptococcus
c) E.coli d) Pneumococcus

1215. Neonatal meningitis acquired during passage through birth canal is due to - *(TN 2002)*
a) Streptococcus agalactiae
b) S. equisimilus
c) S. pyogenes
d) Pnemococci

1216. Causative agent of SABE should be culture on -
a) Nutrient agar b) Blood agar *(UP 08)*
c) LJ medium d) Tellurite broth

1217. Which of the following is lanceolate - *(PGI 79, 82)*
a) Cl. tetani b) Donovania
c) Pneumococci d) Meningococci

1218. Draughtman concentric rings on culture are produced by- *(AMU 87, UP 05)*
a) Yersina pestis b) H. ducreyi
c) B. pertusi d) Pneumococi
e) B. anthracis

1219. Most common cause of community acquired pneumonia- *(UP08)*
a) Strep pneumoniae b) Kleb pneumoniae
c) Vibrio cholera d) H. influenzae

VIROLOGY

GENERAL PROPERTIES OF VIRUSES

1220. DNA covering material in a virus is called as -
a) Capsomere b) Capsid *(PGI96)*
c) Nucleocapsid d) Envelope

1221. All of the following are general properties of Viruses except- *(AI94)*
a) May contain both DNA and RNA
b) Form extracellular infectious particles
c) Heat labile
d) Not affected by antibiotics

1198) a 1199) d 1200) c 1201) c 1202) a 1203) a 1204) b 1205)c,d,e 1206) a 1207) d 1208)c,d,e 1209) d 1210) d 1211)c,d,e 1212)c 1213)d 1214)a 1215)a 1216)b 1217)c 1218)d 1219)a 1220)b 1221)a

1222. Both intranuclear and cytoplasmic inclusion is seen in - *(NEET/DNB Pattern)*
a) Poxvirus b) Herpesvirus
c) Measles virus d) Mumps virus

1223. Bollinger bodies are seen in - *(NEET/DNB Pattern)*
a) Chickenpox b)Cowpox
c) Fowlpox d) Smallpox

1224. Appearance ofcowdry type Ainclusion bodies -
a) Granular *(NEET/DNB Pattern)*
b) Circumscribed
c) In polio
d) None

1225. The symmetric protein shell which encases the nucleic acid core of virus - *(MAHE 05)*
a) Capsomere b) Capsid
c) Basidiomycetes d) Fungi imperfecti

1226. All of the following are having lipid envelope except-
a) HIV b) Rabies virus *(AMU 05)*
c) Varicella d) Enterovirus

1227. Lipid envelope is found in which virus - *(PGI98)*
a) Reo b) Herpes
c) Picoma d) All of the above

1228. In which of the following has genome double stranded nucleic acid - *(PGI May 10)*
a) Orthomyxoviruses b) Poxviruses
c) Parvoviruses d) Reoviruses

1229. Which of the following viruses possesses DNA a capsid with icosahedral symmetry and no lipid envelope-
a) Herpesvirus b) Adenovirus *(PGI87)*
c) Poxvirus d) Papovavirus

1230. HPV belongs to - *(NEET/DNB Pattern)*
a) Papova virus b) Parvovirus
c) Herpes virus d) Poxvirus

1231. Which of the following is not an RNA virus -
a) Ebola b) Simian 40 *(AIIMSNov08)*
c) Rabies d) Vesicular stomatitis virus

1232. Which is enveloped virus - *(NEET/DNB Pattern)*
a) Dengue virus b) Norwalk virus
c) Hep A virus d) Adenovirus

1233. Non-enveloped ss-RNA virus *is-(NEET/DNB Pattern)*
a) Picomavirus b) Poxvirus
c) Retrovirus d) Bunyavirus

1234. Which of the following virus has negative sens RNA? *(AI98)*
a) Rabies b) Reovirus
c) Coronavirus d)Calci

1235. Negative sense nuclei acid genome is found in -
a) Poliovirus b) Rabies *(PGI May 10)*
c) Measles d) Picomavirus
e) Influenzae

1236. The virus with smallest genome is -
a) Reovirus b) Parvovirus
c) Picomavirus d) HTV

1237. Smallest DNA virus is -
a) Herpes vims b) Adenovirus
c) Parvovirus d) Poxvirus

1238. Which of the following does not possess both DNA &RNA- *(Kerala 96)*
a) Bacteria b) Fungus
c) Virus d) Spirochete

1239. Which one given below is a DNA virus ? *{Corned 08)*
a) Polio vims b) Adenovirus
c) Parvovirus d) Hepatitis A vims

1240. Double stranded RNA is seen in - *(JIPMER 93)*
a) Reovirus b) Rhabdovims
c) Parvovirus d) Retrovirus

1241. Positive sense nucleic acid genome is found in -
a) Polio vims b) Papovavims *(UP 09)*
c) Influenza d) Picomavims

1242. Segmented genome is found in - *(AIIMSJune 98)*
a) Retrovirus b) Rotavims
c) Poliovirus d) Rhabdovims

1243. Segmented RNA is found in - *(AIIMSJune 97,A191)*
a) Influenza vims
b) Rabies vims
c) Herpes vims
d) Molluscum contagiosum vims

1244. Segmented double stranded RNA virus is seen in -
a) Reovims b)Myxovims *(PGI 97)*
c) Rabies d) Parvovirus

1245. Viruses can be isolated from clinical samples by cultivation in the following except - *(AI 05)*
a) Tissue culture b) Embryonated eggs
c) Animals d) Chemically defined media

1246. Hep-2 cells are a type of - *(Karn 95)*
a) Primary cell cultures b) Diploid cell strain
c) Continuous cell lines d) Explant culture

1247. Which of the following is primary cell line -
a) Chick embryo fibroblast *(NEET/DNB Pattern)*
b) Hela cells
c) Vero cells
d) WI-38

1248. Which of the following is a primary cell culture -
a) Chick fibroblast *(NEET/DNB Pattern)*
b) Hela
c) HEP-2
d) HLr8

1249. Influenza virus culture is done on -
a) Chorioallantoic membrane *(NEET/DNB Pattern)*
b) Allantoic cavity
c) Yolk sac
d) All

1250. Human fibroblast cell line is used for cultivation of -
a) Adenovims *(NEET/DNB Pattern)*
b) Poliovirus
c) HIV
d) Measles

1251. Which is not a cytopathic effect of virus -
a) Syncytium formation
b) Budding
c) Ballooning and floating
d) Focal degeneration

1222) c 1223) c 1224) a 1225) b 1226) d 1227) b 1228) b,d 1229) b,d 1230) a 123 l)b 1232) a 1233) a 1234) a 1235) b,c,e 1236) b 1237) c 1238) c 1239) b 1240) a 1241) a,d 1242) b 1243) a 1244) a 1245) d 1246) c 1247) a 1248) a 1249) b 1250) b 125 l)b

1252. Which of the following produces pocks on chorioallantoic membrane of chick embryo -
a) Myxovirus b) Varicella*(AlIMSDec94)*
c) Herpes simplex d) Cytomegalovirus

1253. Pocks on chick embryo are formed by all except -
a) Variola b) Vaccinia *(PGI97)*
c) Chickenpox d)Cowpox

1254. Viral plaque is made in lab for - *(AIIMS Sept 96,*
a) Quantitative assay of infectivity of virus *AI98)*
b) Diagnosis of virus
c) Qualitative assay of infectivity of virus
d) Type of virus

1255. Virus quantification is done by- *(NEET/DNB Pattern)*
a) Egg inoculation b) Hemadsorption
c) Plaque assay d) Electron microscopy

1256. Laboratory diagnosis of viral respiratory tract infection can be established by all of the following tests except - *(AI 04)*
a) Detection of virus specific IgM antibodies in single serum specimen
b) Demonstration of viral antigens by indirect immunofluorescence assay in nasopharynegeal washing
c) Isolation of viruses using centrifugation enhanced culture
d) Detection of viral heamagglutionation inhibiting (HAI) antibodies in a single serum specimen

1257. Reverse transcriptase polymerase chain reactions can aid in diagnosis of all of the following viral infections except - *(AI 97)*
a) Adenovirusb) Astrovirus
c) Rotavirus d) Poliovirus

1258. Vaccine preparation requires which virus as vector-
a) Rhinovirus b) Vaccinia *(PGI June 01)*
c) Adenovirus d) Ebola
e) Hepatits B

1259. Susceptible cultured cells infected with which of the following viruses would exhibit hemadsorption with the appropriate erythocyte - *(AIIMS 93, 84)*
a) Sindbis virus b) Rabies virus
c) Measles virus d) Respiratory syncytial virus

1260. Property of elution is found in - *(PGI 96)*
a) Myxoviras b) Togavirus
c) Parvovirus d) Adenovirus

1261. One virus particle prevents multiplication of second virus. This phenomena is - *(PGI 96)*
a) Viral interference b) Mutation
c) Supervision d) Permutation

1262. Von Magnus phenomenon- *(PGI 97)*
a) Is a normal replicative cycle
b) Virus yield has low hemagglutination
c) Virus has high infectivity
d) Virus yields has high hemagglutination titre but low infectivity

1263. Vaccine prepared by embryonated Hen's egg are -
a) Measles b) Rabies *(PGI June 04)*
c) Rubella d) Varicella

BACTERIOPHAGE

1264. Bacteriophages are mostly needed for -*(AIIMS 97)*
a) Bacterial identification
b) Epidemiologically
c) As antibacterial agent
d) Conversion property in bacteria

1265. Lysogenic conversion is - *(PGI 96)*
a) New properties in a bacterium due to integration of phage genome
b) Transfer of DNA from one bacterium to another by a bacteriophage
c) Transfer of free DNA
d) Transfer of genome during physical contact

1266. Lambda phage which of the following is true -
a) It causes mad cow disease *(AIIMS May 11)*
b) Lysogenic to lytic conversion cannnot occur
c) Lysogenic form incorporates in host DNA & remain dormant
d) Lytic phase incorporates in host DNA, proliferate & causes rupture of cell

1267. All of the following statements are true about bacteriophage except- *(AIIMS Nov 08)*
a) It is a virus that infect bacteria
b) It helps in transduction of bacteria
c) It imparts toxigenicity to bacteria
d) It transfers only chromosomal gene

1268. Which of the following statement is true about bacteriophage - *(AIIMS May 11)*
a) It is a bacterium
b) It helps in transformation
c) It imparts toxigenicity to bacteria
d) It transfers only chromosomal gene

1269. Phage typing is useful as an epidemiological tool in all, except -
a) Salmonella b) Staph aureus
c) V. cholerae d) Shigella dysenteriae

1270. Phage typing is widely used for the intraspecies classification of one of the following bacteria -
a) Staphylococci
b) E. coli
c) Klebsiella pneumoniae
d) Pseudomonas aeruginosa

POXVIRUSES

1271. Small pox belongs to which class of poxviruses -
a) Parapoxvirus *(NEET/DNB Pattern)*
b) Capripoxvirus
c) Leporipox virus
d) Orthopoxvirus

1272. Which of the following is not a pox \irm-*(AIIMS 92)*
a) Cow pox b) Molluscum contagiosum
c) Smallpox d) Chicken pox

1273. Following virus is of pox virus -*(NEET/DNB Pattern)*
a) Variola b) Coxsachie
c) ECHO d) HSV

1252) c 1253) c 1254)a 1255)c 1256)d 1257)a 1258)b,c 1259)b,c 1260)a 1261) a 1262)d 1263)b 1264)a 1265)a 1266)c 1267) d 1268)c 1269)d 1270)a 1271)d 1272)d 1273)a

1274. Brick-shaped virus - *(NEET/DNB Pattern)*
a) Chicken pox b) Small pox
c) CMV d)EBV

1275. Inclusion bodies of vaccinia is known as - *(PGI86)*
a) Guamieri bodies b) Negri bodies
c) Asteroid bodies d) Schuffner dots

1276. Which virus cannot be cultivated-
a) Vaccinia *(NEET/DNB Pattern)*
b) Variola
c) Molluscum contagiosum
d) Cowpox

1277. Which cox wont grow in egg, animal cells -
a) Cowpox *(NEET/DNB Pattern)*
b) Vaccinia
c) Variola
d) Molluscum

1278. Most common molluscum *\xi'm-(NEETZDNB Pattern)*
a) 1 b) 2
c) 3 d) 4

1279. Umblicated nodules are produced by-
a) Poxvirus *(NEET/DNBPattern)*
b) Enterovirus
c) Rhinovirus
d) Myxovirus

HERPESVIRUSES

1280. Varicella are classified under- *(AI96)*
a) Enterovirusb) Retrovirus
c) Poxvirus d) Herpesvirus

1281. HHV-6B causes -
a) Carcinoma cervix
b) Carcinoma endometrium
c) Clear cell carcinoma
d) Focal encephalitis

1282. HHV-8 causes - *(NEET/DNB Pattern)*
a) Burkitt's lymphoma
b) Nasopharyngeal carcinoma
c) Kaposi sarcoma
d) Hepatic carcinoma

1283. All enveloped RNA viruses belong to one large group except- *(Kar 09)*
a) Influenza b) Parainfluenza
c) Mumps d) Herpes

1284. True about Herpes virus - *(Bihar 09)*
a) HSV 1 causes encephalitis
b) EBV affects
c) CMV is always symptomatic
d) Herpes zoster is not activated

1 ■ HERPES SIMPLEX VIRUS

1285. Herpes simplex virus is - *(Al 91)*
a) Single stranded DNA
b) Double stranded DNA
c) Single stranded RNA
d) Double stranded RNA

1286. Encephalitis is caused by - *(AIIMS Dec 98)*
a) HSV-1 b)EBV
c) Infectious mononucleosis d) CMV

1287. All of the following are true about Herpes group virus except- *(AT 98)*
a) Ether sensitive
b) May cause malignancy
c) HSVII involves below diaphragm
d) Burkitt's lymphoma involves Tcells

1288. Regarding HSV-2 infection - *(PGI June 02)*
a) Primary infection is usually wide spread
b) Recurrent attacks are due to reactivation of latent infection
c) Encephalitis can be caused by HSV - 2
d) Newborn may acquire infection via the birth canal at the time of labour
e) Treatment is with acyclovir

1289. True about Herpes virus - *(PGI Dec 03)*
a) HSV encephalopathy is treated with acyclovir
b) Oropharyngeal involvement is common in HSV -1
c) Recurrent genital involvement is seen in HSV - 2
d) Reccurance is rare in HSV -1

2. VARICELLA ZOSTER VIRUS

1290. Herpes - Zoster is caused by - *(AI 99)*
a) Herpes - simplex type I b) Herpes - simplex type II
c) Epstein - barr virus d) Varicella

1291. Most common extra skin manifestation of varicella is involvement of-
a) CNS b) Lungs
c) Kidneys d)CVS

1292. Wliich virus reactivates & involves the eye - *(AI98)*
a) Herpes zoster b)CMV
c) E. B. virus d) Enterovirus 70

1293. Varicella zoster remains latent in - *(AI 10)*
a) Lymphocytes b) Monocytes
c) Trigeminal ganglion d) Plasma cells

1294. Zoster recurrance occur after infection with-
a) HSV1 b)HSV2 *(A199)*
c) Varicella d) Small pox

1295. Infectivity of chicken pox last for - *(AI- 02)*
a) Till the last scab falls off
b) 6 days after onset of rash
c) 3 days after onset of rash
d) Till the fever subsides

1296. Tests of chicken pox- *(PGI Dec 08)*
a) FAMA b) ELISA
c) Widal d)PCR

1297. Chickenpox- *(PGI 85)*
a) Is commonly seen in a congenital form
b) May be severe in a newborn child infected by the mother in late pregnancy
c) Affects the limbs more than the trunk
d) May cause pneumonitis
e) Should be treated by intravenous vidarabine when there is evidence of hepatitis

1274)b 1275)a 1276)c 1277)d 1278)a 1279)a 1280)d 128l)d 1282) c 1283)d 1284)a 1285)b 1286)a 1287) d
1288) a,b,d,e 1289)a,b,c 1290) d 1291) a 1292)a 1293)c 1294)c 1295)b 1296)a,b,d 1297)b,d

1298. Shingles are seen in - *(NEET/DNB Pattern)*
a) IMN b) Herpes zoster
c) Chicken pox d) Small pox

1299. Which virus remains dormant but can be reactivated is - *(UP 09)*
a) Herpes simplex b) Herpes zoster
c) EBvirus d)CMV

3. EPSTEIN-BARR VIRUS

1300. Ebstein Barr virus is associated with -
a) Carcinoma larynx *(AJIMS Nov 04)*
b) Carcinoma bladder
c) Carcinoma nasopharynx
d) Carcinoma maxilla

1301. A patient with sore throat has a positive Paul Bunnell test The causative organism is-*(NEET/DNB Pattern)*
a) EBV b) Herpesvirus
c) Adenovirus d) CMV

1302. Paul Bunnell antibodies are reactive in all except-
a) Ck b) Sheep *(SGPGI05)*
c) Dog d) Horse

1303. TVue about infectious mononucleosis -*(PGI June 08)*
a) Associated with heterophile antibodies
b) Monocytosis
c) Associated with cold agglutinin
d) Associated with CMV infection
e) Self limited disease

1304. Lymphocytosis with atypical lymphocytes are seen in infection with - *(NEET/DNB Pattern)*
a) HSV b)HBV
c) EBV d)RSV

1305. Burkitt's virus is - *(NEET/DNB Pattern)*
a) EBV b) HPV
c) HIV d)HAV

1306. E. B. virus causes all EXCEPT - *(AIIMSNov 99)*
a) Infectious mononucleosis
b) Nasopharyngeal carcinoma
c) Burkitt's Lymphoma
d) Carcinoma cervix

1307. Paul Bunnell test for - *(NEET/DNB Pattern)*
a) Malta fever
b) Typhus fever
c) Enteric fever
d) Infectious mononucleosis

1308. Estein Barr (EB) virus has been implicated in the following malignancies except - *(AT 04)*
a) Hodgkin's disease
b) Non Hodgkin's lymphoma
c) Nasopharyngeal carcinoma
d) Multiple myeloma

1309. IMN, true is all except - *(Kerala 09)*
a) Caused by EBV
b) Also called kissing disease
c) Diagnosed by Paul Bunnel test
d) RNA virus

1310. Epstein Barr virus causes all except - *(Kerla 97)*
a) Bukitt's lymphoma
b) Infectious mononucleosis
c) Nasophamygeal carcinoma
d) Carcinoma cervix

1311. Virus implicated in Burkitt's lymphoma is -
a) EBvirus b) Arbovirus *(MAHE 07)*
c) Picoma virus d) Coxsackie virus

1312. African Burkitt's lymphoma is caused by - *(UP 09)*
a) CMV b)EBV
c)HZV d)HSV

1313. The following are true about EBV except - *(MP 09)*
a) A member of herpes virus family
b) Infects epithelial cells of oropharynx
c) The main target of virus is the T- cell lymphocytes
d) It is implicated in nasopharyngeal carcinoma

1314. EBV infects - *(UP 09)*
a) T-cells b) Monocytes
c) B- cells d) Eosinophils

1315. Most sensitive test for diagnosis of IMN -
a) Monospot test *(Kerala 09)*
b) Paul Bunnel test
c) Lymphocytosis in peripheral smear
d) Culture

4. CYTOMEGALO VIRUS

1316. The most common presentation of congenital CMV infection is - *(PGI 94)*
a) Hepatosplenomegaly b) Microcephaly
c) Cerebral calcification d) Chorioretinitis

1317. Which of the following does not establish a diagnosis of congenital CMV infection in a neonate? *(AI-95)*
a) Urine culture of CMV
b) Ig G CMV antibodies in blood
c) Intra-nuclear inclusion bodies in hepatocytes
d) CMV viral DNA in blood by polymerase chain reaction

1318. Immunocompromised patient due to transplantation is suffering from pyrexia and neutropenia. Most likely cause is - *(PGI97)*
a) HSV b)CMV
c) Gram (-) ve organism d) Gram (+) ve organism

1319. All are true regarding CMV except - *(Kolkata 09)*
a) It is a DNA virus
b) Most commonly infects in last trimester
c) Diagnosed by increased IgA in fetal blood
d) Most common cause of congenital viral infection

1320. Cytomegalovirus causes what cancer in AIDS patients- *(Kerla 94)*
a) Lymphoma b) Kaposi sarcoma
c) Leukemia d) Glioma

1321. Most common disease caused by CMV in a post bone-marrow transplant patients - *(Jipmer 11)*
a) Pyelonephritis b) Meningitis
c) Pneumonia d) GI ulceration

1298) b 1299)b 1300)c 1301)a 1302)a 1303)a,c,d,e 1304)c 1305)a 1306)d 1307)d 1308)d 1309)d 1310)d

ADENOVIRUSES

1322. Virus causing hemorrhagic cysititis, diarrhea and conjunctivitis is- *(Al 01)*
a) RSV b) Rhinovirus
c) Adenovirus d) Rotavirus

1323. Pharyngoconjunctival fever is caused by -
a) Adenovirus 3 and 7 *(NEET/DNB Pattern)*
b) Adenovirus 11, 21
c) Adenovirus 40, 41
d) Adenovirus 8, 19

1324. Adenovirus causes all except -*(NEET/DNB Pattern)*
a) Hemorrhagic cystitis
b) Diarrhea
c) Respiratory tract infection
d) MN

1325. Which virus can cause hemorrhage - *(JIPMER 93)*
a) Parvovirus b) Adenovirus
c) HPV d) Coronavirus

1326. Adenovirus causes - *(Kerala 94)*
a) Keratoconjuctivitis b) Diarrhoea
c) Parotid enlargement d) All of the above

PICORNA VIRUSES

1327. All belong to Picorna viruses except - *(PGI98)*
a) Enterovirus 70 b) Coxsackie virus
c) Rhinovirus d) Herpes simplex virus

1328. Coxsackie virus is - *(NEET/DNB Pattern)*
a) Harpes virus b) Pox virus
c) Enterovirus d) Myxovirus

1329. Suckling mice is used for isolation of - *(NEET/*
a) Coxsachie virus b) Pox *DNB Pattern)*
c) Herpes d) Adenovirus

1330. All are in included in picorna group of viruses except- **(***Kerla 04)*
a) Encephalo myocarditis b)HEV
c) Foot and mouth virus d) Poliovirus

1331. Epidemic hemorrhagic conjuctivitis is caused by -
a) HSV b)HZV *(Delhi 09)*
c) HIV d) Picorna virus

1332. Enterovirus causes all *except-(AIIMS Nov 01, Al09)*
a) Haemorrhagic fever b) Pleurodynia
c) Herpangia d) Aseptic Meningitis

1333. Which of the following virus is shed in stool -
a) Herpangina b) Influenza
c) Varicella d) Small pox

1334. Coxsackie group A **commonly cause -**
a) Conjunctivits b) Aseptic meningitis
c) Hepatitis d) Myocarditis

1335. Herpangina is caused by - *(NEET/DNB Pattern)*
a) Enterovirus b) Rhinoviruses
c) Myxovirus d) Rabies virus

1336. Conjunctivitis is caused by all except -*(AIIMSDec 98)*
a) CMV b) Enterovirus 70
c) CoxsackiesA24 d) Adenovirus

1337. Acute hemorrhagic conjunctivitis is caused by -
a) Enterovirus 70 b) Adenovirus *(Al 97)*
c) Poliovirus d) Hepadnavirus

1338. Enterovirus 72 is - *(NEET/DNB Pattern)*
a) Hepatitis A b) Hepatitis E
c) Hepatitis G d) Hepatitis C

1339. Which of the following is associated with acute hemorrhagic conjuctivitis - *(Kerala 09)*
a) Rhabdovirus b) Enterovirus
c) Calcivirus d) Echovirus

1340. Enteroviruses causes - *(Bihar 08)*
a) Acute hemorrhagic conjuctivitis
b) Acute follicular conjuctivitis
c) Posterior follicular conjuctivitis
d) Epidemic Keratoconjuctivitis

1341. Enterovirus causes all, except- *(MAHA 05)*
a) Hemorrhagic fever b) Pleurodynia
c) Herpangina d) Aseptic meningitis

1342. Coxsackie B virus causes all except - *(Jipmer 11)*
a) Aseptic meningitis b) Herpangina
c) Myocarditis d) Bornholm disease

1343. The following virus can be grown only in suckling mice- *(JIPMER 2002)*
a) Coxsackie virus b) Rhinovirus
c) Echovirus d) Poliovirus

POLIOVIRUS

1344. All are true about poliovirus, *except-(AJIMS May 02)*
a) Type I is responsible for most epidemics
b) Very difficult to eliminate type I
c) Type I responsible for vaccine paralytic polio myelitis
d) Type I most commonly associated with paralysis

1345. Epidemic of Polio is due to- *(Kolkata 09)*
a) Type I virus
b) Type II virus
c) Type III virus
d) Combine type II and III virus

1346. Death in Poliomyelitis is due to - *(Orissa 05)*
a) Infection b) Neurogenic shock
c) Cardiac failure d) Respiratory paralysis

1347. AO of the following statements are true regarding poliovirus except - *(Al 04)*
a) It is transmitted by feco-oral route
b) Asymptomatic infections are common in children
c) There is a single serotype causing infection
d) Live attenuated vaccine produces herd immunity

1348. False about PaUo - *(NEET/DNB Pattern)*
a) Descending paralysis
b) Bilateral symmetrical
c) Non-progressive
d) LMN type paralysis

1322) c 1323) a 1324)d 1325)b 1326) a,b 1327)d 1328)c 1329)a 1330)b 1331) d 1332)a 1333)a 1334)b 1335)a 1336) a 1337)a 1338)a 1339)b 1340)a 1341)a 1342)b 1343)a 1344)c 1345)a 1346)d 1347)c 1348)b

1349. The most definitive method for laboratory diagnosis of poliomyelitis are A/E -
a) Virus isolation from blood
b) Virus isolation from CSF
c) Virus isolation from faeces or throat
d) Serological diagnosis

1350. Diagnosis of polio - *(NEET/DNB Pattern)*
a) Detection of polio virus in stool
b) Serology
c) Limb wasting
d) AFP

1351. True about polio - *(AIIMS Nov 07, May 08)*
a) Paralytic polio is most common
b) Spastic paralysis
c) IM injections and increased muscular activity lead to increased paralysis
d) Polio drops given only in < 3 year

1352. Portal of entry of poliovirus in mainly - *(PGI01)*
a) Gastrointestinal tract b) Nasal mucosa
c) Lung d)Skin

1353. The virus, which spreads by both hematogenous and neural route is -
a) Rabies virus b) Varicella zoster virus
c) Poliovirus d)E.B. virus

MYXO VIRUSES

1354. Myxoviruses include - *(PGI Dec 08)*
a) Orthomyxovirus b) Influenza
c) Measles d) Polio
e) HSV

1355. Which of the following statement is/are true of all paramyxoviruses -
a) They contain a single standed RNA genome of negative polarity
b) Envelope is derived from the host cells plasma membrane
c) They have a cytoplasmic site of replication
d) They enter the body by the respiratory route

A.ORTHOMYXOVIRUS (INFLUENZA)

1356. Reye's syndrome following influenza is most commonly associated with - *(AIIMS 93)*
a) Type A b)TypeB
c) Type C d) All of the above

1357. Influenza vaccines is administered -
a) Subcutaneosly b) Intradermal
c) Nasal drops d) Intrathecal

1358. TYue statement about influenza A **is -** *(AI99)*
a) It has a double stranded segmented RNA
b) Pandemic are caused by antigenic drift
c) Nucleocapsid antibody is not specific
d) Hemagglutinin and Neuraminidase is strain specific

1359. False about antigenic drift - *(AIIMS 94)*
a) Occur under pressure for immunity
b) Responsible for epidemics of influenza
c) Occurs only in influenza-A
d) Occur every 10-12 years

1360. False about antigen drift - *(NEET/DNB Pattern)*
a) Causes pandemic
b) Occurs due to mutation
c) Occurs more frequently
d) Affected by previous antibodies

1361. Antigenic shift - *(NEET/DNB Pattern)*
a) Occurs every 2-3 years
b) Gradual change over time
c) Results from genetic recombination
d) Occurs in all influenza viruses

1362. Not true regarding influenza virus is - *(AIIMS 99)*
a) All types exhibit antigenic shift
b) Only type A shows antigenic drift
c) Drift is accumulation of point mutations
d) None of the above

1363. Antigenic variation seen in which of the following - *(PGI Dec 04)*
a) Influenza virus b) Hepatitis virus
c) Yellow fever virus d) Leptospira

1364. TYue about influenza - *(UP 2K)*
a) Epidemic is due to antigenic drift
b) Has double standed RNA
c) Nucleocapsid is protective
d) Neuraminidase & haemagglutination are specific

1365. Causes of antigenic drift in influenza viral infections-
a) Small mutation in neuraminidase and hemagglutinin *(MAHE 07)*
b) Large mutations in hemagglutinin only
c) Step mutations in viral genome
d) None of the above

1366. Which of the following is true regarding influenza-
a) It is caused by an enveloped DNA virus *(MP 09)*
b) Laboratory studies may show neutropenia early in the course of disease
c) Primary infectious pneumonia is less common than secondary bacterial pneumonia
d) Antiviral agents given early prevents complications

1367. H5N1 is a strain of - *(AI 08)*
a) Avian flu
b) New vaccine against AIDS
c) Agent for japanese encephalitis
d) Causes chickengunya fever

B. PARAMYXOVIRUSES

1368. Paramyxovirus includes - *(NEET/DNB Pattern)*
a) Retrovirus b) Poliovirus
c) Parainfluenza d) Rabies

1349)d 1350) a 1351)c 1352)a 1353)c 1354)a,b,c 1355)a,b,d 1356)b 1357)a,cl358)d 1359)c,d 1360)a 1361) c 1362)a,b 1363) a 1364)a,d 1365)a 1366)c 1367)a 1368)c

1. MEASLES

1369. Measles virus is - *(PGI97)*
a) Paramyxovirus b)Orthomyxovirus
c) Poxvirus d) Picomavirus

1370. Which of the following is the "Least Common" complication of measles ? *(AI98)*
a) Diarrhoea b) Pneumonia
c) Otitis media d) SSPE

1371. Giant cell (Hecht's) pneumonia is due to -
a) CMV b) Measles *(PGI Dec 98)*
c) Malaria d) P. carinii

2. MUMPS

1372. Commonest complication of mumps is - *(AI 00)*
a) Orchitis and oophritis b) Encephalitis
c) Pneumonia d) Myocarditis

1373. With reference to mumps which of the following is true - *(AI 06)*
a) Meningoencephalitis can precede parotitis
b) Salivary gland involvement is limited to the parotid
c) The patient is not infectious prior to clinical parotid enlargement
d) Mumps orchitis frequently leads to infertility

3. R.S.V.

1374. Most common agent responsible for Bronchiolitis is - *(AI 94)*
a) RSV b) Adenovirus
c) Herpesvirus d) Influenza virus

1375. Virus lacking hemagglutinin and neuraminidase but having membrane fusion protein is -
a) RSV b)CMV
c) HSV d)EBV

RUBELLA

1376. Incubation period of rubella is - *(AI- 93)*
a) 18-72 hours b) 2-3 weeks
c) 1-3 months d) >1 year

1377. All of the following statements are true about congenital rubella except - *(AI 05)*
a) It is diagnosed when the infant has IgM antibodies at birth
b) It is diagnosed when Ig G antibodies persist for more than 6 months
c) M.C. congenital defects are deafness, cardiac malformation and cataract
d) Infection after 16 weeks of gestation results in major congenital defects

1378. Risk of the damage to fetus by maternal rubella is maximum if mother gets infected in - *(AIIMS 05)*
a) 6-12 weeks of pregnancy
b) 20-24 weeks of pregnancy
c) 24-28 weeks of pregnancy
d) 32-36 weeks of pregnancy

1379. Classic triad of congenital rubella includes all except- *(NEET/DNB Pattern)*
a) Cataract b) Deafness
c) Retinitis d)CHD

1380. Defect most commonly occuring in congenital rubella is- *(TN 89, 90)*
a) Cataract b) Deafness
c) Microcephaly d) Blindness

1381. The congenital rubella syndrome - ***(Delhi** 08)*
a) May be prevented by vaccination in early pregnancy
b) Causes IUGR
c) Causes cataract
dj Causes deafness only if acquired only if acquired before 16 weeks of gestation

ARBOVIRUSES

1382. Following are Arboviral diseases - *(PGI June 03)*
a) KFD b) West Nile Fever
c) Ganj am virus d)RSV
e) Puumala virus

1383. Viruses causing hemorrhagic fever are-
a) Lassa fever virus *(PGI Nov 10)*
b) Yellow fever virus
c) West Nile virus
d) Crimean Congo virus
e) Ross river virus

1384. Hemorrhagic fever is caused *by-(NEET/DNB Pattern)*
a) West-Mile fever b) Sandfly fever
c) Ebola virus d) All of the above

1385. Fever & hemorrhagic rash are seen in all except-
a) Dengu fever *(PGI Nov 11)*
b) Lassas fever
c) Rift Valley fever
d) Sand fly fever
e) Yellow fever

1386. Hemmorrhagic fever is not caused by -
a) Yellow fever *(NEET/DNB Pattern)*
b) KFD
c) Japenese encephalitis
d) Dengue fever

1387. Which of the following is/are arboviral diseases -
a) Japanese encephalitis *(PGI june 09)*
b) Dengue
c) Yellow fever
d) Hand-foot-mouth disease
e) Rocky montain spotted fever

1388. Which of the following is not common in India -
a) Japanese B encephalitis *(AI 91)*
b) Lassa fever
c) KFD
d) Dengue

1389. Group B (flaviviruses) Arboviruses is/are-(PG/*Dec*
a) Dengue fever b) Rift valley fever *06)*
c) Chikungunya fever d)J.E.
e) Yellow fever

1369) a 1370)d 1371)b 1372)a 1373)a 1374)a 1375)a 1376)b 1377)d 1378)a 1379)c 1380)a,b 1381)b,c 1382) a,b,c,e 1383)a,b,d 1384)c 1385)dl386)c 1387)a,b,c 1388)b 1389)a,b,e

1390. Which of the following statements is true regarding Arbo viruses - *(AI04)*
a) Yellow fever is endemic in India
b) Dengue virus has only one serotype
c) Kyasanur Forest disease (KFD) is transmitted by ticks
d) Mosquito of culex visnoi-complex is the vector of Dengue fever

1391. The vector of Japanese B encepalitis virus is - *(DPG 10, Kam 94)*
a) Anopheles mosquito b) Culex mosquito
c) Aedes mosquito d) All of the above

1392. In India, human infections has been reported with Dengue virus type - *(AI91)*
a) Types 1 and 2b) Types 1 and 3
c) Types 2 and 4 d) All 4 types

1393. Break bone fever is caused by - *(Bihar 08)*
a) Variola b) Coxsackie
c) Arbovirus d) Adenovirus

1394. Break bone fever is caused by - *(MP09)*
a) Variola b) Coxsackie
c) Dengue d) Adenovirus

1395. Which of the following flavivirus is closely related to Russian spring summer encephalitis causing virus- *(APPGE04)*
a) Dengue b) Chickengunya
c) KFD d) West Nile fever

1396. All of the following are true about the papovavirus except- *(AI95)*
a) They are non-enveloped icosahedral viruses
b) Produce papilloma and warts in humans
c) RNA virus
d) SV - 40 is oncogenic

1397. Which of the following is true - *(AIIMSMay 08)*
a) Hanta virus pulmonary syndrome is caused by inhalation of rodent urine and feces
b) KFD is caused by bite of wild animal
c) Lyssa virus is transmitted by tick

1398. All are true regarding Hanta virus Except -
a) DNA virus *(AIIIMS Sept 96)*
b) Carried by rodents
c) Causes recurrent respiratory infection
d) Haemorrhagic manifestation may occur

1399. Following are true of kyasanur forest disease except-
a) Transmitted by Soft tick *(AI 94)*
b) Caused by retrovirus
c) Incubation Period is 3-8 days
d) Killed vaccine available

1400. Which of the following are true regarding KFD -
a) It is zoonosis *(PGI97)*
b) Affects monkeys
c) Caused by bacteria
d) Caused by rickettsia

1401. In Japanese Encephalitis, pigs acts as - *(PGI2000)*
a) Amplifier b) Definitive host
c) Intermediate host d) Any of the above

1402. Amplifier host is - *(NEET/DNB Pattern)*
a) Pig in JE b) Dog in rabies
c) Man in JE d) Cattle in JE

1403. Dengue hemorrhagic fever is caused by - *{AI 09)*
a) Type I dengue virus
b) Reinfection with same serotype of dengue virus
c) Reinfection with a different serotype of dengue virus
d) Infection in an immunocompromised host

1404. Most virulent dengue fever strain is -
a) 1 b) *2(NEET/DNB Pattern)*
c) 3 d) 4

1405. Most sensitive diagnostic test for dengue is ?
a) IgM ELISA *(AIIMS Nov 08)*
b) Complement fixation test
c) Neutralization test
d) Electron microscopy

RHABPOVIRUS (RABIES)

1406. Which ofthe following statements is true about rabies virus- *(AI 03)*
a) It is double stranded RNA virus
b) Contains a DNA-dependent RNA polymerase
c) RNA has a negative polarity
d) Affects motor neurons

1407. About rabies true is -
a) Vaccine causes life long immunity
b) Multiple strains are found
c) CNS infection occurs through viremia
d) Bullet-shaped nonenveloped, double stranded RNA virus

1408. Rabies virus is inactivated by - *(PGI 97)*
a) Phenol b) UV radiation
c) BPL d)All

1409. Negri bodies are located in - *(BIHAR 91, DNB 92)*
a) Astrocytes b)Oligodendroglia
c) Neurons d) Microglia

1410. Rabies virus - *(MAHA05)*
a) Can be isolated from the blood of infected patients
b) Has multiple antigenic types
c) Can be transmitted by a dog 4 weeks before the dog becomes noticeably ill
d) Produce infection that is almost fatal to humans

1411. The staining useful for antemorten diagnosis of rabies is- *(Karn.95)*
a) Seller b) Macchiavillo
c) Giemsa d) Fluorescent

1412. In Rabies, the characterstic pathological manifestation is - *(AI97)*
a) Ventriculitis
b) Brainstem encephalitis
c) Basal ganglia affection
d) Meningitis

1413. Negri bodies are found in - *{NEET/DNB Pattern)*
a) Hypothalamus b) Hippocampus
c) Midbrain d) Medulla

1390)c 1391)b 1392)d 1393)c 1394)c 1395)c 1396)c 1397)a 1398)a 1399)b 1400)a,b 1401)a 1402)a 1403) c 1404)b 1405) c 1406)c 1407)None 1408)d 1409)c 1410)d 1411)d 1412)b 1413)b

1414. Rabies is identified by - *{ARMSMay 10, AI07)*
a) Guameri bodies b) Negri bodies
c) Cowdry A bodies d) Cowdry B bodies

1415. Regarding Rabies, true is - *(AI 00)*
a) Incubation period depends on the site of bite
b) Diagnosis is by eosinophilic intranuclear inclusion
c) It is a RNA virus
d) Caused only by dogs

1416. A15 year old girl was admitted to the infectious disease hospital with a provisional diagnosis of rabies. The most suitable clinical sample that can confirm the antemortem diagnosis is- *(ARMS Nov. 04)*
a) Serum for anti-rabies IgG antibody
b) Comeal impression smear for immunofluorescence stain
c) CSF sample for viral culture
d) Giemsa stain on smear prepared from salivary secretions

1417. True about Rabies virus is - *(ARMSMay 94, AI97)*
a) Rabies is diagnosed by immunofluorescence
b) Rabies causes life long immunity
c) Rabies has various strains of vimses
d) Rabies vaccine is always live attenuated

1418. Neurological complications following Rabies vaccine is common with -
a) HDCS Vaccine b) Chick embryo Vaccine
c) Semple Vaccine d) Duck Egg Vaccine

1419. All of the following rabies vaccines are commercially available except - *(AI 99)*
a) Killed sheep brain vaccine
b) Human diploid cell vaccine
c) Vero continous cell vaccine
d) Recombinant glycoprotein

1420. Recommended vaccines for rabies -
a) Semple
b) Duck embryo vaccine
c) Suckling mouse brain vaccine
d) HDCV

1421. Which anti-rabies vaccine has been recommended byWHO-
a) Duck cell vaccineb) Chick fibroblast vaccine
c) HDCV d) Sheep brain vaccine

1422. For the treatment of case of class III dog bite, all of the following are correct except - *(AI 05)*
a) Give Ig for passive immunity
b) GiveARV
c) Immediately stitch wound under antibiotic coverage
d) Immediately wash wound with soap and water

1423. Class II exposure in animal bites includes the following- *(AI 03)*
a) Scratches without oozing of blood
b) Licks on a fresh wound
c) Scratch with oozing of blood on palm
d) Bites from wild animals

1424. Active immunisation following exposure is given most commonly for - *(AI 99)*
a) Rabies b) Polio
c) Plague d) Measles

1425. The schedule of HDCV in rabies is - ***(AI** 96)*
a) 0,3,7,10,14,28 b) 0,3,10,30
c) 3,7,14,16,18 d) 0,7,14,16,18

1426. In rabies, human diploid cell culture vaccine for post-exposure vaccination is given on the following days-
a) 0, 7,28 then booster dose in 90 days *(AI 98)*
b) 0, 7, 28 then booster dose in 2 years
c) 0, 3,7, 14, 30 then booster dose in 90 days
d) 0, 3, 7 and booster dose in 90 days

1427. Number of doses of HDCV vaccine required for preexposure prophylaxis -
a) 7 b) 5
c) 3 d) 1

1428. What is the correct recommended schedule (on days) for post- exposure treatment of person who has been vaccinated for rabies previously with HDC -
a) 0,3 and 7 b) 0,3,7 and 14
c) 0,3,7,14 and 28 d) 0 and 3

HEPATITIS VIRUSES

1429. HCV is - *(PG1 Dec 05, June 08)*
a) Enveloped RNA
b) Nonenveloped RNA
c) Nonenveloped positive strand RNA
d) Enveloped negative strand RNA
c) DNA virus

1430. Most common route of spread of Hepatitis E is -
a) Sex b) Feco-oral *(AI 93)*
c) Blood transfusion d) IV injections

1431. Non-parenteral hepatitis is - ***(AI** 2000)*
a) Hepatitis E b) Hepatitis B
c) Hepatitis C d) Hepatitis D

1432. Incubation period of HBV is -
a) 45 to 180 days b) 6 to 60 days
c) 10 days d) lOhrs

1433. Carrier state does not exist for -
a) Hepatitis B virus
b) Hepatitis A virus
c) Non A Non B Hepatitis
d) Delta agent

1434. Age group affected by Hepatitis[6] A' virus -
a) Children b) Adult *(PGI99)*
c) Old age d) Any age

1435. Which is ssrna unenvloped virus -
a) HBV b) HEV*(NEET/DNB Pattern)*
c) HCV d) None

1436. Acute liver failure is caused by A/E- *(NEET/DNB*
a) Hepatitis A b) Hepatitis B *Pattern)*
c) Hepatitis E d) Hepatitis C

1437. Which hepatitis virus had been called as enterovirus-
a)HAV b) HBV *(MP09)*
c) HCV d)HEV

1414)b 1415) a 1416)b 1417) a 1418)c 1419) d 1420)d 1421)b 1422)c 1423)b 1424)a 1425)a 1426)c 1427)c
1428) a 1429) a 1430)b 1431) a 1432)a 1433)b 1434)a 1435)b 1436)d 1437)a

1438. Potent vaccine is available for - *(Delhi 09)*
a) Hepatitis C b) Hepatitis A
c) Hepatitis D d) Hepatitis E

1439. In chronic Hepatitis B infection, which one of the following markers is indicative of active viral replication and the corresponding risk of disease transmission ? *(UPSC 07)*
a) HBe antigen b) HBs antigen
c) Anti - HBe d) Anti - HBs

1440. Serological marker of infectivity of Hepatitis $^{6}B^{r}$ is-
a) HBsAg b) HBeAg *(Kerala 09)*
c) IgM anti Hbc d) HBeAg

1441. Which of the following hepatitis has a poor prognosis - *(UP 09)*
a) Hepatitis A b) Hepatitis B
c) Non-A Non-B type d) Hepatitis C

1442. Cell-Fraction derived vaccine is - *(AP 97)*
a) Hepatitis-B b) Measles
c) Mumps d) Rubella

1443. Hepatitis 'C' virus resembles which of the following virus groups - **(***Corned 0* **7)**
a) Picamo viruses b) Herpes viruses
c) Hepadna viruses d) Flavi viruses

1444. Which hepatitis virus is notorious for causing chronic hepatitis evolving to cirrhosis - *(Kar 09)*
a) HCV b)HBV
c) HEY d)HAV

1445. Chronic hepatitis is seen in - *(JIPMER 99)*
a) Hepatitis C b) Hepatitis D
c) Hepatitis A d) Hepatitis E

1446. Which of the following does not go into chronic hepatitis stage - *(TN 2001)*
a) HBV b)HCV
c) HDV d)HEV

1447. The commonest cause of viral hepatitis in India -
a) Hepatitis type A virus *(DNB 92)*
b) Hepatitis type B viurs
c) Enterically transmitted NANB virus
d) Parenterally transmitted NANB virus
e) Delta virus

1448. Regarding hepatitis E, it is true that - *(DPG10)*
a) Occurs with Hepatitis B
b) Is single stranded DNA virus
c) Occurs along with HIV
d) Increases mortality in pregnancy

1449. Which of the hepatitis prevalent in pregnancy -
a) Hepatitis A b) Hepatitis B *(UP 07)*
c) Hepatitis C d) Hepatitis E

1450. The most common HIV subtype in India is -
a) A b)D *(Kama09)*
c) E d)C

1 ■ HEPATITIS A VIRUS

1451. Hepatitis Ais transmitted by - *(AI93)*
a) Blood route b) Inhalation
c) Feco-oral route d)All

1452. About Hepatitis 'A' true is - *(PGIDec 08)*
a) Causes mild illness in children
b) 3% incidence of carrier state
c) 10% transform into HCC
d) Vertical transmission never seen

1453. Hepatitis A virus is best diagnosed by - *(AI 01)*
a) IgM antibodies in serum
b) Isolation from stool
c) Culture from blood
d) Isolation from bile

1454. Transmission of hepatitis A virus occurs -*(PGI 99)*
a) One week before and one week after onset of symptom
b) 2 weeks before onset of symptoms
c) 2 weeks after onset of symptoms
d) 1 week after onset of symptoms

1455. Cultivable (in vitro) hepatitis virus is-
a) Hepatitis A b) Hepatitis B *{AIIMSMay 07)*
c) Hepatitis C d) Hepatitis D

2. HEPATITIS B VIRUS

1456. Which of the following hepatitis viruses is a DNA virus - *(AIIMS May 03, PGI dec 04)*
a) Hepatitis C virus b) Hepatitis B virus
c) Delta agent d) Hepatitis E virus

1457. All of the following are components of Dane Particle except - *(AIIMS 98)*
a) Surface antigen b) Core antigen
c) C-antigen d) Delta antigen

1458. HBV present in India is -
a) Adw b) Ayw
c) Adr d)Ayr

1459. Reverse transcriptase of HBV is coded on following gene - *(AI00)*
a) c gene b) s gene
c) p gene d) x gene

1460. Hepatitis Bis not transmitted by-
a) Blood transfusion b) Pasteurised albumin
c) Cryoprecipitate d) Sexual contact

1461. Which of the following hepatitis virus have significant perinatal transmission - *(AI03)*
a) HEV b)HCV
c) HBV d)HAV

1462. Presence of HBe Ag in patients with hepatitis indicates - *(AIIMS92)*
a) Simple carriers b) Late convalescence
c) High infectivity d) Carrier status

1463. HBV all true, except - *(PGI98)*
a) It is a DNA virus
b) Spreads by blood transfusions
c) HBs Ag marker of infection
d) Least chance of chronicity

1464. HBV is associated with all of the following except -
a) Hepatic cancer b) Chronic hepatitis
c) Hepatic adenoma d) Cirrhosis

1438) b 1439) a 1440)b 1441)b 1442)a 1443)d 1444)a 1445)a,b 1446) d 1447) c 1448)d 1449)d 1450)d 145 l)c 1452) a 1453)a 1454)b,d 1455)al456)b 1457)d 1458)b,c 1459)c 1460)b 1461)c 1462)c 1463)d 1464)c

1465. Hepatitis B vaccination is given to a patient. His serum will reveal - *(AIIMS May 02)*
a) HBsAg
b) Anti-HBsAg
c) IgM Anti-HBcAg and HBsAg
d) IgM and IgG Anti-HBcAg

1466. A thirty year man presented with nausea, fever and jaundice of 5 days duration. The biochemical tests revealed a bilirubin of 6.7 mg/dl (conjugated 5.0 mg/dl) with SGOT/SGPT (AST/ALT) of 1230/ 900 IU/ml. The serological tests showed presence of HBsAg, IgM anti HBc and HBe Ag. The most likely diagnosis - *(AIIMS 02)*
a) Chronic hepatitis B infection with high infectivity
b) Acute hepatitis B infection with high infectivity
c) Chronic hepatitis B infection with low infectivity
d) Acute hepatitis B infection with low infectivity

1467. Serological testing of patient shows HBsAg, IgM anti-HBc and HBeAg postive. The patient hase - *(NEET/DNB Pattern)*
a) Chronic hepatitis B with low infectivity
b) Acute hepatitis B with high infectivity
c) Chronic hepatitis with high infectivity
d) Acute on chronic hepatitis

1468. The serological marker of acute Hepatitis B infection is - *(AJ 93)*
a) HBsAg + HBeAg b) HBsAg+Core antibody
c) HBsAg d) HBeAg

1469. Acute Hepatitis B can be earliest diagnosed by- *(AIIMSNov 01)*
a) IgM anti HBc ab b) Hbs Ag
c) IgC anti HBc abs d) Anti HBs Ag ab

1470. Recent Hepatitis infection is best diagnosed by- *(AIIMS Nov 01)*
a) Hbs Ag b) Ig G Anti HBe abs
c) Anti HBs Ag abs d) IgM anti HBc abs

1471. A 30 year old patient presented with history of jaundice for 10 days. His liver function tests showed bilirubin of 10 mg/dl, SGOT/SGPT - 1100/1450, serum alkaline phosphatase - 240IU. He was positive for Hbs Ag. What should be the confirmatory test to establish acute hepatitis B infection - *(AIIMS 06)*
a) Ig M anti-HBc antibody
b) Hbe Ag
c) HBVDNVbyPCR
d) Anti-HBc antibody

1472. Anti HBs Ab indicates - *(AIIMS 93)*
a) Resistance to Hepatitis B
b) Acute infection
c) Good Prognosis
d) Hepatocellular Carcinoma

1473. In a patient only anti HBs Ag is positive in serum, all other markers are negative. This indicates -
a) Acute hepatitis *(AIIMS 00)*
b) Chronic active hepatitis
c) Persistent carrier
d) Hepatitis B vaccination

1474. First antibody to appear in hepatitis -
a) IgM anti-HBe *(NEET/DNB Pattern)*
b) IgG-anti-HBe
c) IgM anti-HBc
d) IgM anti-HBs

1475. Epidemiologic study of Hepatitis B is by - *(A197,*
a) HBe Ag b) HBc Ag *AIIMS May 95)*
c) HBs Ag is used d) Anti HBc

1476. Infection/ multiplication of HBsAg is best/commonly diagnosed by - *(NEET/DNB Pattern)*
a) HBeAg b) HbsAg
c) HBV DNA d) Anti HBs Ag

1477. Best means of giving hepatitis B vaccine is -
a) Subcutaneous b) Intradermal
c) Intramuscular deltoid d) Intramuscular gluteal

1478. A blood donor is not considered for safe transfusion, if he has- *(AI 00)*
a) Anti HBsAg +ve
b) Anti HBsAg and HBeAg (+)ve
c) HBsAg +ve and IgM anti HBc +ve
d) Anti HBc +ve

3- HEPATITIS C VIRUS

1479. Hepatitis C virus is a - *(NEET/DNB Pattern,*
a) Togavirus b)Flavivirus *AIIMS May 04)*
c) Filovirus d) Retrovirus

1480. Max. Hepatitis C virus transmission to foetus in pregnancy depends on - *(PGI2000)*
a) Duration of illness b) Time of infection
c) Route of delivery d) HIV infection
e) High level of HCVRNA

1481. Hepatitis C virus TRUE finding is - *(AIIMSDec 98)*
a) Spreads along fecooral route
b) Antibody to HCV may not be seen in acute stage
c) Does not cause chronic hepatitis
d) It cannot be cultured

1482. HCV is associated with - *(AI 00)*
a) Anti LKM-1 antibody b) Scleroderma
c) Cryoglobulinemia d) Polyarteritis nodosa

1483. Commonest hepatotropic virus causing increased chronic carrier state is - *(AIIMS 97)*
a) HEV b)HAV
c) HBV d)HCV

1484. Chronic liver disease is caused by - *(AI 00)*
a) Hepatitis B b) Hepatitis A
c) Hepatitis C d) Hepatitis E

1485. Next to HBV, virus implicated in hepatocellular Ca is- *(PGI 98)*
a) HCV b) Herpes
c) HAV d)HEV

1486. Which of the following statements about Hepatitis 'C'is true- *(AI09)*
a) DNA virus
b) Most common indication for liver transplant
c) Does not cause liver cancer
d) Does not cause coinfection with hepatitis B

1465) b 1466) b 1467)b 1468)b 1469)a 1470)d 1471)a 1472)a 1473)d 1474)c 1475)d 1476)a 1477)c 1478)c 1479) b 1480) e 1481) b,d 1482) a,c 1483) d 1484) c,a 1485) a 1486) b

4. HEPATITIS E VIRUS

1487. Which of the following is *Ca\ci\irus-(AIIMS Nov 01)*
a) Hepatitis E b) Hepatitis B
c) Hepatitis C d) Hepatitis A

1488. With which of the following of viral hepatitis infection in pegnancy, the maternal mortality is highest -
a) Hepatitis A b) Hepatitis *B(AIIMS 06)*
c) Hepatitis C d) Hepatitis E

1489. A young pregnant woman presents with fulminant hepatic failure. The most likely aetiological agent is - *(AI 04)*
a) Hepatitis B virus b) Hepatitis C virus
c) Hepatitis E virus d) Hepatitis A virus

1490. A **pregnant woman from bihar presents with hepatic encephalopathy. The likely diagnosis -** *(AI 01)*
a) Hep.E b)Hep.B
c) Sepsis d) Acute fatty liver of pregnancy

1491. Regarding Hepatitis E true is - *(AIIMS98)*
a) Occurs with Hepatitis B
b) Single stranded DNA virus
c) Occurs along with HTV
d) Mortality increased in pregnancy

1492. Hepatitis E clinically resembles -
a) Hepatitis A b) Hepatitis B
c) Hepatitis C d) Hepatitis D

5. HEPATITIS P VIRUS

1493. Which of the following is a defective virus - *(AI 01)*
a) HAV b)HBV
c) HCV d)HDV

1494. HBV and HDV false is - *(NEET/DNB Pattern)*
a) Both can infect simultaneously
b) HDV causes more serious infecton d/t superinfection
c) HDV cannot infect in absence of HBV
d) DNA viruses

1495. HDV is -0 *(NEET/DNB Pattern)*
a) SS-RNA virus b) SS-DNA virus
c) DS-RNA virus d) DS-DNA virus

6. HEPATITIS G VIRUS

1496. Choose the false statement regarding Hepatitis G virus - *(Karnataka 2001)*
a) Also called GB virus
b) Blood bom RNA virus
c) Mostly infected with C vims
d) Responds to Lamivudine

HUMAN IMMUNODEFICIENCY VIRUS

1497. HIV virus contains - *(AI 02)*
a) Single stranded DNA
b) Single stranded RNA
c) Double stranded DNA
d) Double stranded RNA

1498. HIV gene is/are - *(PGI June 01)*
a) Gp73 b) P24
c) GP120 d)Gp5

1499. Nef gene in HIV is for use - *(NEET/DNB Pattern)*
a) Enhancing the expression of genes
b) Enhancing viral replication
c) Decreasing viral replication
d) Maturation

1500. A HIV mother delivers a baby All are true, except- *(AIIMSNov 99)*
a) Risk of HIV in the baby is upto 90%
b) HIV infection cannot be diagnosed in the baby with available methods.
c) AIDS can be transmitted from mother to child during delivery.
d) Breast feeding can transmit AIDS

1501. True about HIV- *(PGI 2000)*
a) Not transmitted through semen
b) More chances of transmission during LSCS than normal labour
c) More infectious than hepatitis B
d) Male to female transmitted > female to male

1502. The chance that a health worker gets HIV from an accidental needle prick is - *(PGI June 99)*
a) 1% b) 10%
c) 95% d) 100%

1503. HIV can - *(PGI June 08)*
a) Cross blood brain barrier
b) RNA vims
c) Inhibited by 0.3% H_20_2
d) Thermostable

1504. What is the sequence which a retrovirus follows on entering a host cell - *(AI 2K)*
a) RNA-DNA-RNA b) RNA-DNA
c) DNA-RNA d)DNA-RNA-DNA

1505. Regarding HIV infection, not true is - *(AI01)*
a) p24 is used for early diagnosis
b) Lysis of infected CD4 cells is seen
c) Dendritic cells do not support replication
d) Macrophage is a reservoir for the vims

1506. Regarding HIV which of the following is not true -
a) It is a DNA retro vims *(AI 02)*
b) Contains Reverse Transcriptase
c) may infect host CD_4 cells other than T lymphocytes
d) Causes a reduction in host CD_4 cells at late stage of disease

1507. HIV affects - *(AIMS 98)*
a) Only T helper cells
b) T helper and macrophages
c) NK cells
d) B - lymphocytes

1508. HTV infects most commonly - *(AIIMS Jun 00, AI 09)*
a) CD4+helper cells b) CD8+cells
c) Macrophage d) Neutrophil

1509. AIDS involves- *(AI 98)*
a) T-helper cells b) T-suppressor cells
c) T-cytotoxic d)B. cells

1487) a 1488) d 1489) c 1490) a 1491) d 1492) a 1493) d 1494) d 1495) a 1496) c,d 1497) b 1498) None 1499) c 1500) a 1501) d 1502)a 1503)a,b,c 1504)a 1505)c 1506)a 1507)b,d 1508)a 1509)a

1510. The receptor through which M-tropic fflVstrains bind- *(MH11)*
a) CCR5 b)CXR4
c) CXCR5 d) Any of the above

1511. All the following are true about HIV except - *(IN99)*
a) A DNA virus belonging to lentivirus
b) Attacks CD4 lymphocytes
c) CD4: CD8 ratio is reversed
d) Mostly spread by heterosexual contact

1512. Which of the following is not a structural gene of HIV-
a) Gag b)Pol *(Maharashtra 10)*
c) ENV d) Tat

1513. The gene coding for core of HIV is - *(Delhi 96)*
a) GAG b)ENV
c) POL d) TAT

1514. Which of the following gene is associated with encoding of reverse transcriptase - *(Delhi 09)*
a) Pol b) Env
c) Gag d)LTR

1515. Gag gene encodes for - *(Bihar 09)*
a) Reverse transcriptase b) Core antigen
c) Envelope d) Gene activation

1516. Chemokine co-receptor for HIV found on macrophage is- *(Kam11)*
a) CD4 b)CDS
c) CCR5 d) CXCR4

1517. Gloves, syringes, needles etc., used for patients whose HIV test results is not known, should be immersed in - *(UPSC99)*
a) Povidone - iodine 1%
b) Boiling water
c) 1% solution of sodium hypochlorite
d) 10% solution of dettol

1518. The HIV virus can be destroyed in vitro by which of the following - *(Karnat.96)*
a) Boiling b) Ethanol
c) Cidex d) All of the above

1519. In the heterosexual trnsmission of HIV - *(Kerala 09)*
a) There is greater risk of transmission from man to woman
b) There is greater risk of transmission from woman toman
c) Risk is equal in either ways
d) HIV infection is not transmitted by heterosexual act

1520. AIDS is not transmitted by - *(Kerala 09)*
a) Blood transfusion b) Cryoprecipitate
c) Breast milk d) Plasma

1521. Risk of HIV transmission is not seen with -
a) Whole blood *(Delhi 09)*
b) Platelets
c) Plasma derived hepatitis B vaccine
d) Leucocytes vaccines

1522. During the Window period of patient with AIDS -
a) ELISA is-ve *(NIMS 96)*
b) Western Blot is - ve
c) Both are-ve
d) PCRis-ve

1523. Window period in HIV is from - *(Jimper 04)*
a) Infection to appearance of antibodies in serum
b) Infection to appearance of viral particles in blood
c) Infection to appearance of symptoms
d) Infection to decrease of CD4 lymphocytes

1524. The commonly used screening test for Human immunodeficiency virus is - *(Karnat. 96)*
a) VDRL test b) Weil-Felix test.
c) ELISA test d) Western blot test

1525. Reverse Transcriptase is - *(AP 96)*
a) DNA polymerase
b) DNA dependant RNA polymerase
c) RNA dependant DNA polymerase
d) None

1526. HIV virus can be isolated from all except - *(ALLPH98)*
a) Semen b) Saliva
c) Blood d) Skin scraping

1527. Full blown Immunodeficiency syndrome is -
a) High viral titres with low CD 4 count *(SGPGI09)*
b) Low viral titres with low CD 4 count
c) Low viral titres with high CD 4 count
d) High viral titres with high CD 4 count

1528. Most common opportunistic infection in AIDS in India- *(Orissa 04)*
a) Toxoplasmosis b) Crytococcosis
c) Cryptosporidium d) TB

1529. The common causative agent in diarrhea in AIDS patients is- *(UP 07)*
a) Toxoplasma b)Cryptosporidium
c) Salmonellae d) Mycobacteria

1530. Which is not increased in HIV infection - *(Delhi 08)*
a) CMV
b) Kaposi sarcoma
c) Mycobacterial infection
d) Pneumococcal infection

1531. Which of the following mycobacteria can cause disease in HTV+ve patient with a CD4 count of600/ cu.mm? (*Corned 07)*
a) M. tuberculosis b) MAC
c) M. chelonei d) M. fortuitum

1532. Sero conversion in HIV Infection takes place in -
a) 2 weeks b) 4 weeks *(JIPMER93)*
c) 9 weeks d) 12 weeks

1533. p24 antigen disappears from the blood after how many weeks in HTV - *(AMU 05)*
a) 2-4 weeks b) 4-6 weeks
c) 6-8 weeks d) 8-10 weeks

1534. Most common mode of transmission of HIV world wide is- *(SGPGI 04)*
a) Heterosexual b) Homosexual
c) IV-drug abuse d) Contaminated blood products

1535. Latent phase of HIV - *(PGI Dec 06)*
a) Viral Replication
b) Sequestred in lymphoid tissue
c) Infective
d) Not infective
e) Rapid decline of CD4 count is common

1510)a 1511) a 1512)d 1513)a 1514)a 1515)b 1516)c 1517)None 1518)d 1519)a 1520)b 1521)c 1522)c
1523) a 1524)c 1525)c 1526)d 1527)a 1528)d 1529)b 1530)None 1531)a 1532)b 1533)c 1534)a 1535)a,b,e

1536. HIV infection is associated with - *(PGIJune 02)*
a) A glandular fever like illness
b) Generalised lymphadenopathy
c) Gonococcal septicemia
d) Sinus disease
e) Presenile dementia

1537. Most common agent causing tuberculosis in AIDS patient in tropical countries is - *(AI97)*
a) Mycobacterium tuberculosis
b) Mycobacterium intracellulare
c) Mycobacterium parvum
d) Mycobacterium atypical

1538. In India most common cause of T. B. in HIV -
a) Myco. Tuberculosis *(PGI 2000)*
b) Myco. Avium intracelluare
c) M. bovis
d) M. scrofulaceum

1539. CMV retinitis in HTV occurs when the CD4 counts falls below- *(AI02)*
a) 50 b) 100
c) 200 d) 150

1540. An HIV patient complains of visual disturbances. Fundal examination shows bilateral retinal exudates and perivascular haemorrhges. Which of the following viruses are most likely to be responsible for this retinitis - *(AI04)*
a) Herpes simplex b) Varicella zoster
c) Cytomegalovirus d)EBV

1541. The most common organism amongst the following that causes acute meningitis in an AIDS patients is-
a) Streptococcus pneumoniae *(AI05)*
b) Steptococcus agalactiae
c) Cryptococcus neoformans
d) Listeria monocytogenes

1542. Common CNS lesions in HIV is caused by-*(PGIjune*
a) Cryptococcus b) Toxoplasma *09)*
c) Neurocysticercosis d) Mucormycosis
e) Lymphoma

1543. Important features of AIDS are - *(PGI June 01)*
a) Follicular tonsillitis b) Lichen planus
c) Oral candidiasis d) Hairy leukoplakia
e) Mitotic lesions of oral cavity

1544. Which of the following lesions is associated with HTV infection - *(AIIMS May 04)*
a) Hairy leukoplakia b) Erythroplakia
c) Oral lichen planus d) Bullous pemphigoid

1545. In a patient having HIV infections, oral ulcer is most commonly due to - *(Orissa05)*
a) Candida b) Cryptococcosis
c) Histoplasma d) Trichophyton

1546. Oral hairy leukoplakia is caused by- *(NEET/DNB*
a) HSV b)EBV *Pattern)*
c) CMV d)HPV

1547. Persistent diarrhoea in AIDS is caused by A/E-
a) Microspora b) Cryptococcus *(PGI 01)*
c) Cryptosporidia d) Isospora belli
e) Giardialamblia

1548. Fungal infections associated with AIDS patient are- *(PGI Dec 03)*
a) Pneumocystis carinii b)Penicilliummameffei
c) Candida d) Cryptococcus
e) Cryptosporidium

1549. Which infection is not common in HIV patients -
a) Cryptosporidiosis *(AIIMS Feb 97)*
b) Atypical mycobacterial infection
c) Aspergillosis
d) Candidiasis

1550. Fungal infection in AIDS - *(PGIDec 06)*
a) Mucormycosis
b) Aspergillosis
c) Disseminated candidiasis
d) Mucocutaneous candidiasis
e) Pneumocystis jiruveci

1551. Most common genital lesion in HIV patient is -
a) Chlamydia b) Herpes *(AI 10)*
c) Syphilis d) Candida

1552. Commonest helminthic infection in AIDS is -(*AI99)*
a) Trichuris trichura
b) Strongyloides stercoralis
c) Enterobius vermicularis
d) Nector-americanus

1553. Which of the foolwing is not seen in HIV Patient with CD count less than 100 Per micro litre, who has non productive cough - *(AIIMS June 99)*
a) Mycobacterium tuberculosis
b) Pneumocystis carinii
c) Mycoplasma pneumoniae
d) Cryptococcal infection

1554. The tissue of origin of the Kaposi's sarcoma is -
a) Lymphoid b) Vascular *(AIIMS May 05)*
c) Neural d) Muscular

1555. Multifocal tumor of vascular origin in a patient of AIDS- *(AI 00)*
a) Kaposi sarcoma b) Astrocytoma
c) Gastric Carcinoma d) Primary CNS lymphoma

1556. A patient with HIV has diarrhoea with AFB (+)ve organism in stool. The most likely organism is -
a) Mycobacterium avium intracellulare *(AI00)*
b) Mycobacterium TB
c) Mycobacterium leprae
d) Mycoplasma

1557. True about HIV all except - *(NEET/DNB Pattern)*
a) PML caused by JC virus
b) CNS lymphoma is the most common CNS tumor
c) CMV is the most common cause of retinitis
d) Most common cause of seizure is Candida

1558. In HIV window period indicates- *(AIIMS Nov 07)*
a) Time period between infection and onset of first symptoms
b) Time period between infection and detection of antibodies against HIV
c) Time period between infection and minimum multiplication of the organism
d) Time period between infection and maximum multiplication of the organism

1536)a,b,d,e 1537)a 1538)a 1539)a 1540)c 1541)c 1542)a,b,e 1543)c,d 1544)a 1545)a 1546)b 1547)c,e 1548)a,b 1549) c 1550)c,d 1551)b 1552)b 1553)c 1554)b 1555)a 1556)a 1557)d 1558)b

1559. HIV can be detected and confirmed by - *(AI05)*
a) Polymerase Chain Reaction (PCR)
b) Reverse Transcriptase - PCR
c) Real Time PCR
d) Mimic PCR

1560. ELISA test when compared to western blot technique is- *(AI93, 96)*
a) Less sensitive, less Specific
b) More sensitive, More specific
c) Less sensitive, more specific
d) More sensitive, less Specific

1561. Most sensitive test for HIV infection - *(NEET/DNB Pattern)*
a) Western blot b) ELISA
c) Agglutination test d) CFT

1562. Following is the marker ofHIV infection in blood- *(AIIMS94)*
a) Reverse Transcriptase b) DNA polymerase
c) RNA polymerase d)None

1563. All of the following methods are used for the diagnosis of HTV infection in a 2 month old child, except- *(AIIMSMay 03)*
a) DNA-PCR. b) Viral culture.
c) HIV ELISA d) p24 antigen assay

1564. A patient comes to hospital with a history of sore throat, diarrhoea and sexual contact 2 weeks before. The best investigation to rule out HTV is - *(AI00)*
a) P24 antigen assayb) ELISA
c) Western blot d) Lymphnode biopsy

1565. False about p24 is - *(NEET/DNB Pattern)*
a) Seen after 3 weeks of infection
b) Cant be seen in first week
c) Cant be detected after seroconversion
d) Detected by ELISA

1566. In diagnosis of AIDS, criteria include the following except - *(PGI Dec 01)*
a) CD4<200
b) CD8 < 500
c) CD 4: CD 8=1
d) Presence of any of the opportunistic infections tuberculosis, pneumosystic carinii, cytomegalovirus
e) Western blot is positive

1567. A resident doctor sustained a needlestick injury while sampling blood of a patient who is HTV positive. A decision is taken to offer him post-exposure prophylaxis. Which one of the following would be the best recommendation ? *(ARMS Nov 03)*
a) Zidovudine + Lamivudine for 4 weeks
b) Zidovudine+Lamivudine+Nevirapine for 4 weeks
c) Zidovudine 4- Lamivudine + Indinavir for 4 weeks
d) Zidovudine + Stavudine + Nevirapine for 4 weeks.

1568. Antenatal maternal HIV diagnosis is of importance in - *(Japmer 04)*
a) To prevent vertical transmission
b) To terminate
c) To discharge
d) To isolate the patient

1569. Maternal to child transmission of HTV is prevented by - *(ARMS Nov 11)*
a) Nevirapine b) Lamivudine
c) Didanosine d)Abacavir

1570. Which one of the following is true regarding HIV infection- *(AI 04)*
a) Following needle stick injury infectivity is reduced by adminsitration of nucleoside analogues
b) CD4 counts are the best predictors of disease progression
c) Infected T cells survive for a month in infected patients
d) In latent phase HIV has minimal replication

ONCOGENIC VIRUSES

1571. Which is NOT an oncogenic \irus- *(AIIMS June 97)*
a) HTLV -1 b) Herpes simplex
c) Papillomavirus d)HBV

1572. Oncogenic RNA virus is -
a) Avian leukosis virus b) Herpesvirus
c) Adenovirus d) Togavirus

1573. All oncogenic viruses containing RNA belongs to-
a) Picomaviridae *(NEET/DNBPattern)*
b) Herpesviridae
c) Retroviridae

1574. Most common oncogenic RNA virus-
a) Retrovirus *(NEET/DNBPattern)*
b) Picomavirus
c) Orthomyxovirus
d) Paramyxovirus

1575. Oncogenic virus is - *(NEET/DNB Pattern)*
a) CMV b)VZV
c) Poliovirus d)EBV

1576. All of the following are DNA oncogenic viruses except- *(COMED 06)*
a) Epstein Barr virus
b) Hepatitis B virus
c) Adult T cell Leukemia/lymphoma virus
d) Kaposi sarcoma virus

1577. The following viruses has been associated with oncogenesis except - *(UP 97)*
a) Human Papilloma Viruses
b) Epstein Barr virus
c) Human T cell leukemia virus
d) Varicella Zoster virus

1578. Which of the following "oncogenic viruses" is so far not shown to be (oncogenic) in man - *(DNB 92)*
a) Hepatitis B virus
b) Epstein-Barr virus
c) Herpes simplex Type 2
d) Adenovirus
e) Human T cell lymphotrophic virus 1 (HTLVI)

1579. All are oncogenic viruses except - *(JIPMER 98)*
a) EB virus b) Reo virus
c) Retrovirus d) Human papilloma virus

1559)b 1560) d 1561)b 1562)a 1563)c 1564)a 1565)a>c 1566)b,c,e 1567)c 1568)a 1569)a 1570)a 1571)None
1572) a 1573) c 1574) a 1575) d 1576)c 1577)d 1578)d 1579)b

1580. All viruses are oncogenic except - *(MP 98)*
a) EBV b)HTLV-l
c) HSV-1 d)HPV

1581. The only oncogenic virus whose pathogenicity has been proved without doubt is- *(JIPMER 05)*
a) HTLV-I b)HTLV-n
c) HTLV-ni d) HTLV-IV

HUMAN PAPILLOMAVIRUS

1582. Most common tumour caused by virus is -
a) Warts *(AIIMS Dec 97)*
b) Carcinoma cervix
c) Nasopharyngeal corcinoma
d) Lymphoma

1583. Condyloma acuminatum is caused by -
a) HSV b)HPV *(NEET/DNB*
c) HIV d)VZV *Pattern)*

1584. Which of the following statement is correct -
a) Viral warts usually resolve spontaneously
b) Plantar warts should not be excised *(PGI05)*
c) Callosities are formed occupationally
d) Corn's are viral in etiology
e) Plantar warts are painless

1585. HPV vaccine is - *(AIIMS Nov 09)*
a) Monovalent b) Bivalent
c) Quadrivalent d) Both bivalent and quadrivalent

1586. TVue about HPV vaccination - *(PGI Nov 09)*
a) Given in women age group 20-40 years
b) Primary dose consists of 2 doses
c) Efficacy > 70% for cervical cancer
d) Two types are available in market
e) Protect against HPV 16 & 18

1587. Human papillomatosis is caused by-
a) HSV bHPV *(NEET/DNB*
c) HTV d)HBV *Pattern)*

1588. Most common type of HPV associated with cervical cancer - *(NEET/DNB Pattern)*
a) 6,11 b) 5,8
c) 16,18 d)6,8

1589. Condyloma accminatum is caused by HPV types of -
a) 18,31 b) 17,12 *(UP09)*
c) 6,11 d) 16,18

1590. Type of human papilloma virus associated with cacinoma cervix - *(JIPMER 98)*
a) Types 6,12,18 b) Types 16,18,31
c) Types 6,8,11 d) Types 3,10,19

ROTAVIRUS

1591. All are cultivable virus Except - *(ARMS Dec 97)*
a) Rotavirus b) Enterovirus
c) ECHO virus d) Coxsackie virus

1592. All are true about Rota virus except - *(ARMSDec 97)*
a) Causes diarrhoea in man and children.
b) Rota B Can be grown in cell culture.
c) Rota C can cause diarrhoea in children
d) Culture cannot be done

1593. Which of the following is true about Rotavirus -
a) Commonly affects children *(AI 94)*
b) Double Stranded DNA
c) Can be grown easily on cell culture
d) Egg shell appearance under electron microscope

1594. Viral enterotoxin is detected as a possible of mechanism pathogenesis in - *(AI 98)*
a) Adenovirus b) Rotavirus
c) Calcivirus d) Astrovirus

1595. ROTA virus is diagnosed by - *(ARMSNov 99)*
a) IgM specific antibody in stool
b) ELISA demonstrates antibody in stool
c) Immunoflorescence antigen in stool
d) Culture of rotavirus

1596. Rotavirus infection is diagnosed by the presence of-
a) Antigen in stool by ELISA *(AI2000)*
b) Virus in stool
c) Antigen in blood
d) Antibody in stool

1597. Rotavirus is detected by - *(NEET/DNB Pattern)*
a) Antigen in stool
b) Antibody in serum
c) Demonstration of virus
d) Stool culture

1598. Best vaccine for rotavirus infection is - *(AI 98)*
a) Asymptomatic neonatal vaccine
b) DNA vaccine
c) Genetic reassortment
d) Capsular component vaccine

1599. Genetic reassortment is seen with - *(ARMSNov 10)*
a) Astrovirus b) Herpes virus
c) Rotavirus d) Hepadena virus

1600. Rota virus causes- *(Delhi 08)*
a) Acute nonbacterial gasteroenteritis in adult
b) Infantile diarrhea
c) Teratogenic effects
d) Respiratory infection in immunocompromised

1601. The following is true of Rota virus - *(AI 92)*
a) Easily grown in cell culture
b) Double stranded DNA
c) Terminal ileum villi destroyed
d) Adult and old people account for 60% of infection.

SLOW VIRAL DISEASES

1602. Which of the following is not consider to be a slow viruse diseases -
a) Kuru b) Scrapie
c) Creutzfeldt Jakob disease d) Maedi
e) Sarcoidosis

1603. TVue about prion protein diseases is all, except -
a) Myoclonus is seen in 10% of the patients
b) Caused by infectious protein *(ARMS Nov 01)*
c) Brain biopsy is diagnostic
d) Commonly manifests as dementia

1580) None 1581)a 1582)a 1583)b 1584)a,b,c 1585)d 1586)c,d,e 1587)b 1588)c 1589)c 1590)b 1591)a 1592)b 1593) a 1594)b 1595)c 1596)a 1597)a 1598)c 1599)c 1600)b 1601)c 1602)e 1603)a

1604. Creutzfeldt-Jacob disease is caused by - *(PGI99)*
a) Prion b) JC virus
c) Genetic factors d) Nutritional deficiency

1605. Prions are- *(AI 08)*
a) Made up of bacterial and viral particles
b) Immunogenic
c) Infectious
d) RNA particles

1606. Prions consists of - *(AIIMS Nov 07)*
a) DNAandRNA b) DNA, RNA and Protein
c) RNA and protein d) Only proteins

1607. Regarding prion protein which of the following statment is true - *(AIIMS Nov 08)*
a) It is protein product coded in viral DNA
b) It catalyses abnormal folding of other proteins
c) It protect disulfide bonds from oxidation
d) It cleaves normal proteins

1608. True about prions is - *(AI 11)*
a) Encoded by viral genome
b) Associated with misfolding of protein
c) Non infectious
d) Immunogenic

1609. Mad Cow disease (Spongiform disease) occurs due to- *(AIIMSDec 97)*
a) CJ virus b) Arena virus
c) Kuru virus d) Parvo virus

1610. Mad Cow disease (Bovine Spongioform Encephalopathy) is similar in man to - *(AIIMS 96)*
a) Alzheimer's Disease
b) Creutzfeldt Jakob Disease
c) Huntingtons Chorea
d) Picks Disease

1611. Fatal familial insomnia is associated with - *(AI99)*
a) Prion disease b) Degenerationdisease
c) Neoplasticdisease d) Vascular disease

1612. Mad cow disease is due to - *(Culcutta 2K)*
a) Slow virus b) Mycoplasma
c) Bacteria d) Fungus

1613. Which one of the following not a prion associated disease - *(JIPMER 05)*
a) Srapie
b) Kuru
c) Creutzfeldt-Jakob disease
d) Alzheimer's disease

1614. Which of the following is NOT a prion disease?
a) Bovine spongiform encephalopathy *(Kam 11)*
b) Transmissible mink encephalopathy
c) Scrapie
d) Progressive multifocal leucoencephalopathy

PARVOVIRUS

1615. The virus which causes aplastic anemia in chronic hemolytic diseases is - *(PGI96)*
a) Adenovirus b) Hepatitis virus
c) EB virus d) Parvovirus

1616. One of the following is not a cultivable virus - *{AI 97)*
a) Papova b) Parvovirus B-19
c) Herpes d) Adenovirus

1617. Parvo virus causes- *(PGI Dec 07)*
a) Aplastic anemia
b) Erythema infectiosum
c) Roseola infantum
d) Arthritis

1618. In Parvovirus infection what is common in adult -
a) Bone marrow aplasia b) PRC A *(PGI June 07)*
c) Erythema infectiosum d) Arthropathy

1619. Parvovirus infection is associated with - *(PGI June*
a) Hydrops fetalis b) Aplastic anemia *08)*
c) Abortion d) Sixth disease
e) Hemophagocytic syndrome

1620. All of the following statements about Parvovirus B-19 are true except - ***(AI** 09)*
a) DNA virus
b) Crosses placenta in only < 10% of cases
c) Can cause severe anemia
d) Can cause aplastic crises

1621. All of the following statements about parvovirus B-19 are true, except - ***(AI** 11)*
a) <10% spread by transplacental route
b) Respiratory route is the primary mode of transmission
c) It is a DNA virus
d) Affects erythroid progenitors

1622. Parvovirus B19 does not cause - *(AIIMSMay 08)*
a) Roseola infantum
b) Aplastic anemia in sickle cell disease
c) Fetal hydrops

1623. Slapped cheek sign is seen in - *(NEET/DNB Pattern)*
a) Parvovirus B19 b) JC virus
c) Rota virus d) Mumps

1624. Infection with which of the following agents is particularly dangerous for anemic patients -*(HP 06)*
a) Adenovirus b) Cytomegalovirus
c) Herpes simplex virus d) Parvovirus

MISCELLANEOUS

1625. The viruses causing gastroenteritis are - *(PGIDec*
a) Rotavirus b) Norwalk virus *08)*
c) Adenovirus d) Hepatadenovirus
e) Enterovirus

1626. Regarding respiratory viruses all are true except -
a) RSV is the most common cause of bronchiolitis in infants *(AIIMS Nov 07)*
b) Mumps causes septic meningitis in adult
c) Measles causes SSPE
d) EBV causes pleuritis

1627. Choose the correct matches - *(PGI June 02)*
a) Mumps - RA 27/3 strain
b) Rubella - Jeryl - Lynn strain
c) Measles - Edmonston - Zagreb strain
d) BCG-Danish 1331 strain

1604) a,c 1605)cl606)d 1607)b 1608)b 1609)? 1610)b 1611)a 1612)a 1613)d 1614)d 1615)d 1616)b
1617)a,b,d 1618)d 1619)a,b,c,e 1620)b 1621)a 1622)a 1623)a 1624)d 1625)a,b,c,e ■'1626)b 1627)c,d

1628. Latency seen in viral infections- *(PGIDec. 08, June 05)*
a) HSV-II b) CMV
c) Rotavirus d) HIV
e) EBV

1629. HTLV extra gene is - *(NEET/DNB Pattern)*
a) Gag b)Pol
c) Env d) px

1630. Incubation period less than 10 days seen -
a) Influenza b) Cholera *(PGIDec 02)*
c) Plague d) Chickenpox
e) Rabies

1631. Human to human transmission not seen in -
a) SARS b) Japanes B encephalitis
c) Bird's flu d) Poliomyelitis
e) HIV *(PGI June 05)*

1632. Which of the following pair is correct -
a) RS V - Bronchiolitis *(PGIDec 05)*
b) Orf - viral infection is transmitted from sheep
c) Parvovirus B 19 - Exanthema subitum
d) HHV6 - kaposi Sarcoma

1633. All of the viruses cause pneumonia except - *(AI-95)*
a) Cytomegalovirus b) Mumps
c) Measles d) Retrovirus

1634. Renal involvement is seen in which of the following infections - *(PGI 03)*
a) Cytomegalovirus b) Polyoma virus
c) Human Papilloma virus d)HIV
e) HBV

1635. All of the following statements are true regarding central nervous system infection, except-
a) Measles virus is the causative agent for subacute sclerosing panencephalitis *(AIIMS - 04)*
b) Cytomegalovirus causes bilateral temporal lobe hemorrhagic infarction
c) Prions infection causes spongiform encephalopathy
d) JC virus is the causative agent for progressive multifocal leucoencephalopathy

1636. PML is caused by - *(PGI 2000)*
a) CMV b) Papova virus
c) HIV d) Polio virus

1637. Progressive multifocal leukoencephalopathy is caused by - *(NEET/DNB Pattern)*
a) CMV b)EBV
c) JC virus d) RSV

1638. SARS true are - *(PGI June 06)*
a) Severe acute respiratory syndrome
b) Documented respiratory route spread
c) Effective vaccine available
d) Cause atypical pneumonitis
e) Group coronavirus

1639. Causative organism of SARS - *(NEET/DNB Pattern)*
a) H1N1 b) Corona virus
c) Rotavirus d)RSV

1640. Which pathogens adhere to respiratory epithelium-
a) RSV b) Influenza *(PGI Dec 06)*
c) Parainfluenza d)HBV
e) Picomavirus

1641. Emergence or resurgence seen in which of the following organisms - *(PGI Dec 04)*
a) Poliovirus b) Measles virus
c) Nipah virus d) West Nile virus
e) Hepatitis B virus

1642. New infectious agents are - *(PGIDec 07)*
a) Nipah virus b) Pneumocystis jieruveci
c) Coronavirus d)SARS
e) Prion

1643. Virus that affect lymphoid tissue - *(PGI Dec 06)*
a) Adenovirus b) Herpesvirus
c) CMV d)HTV
e) HBV

1644. For which of the following are live vaccines used -
a) Measles b) Cholera *(PGI 88)*
c) Smallpox d) Oral Polio

1645. Electron microscopy is helpful in diagnosis of -
a) Rotavirus b)RSV *(PGNJune03)*
c) Herpesvirus d) Prion

1646. Culture of CSF easily detect - *(PGI Nov 09)*
a) CMV b) Echovirus
c) Coxsakie d)HSV
e) Mumps

1647. Which of the following does not cause conjuctivitis-
a) Adenovirus b) Enterovirus *(JIPMER 92)*
c) Coxsackie virus d) Herpes virus

1648. Kaposi sarcoma is caused by - *(Delhi 09)*
a) EBV b) Parvovirus
c) Herpes virus d) Rotavirus

1649. Ebola virus is a- *(Delhi 96)*
a) Reovirus b) Filovirus
c) Arbovirus d) Arenavirus

1650. $MgCl_2$ is added to polio vaccine because of the following - *(JIPMER 79, UPSC 89, 92)*
a) Potentiates the vaccine
b) Vaccine can be kept at higher temperatures
c) Preservative
d) None of the above

1651. Which virus given below is not a teratogenic virus ? **(***Corned 08)*
a) Rubella b)Cytomegalovirus
c) Herpes simplex d) Measles

1652. An emerging viral pathogen causing pyelonephritis in kidney allografts is - **(***Corned 08)*
a) Molluscum contagiosum
b) Herpes simplex virus
c) Polyoma virus
d) Influenza virus

PARASITOLOGY

GENERAL

1653. Which of the following is a protista- *(NEET/DNB Pattern)*
a) Algae b) Fungi
c) Protozoa d) Bacteria

1628)a,b,d,e 1629)d 1630)a,b,c 1631)bl632)a,b 1633)b 1634)d,e 1635)b 1636)b 1637)c 1638)a,b,d,e 1639)b 1640) a,b,c,e 1641)c,d 1642)a,c,d 1643)c,d,e 1644) All 1645)a,e 1646)Ail 1647)None 1648)c 1649)b 1650) b 1651)d 1652)c 1653)c

1654. Nematodes are differentiated from other worms by- *(PGIDec 05)*
a) Segmentation absent b) Separate celomic cavity
c) Sexes separate d) They are cylindrical
e) GIT is formed completely

1655. True about trematodes - *(NEET/DNB Pattern)*
a) Two host required
b) Segmented
c) Anus present
d) Body cavity present

1656. HemoflageUate- *(AIIMS90)*
a) Requires intermediate host
b) Grows in living tissue
c) Does not grow in culture media
d) Has undulating membrane

PROTOZOA

1. ENTAMOEBA

1657. All the following amoebae live in the large intestine except - *(Karnat89)*
a) E.coli b) E. nana
c) E.gingivalis d) l.butschii

1658. Non-pathogenic amoebae is/are - *(PGIMay 10)*
a) E. histolytica b) E.coli
c) Acanthanmoeba d) E.Hartmanni
e) Balamuthia

1659. Which of the following is true about mature cysts of E. histolytica - *(AI96)*
a) Endoplasm and ectoplasm are clearly defined
b) Eight chromatid bodies
c) Shows chromatid bodies and glycogen mass
d) Nuclear structure retains characteristics of trophozoite

1660. All are true about Entamoeba Histolytica except -
a) Cyst are 8 nucleated *(AI 91)*
b) Cyst are 4 nucleated
c) Trophozoites colonise in the colon
d) The chromatid bodies are stained by Iodides

1661. Which is true of trophozoites of E.histolytica -
a) Has eccentric Karyosome *(AI 93)*
b) Nuclear membrane with chromatin
c) Shows erythrophagocytosis
d) Presence of bacteria inside cell

1662. Which one of the following statements is false -
a) The presence of ingested erythrocytes is seen only in Entamoeba histolytica *(AIIMS Nov 03)*
b) Young adult male of low socioeconomic status are most commonly affected by invasive amoebiasis
c) A low iron content in the diet predisposes to invasive amoebiasis
d) The pathogenic and non-pathogenic strains of E. histolytica can be differentiated by the electrophoretic study of zymodemes

1663. The pathogenecity of Entamoeba histolytica is indicated by- *(APPGE 05)*
a) Zymodeme pattern b)Size
c) Nuclear pattern d) ELISA test

1664. The main reservoir for entamoeba histolytica is -
a) Man b) Dirty water *(AI91)*
c) Soil d) Ponds

1665. Amoebiasis is transmitted by all *except-(AIIMSNov 10)*
a) Cockroach b)Faecooral
c) Vertical transmission d)Oro-rectal

1666. All are seen in cyst of E.Histolytica except -
a) Glycogen mass *(Kerala 94)*
b) Chromatid bars
c) Eccentric nucleus
d) Retractile nucleus

1667. Primary amoebic meningitis caused by- *(SGPGI 05)*
a) Naegleri fowled b) E.histolytica
c) E.coli d)B.coli

1668. The most distinctive feature of pathogenic Entamoeba histolytica on fresh stool examination is - *(UP 97)*
a) Presence of active pseudopodia
b) Erythrophagocytosis
c) Presence of intracytoplasmic vacuole
d) Presence of two nucleoli

1669. Regarding cutaneous amoebiasis which is not true -
a) It is a spreading necrotising inflammation of the skin and subcutaneous tissue *(Karn 94)*
b) Rapid improvement with anti-amoebic treatment occurs
c) Can occur in the perianal region
d) The infection reaches the skin through the blood stream

1670. True about amoebic colitis is - *(PGI June 02)*
a) Caused by E histolytica
b) Cyst contains eight nuclei
c) Flask-shaped ulcers are present
d) Cecum is most commonly affected
e) Is premalignant

1671. Stain with parasite having charcot-laden crystals but no pus cells- *(NEET/DNB Pattern)*
a) Giardia b) Tenia
c) E. histolytica d) Trichomonas

1672. Invasive amoebiasis can be best diagnosed by -
a) ELISA *(AIIMS Nov 01)*
b) Countercurrent immunoelectrophoresis
c) Indirect hemaglutination test
d) Complement fixation test

1673. Amoebic liver abscess can be diagnosed by demonstrating- *(AI 91)*
a) Cysts in the sterile pus
b) Trophozoites in the pus
c) Cysts in the intestine
d) Trophozoites in the feces

1654) a,c,d,e 1655)a 1656)a,b,d 1657)c 1658)b,d 1659)d 1660)a,d 1661)b,c 1662)c 1663)a 1664)a 1665)c 1666)d 1667) a 1668)b 1669)d 1670)a,c,d 1671)c 1672)a 1673)b

1674. Significant titres of IHA is seen in all types of amoebiasis except- *(AIIMS 98)*
a) Acute amoebic dysentery
b) Brain abscess
c) Liver abscess
d) Cyst passers

1675. A patient presents with lower gastrointestinal bleed. Sigmoidoscopy shows ulcer in the sigmoid. Biopsy from this area shows flask-shaped ulcers. Which of the following is the most appropriate treatment -
a) Intravenous ceftriaxone *(ARMS 05)*
b) Intravenous metronidazole
c) Intravenous steroids and sulphasalazine
d) Hydrocortisone enemas

1676. Commonest site of extraintestinal amoebiasis is -
a) Brain b) Liver *(Delhi 93)*
c) Spleen d) Lungs

1677. Chronic amoebic keratitis is seen in - *(UP 07)*
a) E. histolytica b) Acanthamoeba
c) Naegleria c) Haemoflagellates

1678. E. Histocytica. True are - *(PGI June 06)*
a) Mostly symptomatic
b) Differentiated morphologically from E. dispar
c) Antigenically different from E. disper

1679. The mature cyst of Entamoeba histolytica differs from Entamoeba coli, in the following except -
a) Size is 6 to 15 microns *(Karnat. 96)*
b) Nuclei are 1 to 4 in number
c) Karyosome is central in position
d) Chromatid bars seen

1680. The cystic form of all are seen in man except -
a) E.histolytica b) Giardia *(NEET/DNB Pattern)*
c) Trichomonas d) Toxoplasma

1681. Cyst phase does not exist in - *(TN 03, UP 09)*
a) Gardenella vaginalis
b) Trichomonas vaginalis
c) Entamoeba hystolytica
d) Entamoeba coli

1682. Neuropathogenic amoeba are - *(JIPMER 85)*
a) Acanthamoeba b) Ent. coli
c) Nageleria d) Ent. Histolytica

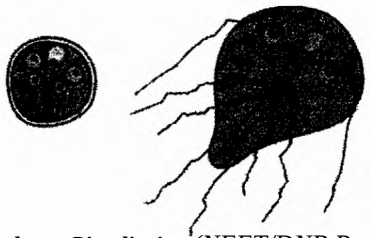
1683. A 30-year old patient presented with features of acute meningoencephalitis in the casualty. His CSF on wet mount microscopy revealed motile unicellular microorganisms. The most likely organism is -
a) Naegleria fowleri *(ARMS May 05)*
b) Acanthamoeba castellani
c) Entamoeba histolytica
d) Trypanosoma cruzi

1684. Acute Primary Amoebic meningoencephalitis true is-
a) Meningitis caused by acanthamoeba species is acute in nature *(ARMSMAY 08)*
b) Diagnosis is by demonstration of trophozoite in CSF
c) Caused by feco-oral transmission
d) More common in tropical climate

1685. Eiosinophilic meningoencephalitis is caused by -
a) Gnathostoma spinigerum *(PGI 2000)*
b) Naegleria
c) Toxocara canis
d) Angiostrongylus cantonensis

1686. Most fatal amoebic encephalitis is caused by -
a) E.histolytica b)Naeglaria *(Bihar 09)*
c) E. dispar d) Acanthamoeba

1687. Fulminant Amoebic meningoencephalitis caused by-
a) Acanthamoeba b)N.fowleri *(AP96)*
c) E.Histolytic d) E. Coli



1688. Selective medium for Naegleria fowleri is -
a) Nutrient agar rich with E coli *(Maharashtra 10)*
b) NNN media
c) Non-nutrient agar with E.coli
d) Diamond media

2. GIARDIA LAMBLIA

1689. Giardiasis is associated with - *(ARMSFeb 97,*
a) Common variable immunodeficiency *Nov 02)*
b) Cj esterase deficiency
c) C_g deficiency
d) Anaemia

1690. The normal habitat of giardia is -
a) Duodenum and jejunum *(NEET/DNB Pattern)*
b) Stomach
c) Caecum
d) Ileum

1691. An anxious mother brought her 4 year old daughter to the pediatrician. The girl was passing loose bulky stools for the past 20 days. This was often associated with pain in abdomen. The pediatrician ordered the stool examination, which showed the following organisms. Identify the organism - *(AI03)*
a) Entamoeba histolytica
b) Giardia lamblia
c) Cryptosporidium
d) E.Coli

1692. True about Giardiasis - *(NEET/DNB Pattern)*
a) Only cyst is infective
b) Reside in ceacum
c) Only man to man transmission
d) Exist in one phases

1693. True about Giardia is - *(ARMSMay 94)*
a) May cause traveller's diarrhoea
b) Giardia inhabits ileum
c) Trophozoites are infective to man
d) None of the above

1674)d 1675)b 1676)b 1677)b 1678)c 1679)d 1680)c 1681) a,b 1682)a,c 1683)a 1684)b 1685)a,d 1686)b 1687)b 1688) c1689)a 1690)a 1691)b 1692)a 1693)a

1694. Which of the following infestation leads to malabsorption - *(AI05, AIIMS 04)*
a) Giardialamblia
b) Ascaris lumbricoides
c) Necater Americana
d) Ancylostoma duodenale

1695. Digestion in intestinal mucosa is inhibited by -
a) V cholera b) G lamblia *(MAHA 05)*
c) Enterokinase d) S haematobium

1696. A patient presents with diarrhoea, analysis of stool on wet mount shows mobile protozoa without RBCs and pus cells. The diagnosis is - *(AI2000)*
a) Balantidium coli
b) Giardiasis
c) Trichomonas hominis
d) Entamoeba histolytica

1697. Which of the following is true with Giardia lamblia-
a) Malabsorption commonly seen *(PGI Dec 05)*
b) Trophozoite forms is binucleate
c) Diarrhea is seen
d) Jejunal wash fluid is diagnostic

1698. The following is true of Giardiasis except -
a) Complement fixation test is diagnostic *(AI92)*
b) Stools contain only cysts
c) Habitat is colon
d) Trophozoites and cysts are found in duodenum.

1699. Which of the following is true about giardia -
a) CFT is diagnostic *(PGI 95)*
b) Trophozoites and cysts are seen in man
c) Lives in lower intestine
d) Invades normal mucosa

3- TRYPANOSOMA

1700. Vector for T.cruzi is - *(JIPMER 90)*
a) Reduvid bug b) Tsetse fly
c) Sandfly d) Hard tick

1701. Protozoa associated with megaesophagus -
a) Trypanosome *(NEET/DNB Pattern)*
b) Ameba
c) Giardia
d) Gnathostoma

1702. Parasitic disease affecting intestine is - *(Kerala 96)*
a) Chagas disease b) Malaria
c) Kalaazar d) Fasciola

1703. Tse-tse fly transmits - *(Kerala 94)*
a) Trypansoma brucei b) T.cruzi
c) Kala-azar d) Oriental sore

1704. Winter bottoms sign in sleeping sickness refers to- *(NEET/DNB Pattern)*
a) Unilateral conjunctivitis
b) Posterior cervical lymphadenopathy
c) Narcolepsy
d) Transient erythema

1705. Sleeping sickness is transmitted by - *(PGI 86)*
a) Tse-Tse fly b) House fly
c) Sandfly d)Simuliumfly

4. LEISHMANIA

1706. "Amastigote forms" are seen in - *(PGI June 01)*
a) Leishmania donovani b) Toxoplasma gondi
c) Leishmania major d) Entamoeba

1707. Mucocutaneous leishmaniasis is caused by -
a) L-braziliensis b)L. tropica *(PGI 97)*
c) L. donovani d) L-orientalis

1708. Amastigote form is seen in- *(Orissa 09)*
a) Macrophages b)RES
c) Lymphocytes d)RBC

1709. The most important reservoir of Leishmaniasis in India is- *(JIPMER 09)*
a) Dogs
b) Rodents
c) Acute visceral leishmaniasis
d) Cases of post kalaazar dermal leishmaniasis

1710. Double rise of temperature in 24 hours is seen in case of- *(JIPMER 02, Bihar 02)*
a) KalaAzar b) Malaria
c) TB d) Hodgkin's lymphoma
e) Brucellosis

1711. Visceral leishmaniasis - *(PGIDec 02)*
a) Caused by L. tropica
b) Post-leishmaniasis dermatitis is common
c) Antimonials are useful drugs
d) Diagnosed by blood smear
e) Vector is phlebotomus sergenti

1712. Drug not used in visceral leishmaniasis -
a) Sitamoqine b) Paromycin *(AIIMS Nov 09)*
c) Miltefosine d) Hydroxychloroquine

1713. Which of the following is most severely affected in Kala azar - *(JIPMER 81, BIHAR 90)*
a) Spleen b) Liver
c) Adrenal gland d) Bone marrow

1714. The following are true of kala-azar except -
a) Persistent hypergammaglobulinemia
b) Pancytopenia
c) Cancrum oris can occur
d) Full treatment prevents post kala-azar dermal leishmaniasis

1715. A 20 years femle has hepatosplenomegaly, fever, pallor and generalized lymphadenopathy. Lab test useful for diagnosis is/are - *(PGI June 09)*
a) ESR
b) Electrophoresis
c) Parasite detection in aspirate
d) ELISA
e) Routine haemogram

1694) a 1695)b 1696)b 1697)b,c 1698)a,b,c 1699)b 1700)a 1701)a 1702)a 1703)a 1704)b 1705)a
1706) a,c 1707) a 1708) b 1709)c 1710)a 1711)c,d 1712)d 1713)a 1714)d 1715)a,c,e

1716. The following tests help in laboratory diagnosis of Kala-azar except- *(AI02)*
a) Bone marrow examination
b) Immobilisation test
c) Blood smear examination
d) Aldehyde test

1717. In a case of Kala-azar aldehyde test becomes positive after- *(PGI93)*
a) 2 weeks b) 4 weeks
c) 8 weeks d) 12 weeks

1718. Leishmania is cultured in.....media- *(NEET/DNB Pattern)*
a) Chocolate agar b) NNN
c) Tellurite d) Sabourauds

5. PLASMODIUM

1719. Causative agent of malaria - *(NEET/DNB Pattern)*
a) Protozoa b) Mosquito
c) Bacteria d) Virus

1720. The scientist who discovered the transmisssion of malaria by anopheline mosquito - *(NEET/DNB Pattern)*
a) Laveran b)Paulmuller
c) Ronald Ross d) Pampana

1721. Malarial parasite was discovered by- *(NEET/DNB Pattern)*
a) Ronald ross b) Paul muller
c) Laveran d)Pampania

1722. Infectious stage of plasmodium is - *(Kerala 09)*
a) Trophozoite b) Cryptozoite
c) Sporozoite d) Merozoite

1723. In plasmodium falciparum the number of cycles, the parasite undergoes in the liver is -
a) 0 b) 1 *(JIPMER 09)*
c) 2 d)3
e) 5

1724. Band shaped trophozoites are seen in - *(TN89)*
a) P. ovale b)P.vivax
c) P. falciparum d) P. Malariae

1725. Parasitemia is highest in - *(MP 09)*
a) Vivax malaria b) Ovale malaria
c) Falciparum malaria d) Quartan malaria

1726. Multiple infection of red blood cell is seen with-
a) Plasmodium ovale *(Karnat 08)*
b) Plasmodium vivax
c) Plasmodium falciparum
d) Plasmodium malariae

1727. Which of the following is true about malaria -
a) Gametocyte harbourers are carrier *(Delhi 09)*
b) All stage in erythrocytic schizogony seen in falciparum infection in peripheral blood
c) Schizonts of vivax do not completely fill the RBC
d) All the correct

1728. In malaria reservoir, parasite remains as -
a) Merozoite b) Sporozoite *(AIIMSNov 03)*
c) Trophozoite d) None

1729. Pernicious malaria is a complication seen in infection with - *(Korn 11)*
a) Plasmodium vivax
b) Plasmodium falciparum
c) Plasmodium malariae
d) Plasmodium ovale

1730. The most virulent plasmodium species causing malaria is - *(DPG 10,J&K05)*
a) Plasmodium vivax b) Plasmodium falciparum
c) Plasmodium ovale d) Plasmodium malariae

1731. Splenic rupture is most common in infection with-
a) P. vivax b)P ovale *(Delhi 08)*
c) P. malariae d) P. falciparum

1732. In malaria the Shuffner's dots are due to- *(SGPGI09)*
a) The disintegrated parts of the parasite
b) The intracellular space not occupied by parasite
c) The pigment released from breakdown of hemoglobin
d) The gametocytes

1733. In malaria, sexual cycle is - *(NEET/DNB Pattern)*
a) Sporozoite to gametocytes
b) Gametocytes to sporozoite
c) Occurs in human
d) Responsible for relapse

1734. In transmission of malaria, mosquito bite transfers-
a) Sporozoite b) Merozoite *(PGI79)*
c) Hypnozoite d) Gametocyte

1735. Infective form of mosquito in plasmodium falciparum is- *{AIIMSNov 09)*
a) Merozoites b) Sporozoites
c) Gametocytes d) Trophozoites

1736. The cycle of malaria parasite is in sequence of -
1) Exoerythrocytic stage
2) Gametocytic stage
3) Erythrocytic stage
4) Sporogony
a) 1,2,3,4 b) 1,3,2,4
c) 1,4,2,3 d) 1,4,3,2

1737. In which type of malarial parasite is the exoerythrocytic stage absent - *(PGI 96)*
a) P ovale b)P vivax
c) P falciparum d)P malariae

1738. Malaria parasites - *(AIIMS 84)*
a) Has man as its intermediate host
b) Has a life cycle that alternates between man and tse-tse fly
c) Has 4 important species in man
d) Can be easily cultured in the laboratory

1739. Malaria carriers contain - *(NEET/DNB Pattern)*
a) Trophozoite b) Gametocytes
c) Merozoites d) Trophozoites

1740. Plasmodium falciparum infection of man is characterized by - *(AI 97)*
a) The erythrocytes are increased in size
b) All stages of erythrocytic schizogony are seen in peripheral blood
c) Multiple infection of erythrocytes are seen
d) Each erythrocytic cycle lasts 72 hours

1716) b 1717) d 1718) b 1719)a 1720)c 1721)c 1722)c 1723)b 1724)d 1725)c 1726)c 1727)a 1728)d 1729)b
1730)b 1731) d 1732)c 1733)b 1734)a 1735)c 1736)b 1737)c 1738)a,c 1739)b 1740)c

1741. Which of the following is true about malaria -
a) Size of RBC is enlarged in Vivax infection *(AI96)*
b) Size of RBC is enlarged in Falciparum infection
c) Schuffner's dots are seen in Malariae
d) Relapse is seen in Falciparum infection

1742. Which of the following is true about P. falciparum -
a) James dots are seen *(AI96)*
b) Accole forms are seen
c) Relapses are frequent
d) Longest incubation period

1743. Stages seen in peripheral smear of falciparum malaria - *(PGI Dec 05)*
a) Schizonts b) Gametocytes
c) Accole d) Ring form
e) Trophozite

1744. In plasmodium falciparum following are seen in blood except - *(PGI 9 7)*
a) Schizonts b) Mature trophozoite
c) Mature gametocytes d) None

1745. Stage of falciparum not seen in PBS is - *(PGI 99)*
a) Schizont b)Gametocyte
c) Ring form d) Double ring

1746. Not seen in the peripheral smear in plasmodium falciparum infection - *(PGI97)*
a) Accole b) Maurer's dot
c) Shuffners dots d) Schizonts

1747. Which is true of malaria - *(AI 93)*
a) Rods forms are seen in P. malariae
b) RBC size is more in P. vivax
c) Relapse seen in P. falciparum
d) Male and female mosquito transmit disease

1748. Patient diagnosed to have malaria, smear shows all stages of schizonts 14-20 merozoites, yellowish - brown pigment. The type of malaria is - *(AIMS 01)*
a) PI. falciparum b) PI. malariae
c) PL vivax d) PI. ovale

1749. RBC's are enlarged in infection with - *(AIMS 02)*
a) P. vivax b)P. malariae
c) P. ovale d) P. falciparum

1750. Senescent RBC's are mainly attacked in- *(PGI 02)*
a) Vivax malaria b) Ovale malaria
c) Falciparum malaria d) Quartan

1751. Malarial pigment is formed by - *(AIMS May 94)*
a) Parasite b) Bilirubin
c) Hemoglobin d) Any of the above

1752. Malarial parasite - which statement is false regarding communicability - *{AIMSNov 06)*
a) The gematocytes appear in blood 4-6 days after a sexual phase in p. vivax.
b) The gametocytes appear in blood 10-12 days after a sexual Phase in p.. falciparum
c) The number of gametocytes increases in blood with time
d) The number of gametocytes increases by 1000 times

1753. Chronic complication of malaria - *(PGIDec 02)*
a) Splenomegally b) Nephrotic syndrome
c) Pneumonia d) Hodgkins's disease

1754. P.F.causes- *(PGIJune 03)*
a) Thrombocytopenia b) DIC
c) Hemolysis d)Haematemesis

1755. Which type of malaria is associated with renal failure - *(NEET/DNB Pattern)*
a) Falciparum b) Vivax
c) Malariae d) Ovale

1756. Malaria causing nephrotic syndrom ^(NEET/DNB
a) P. vivax b) P. falciparum *Pattern)*
c) P. malariae d) P. ovale

1757. Cerebral malaria is caused by plasmodium -*(PGI97)*
a) Falciparum b) Ovale
c) Malariae d) Vivax

1758. Which one of the following is detected by the antigen detection test used for the diagnosis of P. falciparum malaria - *(AIMS Nov 04)*
a) Circum-sporozoite protein
b) Merozoite surface antigen
c) Histidine-Rich-Protein I (HRP-I)
d) Histidine-Rich-Protein n (HRP-II)

1759. Thin blood smear for malaria is used to identify - *(AIMS May 93)*
a) Schizont b)Gametocyte
c) Plasmodium parasite d) Type of parasite

1760. True of malaria diagnosis - *(PGI 2000)*
a) Thick smear to identify parasite
b) ABER reveals positivity by 100
c) All have same Incubation
d) Fluorescent Ab within 1 week

1761. What is the treatment of choice for benign tertian malaria? *(UPSC07)*
a) Sulfamethaxazole - pyrimethamine
b) Quinine
c) Mefloquine
d) Chloroquine

6. TOXOPLASMA

1762. Oocyst of toxoplasma is found in - *(AIMS Dec 9 7)*
a) Cat b)Dog
c) Mosquito d) Cow

1763. True about Toxaplasma gondii is, it is carried by-
a) Cats b) Dogs *(AIMS 97)*
c) Rats d)Cow

1764. Tachyzoites are seen in - *(PGI 97)*
a) Toxoplasma b)Toxocara
c) Pulmonary eosinophilia d) Ascaris

1765. All of the following statements about toxoplasmosis are true except - *(AI 97)*
a) Oocyst in freshly passed cat's faeces is infective
b) May spread by organ transplantation
c) Maternal infection acquired after 6 months has high risk of transmission.
d) Arthalgia, sore throat and abdominal pain are the most common manifestations

1741) a 1742)b 1743)b,c,d 1744)a,b 1745)a 1746)c,d 1747)b 1748) c 1749) a,cl750) d 1751)c 1752)c 1753)a,b 1754) All 1755) a 1756) c 1757) a 1758) d 1759) d 1760) a 1761) d 1762) a 1763) a 1764) a 1765) a,d

1766. The infective form of toxoplasma gondii is-
a) Oocyst b) Bradycyst *(Karn. 94)*
c) Tachyzoite d) All of the above

1767. Route of transmission of toxoplasma - *(DNB 09)*
a) Blood b) Feces
c) Urine d) None

1768. Cat is an agent for transmission of the following disease of man - *(AIIMS 82)*
a) Isospora hominis b) Fasciola hepatica
c) Toxoplasma gondii d)Chilomastixmensili

1769. Frenkel's skin test is positive *ta-(PGI 79, AIIMS 94)*
a) Spinal cord compression
b) Toxoplasmosis
c) Pemphigus
d) Pemphigoid

1770. All are true regarding Toxoplasmosis, except -
a) Subclinical in most cases among adults
b) Intracerebral calcification in children
c) IgM antibody in new bom suggests congenital infection *(AIIMS Nov 93)*
d) NOT infective in 3rd trimester in pregnancy

1771. Sabin feldman Dye test is used to demonstrte infection with - *(NEET/DNBPattern)*
a) Filaria b) Toxoplasma
c) Histoplasma d) Ascaris

1772. True about toxoplasmosis is all except -
a) In adults toxoplasmosis is usually asymptomatic
b) IgG antibodies are diagnostic in Congenital toxoplasmosis *(AIIMS Nov 01)*
c) Is a antroponotic disease
d) Encephalitis is uncommon (rare) in immunocompetent individuals

1773. Congenital toxoplasmosis - False *is-(AIIMSMay 10)*
a) Diagnosed by detection of IgM in cord blood
b) IgA is more sensitive than IgM for detection
c) Dye test is gold standard for IgG
d) Avidity testing must be done to differentiate between IgA & IgM

1774. Toxoplasmosis in the foetus can be best confirmed by- *(AIIMS 02)*
a) IgM antibodies against Toxoplasma in the mother
b) IgM antibodies against Toxoplasma in the foetus
c) IgG antibodies against Toxoplasma in the mother
d) IgG antibodies against Toxoplasma in in the foetus

1775. Congenital toxoplasmosis false is - *(AIIMSMay 09)*
a) IgA is better than IgM in detection
b) Diagnosed by detection of IgM in cord blood
c) IgG is diagnostic
d) Not recalled

1776. True about toxoplasmosis- **(***PGIDec03)*
a) Due to ingestion of sporocyst with meat
b) Due to ingestion of oocyst from cat's faeces
c) Spiramycin given in pregnancy
d) Due to bite of anopheles mosquito
e) Mostly symptomatic

7. BALANTIDIUM CPU

1777. Cyst form is found in - *(AIIMS 89)*
a) Entamoeba fragilis b)B.Coli
c) T. vaginalis d) T. Intestinalis

8. CRYPTOSPORIDIUM

1778. TVue about Cryptosporidium parum - *(PGI03)*
a) Affect only in immunocompromised patient
b) It is one of the common opportunistic infection in AIDS
c) Cyst size 12-15 mm
d) AFB (+)ve cyst
e) Treatment is metronidazole

9. BABESIA

1779. True about Babesiosis - *(PGI June 03)*
a) Caused by Babesia microti
b) Resides in RBC
c) Resides in WBC
d) Chloroquine is the treament of choice
e) It is filarial parasite

1780. Babesiosis is transmitted by - *(MP09)*
a) Tick b) Mites
c) Flea d)Mosquito

1781. Maltese cross is characteristic feature of - *(AI09)*
a) Cryptococcus neoformans
b) Babesia microti
c) Blastomycosis
d) Penicillium marfeni

HELMINTHOLOGY

1- TAENIA

1782. Tape worm is found in - *(PGI 96)*
a) Stomach b) Liver
c) Ileum and jejunum d) Caecum

1783. Man is both intermediate and definitive host for- *(NEET/DNB Pattern)*
a) T. Solium b) T.Saginata
c) D. Latum d) Dicroftis hominis

1784. Consumption of uncooked pork is likely to cause which of the following helminthic disease - *(AI01)*
a) Tinea saginata b) Tinea solium
c) Hydatid cyst d) Trichuris trichura

1785. Cysticercosis is caused by - *(PGI June 05)*
a) T. Solium b) T. Saginata
c) A. duodenale d) E. Granulosus
e) E. Multilocularis

1786. The following regarding cysticercosis are true except- *(PGI 95)*
a) Commonest sites are meninges and cerebral ventricle
b) Calcification is common
c) Causes focal neurological complication
d) Found in subcutaneous tissues

1766) a,b 1767) a,b 1768)c 1769)b 1770)d 1771)b 1772)b 1773)d 1774)b 1775)c 1776)b,c 1777)b 1778) b,d 1779) a,b 1780)a 1781)b 1782)c 1783)a 1784)b 1785)a 1786)a

1787. Neurocysticerosis, following are true except -
a) Not acquired by eating contamined vegetables
b) Caused by regurgitation of larva *(PGI98)*
c) Acquired by orofecal route
d) Acquired by eating pork

1788. Which of the following is the most common location of intracranial neurocysticercosis - *(AIIMS Nov 05)*
a) Brain parenchyma b) Subarachnoid space
c) Spinal cord d) Orbit

1789. Commonest parasite of CNS in India is - *(AI 99)*
a) Schistosomiasis b) Cysticercosis
c) Trichenella-spiralis d) Hydatid cyst

1790. Which of the following is the most common central nervous system parasitic infection -
a) Echinococcosis b) Sparganosis^/ZMS' *03)*
c) Paragonimiasis d) Neurocysticercosis

1791. The larval form of Taenia is referred to as -
a) Cysticercus b) Cysticercoid *(Delhi 08)*
c) Echinococcus d) Conerus

1792. The most commonly affected tissues in cysticercosis is - *(AIIMS 81 ,PGI 79)*
a) Brain b) Eye
c) Muscles d) Liver

1793. Spinal cord compression maybe caused by-
a) Cysticercosis *(Kerala 94)*
b) Ankylostomiasis
c) Echinoccus Granulosus
d) Visceral larva migrans

2. ECHINOCOCCUS GRANULOSUS

1794. Hydatid disease of liver is caused by - *(PGI Dec 01)*
a) Strongloides
b) Echinococcus granulosus
c) Taenia solium
d) Trichinella spiralis
e) Echinococcus multilocularis

1795. Intermediate host for hydatid disease -
a) Man b) Dog *(AIIMS May 09)*
c) Cat d) Foxes

1796. Least common site of calcified hydatid cyst is -
a) Lung b) Mediastinum
c) Extraperitoneal site d) Liver

1797. Arc-C-5 in Countercurrent electrophoresis of Serum is diagnostic of-
a) Cysticercosis b) Cryptococcosis
c) Hydatidosis d) Brucellosis

1798. Which of the following show regressive metamorphosis - *(MH11)*
a) Hydatid cyst b) Cysticercoid
c) Cysticercus bovis d) Cysticercus cellulosae

1799. A company executive, who travels world wide, presents with upper abdominal mass and + ve casoni's test. The organism is - *(AI2000)*
a) Echinococcus b) Entamoeba histolytica
c) Hepatitis d) Ascariasis

1800. Hydatid disease is caused by - *(NEET/DNB Pattern)*
a) Echinococcus b) Tapeworm
c) Ascaris d)Clonorchis

1801. The following infection resembles malignancy -
a) Echinococcus granulosus *(JIPMER 2002)*
b) E. multilocularis
c) E. vogeli
d) E. oligarthus

1802. What is malignant hydatid disease - *(DNB 09)*
a) Malignant change into hydatid cyst
b) Infection with E. multilocularis
c) Hydatid disease in immunocompromised host
d) None of the above

1803. The definitive host for echinococcous granulosa is-
a) Man b) Sheep *(Delhi 09)*
c) Hound d) Dog

3. HYMENOLEPSIS NANA

1804. Dwarf tapeworm refers to- *(AIIMS 84)*
a) Echinococcus b)LoaLoa
c) Hymenolepsis nana d) Schistosoma mansoni

1805. The egg which of the following parasites consist of polar filaments arising from either end of the ambrophore-
a) Taenia saginata
b) Taenia solium
c) Echinococcus granulosus
d) Hymenolepis nana
e) Diphyllobothrium latum

4. SCHISTOSOMA

1806. Schistosoma japonicum resides in- *(AI 92)*
a) Vesical Plexus b) Splenic Vein
c) Systemic Circulation d) Gall bladder

1807. Natural habitat of Schistosoma (blood flukes) -
a) Veins of the urinary bladder *(PGI 80)*
b) Portal & pelvic veins
c) Vesical plexuses
d) All of the above

1808. Terminal spined eggs are seen in - *(PGI95)*
a) Schistosoma haematobium
b) Sch.mansoni
c) Sch.japonicum
d) Chlonorchis sinensis

1809. Painless terminal hematuria is seen as one of the manifestations in the infection caused by -
a) Schistosoma japonicum *(Kamat 96)*
b) Schistosoma mansoni
c) Schistosoma haematobium
d) Plasmodium falciparum

1810. Katayama fever is caused by -*(NEET/DNB Pattern)*
a) F. hepatica b) C. sinensis
c) S. haematobium d) A. lumbricoides

1787) a,d 1788) a 1789)b 1790)d 1791) a 1792)c 1793)a 1794)b,e 1795)a 1796)a 1797)c 1798)a 1799)a 1800) a 1801)b 1802)b 1803)d 1804)c 1805)d 1806)b 1807)d 1808)a 1809)c 1810)c

1811. A man on return from a country complains of pain in abdomen, jaundice, with increased alkaline phosphatase and conjugated hyperbilirubinemia. USG shows blockage in the biliary tree. What could be the cause - *(AIIMS May 09)*
a) Fasciola buski b) Clonorchis sinensis
c) Strongyliodes d) Ancylostoma

1812. Which is not a liver fluke - *(PGI Nov 10)*
a) Paragoniomus b) Whipworm
c) Clonorchis sinensis d) Gnathostomaspinigerum
e) Opisthorchis

5. STRONGYLOIPES

1813. Parasitic intestinal infestation seen in immunosuppressed patient is - *(Del- 85)*
a) Giardiasis b) Ascariasis
c) Liver fluke d) Schistosomiasis
e) Strongyloides

1814. Infection with colitis is caused by - *(PGI 2000)*
a) Enterobius vermicularis
b) Trichuris trichura
c) Strongyloides
d) Clonorchis

1815. The cause of larva currens- *(TN 09)*
a) Strongyloides stercoralis
b) Necator americanus
c) Ankylostoma duodonale
d) H. nana

6. HOOKWORM

1816. Ankylostoma enters the human body by-*(Kerala 09)*
a) Ingestion b) Inhalation
c) Penetration of skin d) Inoculation

1817. Habitat of hookworm is - *(Kerala 94)*
a) Jejunum b) ileum
c) Colon d) Duodenum

1818. The hookworm thrives on - *(PGI86)*
a) Whole blood b) Plasma
c) Serum d)RBC

1819. The average blood loss in ankylostomiasis per worm is - *(PGI 79)*
a) 0.2ml/day b) 2 ml/day
c) 0.33ml/day d) 1 ml/day

1820. Highest incidence of anemia in the tropics is due to-
a) Hookworm b) Thread Worm *(TN97)*
c) Ascaris d) Guinea worm

7. ENTEROBIUS VERMICULARIS

1821. Seat worm is- *(AIIMS 80, 84)*
a) Enterobius b)Dracunculus
c) Ankylostoma d) Necator

1822. Most common presenting symptom of thread worm infection amongst the following is - *(AI 9 7)*
a) Abdominal pain b) Rectal prolapse
c) Urticaria d) Vaginitis

8. ASCARIS LUMBRICOIDES

1823. Ascariasis causes - *(MAHE 07)*
a) Appendicitis b) Intestinal obstruction
c) Bile duct obstruction d) All of the above

1824. Specific diagnosis of ascaris is made by - *(PGIDec*
a) Adult worm in stool b) Egg detection *04)*
c) Antigen detection d) Antibody detection
e) Skin test

9- FILARIOIDEA

1825. A child from Bihar comes with fever. Blood examination shows sheathed microfilaria with nuclei upto tail tip. The diagnosis is - *(AI 2000)*
a) B. malayi b) W. bancrofti
c) Loa loa d) Oncocerca volvulous

1826. All of the following are true about Brugia malayi except- *(AI 95)*
a) The intermediate hosts in India are Mansoni
b) The tail tip is free from nuclei
c) Nuclei are blurred, so counting is difficult
d) Adult worm is found in the lymphatic system

1827. Sheathed microfilaria is/are - *(PGI Dec 04)*
a) W. bancrofti b) Loa-loa
c) M. perstans d) B. malayi

1828. Wucheria bancrofti, true is -*(NEET/DNB Pattern)*
a) Unsheathed b) Tail tip free from nuclei
c) Non-periodic d)All

1829. Lymphatic filariasis caused by - *(PGINov 10)*
a) W. bancrofti b) Brugia malayi
c) Schistosoma d) B. timori
e) Onchocera volvulus

1830. Which is non lymphatic filarisis-(Ms£r/DM? *Pattern)*
a) Loa loa b) Wucheria bancrofti
c) Brugia malai d) Brugia timori

1831. The organism most commonly causing genital filariasis in most part of Bihar and easteran U.P. is-
a) Wuchereria bancrofti *(AI 03)*
b) Brugia malayi
c) Onchocerca volvulus
d) Dirofilaria

1832. Which is false about Wuchereria bancrofti -
a) Causes filariasis *(AI 90)*
b) Body is long and slender
c) Terminal nuclei absent
d) Man and anopheles are host

1833. False regarding filariasis is - *(AIIMS Nov 93)*
a) Morbidity increase with age in endemic areas
b) Humoral immunity plays dominant role
c) Usually unilateral
d) Man is the only host for filariasis

181 l)b 1812) a,b,d 1813)e 1814)c 1815)a 1816)c 1817)a>d>b 1818)b 1819)a 1820)a 1821)a 1822)a
1823)d 1824) a,b,d 1825)a 1826)b 1827)a,b,d 1828)b 1829)a,b,d 1830)a 1831)a 1832)d 1833)b,d

1834. In which stage of fllariasis are microfilaria seen in peripheral blood - *(AI01)*
a) Tropical eosinophilia
b) Early adenolymphangitis stage
c) Late adenolymphangitis stage
d) Elephantiasis

1835. All are TRUE regarding fllariasis except -
a) Man is an intermediate host. *(AIIMSFeb 97)*
b) Caused by wuchereria bancrofti
c) Involves lymphatic system
d) DEC is used in treatment

1836. Meyers Kouwenaar syndrome is a synonym for -
a) Tropical pulmonary eosinophilia *(PGI88)*
b) Larva mi grans
c) Occult fllariasis
d) Cutaneous allergic reactions to Ascariasis

1837. Which is not a feature of tropical eosinophilia -
a) Eosinophila more than 3000/mm^3
b) Microfilariae in tissues
c) Microfilariae in blood
d) Lymphadenopathy

1838. Calabar swelling is produced by-
a) Onchocerca volvulus b) Loa loa
c) Burgiamalayi d) Wuchereria bancrofti

1839. Kallu a 30 year old man, presented with subcutaneous itchy nodules over the left iliac crest. On examination they are firm, non tender and mobile. Skin scrapping contains microfilaria and adults worms of - *(AIIMS May 01)*
a) Loa Loa b) Onchocerca volvulus
c) Brugiamalayi d) Mansonella persutans

10. TRICHUMS TRICHURA

1840. Chronic dysentery, abdominal pain, and rectal prolapse in children is caused by - *(UP 07)*
a) Enterobius vermicularis
b) Ascariasis
c) Trichuris trichura
d) Trichinella spiralis

11- DRACUNCULUS MEDINENSIS

1841. Dracunculosis infection occurs through-
a) Ingestion of water containing cy clops *(Kerala 94)*
b) Ingestion of water containing the parasite
c) Ingestion of fish
d) Penetration of skin

1842. Dragon or serpent worm is - *(AIIMS 01)*
a) Enterobius b) Trichuris
c) Dracunculus d) T. Solium

1843. The slender rhabditiform larvae of which of the following helminths move about in water and are ingested by species of cy clops - *(MAHE 05)*
a) D. latum b) D. medinensis
c) W.bancrofti d) S. mansoni

1844. Definitive host for Guinea worm is - *(JIPMER 93)*
a) Man b) Cyclops
c) Snail d) Cyclops & man

1845. Cycolps are intermediate hosts for - *(Kerala 95)*
a) Kalaazar
b) Schistosomiasis
c) Dracunculus medinensis
d) Teniasis

12. LARVA MIGRANS

1846. Cutaneous larva migrans is due to - *(AI88)*
a) Ankylostoma braziliensis
b) W.bancrofti
c) B. Malayi
d) D. medinensis

1847. Visceral larva migrans is associated with - *(AI 11)*
a) Strongyloids stereoalis
b) Ankylostoma brazilensis
c) Toxocara canis
d) Visceral leishmaniasis

MISCELLANEOUS

1848. Second intermediate host of Dichyllobothrium latum is- *(PGI 86)*
a) Cycolps b) Man
c) Snail d) Fresh water fish

1849. 24 Year old AIDS pt. develops chronic abdominal pain, low grade fever, diarrhoea, malabsorption. Oocysts demonstrated in stool. Likely cause of his diarrhoea is - *(HP 2006)*
a) E. histolytica b)Glamblia
c) Microsporidia d) Isospora belli

1850. HTV pt with malabsotion, fever, chronic diarrhoea, with acid fast positive organism. What is the causative agent ? *(AIIMS May 10)*
a) Giardia b) Microsporidia
c) Isospora d) E. histolytica

1851. Which of the following is true with microsporidia -
a) It is fungus *(PGI Dec 05)*
b) It is a protozoa
c) It is a bacteria
d) It is associated with diarrhoea in HIV

1852. Definitive host is one- *(PGI 2K)*
a) In which sexual multiplication takes place
b) In which asexual multiplication takes place
c) Harbors adult form
d) Harbors larval form

1853. Man is the definitive host for- *(PGIJune 05)*
a) E. granulosus b)T. Solium
c) T. Saginata d) T. Cannis
e) E. Multilocularis

1854. Man is secondary host for - *(NEET/DNB Pattern)*
a) Malaria b) Tuberculois
c) Filariasis d) Relapsing fever

1834)b 1835) a 1836)c 1837)c 1838)b 1839)b 1840)c 1841)a 1842)c 1843)b 1844)a 1845)c 1846)a 1847)c 1848)d 1849)d 1850)c 1851)b,d 1852)a,c 1853)b,c 1854)a

1855. Fish acts as intermediate host in - *(PGI June 04)*
a) D. latum b) Clonorchis sinensis
c) H. Diminuta d) H. Nana

1856. Not transmitted by fish - *(AIIMS Nov 93)*
a) Paragonimus westermanii
b) Clonorchis sinensis
c) Diphyllobothrium latum
d) Schistosomajaponicum

1857. Man is a definitive host of which parasite -
a) Malaria b) Filaria *(HPU05)*
c) Measles d) Tapeworm

1858. Man is a definitive host for - *(KERALA 2K)*
a) Echinococcos b) Malaria
c) Filariasis d) Rabies
e) Leishmaniasis

1859. Which of the following parasite does not enter into the body by skin penetration - *(AIIMSDec 97)*
a) Dracunculus b) Necatar americanus
c) Ancylostoma duodenale d) Stronglyoides

1860. Parasites penetrating through skin for entry into the body are - *(PGI June 01)*
a) Ankylostoma duodenale b) Strongyloides
c) Roundworm d)Trichuristrichura

1861. Autoinfection is seen with - *(AIIMS Nov 01)*
a) Ankylostoma b) Enterobius
c) Echinococcus d) Ascariasis

1862. Autoinfection is seen with - *(AIIMS May 09)*
a) Cryptosporodium b) Strongyloides
c) Giardia d) Gnathostoma

1863. Autoinfection is a mode of transmission in- *(A12K)*
a) Trichinella b)Cycticercosis
c) Ancylostoma d) Ascaris

1864. Autoinfection is seen with - *(A.P 97)*
a) Trichuris trichura b) Ankylostoma duodenale
c) Ascaris d) Enterobius

1865. On microscopic examination eggs are seen, but on saturation with salt solution, no eggs are seen, The eggs are likely to be of - *(AIIMS Nov 99)*
a) Trichuris trichura
b) Tenia solium
c) Ascaris lumbricoides
d) Ancylostoma duodenale

1866. All float in a saturated salt solution except -
a) Clonorchis sinensis *(AIIMS May 95)*
b) Fertilised eggs of ascaris
c) Larva of strongyloids
d) Trichuris trichura

1867. Saturated salt solution concentrates eggs of all, except - *(AIIMS Dec 95)*
a) Unfertilized egg of ascaris
b) Trichuris
c) Hymenolepis nana
d) Echinococcus granulosus

1868. The egg of which helminth can be concentrated in saturated salt solution - *(AIIMS May 93)*
a) Taenia saginata
b) Taenia solium
c) Unfertilized egg of Ascaris
d) Ancylostoma duodenale

1869. In formal ether concentration technique, which layer contain parasites - *(MH11)*
a) Ether b) Fecal debris
c) Formal water d) Sediment

1870. Larva found in muscle is - *(AIIMSDec 98)*
a) Trichinella spiralis
b) Ankylostoma duodenale
c) Trichuris trichura
d) Enterobius vermicularis

1871. Larval form of which parasite resides in muscle - *(AIIMS Dec 94)*
a) Taenia saginata b) Echinococcus
c) Trichinella d) All of the above

1872. In which parasitic infestation sputum examination is not of much value - *(AIIMS Sept 96)*
a) Trichuris trichura
b) Strongyloides
c) Ancyclostoma duodenale
d) Paragonimus Westermanii

1873. Sputum examination is not useful in diagnosis of- *(AI98)*
a) Trichuris trichura b) Ank. duodenale
c) Paragomniasis d) Strongyloides

1874. Which one of the following doest not pass through the lungs - *(AI 96)*
a) Hookworm b) Ascaris
c) Strongyloides d) Enterobius Vermicularis

1875. Parasites causing lung infestation are -
a) H. nana *(PGI Dec 03)*
b) Paragonimus westermanii
c) Taenia saginata
d) E. granulosus
e) E. multilocularis

1876. Which of the following is NOT responsible for pulmonary eosinophilia - *(AIIMS Dec 94)*
a) Ascaris lumbricoides
b) Paragonimus westermanii
c) Wuchereria bancrofti
d) Babesia microti

1877. Pulmonary eosinophilia is seen in the following parasitic infections except - *(AI 2000)*
a) Babesiosis b) Hookworm infection
c) Strongyloidiasis d) Visceral larva migrans

1878. Parasite causing pulmonary eosinophilia syndrome - *(PGI 98)*
a) Strongyloides b)Enterobiasis
c) Hookworm d) Trichinella

1879. Which organism can be isolated from stool & sputum- *(NEET/DNB Pattern)*
a) Paragnomus b) Fasciola
c) Chlomchis d) P carini

1855)a,b 1856) d>a 1857)b,d 1858)c,e 1859)a 1860)a,b 1861)b 1862)b 1863)b 1864)d 1865)b 1866)a,c 1867) a 1868)d 1869)d 1870)a 1871)d 1872)a 1873)a 1874)d 1875)b,d 1876)d 1877)a 1878)a,c 1879)a

1880. All are inhabitants of Liver except - *(AI94)*
a) F. hepatica b) F. buski
c) Clonorchis sinensis d) Opisthorchis felincus

1881. Liver is the target organ for - *(AIIMS June 97)*
a) Fasciola buski
b) Paragonimus westermani
c) Clonorchis sinenses
d) Schistosoma Haematobium

1882. Which of the following is not a neuroparasite -
a) Taenia solium b) Acant amoeba *(AI 05)*
c) Naegleria d) Trichinella spiralis

1883. Parasitic Encephalitis is caused by - *(PGIDec 05)*
a) Naegleria b) Acanthamoeba
c) Balamuthia d) Gnathostoma

1884. Skin snip is used in the diagnosis of -*(JIPMER 02)*
a) Trichinosis b)Strongyloidosis
c) Schistosomiasis d) Onchocerciasis

1885. Larval form in stool is found in -
a) Strongyloides *(PGIMay 10, Dec 01)*
b) Ancylostoma duodenale
c) Ascaris lumbricoides
d) Necator americanus
e) Trichura

1886. Which of the following is detected in peripheral blood smear - *(PGI Dec 04)*
a) Malaria b) Toxoplasma
c) Babesia d) Brucella
e) Filaria

1887. Microcytic hypochromic anemia found in infestation of- *(PGI June 06)*
a) Ancylostoma b) Ascaris
c) Necator d) Diphyllobothrium

1888. Megaloblastic anaemia is caused by -
a) Diphyllobothrium latum *(AIIMS Dec 95)*
b) Schistosoma hematobium
c) Echinococcus granulosus
d) Taenia solium

1889. Rhabditiform larvae in freshly passed stools are seen with- *(Maharashtra10)*
a) Toxoplasma b) Trichuris
c) Ankylostom d) Srongyloides

1890. Which egg does not float in a saturated solution of saline? *(DPG10)*
a) Ankylostoma eggs
b) Trichuris eggs
c) Unfertilized eggs of ascaris
d) Fertilized eggs of ascaris

1891. Simple life cycle requires - *(NEET/DNB Pattern)*
a) One host b) Two host
c) Three host d) Four host

1892. Simple life cycle is seen in - *(PGI dec 06)*
a) Ascaris b) T. solium
c) Toxoplasma d)Giardia
e) Schistosoma

1893. Two hosts are required in - *(PGI dec 02)*
a) T. solium b) E. histolytioca
c) T. saginata d) Giardia
e) Toxoplasma

1894. Which of the following parastie passes through three hosts - *(UP 09)*
a) Fasciola hepatica b) Fasciola buski
c) Schistosoma haematobium d) Clonorchis sinensis

1895. Water host required for schistosomiasis -
a) Fish b) Cyclops *(NEET/DNB Pattern)*
c) Snails d) Crabs

1896. Schistosomiasis is transmitted by -
a) Cyclops b)Fish *(NEET/DNB Pattern)*
c) Snaile d) Cattle

1897. Crab is the intermediate host for-
a) Clonorchis sinensis *(NEET/DNB Pattern)*
b) Paragonimus westermani
c) Fasciola hepatia
d) Schistosoma hematobium

1898. Dogs are responsible for transmission of all the following except- *(JIPMER 2000)*
a) Hydatid disease b) Toxoplasmosis
c) Kala-azar d) Toxocara canis

1899. All of the following disease may be acquired by ingestion except - *(AI 94)*
a) Taeniasis b) Guinea worm
c) Toxoplasmosis d) Leishmaniasis

1900. Which if the following diseases is transmitted by egg ingestion - *(AI 95)*
a) Taeniasis b) Trichinosis
c) Hydatidosis d) Strongyloidosis

1901. Cercariae are infective form of- *(NEET/DNB Pattern)*
a) S. hematobium b) P. westermanii
c) F. hepatica d) T. solium

1902. Pancreatic Ca is caused by - *(AI 01)*
a) Fasciola b) Clonorchis
c) Paragonimus d) None

1903. Cholangiocarcinoma is caused by - *(PGI June 02)*
a) Fasciola infestation
b) Clonorchis infestation
c) Paragonimus infestation
d) Ascaris infestation
e) None of these

1904. Causes of biliary tract carcinoma after ingesting infected fish - *(AIIMS Nov 10)*
a) Grathostoma
b) Angiostrongylus cantonens
c) Clonorchis sinesis
d) H. dimunata

1905. Which of the following does not cause biliary tract obstruction ? *(AI 08)*
a) Ascaris lumbricoides
b) Ankylostoma duodenale
c) Clonorchis sinensis
d) Fasciola hepatia

1906. Which of the following may cause biliary obstruction- *(AI 10)*
a) Ancylostoma b) Entrobius
c) Strongyloides d) Clonorchis

1880)b 1881) c 1882) d 1883)A11 1884)d 1885)a,b,d 1886)a,b,c,e 1887)a,c 1888)a 1889)d 1890)c 1891)a 1892) a,c 1893) a,c,e 1894)d 1895)c 1896)c 1897)b 1898)b 1899)d 1900)c>a 1901)a 1902)b 1903)a,b 1904) c 1905)b 1906) d

1907. Pigs are reservoir for - *(AI 2000)*
a) T. Solium b) T. Saginata
c) Trichinella spiralis d) Ancyclostoma

1908. The largest trematode infecting man is - *(AI 96)*
a) F.hepatica b) F. buski
c) E. Granulosus d) Clonorchis sinensis

1909. Which worm is longest - *(SGPGI 09)*
a) T. solium b) T. saginata
c) Hookworm d) A. lumbricoides

1910. Largest intestinal protozoa is- *(NEET/DNB Pattern)*
a) E.coli b) Balantidium coli
c) Giardia d) T. gondii

1911. All cause malabsorption except -*(AIIMSMay 10,09)*
a) Giardiasis b)Ascaris lumbricoides
c) Strongyloides d)Capillariaphillipinesis

1912. 25 years old male presented with diarrhea for 6 months. On examination the causative agent was found to be acid fast with 12 micro meter diameter. The most likely agent is - *(AIIMSMay 09)*
a) Cryptosporidium b) Isospora
c) Cyclospora d) Giardia

1913. Which of the following is viviparous - *(SGPGI 05)*
a) Strongyloidis stercoralis b) Trichinella spiralis
c) Enterobius d) Ascaris

1914. All are intracellular parasites, except - *(Orissa 08)*
a) Leishmania b) Plasmodium
c) Toxoplasma d) None of these

1915. A 7 year old presented with intermittent abdominal cramps, loose stool and on stool examination eggs of size 100 m are seen, which is not the cause -
a) Fasciola gigantica *(AIIMSNov 09)*
b) Echinostoma iliocanum
c) Gastrodiscoides hominis
d) Opisthorcis vivemi

1916. Which of the following is toxic to parasite -
a) Peroxidase *(NEET/DNB Pattern)*
b) Interferon
c) IL-2
d) HA5

1917. Hanging drop method is used for- *(NEET/DNB*
a) T. trichomonas b) Plasmodium*Pattern)*
c) Toxoplasma d) Cryptosporidium

1918. Which of the following parastites is uncommon in india- *(AP97)*
a) Pinworm b) Schistosoma
c) Hookworm d) Roundworm

1919. Most common nematode in south India is -*(DPG10,*
a) Brugiatimori *Kerla09)*
b) Brugiamalayi
c) Onchocerca volvulus
d) Wuchereria bancrofti

1920. Which of the following organism is biggest -
a) Balantidium coli *(JIPMER93)*
b) Entamoeba coli
c) Escherichia coli
d) Entamoeba histolytica

1921. Which worm is longest - *(HPU 2001)*
a) T. solium b) T. saginata
c) Hookworm d)A. Lumbricoides

1922. Respiratory symptoms are associated with -
a) Rocky mountain spotted fever *(MAHE 98)*
b) Strongyloides
c) T. Solium
d) Onchocerca

1923. Filariform larva is infective in - *(MH 11)*
a) Enterobius vermicularis b) Ascaris lumbricoides
c) Necator americanus d) Trichuris trichura

ARTHROPOD BORN DISEASES

1924. Reduviid bug is a vector for the transmission of- *(AIIMS 05)*
a) Relapsing fever b) Lyme's disease
c) Scrub typhus d) Chaga's disease

1925. Culex mosquito is associated with the transmission of- *(PGI Dec 01)*
a) Malaria b)Filariasis
c) Dengue d) Japanese encephalitis
e) Typhus

1926. Aedes aegypticus transmits - *(PGI June 04)*
a) JE b)KFD
c) Yellow fever d)Filaria
e) Dengue

1927. Which of the following is not transmitted by lice -
a) Q fever *(AIIMS Nov 06)*
b) Trench fever
c) Relapsing fever
d) Epidemic typhus

1928. Vector for Kala-azar - *(AIIMS Nov 07)*
a) Flea b) Tsetse fly
c) Sandfly d) Tick

MYCOLOGY

GENERAL PROPERTIES OF FUNGUS

1929. Fungi are - *(AI 92)*
a) Prokaryotes b) Eukaryotes
c) Plant d) Animals

1930. The fungi which do not have sexual phase belong to which of the following groups - *(PGI94, 96, 97)*
a) Phycomycetes b) Fungi Imperfecti
c) Basidiomycetes d) Asomycetes

1931. Aseptate hyphae are seen in -*(NEET/DNB Pattern)*
a) Phycomycetes b) Ascomycetes
c) Basidiomycetes d) Deutromycetes

1932. Which of the following is produced sexually -
a) Ascospore b)Conidium*(AIIMS81)*
c) Oidium d) Yeast buds

1933. A sporangium contains - *(AIIMS 02)*
a) Spherules b) Sporangiospores
c) Chlamydospores d)Conidia

1907) a,c 1908)b 1909)a 1910)b 1911)b 1912)c 1913)b 1914)d 1915)d 1916)a 1917)a 1918)b 1919)b 1920) a 1921) b 1922)a,b 1923)c 1924)d 1925)b,d 1926)c,d,e 1927)a 1928)c 1929)b 1930)b 1931)a 1932)a 1933)b

1934. Fungal spores may be produced - *(AIIMS 02)*
a) Singly b) In chains
c) In sporangium d) All of the above

1935. Budding reproduction in tissue is seen in -
a) Cryptococcus, Candida *(NEET/DNB Pattern)*
b) Candida, rhizopus
c) Rhizopus, mucor
d) Histoplasma, Candida

1936. All the following are yeast like fungi except-
a) Candida b) Geotrichum *(A1IMS 97)*
c) Cryptococcus d) Trichophyton

1937. Which of the following is only yeast -
a) Candida *(NEET/DNB Pattern)*
b) Mucor
c) Rhizopus
d) Cryptococcus

1938. All are yeast like fungus except - *(AIIMSFeb 97)*
a) Cryptococcus b) Candida
c) Trichophyton d) None of the above

1939. In HIV infected individual Gram stain of lung aspirate shows yeast like morphology. All of the following are the most likely diagnosis except -
a) Candida tropicalis *(ARMS Nov 05)*
b) Cryptococcus neoformans
c) Pencilliummameffi
d) Aspergillus fumigates

1940. A 25 years old female complains of recurrent rhinitis, nasal discharge and bilateral nasal blockage since one year. She has history of asthma and allergy. On examination multiple ethmoidal polyps are noted with mucosal thickening and impacted secretions in both the nasal cavities. Biopsy is taken and the material is cultured which shown the growth of many hyphae and pseudohyphae with dichotomous branching typically at 45°. Which of the following is the most likely responsible organism? *(AI10)*
a) Aspergillus fumigatus b) Rhizopus
c) Mucor d) Candida

1941. A diabetic patient present with bloody nasal discharge, orbital swelling and pain. Culture of periorbital pus showed branching septate hyphae. Which of the following is the most probable organism involved - *(AI 10)*
a) Mucor b) Candida
c) Aspergillus d)Rhizopus

1942. Gram stained periorbital exudates in severe panophthalmitis with cellulitis in an elderly diabetic shows irregular branching aseptate and broad hyphae. Which of the following is the most likely diagnosis-
a) Candida *(AI 12)*
b) Aspergillus
c) Pencillium
d) Apophysomyces species

1943. Aseptate hyphae is not seen in -*(NEET/DNB Pattern)*
a) Rhizopus b) Mucor
c) Aspergillus d) None

1944. The culture media for fungus is - *(PGI 94)*
a) Tellurite medium b) NNN medium
c) Chocolate agar medium d) Sabourauds medium

1945. Stain used for staining fungal elements -
a) Acid fast stain *(ARMS Nov 09)*
b) Mucicarcmine
c) Methanamine silver
d) Gram stain

1946. Which dye is most suitable for fungus demonstration in biopsy- *(ARMS Nov 06)*
a) Alizarin red b) Veirhoff dye
c) Mason's trichome d) PAS

1947. Correctly matched stain - *(PGI June 06)*
a) Mucicarmine - Cryptococcus
b) Giemsa - Candida
c) Methanamine silver Histoplasma
d) Gram's - Pneumocystis carinii

1948. Which of the following fungi is/are difficult to isolate culture - *(PGI Dec 03)*
a) Candida
b) Dermatophytes
c) Cryptococcus
d) Malassezia furfur
e) Coccoidiodomycosis

1949. Which organism cannot be cultured -*(PGINov 10, June 07)*
a) Klebsiella rhinoscleromatis
b) Klebsiella ozaenae
c) Klebsiella granulomatis
d) Pneumocystis jiroveci
e) Rhinosporidium seeberi

1950. Which organism cannot be cultured in cell free media- *(PGI Nov 11)*
a) Klebsiella rhinoscleromatis
b) Klebsiella ozaenae
c) Treponema pallidum
d) Pnemocystis jiroveci
e) Rhinosporidium seeberi

1951. Fungus not cultivable usually - *(NEET/DNB Pattern)*
a) Rhinosporidium b) Cryptococcus
c) Dermatophytes d) Histoplasma

1952. Wood's light can be used for evaluation of -
a) Tinea capitis b) Freckles *(PGI June 02)*
c) Vitiligo d) Tuberous sclerosis

1953. Wood's Lamp used in - *(PGINov 10, June 06)*
a) Tinea pedis
b) Pityriasis versicolor
c) Sporotrichosis

1954. Which of the following is a nonculturalable fungus-
a) Rhinosporidium b) Candida *(MANIPAL 01)*
c) Sporothrix d) Penicillium

1955. Not be cultured in Sabouraund's agar - *(MAHE 07)*
a) Blastomyces b) Coccidiodes
c) Sporotrichum d) Rhinosporidium seeberi

1956. Dimorphic fungus - *(PGIDec 02)*
a) Candida b) Cryptococcus
c) Blastomycosis d) Coccidioidomycosis
e) Sporotrichosis

1934)d 1935)a 1936)d 1937)d 1938)c 1939)d 1940)a 1941)c 1942)d 1943)c 1944) d 1945)c 1946)d 1947)a,c 1948)d 1949) d,e 1950)c,d,e 1951)a 1952) All 1953)b 1954)a 1955)d 1956)a,c,d,e

1957. All are dimorphic fungi except - *(AIIMSMay 09)*
a) Blastomyces dermatitidis b) Histoplasma
c) Pencilliummameffi d)Phialopora

1958. Dimorphic fungus - *(NEET/DNB Pattern)*
a) Candida b) Hisplasma
c) Rhizopus d) Mucor

1959. The following fungi are thermally dimorphic except-
a) Sporothrix schenkii *(AIIMS Nov 03, AI97,*
b) Cryptococcus neoformans *NEET/DNB Pattern)*
c) Blastomyces dermatitidis
d) Histoplasma capsulatum

1960. Dimorphic fungi are all except - *(UPSC 97, AI 91)*
a) Coccidioidomycosis b)Blastomycosis
c) Candida d) Histoplasma
e) Sporothrix schenckii

1961. Which of the following is a dimorphic fungi-*(Jipmerll)*
a) Rhizopus b) Sporothrix schenckii
c) Tinea versicolor d) Microsporum

1962. The medium of choice for culturing yeast form of dimorphic fungi is - *(DNB 89)*
a) Brain-heart infusion
b) Sabouraud's
c) Sabouraud's plus antibiotics
d) Any medium incubated at 35-37°C

1963. Systemic fungal infections can be caused by the following- *(AIIMS 85)*
a) Cryptococcus neoformans
b) Histoplasma capsulatum
c) Paracoccidioides brasiliensis
d) Naegleria fowleri
e) Isospora berilli

DERMATOPHYTES

1964. Dermatophytes infecting- *(Delhi 89, 93)*
a) Subcutaneous tissue
b) Systemic organs
c) Nails, hair and skin
d) Superficial skin and deep tissue

1965. Which of the following infects hair, skin and nails- *(NEET/DNB Pattern)*
a) Trichosporum b) Trichophyton
c) Microsporum d) Epidermophyton

1966. A patient made a self-diagnosis of athlete's foot (tinea pedis) and began using a product advertised on television. The condition improved but did not clear and then the patient showed himself to a Dermatologist. A skin scraping was sent to the laboratory for culture, including culture for fungi. The fungal culture yielded a slow growing colony, which produced a few small microconidia. This is consistent with isolation of a dermatophyte of the genera - *(AIIMS Nov 03)*
a) Trichophyton b) Microsporum
c) Epidermophyton d) Trichosporon

1967. Dermatophytoses in caused by - *(Delhi 02)*
a) Herpes simplex b) Papilloma virus
c) Trichophyton d) Candida

1968. Trichophyton species can infect- *(Karn 94)*
a) Skin, hair and nail b) Skin and nail
c) Hair and nail d) Skin and hair

1969. The organism that does not affects hair -
a) Trichophyton rubrum *(APPGE 05)*
b) Epidermophyton floccosum
c) Microsporum
d) All

1970. Which oneofthe following fungus does NOT infect hair?
a) Epidermophyton b) Microsporum *(Karn11)*
c) Trichophyton d) Trichosporon

1971. Tinea Capitis is caused by all except - *(JIPMER 97)*
a) Epidermophyton b) Microsporum
c) T. Violaceum d) T. Schoenleinii

1972. The causative agent of Favus is - *(Corned. 08)*
a) Microsporum audounii
b) Microsporum canis
c) Trichophyton mentagrophyte
d) Trichophyton schoenleinii

1973. Tinea pedis is caused by which of the following -
a) E. floccosum b)M.furfur *(MAHA 05)*
c) M. canis d) E.wemeckii

1974. Keroin is caused by - (*PGI98)*
a) Candida b) Streptococcus
c) Dermatophytes d) Herpes

1975. Black dot ring worm is caused by - *(UPSC 04)*
a) Microsporum b) Trichophyton
c) Epidermophyton d) Candida

1976. T. capitis (endothrix) is caused by - (*PGIDec 2000)*
a) Epidermophyton b) T.tonsurans
c) T.violaceum d) Microsporum
e) T. rubrum

1977. Pityriasis versicolor is caused by- *(NEET/DNB*
a) E. floccosum b) M. gypseum *Pattern)*
c) M. furfur d) T. tansurans

1978. Selenium sulfide is indicated for treating -
a) Tinea versicolor *{Corned 08)*
b) Tinea corporis
c) Mixed mycotic infections
d) Candidiasis only

1979. Trichophyton species which is zoophilic -
a) T. tonsurans *(NEET/DNB Pattern)*
b) T. violaceum
c) T. schoenleinii
d) T. mentagrophytes

1980. Tinea cruris is caused by - *(PGI 97)*
a) Epidermophyton b) Trichophyton
c) Microsporum d) Candida

1981. Which of the following does not produces dermatophytosis in India - *(PGI Dec 04)*
a) Trichophyton rubrum
b) Trichophyton mentagrophytes
c) Microsporidium distortum
d) Epidermophyton floccosum

1957) d 1958) b>a 1959)b 1960)None 1961)b 1962)c 1963)a,b,c 1964)c 1965)b 1966)a 1967)c 1968)a 1969)b 1970) a 1971)a 1972)d 1973)a 1974)c 1975)b 1976)b,c 1977)c 1978)a 1979)d 1980)a,b 1981)c

1982. Which of the following is spread from animals to man- *(AI92)*
a) T. rubrum b) T. tonsurans
c) E. floccosum d) T. verrucosum

1983. Hair perforation test is positive in infection with-
a) Trichophyton b) Microsporum
c) Epidermophyton d) All of the above

MYCETOMA

1984. A farmer has an ulcer on leg with indurated margin and multiple sinuses with discharging granules. The likely diagnosis is - *(A1IMS Dec 94)*
a) Mycetoma b) Scrofuloderma
c) Lupus vulgaris d) Actinomycosis

1985. Mycetoma is caused by the following agents except-
a) Allescheria boydii (*Corned 08)*
b) Madurella mycetomii
c) Trichosporum beigelli
d) Nocardia asteroides

1986. All of the following cause sulfur granules except- *(AMU 05)*
a) Chromoblastomycosis
b) Botryomycosis
c) Mycetoma
d) Actinomycosis

1987. Sulphur granules are composed of - *(J&K 2001)*
a) Organisms b) Leucocytes
c) Erythrocytes d) Keratinocytes

1988. The causative organism in Madura Mycosis Mycetoma is - *(AI 96)*
a) Nocardia b) Dimorphic fungus
c) Aspergillus d) Dermatophytes

1989. Mycetoma foot can be caused by following -
a) Cladosporium *(PGI May 10)*
b) Phialophora jeanselmei
c) Madurella mycetomi
d) Allescheria boydii

1990. Actinomycetoma is caused by - *(PGI Dec 05)*
a) Actinomyces b) Nocardias
c) Streptomyces d) Madura mycosis

1991. The most common cause of mycetoma in India -
a) Nocardia braziliensis *(PGI 97)*
b) Actinomadura madurae
c) Piedra
d) Tinea cruris

1992. The granules discharged in mycetoma contains -
a) Bone specules *(AIIMS May 02)*
b) Fungal colonies
c) Pus cells
d) Inflammatory cells

1993. True about mycetoma - *(PGI Dec 08, 04)*
a) Commonly occurs in hands
b) Commonly erodes bone
c) Drains through lymphatics
d) Antibiotics has no role

1994. Which of the following is false about mycetoma -
a) Can affect lower and upper extremities *(AI 95)*
b) Caused by actinomycetes and filamentous fungi
c) Diagnosis is by examination of pus
d) Uncommon in India

1995. Which of the following organisms is implicated in the causation of botryomycosis - *(PGI Dec 01)*
a) Staphylococcus aureus
b) Staphylococcus albus
c) Pseudomonas aeruginosa
d) Streptococcus pneumonia
e) Streptococcus pyogenes

1996. A farmer presents with multiple dicharging sinuses in the leg not responding to antibiotics. Most likely diagnosis is - *(AIIMS May 02)*
a) Madurella b)Actino-mycetoma
c) Nocardia d) Sporothrix

1997. Discharging sinus is seen in - *(NEET/DNB Pattern)*
a) Sporotrichosis b) Cryptococcosis
c) Histoplasmosis d) Mycetoma

1998. True about madura mycetoma- *(PGIJune05)*
a) Fungal infection
b) Presented as non-painful nodular lesion for many months
c) Discharging sinus
d) Bone involvement seen

CANDIDA

1999. TVue about Candida albicans is- *(AIIMS May 94)*
a) Candida is pathogenic to mice
b) It's growth is inhibited by Griseofulvin
c) Candida shows mycelia and chlamydospores on com meal agar
d) Candida is present in normal feces

2000. Renauld Braud phenomenon is seen in -
a) Candida albicans *(NEET/DNB Pattern)*
b) Candida pscitasi
c) Histoplasma
d) Cryptococcus

2001. The following is not true of Candida albicans -
a) Yeast like fungus *(AI 92)*
b) Forms chlamydospores
c) Blastomeres seen in isolates
d) Causes meningitis in immunocompromised

2002. Candida albicans causes all of the following except -
a) Endocarditis b) Mycetoma *(AI95)*
c) Meningitis d) Oral thrush

2003. Which fungal infection is commonest in neutropenia-
a) Candida *(AIIMS 99)*
b) Histoplasma
c) Aspergillus niger
d) Aspergillus fumigatus

2004. M.C. fungal infection in febrile neutropenia is -
a) Aspergillus niger b) Candida*(AI01)*
c) Mucormycosis d) Aspergillus fumigatus

1982) d 1983) a 1984)a 1985)c 1986)a 1987)a 1988)a 1989)b,c,d 1990)a,b,c 1991)b 1992)b 1993)b 1994)H 1995) a 1996) a 1997)d 1998) All 1999)d,c 2000)a 2001)c 2002)b 2003)a 2004)b

2005. Candida infection is predisposed by all, except -
a) Menstruation *(AIIMS Sept 96)*
b) Diabetes
c) Minipill users
d) Combined pill users

2006. A vitreous aspirate from a case of metastatic endophthalmitis on culture yields Gram-positive round to oval cells, 12-14 m in size. The aspirate on Gram staining shows the presence of pseudohyphae. Which of the following is the most likely aetiological agent? *(AI06)*
a) Aspergillus b)Rhizopus
c) Candida d)Fusarium

2007. A HIV positive female presents with an indurated ulcer over the tongue. Laboratory findings show growth in cornmeal agar at 20 degree celcius, microscopy showing hyphae and growth in human serum at 37 degree celcius show budding yeasts. The probable cause is - *(AIIMS May 01)*
a) Candida albicans b) Histoplasmosis
c) Blastomycosis d) Coccidioidomycosis

2008. Candida is most often implicated in causation -*(Delhi 93)*
a) Conjunctivitis b) Tinea capitis
c) Desert rheumatism d) Thrush

2009. Germ tube test is used in diagnosis for - *(Kama 09)*
a) Candida albicans b) Cryptococcus
c) Histoplasma d) Coccidiomycosis

2010. Candidiasis is associated with all except-*(Kerala 09)*
a) OCP user b) IUCD user
c) Diabetes d) Pregnancy

CRYPTOCOCCUS

2011. All are true regarding cryptococcal infection, except
a) Occurs in immunodeficient states -*{AIIMS Sep 96)*
b) Capsular antigen in CSF is a rapid method of detection
c) Anticapsular antibody is protective
d) Urease +ve

2012. TRUE about cryptococcus neoformans is all except -
a) Anticapsular antigen is detected in C.S.F. *(AI98)*
b) Common in immunocompromised patient
c) Anticapsular antibody prevents recurrence
d) Strongly positive mucicarmine stain of the organism in tissue is diagnostic

2013. The capsule of cryptococcus neoformans in a CSF sample is best seen by - *{NEET/DNB Pattern, AI 05)*
a) Gram stain b) India ink preparation
c) Giemsa stain d) Methanamine-silver stain

2014. Cryptococcus can be readily demonstrated by -
a) Albert's stain b) India ink stain *(PGI June 02)*
c) Giema's stain a) Gram's stain
e) Z-N stain

2015. Latex agglutination study of the antigen in CSF helps in the diagnosis of - *(AI 2000)*
a) Cryptococcus b) Candidiasis
c) Aspergillosis d) Histoplasmosis

2016. Which is false regarding cryptococcus neoformans-
a) Grows at 5° C and 37° C *(AI 95)*
b) It has 4 serotypes
c) Urease negative
d) Causes superficial skin infection

2017. All are true about cryptococcus except -*(APPGE 04)*
a) Polysaccharide capsule
b) Reproduces by budding
c) Pseudohyphae
d) Mycelium have a narrow base

2018. Which is not true of cryptococcus neoformans -
a) Grows at 37° c *(JIPMER92)*
b) Grows on sabourauds agar
c) Polysaccharide capsule
d) Urease negative

2019. Most fulminant fungal meningitis is caused by -
a) Coccidioides b) Histoplasma *(AP 01)*
c) Cryptococcus d) Mucormycosis

2020. Phagocytosis of C.neoformans is inhibited by -
a) Cryptococcal capsular material *(PGI 83)*
b) The size of the yeast cells
c) The cells walls
d) Toxins produced by the organism

2021. Cryptococcus is least likely to cause infection of -
a) Skin b)Bone *(AI95)*
c) Brain d) Kidney

2022. Cryptococcus has predilection for- *(PGI98)*
a) Lungs b) Meninges
c) Liver d) GIT

2023. Cryptococcal meningitis is common in - *(PGI2000)*
a) Renal transplant recipient
b) Agammaglobulinemia
c) Neutropenia
d) IgA deficiency

2024. The most common organism amongst the following that causes acute meningitis in an AIDS patient is -
a) Streptococcus pneumoniae *(AI 05)*
b) Streptococcus agalactiae
c) Cryptococcus neoformans
d) Listeria monocytogenes

2025. Eucalyptus camaldulensis is associated with the transmission of - *(PGI 99)*
a) Blastomyces dematitidis b) Histoplasma
c) Cryptococcus d) Coccidioides immitis

2026. Fungi that possess a capsule is-*(NEET/DNBPattern)*
a) Candida b) Aspergillus
c) Cryptococcus d)Mucor

2027. Cryptococcus-neoformans is a - *{AI99)*
a) Protozoa b) Fungus
c) Parasite d) Mycoplasma

2028. Aspergilloma has - *(DPG10, JIPMER 99)*
a) Septate hyphae
b) Pseudohyphae
c) Metachromatic hyphae
d) No hyphae

2005)a 2006)c 2007)a 2008)d 2009)a 2010)b 2011)c 2012)c 2013)b 2014)b 2015)a 2016)c 2017)c,d 2018) d 2019) c 2020) a 2021) d 2022) a,b 2023) a 2024) c 2025) c 2026) c 2027) b 2028) a

ASPERGILLUS

2029. What is the most probable portal of entry of a Aspergillus - *(AIIMS 80, DNB 91)*
a) Puncture woundb) Blood
c) Lungs d) Gastrointestinal tract

2030. An elderly diabetic has left sided orbital cellulites, CT scan of paranasal sinuses shows evidence of left maxillay sinusitis. Gram stained smear of the orbital exudates shows irregularly branching septate hyphae. The following is the most likely aetiological agent - *(AIIMS Nov 03)*
a) Aspergillus b)Rhizopus
c) Mucor d) Candida

2031. Branched septate hyphae found on cornmeal smear in a case of corneal ulcer is - *(ARMS June*
a) Candida b) Mucor*2000)*
c) Aspergillus d) Histoplasma

2032. Common fungus causing corneal ulcer -
a) Aspergillus b) Mucor *(PGI June 01)*
c) Fusarium d)Sprothrix

2033. In a patient, corneal scraping reveals narrow angled septate hyphae, which of the following is likely etiologic agent - *(AJ 02)*
a) Mucor b) Aspergillus
b) Histoplasma d) Candida

2034. Which of the following is the most common etiological agent in paranasal sinus mycoses ?
a) Aspergillus spp *(ARMS May 06)*
b) Histoplasma
c) Conidiobolus coronatus
d) Candida albicans

2035. Aflatoxins are produced by - *(AI11)*
a) Aspergillus flavus b) Aspergillus niger
c) Aspergillus fumigatus d) Candida

P. CARINII

2036. Pneumocystis carinii is a fungus because -
a) rRNA, mitochondrial protein gene *(PGIDec 2000)* sequence & presence of thymidylate synthase
b) Cell wall contains glucans
c) Angifungals are effective against P. carini
d) Commonest infection in AIDS

2037. Pneumocystis carinii is a - *(PGI June 06)*
a) Fungi
b) Protozoa
c) Gram negative

2038. Which of the following is a fungus - *(PGI June 07)*
a) Klebsiella b) Clostridia
c) Pneumocystis jerovecii d) Listeria

2039. P. Carni causes infection of primarily -
a) Rats b) Mice *(NEET/DNB Pattern)*
c) Humans d) Rabbits

2040. Select the false statement about P. jiroveci-
a) It is seen in only immunocompromised individuals
b) Frequently associated with CMV *(AI 08)*
c) May be associated with pneumatocele
d) Diagnosed with sputum microscopy

2041. A patient of acute leukemia is admitted with febrile neutropenia. On day four of being treated with broad-spectrum antibiotics, his fever increases. X-ray chest shows bilateral fluffy infiltrates. Which of the following should be the most appropriate next step in the managment - *(ARMS Nov 04)*
a) Add antiviral therapy b) Add antifungal therapy
c) Add cotrimoxazole d) Continue chemotherapy

2042. Pneumocystis carinii is diagnosed by - *(Delhi 08)*
a) Sputum examination for trophozoites and cyst under microscope
b) Culture
c) Positive serology
d) Growth on artificial media

ENDEMIC MYCOSIS

2043. Endemic fungal infection - *(PGIDec 05)*
a) Coccidioides immitis b) Cryptococcus
c) Histoplasmosis d) Aspergillus
e) Blastomyces

2044. True about histoplama capsulatum - *(PGI97)*
a) Dimorphic fungus
b) Causative organism of moniliasis
c) Causative organism of valley fever
d) Capsulated

2045. Darling disease is caused by - *(NEET/DNB Pattern)*
a) Histoplasma b) Candida
c) Cryptococcus d) Rhizopus

2046. What is true about Histoplasmosis -
a) In early stage it is indistinguishable from TB
b) Culture is not diagnostic *(ARMS May 08)*
c) Hyphal forms are infectious form
d) Person to person spread occurs by droplet infection

2047. "Tuberculate spores" are characteristic features of- *(PGI May 10)*
a) Candidia b) Histoplasma
c) Coccidiodomyces c) Cryptococcus

2048. All the following regarding histoplasmosis are true except - *(MP 09)*
a) Very rare in patients with AIDS
b) Bone marrow is involved
c) Gomori methamine silver stain used
d) Dimorphic fungi

2049. In tissue, Coccidioides immitis produces -
a) Spherules and endospores *(ARMS84)*
b) Encapsulated yeast cells
c) Fine, delicate hyphae
d) Coarse, septate hyphae

2050. Valley fever or desert rheumatism is caused by -
a) Sporothrix b) Cladosporium *(ARMS 86)*
c) Phialophora d) Histoplasma

2029)c 2030)a 2031)c 2032)a,c 2033)b 2034)a 2035)a 2036)a,b,c 2037)a 2038)c 2039)a 2040)b 2041)c 2042) a 2043) a,c,e 2044) a 2045) a 2046) a 2047) b 2048) a 2049) a 2050) None

2051. Coccidioides immitis is identified in tissues on the basis of which of the *io\\owing-(AlIMS79, Orissa 90)*
a) Budding yeast cells with pseudohyphae
b) Yeaslike forms with very large capsules
c) Arthrospores
d) Endosporulating spherules

2052. Blastomycosis is characterized by all except -
a) Yeast like fungus *(JIPMER 81, Delhi 92)*
b) Commonly involves lung and skin
c) Dimorphic fungus
d) Common in South America

CHROMOBLASTOMYCOSIS

2053. Causative microorganism of chromo-blastomycosis-
a) Cladosporium *(AIIMS May 93)*
b) Blastomyces
c) Sporothrix
d) Histoplasma capsulatum

2054. Sclerotic bodies 3-15u in size, multiseptate, chestnut brown colour seen in - *(A.P 97)*
a) Rhinosporidiosis
b) Chromoblastomycosis
c) Phacohypomycosis
d) Histoplasmosis

2055. Sclerotic bodies is seen - *(NEET/DNB Pattern)*
a) Sporothrix b) Blastomycosis
c) Chromoblastomycosis d) Coccidiodes

SPOROTRICHOSIS

2056. A gardener has multiple vesicles on hand and multiple eruptions along the lymphatics. Most common fungus responsible is ? *(AIIMSNov 08)*
a) Sporothrix schenckii b) Cladosporium
c) Histoplasma d) Candida

2057. A patient, resident of Himachal Pradesh presented with a series of ulcers in a row, on his right leg. The biopsy from the affected area was taken and cultured on Sabouraud's Dextrose agar. What would be the most likely causative organism ? *(ARMSNov 03)*
a) Sporothrix schenckii b) Cladosporium spp.
c) Pseudoallescheria boydii d) Nocardia brasilinsis

2058. A former from the sub-Himalayan region presents with multiple leg ulcers. The most likely causative agent is - *(AI12)*
a) Trichophyton Rubrum
b) Cladosporium species
c) Sporothrix Schenckii
d) Aspergillus

2059. Cigar body is seen in - *(NEET/DNB Pattern)*
a) Cryptococcosis b) Histoplasmosis
c) Sporotrichosis d) Aspergillosis

2060. Asteroid bodies and cigar shaped globi may be produced by - *(ARMS 8 7)*
a) Sporothrix b) Sporotrichosis
c) Phialophora d) Aspergillus

MUCORMYCOSIS

2061. Mucormycosis- *(PGIDec 02)*
a) Angio-invasion
b) Lymph invasion
c) Septate hyphae
d) Long term deferoxamine therapy is predisposing factor
e) It may lead to blindness

2062. Orbital mucormycosis is a complication of -
a) AIDS b) Steroid therapy
c) Cushing's disease d) Diabetic ketoacidosis

2063. Vascular invasion is characteristic feature of- *(ARMS 80)*
a) Candidiasis b) Mucormycosis
c) Blastomycosis d) Sporotrichosis

2064. Vascular involvement and thrombosis is seen in - *(Corned 08)*
a) Coccidioidomycosis b) Aspergillosis
c) Mucormycosis d) Histoplasmosis

MISCELLANEOUS

2065. Which of the following is the most common fungal infection in immunocompetent patient - *(AI 11)*
a) Candida b) Aspergillus
c) Cryptococcus d)Penicillium

2066. White piedra is caused by - *(MH11)*
a) Piedra hortae
b) Pityrosporum orbicularea
c) Hortae wemickii
d) Trichosporum beigelli

2067. Which is not a fungus -
a) Rhinosporidiosis b) Sporotrichosis
c) Torulosis d) Candidiasis

2068. TYue about Rhinosporidium Seebri - *(PGI June 06)*
a) Fungi
b) Bacteria
c) Ketoconazole-treatment
d) Present in coastal India

2069. Neurotropic fungus is/are - *(PGI Dec 02)*
a) Cryptococcus neoformans b) Histoplasmosis
c) Trichophyton d) Candida
e) Aspergillosis

2070. Cerebral infarction is caused by - *(PGI June 01)*
a) Toxoplasma b) Cryptococcus
c) Aspergillus d) Mucor
e) Histoplasma

2071. Farmers lung is caused by- *(PGI 87)*
a) Micromonospore faenia b) Aspergillosis
c) Histoplasma capsulatam d) All of the above

2072. Which one of the following diseases is endogenous in origin- *(PGI 80)*
a) Aspergillosis b) Candidiasis
c) Phycomycosis d) All of the above

2051)c,d 2052) d 2053) a 2054) b 2055) c 2056) a 2057) a 2058) c 2059) c 2060) a,b 2061) a,d,e 2062) d
2063) b 2064) b,c 2065) a 2066) d 2067) a 2068) b,d 2069)a,b,d,e 2070) a,c,d 2071) a 2072) b

2073. Penicillium marneffei is seen in - *(Orissa 04)*
a) IB b)AIDS
c) Diabetes d) Kala azar

MISCELLANEOUS (MICROBIOLOGY)

2074. Which of the following is a killed vaccine -
a) Hepatitis B b) Measles *(Jipmer 11)*
c) Yellow fever d) Japenese encephalitis

2075. What will happen if a bacteria acquires genes coding for restriction endonuclease - *(AIIMS Nov 10)*
a) Bacteria will die as lacks methylase
b) It will damage the host cell
c) It will have capacity to divide & multiply many times
d) Enhances proof reading activity of that bacteria

2076. Antigenic variation is/are seen in - *(PGIMay 10)*
a) Treponema pallidum b) Neisseria
c) Corynebacterium d) Borrelia recurrentis

2077. Maltess cross seen on polarizing microscopy in -
a) Cryptococcus neoformans *(AIIMS May 10)*
b) Penicillium mameffi
c) Blastomyces
d) Candida albicans

2078. Which of the following does not have non-human reservoir - *(PGI Nov 09, June 09)*
a) Salmonella typhi b) N. Gonorrhoea
c) E.coli d) Clostridium tetani
e) Treponema pallidum

2079. Man is the only reservoir of - *(AIIMS 90)*
a) Rabies b) Measles
c) Typhoid d) Japanese B encephalitis

2080. Biosafety precaution grade HI is practiced in all of the following organisms except ? *(AIIIMS Nov 08)*
a) Human influenza virus
b) St. louis encephalitis virus
c) Coxiellabumetti
d) Mycobacterium tuberculosis

2081. The following diagnostic tests are useful for corresponding purposes except - *(AI 02)*
a) Ziehl - Neelsen staining - Detection of mycobacteria
b) Immunoflorescence - Detection of Influenza virus
c) Specific IgM antibodies - Immunity against Rubella
d) Specific IgM antibodies - Detection of acute infection

2082. All of the following cause hemolytic uremic syndrome except - *(AIIMS May 0 7)*
a) Shigella b) Campylobacter
c) EHEC d) Vibrio cholera

2083. Hemolytic uremic syndrome is caused by -
a) EDEC b) Shigella *(PGIDec 07)*
c) Salmonella d) Cholera
e) Klebsiella

2084. All cause meningitis in the elderly except - *(AI 08)*
a) HSV2
b) Pneumococci
c) Gram negative bacteria
d) Listeria

2085. Which of the following grows in cell culture media-
a) Chlamydia *(PGI June 08)*
b) Ureoplasma urealyticum
c) Pseudomonas
d) Trophyrema whippeli

2086. Type of graft, best suited for renal transplantation -
a) Allograft b) Autograft *(AI 99)*
c) Xenograft d) Isograft

2087. A neonate develops encephalitis without any skin lesions. Most probable causative organisms is -
a) HSVI b) HSVII *(AIIMSMay 02)*
c) Meningococci d) Streptococci

2088. Category A bioterrorism agents *are-(AIIMS Nov 06)*
a) Ebola
b) Yersinia
c) Clostridium botulinum d) Rickettsia
e) Cholera

2089. Micro-organism used as weapon in biological terrorism - *(PGI Dec 02)*
a) Small pox V b) Rabies V
c) EbdaV d) Influenza CV
e) Human parvovirus

2090. Which amongst the following biological agents carries the least potential for use as a biological weapon for microbial terrorism? *(AI 11)*
a) Plague (Yersinia pestis)
b) Small pox (variola major)
c) Botulism (Cl. botulinum)
d) Brucellosis (Brucella sp)

2091. Which amongst the following biological agents has the highest potential for use as a biological weapon for microbial bioterrorism - *(AI 11)*
a) Plague (Yersinia pestis)
b) Small pox (variola major)
c) Botulism (Cl. botulinum)
d) Brucellosis (Brucella sp)

2092. Which of the following is not a group A bio terrorism agent - *(NEET/DNB Pattern)*
a) Small pox b) Hemorrhagic fever
c) Salmonella d) Botulism

2093. A child with fever and pharyngitis which of the following investigation should not to be done -
a) Widal test *(AIIMS 2000)*
b) ASO
c) Throat swab and culture
d) Chest x-ray

2094. Acute intravascular hemolysis can be caused by infection due to all of the following organisms except-
a) Clostridium tetani *(AIIMS Nov 03, AI 03)*
b) Bartonella bacilliformis
c) Plasmodium falciparum
d) Babesia microti

2095. Infective endocarditis is common in - *(PGI June 01)*
a) MR b) Coarctation of aorta
c) AR d) MS
e) TS

2073) b 2074) d 2075) a 2076) b,d 2077) a 2078) a,b,d 2079) b,c 2080) a 2081) c 2082) d 2083) b,c 2084) a 2085) a,b,d 2086) d 2087) b 2088) a,b,c 2089) a 2090) d 2091) a 2092) c 2093) a 2094) a 2095) a,c

2096. Zoonotic diseases are all except - *(PGIDec 01)*
a) Typhoid b) Anthrax
c) Rabies d)Q fever

2097. Loeffler's syndrome occurs in all except - (*AIIMS*
a) Toxocara b) Strongyloides *May 07)*
c) Ascaris d)Giardia

2098. Which of the following is an antimicrobial susceptibility testing - *{PGI June 05)*
a) Kibry baur method b)ATCC
c) NCTC d) Stockes method
e) NCCLS

2099. Which of the following is/are transfusion transmitted viruses - *(PGI Dec 03)*
a) Hepatitis B b)CMV
c) HTLV-1 d) Rubella
e) HHV-8

2100. Which of the following is transmitted by blood -
a) Toxoplasma b) Syphilis *(PGI 01)*
c) CMV d) Hepatitis B and C
e) Hepatitis A

2101. Diseases which can be transmitted by milk-^4/*88)*
a) Q Fever b) Poliomyelitis
c) Whooping cough d) Diphtheria

2102. The single most common cause of pyrexia of unknown origin is - *(AIIMS May 06)*
a) Mycobacterium tuberculosis
b) Salmonella typhi
c) Brucella sp
d) Salmonella paratyphi A

2103. A veterinary doctor had pyrexia of unknown origin. His blood culture in special laboratory media was positive for gram-negative short bacilli which was oxidase positive. Which one of the following is the likely organism grown in culture ? *(AI06)*
a) Pasteurella spp b) Francisella spp
c) Bartonella spp d) Brucella spp

2104. Organism most likely to cause "fever of unknown origin" in a farmer who raises goats - *(MAHA 05)*
a) Brucella melitensis
b) Clostridium novyi
c) Histoplasma capsulatum
d) Mycobacterium tuberculosis

2105. Infection occuring after man's bite is -
a) Spirochetes *(AIIMS Sep 96)*
b) Staphylococcus
c) Anaerobic streptococci
d) Candida

2106. Probiotics are useful for - *(AI 08)*
a) Necrotizing enterocolitis
b) Breast milk jaundice
c) Hospital acquired pneumonia
d) Neonatal seizures

2107. Vaccination causing intussusception -*(PGI dec 07)*
a) Rotavirus b) Parvovirus
c) Poliovirus d)BCG
e) Measles

2108. Recent noble prize for - *(AIIMS Nov 09)*
a) RNAi
b) Lipoxin
c) T beta transcription factor
d) Mitochondrial DNA

2109. Pigment producing colonies are seen in-*{Kamat 09)*
a) Pseudomonas
b) Atypical mycobacteria
c) Serratia marsescens
d) All of the above

2110. Pasteur developed the vaccine for - *(MAHA 05)*
a) Anthrax b) Rabies
c) Chicken cholera d) All of the above

2111. All are transmitted by milk except - *(AI90)*
a) Tuberculosis b) Brucellosis
c) Q Fever d)Leishmaniasis

2112. All cause brain lesions except - *(TN 98)*
a) Giardiasis b) Tuberculosis
c) Cysticercosis d) Bacteriodes

2113. Refrigerated blood stored up to 48 hours before transfusion can destroy which of the following -
a) HIV *(JIPMER 02)*
b) Hepatitis B
c) Treponema pallidum
d) PVivax

2114. Draining sinuses are seen in - *(PGI 90)*
a) Mycetoma b) Scrofula
c) Lupus vulgaris d) Pediculosis

2115. Abdominal pain, fat malabsorption & frothy stools suggests - *(JIPMER 98)*
a) Amoebiasis b) Bacillary dysentry
c) Giardiasis d) Pancreatic enzyme deficiency

2116. The phenomenon of genetic reassortment -
a) Can occur during reovirus replication *(PGI 88)*
b) Involves the crossing over of genes within an RNA segment
c) Can occur during influenza virus replication
d) Can occur only with RNA viruses of plus polarity

2117. Post exposure immunization is done for-
a) Measles b) Polio *(JIPMER 95)*
c) Rabies d) Chicken pox

2118. Necrotizing granulomatous inguinal lymphadenopathy is caused by - *(JIPMER 95)*
a) Syphilis b) Granuloma inguinale
c) Sarcoidosis d) Tuberculosis

2119. Which of the following is not a sexually transmitted disease - *(TN 04)*
a) Hepatitis B b) Amoebiasis
c) Bacterial vaginosis d)Yaws

2120. The ratio of anaerobe to aerobes in stool is-
a) 10:1 b) 100:1 *(JIPMER 81)*
c) 1000:1 d) 10000:1

2121. The predominant colonic bacteria are - *(PGI88)*
a) Largely aerobic b) Largely anaerobic
c) Bacteroides d) Staphylococci

2122. Most dominant colonic bacteria is -*(JIPMER 2002)*
a) E. coli b) Bacteroides
c) Clostridium d)Veilonella

2096)a 2097)d 2098)e 2099) a,b,e 2100)All 2101)a,d 2102)a 2103)d 2104)a 2105)b 2106)a 2107)a 2108)a 2109)d 2110)d 2111)d 2112)a 2113)c 2114)a,b 2115)c,d 2116)a 2117)a,c 2118)a,d 2119)d 2120)c 2121)b 2122)b

2123. Microorganism used as weap-on in biological terrorism is - *(DPG10)*
a) Smallpox virus b) Rabies virus
c) Influenzae virus d) Human narvovirus

2124. All causes brain lesions except - *(DPG 10)*
a) Giardiasis b) Tuberculosis
c) Cysticercosis d) Bacteroids

NOSOCOMIAL INFECTIONS

2125. A person get infected in a hospital and clinical manifestation appear after he is discharged this is called - *(Manipal 06)*
a) Nosocomial infection
b) Opportunistic infection
c) Epizootic infection
d) Physician induced

2126. All the following are true about nosocomial infections except - *(AI04)*
a) May manifest within 48 hours of admission
b) May develop after discharge of patient from the hospital
c) Denote a new condition which is unrelated to the patient's primary conditions
d) May already present at the time of admission

2127. Hospital acquired organisms are all except-(77P *09)*
a) Staphylococcus b) Acinobacter
c) Streptococcus d) Pseudomonas

2128. The most common pathogens responsible for nosocomial pneumonias in the ICU are - *(AI 05)*
a) Gram positive organisms
b) Gram negative organisms
c) Mycoplasma
d) Virus infections

2129. Which of the following causes highest risk of nosocomial infection to a patient - *(AIIMSMay 09)*
a) Patient admitted for elective surgery
b) HIV patient coming in follow up OPD
c) Patient undergoing endoscopy
d) Patient admitted for normal delivery

2130. Most common species of pseudomonas causing intravascular catheter related infections is ?
a) P cepacia *(AIIMS Nov 08)*
b) P aeruginosa
c) Pmaltiphila
d) P mallei

2131. In a post operative intensive care unit, five patients developed post - operative wound infection on the same wound. The best method to prevent cross infection occuring in other patients in the same ward is to - *(AIIMS Nov 10, AI 03)*
a) Give antibiotics to all other patients in the ward
b) Fumigate the ward
c) Disinfect the ward with sodium hypochlorite
d) Practice proper hand washing

2132. Most common catheter related blood stream infection is- *(AIIMSMay 07)*
a) Candida
b) Gram negative organisms
c) Coagulase positive staphylococci
d) Coagulase negative staphylococci

2133. Commonest cause of nosocomial infection-*(JIPMER*
a) Pseudomonas b) Staphylococci *08)*
c) Klebsiella d) Enterobacteriacea

2134. There is an outbreak of MRSA infection in a ward. What is the best way to control the infection-
a) Vancomycin given emperically to all the patients
b) Fumigation of ward frequently *(AIIMS Nov 10)*
c) Washing hand before & after attending patient
d) Wearing mask before any invasive procedure in ICU

SEXUALLY TRANSMITTED DISEASES

2135. All of the following are sexually transmited, Except-
a) Candida albicans *(AI 02)*
b) Echinococcus
c) Molluscum contagiosum
d) Group B streptococcus

2136. Which of the following is/ are not STD-
a) HAV b)HPV *(PGI Nov 10)*
c) HIV d) Varicella zoster virus
e) HTLV-I

2137. Genital ulcers are seen in all except - *(PGI may 10)*
a) H. aegypticus b) H.ducreyi
c) HSV d)Chlaymdia
e) T. pallidum

2138. Correct combination of incubation period is-
a) Syphilis : 9-90 days *(PGI May 11)*
b) Herpes genitalis : 4-5 wk
c) LGV: 3d-6wk
d) Donovanosis : 1-4 wk
e) Chancroid : 2-3 wk

2139. A 30 year old male, Kallu, with a history of sexual exposure comes with a painless indurated ulcer over the penis with everted margins. The diagnosis is -
a) Syphilis *(AIIMS May 01,*
b) Chancroid *NEET/DNBPattern)*
c) Lymphogranuloma venerum
d) Granuloma inguinale

2140. A patient has multiple necrotic ulcers over glans penis with tender inguinal lymphadenopathy. The likely diagnosis is - *(AIIMS Dec 94)*
a) Haemophilus ducreyi
b) Chlamydia trachomatis
c) Herpes simplex
d) Candida albicans

2141. In donovanosis - *(NEET/DNBPattern)*
a) Pseudolymphadenopathy
b) Penicillin is used for treatment
c) Painful ulcer
d) Suppurative lymphadenopathy

2123)a 2124)a 2125)a 2126)d 2127)b 2128)b 2129)a 2130)b 2131)d 2132)d 2133)b 2134)c 2135)b 2136)a,b 2137) a 2138) a,c,d 2139) a 2140) a 2141) a

2142. A male patient presented with granulomatous penile ulcer. On Wright geimsa stain tiny organisms of 2 microns within macrophages seen. What is the causative organism? *(AIIMS May 10)*
a) D3V
b) Calymmatobacterium granulomatis
c) Neisseria
d) Staph aureus

2143. A 45 year old female complaints of lower abdominal pain and vaginal discharge. On examination there is cervicitis along with a mucopurulent cervical discharge.The best approach to isolate the possible causative agent would be- *(AIIMS Nov 05)*
a) Culture chocolate agar supplemented with Haemin
b) Culture on McCoy cells
c) Culture on a bilayer human blood agar
d) Culture on vero cell lines

2144. A man presents to a STD clinic with urethritis and urethral discharge. Gram stain shows numerous pus cells but no microorganism. The culture is negative on the routine laboratory media. The most likely agent is - *(AIIMS Nov 02, 07)*
a) Chlamydia trachomatis
b) Haemophilus ducreyi
c) Treponema pallidum
d) Neisseria gonorrhoeae

2145. A young male patient presented with UTI, on urine examination pus cells were found but no organisms. Which method would be best used for culture -
a) McCoy cell line *(AIIMS May 12, Nov 11,*
b) Thayer martin medium *06, AI07)*
c) LJ. medium
d) Levinthal medium

2146. A 30 year old male patient presents with urethritis. All of the following can be the causative agent except-
a) Neisseria gonorrhoeae *(AIIMS Nov 04)*
b) Chlamydia trachomatis
c) Trichomonas vaginalis
d) Haemophilus ducreyi

2147. Most common cause of Non gonococcal urethritis is - *(AIIMS May 93, AI 96)*
a) Meningococci b) E. coli
c) Chlamydia trachomatis d) Mycoplasma

2148. A 28 year old sexually active male presents with burning micturation. On clinical examination no ulcer in the genitals. Urine examination shows 50 WBCs/HPF, no RBCs, leucocyte esterase positive, gonococcal culture negative. What could be the most probable causative organism ? *(AIIMSNov 07)*
a) Treponema pallidum b) Neisseria
c) Chlamydia trachomatis d) H. ducreyi

2149. Green frothy vaginal discharge is produced by -
a) Herpes simplex *(AIIMS May 94)*
b) Candida albicans
c) Trichomonas vaginalis
d) Normal vaginal flora

2150. Treatment of partner is required in all infections except - *(PGI 2000)*
a) Candida b) Herpes
c) Trichomonas d) Gardnerella

GASTROENTERITIS

2151. A cook prepares sandwitches for 10 people going for picnic. Eight out of them develop severe gastroenteritis within 4-6 hrs of consumption of the sandwitches. It is likely that on investigations the cook is found to be the carrier of - *(AIIMSNov 02)*
a) Salmonella typhi.
b) Vibrio cholerae
c) Entamoeba histolytica
d) Staphylococcus aureus

2152. Kallu, a 22 year old male had an outing with his friends and developed fever of38.50C, diarrhoea, and vomiting following eating chicken salad, 24 hours back. Two of his friends developed the same symptoms. The diagnosis is - *(AIIMS 01)*
a) Salmonella enteritis b) Bacillus cereus
c) S. aureus d) Vibrio cholerae

2153. Thirty-eight children consumed eatables procured from a single source at a picnic party. Twenty children developed abdominal cramps followed by vomiting and watery diarrhea 6-10 hours after the party. The most likely etiology for the outbreak is -
a) Rotavirus infection *(AI 03)*
b) Entero-toxigenic E.coli infection
c) Staphylococcol toxin
d) Clostidium perfringens infection

2154. Most Probable cause of food poisoning in a child who has eaten Ice Cream 16-18 hrs earlier is -
a) Staph aureus *(AIIMS 92)*
b) Clostridium perfringens
c) Clostridium botulinum
d) Salmonella typhimurium

2155. Food poisoning case with diarrhea within 6 hours- *(NEET/DNB Pattern)*
a) Staph aureus b) Cl. perfringens
c) CL botulinum d)V. cholerae

2156. 18 years old girl presents with watery diarrhea. Most likely causative agent - *(NEET/DNB Pattern)*
a) Rota virus b) V. cholerae
c) Salmonella d) Shigella

2157. Preformed toxin is important in food poisoning due to all EXCEPT- *(AIIMS Nov 01)*
a) Staph aureus b) Clostridium botulism
c) EIEC d) B.cereus

2158. Toxins are implicated as the major pathogenic mechanism in all of the following bacterial diarrheas except - *(AI 04)*
a) Vibrio cholerae
b) Shigella sp.
c) Vibrio parahemolyticus
d) Staphylococcus aureus

2142)b 2143)b 2144)a2145)a 2146)d 2147)c 2148)c 2149)c 2150)a,d 2151)d 2152)a2153)d 2154)d 2155)a 2156)b 2157)c 2158)c

2159. In a patient presenting with diarrhea and pus cells in stool, the causative organism can be all except -
a) Non-01 vibrio cholerae *(PGI Dec 01)*
b) Enterotoxigenic E. coli
c) Enteroinvasive E. coli
d) Shigella dysenteriae 1
e) Vibrio cholera

2160. Micro-organisms invading the GIT causing gasteroenteritis - *(PGIdec 07)*
a) EHEC b) Shigella
c) Vibryo parahemolyticus d) Campylobacter
e) Salmonella

2161. A child with fever with RBCs & pus in stools, causative organism is - *(NEET/DNB Pattern)*
a) ETEC b)EHEC
c) EPEC d) EAEC

2162. Heat stable enterotoxin causing food poisoning is caused by all the following except - *(AI02)*
a) Bacillus cereus b) Yersinia enterocolitica
c) Staphylococcus d) Clostridium perfringens

2163. Traveller's diarrhoea is caused by- *(AIIMSDec 97)*
a) Shigella b)E.Coli
c) E. histolytica d) Giardiasis

2164. The most common causative organism for Traveller's diarrhoea is - *(AIIMS Dec 94)*
a) E. coli b) Shigella
c) Norwalk virus d) Rotavirus

2165. A person returns to Delhi from Bangladesh after 2 days and has diarrhoes. Stool examination shows RBC's in stool. The likely organism causing is -
a) Enteropathogenic E. Coli *(Kerala 04)*
b) Enterotoxigenic E. Coli
c) Salmonella typhi
d) Shigella dysenteriae

2166. Fecal leucocytes are absent in all the following EXCEPT- **(***Corned 08)*
a) Giardiasis
b) Cryptosporidiasis
c) Campylobacter infection
d) Clostridium perfringes infection

2167. In India which of the following is true regarding the cause of Travellers diarrhea - *(SGPGI05)*
a) Giardiasis
b) E.coli
c) Amoebiasis
d) Idiopathic without any causative organisms

2168. Stool examination is required for diagnosis of infection with - *(PGI June 01)*
a) Staph food poisoning b) Clostridia
c) Shigella
d) Campylobacter
e) E, vermicularis

2169. Detected by stool examination except - *(PGI2000)*
a) Staphyloccous food poisoning
b) Giardiasis
c) Fungus
d) Staphylococcal pseudomembranous colitis

2170. Recommended transport medium for stool specimen suspected to contain enteric pathogens is -
a) Amie's medium *(NEET/DNB Pattern)*
b) Buffered glycerol saline medium
c) MacConkey medium
d) Stuart's medium

2171. Food poisoning is seen with -*(NEET/DNB Pattern)*
a) Staph aureus b) Staph, epidermidis
c) Strep, pyogenes d) Staph saprophyticus

NORMAL MICROBIAL FLORA OF HUMAN BODY

2172. Common natural flora of skin are - *(PGI june 09)*
a) Streptococcus
b) Staphylococcus aureus
c) Candida albicans
d) Bacteriods ffagilis
e) Prop ionibacterium acne

2173. Transient colonization is caused by - *(PGIDec 08)*
a) HSV b) Trichomonas vaginalis
c) H. inlfuenzae d) N. Gunorrhae
e) Staphylococcus aureus

2174. Common natural flora of skin are - *(PGI Dec 08)*
a) Streptococcus b) Staphylococcusaureus
c) Diphtheriod d) E.coli
e) Enterococci

2175. Which of the following is the main colonizer of sebaceous gland - *(PGI June 0 7)*
a) Propionic bacterium acnes
b) Diptheria
c) Strep.pyogens
d) Staph, aureus
e) Candida

2176. In the gut, anaerobic bacteria outnumber the aerobes by a ratio of - *(AIIMS May 06)*
a) 10:1 b) 100:1
c) 1000:1 d) 10,000:1

2177. It is true regarding the normal microbial flora present on the skin and mucous membranes that -
a) It cannot be eradicated by antimicrobial agents *(AI 05)*
b) It is absent in the stomach due to the acidic pH.
c) It establishes in the body only after the neonatal period.
d) The flora in the small bronchi is similar to that of the trachea

2178. MC commensal gut flora in adult - *(PGI 2000)*
a) Lactobacillus b) Bacteroides
c) E.coli d)Klebsiella

2179. The following micro - organism constitutes the normal flora of oral cavity - *(Karnataka 02)*
a) Esch. coli
b) Staphylococcus epidermidis
c) Branhamella catarrhalis
d) Picomavirus

MEDICINE

CVS

GENERAL

1. At the end of ventricular diastole - *(PGI June 98)*
a) Atrial volume is more
b) Coronary flow is maximum
c) Flow in aorta drops
d) All of the above

2. Isovolumic relaxation phase of the cardiac cycle ends with- *(Al 04)*
a) Peak of'C' waves
b) Opening of A.V. valve
c) Closure of semilunar valve
d) Begning of T wave

3. During the cardiac cycle the opening of the aortic valve takes place at the - *(Al 04)*
a) Begining of systole
b) End of isovolumetric contraction
c) End of diastole
d) End of diastasis

4. All of the following phases of the jugular venous pulse and their causes are correctly matched. Except- *(Al 02)*
a) 'c' wave - onset of atrial systole
b) 'a-x' descent - atrial relaxation
c) 'v-y' . emptying of blood from right atrium into right ventricle
d) 'y-a' ascent - filling of the right atrium from the vena cava

5. 'C' wave in JVP is due to - *(AIIMS Nov 0 7)*
a) Atrial contraction
b) Tricuspid valve bulging into right atrium
c) Right atrial filling
d) Rapid ventricular filling

6. Which of the following is the correct statement regarding findings in JVP - *(Al 02)*
a) Cannon wave: Complete heart block
b) Slow vy descent: Tricuspid regurgitation
c) Giant c wave : Tricuspid stenosis
d) Increased JVP with prominent pulsations : SVC obstruction

7. In the JVP, 'a' waves are absent in - *(Al 94)*
a) Atrial fibrillation b) Mitral stenosis
c) Tricuspid atresia d) Sick sinus syndrome

8. Giant 'a' waves in JVP occur in all except - *(Al96)*
a) Junctional rhythm
b) Pulmonay hypertension
c) Tricuspid regurgitation
d) Complete heart block

9. First heart sound is soft in all, except -
a) Short PR interval *(ARMS Dec 95)*
b) Ventricular septal defect
c) Mitral regurgitation
d) Calcified valve

10. Loud Sj is caused by - *(PGIDec 04)*
a) Calcified mitral valve b)MVP
c) Short PR interval d) Tachycardia
e) Dilatation or widening of mitral valve after valvotomy

11. Reverse splitting of 1st heart sound heard in -
a) RBBB b) LBBB *(PGI June 04)*
c) Tricuspid stenosis d)AR
e) Atrial myxoma

12. Loud SI in mitral stenosis is seen in -
a) Prolonged flow through mitral valve
b) 1st degree heart block *(PGI June 99)*
c) Calcification of the valve
d) Immobilization of the valve

13. Wide split S_2 occurs in - *(ARMS May 93)*
a) VSD (ventricular septal defect)
b) Mitral stenosis
c) ASD (Atrial septal defect)
d) Coarctation of aorta

14. Reverse splitting of S_2 is seen in all except -
a) LBBB *(PGI Dec 05)*
b) WPW type A
c) LV pacing
d) Systemic hypertension
e) Post-stenotic dilatation in AS

15. Wide-split second heart sound is seen in -
a) ASD b)LBBB *(PGI Dec 02)*
c) PDA d)MR
e) PS

16. Wide splitting of S_2 - *(PGIDec 06)*
a) ASD b)MR
c) PDA d)PS
e) LBBB

17. Single second heart sound is seen in - *{PGIDec 04)*
a) TOF
b) Pulmonary arterial hypertension
c) Pulmonary atresia
d) Corrected TG A
e) Severe pulmonary stenosis

18. Loud pulmonary component of second heart sound heard in - *(PGIJune 04)*
a) Pulmonary hypertension
b) TOF
c) Eissenmenger's syndrome
d) Pulmonary stenosis
e) AS

19. All of the following heart sounds occur shortly after S_2 except - *(Al 03)*
a) Opening snap b) Pericardial knock
c) Ejection click d) Tumor plop

20. Some times the following diastolic sounds heard during cardiac auscultation - *(PGIDec 06)*
a)S_3 b)S_4
c) Opening snap d) Ejection click

21. Third heart sound is seen in all except - *{ARMSDec*
a) Athletes b) Mitral stenosis *98)*
c) Constrictive pericarditis d)LVF

l)corb 2)b 3)b 4) a 5)b 6) a 7) a 8)c 9) a 10)c ll)b,e 12) a 13)c 14)b,c 15)a,e 16) a,b,d 17)a,c 18)a,c 19)c 20)a,b,c 21) b

22. True about third heart sound is - *(PGIDec 98)*
a) Absent in Chr. constrictive pericariditis
b) Absent in aortic aneurysm
c) Absent in MS
d) Normal physiologically in Athletes

23. Left ventricular S_3 is seen in - *(PGIDec 05)*
a) Pregnancy b)MS
c) MR d)ASD
e) PDA

24. All of the following statements about third Heart sound (S3) are true, except - *(AI10)*
a) Occurs due to rapid filling of the ventricles during atrial systole
b) Seen in Constrictive Pericarditis
c) Seen in Atrial Septal Defect (ASD)
d) Seen in Ventricular Septal Defect (VSD)

25. S_4 is not seen in - *(AIIMS May 95)*
a) Ventricular aneurysm
b) Mitral regurgitation
c) Hypertrophic cardiomyopathy
d) Hypertension

26. Continuous murmur is found in all, except ~
a) Mitral stenosis with mitral regurgitation
b) Patent ductus arteriosus *(AIIMS May 93)*
c) Rupture of sinus of Valsalva
d) Systemic arteriovenous (AV) fistula

27. A continuous murmur is heard in all of the following conditions except - *(AIIMS May 05)*
a) Ventricular septal defect with aortic regu.rgitation
b) Patent ductus arteriosus
c) Coronary arteriovenous fistula
d) Venous hum

28. Continuous murmur is present in - *(PGI June 06)*
a) PDA
b) AS with AR
c) Shunt between pulmonary & subclavian artery

29. Continuous murmur is found in - *(PGIDec 04)*
a) AS combined with AR
b) Systemic A V fistula
c) PDA with reversal of shunt
d) Aortopulmonary window
e) Rupture of sinus valsalva

30. A continuous murmur is heard in all of the following conditions except - *(AIIMSMay 05)*
a) Ventricular septal defect with aortic regurgitation
b) Patent ductus arteriosus
c) Coronary arteriovenous fistula
d) Venous hum

31. Continuous murmur is seen in all the following except- *(AI 95)*
a) Aortic sinus of valsalva rupture
b) Coarctation of Aorta
c) AV malformations
d) Peripheral pulmonary stenosis

32. Carey coomb murmur is seen in - *(PGIDec 9 7)*
a) Severe mitral stenosis
b) Acute rheumatic carditis
c) Pure aortic regurgitation
d) Severe pulmonary HT

33. Carey coombs murmur, which is false -
a) Delayed diastolic murmur *(AIIMS Nov 06)*
b) Seen in rheumatic fever
c) Can be associated with A.R.
d) Low pitched murmur

34. An early systolic murmur may be caused by all of the following except - *(AI 03)*
a) Small ventricular septal defect
b) Papillary muscle dysfunction
c) Tricuspid regurgitation
d) Aortic stenosis

35. Systolic thrill in left 2nd or 3rd intercostal space is seen in - *(AI 09)*
a) Subpulmonic VSD b)PinkTOF
c) Ebstein's anomaly d) Pulmonary stenosis

36. Pulse pressure is - *(AIIMSMay 93)*
a) 1/3 diastolic + 1/2 systolic B.P.
b) 1/2 diastolic + 1/3 systolic B.P.
c) Systolic - diastolic B.P.
d) Diastolic + 1/2 systolic B.P.

37. Wide pulse pressure may be seen in all except -
a) Aortic regurgitation *(AI 91)*
b) PDA
c) Complete Heart block
d) Congestive Heart failure

38. Pulsus paradoxus is seen in all except -
a) IPPV *(AIIMS June 98)*
b) COPD
c) Cardiac Tamponade
d) Constrictive pericarditis

39. Pulsus paradoxus is present in - *(PGIDec 05)*
a) Emphysema
b) Pulmonary embolism
c) Hypovolemic shock
d) Hypertrophic cardiomyopathy

40. True about pulsus paradoxus is - *(PGI June 98)*
a) Arm-tongue circulation time is increased
b) T Stroke volume
c) Seen in constrictive pericarditis
d) THR

41. Pulsus paradoxus is seen in - *(PGI June 06)*
a) Cardiac tamponade b) Constrictive pericarditis
c) HOCM d)AR
e) Severe asthma

42. Pulsus bisiferiens is best felt in - *(AIIMS Dec 98)*
a) Carotid artery b) Brachial artery
c) Radial artery d) Femoral artery

43. Pulsus bisiferiens is seen in all, except -
a) Aortic regurgitation + Aortic stenosis
b) Aortic regurgitation *(AIIMS May 93)*
c) Hypertrophic cardiomyopathy
d) Tetralogy of Fallot

22) c,d 23) a,c,d,e 24) a 25) a 26) a 27) a 28) a,c 29)b,d,e 30) a 31) d 32) b 33) a 34) d 35) d
36) c 37) d 38) a 39)a,b,c 40) c 41)a,b,e 42) c 43) d

44. Bisiferien pulse is seen in - (*PGIDec 05)*
a) AS+AR
b) Hypertrophic cardiomyopathy
c) Severe AR

45. Pulsus alternans occurs in - *(PGI June 98)*
a) Constrictive pericarditis b) Viral myocarditis
c) Hypokalemia d)MI

46. Double apical impulse is seen in - *(PGIDec 98)*
a) MR b) AR
c) AS d) MS

47. Pulsus bisiferiens is best felt in - (*AIIMS June 98)*
a) Carotid artery b) Radial artery
c) Brachial artery d) Femoral

48. Water hammer pulse seen in - *(AIIMSMay 07)*
a) Aortic stenosis
b) Aortic regurgitation
c) Aortic stenosis and Aortic regurgitation
d) Mitral regurgitation

49. Which of the following is not true about hepatoj ugular reflex - *(A109)*
a) Seen in pulmonary stenosis
b) Associated with decreased afterload
c) Seen in tricuspid regurgitation
d) May indicate right heart failure

50. Positive hepatoj ugular reflux is found in all of the following conditions except- *(AIIMSMay 11)*
a) Tricuspid regurgitation
b) Right heart failure
c) Decreased after load
d) Increased capillary bed pressure

51. Enlarged pulsatile liver is seen in - *(AI09)*
a) Tricuspid regurgitation
b) Aortic regurgitation
c) Mitral regurgitation
d) Pulmonary regurgitation

52. Where pulsatile liver and ascites is found -
a) TR b) Critical pulmonary stenosis
c) MR d)MS *(AIIMS May 11)*

53. Swan Ganz. catheter is used for - *(PGI June 03)*
a) Lt. cardiac output
b) Pulmonary capillary pressure
c) Pulmonary artery occlussion pressure
d) 0_2 saturation in mixed venous blood

54. Normal PCWP with pulmonary oedema is seen in -
a) Left atrial myxoma *(AIIMS June 98)*
b) High altitude
c) Pulmonary vein obstruction
d) Pulmonary artery obstruction

55. A patient comes with sudden respiratory distress, on examination, bilateral basal crepts are present over chest suggestive of pulmonary edema with normal alveoler wedge pressure. The likely cause is - *(AIIMS June 2000)*
a) Narcotic overdose
b) Congestive heart failure
c) Myocardial infarction
d) Cardiogenic shock

56. Pulm. edema associated with normal PCWP is observed, which of these is not a cause - *(AI 01)*
a) High altitude
b) Cocaine overdose
c) Post cardiopulmonary bypass
d) Bilateral renal artery stenosis

57. Left atrial filling pressure closely approximates -
a) Pulmonary capillary wedge pressure
b) Central venous pressure *(AIIMS May 93)*
c) Intrapleural pressure
d) Intracranial pressure

58. TVansoesophageal Echocardiography is useful in -
a) Sinus venosus type of ASD *(PGI June 98)*
b) Dissection of arch of aorta
c) Thrombosis
d) Prosthetic valve endocarditis

59. Causes of raised J.V.P. with hypotension are all except - *(AIIMS May 07)*
a) Cardiac tamponade b) Right ventricular M.I.
c) Heart failure d) 2nd Degree A. V. block

60. A 36 year old female recurrent chest pain and palpitation varying in duration and severity and 6-7 ectopics per minute (Possibly supraventrigation is) not related to exertion. Her BP is 86 mm Hg and pulse rate is 86/min. The ideal investigation is-
a) Echocardiography *(AIIMS 99)*
b) Electrophysiological studies
c) Thallium study
d) Technetium pyrophosphate

61. Continuous murmur is seen in- *(AP 98)*
a) PDA b) A-V malformation
c) AP Window d) All of the above

62. All produce continuous murmurs except - *(IN 98)*
a) Mitral valve prolapse
b) Arterio venous malffomations
c) Ruptured sinus of valsalva
d) PDA

63. Prominent 'a' wave of JVP is not seen in - *(UP 96)*
a) Junctional Rhythm b) Complete heart block
c) Tricuspid stenosis d) Pulmonary stenosis

64. Normal PQ interval is - *(Kerala 96)*
a) 0.12 sec. b) 0.2 sec.
c) 0.16 sec. d) 0.02 sec.
e) 0.016 sec.

65. Central venous pressure monitoring is helpful in -
a) Regulating the speed and amount of fluid infusion *(UPSC 97)*
b) Regulating the dose of noradrenaline
c) Deciding the need for plasma infusion
d) Deciding the requirement for blood transfusion

66. Swan-Ganz catheter is used to measure - *(UP 97)*
a) Right artial flow
b) Pulmonary capillary pressure
c) Central venous pressure
d) Right ventricular pressure

44) a,b,c 45) d 46) c 47) b 48) b 49) b 50) c 51) a 52) a 53)All 54) b 55) a 56) d 57) a
58)All 59) d 60) b 61) d 62) a 63) None 64) c 65) a 66) b

67. Electrical alterans in ECG is characteristic of -
a) Severe bronchial asthma *(Kerala 95)*
b) Peri cardial effusion
c) Severe LVF
d) - AR.

68. A Carey Coomb's murmur heard in a child with mutiple joint pains is suggestive of - *(UPSC 95)*
a) Infective endocarditis
b) Rheumatoid arthritis
c) Rheumatic fever
d) Libman-Sack's endocarditis

69. A young lady complains of sudden onset of palpitations, extreme weakness and sweating. On examination, she was found to have B.P. 90/70 with a regular pulse rate of 180/minute. Her symptoms disappeared after vomitting but she complained of polyuria. The most likely diagnosis is -
a) Primary thyrotoxicosis *(UPSC 96)*
b) Acute anxiety state
c) Paroxysmal atrial tachycardia
d) Paroxysmal atrial flutter

70. All are seen in association with reverse splitting of S_2 except - *(MP 98)*
a) LBBB b) Complete heart block
c) Systolic Hypertension d) Aortic stenosis

71. Water hammer pulse is seen in all except -
a) AR b) Anaemia *(CMC 98)*
c) Pregnancy d)MR
e) MS

72. Which one is not a feature of Leriches syndrome -
a) Absent femoral pulse *(AP 96)*
b) Gluteal claudication
c) Continuous bruit over abdominal aorta
d) Impotence

73. Dicrotic pulse is seen in - *(Jipmer 2K)*
a) Cardiac tamponade
b) Aortic regurgitation
c) Dilated cardiomyopathy
d) Retrictive cardiomyopathy

74. Which is not a major criteria for CCF- *(Orissa R)*
a) PND b) Rales
c) S3 gallop d) Cardiomegaly

75. Framingham criteria for diagnosis of congestive heart failure classifies the following as major criteria except- *(Kerala 2K)*
a) Extremity oedema
b) Acute pulmonary oedema
c) Positive hepatojugular reflux
d) Paroxysmal nocturnal dyspnoes
e) S3 gallop

76. Ventricular hypertrophy means - *(TN2001)*
a) Systolic dysfunction b) Diastolic dysfunction
c) Asystole d)None

77. Ejection fraction denotes performance of-*(CUPGEE 02)*
a) Left ventricle b) Left atrium
c) Aortic valve d) Pulmonary valve

78. In Marfan's aortic aneurysm occurs in - *(AMC2K)*
a) Ascending aorta b) Arch of aorta
c) Descending aorta d) Abdominal aorta

79. The earliest manifesation in the fatty streak of Atherosclerosis is - *(Kerala 97)*
a) Collection of lipid in endothelial cells
b) Collection of lipid in smooth muscule
c) Endothelial cell damage
d) Noneof the above

80. Lipoprotein-X is elevated in - *(AP 96)*
a) Hypercholesterolemia
b) Primary Biliary cirrhosis
c) Indian childhood cirrhosis
d) Alcoholic Cirrhosis

81. Most common site of aortic dissection -*(Jipmer 98)*
a) Ascending aorta b) Arch, of aorta
c) Descending aorta d) Abdominal aorta

82. Aortic H^section is seen in - *(JIPMER 98)*
a) Down's syndrome b) Klinefelters syndrome
c) Turners syndrome d) Marfan's syndrome

83. Standing increases murmur intensity in -
a) Aortic stenosis *(Jipmer 03)*
b) Aortic regurgitaion
c) Hypertrophic cardiomyopathy
d) Mitral stenosis

84. Calcium Gluconate is not used in CPR by -
a) Hypocalemia b) Hypokalemia *(NIMHANS 05)*
c) Hyperkalemia d) Calcium antagonism

85. A 26 year old man complains of abdominal distension, swelling of the legs and easy fatigability. His blood pressure is 90/70 mm Hg and pulse becomes difficult to feel on inspiration. JVP is grossly elevated and rises further on deep inspiration. He has pedal edema, ascites and tender hepatomegaly. Precordium is quiter with loud and some what early apical third heart sound. The probable diagnosis is - *(UPSC 04)*
a) Cor Pulmonale b) Tricuspid stenosis
c) Constrictive pericarditis d) Pulmonary stenosis

86. Ej ection fraction denotes performance of -
a) Left ventricle b) Left atrium *(Jipmer 05)*
c) Aortic valve d) Pulmonary valve

87. Anacrotic pulse in felt in- *(MAHE 05)*
a) AR b)MR
c) MS d) AS

88. A continuous murmur is heard in all of the following conditions except - *(AIIMS May 05)*
a) Ventricular septal defect with aortic regurgitation
b) Patent ductus arteriosus
c) Coronary arteriovenous fistula
d) Venous hum

89. Carcinoid syndrome produces valvular disease primarily involving - *(AIIMS May 05)*
a) Pulmonary valves b) Tricuspid valves
c) Mitral valve d) Aortic valve

67)b 68)c 69)c 70)b 71)e 72)c 73)c 74)None 75)a 76)b 77)a 78)a 79)a 80)b
81) a 82) d 83) c 84) b 85) c 86) a 87) d 88) a 89) b

90. Most common cause of orthostatic hypotension - *(NIMHANS 06)*
a) Peripheral neuropathy b) Carcinoid Syndrome
c) Pheochromocytoma d) Hypothyroidism

91. Most common organism for causing infective endocarditis in native valve - *(COMED 06)*
a) Streptococcus Viridans b) Entero cocci
c) Staphylo cocci d) Gram negative bacilli

92. 'a' wave in JVP is seen in - *(Manipal 06)*
a) Will be large when atria contracts against resistance
b) Filling of ventricles
c) It is followed by "V" waves
d) *i* in inspiration

93. Non-cardiac causes of raised central venous pressure include the following except - *(UPSC 07)*
a) Abdominal compartment syndrome
b) Tension pneumothorax
c) Positive pressure ventilation
d) Hypervolaemia

94. Which one of the following does not cause pulsus paradoxus ? *(UPSC 07)*
a) Severe aortic regurgitation
b) Cardiac tamponade
c) Constrictive pericardities
d) Acute severe bronchial asthma

95. Match list I with list II and select the correct answer using the code given below the Lists - *(UPSC 0 7)*

List I *(Heart Sound)*	Listn *(Disease)*
A. LoudS,	1. Valvulary pulmonary stenosis
B. Loud S_2	2. Atrial septal defect
C SoftS_2	3. Mitral stenosis
D. Wide and fixes $S_{.0}$	4. Pulmonary arterial hypertension

Code.•

	A	B	C	D
a)	3	4	1	2
b)	**3**	1	4	2
c)	2	4	1	3
d)	2	1	4	3

96. The clinical manifestation of cauda equina lesion include the following except - *(UPSC 0 7)*
a) Urinary retention
b) Radicular pain
c) Dermatomal sensory loss
d) Extensor plantar reflexes

97. Pansystolic murmur at apex with soft first heart sound is the key sign of which one of the following ?
a) Aortic regurgitation *(UPSC 07)*
b) Mitral regurgitation
c) Ventricular septal defect
d) Atrial septal defect

98. The dicrotic notch on the aortic pressure curve is caused by - *(Corned 07)*
a) Closure of the pulmonary valve
b) Rapid filling of the left ventricle
c) Closure of the aortic valve
d) Contraction of the atria

99. The test of choice to detect peri valvular abscess of aortic valve is - *(Corned 07)*
a) MRI of the heart
b) Transosophageal ECHO with Doppler
c) Ventriculography
d) CT Chest

100. The most common form of diabetic neuropathy is -
a) Acutemononeuropathy *(Corned 08)*
b) Autonomic neuropathy
c) Polyradiculopathy
d) Distal symmetric polyneuropathy

101. The 'a' wave of jugular venous pulse is produced by- *(UPSC-109)*
a) Atrial relaxation b) Atrial systole
c) Atrial diastole d) Rapid venous filling

102. 'Kerley B lines' in the chest X-ray of a patient is a radiological feature of - *(UPSC-109)*
a) Respiratoryfailure b) Heart failure
c) Renal failure d) Liver failure

103. Pulses paradoxus can be seen in the following clinical states except - *(UPSC-109)*
a) Pericardial tamponade
b) Acute severe asthma
c) Acute myocardial infarction
d) Massive pulmonary embolism

104. Bibasilar Velcro crackles occur in ? *(COMED 09)*
a) Acute pulmonary oedema
b) Acute bronchopneumonia
c) Pulmonary fibrosis
d) Pulmonary embolism

105. A mill-wheel type of murmur during laparoscopy suggests - *(COMED 09)*
a) Tension pneumothorax
b) Intraabdominal bleeding
c) Gas embolism
d) Pre-existing valvular disease

106. Giant 'V' wave on examination of the jugular venous pulse is suggestive of - *(COMED 09)*
a) Atrial flutter with changing block
b) Tricuspid incompetence
c) Ventricular septal defect
d) Pulmonary stenosis

107. TVue about third heart sound (H3) - *(PGIMay 10)*
a) Heard in MR b) Diastolic sound
c) High pitch sound d) Normal in children

108. Murmur increasing with Valsalva manouvre -
a)VSD b) HOCM *(AIIMSNovlO)*
c)MS d) AS

90) a 91) c 92) a 93) d 94) a 95) a 96) d 97) b 98) c 99) b 100) d 101) b 102) b 103) c
104)c 105) c 106)b 107) a,b,d 108)b

109. Positive hepatojugular reflux is found in all of the following conditions except - *(AIIMSMay 11)*
a) Tricuspid regurgitation
b) Right heart failure
c) Decreased after load
d) Increased capillary bed pressure

110. P2is best appr.cciate *(NEET/pNB.pattern)*
a) left intercostal space
b) 2nd right intercostal space
c) 4"ICS
d) 3rd ICS

111. Pulmonary edema PCWP- *(NEET/DNB Pattern)*
a) >28 mm Hg b) > 15 mm Hg
c) > 10 mm Hu

ARRYHTHMIA

112. QRS complex indicates - *(AI98)*
a) Atrial repolarization
b) Atrial depolarization
c) Ventricular repolarization
d) Ventricular depolarization

113. ECG in young healthy person with 80 beats/min will not show - *(PGI June 98)*
a) PR interval between 120-200 msec
b) QRS interval less than 100 msec
c) Interval between 2 QRS is 750 msec
d) T. wave repressents repolarization

114. Current of injury is- *(PGI June 05)*
a) P wave b) ST segment
c) QRS complex d) QT interval

115. WPW syndrome all true except - *(PGIDec 05)*
a) More common in females
b) Rt ventricular aberrant is commonly seen
c) Incidence i with age
d) Heart is structurally normal
e) Incidence is 0.3 to 0.7%

116. All are ECG findings in Wolf Parkinson's white syndrome, except - *(AIIMS Feb 97)*
a) Narrow QRS complexes b) Normal QT interval
c) Slurred and tall QRS d) Short PR interval

117. The drug of choice in patients with Wolff-Parkinson-White syndrome with atrial fibrillation is -
a) Digitalis b) Procainamide *(AIIMSNov 03)*
c) Verapamil d) Adenosine

118. Congenital long QT syndrome can lead to -
a) Complete heart block *(AIIMS May 03)*
b) Polymorphic ventricular tachycardia.
c) Acute myocardial infarction.
d) Recurrent supraventricular tachycardia.

119. Torsade-de-pointes is caused by - *(PGI June 99)*
a) Hypermagnesemia b) Metabolic acidosis
c) Hypomagnesemia d) Metabolic alkalosis

120. Feature of Torsade de pointes is - *(AIIMS Dec 97)*
a) Wide QRS complex b) Short QRS complex
c) Prolonged QTc interval d) Short QTc interval

121. Torsades de pointes causes ? *(AIIMSMay 08)*
a) EideQRS b) Short QRS
c) WideQT d) Short QT

122. Which of the following statements about Premature ventricular beats is false - *(PGI 97)*
a) Sequential depolarization of ventricles
b) Wide, Bizzare, Notched QRS complexes
c) Prevalence decreases with age
d) Palpitations is a common presenting feature

123. In a patient with wide-complex tachycardia, the presence of all of the following in the ECG indicates ventricular tachycardia except - *(AIIMS Nov 03)*
a) Atrioventricular dissociation
b) Fusion beats
c) Typical right bundle branch block
d) Capture beats

124. Ventricular tachycardia is represented by all, Except- *(PGI 97)*
a) Wide QRS complex b) AV dissociation
c) Capture Beasts d) Fusion beats
e) Typical RBBB QRS complex

125. Ventricular ectopic beats represented by -
a) Irregular RR interval *(PGI June 05)*
b) Incomplete compensatory pause
c) A.V. dissociation
d) Presence of fusion beat
e) Wide QRS

126. EKG finding of ventricular premature beats - *(PGI June 04)*
a) Fusion beat b) Narrow QRS complex
c) AV Dissociation d) Wide QRS complex
e) Capture beat

127. Accelerated idioventricular rhythm (AIVR) is mos characteristically seen in? *(AI10)*
a) AV nodal block
b) Myocardial reperfusion
c) Metabolic derangement
d) Digitalis therapy

128. A patient with heart failure developed ventricular arryhthmia. Treatment is/are - *(PGI June 04)*
a) Encainide b)Flecainide
c) Intracardiac Defibrilation d) Beta-blockers
e) Amiodarone

129. After a successful Total Hip Replacement a 59 year old patient developed severe chest pain. Echocardiography revealed reduced wall motion of right ventricle with slow flow across the tricuspid valve. Which of the following is most likely diagnosis? *(AI 10)*
a) Pulmonary embolism
b) Aortic dissection
c) Dilated cardiomyopathy
d) Right ventricular infarction

130. What is the drug of choice to control supraventricular tachycardia - *(AIIMSNov 05)*
a) Adenosine b) Propranolol
c) Verapamil d) Digoxin

109) c 110) a 111) a 112)d 113)None 114)b 115)a 116)a 117)b 118)b 119)c 120)c 121)c 122) c
123) c 124) e 125)a,c,d,e 126)a,c,d,e 127) b 128)c,d,e 129) a 130) a

131. A chronic alcoholic develops palpitations suddenly after alcohol binge. His pulse is irregularly irregular Which of the following arrythmia is most commonly associated with alcohol binge in the alcoholics ? *(AIIMS Nov 01)*
a) Ventricular fibrillations
b) Vetricular premature contractions
c) Atrial flutter
d) Atrial fibrillation

132. Atrial fibrillation may occur in all of the following conditions, except - *(ARMS May 03)*
a) Mitral stenosis b) Hypothyroidism
c) Dilated cardiomyopathy d) Mitral regurgitation

133. In a patient with chronic atrial fibrillation with a regular beat of 60/min, the most probable cause is - *(ARMS May 01)*
a) Sleep b) Digitalis toxicity
c) Sino nodal block d) Hypothyroidism

134. A person with mitral regurgitation and atrial fibrillation presents with syncope. On examination the person has a heart rate of 55. What is the most probable cause ? *(AJ 07)*
a) Digitalis toxicity
b) Incomplete heart block
c) Stroke
d) Subarachnoid Haemorrhage

135. True regarding atrial fibrillation - *(PGI June 06)*
a) t Thromboembolism
b) Digoxin treatment
c) Anticoagulant not required
d) Aspirin given

136. Which of the following is seen in second degree AV block- *(PGIDec 01)*
a) Change in morphology of ventricular complex
b) Increased atrial rate compared to ventricular rate
c) Increase in cardiac output
d) Decrease in stroke volume
e) Increased AV conduction time

137. Constant PR inverval is seen in - *(ARMS 1997)*
a) First degree block
b) Second degree - Mobiz type I block
c) Second degree - Mobiz type II block
d) Third degree block

138. All of the following are features of Mobiz type I block except- *(A11992)*
a) Constant PR interval
b) Normal QRS morphology
c) Regular atrial rhythm
d) Atrial rate - ventricular rate

139. All of the following features can differentiate between ventricular tachycardia and supraventricular tachycardia except-
a) QRs< 0.14 seconds *(ARMSDec 98)*
b) Ventricular rate > 160/min
c) Variable first heart sound
d) Relieved by carotid sinus massage

140. Broad complex tachycardia due to ventricular a tachycardia is suggested by (select three correct options) - *(PGI 1994)*
a) Fusion Beats
b) AV dissociation
c) Capture Beats
d) Termination tachycardia by carotid massage
e) Triphasic QRS in VI

141. Drug of choice in PSVT is - *(AJ 98)*
a) Amaidarone b) Lingnocaine
c) Quinidine d) Adenosine

142. Drug used in AV Block - *(PGIDec 03)*
a) Isoprenaline b) Dopamine
c) Atropine d)Disopyramide
e) Propranolol

143. In the treatment of severe bradycardia, all of the following can be the best modality of treatment except-
a) Atropine b) Pacing *(ARMSNov 05)*
c) Isoproterenol d) Diltiazem

144. ST elevation is seen in all of the following conditions except - *(ARMS May 02)*
a) Myocardial infarction
b) Coronary artery spasm
c) Constrictive pericarditis
d) Ventricular aneurysm

145. A patient develops sudden palpitation with HR 150/ min, regular. What could be the cause -
a) PSVT *(ARMS May 11)*
b) Sinus tachycardia
c) Ventricular tachycardia
d) Atrial flutter with block

146. All of the following may cause ST segment elevation on EKQ except - *(AI05)*
a) Early repolarization variant
b) Constrictive pericarditis
c) Ventricular aneurysm
d) Prizmetal angina

147. QT prolongation isseen in all, except-*(ARMS June*
a) Hypothermia b) Digitalis toxicity *2K)*
c) Hypocalcemia d) Romanowand syndrome

148. QT interval is shortened in - *(AI 95)*
a) Hypocalcaemia b) Hypokalemia
c) Hypercalcemia d) Hyperkalemia

149. Hypercalcemia in ECG is diagnosed by-*(PGIDec 99)*
a) Increased QT interval
b) Decreased QT interval
c) Increased PR interval
d) Tall T waves

150. Hypocalcemia is characterized by all of the following features except - *(AI 03)*
a) Numbness and tingling of circumoral region
b) Hyperactivity tendon reflexes
c) Shortening of Q-T interval in ECG
d) Carpopedal spasm

131) d 132) b 133) b 134)a 135)a,b,d 136)a,b,e 137)a,c 138)a 139)b 140)a,b,c 141)d 142)a,c 143)d 144) c 145) a 146)b 147)b 148)c 149)b 150)c

151. All of the following are the electrocardiographic features of severe hyperkalemia except - *(A103)*
a) Peaked T waves b) Presence of U waves
c) Sine waves pattern d) Loss of P waves

152. All are ECG changes in hypokalemia, except -
a) U wave *(AIIMS Dec 97)*
b) ST segment sagging
c) T-wave flattening or inversion
d) QT interval prolongation

153. All of the following are the electrocardiographic features of Hyperkalemia, except - *(AIIMSMay 04)*
a) Prolonged PR interval
b) Prolonged QT interval
c) Sine wave patterns
d) Loss of P waves

154. The following ECG findings are seen in Hypokalemia -
a) Increased PR interval with ST depression *(AI07)*
b) Increased PR interval with peaked T wave
c) Prolonged QT interval with T wave inversion
d) Decreased QT interval with ST depression

155. Athletic syndrome is characterized by-
a) Increased amplitude of QRS *(PGIJune99)*
b) Tachycardia
c) Decreased QT interval
d) U-waves

156. Asynchronous cardioversion is given in -
a) AF *(AIIMS Dec 98)*
b) Ventricular fibrillation
c) Atrial flutter
d) Ventricular tachycardia

157. In left sided massive pneumothorax, ECG shows all, except - *(AIIMS May 94)*
a) Left axis deviation
b) Absent R wave
c) Peaked P wave
d) Precordial T wave inversion

158. Radiofrequency ablation is done *ior-(AIIMSJune 98)*
a) Ventricular tachycardia b)PSVT
c) WPW syndrome d) Atrial tachychardia

159. Which of the following ECG changes is least likely in a patient with left pneumothorax-(yt//MS'*Nov 2K)*
a) Inversion of Twave b) Left axis deviation
c) Small R wave d) Electrical altemans

160. Long and peaked a waves are seen in all except-
a) Tricuspid atresia *(MP 2K)*
b) Ebsteins anomaly
c) Hyperkelamia
d) Right atrial enlargement

161. Qt. prolonged is associated with - *(NIMHANS 01)*
a) Hypercalcemia
b) Type 1 a anti arrythmic drugs
c) Torsade de pointes
d) Atrial fibrillation

162. A-48 year old presents with history of precordial chest pain. He has BP of 80/60 mm of Hg. EKG shows wide QRS complex with no preceding P waves and a rate of 112/min. The most immediate step in the management of this patient would be -
a) Intravenous lignocaine *(UPSC 2002)*
b) DC electrical cardioversion
c) Overdrive atrial pacing
d) Primary percutaneous transluminal angioplasty

163. Desynchronised defibrillation is used in -*(CMC 01)*
a) Atrial fibrillation b)Attial flutter
c) SVT d) Ventricular fibrillation

164. S.A. node is pacemaker in heart because -
a) It is only excitable *(Jipmer 95)*
b) Its resting excitability is highest of all
c) It is only sensitive to vagus
d) It is the biggest pacemaker

165. Desynchronised defibrillation is used in -*(CMC 01)*
a) Atrial fibrillation b) Atrial flutter
c) SVT d) Ventricular fibrillation

166. The current drug of choice in paroxysmal Sypraventricular Tachycardia (PAVT) is -
a) Digoxin b) Dilantoin *(KERN95)*
c) Propranolol d) Adenosine

167. Wenckebachk phenomenon is defined as -
a) Progressive lengthening of PR interval till a beat is dropped *(Delhi 96)*
b) Slurred QRS complex
c) Irregular heart rate & permature ventricular beats
d) Shortened ST intervals

168. P-wave is absent in - *(ROHATAK97)*
a) WPW syndrome
b) Atrial Fibrillation
c) Ventricular Tachycardia
d) Ventricular Fibrillation
e) Atrial Tachycardia

169. Verap amil belong to which class of antiarrythmic -
a) Class I b) Class II *(AP98)*
c) Class III d) Class IV

170. Which one of the following electrocardiographic changes is found in hypercalcaemia - *(UPSC2K)*
a) Proponged Q-T interval b) Short Q-T interval
c) Increased QRS interval d) Short P-R interval

171. Which one of the follwing is the ECG hallmark of hypothermia - *(UPSC 2002)*
a) Prominent U wave b) Inverted T wave
c) Bizarre QRS wave d) Osborne J wave

172. Ventricular aneurysm has one of the following characteristic features - *(Kanataka 03)*
a) Persistent ST segment elevation
b) Persistent ST segment depression
c) Left bundle branch block
d) Right bundle branch block

173. Acute symptomatic sinus bradycardia usually responds to - *(UPSC 05)*
a) Adrenaline b) Dopamine
c) Atropine d) Norepinephrine

151) b 152)d 153) b 154)a 155)a 156)b 157)a 158)c 159)b 160)c 161)b,c 162)b 163)d 164)b
165)d 166) d 167) a 168)b 169)d 170)b 171)d 172)a 173)c

174. Which one of the following statements is true to Stockes-Adam attack- *(UPSC 05)*
a) It is usually preceded by an aura
b) Focal neurological signs are commonly observed during the attack
c) It is usually caused by high degree of atrioventricular block
d) It is caused by recurrent paroxysmal tachyarrhythmias

175. The most common cause of sudden arrhythmic cardiac death is - *(J Sc k 05)*
a) Myocardial infarction
b) Aortic stenosis
c) Dilated cardiomyopathy
d) Electrolyte abnormalities

176. All the following features favour ventricular tachycardia as the cause of broad-complex tachycardia, except - *(J Sc k 05)*
a) Fusion beats
b) Extreme left axis deviation
c) Veiy broad QRS complexes (> 140 ms)
d) Response to carotid sinus massage

177. What is the drug of choice to control supraventricular tachycardia - *(AIIMSNO V05)*
a) Adenosine b) Propranolol
c) Verapamil d)Digoxin

178. Which one of the following drugs should be avoided in Wolff-Parkinson-White (WPW) Syndrome ?
a) Digoxin b) Adenosine *(UPSC 06)*
c) Procainamide d) Amiodarone

179. Which congenital heart disease is associated with pre excitation ? *(UPSC 06)*
a) Atrial Septal Defect
b) Bicuspid Aortic Valve
c) Ebstein's Anomaly
d) Patent Ductus Arteriosus

180. In syndrome X, patients have all of the following except- *(COMED06)*
a) Angina like chest pain
b) Ischemic ST segment depression
c) Abnormal coronary arteriogram
d) Excellent prognosis

181. Which one of the following is the drug of choice in the case of ventricular tachycardia in myocardial infarction ? *(UPSC 07)*
a) Xylocaine b) Digitalis
c) Quinidine d) Disopyramide

182. The ECG of a patient with an artificial pacemaker in the right ventricle shows - *(Corned 0 7)*
a) Right bundle branch block with narrow QRS complex
b) Right bundle branch block with broad QRS complex
c) Left bundle branch block with broad QRS complex
d) Left bundle branch block with narrow QRS complex

183. The drug of choice for persistent unstable ventricular arrhythmia is - *(Corned 0 7)*
a) Procainamide b) Calcium gluconate
c) Amiodarone d) Digoxin

184. Congenital long QT syndrome is associated with neonatal- *(Corned 08)*
a) Sinus bradycardia
b) Sinus tachycardia
c) Supra ventricular tachycardia
d) Ventricular tachycardia

185. The drug of choice in paroxysmal supraventricular tachycardia is - *(Corned 08)*
a) Digoxin b) Adenosine
c) Nifedipine d)Esmolol

186. Which of the following disease can be associated with short QT interval on ECG ? *(Delhi PG Mar. 09)*
a) Chronic myeloid leukemia
b) Multiple myeloma
c) Chronic lymphocytic leukemia
d) Hodgkin's disease

187. Which of the following treatments is appropriate for tall peaked T waves on ECG *1 (Delhi PG Mar. 09)*
a) Atropine IV
b) Nitroprusside IV
c) Inhaled Salbutamol
d) Inhaled betamethasone

188. A patient develops sudden palpitation with HR 150/ min, regular. What could be the cause -
a) PSVT *(AIIMS May 11)*
b) Sinus tachycardia
c) Ventricular tachycardia
d) Atrial flutter with block

189. Pulse deficit more than 10 is seen in- *(NEET/DNB Pattern)*
a) Ventricular premature contraction
b) Atrial flutter
c) Atrial fibrillation
d) Ventricular fibrillation

190. P wave is absent in - *(NEET/DNB Pattern)*
a) Atrial fibrillation b) Congestive cardiac failure
c) Atrial flutter d) Myocardial infarction

191. All are ECG changes in hypokalemia, except -
a) U wave *(NEET/DNBPattern)*
b) ST segment sagging
c) T-wave flattening or inversion
d) QT interval prolongation

192. Hypokalemia ECG changes - *(NEET/DNB Pattern)*
a) Tall T wave b) Short QRS interval
c) Depressed ST segment d) Absent P wave

193. Athletic syndrome is characterized by- *(NEET/DNBPattern)*
a) Increased amplitude of QRS b) Tachycardia
c) Decreased QT interval d) U-waves

194. Tall T wave in E.C.G occurs in - *(NEET/DNB Pattern)*
a) Hyperkalemia b) Hypokalemia
c) Hypercalcemia d) Hypocalcemia

174)c 175) a 176)c 177)a 178)a 179)c 180)c 181)a 182)c 183)c 184)a 185)b 186)b 187)c 188) a 189)c 190)a 191)d 192)c 193)a 194)a

195. 30-60⁰ left axis deviation - *(NEET/DNB Pattern)*
a) Left ventricular hypertrophy
b) Right ventricular hypertrophy
c) Aortic stenosis
d) Left atrial enlargement

196. Square root sign is an indicat *[onolr ^EET/DNB*
a) Constrictive pericarditis *Pattern)*
b) Hypertropic cardiomyopathy
c) Restrictive cardiomyopathy
d)

197. Kussumaul's sign is most commonly seen in-
a) Restrictive cardiomyopathy
b) Pericardial tamponade *(NEET/DNB Pattern)*
c) Constrictive pericarditis
d) Right ventricular infarct *wA'Mr^'u*

CARDIOMYOPATHY & PERICARDITIS

198. Beck's triad of cardie tamponade includes -
a) Hypotension *(PGI Dec 03)*
b) Neck vein distension
c) Paradoxical pulse
d) Silent heart
e) Tachycardia

199. Beck's Triad is seen in - *(AI10)*
a) Constrictive Pericarditis
b) Cardiac tamponade
c) Right ventricular myocardial infarction (RVM)
d) Restrictive cardiomyopathy

200. Topical JVPfinding in cardiac tamponade-fPG/*June2K)*
a) absent 'Y' descent b) Prominant 'a' wave
c) Absent 'a' wave d) Prominent 'Y' wave

201. Pulsus paradoxus is a characteristic feature of -
a) Constrictive pericarditis *(AIIMS Dec 92)*
b) Cardiac Tamponade
c) Hypertrophic obstructive cardiomyopathy
d) Restrictive cardiomyopathy

202. 30 year old male comes with h/o acute breathlessness. JVP T sed inspiratory fall of B.P. by 14 mmHg true about this condition-
a) Kussmaul sign *(PGI June 08)*
b) Low electric ECG
c) Rapidly discent
d) Inspiratory fall of systemic fall of more than 10 mm Hg

203. All of the following may be seen in patient of cardiac tamponade except- *(AI 06)*
a) Kussmaul's sign
b) Pulsus paradoxus
c) Electrical altemans
d) Right ventricular diastolic collapse on echocardiogram

204. All of the following are seen in cardiac tamponade except- *(AI 04)*
a) Pulsus paradoxus
b) Diastolic collapse of right ventricle on echocardiogram
c) Electrical alterans
d) Kussumaul's Sign

205. All are features, seen in cardiac tamponade, EXCEPT- *(AIIMS Dec 95)*
a) Raised JVP b) Kussamaul sign
c) Rapid y descent d) Pulsus paradoxus

206. During ventricular pressure pulses square root wave is seen in - *(PGI Dec 98)*
a) ASD
b) MVPS
c) Dilated cardiomyopathy
d) Constrictive pericarditis

207. Kussumaul's sign is not seen in - *(AI 01)*
a) Restrictive cardiomyopathy
b) Constrictive pericarditis
c) Cardiac tamponade
d) RV infarct

208. Not seen in constrictive pericarditis is -
a) Acute pulmonary edema *(PGI June 99)*
b) Ascites
c) Tapping apex
d) Pericardial knock

209. All are true in chronic constrictive pericarditis except - *(PGI Dec 99)*
a) Kussamauls sign in present
b) Ascites is not in proportion to edema
c) Commonest cause is idiopathic
d) Right ventricular and diastolic pressure is raised

210. Electrical altemans is seen in - *(AI 95)*
a) Cardiac tamponade
b) Restrictive cardiomyopathy
c) Constrictive pericarditis
d) Right Ventricular MI (RVMI)

211. A pt presents with engorged neck veins, BP 80/50 and pulse rate of 100 following blunt trauma to the chest: Diagnosis is - *(AI 01)*
a) Pneumothorax
b) Right ventricular failure
c) Cardiac tamponade
d) Hemothorax

212. A young motorist suffered injuries in a major road traffic accident. He was diagnosed to have fracture of left femur and left humerus. He was also having fractures of multiple ribs anteriorly on both the sides. On examination the blood pressure was 80/ 60 mm Hg. and heart rate was 140/minute. The patient was agitated, restless, and tachypnic. Jugular veins were distended. Air entry was adequate in both the lung fields. Heart sounds were barely audible. Femoral pulses were weakly palpable but distally no pulsation could be felt. On priority basis, the immediate intervention would be - *(AIIMSNov 02)*
a) Rapid blood transfusion.
b) Urgent pericardial tap.
c) Intercostal tube drainage on both the sides.
d) Fixation of left femur and repair of femoral artery.

195) a 196) a 197) c 198)a,b,d 199) b 200) a 201) b 202) b,d 203) a 204) d 205) c 206) d 207) c 208) a 209) c 210) a 211)c 212) b

213. A post-operative cardiac surgical patient developed sudden hypotension, raised central venous pressure, pulsus paradoxus at the 4th post operative hour. The most probable diagnosis is - *(A103)*
a) Excessive mediastinal bleeding
b) Ventricular dysfunction
c) Congestive cardiac failure
d) Cardiac tamponade

214. A patient presents with respiratory distress, hypotension and dilated bulging neck veins after chest trauma, most likely cause is- *(AIMS June 2K)*
a) Hemothorax b) Tension Pneumothorax
c) Cardiac tamponade d) Flail chest

215. Which of the following is least likely to cause constrictive pericarditis - *(AIIMSNov 06)*
a) Tuberculous pericardial effusion
b) Staphylococcal effusion
c) Post cardiac surgery
d) Acute rheumatic fever

216. A 30-year-old man presents with fever and progressively increasing breathlessness since the last two weeks. His clinical examination reveals : pulse 120/min regular, BP 100/60 mmHg, and muffled S, and S_2 heart sounds. The distended jugular vein has a rapid X descent, with an absent Y descent What is the probable diagnosis? *(UPSC111)*
a) Right ventricular failure
b) Constrictive pericarditis
c) Cardiac tamponade
d) Left ventricular failure

OTHER CARDIOMYOPATHY & PERICARDITIS

217. Which one of the following is a cause for "Restrictive cardiomyopathy" - *(AIMS May 04)*
a) Alcohol b) Hemochromatosis
c) Amyloidosis d) Sarcoidosis

218. False regarding restrictive cardiomyopathy is -
a) Filling pressure is increased *(AIIMSNov 93)*
b) Left ventricular hypertrophy
c) Heart failure is not predominantly right sided
d) In early phase, systolic function is not impaired

219. To differentiate restrictive cardiomypathy and constrictive pericarditis, features favouring constrictive pericarditis are - *(PGIJune 02)*
a) Diastolic pressures are equalised
b) There is mild pericardial effusion
c) Associated with septal hypertrophy
d) Thick pericardium is present
e) RV size in increased

220. True statement regarding cardiac tamponate -
a) Kussumal sign positive *(PGIMay 11)*
b) Enlargement of the cardiac silhouette
c) Promenent y descent
d) Electrical altemans
e) Muffled heart sounds

221. Rapid X descent is unlikely in - *(PGIDec 99)*
a) Constrictive pericarditis
b) Cardiac tamponade
c) RVM
d) Restrictive cardiomyopathy

222. Haemorrhagic pericarditis occurs in all of the following conditions except.- *(AIMSMay 2003)*
a) Transmural myocardial infarction.
b) Dissecting aneurysm of aorta.
c) Metastatic disease of pericardium.
d) Constrictive pericarditis.

223. Cardiomyopathy may be seen in all of the following except - *(AIMS 06)*
a) Duchenne muscular dystrophy
b) Friedrich's ataxia
c) Type IUI glycogen storage disease
d) Alkaptonuria

224. All of the following conditions produce restrictive cardiomyopathy except - *(UPSC 95)*
a) Hypothyroidism
b) Amyloidosis
c) Hyper-eosinophilic syndrome
d) Tropical endomyocardial fibrosis

225. True about pain of pericarditis is - *(JIPMER 02)*
a) Pain increase on leaning forward
b) Pain decreasing on supine position
c) Pain increases during inspiration
d) Pain increasing on eating

226. What is the cause for heamorrhagic pericardial effusion except ? *(APPG 06)*
a) Transmural myocardial infarction
b) Aortic aneurysm dissection
c) Metastasis to pericardium
d) Constrictive pericarditis

227. Kussmauls sign is seen in all except - *(APPG 06)*
a) Constrictive pericarditis
b) Right vertricular infarct
c) Restictive cardiomyopathy
d) Cardiac tamponade

HOCM

228. All are the true regarding hypertrophic obstructive cardiomyopathy, except - *(AIMSDec 97)*
a) Systolic dysfunction b) Concentric hypertrophy
c) Diastolic dysfunction d) Double apical impulse

229. All of true about HOCM except -
a) Asymmetrical septal thickness
b) Left ventricular outflow obstruction
c) Double apical impule
d) Digitalis is useful

230. The murmur of hypertropic obstructive cardio myopathy is decreased in which of the following- *(AIMS Nov 2000)*
a) Supine position b) Standing position
c) Valsalva maneuver d) Amyl nitrate inhalation

213)d 214)b 215)d 216) c 217)c 218)b,c 219)a,d 220)b,d,e 221)c 222)d 223)d 224)a 225)c,d 226)d
227) d 228) a 229) d 230) a

231. A 35-year-old farmer consulted a local medical practitioner for recurrent attacks of chest pain. His elder brother had similar complaints and had died suddenly at the age of40 years. The farmer was advised to take nitroglycerine sublingulaly at the time of pain. However, the patient finds that the intensity of pain is increased by nitroglycerine. Most probably, he is suffering from - *(AIIMSNov 02)*
a) Subacute bacterial endocarditis involving the aortic valve.
b) Hypertrophic obstructive cardiomyopathy.
c) Degenerative mitral regurgitation.
i d) Chronic Type A dissection of aorta.

232. A 68-year old man who has had a recent syncopal episode is hospitalized with congestive heart failure. His blood pressure is 160/80 mmHg. His pulse rate is 80 beats per minute, and there is a grade III/IV harsh systolic murmur. An echocardiogram shows a disproportionately thickened ventricular septum and systolic anterior motion of the mitral valve. Which of the following findings would most likely be present in this man- *(AIIMS Nov 99)*
a) Radiation of the murmur to the neck.
b) Decrease of the murmur with hand grip
c) 'Delayed carotid upstroke
d) Reduced left ventricular ejection fraction

233. Aggravation of symptoms of angina in a patient when given nitrates is seen in - *(AIIMS June 2000)*
a) Aortic regurgitation
b) Mitral regurgitation
c) Single left coronary artery stenosis
d) Idiopathic hypertrophic subaortic stenosis

234. A16 year old male is referred by high school coach for a physical examination before joining the football team. His elder brother had died suddenly during football practise, no autopsy was done. The patient has a loud systolic murmur on chest auscultation. All of the following would be constant with hypertrophic cardiomyopathy, except-
a) A crescendo-decrescendo systolic murmur
b) Murmur radiating to neck *(AIIMSNov 99)*
c) Brisk carotid upstroke
d) Increase in murmur during valsalva or standing

235. Murmur increasing with valsalva maneouvre-
a) Mitral stenosis b) HOCM *(AIIMS Nov 09)*
c) M.R. d) Aortic stenosis

236. Murmur increasing with Valsalva manouvre -
a)VSD b) HOCM *(AIIMS Nov 10)*
c) MS d) AS

237. All are true regarding hypertrophic cardiomyopathy, Except - *(AIIMS June 9 7)*
a) Digoxin is helpful
b) Irregular thickness of septa
c) Dynamic obstruction
d) Double apical impulse

238. The 9 month old child of a diabetic mother presents with tachypnea and hepatomegaly. Echo cardiography of the heart showed normal cardiac morphology with asymmetric septal hypertrophy. Which of the following you will give to treat this child -
a) Digoxin b) Frusemide *(AIIMS Nov 2K)*
c) Propanolol d) Isoptin

239. A young man has H/O of breathlessness while walking to gym. On examination he has ejection murmur which increase on valsalva manouver. ECG shows LVH with deep Q wave in anterior chest leads. He should avoid - *(PGI09)*
a) Reguler walking in gym
b) Verapamil
c) Digitalis
d) Sublingual nitroglycerine
e) Diuretics

240. All are *t*ne* about hypertrophic cardiomyopathy, Except- *(Sep 96)*
a) Digoxin is useful b) Abdominal pain
c) Jaundice d) Bleeding

241. All are true about Hypertrophic Obstructive cardiomyopathy, except - *(AI2000)*
a) p agonists are useful
b) Asymmetrical hypertrophy of septum
c) Dynamic L. V. outflow obstruction
d) Double apical impulse

242. A 25 years old basket ball player suddenly collapsed while undergoing an athletic event and died. At autopsy the septum was hypertrophied. The most probable diagnosis is - *(AIPGMEE 08)*
a) HOCM
b) Right ventricular conduction Abnormality
c) Epilepsy
d) Snakebite

243. 26 year old man died while playing. His autopsy of the heart revealed myocyte hypertrophy. Diagnosis is -
a) HOCM *(AIIMS Nov 09)*
b) DCM
c) Arrhythmogenic cardiac problem
d) Restrictive cardiomyopathy

244. All are true about hypertrophic obstructive cardiomyopathy except- *(JIPMER 95)*
a) Assymetrical septal hypertrophy
b) Systolic ventricular dysfunction is absent
c) Anterior leaflet movement is delayed
d) Cardiac output is diminished

245. All are true about hypertrophic obstructive cardiomypathy except - *(UP 2K)*
a) Asymmertric hypertrophy of septum
b) Systolic motion of anterior leaflet
c) Left ventricle outflow obstruction
d) Beta blockers are not effective

231)b 232)b 233) d 234)b 235) b 236)b 237) a 238) c 239)a,c,d,e 240) a 241) a 242) a 243) a 244) c 245) d

246. The systolic ejection murmur in hypertrophic obstructive cardiomyopathy is diminished when a patient - *(Corned 08)*
a) Performs the valsalva maneuver
b) Lies down
c) Inhales amyl nitrite
d) Stands up

247. The 9 month old child of a diabetic mother presents with tachypnea and hepatomegaly. Echo ■^^^ra^^aj^ol'tiieieart showed normal cardiac morphology with asymmetric septal hypertrophy. Which of the following you will give to treat thiS child - *(NEET/DNB Pattern)*
- a) Digoxin b) Frusemide
c)Propaholbl d) Isoptin '(ppl

248. All are true about hypertrophic cardiomyopathy, Except- *(NEET/DNB Pattern)*
a) Digoxin is useful b) Abdominal pain
c) Jaundice d) Bleeding

VALVULR AND CONGENITAL HEART DISEASE

249. True regarding Mitral valve prolapse syndrome is all,except- *(Nov 93)*
a) More common in female
b) Mostly symptomatic
c) High incidence of arrhythmia
d) Transient cerebral ischemia can occur

250. A female patient Chandani develops chest pain which is not associated with exercise and chest auscultation shows multiple non ejection clicks. The investigation which is used to diagnose the disease is - *(AIMS June 99)*
a) Echocardiography b) Pyrophosphate scan
c) Thallium 201 scan d)ECG

251. A young asymptomatic female is observed to have a Midsystolic Click on routine examination. Valves are likely to show - *(AI10)*
a) Myxomatous degeneration
b) Aschoff bodies
c) Calcific degeneration
d) Ruptured chordae tendinae

252. All of the following are true for mitral valve prolapse, except- *(AI 06)*
a) Transmission may be as an autosomal dominant trait
b) Majority of the case present with features of mitral regurgitation
c) The valve leaflets characteristically show myxomatous degeneration
d) The disease is one of the common cardiovascular manifestations of Marfan's Syndrome

253. All of the following are true about ASD except -
a) Right atrial hypertrophy *(AI 01)*
b) Left atrial hypertrophy
c) Right ventricular hypertrophy
d) Pulmonary hypertension

254. A young female presents with history of dyspnoea on exertion. On examination, she has wide, fixed split S_2 with ejection systolic murmur (HWI) in left second intercostal space. Her EKG shows left axis deviation. The most probable diagnosis is -
a) Total anomalous pulmonary venous drainge
b) Tricuspid atresia *(AIIMSMay 03)*
c) Ostium primum atrial septal defect.
d) Ventricular septal defect with pulmonary arterial hypertension

255. TVue about V.S.D. is, all except - *(June 97)*
a) Small hole closes spontaneously
b) Defect is usually in membranous part
c) Endocarditis is commonest complication
d) Pulmonary oligemia in chest X-ray

256. Mitral stenosis is associated with - *(AI97)*
a) Right ventricular hyper trophy
b) Left ventricular hypertrophy
c) Left axis deviation
d) QRS complex

257. Following is true regarding opening snap - *(AIMS*
a) It is a high-pitched diastolic sound *Nov 02)*
b) It s due to opening of stenosed aortic valve.
c) It indicates pulmonary arterial hypertension.
d) It preceedes the aortic component of second heart sound.

258. The severity of Mitral stenosis is clinically best decided by - *(AIIMSMay 03)*
a) Length of diastolic murmur
b) Intensity of diastolic murmur
c) Loudness of first heart sound
d) Split of second heart sound

259. Severity of mitral stenosis is assessed by - *(AI98)*
a) Loud opening snap b) Length of murmur
c) Loud Sj d) Splitting S_2

260. Severity if mitral stenosis is judged by-
a) Loud Sj *(PGIJune02)*
b) S_2-OS gap
c) Prolonged diastolic murmur
d) S_3
e) S_4

261. The severity of mitral regurgitation is decided by all of the following clinical findings except -
a) Presence of mid- diastolic murmur across mitral valve *(AIMS May 03)*
b) Wide split second heart sound.
c) Presence of left ventricular S3 gallop.
d) Intensity of systolic murmur across mitral valve

262. Severity of MR is associated with - *(PGIpec 01)*
a) Long duration of systolic murmur
b) Thromboembolism
c) Atrial fibrillation
d) LVS3 Left ventricular S_3
e) Loud SI

246) b 247) c 248) a 249) b 250) a 251) a 252) b 253) b 254) c 255) d 256) a 257) a 258) a 259) b 260) b,c 261) d 262) c,d

263. A 59 year old man with severe myxomatous mitral regurgitation is asymptomatic, with a left ventricular ejection fraction of 45% and an end systolic diameter index of 2.9 cm/m^2. The most appropriate t/t is -
a) Mitral valve repair or replacement *(AI05)*
b) No treatment
c) ACE inhibitor therapy
d) Digoxin and diuretic therapy

264. All ofthe following murmurs may be heard in patients with aortic reugurgitation except - *(A1IMSNov 02)*
a) High-pitched decrescendo diastolic murmur
b) Soft, low pitched middiastolic rumbling murmur.
c) Mid-systolic ejection flow murmur
d) Pansystolic murmur.

265. Aortic regurgitation does NOT occur in - *(Sep 96)*
a) Acute MI b) Marfan's syndrome
c) Rheumatic heart disease d) Infective endocarditis

266. Acute Aortic regurgitation is seen in all of the following except - *(AI94)*
a) Marfan's syndrome
b) Acute myocardial infarction
c) Bacterial endocarditis
d) Ankylosing spondylitis

267. A 35 year old athlete has height 184 cm., arm span 194cm., pulse rate 64/min., BP 148/64 mm Hg. Chest ausultation reveals long diastolic murmur over right 2nd intercostal space on routine examination. The probable diagnosis is- *(A1IMS June 99)*
a) Aortic regurgitation b) Atrial septal defect
c) Ebstein anomaly d) Coarctation of aorta

268. A young basketball player with ht 188 cm and armspan 197 cm has a diastolic murmur best heard in second right intercostal space : likely cause of murmur is- *(A101)*
a) AS b) Coarctation of aorta
c) AR d)MR

269. Wide pulse pressure is seen in - *(PGIDec 03)*
a) Aortic regurgitation b) PDA
c)MR d)AS
e) CCF

270. A 63 year old man presents with a triad of angina, syncope and congestive heart failure. Which of the following valvular heart lesion can be suspected - *(AIIMS May 05)*
a) Mitral stenosis b) Tricuspid regurgitation
c) Aortic stenosis d) Aortic regurgitation

271. Angina pectoris and syncope are most likely to be associated with - *(AI 94)*
a) Mitral stenosis b) Aortic stenosis
c) Mitral regurgitation d) Tricuspid stenosis

272. ***tn*** **severe aortic stenosis true finding is -**
a) Late systolic ejection click. *(AIIMSDec 98)*
b) Heaving with outward apex
c) ST segment deviation in ECG
d) Loud S_2

273. Which of the following physical signs is seen in a patient with severe aortic stenosis -*(AIIMSMay 02)*
a) Opening snap
b) Diastolic rumble
c) Holosystolic murmur
d) Delayed peak of systolic murmur

274. A 50 year old man with aortic stenosis is doing exercise for 11 minutes according to bruce protocol. Exercise stopped due to fatigue, Regional pressure gradient is 60 mm Hg between the two sides of the aortic valve. What is the best management -
a) Angiogram *(AIIMS Nov 11)*
b) Aortic valve replacement
c) Aortic ballooning to prevent further derangement
d) Observation

275. All of the following are true regarding Tetralogy of Fallot except - *(AIIMS May 05)*
a) Ejection systolic murmur in second intercostal space
b) Single second heart sound
c) Predominantly left to right shunt
d) Normal jugular venous pressure

276. Essential criteria for TOF includes all except -
a) Valvular stenosis *(AIIMSNov 07)*
b) Infundibular stenosis
c) Over riding of aorta
d) RVH

277. Fallots tetralogy manifestation - *(PGI June 06)*
a) Left axis deviation
b) Left ventrucular hypertrophy
c) VSD
d) Blalock taussig shunt is between pulmonary artery & subclavian artery
e) Morphine is contraindicated in cyanotic spells

278. Peripheral pulmonic stenosis is associated with -
a) Subaortic stenosis *(PGI June 02)*
b) Takayasu's arteritis
c) William syndrome
d) Coarctation of syndrome
e) Rubella

279. The most common cause of tricuspid regurgitation is secondary to - *(AI 03)*
a) Rheumatoid heart disease
b) Dilatation of right ventricle
c) Coronary artery disease
d) Endocarditis due to intravenenous drug abuse

280. All can cause recurrent pulmonary infection except-
a) VSD b) Recurrent LVF *(AIIMS Sep 96)*
c) TOF d) ASD

281. Paessure difference of 5 mm Hg between the two up per limbs occurs in which congenital heart disease-
a)TOF b) TGA*(PGI)*
c) HOCM d) Supra-valvular aortic stenosis

263) a 264) d 265) a 266) b 267) a 268) c 269)a,b,c 270) c 271) b 272) c 273) d 274) d 275) c 276) a 277) c,d 278) c,e 279) b 280) c 281) d

282. All of the following findings would be expected in a person with coarctation of the aorta except -
a) A systolic murmur across the anterior chest and back and a high-pitched diastolic murmur along the left sternal border *(AIIMS Nov 99)*
b) A higher blood pressure in the right arm than in the left arm
c) Inability to augment cardiac output with exercise
d) Persistent hypertension despite complete surgical repair

283. A 27 year old man in noted to have blood pressure of 170/100 mmHg. He has prominent aortic ejection click and murmurs heard over the ribs on the both sides anteriorly and over the back posterioly. In addition, the pulses in the lower extremities are feeble and he complains of mild claudication with exertion. The most likely diagnosis is- *(AIIMS Nov 04)*
a) Artial septal defect b) Aortic stenosis
c) Coarctation of the aorta d) Cardiomyopathy

284. A patient presents with headache, intermittent claudication and dizziness. Which of the following may be the underlying cause - *{AIIMSNov 2000*)
a) Tetrology of Fallot b) Coarctation of aorta
c) Patent ductus arteriosus d) Atrial septal defect

285. A 41/2- year-old girl always had to wear warm socks even is summer season. On physical examination, it was noticed that she had high blood pressure and her femoral pulse was weak as compared to radial and carotid pulse, a chest radiograph showed remarkable notching of ribs along with their lower borders. This was due to - *(AIIMS Nov 02)*
a) Femoral artery thrombosis
b) Coarctation of aorta
c) Raynaud's disease
d) Takayasu's arteritis

286. All of the following causes death in coarctation of Aorta except - *(PGI June 2000)*
a) Infective endocarditis b)CCF
c) Intra cranial hemorrhage d) Anterior MI

287. A patient complains of intermittent claudication, dizziness and headache, likely cardiac lesion is -
a) TOF b)ASD *(AI01)*
c) PDA d) Coarctation of aorta

288. Coarctation of aorta is associated with all, except -
a) Turner's syndrome *(AIIMS June 98)*
b) Bicuspid aortic valve
c) Pulmonary stenosis
d) Atresia of aortic arch

289. Coarctation of aorta is most commonly associated with- *(AI08)*
a) VSD b)PDA
c) Bicuspid aortic valve d)ASD

290. Coarctation of Aorta is most commonly associated with- *(AI11)*
a) Bicuspid Aortic valve
b) Patent Dustus Arteriosus (PDA)
c) Ventricular Septal Defect (VSD)
d) Atrial Septal Defect (ASD)

291. Co-arctation of aorta may be associated with all of the following except - *(AI 97)*
a) Bicuspid aortic value b) Turner syndrome
c) Renal artery stenosis d) PDA

292. All are associated with coarctation of aorta, except-
a) Patent ductus arteriosus *(AIIMSDec 95)*
b) Renal artery stenosis
c) Bicuspid aortic valve
d) Turner's syndrome

293. Rib notching is seen in all *except-(AIIMSJune 2000)*
a) Coarctation of aorta
b) Classical blalock tausing operation
c) I VC obstruction
d) Neurofibromatosis

294. A 2 year young man presents with exertional dyspnoea, headache, and giddiness. On examination, there is hypertension and LVH. X-ray picture shows notching of the anterior ends of the ribs. The most like diagnosis is - *(AI 02)*
a) Phaeochromocytoma
b) Carcinoid syndrome
c) Coarctation of the aorta
d) Superior Mediastinal syndrome

295. MC cause of death in adult with PDA *is-(PGIDec 99)*
a) CCF b) Infective endocarditis
c) Rupture d) Embolism

296. Causes of cynosis - (*PGI June 05)*
a) TOF b)PDA
c) Tricuspid atresia d) Eisenmenger's complex
e) TGA

297. Pulmonary flow is decreased in - *(PGI Dec 03)*
a) Fallot's tetralogy b) Ebstein's anomally
c) Common atria d) TGV with intact septum
e) Postoperative TGV correction

298. Congenital heart disease associated with decreased pulmonary blood flow- *(PGI Dec 04)*
a) Truncus arteriosus b)TAPVC
c) Ebstein's anomaly d) Complete TGA
e) Single ventricle with pulmonary stenosis

299. LVH is commonly seen with - *(AI 99)*
a) Pure mitral stenosis
b) ASD with fossa-ovalis
c) Aortic incompetance
d) Carcinoid syndrome

300. Right axis deviation is seen in all except-
a) VSD *(AIIMS June 98)*
b) Tricuspid atresia
c) Pulmonary atresia
d) ASD

282) c 283) c 284) b 285) b 286) d 287) d 288) c 289) c 290) a 291)c 292) b 293) c 294) c 295) a 296) a,c,d,e 297) a,b 298) c,e 299) c 300) b

301. Digital clubbing is seen in ail except -
a) Endocarditis *(AIIMSMay07)*
b) Pulmonary arteriovenous fistula
c) Tricuspid atresia
d) Aortic dissection

302. RBBB with left Axis Deviation is characteristic of-
a) Ostium PrimumASD *(Karn. 95)*
b) Mitral valve prolapse
c) Patent Ductus Arteriosus
d) Ventricular Septal Defect

303. A child has cyanotic disease with left ventricular enlargement wiht left axis deviation. Probable diagnosis is - *(U.P. 96)*
a) TOF b) TAP VC
c) Double outlet right ventricle d) Tricuspid atresia

304. Clinical features of ostium secondum type of atrial septal defect are all except - *(UP 97)*
a) Occurence of congestive failure in childhood
b) Atrial arrhythmias
c) Wide and fixed splitting of the second heart sound
d) Mid-diastolic rumble along the left sternal border

305. Hilar dance is seen in fluroscopy of- *(TN98)*
a) Patentductus arteriosus b) Aorticstenosis
c) Coarctation of aorta d) Mitral stenosis

306. Holt Oram syndrome is characterized by -
a) ASD b) VSD *(SGPGI05)*
c) TGA d)AR

307. A 21-year old male presents with exertional dyspnea, raised JVP and loud P2. ECG shows right axis deviation. All of the following conditions are possible except: *(DelhiPGMar 09)*
a) Atrial septal defect
b) Mitral stenosis
c) Ostium primum
d) Pulmonary thromboembolism

308. Pulse pressure in severe aortic regurgitation is equal to- *(JIPMER95)*
a) 30-45 mm Hg b) 45-60 mm Hg
c) 60-75 mmHg d)75-90mmHg

309. Left vertricular hypertrophy is not a feature of-
a) Mitral regurgitation *(Karnat96)*
b) Isolated mitral stenosis
c) Isolated ventricular septal defect
d) Aortic stenosis

310. Which one of the following is characteristic of mitral valve prolapse syndrome - *(UPSC 96)*
a) Rough mid diato lie murmur
b) Collapsing pulse
c) Lound first heart sound
d) Mid systolic click

311. Angina & sycope in same patient is seen in-
a) Aortic stenosis b) MVP *(MP 98)*
c) MS d)AR

312. Findings in a case of advanced mitral stenosis include
a) Low pulse pressure b)LVH *(Kerala 98)*
c) Exercise induced angina d)None

313. Aortic regurgitation is seen in all except- *(MP 2K)*
a) Rheumatic fever b) Infective endoerditis
c) Marfan syndrome d) Myocardial infarction

314. Acute aortic regurgitation occurs *in-(UPSC2001)*
a) Infective endocarditis
b) Ankylosing spondylitis
c) Marfan's syndrome
d) Rheumatoid arthritis

315. In Valvular Aortic Stenosis poorest prognosis in indicated when - *(Karn. 96)*
a) Angina occurs b) Syncope occurs
c) Dyspnea occurs d) Palpitation occurs

316. Aortic regurgitation may be associated with all of the following except - *(UPSC 06)*
a) Ankylosing Spondylitis
b) Marfan's Syndrome
c) Dissection of the aorta
d) Polyarteritis nodosa

317. Regarding reheumatic heart disease, consider the following statements - *(UPSC 07)*
1. Rheumatic carditis is a pancarditis
2. Carey-coombs murmur is a delayed systolic murmur heard during the course of acute rheumatic fever
3. Mitral regurgitation is the most common manifestation of acute rheumatic carditis

Which of the statements given above is/are correct?
a) 1 only b) 1 and 2
c) 2 and 3 d) 1 and 3

318. A patient of rheumatic heart disease with mitral stenosis and atrial fibrillation is on oral warfarin. On one OPD visit, his INR is found to be 6. What is the action to be taken? *(UPSC 07)*
a) Stop warfarin, and review
b) Stop wairfarin, and administer fresh frozen plasma
c) Stop warfarin, and administer intramuscular vitamin K
d) Stop warfarin, and administer intramuscular vitamin K

319. Severe chronic MR is associated with *-(PGINov 10)*
a) H3 b)H4
c) Left atrial enlargement d) Atrial fibrillation
e) Displaced apical impulse

320. Where pulsatile liver and ascites is found -
a) TR *(AIMS May 11)*
b) Critical pulmonary stenosis
c) MR
d) MS

321. Coarctation of Aorta is most commonly associated with- *(AI11)*
a) Bicuspid Aortic valve
b) Patent Dustus Arteriosus (PDA)
c) Ventricular Septal Defect (VSD)
d) Atrial Septal Defect (ASD)

301)d 302)a 303)d 304)a 305)None 306)a 307)c 308)d 309)b 310)d 311)a 312)a 313)d 314)a,b,c 315)c 316) d 317)d 318)a 319)a,c,d,e 320)a 321)a

322. A 38-year-old man presents with chest pain and shortness of breath. His pulse rate is 85/min, blood pressure is ISO/ 118 mmHg and the cardiac auscultation reveals an ejection systolic murmur. The EGG shows LVH pattern and ST depression in the anterior leads. His troponin T test is positive. The echocardiogram of the person is likely to reveal
a) Aortic regurgitation *(UPSCI11)*
b) Aortic stenosis
c) Mitral regurgitation
d) Mitral valve prolapse

323. Midsystolic click is characteristic feature of -
a) MVP b) MS *(NEET/DNB Pattern)*
c) AR d) POA

324. A 40 year old female presented with dyspnoea on exertion grade in and palpitations. ECG showed atrial fibrillation with fast ventricular rate. Echocardiography shows severe mitral stenosis with left atrial appendage clot. Which of the following is not advised? *(AIIMS, May 12)*
a) Diltiazen to control ventricular rate
b) Start warfarin and follow-up with repeat echocardiography
c) EC followed by percutaneous balloon mitral valvuloplasty
d) Open mitral commissurotomy with clot removal

325. Sudden death can be seen in- *(NEET/DNB Pattern)*
a) AS **b) MS**
c) MR d) MR

326. Subaortic stenosis is not associated with?
a) Ventricular septal defect *(NEET/DNB Pattern)*
b) Aortic regargitation
c) Patent ductus arteriosus
4) Coarctation of **aorta**

327. Sj ejection click & severe pulmonary stenosis relation is- *(NEET/DNB Pattern)*
a) In severe pulmonary stenosis gap increases
b) In severe pulmonary stenosis gap reduces
c) In severe pulmonary stenosis no change
d) In severe pulmonary stenosis ejection click comes before

MYOCARDIAL INFARCTION

328. All of the following are risk factors for atherosclerosis except - *(AI06)*
a) Increased waist-hip ratio
b) Hyperhomocysteinemia
c) Decreased fibrinogen levels
d) Decreased HDL levels

329. Risk factors for coronary artery disease (CAD) -
a) High HDL *(PGIJune 01)*
b) Low LDL
c) Increased homocysteine levels
d) Decreased fibrinogen levels
e) Increased lipoproeins

330. Diagnostic criteria of Metabolic syndrome include (s)-
a) High serum homocysteine *(PGI 09)*
b) High serum triglyceride
c) High serum adiponectin
d) Low HDL cholesterol
e) High LDL cholesterol

331. All of the following dietary goals are recommended for patients with high risk of coronary heart disease, Except- *(AI 11)*
a) LDL cholesterol <100 mg/dl
b) Saturated fat < 7% of total calories
c) Salt restriction < 6 gm/day
d) Avoid Alcohol

332. In an old patient, the best indicator of probability of developing cardiovascular disease can be calculated by- *(AIIMSMay 02)*
a) LDL/HDL ratio b) Triglycerides
c) Total cholesterol d) Serum LDL

333. Which of the following about atherosclerosis is true?
a) Intake of unsaturated fatty acid associated with decreased risk *(AIIMS May 11)*
b) Thoracic aorta involvement is more severe than abdominal aorta involvement
c) Extent of lesion in veins is same as that in arteries
d) Hypercholesterolemia does not always increase the risk of atherosclerosis per se

334. Best predictor of Cardiovascular risk amongst the following - *(AI 09)*
a) Antichlamydial antibody b) Lipoprotein (a)
c) C reactive protein (CRP) d) Homocysteine

335. Treatment with w-3 polyunsaturated fatty acids, what will be the lipid profile - *(Aiims Nov 06)*
a) Increased LDL and increased total cholesterol
b) Decreased LDL and decreased total cholesterol
c) Increased LDL and decreased total cholesterol
d) Decreased LDL and increased total cholesterol

336. Most important predictor of coronary artery disease - *(AIIMSMay 09)*
a) VLDL b)LDL
c) Chylomicron d) LDL/HDL

337. Best predictor for coronary artery disease -
a) HDL b) LDL*(AIIMS Nov 10)*
c) *VLDL* d) Chylomicron

338. A patient presents 12 hours following a Myocardial infarction. Which of the following enzymes will be elevated at this period - *(AIIMS Nov 2000)*
a) Lactate dehydrogenase
b) Serum glutamate oxaloacetate Transferase
c) Creatinine phosphokinase
d) Myoglobin

339. Troponin-T is preferable to CPK-MB in the diagnosis of acute myocardial infarction (MI) in all of the following situations except - *(AI 03)*
a) Bedside diagnosis of MI
b) Postoperatively (after CABG)
c) Reinfarction after 4 days
d) Small infarcts

322) b 323) c 324) c 325) a 326) b 327) b 328) c 329) c,e 330) b,d 331)d 332) a 333) a 334) c 335) c 336) d 337) b 338) c 339) c

340. In MI, which enzyme is raised in 4 to 6 hrs. & decreases in 3 to 4 days - *(AIIMS June 98)*
a) SGOT b)LDH
c) CPK d) SGPT

341. In stable angina - *(AIIMS Nov 2003)*
a) CK-MB is elevated
b) Troponin I is elevated
c) Myoglobin is elevated
d) The levels of cardiac markers remain unchanged

342. A 60 year old man presents with chest pain which last 6 hours and is diagnosed as acute myocardial infarction. Angiography showed involvement of anterior descending branch of left coronary artery The most probable site of infarct *is-(AIIMS May 01)*
a) Anterolateral wall b) Posterior wall
c) Inferior wall d) Septal

343. All of the following arteries are common sites of occlusion by a except - *(AIIMS May 05)*
a) Left anterior descending
b) Right coronary artery
c) Circumflex coronary artery
d) Marginal artery

344. What is diagnostic of fresh myocardial infarction inECG- *(May 95)*
a) QT interval prolongation
b) P mitrale
c) ST segment elevation
d) ST segment depression

345. ST depression & T wave invesion in VI to V6 and a VL leads indicate - *(PGI Dec 2000)*
a) Anterolateral wall AMI b) Posterior wall AMI
c) Inferior AMI d) Lateral wall AMI

346. ECG is least useful for diagnosing ischemia due to involvement of - *(AI2011)*
a) Left anterior descending
b) Right coronary artery
c) Right coronary artery
d) Left circumflex

347. ECG sensitive to detect ischemia is/are - *(PGI09)*
a) Lead I b) Lead II
c) LeadaVF d)LeadVj
e) LeadV_2

348. ALL of the following statement regarding the ECG in acute pericarditis are true except - *(AI 03)*
a) T wave inversions develop before ST elevation retur to baseline
b) Global ST segment elevation is seen in early pericarditis
c) Sinus tachycardia is a common finding.
d) PR segment depression is present in majority of patients

349. Universal definition of MI all except?
a) Sudden death can be MI *(AIIMS Nov 11)*
b) New abnormal wall motion with raised cardiac biomarkers
c) 3 times increase in troponin levels after coronary artery bypass
d) Reperfusion in 5-7% leads to elevation of troponin levels

350. Ramkumar a 70 year old hypertensive male was admitted in the intensive care unit with transmural anterolateral myocardial infraction. His condition was stable till fifth day of admission, when he developed a pericardial friction rub and pleuritic chest pain which persisted despite narcotic and steroid therapy. On the seventh morning, he suddenly developed marked hypotension. On examination there was marked distension of the jugular veins, accompanied with electromechanical dissociation, Most likely, the patient had developed -
a) Severe acute mitral regurgitation *(AIIMSNov 02)*
b) Ventricular septal rupture
c) Right ventricular infarction
d) External cardiac rupture

351. In a patient with myocardial infarction the valvular lesion commonly seen is - *(AIIMS May 02)*
a) Aortic stenosis b) Mitral regurgitation
c) Aortic regurgitation d) Septal defect

352. Post MI systolic murmur in left lower sternum may be due to all, except - *(May 93)*
a) Complete heart block
b) Rupture of Interventricular septum
c) Papillary muscle dysfunction
d) Ischemic cardiomyopathy

353. A patient had an inferior wall myocardial infarction and was in shock. The reason for the patient being in shock is - *(AIIMSMay 2002)*
a) Mitral regurgitation
b) Infarction causing septal defect
c) Right ventricular infarction
d) Decreased ejection fraction from left ventricle

354. A patient with acute inferior wall myocardial infarction has developed shock. Which of the following is the most likely cause of shock -
a) Cardiac rupture *(AIIMS May 2004)*
b) Inteventricular septal perforation
c) Papillary muscle rupture
d) Right ventricular infarction

355. A previously healthy 58 years old man is admitted to the hospital because of an acute inferior myocardial infarction. Within several hours, he becomes oliguric and hypotensive (blood pressure is 90/60 mmHg). Insertion of a pulmonary artery (Swan-Ganz) catheter reveals the following pressures: pulmonary capillary wedge- 4 mm Hg; pulmonary artery- 22/4 mmHg: and mean right atrial-11 mmHg. This man would best be treated with- *(AIIMS Nov 99)*
a) Fluids
b) Digoxin
c) Dopamine
d) Intraaortic balloon counterpulsation

340) c 341) d 342) a 343) d 344) c 345) a 346) d 347)All 348) a 349) c 350) d 351)b 352) a 353) c 354) d 355) a

356. In a patient of acute inferior wall MI: best modalitiy ofrxis- *(AI01)*
a) IV fluids b) Digoxin
c) Diuretics d) Vasodilators

357. Which test is performed to detect reversible myocardial ischemia - *(AIIMS May 03)*
a) Coronary angiography
b) MUGA scan
c) Thallium scan
d) Resting echocardiography

358. Test for reversible cardiac *isch&ma-(AIIMSMay 09)*
a) Angiography b) Thallium scan
c) MUGA d) Resting Echocardiography

359. Reperfusion is useful for - *(AIIMS May 11)*
a) Stunt myocardium
b) Hibernating myocardium
c) Non ischaemic viable myocardium
d) Mixed ischaemic myocardium

360. Volume of infarcted area in acute myocardial infarction (AMI) can bedetected by -*(PGIDEC2000)*
a) ECHO b)ECG
c) Levels of CPKMB d) Thallium scan

361. Drug used to perform stress ECHO ? *(AIIMSMay 08)*
a) Thallium b)Dobutamine
c) Adrenaline d) Adenosine

362. All of the following drugs are used in the management of acute Myocardial infarction except-
a) Tissue plasminogen activator
b) Intravenous beta blockers
c) Acetylsalicylic acid
d) Calcium channel blockers

363. The treatment of acute myocardial infarction includes which of the following - *(PGIDEC 01)*
a) Aspirin b) Heparin
c) Alteplase d) Oral anticoagulants
e) ACE inhibitors

364. A patient presents with intense chest pain of 2 hrs duration. ECG shows ST depression in leads I and V, to W. There is associated T inversion and CPK-MB is elevated. Which of the following should be included in his management - *(PGI June 2000)*
a) Nitroglycerine dripb) Aspirin
c) Coronary angiography d) Streptokinase
e) i.v. metoprolol

365. The best possible intervention for acute myocardial infarction is - *(AIIMS May 05)*
a) Streptokinase
b) Streptokinase and aspirin
c) Early primary coronary intervention
d) Streptokinase and heparin

366. A 40 year old male, chronic smoker comes with acute epigastric discomfort, for past one hour. ECG showing ST segment elevation in inferior leads. What is the immediate intervention?*(AIIMSNov 07)*
a) Aspirin b) Thrombolytic therapy
c) IV pantoprazole d) Beta blockers

367. A 50 year old man with a history of smoking, hypertension, and chronic exertional angina develops several daily episodes of chest pain at rest compatible with cardiac ischemia. The patient is hospitalized. All the following would be part of an appropriate management plan except -
a) Intravenous heparin *(AIIMS Nov 99)*
b) Aspirin
c) Intravenous nitroglycerin
d) Lidocaine by bolus infusion

368. A man with chest pain, ST segment depression in lead vl-v4, after one hour will not be given -*(AIIMS*
a) Beta blocker b) Thrombolytic *May 08)*
c) Morphine d) Aspirin

369. Agent of first choice in an acute attack of Prinzmetal's angina is - *(A195)*
a) Diltiazem b) Nitrates
c) Propranolol d) Verapamil

370. A 70 yrs pt. is refusing for angiography but he has an episode of chest pain on walking upstairs not progressed for last 4 year what should be done in this patient - *(PGIDec 05)*
a) Aspirin lowdose given
b) Nitroglycerine sublingual before walking upstairs
c) Continue exercise even after chest pain .

371. In MI following are used except - *(PGIDec 97)*
a) Fibrinolytics
b) Plasminogen activator inhibitor
c) Anti thrombin
d) Platelet inhibitor

372. Complications of streptokinase are - *(PGI June 01)*
a) Myocardial rupture b) Joint pain
c) Intracranial bleed d) Anaphylaxis
e) Parkinsonism

373. Streptokinase and urokinase are contraindicated in- *(AI10)*
a) Intracranial malignancy b) Pulmonary embolism
c) AV fistula d) Thrombophlebitis

374. Exercise testing is absolutely contraindicated in which one of the following - *(AI03)*
a) One week of following myocardial infarction
b) Unstable angina
c) Aortic stenosis
d) Peripheral vascular disease

375. Poor prognostic factor in Acute Myocardial infarction - *(PGI June 98)*
a) VPC's in first 24 hours
b) Hypotension at diagnosis
c) Chest pain
d) Hypertension

376. For the management of intraoperative myocardial ischaemia, all of the following are advised except-
a) Heparin
b) Intravenous nitroglycerine
c) Calcium channel blocker
d) Atropine *

356) a 357) c 358) b 359) b 360) a,d 361) b 362) d 363)a,b,c,e 364)a,b,c,e 365) c 366) a 367) d 368) b
369) b 370) a,b 371) b 372) c,d 373) a 374) b 375) b 376) a

377. A patient presents with acute anterior wall infarction and hypotension. Which will be the immediate treatment modality for this patient -
a) Intra aortic ballon counter pulsation *(AI07)*
b) Anticoagulation
c) Thrombolytic therapy
d) Angiography and Primary angioplasty

378. Following an attack of myocardial infarction the mortality and morbidity of the patient is indicated by
a) Ventricular extra systole *(AIIMS June 2000)*
b) Left ventricular ejection fraction
c) Duration of syneope
d) Percentage of narrowness of coronary artery

379. Which of the following is not a framingham major criteria for the diagnosis of heart failure ?
a) Paroxysmal nocturnal dyspnea *(AIIMS Nov 08)*
b) Cardiomegaly
c) S_3 gallop
d) Hepatomegaly

380. Which of the following dietary interventions reduces the further risk in MI patients - *(AIIMSMay 07)*
a) High fibre diet
b) Sterol esters
c) Potassium supplements
d) co_3 polyunsaturated fatty acids

381. Drug used in unstable angina & NSTMI -
a) Morphine b) Aspirin *(PGIMaylO)*
c) Nitrates d) Antithrombotic therapy
e) CCB

382. Reperfusion is useful for - *(AIIMSMay II)*
a) Stunt myocardium
b) Hibernating myocardium
c) Non ischaemic viable myocardium
d) Mixed ischaemic myocardium

383. Which of the following about atherosclerosis is true?
a) Intake of unsaturated fatty acid associated with decreased risk
b) Thoracic aorta involvement is more severe than abdominal aorta involvement
c) Extent of lesion in veins is same as that in arteries
d) Hypercholesterolemia does not always increase the risk of atherosclerosis per se

384. Diagnostic criteria of Metabolic syndrome include (s) - *(NEET/DNB Pattern)*
a)High serum homocysteine
b) High serum triglyceride
c) High serum adiponectin
d) Low HDL cholesterol
e) High LDL cholesterol

385. Cholesterol level for prevention of coronary artery disease- *(NEET/DNB Pattern)*
a) <250mg/dl b)<220mg/dl
c) <300mg/dl d)<200mg/dl

386. Atherosclerosis is seen with which bacteria-
a) Staph aureus b) Streptococcus pneumonia
c) Chlamydia d) *(NEET/DNB Pattern)*

387. In 2 patients with Atherosclerosis, one is diabetic and other is non-diabetic. In relation to non-diabetic, diabetic patient has 100 times increased risk of ?
a) MI *(AIIMS, May 12)*
b) Stroke
c) Lower Limb Ischemia
d) Vertebrobasilar insufficiency

388. Which can cause profound hyperlipidemia?
a) Hyperinsulinemia *(NEET/DNB Pattern)*
b) Hypothyroidism
c) Hyperparathyroidism
d) Hyperthyroidism

389. Reinfarction after 8th day- *(NEET/DNB Pattern)*
a) Troponin bj CK-Mti ^ J i
c) LDH d) Myoglobin

390. Cardiac marker diagnostic on 10th day of MI- *(NEET/DNB Pattern)*
a) CPKMB b) LDH
c) Troponin d) Myoglobin

391. An elderly female presents to the emergency department and was found to have a transmural myocardial infarction. Based on her ECG, she was started on thrombolytic therapy with streptokinase. On further examination, which of the following findings would indicate that the thrombolytic therapy is risky and should be stopped? *(AIIMS, May 12)*
a) Pericardial friction rub
b) Mobitz Type II block
c) Significant pericardial effusion on echocardiography
d) Lower limb vein thrombosis

392. The treatment of a patient with myocardial infarction is thrombolytic therapy, if the patient presents within ___hours of chest pain - *(AIIMS, May 12)*
a) 6 hours b) 12 hours
c) 18 hours d) 24 hours

CONGESTIVE HEART FAILURE

393. Peripheral edema in CCF is due to -*(PGIDec 2000)*
a) Increased sympathetic tone
b) ANP (atrial natriuretic peptide)
c) Increased hydrostatic pressure
d) Pulmonary hypertension

394. In CCF there is- *(PGI Dec 98)*
a) Oliguria
b) Polyuria
c) Olijuria during day and polyuria during night
d) Anuria

395. CCF is associated with Increase in all of the following except - *(A107)*
a) Right atrial mean pressure
b) Serum sodium
c) Serum urea
d) Serum norepinephrine

377) a 378)b 379) d 380) d 381)All 382) b 383) a 384) b,d 385) d 386) c 387) c 388)b 389) a 390) c
391) c 392) d 393) a,c 394) a 395) b

396. Most common cause of acute RVF -*(AlIMSMay 09)*
a) Massive pulmonary embolism
b) Tricuspid stenosis
c) Pulmonary stenosis
d) Tricuspid regurgitation

397. Radiological features of left ventricular heart failure are all, except - *(AIIMS May 10)*
a) KerlyB lines
b) Cardiomegaly
c) Oligemic lung fields
d) Increased flow in upper lobe veins

398. Drug used in heart failure - *(PGI June 04)*
a) ACE inhibitors b) Hydralazine
c) Ca_2+ channel blockers d) Carvedilol
e) Chlorthalidone

399. In a patient with chronic congestive cardiac failure, all of the following drugs prolong survival, except-
a) Metoprolol b) Carvedilol *(AIIMSMay 04)*
c) Enalapril d)Digoxin

400. In congestive cardiac failure all are true used except-
a) Spironlactone b) Nitrates*(AIIMSNov 09)*
c) Nesiritide d) Trimetazidine

401. All are true about starting of P-blocker therapy in a case of CHF except - *(AIIMS Nov 10)*
a) They should be started with optimal doses
b) They should be gradually increased over weeks
c) Special precautions should be taken in cases of NYHA class III and IV
d) Carvedilol and Metoprolol are the preferred drugs

402. Which of the following is the best inotrope agent for use in Right Heart Failure Secondary to pulmonary hypertension - *(AI11)*
a) Dobutamine b)Digoxin
c) Milrinone d) Halothane

403. Drugs used in chromic heart failure-(PG7*Nov 10)*
a) Isosorbide nitrate b) Lisinopril
c) Spironolactone d) Losartan
e) Carvedilol

404. All are true about starting of b-Blocker therapy in a case of CHF except - *(AIIMS Nov 10)*
a) They should be started with optimal doses
b) They should be gradually increased over weeks
c) Special precautions should be taken in cases of NYHA class Aland IV
d) Carvedilol and Metoprolol are the preferred drugs

405. Which of the following is the best inotrope agent for use in Right Heart Failure Secondary to pulmonary hypertension- *(AI 11)*
a) Dobutamine b)Digoxin
c) Milrinone d) Halothane

406. Which is increased in plasma of chronic heart disease patients - *JNEET/DNB Pattern)*
a) BNP b) Endothelin-1
c) Cortisol d)

407. All of the following are used in the initial management of acute life threatening cardiognenic pulmonary edema, except - *(AI 12)*
a) Digoxin b) Morphine
c) Furosemide d) Positive Pressure Ventilation

DIGITALIS

408. All of the following statements about digitalis are true except - *(AI 9 7)*
a) Excretion is mainly renal
b) Oral absorption is good
c) Actively metabolized in liver
d) Lipid soluble

409. All of the following electrocardiographic findings may represent manifestations of digitalis intoxication, EXCEPT - *(AIIMS Nov 99)*
a) Bigeminy
b) Junctional tachycardia
c) Atrial flutter
d) Atrial tachycardia with variable block

410. All of the following statements about Digoxin induced arrythmias are true, Except - *(AI 11)*
a) Biventricular Tachycardia
b) Paroxysmal Atrial Tachycardia with variable AV block
c) Ventricular Bigeminy
d) May be used to Atrial Fibrillation

411. True statement regarding Atrioventricular block with atrial tachycardia is - *(AIIMS Dec 98)*
a) Seen in WPW syndrome
b) Is a complication of pacemaker
c) Can occur in normal person occasionally.
d) Seen in Digitalis toxicity with K^+ depletion

412. Digoxin toxicity is enhanced by all, except -
a) Quinidine *(AIIMS Dec 97)*
b) Hyperkalemia
c) Hypomagnesemia
d) Hepatic dysfunction

413. All of the following may precipitate digitalis toxicity except - *(AI 97)*
a) Hypocalcemia b) Hypokalemia
c) Hypomagnecemia d) Hypothyroidism

414. Digitalis toxicity enhanced by A/E -*(.AlIMSMay 10)*
a) Renal failure b) Hyperkalemia
c) Hypercalcemia d) Hypomagnesemia

415. Following are used in treatment of digitalis toxity except- *(AI 95)*
a) Potassium b)Lignocaine
c) F_{ab} particles d) Hemodialysis

416. Treatment of digoxin overdose includes administration of all of the following except -*(AI 97)*
a) Potassium b)Lignocaine
c) Phenytoin d) Hemodialysis

396) a 397) c 398)a,b,d 399) d 400) d 401) a 402) c 403)AH 404) a 405) c 406) a 407) a 408) a 409) c
410) a 41 l)d 412) d 413)a 414)b 415)d 416)d

417. Digoxin is used in the treatment of - *(PGI June 04)*
a) Constrictive pericarditis b) Cardiac tamponade
c) Heart block d) Atrial fibrillation
e) Diastolic failure

418. First symptom of digoxin overdose is - *(Kamat 99)*
a) GIT disturbance b) U-vave on ECG
c) Ectopic on ECG d) Fainting spells

419. The following agents may be used as prophylaxis in high altitude pulmonary edema - *(UPSC 0 7)*
a) ACE inhibitor b) Acetazolamide
c) Nifedipine d) Digoxin

420. All of the following statements about Digoxin induced arrythmias are true, Except - *(AI11)*
a) Biventricular Tachycardia
b) Paroxysmal Atrial Tachycardia with variable AV block
c) Ventricular Bigeminy
d) May be used to Atrial Fibrillation

421. Digoxin is contraindicated in - *(UPSC 111)*
a) Supraventricular tachycardia
b) Hypertrophic cardiomyoathy
c) Atrial fibrillation
d) Congestive cardiac failure

422. Low renin is seeninA/E- * *(NEET/DNBPattem)*
a) Essential hypertension
b) Conn's syndrome
c) Renovascular hypertension
d) Liddle syndrome

423. Increased rennin activity is seen in- *(NEET/DNB Pattern)*
a) Benign nephrosclerosis
b) Malignant nephrosclerosis
c) HUS
d) MHA

424. Non modifiable risk factor for hypertension -
a) Gender *(NEET/DNBPattem)*
b) Obesity JE
c) Salt intake
d) Cultural characteristic acquired civef timeJ^&l

HYPERTENSION

425. Most common cause of renal artery stenosis in young adults in India is - *(AIIMSDec 97)*
a) Atherosclerosis
b) Non specific aorto-aortitis
c) Fibro muscular dysplasia
d) None of the above

426. Renal artery stenosis may occur in all of the following except - *(AI 06)*
a) Atherosclerosis b) Fibromuscular dysplasia
c) Takayasu's arteritis d) Polyarteritis nodosa

427. Angiographically, the typical "beaded" or "pile of plates" appearance involving the internal carotid artery is seen in - *(ARMS May 04)*
a) Takayasu's Disease
b) Non-specific aorto-arteritis
c) Fibromuscular dysplasia
d) Rendu-Osler-Weber Disease

428. A 20 year female has b/I bruit on flank. Her B.P is 160/110. Which of the following statement is correct.
a) Enalapril deteriotes renal function *(PGI 09)*
b) Most definitive diagnostic procedure is contrast enhanced arteriography
c) Always b/I
d) Surgical intervention may be used
e) Fibromuscular dysplasia is a common cause in this patient

429. Commonest cause of sustained severe hypertension in children - *(ARMSDec 95)*
a) Endocrine causes
b) Coarctation of aorta
c) Renal parenlchyma disease
d) Pheochromocytoma

430. Monogenic & Autosomal Dominant cause of HTN is/are - *(PGI Nov 09)*
a) 17-a Hydroxylase deficiency
b) Familial Conn's syndrome
c) Pregnancy induced HTN
d) Glucocorticoid remediable hyperaldosteronism

431. In essential hypertention changes seen in the heart are- *(ARMS May 01)*
a) Cardiac cell hyperplasia
b) Cardiac cell hypertrophy
c) Increse in the mitochondrial number
d) Increase in size of mitochondria

432. Which of the following is most specific and sensitive screening test in a case of renovascular hypertension - *(ARMS Nov 01)*
a) HRCT
b) CT guided angiography
c) Captopril induced radionuclide scan
d) MRI

433. Quick Reduction of blood pressure is done in -
a) Cerebral infarct *(ARMS Nov 92)*
b) Hypertensive encephalopathy
c) Myocardial infarction
d) Any patient with hypertension

434. A person has headache & profuse sweating. On examination his B.P is 200/120 mm Hg. Which of the following shoud not be used - *(PGI 09)*
a) Nifedipine b) Sodium nitroprusside
c) Phenoxybenozamine d) Methyldopa
e) Labetalol

435. A young patient presented with blood pressure of 190/120 mm of Hg without any clinical symptom and fundus examination is normal, treatment of choice - *(PGI June 03)*
a) Oral Nitroglycerine b) IV Nitroglycerine
c) Oral Enalapril d) IV Enalapril
e) Sublingual short acting Nifedipine

417) d 418) a 419) d 420)a 421)b 422)c 423)b 424)a 425)b 426)d 427)c 428)a,b,d,e 429)c 430) c,d 431)b 432) d 433) b 434)a,c,d 435) c

436. All of the following drugs can be used in hypertensive emergency - *(AIIMS May 90)*
a) Trimethaphan b) I.V. hydralazine
c) Indapamide d) Sublingual nifedipine

437. All of the following are useful intravenous therapy for hypertensive emergencies except -
a) Fenodolpam b) Uradipil *(AIIMS May 03)*
c) Enalapril d) Nifedipine

438. A hypertensive, diabetic is having proteinuria, antihypertensive of choice is - *(AIIMSMay 95)*
a) Propanolol b)Clonidine
c) Enalapril d) Alpha methyldopa

439. All of the followed drug combinations may be recommended for initial management of hypertension, Except - *(A191)*
a) ACE inhibitors and beta blockers
b) ACE inhibitors and calcium channel blockers
c) Diuretics and ACE inhibitors
d) Diuretic and Betablockers

440. In Accelerated HTN what is metabolic defect -
a) Normal non-ionic metabolic acidosis
b) Ionic gap met acidosis *(PGI June 00)*
c) Hypomagnesemia
d) Metabolic alkalosis

441. An elderly patient with hypertension with diabetes, proteinuria without renal failure, antihypertensive of choice is - *(AIIMS Nov 93)*
a) Furosemide b) Methyldopa
c) Enalapril d) Propranolol

442. In primary pulmonary hypertension basic abnormality in gene lies in - *(AIIMSMay 07)*
a) Bone morphogenetic protein receptor II
b) Endothelin
c) Homeoboxgene
d) PAX-11

443. Pulmonary hypertension may occur in all of the following conditions except - *(AI03)*
a) Toxic oil syndrome
b) Progressive systemic sclerosis
c) Sickle cell anemia
d) Argemone mexicana poisoning

444. Pulmonary hypertension is caused by-*(PGI June 03)*
a) Interstitial lung disease
b) Myocardial infarction
c) Systemic hypertension
d) Thromboembolism

445. All are causes of pulmonary hypertension except - *(AIIMS Nov 0 7)*
a) Hyperventilation b) Morbid obesity
c) High altitude d) Fenfluramine

446. Pulmonary hypertension in COPD is due to -
a) Constriction of pulm vessels *(PGIDec 97)*
b) Hypoxia
c) Interstitial fibrosis
d) Bronchoconstriction

447. Not seen in pre capillary pulm. hypertension -
a) T pressure in pulm circulation *(PGI June 98)*
b) t capillary pressure
c) Rt-vent. hypertrophy
d) t Pulm. wedge pressure

448. Which is a feature of high altitude pulmonary edema-
a) Associated with low cardiac output *(Aiims Nov*
b) Associated with pulmonary hypertension *06)*
c) Occurs only in unacclamatized persons
d) Exercise has no effect

449. All are used for treating Pulmonary hypertension except - *(AIIMS May 08)*
a) Endothelin receptor antagonists
b) Phosphodiesterase inhibitors
c) Calcium Channel Blockers
d) Beta blockers

450. Drug Not used in pulmonary hypertension -
a) Calcium channel blocker *(AIIMS May 2010)*
b) Endothelin receptor antagonist
c) Alpha blocker
d) Prostacyclin

451. Manifestations of aortic dissection are -
a) Pericardial effusion b)AR *(PGIJune 01)*
c) MR d)AMI
e) Limb ischemia

452. Aortic dissection is associated with -*(PGI June 02)*
a) Systemic hypertension
b) Coarctation of Aorta
c) In 1st trimester of pregnancy
d) Takayasu's arteritis
e) Marfan syndrome

453. A 50 year old male patient, an alcoholic and smoker presents with a 3 hour history of severe retrosternal chest pain and increasing shortness of breath. He started having this pain while eating, which was constant and radiated to the back and interscapular region. He was a known hypertensive. On examination, he was cold and clammy with a heart rate of 130/min, and a BP of80/40 mmHg. JVP was normal. All peripheral pulses were present and equal. Breath sounds were decreased at the left lung base and chest x-ray showed left pleural effusion. What is the most likely diagnosis? *(AIIMSNov 03)*
a) Acute aortic dissection
b) Acute myocardial infarction
c) Rupture of the esophagus
d) Acute pulmonary embolism

454. A 50 year old man, an alcoholic and a smoker presents with a 3 hour history of increasing shortness of breath. He started having this pain while eating, which was constant and radiated to the back and interscapular region. He was a known hypertensive. On examination, he was cold and clammy with a heart rate of 130/ min, and a BP of 80/40 mm Hg. JVP was normal. All peripheral pulses were present and equal. Breath sounds were

436)b,c,d 437) d>c 438) c 439) a 440) d 441) c 442) a 443) d 444)a,b,d 445) a 446) a 447) d 448)b 449) d 450) c 451)a,b,d,e 452)a,b,d,e 453) a 454) a

decreased at the left lung base and chest X-ray showed left pleural effusion. Which one of the following is the most likely diagnosis? *(AI 05)*
a) Acute aortic dissection
b) Acute myocardial infarction
c) Rupture of the esophagus
d) Acute pulmonary embolism

455. In Aortic dissection drug used are - *(PGIDec 05)*
a) Propanolol b)Diazoxide
c) Na nitroprusside d) Hydralazine
e) Labetelol

456. Renin plays important role in - *(U.P 96)*
a) Renovascular hypertension
b) Malignant hypertension
c) Coronary artery disease
d) Essential hypertension

457. Ideal imaging modality for Renal arterial hypertension - *(Karnat 96)*
a) IVP b)USG
c) Angiography d) Renin assay

458. Which one of the following is of most serious prognostic significance in a patient of essential hypertension - *(UPSC97)*
a) Diastolic blood pressure greater than 130 mmHg
b) Transient ischaemic attacks
c) Left ventricular hypertrophy
d) Papilloedema and progressive renal failure

459. In benign hypertension commonest vascular pathology is - *(UPSC95)*
a) Atherosclerosis b) Fatty infilitraion of intima
c) Fibmoid necrosis d) Hyaline arteriosclerosis

460. All of the following are feature of malignant hypertension except - *(UPSC97)*
a) Grade IV hypertensive retinopathy
b) Haemolytic blood picture
c) Renal failure
d) Respiratory failure

461. In essential hypertension the drug prescribed with least cardiovascular effect- *(APPGE 05)*
a) Clonidine b) Alpha blocker
c) Beta blocker d) ACE inhibitor

462. Calcium blocking agents of use in the treatment of hypertension include - *(Delhi PG Feb. 09)*
a) Prazosin b) Lidoflazine
c) Captopril d) Nifedipine

463. Which of the following drugs should not be used in a setting of severe hypertension in elderly on empirical basis ? *(Delhi PG Mar. 09)*
a) Enalapril b) Amlodipine
c) Chlorthiazide d) Prazosin

464. Cause of secondary hypertension includes -
a) Old age *(PGIMay 10)*
b) Renal parenchymal disease
c) Pregnancy-indued HTN
d) Hypothyroidism
e) Hyperthyroidism

465. Enalapril use is not advisable in the following conditions except - *(UPSC 111)*
a) Single kidney
b) Diabetic nephropathy with albuminuria
c) Bilateral renal artery stenosis
d) Hyperkalaemia

466. Not seen in primary pulmonary hypertension -
a) Left parasternal heave *(NEET/DNB Pattern)*
b) Right parasternal heave
c) Single S2
d) Pulmonary ejection click

467. Iloprost used in pulmonary hypertension- *(NEET/DNB Pattern)*
a) Inhalation b) Intravenous
c) Oral d) Subcutaneous

SHOCK

468. Characteristics of SIRS includes the following except- *(AI09)*
a) Leukocytosis
b) Thrombocytopenia
c) Infectious or noninfectious cause
d) Oral temperature > 3 8°C

469. Features of shock - *(PGI June 08)*
a) Decreased GFR b) Increased renin
c) Decreased renin d) Decreased cortisol
e) Increase lactate

470. In gram negative septicemia, early findings setting before shock of florid is - *(ai 99)*
a) T Cardiac output, t Total peripheral resistance
b) T Cardiac output, i Total peripheral resistance
c) *i* Cardiac output, t Total peripheral resistance
d) 1 Cardiac output, *i* Total peripheral resistance

471. Early sepsis is characterized by a/e - *(PGI June 01)*
a) Confusion & restlessness b) Bradycardia
c) Hypotension d) Sweating
e) Cold extremities

472. True statements about sepsis and septic shock -
a) It is commonest cause of death in surgical patients.
b) Main treatment is - infection site *(PGI Dec 04)*
c) Leads to organ dysfunction
d) Antibiotic had no role
e) Best fluid is NS or RL

473. A 70 year old man develops pneumonia and septicemia. Patient goes into renal failure and has a BP of 70/50 mm of Hg. Drug that should be used to maintain BP is - *(AI07)*
a) Adrenaline b) Ephedrine
c) Phenylephrine d) Nor epinephrine

474. True statements about shock - *(PGIDec 04)*
a) During dehydration both ICF and ECF volume decreases
b) 10-20% of fluid loss is compatible to life.
c) Early change in shock is increased release of nor adrenaline
d) Risk of death is high when fluid loss is 20-40%
e) Hemorrhage cause intravascular fluid loss

455) a,c,e 456) a 457) c 458) d 459) d 460) d 461) d 462) d 463) d 464)b,c,d,e 465) b 466) b 467) a 468) b 469)a,b,e 470)b 471)b,d,e 472)a,b,c,e 473)d 474)a,b,c,e

475. In cardiac shock - *(PGIDec 02)*
a) SBP<90mmofHg b) DBP < 80 mm of Hg
c) Urine output < 20 ml/hr d) Cardiac index <3.5
e) Stroke volume 70 ml

476. Feature of septic shock is - *(AIIMS Sep 96)*
a) Acute tubular necrosis
b) Acute cortical necrosis
c) Acute glomerulonephritis
d) Acute papillary damage

477. Apatient in ICU has normal pulmonary A pressure; low systemic peripheral resistance; low cardiac index; arterial $P0_2$ = 93; diagnostic possibilities are- *(PGIJune 01)*
a) Cardiogenic shock b) Septic shock
c) Hypovolemic shock d) Cardiac tamponade
e) ATN

478. A patient presented with shock and suspecting it due to hypoglycemia. The treatment should be based on- *(PGI June 03)*
a) IV glucose after clinical assessment
b) Urine sugar
c) Blood sugar
d) IV access

479. Which test is not useful in a patient with history of syncopal attack - *(Aiims Nov 06)*
a) Electrophyciological test b) Table tilt test
c) PET scan d) Holter monitoring

480. Neurocardiagenic syncope, the least useful investigation is - *(AIIMS May 0 7)*
a) Tilt table
b) Carotid sinus massage
c) Carotid duplex scan
d) Orthostatic blood pressure recording

481. A 40 year old presenting with dizziness on standing with systolic reduction of BP of 50mm Hg; appropriate treatment - *(PGI June 04)*
a) Graded compression stockings
b) Salbutamol
c) Fludrocortisone
d) P-blockers

482. A 42 yrs man presenting with dizziness on standing and SBP falls by 50 mm of Hg - *(PGI June 05)*
a) Gradual stockings and compression
b) SIL isoprenaline
c) Fludrocortisone
d) Oral indomethacin
e) Salmeterol

483. 42 yrs old man presented with dizziness on standing, SBP falls by 50 mm Hg and HR is 52/min likely cause is - *(PGI June 05)*
a) CHF
b) Inferior wall MI c) Pheochromocytoma
d) Theophylline toxicity e) Sick sinus syndrome

484. A patient with DM of 4 yrs duration presents with dizziness and HR 52/min, probable cause is -
a) Hypoglycaemia *(PGI June 04)*
b) Inferior wall MI
c) Sick-sinus syndrome
d) Autonomic dysfunction

485. Sudden cardiac death may occur in all of the following except- *(AI06)*
a) Dilated cardiomyopathy
b) Hypertrophic cardiomyopathy
c) Eisenmenger's syndrome
d) Ventricular septal defect

486. Which of the following is used in resuscitation -
a) Epinephrine b) Oxygen *(PGI Dec 01)*
c) Lignocaine d) Magnesium
e) Nor-epihephrine

487. True regarding cardio pulmonary resuscitation is -
a) Most common presentation in ECG is asystole *(AIIMS Dec 98)*
b) Compression to ventilation ratio is 5:1
c) Adrenaline is given if cardioversion fails.
d) Calcuim gluconate is given immediately.

488. In basic life support (BLS), support is given to which of the following organ - *(PGI June 05)*
a) Lung b) Heart
c) Kidney d) Skeletal muscle
e) Brain (CNS)

489. In cardio pulmonary resuscitation, calcium can be given in all, except - *(AIIMS Dec 9 7)*
a) Hypocalcemia b) Hypokalemia
c) Hyperkalemia d) Calcium channel blocker

490. What would be the first line of treatment is a patient develops ventricular fibrillation after intravenous injection of potassium chloride - *(AIIMSMay 2004)*
a) Cardiac massage b) I.V. Adrenaline
c) Defibrillation d) IPPV

491. Which of the following is/are included in treatment of ventricular fibrilation & subsequent cardiac arrest - *(PGI 09)*
a) Atropine b) External pacing
c) Epinephrine d) Antiarrhythmic agents
e) Vasopressin

492. During cardiopulmonary resuscitation, intravenous calcium gluconate is indicated under all of the following circumstances except - *(AI 03)*
a) After 1 minute of arrest routinely
b) Hypocalcemia
c) Calcium channel blockers toxicity
d) Electromechanical dissociation

493. Immediate treatment of peripheral circulatory failure in Dengue Shock Syndrome (DSS) is -
a) I.V. Dextrose Saline *(AIIMS May 94)*
b) I.V. high dose of Dexamethasone
c) I.V. crystalloid infusion
d) I.V. Dopamine + Dobutamine

475) a 476) a 477) d 478) c,d 479) c 480) c 481) a,c 482) a,c 483) b,e 484)b,c,d 485) d 486)a,b,c,d 487) c 488) a,b,e 489)b 490)c 491)c,d,e 492)a 493)a,c

494. Hypovolemic shock is seen in all except- *(KARN96)*
a) Hemorrhage b) Starvation
c) Vomiting d) Diarrhoea

495. The regional arterial resistance of the mesentery and kidney vessels is reduced by - *(UP 97)*
a) Dopamine b)Dobutamine
c) Nor adrenaline d) Isoprenaline

496. 40 % Loss of blood volume in a patient is managed by- *(MP 98)*
a) Vasopressor agents
b) Cardiac stimulants
c) Saline infusion
d) Intracardiac adrenaline

497. In shock all happens except - *(JIPMER 95)*
a) Constriction of capacitance vessels
b) Dilation of arterioles
c) Decrease in cardiac output
d) Heart rate decreases

498. Acute physiology and Chronic Health Evaluation (APACHE) scoring system is used as a scoring system to - *(Karnataka 03)*
a) To predict postoperative cardiac risk
b) To predict postoperative pulmonary complications
c) To evaluate prognosis in the critical care settings
d) To evaluate prognosis after acute myocardial infarction

499. Which of the following of drugs is not recommended in septic shock ? *(Delhi PG Mar. 09)*
a) Normal saline b) Activated protein C
c) Steroids d) Rituximab

500. Dengue shock syndrome occurs due to -
a) Super-imposed Bacterial infection
b) Capillary Leak *(Delhi PG Mar 09)*
c) Addison's Crisis
d) Myocarditis

501. Consider the following statements - *(UPSC-II09)*
Systemic inflammatory response syndrome is characterised by:
1. Temperature either above 38°C or below 36°C
2. Heart rate less than 80/min
3. Tachypnoea > 20/min
4. Leucocyte count > 4 x 10^9/L

Which of the statements given above are correct?
a) 1,2 and 3 b) 1 and 2 only
c) 2 and 3 only d) 1,3 and 4

502. True about Septic shock - *(PGIMay 10)*
a) *i* Cardiac output is initially present
b) Vascular dilation
c) Hypotension is a late sign
d) Widespread endothelial dysfunction

503. Fluid used in hypovolumic shock - *(PGINov. 10)*
a) RL b) NS
c) Blood d) 5% Dextose
e) FFP

504. Systemic Inflammatory Response Syndrome (SIRS) is characterised by the following except -
a) Release of lipopolysaccharade endotoxins from the walls of dying gram-negative bacilli
b) Tachycardia with a heart rate of more than 90/min.
c) White cell count <5000/mm^3 *(UPSCIIU)*
d) Tachypnoea with a respiratory rate of > 20/min.

RHEUMATIC FEVER

505. True about Rheumatic heart disease and Rheumatic fever is/are - *(PGI June 04)*
a) Caused by group 'A' streptococci
b) Caused by group 'B' streptococci
c) Carrier have high risk of developing RF
d) Carrier have low risk of developing RF
e) M-5 protein cross reacts

506. All are true about rheumatic fever, except - (*AIIMS*
a) Common in poor socioeconomic group *June 99)*
b) Develops after streptococcal pharyngitis
c) Communicable disease
d) Seen in 5- 15 year of children

507. True about acute rheumatic fever - *(PGIDec 02)*
a) Chorea
b) Erythema nodosum
c) Arthritis
d) Caused by antecedent a-hemolytic streptococcus infection
e) Carditis

508. Major criteria of Rheumatic fever -
a) Chorea b) Erythema nodosum
c) Arthritis d) Fever
e) Carditis

509. True about Rheumatic fever - *(PGIDec 03)*
a) Chorea is aggravated during pregnancy
b) Chorea & arthritis co-existing
c) Subcutaneous nodules are tender
d) Erythema multiforme seen

510. True statement about Rheumatic fever in children -
a) Polyarthritis *(PGI Dec 03)*
b) Caused by a hemolytic streptococci
c) Erythema marginatum is most common manifestation
d) MC valve involvement is Mitral
e) Erythema marginatum is common in face

511. A pt presents with acute rheumatic carditis with fever. True statements is - *(AIIMS May 10)*
a) Increase troponin T
b) Reduced myocardial contractility
c) Signs of inflammation and necrosis
d) Valve replacement will ameliorate C.C.F.

512. Earliest valvular lesion in a case of acute rheumatic fever is - *(AIIMS May 94)*
a) Mitral regurgitation (MR)
b) Aortic Regurgitation(AR)
c) Mitral stenosis (MS)
d) Aortic Stenosis (AS)

494) b 495) a 496) c 497) d 498) c 499) c 500) b 501)d 502)b,c,d 503)a,b,c 504) c,d 505)a,d,e 506) c 507)a,c,e 508)a,c,e 509) a 510)a,d 511) d 512) a

513. Which valve is least affected in Rheumatic fever? *(AIIMSMay08)*
a) Pulmonary valve b) Tricuspid valve
c) Mitral valve d) Aortic valve

514. True statement about rheumatization of MV -
a) Fusion & shortening of chordae tendineae in MS
b) Calcification of MV *(PGIMay 11)*
c) Aortic dilation
d) Annular involvement

515. True about subcutaneous nodule in Rheumatic fever-
a) Non tender
b) Most common manifestation
c) Present in extensor surfaces
d) Associated with arthritis

516. Rheumatic activity involves mostly. valves-(S4P*96)*
a) Aortic & tricuspid b) Aortic & pulmonary
c) Mitral & tricuspid d) Mitral & aortic

517. In rheumatic heart disease, infective endocarditis is detected by echocardiogram and the largest vegetations seen are due to- *(ICS 98)*
a) Streptococcus viridans
b) Staphylococcus aureus
c) Candida albicans
d) Salmonella typhi

518. In rheumatic fever which is seen- *(AMC 99)*
a) Sydenham's chorea b) Huntington's chorea
c) Athetosis d)All

519. Vegetations on undersurface of A.V. valves are found in- *(KARANT 05)*
a) Acute rheumatic fever
b) Limban Sach's endocarditis
c) Non thrombotic bacterial endocarditis
d) Chronic rheumatic carditis

520. ASO (Antistreptolysin o) test is used for the diagnosis of - *(Corned 07)*
a) Rheumatoid arthritis b) Typhoid fever
c) Rheumatic fever d) Rickettsial fever

521. Which one of the following is not included in Jone's Major criteria - *(AIIMS Nov 10)*
a) Pan carditis b) Chorea
c) Subcutaneous nodule d)HighESR

522. A 25-year-old person with history of repeated episodes of Rheumatic fever is hypersensitive to penicillin. Which of the following drug can be prescribed to him - *(AIIMS, May 12)*
a) Penicillin G b) Sulfisoxazole
c) Sulfasalazine d) Streptomycin

INFECTIVE ENDOCARDITIS

523. Bacterial endocarditis is most commonly caused by-
a) a-Hemolytic Streptococci *(PGI Dec 03)*
b) P-Hemolytic Streptococci
c) Staphylococcus aureus
d) Cardiobacterium
e) Staph epidermidis

524. Which of the following is least likely to cause infective endocarditis - *(AI06)*
a) Staphylococcus albus
b) Streptococcus fecalis
c) Salmonella typhi
d) Pseudomonas aeruginosa

525. A patient has prosthetic valve replacement and he develops endocarditis 8 months later. Organism responsible is - *(AIIMS Nov 10)*
a) Stahylococcus aureus
b) Streptococcus viridans
c) Staphylococcus epidermidis
d) HACEK

526. Infective endocarditis due to pseudomonas is most commonly seen with - *(AIIMS May 07)*
a) Intravenous drug abuse of pentazocin
b) HTV patient
c) Chronic steroid therapy
d) Elderly with community acquired pneumonia

527. The risk of developing infective endocarditis is the least in a patient with - *(AIIMSMay 03)*
a) Small ventricular septal defect
b) Severe aortic regurgitation.
c) Severe mitral regurgitation
d) Large atrial septal defect.

528. Which one of the following cardiac lesions is at highest risk of occurrence of infective endocarditis-
a) Atrial septal defect
b) Mitral valve prolapse without regurgitation
c) Valvular aortic regurgitation
d) Mitral stenosis

529. Osier's nodes are typically seen in which one of the following - *(A103)*
a) Chronic Candida endocarditis
b) Acute staphylococcal endocarditis
c) Pseudomonas endocarditis
d) Libman sack's endocarditis

530. Osier's nodes are seen at - *(AIIMS June 98)*
a) Heart
b) Knee joint
c) Tip of Palm & Sole
d) Anterior abdominal wall

531. Not a feature of infective endocarditis is -
a) Myocardial abscess *(AIIMS Feb 97)*
b) Vegetations along cusps
c) Thrombus in left atria
d) Perforation of cusp

532. Infective endocarditis is least common in- *(AIIMS*
a) Mitral stenosis b) Aortic stenosis *Nov 93)*
c) VSD d)ASD

533. Endocarditis is most commonly seen in -
a) Aortic stenosis *(AIIMSMay 95)*
b) Mitral regurgitation
c) Patent ductus arteriosus
d) Venous bypass graft

513)a 514)a,b,d 515)a,c 516)d 517)c 518)a 519)b 520)c 521)d 522)b 523)c 524)c 525)c 526)a 527) d 528) c 529) b 530) c 531)c 532) d 533) a

534. Bacterial endocarditis is *rarely* seen in - *(AI96)*
a) VSD b) PDA
c) MVP d) Ostium secundum ASD

535. Infective endocarditis is commonly seen in all except - *(AIIMS June 98)*
a) Small VSD b) Tetralogy of fallot
c) PDA d)ASD

536. Least common site for vegetation is -
a) Aortic Stenosis (AS) *(AIIMSMay 94)*
b) Mitral Stenosis (MS)
c) Mitral Regurgitation (MR)
d) Atrial Septal Defect (ASD)

537. Which of the heart valve is most likely to be involved by infective endocarditis following a septic abortion-
a) Aortic valve b) Tricuspid valve *(AI03)*
c) Pulmonary valve d) Mitral valve

538. Most common heart valve involved in IV drug user is- *(AIIMS Feb 97)*
a) Mitral valve b) Aortic valve
c) Pulmonary valve d) Tricuspid valve

539. Least common cause of endocarditis is -
a) A.S.D. b) P.D.A. *(AIIMS June 97)*
c) T.O.F. d) V.S.D.

540. Infective endocarditis is most commonly seen in -
a) ASD b) VSD *(AIIMSFeb 97)*
c) PDA d) Pulmonary stenosis

541. In a patient of heart disease antibiotic prophylaxis for dental extraction is- *(AIIMS June 99)*
a) Amoxycillin b)Imipenam
c) Gentamycin d) Erythromycin

542. Site of lesion in endocarditis of RHD is -
a) Along line of closure of valves *(PGIDec 97)*
b) Both sides of valves
c) Valve cusps
d) Free margin of valves

543. Vegetations on undersurface of A. V. valves are found in- *(AI 01)*
a) Acute Rheumatic carditis
b) Limban Sack's endocarditis
c) Non thrombotic bacterial endocarditis
d) Chronic rheumatic carditis

544. In a patient of rheumatic heart disease with fever and mitral valve vegetations due to infective endocarditis, the vegetations usually do not embolise to - *(AIIMS Nov 2001)*
a) Brain b) Lungs
c) Liver d) Spleen

545. Mitral valve vegetations do not usually embolise to-
a) Lung b) Liver *(AI01)*
c) Spleen d) Brain

546. An i.v. drug abuser presents with fever for 10 days. CXR shows B/L lower lobe consolidation with necrosis and right sided pyopneumothorax. Probable diagnosis is - *(PGINov. 10)*
a) MV endocarditis due to Viridans Streptococci
b) TV endocarditis due to Staph, aureus
c) T.B
d) Pneumocystis jeroveci infection
e) Wegener's Granulomatosis

547. A patient has prosthetic valve replacement and he develops endocarditis 8 months later. Organism responsible is - *(AIIMS Nov 10)*
a) Stahylococcus aureus
b) Streptococcus viridans
c) Staphylococcus epidermidis
d) HACEK

548. Which of the following statements is not tr ue in the cases of infective endocarditis caused by HACEK organisms ? *(UPSC 111)*
a) The clinical course of HACEK endocarditis tends to be acute and fulminant.
b) Cultures of blood from patients with suspect HACEK endocarditis may require up to 30 days to be positive.
